During the Imjin War, King Sŏnjo replaced the local product tribute tax with a grain surtax on land from 1594 to 1599, and King Kwanghaegun reinstituted the method for Kyŏnggi Province in 1608 and Kangwon Province in 1623, dubbing it the taedong (Uniform Land Tax Law) system. Despite landlord opposition to a surtax on land, it was extended piecemeal to the rest of the country by 1708. It eliminated the costs of tribute contracting, helped to convert compulsory labour service to compensated labour, made the land tax three times greater than before, and stimulated market activity.

King Injo began minting coins in 1625, after a hiatus of over a century, and Kim Yuk brought back Chinese cash in 1650 and persuaded King Hyojong to authorize private minting in 1651. Even though Hyojong suspended minting in 1657, cash was still circulating when King Sukchong resumed minting in 1678. Unable to prevent inflation, Sukchong banned minting operations in 1697, and the fear of inflation induced other kings to sustain the ban to 1730. The severe deflation that resulted hindered the growth in market activity, but commerce was stimulated by the agricultural recovery. The abandonment of the fallow system by the application of night soil, the expansion of irrigation, and the shift from broadcast seeding to transplantation allowed landlords to reap greater surpluses and use them to buy more goods on the market, which stimulated the activities of merchants. It allowed a population expansion to around fourteen million in one estimate (over sixteen million in another) by about 1750, but population cut into consumption and put a halt to growth thereafter.

Society was subjected to severe shocks during the Imjin War because the government allowed slaves to purchase freedom and wealthy men to purchase office, but the price for manumission still remained too high to permit a large-scale reduction in the slave population. In 1623, the nothoi of yangban by slave concubines were finally permitted to take the examinations, but slaves were subjected to a greater hardship when the state began to recruit them permanently for military service.

Since the threat of foreign invasion was removed after 1637, the pressure for increasing the size of the army decreased and military service was converted primarily to a cloth tax system. The stigma of associating with slaves in the army stimulated even greater evasion of service by commoners, shrinking the tax base for payment of the support cloth tax. By the early eighteenth c. proposals to include yangban in the tax were rejected in favour of reducing quota of duty soldiers and the tax rate, but it did not alleviate the burden on commoner males.

In politics, the Westerners deposed King Kwanghaegun and drove the Great Northerners into virtual oblivion; they also won a protracted battle with the Southerners over a mourning rite dispute waged between 1659 and 1694. In 1659, Song Shiyŏl of the Westerners
persuaded King Hyōnjong that a lesser degree of mourning be observed for his late father, King Hyojong, because he was the second son of King Injo, despite the Southerners' insistence on a longer degree of mourning. In 1674, however, King Sukchong reversed the decision, sent Song into exile, and installed the Southerners at court.

Factional strife now became deadly and dangerous because of Sukchong's fickleness. In 1680, he reinstated Song Shiyŏl and executed two Southerner leaders. After the Westerners divided into Song's Patriarch's faction and the Disciples' faction, in 1689 King Sukchong replaced the Westerners with Southerners and executed Song because he opposed the Sukchong's deposition of his second queen from the Yŏhŭng Min clan. Five years later in 1694, King Sukchong unexpectedly restored the Min queen, purged the Southerner leaders, and put the Disciples in power, an act that kept the Southerners out of high office for a century.

The devastation wrought by foreign invasions stimulated the emergence of a new concern among scholars over problems of statecraft. The leading figure was the recluse scholar, Yu Hyŏngwŏn (pen name, Pan'gye), who wrote about the problems of his age between 1650 to 1670. Deriving inspiration from the Chinese classics and histories he opposed the examination system for failing to destroy aristocracy and demanded the nationalization and redistribution of land based on ancient Chinese systems. He condemned hereditary slavery as an abomination, yet he admitted radical abolition was not possible because the yangban could hardly live without slave labour. Thus, he supported the matrilineal succession law of 1669 to determine the status of offspring of mixed slave/commoner marriages and the replacement of slaves with hired labour as gradual methods for reducing the slave population. In economic policy he supported the taedong reform because of its rationality and the introduction of currency but it was justified by precedents in both classical and contemporary China. Even though Yu's ideas were not well known until the mid-eighteenth c., they were far more important in stimulating reformist thought in the next two centuries than learning from the West.

Western science, particularly cartography, astronomy, and mathematics, and Western inventions like a telescope, sundial, clocks, and guns were brought to Korea from China after 1631, but only Jesuit views on astronomy gained acceptance. A few shipwrecked Dutchmen like Jan Janse Weltevree and Hendrik Hamel spent years in Korean captivity, but their influence was minimal.

The eighteenth century

In an attempt to increase the population of commoner males for military service, King Yŏngjo in 1730 reinstated permanently the matrilineal succession rule, which had been adopted in 1669 and rescinded twice, the last time in 1689. In 1750, he hoped to extend the military cloth tax to yangban households, but in the face of strong yangban opposition, he refrained from a direct confrontation and cut the cloth tax rate in half. Nevertheless, the measure alleviated the tax burden on the commoner peasants and bought another half century of domestic tranquillity.

Some time around 1780, there was a sudden and rapid decline of the slave population, the outside resident private slaves in particular, because of an increase in the number of runaways. Neither the slave owners nor the government had the will to pay the costs required to recapture them because it was now much cheaper to rent land to landless commoners. Since hired commoner labour had also been replacing official slaves as well, in 1801 King Sunjo manumitted most of them in the capital.

The reduction of the slave population to less than ten per cent was not matched, however, by a corresponding rise of commoners to yangban status. In fact, opportunities for the examinations and government service declined even for many yangban lineages as a
smaller number of *yangban* lineages than before proved successful.

In commerce, the ban against minting and severe deflation eventually forced the reluctant King Yongjo to mint more cash in 1731, but he maintained a conservative monetary policy until his death in 1776. Regular minting ensued after that date, but cash was confined to the copper penny coin, no paper money or bills of exchange were ever printed, and banks never developed.

Despite this brake on commercial expansion, private, unlicensed merchants continued to compete illegally with the licensed monopoly merchants in the capital. In 1742 Yongjo permitted them to do business in certain products for the first time, and in 1791 King Chongjo issued a 'joint sales' edict that restricted monopoly privileges to the licensed 'six shops' in the capital over the products they traditionally sold but allowed unlicensed merchants to sell any other products. This compromise between monopoly and free trade lasted without change to the end of the dynasty.

Statecraft writing by retired scholars was continued in the early eighteenth c. by men like the Southerner, Yi Ik, and the Disciple, Yu Suwon, but they did not always agree with Yu Hyongwon. Yi Ik preferred limiting landed property and thought the well-field model totally impractical. He opposed hereditary slavery in principle but recommended only a ban on the purchase and sale of slaves, a limit of one hundred per family, and a restriction on the number of generations that slave status could be inherited.

In the 1730s, Yu Suwon deplored hereditary slavery but was more interested in converting useless *yangban* into merchants, uplifting the commoner peasants, and affirming the line between them and the slaves. Although he broke the stigma against *yangban* commercial activity, he disdained unbridled competition and favoured government-licensed oligopolies of small shopkeepers and peddlers. In the late eighteenth c. scholars like Pak Chiwon, Pak Chega, Hong Taeyong, and Yi Tongmu, known as advocates of Northern Learning, wanted Korea to emulate the more advanced commercial economy of Qing China and increase trade.

Chong Yagyong (pen name, Tasan), who was influenced by Christianity but was sent into exile because of it for two decades after 1801, was more interested in radical land reform, communal property, and distribution based on work points in which the privileged *yangban* would be reduced to scribes and accountants. He modified this program later on, but he was not particularly concerned about the development of commerce and industry or slavery, probably because the slave population was no longer a major problem.

The rational treatment of Western Learning, particularly Christianity, changed in 1783, when Yi Sung hun was converted while in Beijing. In 1791 the government banned and burned Christian books and executed two Christians for destroying their ancestral tables, but the Chinese annexation of Korea, and the dispatch of European troops to protect Christians from persecution, many officials were convinced that Korean Christians were the fifth column of foreign aggression. The dowager happily seized the opportunity to purge ship'a and Southerner officials and execute Catholic converts.

*Early nineteenth century*

King Chongjo's toleration of minority factions ended with his death in 1800. The dowager queen of King Yongjo, supported by the *pyokpa* faction, became regent for King Sunjo for four years. When in 1801 the authorities intercepted a silk letter sent secretly by the Christian, Hwang Sayong, to Bishop Govea in Beijing asking for more missionaries, the Chinese annexation of Korea, and the dispatch of European troops to protect Christians from persecution, many officials were convinced that Korean Christians were the fifth column of foreign aggression. The dowager happily seized the opportunity to purge *ship'a* and Southerner officials and execute Catholic converts.

After the Catholic persecution and purge of 1801, court politics was dominated by the consort relatives of queens for the rest of the century. Their fortunes were founded by King
Sunjo's father-in-law, Kim Chosun of the Andong Kim clan, and the crown prince's father-in-law, Cho Manyong of the P'ungyang Cho clan. The Andong Kim dominated the court to 1839, the P'ungyang Cho to 1849, the Andong Kim to 1864, the P'ungyang Cho and Andong Kim until 1882, and the Yŏhŭng Min clan to 1895.

The treatment of Christians also varied with the consort clan in power. Christians had to go underground to survive after 1801. Three French priests arrived between 1836 and 1837, but all were executed by a purge directed by the P'ungyang Cho in 1839, and two more in 1846, but the number of Christian converts rose to about 20,000 by 1864.

By the nineteenth century, corruption in the land tax, military support cloth, and government grain loans to the peasantry exacerbated the hardships of the peasantry. These conditions laid the groundwork for the Hong Kyŏngnae rebellion in P'yŏng'an Province in 1812, but Hong was also a professional geomancer who used millennarian appeals and prophetic announcements about a change of dynasty to appeal to the peasants. The rebellion of 1862 in the southern three provinces and Hamgyŏng in the northeast was much larger in scope. Its main causes were specifically land distribution and the land tax, the military cloth tax, and the rural credit system. After it was put down, King Ch'ŏlch'ong's reform attempts were blocked by conservatives.

By mid-century Korea came face to face with Western imperialism. The British had defeated the Chinese in the Opium War in 1842, and the British and French did so again between 1856 and 1860, forcing China to pay huge indemnities and sign unequal treaties. American gunboats arrived in Japan in 1854 and forced a similar treaty on her in 1858. These unequal treaties fixed import tariffs at a low rate, allowed foreign courts to judge their own people for legal violations, and set up extra-territorial areas in the ports controlled by foreign officials. Naturally, Koreans were determined to avoid contact with the West at all costs.

The Taewŏngun's reforms and policies (1864-73)

When King Ch'ŏlch'ong died without heir in 1863, Yi Haung, a member of a minor royal branch family, conspired with the P'ungyang Cho dowager-regent to select his eleven-year-old son to be the next king, Kojong. The father, now known as the Taewon'gun (grand prince), had no legal position, but he controlled policy for the next decade and carried out a major restoration program. He built a palace to elevate the prestige and power of the throne, strengthened central political authority, appointed more minority factions to office, extended the military cloth tax to the yangban for the first time, and reformed the grain loan system to alleviate peasant distress. In foreign policy he adamantly rejected all foreign demands for trade, but his inflationary monetary policy and investment in palace construction drained funds from the military.

Initially sympathetic to Korean Catholics, he turned against them and launched a persecution of Catholics from 1866 to 1871 that took the lives of nine French missionaries and half the 20,000 Korean Christians. In 1864, he also executed a declasse yangban from Kyŏngju named Ch'oe Cheu who had created a new religion called Eastern Learning (Tonghak) to combat Western Learning (Sŏhak). The new faith was a syncretic amalgam of the Confucianism, Buddhism, Daoism, and animism combined even with Christian elements like an anthropomorphic Lord of Heaven and the notion that all men were equal under Heaven. The authorities, however, condemned Tonghak as a heterodox abomination.

In 1866, Korea suffered its first clash with Western troops on its own shores. The French Asiatic Squadron attacked Kanghwa Island in late 1866 to avenge the execution of French missionaries, and an American trading schooner, General Sherman, that sailed up the Taedong River to P'yŏngyang was burned and its crew killed by an angry mob angered by
their arrogant behavior. In 1868, the Prussian adventurer, Ernst Oppert, tried but failed to seize the skeletal remains of the Taewon'gun's father as leverage for a trade agreement. In 1871, the Americans, after failing to induce the Chinese to mediate a treaty with Korea, sent naval gunboats to Korea to negotiate directly. Fired on by coastal batteries on Kanghwa Island, American marines attacked the defenders and killed fifty-three of them before withdrawing to teach the Taewon'gun a lesson. He learned no lesson, however, for he declared victory and denounced all those who supported foreign treaties as traitors.

Relations with Japan deteriorated in 1868 when the Japanese informed Korea that the Tokugawa feudal regime had been replaced by a new central government under the Meiji emperor, but the Taewon'gun refused to accept any changes in traditional relations or communications from any emperor but the Qing emperor. In 1873, Korea barely escaped a punitive Japanese invasion when Prime Minister Iwakura Tomomi returned from a visit to Europe to reverse a decision made by Saigo Takamori to redress Korea's insult to the Japanese emperor. Iwakura believed that Japan's main task was self-strengthening, not a costly foreign venture.

Even though the Taewon'gun's foreign policy was popular with conservative Confucians, his domestic policy antagonized them, particularly his taxation of the yangban, his ban on all but forty-seven of the chartered private academies, and his minting of the multiple-denomination 100-cash. The opposition to his domestic policies made it easy for his son to proclaim personal rule in 1874, leaving his father no choice but to withdraw.

The Kangwha Treaty to the Sino-Japanese War (1874-1895)

King Kojong's intention to revise his father's policies was stymied when at the advice of the conservatives he banned the use of Qing cash. This action only created a fiscal crisis by wiping out the monetary value of most government reserves. He then turned to a reversal of his father's foreign policy by accepting communications from the Japanese emperor on the grounds that the title of Japan's ruler was her own business, and that a profession of friendship would secure peace and permit renewal of traditional trade relations. He was unaware that the Japanese wanted to strip Korea free of Qing suzerainty and expand opportunities for trade beyond the old system.

Because the Japanese perceived that Kojong was vulnerable, they dispatched a reconnaissance vessel to the Korean coast in the hope of attracting fire from Korean coastal artillery. When a Korean shore battery obliged, Tokyo sent Kuroda Kiyotaka with a contingent of troops to Kanghwa Island in February 1876, and he intimidated King Kojong into signing the Kangwha Treaty that opened Korea to trade and diplomacy despite the strong conservative opposition against it.

The Japanese were able to include a statement in the treaty that Korea was a self-governing country, but neither the Koreans nor the Chinese thought that it interfered with Qing suzerainty. The treaty provided for the opening of two additional ports, extraterritorial rights, and Japanese consular jurisdiction in the treaty ports, but other matters like a permanent ambassador in Seoul, a most-favoured-nation clause, or a limited import tariff, were set aside.

The two ports of Wonsan and Inch'on were opened in 1880 and 1882, respectively, and the Japanese began trade in Pusan immediately, replaced inferior Korean with Japanese coins, and established a branch of the Daichi National Bank to finance trade. Since Japanese manufactures were not well developed, Japanese imports consisted mainly of British textiles traded for Korean rice, gold, ginseng, ox hides, dried fish, seaweed, medicines, and cotton homespun.

After 1879, Li Hongzhang, the Chinese official in charge of Qing relations with Korea, and
Huang Zunxian, the Qin minister to Japan, advised the Korean court to conclude more treaties with the United States and other European nations to block Japanese aggression, but their main goal was to preserve China's suzerainty. King Kojong sent technical trainees to the Chinese arsenal in Tianjin, and a secret mission called to Japan to inspect industrial facilities in 1881, but both missions proved dismal failures. He also hired a Japanese army lieutenant to train a new military unit in the capital, but this initial spurt of reform was checked by an abortive plot in 1881 to depose him in favour of the Taewŏn'gun's illegitimate son, and an abortive coup d'état in 1882.

King Kojong took Chinese advise to sign a treaty with the United States on 22 May 1882, the Shufeldt Convention, but he was so fearful of domestic opposition that he allowed Li Hongzhang to negotiate the terms with Commodore Shufeldt in China. Li then sent two of his deputies to Korea with Shufeldt for the signing ceremony. Shufeldt rejected Li's attempt to include a statement confirming Korea's dependence on China, but King Kojong send a separate letter to that effect to the American president. Under the treaty the United States offered her good offices but no military support to defend Korea's independence. It included the standard terms of unequal treaties and set the import tariff at ten percent ad valorem on common items. Later that year, the British reduced the lowest import tariff rate to five percent, and that rate held for other treaties signed with Germany, France, and Russia.

The reaction to King Kojong's program broke out with a vengeance in July 1882, when soldiers of the old regiments rioted, killed officials like Min Kyŏmho and the Taewŏn'gun's brother, Yi Ch'oeŭng, and tried but failed to assassinate the queen. They then drove Japanese Ambassador Hanabusa Yoshimoto (1842-1917) and his entourage to the coast and out of the country. Kojong was forced to install the Taewŏn'gun as a formal head of state, and he immediately dismissed the queen's relatives and reversed Kojong's reforms, but the Qing government was not about to allow the Taewŏn'gun to bring on a Japanese invasion of Korea. Li Hongzhang sent troops to Korea to suppress the rebels and kidnap the Taewŏn'gun, and he kept him under confinement in China for three years. Li also pressured Kojong to pay an indemnity to Japan and allow the Japanese to station a battalion of troops in the capital. Li succeeded in preserving the political status quo by returning the king, the queen, and her relatives to power, but his interference in Korea's domestic politics looked more like Western imperialism than the tributary system. That same year Li also dictated a set of trade regulations with restraints similar to the Western unequal treaties imposed on China.

Kim Okkyun and other officials who travelled to Japan after 1881 contacted Fukuzawa Yukichi (1834-1910), Japan's leading proponent of Westernization, and returned to Korea inspired by Japan's self-strengthening program. But they soon found that the Min clan was suspicious of them and too uninspired an advocate of reform. Fearful of arrest and execution, they decided to launch a coup d'état with the only military support available - the Japanese legation guard.

In 1884, Ambassador Takezoe Shinichiro (1841-1917), without benefit of approval from the Tokyo government, used his guards to help Kim's group seize the palace and murder a half dozen high officials. Kim was only able to hold power for three days because the Qing military adviser, Yuan Shikai, mobilized Chinese and Korean troops and drove the junta and the Japanese out of the capital and the country. The Chinese again saved the king, queen, and her relatives, and forced Kojong to pay an indemnity even though Takezoe was guilty of assisting treason.

To prevent another such incident from inciting a full-scale war, Li Hongzhang met with Ito Hirobumi (1841-1909), a leading Japanese oligarch, in 1885 to sign the Tientsin Convention, which called for the removal of all but a small legation guard on both sides. Unfortunately, there was a loophole in the agreement that would prove fatal, because it
provided that if either party sent more troops to Korea in the future, the other party would automatically have the right to send a force of equal size.

In late 1885, Li Hongzhang appointed Yuan Shikai the Chinese resident minister to Korea, and for the next decade Yuan dominated Korean affairs and prevented any attempt at an independent policy. Li also returned the Taewon’gun to Korea to counter the Min clan, but the queen had already removed most of his supporters. When the British seized Komun Island off the Korean coast as a warning to Russian adventurism in 1885, Yuan persuaded the Koreans to tone down their protest. In 1886, Yuan obtained the banishment of the officials who wanted to hire Russian military instructors, and he tried but failed to persuade Li to depose the king in favour of the Taewon’gun's favourite grandson, Yi Chungyong.

He stymied Kojong's attempts to obtain American military instructors, investment, and loans, blocked efforts to expand American missionary education, forced the recall of the Korean ambassador to the United States in 1887, did likewise with the Korean minister to Japan and stopped the dispatch of a mission to Europe in 1890. He forced Kojong to pay an indemnity to Japanese merchants for imposing a blockade of bean exports during a famine in 1887, and he banned the use of customs revenue as collateral for foreign loans and stopped providing Chinese loans after 1885. He did, however, help Chinese merchants increase their volume of trade in Korea almost to the same level as the Japanese. The Japanese, meanwhile, kept a low posture and did not challenge Chinese hegemony.

Li Hongzhang's strategy to keep Korea in the Chinese tributary orbit came to an end in 1894. Followers of the Tonghak religion emerged from hiding in 1893 to campaign for toleration for their religion, and their spiritual leader, Ch’oe Shihyöng, developed a powerful local organizational system. At the same time Chön Pongjun, a local Confucian yanghan with military experience from Kobu, Cholla Province, began planning a peasant uprising. He only had marginal sympathy with Tonghak beliefs, but he spent two years as the Taewon’gun's aide and appears to have conspired with him to overthrow the Min oligarchy. Peasant poverty, unfair taxation, local government corruption, and Tonghak persecution provided tinder for the rebellion, and a local official's demand for a water tax in Kobu provided the spark for a full-scale rebellion that combined Tonghak believers with peasant malcontents. The rebellion was neither directed primarily against the landlord class nor designed to obtain an Utopian redistribution of land. Rebel manifestoes expressed admiration for the sage emperors of Chinese antiquity, loyalty to the dynasty, disdain for the breakdown of moral order, the poverty of the peasants, and the increase in foreign debt. They also complained about deficiencies in the taedong system, government grain loans, the military cloth tax, and the registration of taxable land - just like 1862 rebellion!

Government forces sent down to quell the rebellion eventually negotiated a settlement that tolerated the existence of the Tonghak religion and its local organization, but the government had panicked and foolishly requested the dispatch of troops from China. At the same time it lured Kim Ockyoon from Japan to Shanghai and had him assassinated, but failed in a similar attempt against Kim's associate, Pak Yonghyo, in Tokyo. Japanese warhawks under Yamagata Aritomo forced a decision in July 1894 to send a large military force to Korea with orders to foment a war to remove Chinese suzerainty once and for all, and Japan declared war soon thereafter.

The Japanese surrounded the palace and asked the Taewon’gun to head a reform government, but he proved a reluctant ally and seemed to be acting in collusion with the Tonghak when they resumed their rebellion in September to resist the Japanese occupation. A contingent of 6,000 Japanese troops with modern weapons participated in the battle at Kongju that brought the rebellion to an end. Inoue Kaoru, the Japanese home minister sent to Korea to run affairs, removed the Taewon’gun, established a cabinet under Kim Hongjip, and recalled Pak Yonghyo from Japan in December to be minister of education. This cabinet passed the first of the radical kabo reforms (Kabo Kyôngjiang) in July 1894,
but most of the reforms were adopted from May to July 1895, thanks to Pak Yanghyo, the power behind the Pak Changyang cabinet.

These reforms revised local government, the police, and the army, put the cabinet in charge of finance and removed the king and queen from government affairs, abolished the civil service examination system and slavery, lifted the ban against the remarriage of widows, and ordered adult males to cut off their topknots and adopt Western-style haircuts. Pak, however, antagonized Inoue by opposing his efforts to gain control over railroad and telegraph rights. When in June 1895, his plan to use his new Military Training Unit to seize power, depose the king, and assassinate the queen leaked, he barely made good his escape to another exile in Japan and the United States.

After the Sino-Japanese War came to an end in April 1895, the Treaty of Shimonoseki terminated the tributary system and made Korea nominally independent. Japan won the island of Taiwan and control over the Liaodong peninsula and railroad rights in Manchuria, but a week later she was forced by Russia, France, and Germany to give up her gains in Manchuria. This Triple Intervention later forced her to withdraw her direct involvement in Korea.

In Korea, Miura Gorō as minister to Korea took over from Inoue. With the acquiescence of the Taewon'gun, he led a group of Japanese gangsters, police, and Korean soldiers to the palace, murdered the queen and burned her body on the palace grounds. He then forced the king to appoint a new pro-Japanese cabinet and all Korean males to cut off their traditional topknots as a symbol of modernization.

Russian hegemony to the Russo-Japanese War (1896-1905)

In 1896, King Kojong was able to escape to the Legation and dismiss his cabinet. An angry crowd bludgeoned Prime Minister Kim Hongjip and two other cabinet officials to death in the streets, and the new conservative cabinet reversed some of the kabo reforms, but not the abolition of slavery and the examination system. The Japanese, however, recalled most of their troops and conceded Russian hegemony in military advisers and loans to the Korean government in return for concessions. It was ironic that King Kojong chose this time, in 1897, to change the name of the country to the Great Han Empire (Taehan cheguk) and proclaim himself emperor.

At least the Japanese withdrawal allowed some young idealists to organize a Korean independence movement. Sō Chaep'il (Philip Jaisohn) and Yun Ch'iho who had spent much time in the United States established the Independence Club in 1896. They held public meetings to demand independence, criticize current officials for selling out national resources to foreigners, and discuss the need for a participatory assembly or council. Their protest in 1898 over the Russian-Japanese negotiations for a possible division of the Korean peninsula and the arrogant demands of the Russian ambassador, Alexis de Speyer, for a coaling station, probably influenced Emperor Kojong to demand and obtain his recall, but Kojong only succeeded because the Russians had always been far more interested in Manchuria.

Kojong accepted the Club's demands for a privy council and agreed to appoint half its members from the Club, but he balked at removing conservative cabinet members and feared the Club wanted to replace the monarchy with a constitutional republic. He then ordered the arrest of the Club's leaders in November 1898, putting an end to the first attempt at independent, extra-bureaucratic political participation.

Soon thereafter, meagre attempts at reform were overwhelmed by Russian and Japanese rivalry. When the Russians rejected a Japanese proposal to acknowledge Japan's exclusive sphere of influence over Korea for one over Manchuria, Yamagata Aritomo pushed the
Japanese government to negotiate the Anglo-Japanese Alliance of 1902. By obtaining Great Britain's promise to assist Japan if any other nation assisted Russia in a future conflict, the Japanese stripped Russia of her former allies, France and Germany. Japan then attacked Russian forces in February 1904, sent its armies to occupy Korea, sank Russia's Baltic fleet, and pushed Russian forces back, but fearing defeat in a protracted war, she happily accepted Theodore Roosevelt's mediation and signed the Portsmouth Treaty in 1905 to end the war. Japan now obtained Russian recognition of paramount interests in Korea and Manchuria.

**From protectorate to annexation (1905-10)**

During the war Japan posted advisers to the Korean ministries of foreign affairs and finance, required approval of all Korean agreements with foreign countries, and reduced the Korean army to 8,214 men. She gained U.S. acquiescence to Japanese control in the Taft-Katsura agreement of 1895, in return for a disavowal of Japanese interest in the Philippines, and British acquiescence in the renewal of her treaty with Japan. Ito then established a Japanese protectorate over Korea against Kojong's will simply by declaring a majority cabinet vote in its favour even when no such vote had been taken. No one noticed Korean mass demonstration in the streets and the protest suicides of two high Korean officials, for all foreign ambassadors obligingly left Korea without protest.

Some Korean nationalists still sought a way to preserve Korean independence. Son Pyönghŭi, an ex-Tonghak leader, took refuge in Japan in 1901, became a convert to Westernization, and organized a Progressive Society in September 1904, that grew to over 100,000 members. Korean government persecution forced him to ally his society with the pro-Japanese Unity and Progress Society (Ilchinhoe), but his group split when the latter declared its support for the Japanese protectorate in 1905. He then gave up politics and organized the Religion of the Heavenly Way (Ch'ŏndogyo) that perpetuated Tonghak doctrine.

The Unity and Progress Society was founded in 1905 by Song Pyöngjun, a businessman in Japan for ten years. During the war it mobilized Koreans as baggage carriers for Japanese forces and established connections with Uchida Ryōhei, an advocate of a Japanese-led, anti-Western alliance of Asian nations. Uchida got Song appointed home minister in 1907, where he was able to obstruct nationalist associations like the Great Korea Association under Yun Chi'oho and Namgung Ōk.

Ito Hirobumi, meanwhile, had returned to Korea as the first resident-general early in 1906. When he disbanded the regular Korean army in 1907, many Korean officers took to the countryside to lead a guerrilla struggle of peasants that lasted for four years. The same year Emperor Kojong sent secret envoys to the meetings of the world peace conference at the Hague in 1907 to plead Korea's case for independence, but the plea fell on deaf ears. Ito responded by forcing Kojong to abdicate to his son, but he paid the price for his machinations when he was assassinated by the Korean patriot, An Chunggŭn in Harbin in 1909.

Ito's death brought to an end his plan to create a figurehead Korean regime, for Yamagata forced through the act of annexation in 1910. Those Korean officials Son Pyöngjun and Prime Minister Yi Wanyong, who aspired to leadership of a pro-Japanese Korean government, watched their political ambitions go up in smoke because the new colonial Government-general of Choson under General Terauchi Masatake stripped all Koreans of rights and opportunities for political participation. Korea then entered a humiliating period of thirty-five years of colonial subjugation.

**Colonial Period, 1910-1945**
Annexation and Administration

There was scant substance to the notion of Western supremacy in East Asia, but this myth nevertheless nourished Meiji Japan's ambition to offset Western power in the west Pacific and act as 'guardian' of East Asia's integrity. Accordingly, Japan became an imperial power whose chief colonial energies between 1890 and 1942 were directed to Formosa, Korea, and Manchuria. This larger and grander mission aside, a militarily restive and economically energetic Japan envisaged definite strategic and commercial benefits in so enlarging its political territory. These intended benefits largely determined the nature of Japan's colonial policies in Korea between 1910 and 1945.

The formal annexation of Korea on 22 August 1910 was almost universally hailed in Japan as a great achievement, and despite treaty clauses which Koreans believed obligated the United States of America to come to its assistance, no Western power expressed any opposition to the move. The Japanese armed forces were thus given a free hand in crushing the vigorous guerrilla resistance of the Korean 'Righteous Armies' (ubiyŏng) and in implementing colonial rule through the Government-General of Chōsen.

To a great many Koreans, however, the annexation was a humiliation and it is often referred to as the 'national shame' (kkuch'ŭl). The ensuing thirty-six years up to liberation from Japan in August 1945 were fraught with tension between Japanese colonial objectives and Korean nationalist and nationalist/socialist aspirations for autonomy. At the same time, tremendous change occurred in the social, economic and cultural lives of the Korean people, change which was associated with industrial developments, the introduction of 'modern' ideas and practices, and the breakdown of the traditional institutions centred on the yangban (ruling class). Besides the question of nationalism, therefore, this period was a time of accelerating change that affected increasing numbers of Koreans in more and more detail. It is possible that these changes prompted Koreans to think about their culture and national position as much as the fact of Japanese colonial rule itself.

Japanese Colonial Policy

Quite apart from the guerrilla campaigns and other forms of opposition to the annexation, Japan's objectives on the Korean peninsula were greatly frustrated by the adoption of an assimilation policy, that is, by the assumptions on which the policy was based, and by the inconsistent nature of its application. In summing up the official rationale of the assimilation policy, General Terauchi Masatake, the first Governor-General, disingenuously said, “It is a natural and inevitable course of things that two peoples whose ... interests are identical, and who are bound together with brotherly feelings, should amalgamate and form one body.” Dissenting voices among a few Japanese scholars and politicians over this egregious assumption were ignored, and despite the magnitude of the March First Uprising in 1919, which created a period of diplomatic embarrassment and administrative panic, assimilation remained the guiding principle throughout Japan's rule of Korea.

Logically, the assimilative principle ought to have involved the absorption of Korea into Japanese political structures and rights. This inconvenience had been circumvented in 1910 by recourse to the argument that 'when the [Meiji] Constitution was written, it did not anticipate the annexation of Korea.' In 1920, spurred by the March First demonstrations, Premier Hara Kei conceded that, “Korea and Japan proper forming equally integral parts of the same empire, no distinction in principle should be made between them, and it is the ultimate purpose of the Japanese government in due course to treat Korea as in all respects on the same footing with Japan proper.” However, at no point did this principle ever threaten the actual distinction that was embodied in the separation of the Japanese Diet from the Government-General of Chōsen and the independent, almost unlimited power of the latter in Korea.
The structure of the Government-General was essentially a continuation of that of the Residency-General of 1905-1910. The Governor-General, who was also commander-in-chief of the army and navy forces in Korea, enjoyed direct authority over the Secretariat, five departments, and seventeen affiliated offices of the Government-General. In accordance with the emphasis on direct control, local administration was also highly centralised so that it was efficient as a directive organ but ineffective as a means of assimilation. Local administration was divided into 13 Provinces, 12 Prefectures, 317 District Magistracies, and 4,322 Townships, the latter being reduced to 2,504 after 1919. Provincial governors, prefect chiefs and district heads were all appointed directly by the Governor-General.

Following reconsideration of colonial practice occasioned by the 1919 uprisings, the Government-General underwent its most extensive structural modifications of the colonial period. Designed to soften Korean opposition, the chief changes were replacement of military with civilian leadership, absorption of the military police into the ordinary police force, inclusion of an Education Bureau under the Secretariat, relaxation of school regulations, and granting permission for the publishing of vernacular newspapers and journals. However, attempts to broaden Korean political participation were shallow and half-hearted. For example, a scheme by Premier Katō to involve Koreans in the central administration in June 1924 was simply abandoned upon the discovery of a Korean Communist Party in Seoul in 1925.

In local government, the limited decentralisation that occurred in 1919 and 1920 related mainly to police matters, but it also heralded the only avenue to political involvement of a representative nature the Koreans were ever to obtain under colonial rule. In November 1920, elections were held for membership in new advisory councils at provincial and municipal levels. As the electoral system was quite new to Koreans, however, elections were held only in specially-selected places, and since the governors reserved the right to appoint council members, elected candidates remained few. In 1930 and again in 1933, the franchise criteria were broadened but remained financially very restrictive, and candidates were vulnerable to Government-General veto. Hence, while legally Koreans were given a voice in some local matters such as education, they were subject to administrative exclusion by decree of the Japanese colonial apparatus. By the 1920s, Japan had installed a bureaucracy of some 17,000 administrators over a population of less than 20 million Koreans.

With political participation out of the question, the Japanese implemented educational policies that were designed to bring about cultural and social assimilation. However, education was not a universal obligation during this period, and the failure of the Japanese colonial education system to transform any significant number of Koreans into loyal citizens of the empire (perhaps 18 per cent of Koreans were fluent in Japanese by 1945) was attended by a correspondingly heavy reliance on the arms of the law. The judiciary was not independent of the Government-General. Unlike for Japanese, there was no jury system for Koreans, and the supreme and all high courts were presided over by Japanese judges throughout this period. The implementation of the law was not generally a great deal harsher than had been the case before 1910 (flogging was abolished as a form of punishment in 1920), but the military and civilian police were plentiful, intrusive, and feared. It has been observed that colonial Korea was one of the most highly policed countries in the world, with one police officer, military or civil, for every four hundred Koreans. Moreover, the per centage of convictions per case was extremely high, averaging 96.8 per cent per year between 1910 and 1923. Yet it was the discriminatory nature of the law that caused most discontent. For the Japanese, one criminal code applied, for the Koreans another, and the greater severity of the latter confirmed in the minds of Koreans conscious of legal systems elsewhere, their belief that Japan was impeding Korea's social advancement.
The rule of the Government-General was thus characterised by efficiency on the one hand and a damaging discrimination on the other. As Governors-General Saitō and Ugaki discovered to their distress, the economic and social interests of the Japanese settlers in Korea and the ambitions of the armed forces were inimical to efforts to implement any real assimilation of the Korean populace. Discouraged by the recalcitrance of the Japanese settlers and alarmed at the Kwangtung Army's fanaticism under General Minami Jirō, Ugaki in 1936 asked in vain to be permitted to resign. Yet apart from a moment of uncertainty in 1919, Japan at no time allowed its rule over Korea to be seriously threatened in any material way by sustained Korean opposition. From the mid-1930s, Japan tightened its hold over the nation even more, a hold it only relinquished when forced to do so by its defeat at the close of World War II.

**Independence Activities**

Quite apart from the inner contradictions of Japan's colonial theory, it was opposition from the Koreans themselves that represented the most formidable obstacles to the assimilation policy. A people possessing the intellectual, religious, artistic and historical heritage of a proud civilisation were not inclined to submit to colonial rule that was predicated on a supposed Korean cultural inferiority. Thus Japanese imperialism stimulated the growth of national consciousness among Koreans, and to a considerable degree the nature, direction and strength of Korean nationalism in the twentieth c. has been determined by its struggle to regain independence from Japan.

Opposition to Japanese encroachments on Korea's sovereignty had begun as early as the 1890s, particularly after alleged Japanese complicity in the infamous assassination of the Korean Queen Min on 8 October 1895. This opposition was expressed in a number of ways, but chiefly through the campaigns of the 1896-1898 Independence Club (Tongnip Hyŏphoe) led by reformers such as Sŏ Chaep'il (1866-1951) and Yun Ch'iho (1865-1945), and the armed resistance of the Righteous Armies (ǔibyŏng) under the leadership of the old guard of Korean Confucianism represented by Ch’oe Ikhyŏn (1833-1906). The former became the inspiration of a number of pro-independence cultural and reformist movements that are often referred to collectively as 'independence enlightenment' movements. The latter continued a vigorous but extremely costly guerrilla resistance until this became impracticable in about 1913, after which armed resistance became focused around a number of expatriate communities across Korea's northern borders in North China, Manchuria and the Russian Maritime Provinces. Both major streams of the independence movement continued in various forms throughout the colonial period, and at times maintained reasonably close communications with each other.

**The March First Movement**

The greatest and most united concrete expression of the will for national independence was the 1919 March First Movement, in which more than a million Koreans participated, over a period of three months or so. This initially peaceful national uprising was conceived and organised chiefly by two religious traditions that had taken hold in Korea and had been competing with each other for the religious allegiance of the people: Ch’ŏndogyo, or the Religion of the Heavenly Way, and Protestant Christianity. If their co-operation was thus conspiratorial, it was also a symbol of the unprecedented unity of the movement that cut across boundaries of age, sex, education and social status, in addition to religion.

The March First Movement grew out of a rising determination among Koreans during the first decade of harsh military rule, a decade referred to as the Dark Ages, to make a stand for their country's political and cultural independence. This determination had been reinforced among the Protestants by hostile actions against their membership by the
Government-General that began with the 1912 Case of the One Hundred Five (paegoin sakkôn), in which Yun Ch’iho and large numbers of leading Protestants were arrested and tried on trumped up charges of plotting to assassinate Governor-General Terauchi Masatake, and continued with close police surveillance of their churches and attempts to force closure of their schools. The indigenous Ch’ŏndogyo religion, formed by Son Pyŏnghŭi (1861-1921) in 1904, was the successor to the late nineteenth-c. Tonghak movement which had already clashed with Japanese forces during the Sino-Japanese War of 1894-1895.

The March First Movement had its origins in the doctrine of the self-determination of nations espoused by the American President Woodrow Wilson at the conclusion of World War I. The movement was preceded, in fact, by the February Eighth Movement in Tokyo, which was organised by Korean students in Japan under the leadership of Yi Kwangsu (1892-?). These students composed a Declaration of Independence that directly appealed to the national self-determination principle and which became the forerunner of the March First Declaration of Independence written some weeks later in Korea by Ch’oe Namsŏn (1890-1957).

The date chosen for the movement was the day on which the Korean people from all over the nation had been permitted to travel to Seoul to pay their last respects to the recently deceased Korean Emperor Kojong (r. 1863-1907). The March First Movement itself commenced with a reading of the Declaration of Independence by the thirty-three signatories in the Myŏngwŏl restaurant in Seoul, followed by a reading before the large crowd that had gathered in Pagoda Park nearby. The crowd broke into chants of, “Long live Korean independence!” and crowded the streets for the beginning of one of the largest mass-movements in the twentieth c.

The movement was both planned and spontaneous. Readings of the Declaration had been scheduled for the same day in other provincial cities and the Protestant and Ch’ŏndogyo networks had been used to good effect. However the response of the public exceeded the expectations of even the most sanguine patriot. Within days the movement had spread to the entire country and was sustained for a full three months despite a chillingly brutal response by the colonial regime. After the demonstrations were finally quelled, the movement continued to inspire the creation of myriad independence organisations; the Japanese police reported up to 3 000 such organisations in 1921. Although this movement failed in its fundamental aim, the March First Movement remains at the zenith of the Korean nationalist movement.

The Korean Diaspora

The helplessness of the Koreans in the face of Japan’s military and political might in spite of the proportions of the March First Movement compelled Koreans abroad to engage in comprehensive preparations for independent statehood, although nationalist activities had begun well before the 1919 movement. Korean émigré communities were centred in Shanghai, in North and West Chientao and other parts of Manchuria, and in California and Hawaii, besides Japan itself. The populations of these communities expanded from the early 1910s for a number of reasons, including economic exigency and nationalist ambitions, and the largest, reaching around 560 000 in the early 1920s, was the group of Korean settlements across the northern border in Manchuria. In the main, nationalist leaders in North China and Manchuria trained Koreans for military offensives against Japan, those in Japan turned to educational and ideological preparations, while those in North America and to some extent Shanghai concentrated on diplomatic efforts and supported ‘enlightenment’ movements, meaning training in the economic, educational and political foundations of independent nationhood.

(a) North America
Activities in the United States centred on An Ch’angho (1878-1938), a former member of the P’yŏngyang branch of the Independence Club, who had originally travelled to California for study but by 1909 had focused his talents on organising the Koreans in the San Francisco area. He established the Hŭngsadan (Society for the Fostering of Activists), which was later organised in Korea as the Tonguhoe by Yi Kwangsu in 1923. An also founded the nationalist newspaper, the Kongnip shinbo, that later was renamed the Shinhan minbo. This news outlet carried on the traditions of the Tongnip shinmun (The Independent), the publication of the Independence Club, and featured articles that called for patriotism and reform of lifestyles, beliefs and ethics.

Another major Korean organisation in North America was the Korean National Association, which was led by another former Independence Club activist, Syngman Rhee (Yi Sungman, 1875-1965), who had fled to America in 1912. Rhee’s efforts were exerted at not the Korean residents of the United States, but instead at those in the ruling circles of the Western governments, aiming to secure support from politicians and governments in North America and Europe, and from the League of Nations, for Korea’s independence. A Korean National Association was formed inside Korea, and Rhee’s influence was further extended by his election to the presidency of the Korean Provisional Government in Shanghai in 1919. Rhee, however, chose to remain in the United States until after liberation in 1945.

(b) China, Manchuria and Siberia

As an international trading port endowed with a number of areas reserved for European diplomatic and trading headquarters known as the ‘Foreign Concessions,’ Shanghai was from early on a haven for pro-independence Koreans, who benefited from both its advantages for communications and the shelter from Japanese police afforded by the concessions. The Confucian reformer and patriot Pak Unshik (1859-1926) based himself in Shanghai from the 1910s, and there wrote his history of Korea, a counter to Japanese propaganda, and later his account of the March First Movement. After this movement, the Korean Provisional Government (Taehan Min’guk Imshi Ch’ôngbu) was established in Shanghai, and for some time the city became a focal point of independence activity for Koreans at home and abroad, and a point of intersection for a number of the more important groups that arose or reorganised in its aftermath.

Leadership of the New Korea Youth Association (Shin Han Ch’ŏngnyŏn Tang), founded by Chang Tŏksu (1895-1947) before the March First Movement, was taken over by Kim Kyushik (1881-1950), the Korean delegate to the Paris Peace Conference at the end of World War II, after Chang returned to Korea to found the nationalist Tonga ilbo newspaper and spearhead the cultural movement. Upon election to the Provisional Government, An Ch’angho moved from San Francisco to Shanghai where he attempted to apply his Hŭngsadan principles as a cabinet minister. An was joined by Yi Kwangsu, composer of the Declaration of Independence in Tokyo, after Chang returned to Korea to found the nationalist Tonga ilbo newspaper and spearhead the cultural movement. Upon election to the Provisional Government, An Ch’angho moved from San Francisco to Shanghai where he attempted to apply his Hŭngsadan principles as a cabinet minister. An was joined by Yi Kwangsu, composer of the Declaration of Independence in Tokyo, who subsequently returned to Korea to further the Hŭngsadan’s work on the peninsula itself. Yi Tonghwi (1873-1935), a guerrilla leader and early socialist who had been active in Manchuria, moved his headquarters to Shanghai for a time upon being elected Premier of the Provisional Government in 1919. Kim Ku (1876-1949), a radical nationalist, Premier of the Provisional Government in 1926, member of the guerrilla Uiyŏldan (Righteous Fighters’ Corps), and founder of the Hanin Aegukdan (Korean Patriotic Corps) in 1931, based his many undertakings in Shanghai throughout almost the entire colonial period. Finally, Shanghai was the venue for the Kungmin Taep’yŏhoe (Korean Delegates’ Conference) organised by An Ch’angho in concert with such major nationalist figures as Shin Ch’aeho (1830-1936), Yŏ Unhyŏng (1885-1947), Kim Kyushik, and Shin Kyusik (1880-1922).

Because of its proximity to the northern Korean border and the large number of rural
Koreans who migrated there in search of land and a living, Manchuria, and particularly North and West Jiandao, became natural havens for guerrilla activities. It was not until after 1919, however, that attempts were made to co-ordinate the various guerrilla forces for large offensives against the Japanese, and even then the enterprise was fraught with difficulties in sustaining communications, supply systems, and unity among the diverse bands scattered over the rugged terrain. However a few co-ordinated raids that cost the Japanese significant casualties in 1920 incurred fierce Japanese reprisals and a ‘mopping-up’ operation late in 1920 known as the Hunch’un Incident. The Provisional Government claimed that some 3 500 Koreans were killed, and over 3 000 homes, 36 schools and 14 Christian churches laid waste during this operation.

The Hunch’un Incident also marked the onset of Chinese-Japanese co-operation against Korean guerrillas. The Mitsuya Agreement signed by Zhang Zuolin for China in June 1925 severely restricted the freedom of Korean groups in West Jiandao who for geographical reasons had escaped the brunt of the Japanese counter-offensive. As Japan established itself in Manchuria from 1929, some Korean guerrilla leaders capitulated to the lure of Japan’s ‘Kyōwa Kai’ (Harmony Society). Sabotage and assassination activities by Kim Ku’s Korean Patriotic Corps in the early 1930s reinvigorated the guerrilla movement for a time and even attracted financial support from Chiang Kai-sheh’s Guomindang in 1934. However, increasing communist influence split the movement and worried the Chinese nationalists, and in 1935 the Ho-Umetu Agreement was signed to terminate Guomindang support of Korean revolutionaries. Upon the outbreak of war between Japan and China in July 1937, Korean guerrilla forces linked themselves more positively to Chinese nationalist and communist forces, and to the Soviet Far Eastern forces based in Siberia.

(c) Japan

Tokyo, from the last decades of the nineteenth through the early decades of the twentieth centuries, attracted nationalist and reformist leaders from around Asia and particularly from China and Korea. As such it served as a meeting ground for young activists from the East Asian nations and a source of ‘progressive’ ideas. Korean students who sailed to Japan from the 1880s to 1920s were mostly from the cream of Korean society and intelligentsia, but at least from 1908 included members of the newly rising group, such as Cho Manshik (1882-?) and Chang Tōksu, who had gained access to ‘new’ education through the Protestant missionary schools. In October 1912, the first Korean student association was founded in Tokyo, and in a comparatively short period these groups became widespread. Enjoying relative freedom of speech in Japan, Koreans debated the issue of Korea’s independence quite openly, and the venue for the debates was usually the Korean YMCA building in each locality.

The latter 1910s and the 1920s were the period of ‘Taishō democracy’ in Japan, and Korean students drew theoretical and moral support from a number of influential Japanese intellectuals during this time. But the chief inspiration for the young Koreans in Japan up to 1919 came from the pen of the brilliant Yi Kwangsū, who advocated a thorough revitalisation of Korean culture. It was mainly through the efforts of Yi and his colleagues that a line of communications was set up between Korean nationalists in North America, Japan, Korea, and Shanghai at the end of World War I to plan and co-ordinate a response to Woodrow Wilson’s principle of national self-determination. Yi himself travelled extensively between Japan, North China, Manchuria, and Korea before and after the February Eighth Tokyo and March First Declarations of Independence.

From 1922, many Koreans in Japan turned to socialist and communist ideologies, which they disseminated in Korea upon their return from their studies. Among the left-wing organisations operated by Koreans in Japan were the North Wind Society (Pukp’ung Hoe) and the January Society (Ilwol Hoe). As the number of Koreans migrating to the Osaka, Nagoya and elsewhere in Japan to work for Japanese enterprises as low-wage labourers
exceeded 300,000 by the early 1930s, left-wing activities among Koreans increased. The impact on Korea of the Korean communist movement in Japan during the colonial period was at least as great as that of its counterpart in Manchuria and North China, and with a greater ideological content.

The Cultural Movement

It is common, but not altogether accurate, to contrast the culturalist movement inside Korea with the military movements across the northern border. Many of the leaders of the two streams, such as Chang Tôksu in Seoul (after 1919) and Yi Tonghwì in Shanghai and Manchuria, maintained cordial relations and viewed their respective activities as complementary means to the same end of Korean independence. To some degree the difference in method was a matter of practicality, that is, a matter of what was feasible or productive inside Korea under the Government-General and what was possible abroad. The limited reforms introduced by the Government-General in response to the March First Movement offered greater freedoms in press and education and to some extent in economic ventures as well.

A central tenet of the culturalist movement was that under the circumstances then prevailing overt political opposition to the Government-General would be counter-productive. Therefore, the most practical action Koreans could take at that point was to equip themselves with the qualities and skills necessary for independence, so that when a genuine opportunity presented itself they could both gain freedom and retain it securely thereafter. The prime foci of their campaigns in the 1920s and 1930s were education, in both Western knowledge and Korea’s literary and historical heritage, and economic self-strengthening. A notable feature of this movement was the prominence and energy of women, led by Kim Hwallan (1899-1970), Esther Hwang, Im Songshin, Pak Indôk and others, who strove to improve women’s education, health, and economic and social status.

There were five main agents of the culturalist movement in Korea. First was the Tonga ilbo newspaper edited by Chang Tôksu from 1920, which published works of Korean literature, articles informing the people of new economic methods, and news of cultural, economic and even political activities in Korea and abroad. The second was the movement to establish a national university, which was somewhat successful with the establishment of Keijo (Seoul) Imperial University in the mid-1920s. Third was Cho Manshik’s Korean Products Promotion Campaign (Chosôn Mulsan Changnyôhoe) of 1923-1924, and the fourth was the Tonguhoe, the Korean branch of An Ch’angho’s Hûngsadan that Yi Kwangsu founded in Seoul in 1923. Finally, there was the Hûngôp Kurapu, or Society for Industrial Development, led by Yun Ch’ihø. Although these actions were severely hampered by the Government-General and all forced to cease activities by 1938, they contributed to the level of literacy and knowledge among Koreans, increased their experience in practical economics and administration, and promoted development and awareness of Korea’s literary and other cultural heritages.

The Socialist and Communist Movements

Various forms of left-wing ideology, from democratic and ethical socialism to Marxist-Leninism, swept the Korean peninsula in the early 1920s. Interest in socialism developed partly from the failure of the democratic nations and the League of Nations to consider Korea’s case in the Paris Peace Conference and later, from Washington and Pacific conferences. Whereas the culturalists advocated waiting for the right opportunity, the socialists and communists urged a creating of opportunity and thus favoured direct political methods. But whatever particular form of leftist thought was adhered to, Korean socialists and communists were motivated primarily by the nationalistic objective of ridding Korea of Japanese rule.
The first socialist party, the Korean Socialist Party (Chosŏn Sahoe Tang), was founded by Yi Tonghwi in Khabarovsk in June 1918. In April 1919 he moved its headquarters to Valdivostok and reorganised it as the Koryŏ Communist Party (Koryŏ Kongsan Tang). In May the Party was based in Shanghai, at which point Yŏ Unhıyŏng completed his Korean translation of the Communist Manifesto. However in September 1919, the Korean section of the Irkutsk Communist Party was promoted by Moscow as the All-Russia Korean Communist Party, causing a division in the Korean movement between ‘Soviet’ and ‘Korean nationalist’ communists. This division came to a head in June 1921 in a horrific armed clash, known as the ‘Free City Incident’, which claimed the lives of some 600 Koreans. When a third Korean communist group surfaced in Chita, the Russians in February 1923 impatiently, but vainly, ordered all factions to dissolve and form a united body. These different factions maintained links with counterparts inside Korea, but by the late 1930s merged into the Chinese and Russian communist parties and armies, thus forming what later were termed the Yenan and Soviet factions.

Meanwhile in Japan, Koreans formed the North Star (Puksŏng Hoe), North Wind, and January societies along with the Tokyo Korean Proletarian Youth League between 1922 and 1925. Whereas the focus of the groups to the north of Korea was on guerrilla warfare, these organisations were directed by students who devoted more energy to the study of socialism and to organisation and education of labourers. Many of these students, such as Chu Chonggŏn and Paek Namun, returned to Korea and formed clandestine reading societies where Marxist thought was studied and revolutionary action was planned. The Korean and Japanese communists merged as early as 1929, and by 1930 the combined movement boasted over 4,000 Korean members.

The first communist group inside Korea was the Seoul Youth League, formed in 1921 with connections to Yi Tonghwi, from which later split the M-L (Marxist-Leninist) faction. By 1924 three more groups had established offices in Seoul: the North Wind Society from Japan, the Tuesday Society (Hwayo Hoe) sponsored by the Irkutsk faction, and the Women’s League (Yŏsŏng Tonguhoe) affiliated with the Seoul Youth League. From 1922, Lenin indicated that Korean communists would not be recognised fully by the Comintern unless a Korean Communist Party was established inside Korea. The first such party was established on 17 April 1925 by the Tuesday and North Wind societies, and this was succeeded by three more parties in February 1926, February 1927, and March 1928. Troubled by factional struggles and Japanese suppression, none of these parties survived longer than nine months. They did, however, keep debate alive and directly or indirectly promoted worker consciousness, development of rural co-operatives, and concern among nationalists and others for the economic conditions of the mass of the people. The party members formed the core of the ‘domestic’ faction by 1945.

The United Front Movement

Cognisant of the need to combine all Korean groups who were committed to the task of liberating Korea from Japan, whatever their respective ideological positions, Yi Tonghwi had attempted to form a united front between left-wing and right-wing or centre nationalists during his term as Prime Minister of the Shanghai Provisional Government from August 1919 to January 1921. His efforts were seconded by a number of leaders at different times, but it was not until February 1927 that a united front movement was effectively organised, with its headquarters in Seoul. Called the Shin’ganhoe (New Korea Society), this united front established branches throughout the peninsula and achieved a membership of some 30,000 by 1930. The Shin’ganhoe published a manifesto and a policy platform, which indicated three main objectives: opposition to colonial policies harmful to the people; amelioration of the economic conditions of the people and promotion of co-operative societies; and continued efforts to increase the general level of education. Leadership of the united front was shared between national figures from the left and centre, but with lesser representation from the culturalist stream.
A sister body, the Kûnuhoe (Korean Women’s League), was founded in June 1929 with its own manifesto and platform, to promote the national, social, and economic interests of women. Although its leadership swung between Christian liberals such as Kim Hwallan and Marxists such as Ho Chongsuk, the Kûnuhoe did succeed, unlike the Shin’ganhoe, in publishing a journal. It also organised education for women, undertook surveys of factory conditions for female labourers, and campaigned for minimum standards of employment for women, including maternity leave.

On 3 November 1929, an altercation between Korean and Japanese students in the city of Kwangju in South Chôlla Province led to a street demonstration by the Koreans against the colonial education system. A number of leftist reading groups had been formed among the Kwangju students by Koreans returning from studies in Japan, and the tinder was dry for such a spark. Seizing their opportunity, the Shin’ganhoe leadership organised rallies in Seoul and sponsored the Kwangju demonstrations into a nationwide movement that involved thousands by March 1930. No repeat of the March First Movement eventuated as the Japanese police moved quickly to arrest Shin’ganhoe members around the nation. In addition to the arrests, the left-wing membership of the Shin’ganhoe were concerned at the extent to which the non-communist leaders were able to influence the course of the Kwangju uprising. Moscow also sent directives to the Korean communists to take over the united front. Thereupon, the communists mounted a campaign for the dissolution of the Shin’ganhoe with the intention of reconstituting it under a leftist charter, and in May 1931 the united front was dissolved. At this point the Japanese Government-General stepped in to prevent a reorganisation, and thereafter the left and right wings of the nationalist movement went their separate ways.

**Economic Developments**

The first half of the twentieth c. witnessed further development of a Korean capitalist class that had its origins in the previous c.. The period from the opening of Korea in 1876 through the industrial developments of the 1930s, resulted in profound economic and social changes that provided a more egalitarian atmosphere for business. Japanese intervention and regulation, however, tempered these new opportunities. Along with this new class, another new group, an industrial labour-force, became more obvious in the 1930s, although it had begun by 1910. The economic modernisation of the colonial period was certainly under way prior to the Japanese annexation of Korea and would no doubt have continued its momentum in any case. However, while it is important to acknowledge that capitalism was not simply an imposition on Korea by Japan, it is also necessary to recognise that in fact capitalism grew in Korea under colonial conditions, something which deeply affected the nature of capital formation and social change in Korea.

(a) **Land Management**

The land acquired by the Oriental Development Company on behalf of Japan from 1908 on was predominately former crown land and reclaimed or idle land. The small proportion of other land that fell into the company’s hands through the new registration laws came principally from poor peasant holdings, not from large estates. The original expectation that Japanese would migrate to Korea to buy or otherwise acquire and settle on Korean farmland never materialised. Consequently, land use during the colonial period proved the exception to the general practice of Japanese directly owning or managing the economy. The status of traditional land ownership was reinforced by the new registration laws, resulting in this period being a relatively good time for Korea’s landowning class, so long as they made good their opportunities and did not embark on open opposition to the colonial regime. Small-scale holdings declined, however, and with this decrease the rate of tenancy over the colonial period climbed from less than 40 per cent to nearly 60 per cent. At the same time, the numbers of Koreans immigrating to Manchuria in search of arable
land rose significantly.

(b) Industry, Trade, and Commerce

Agriculture remained the most important industry in Korea throughout the colonial period, although a structural shift towards secondary and heavy industries began in the mid-1930s. The proportion of the population engaged in agriculture in 1920 was around 80 per cent, but by the late 1930s this had dropped to just over 75 per cent. The structural shift is more apparent, however, if one compares the figures for non-agricultural production, which increased from 11 per cent of total output value at the beginning of the colonial period to 38 per cent at the end. Although some genuine development of Korea’s economic and even social infrastructure did occur, the guiding principle for industrial policy was the demands of the empire as a whole and of Japan in particular.

The chief agricultural interest of the Japanese was rice production. The removal in 1913 of the foreign rice import tariff from rice grown in Korea indicated the Japanese intention of integrating Korean rice production into the home economy. In the 1920s, a number of plans were pursued to increase the rice output of Korean farms in order to achieve imperial self-sufficiency in rice and provide a cheap supply of rice to Japan’s growing urban workforce. As a result, net imports of rice from Korea by Japan increased over the period of 1915 to 1935 from approximately 170,000 to 1.2 million metric tons. It should be noted, however, that the per capita rice consumption of Koreans declined during this period. Japan’s military involvement in China from 1937 especially ensured that the empire’s pressure on Korea’s rice continued through to 1945.

The strengthening of the land ownership system and a plentiful supply of agricultural labour gave landlords a relatively free hand in keeping land rent and taxes as high as the market would bear. This situation is reflected in the very high number of farmers’ strikes and protests through the 1920s and 1930s. No longer busy seeking political posts, some landlords invested their proceeds in non-agricultural industries such as textile manufacture or in banking establishments. But the landowners’ traditional exclusive access to wealth was challenged by initiatives taken by mostly non-elites in the commercial arena. Thus, there are numerous examples of those from the lower classes rising to positions of prominence such as the tenant farmer Pak Hungshik who founded the Hwashin Department Store. It was also this situation that lay behind the ‘self-help’ rationale of Cho Manshik’s Korean Products Promotion Campaign.

Koreans also took advantage of the abolition of the official monopoly of trade from the end of the nineteenth c., which gave rise to a new merchant class, the kaekchu. These middlemen also embraced the opportunities afforded by the colonial use of Korea as a source of Japan’s rice, which they traded in return for goods manufactured by the Japanese zaibatsu firms. A cluster of enterprises formed around their activities: construction of large warehouses, building and operating inns for commercial travellers, supply of packaging and transport of goods, and banking institutions which held funds in safekeeping for their merchant clients. Since the bulk of Korea’s trade was with Japan—around 95 per cent of exports and 80 per cent of imports in 1931—the Japanese relied heavily on the services of the kaekchu, who formed their own co-operative societies and rose from poverty to relative wealth.

Another development during the colonial period was the joint-venture system involving Japanese and Korean enterprises: most of the corporate capital of consequence in which Korean businessmen were involved was held in joint Korean-Japanese companies. Some Korean businessmen succeeded in operating independent companies. The most well-known of these are the Koch’ang Kim brothers, Kim Yŏnsu and Kim Sŏngsu, who took advantage of their fertile lands holdings, the rice export market, and the more relaxed company laws after 1920 to develop an independent textile industry, the Seoul Textile
Company (Kyŏngsŏng Pangjik Hoesa), into a prototype of the modern Korean family-centred chaebol conglomerates. These activities, however, were quite exceptional and depended upon judicious give and take with the colonial authorities.

From 1931, in conjunction with Japan’s creation of Manchukuo and its subsequent designs on North China, the Government-General pursued rapid industrialisation of northern Korea and greater exploitation of the area’s mineral resources. The proportion of Korean engineers and technical personnel to Japanese remained low, never exceeding 1 : 5 -- and Korean workers in these new industries were paid roughly 40 per cent less than the Japanese workers in Korea. An attempt by Governor-General Ugaki to redress this discrimination in 1933 was abandoned in the face of strong Japanese opposition. The industrialisation policy caused internal migration, from farm to factory, and, as mentioned earlier, effected the first noticeable shift from an agricultural towards a secondary industrial economy. A notable feature of this industrialisation was the incorporation into the urban labour force of large numbers of young women.

**Cultural Developments**

The cultural developments of this period can largely be attributed to the influx of foreign culture to Korea, mostly through Japan. It would be erroneous, however, to see the progress and innovations in education, literature and culture as being the result of Japanese intent, and should instead be viewed as continuations of the processes that were already underway during the late nineteenth c. Thus, the developments in Korean literature such as the genre of the ‘new’ novel (shin sosŏl), free-style poetry and the essay were not due to the Japanese presence in Korea, but instead the result of Koreans exploring new areas of literature. The same can be applied to the developments in education during this period with the Japanese actually restricting growth in this area by Koreans. The focus of the Korean educational system during the colonial period was to produce Koreans with the minimum educational level required for performing the menial tasks that their colonial masters required of them. Culturally, the goal of Japan was to assimilate Koreans into the greater Japanese Empire, and this task was to be accomplished by obliterating Korean culture in totality. Hence, the Japanese presence in Korea was detrimental to the preservation of traditional Korean culture, and moreover injurious to the realisation of new Korean culture.

**Forced Assimilation and War**

By the late 1930s the Japanese objectives for Korea underwent a dramatic change as the focus of Japan shifted to her expansionist plans for Asia. To better facilitate the use of Korean human and natural resources, the Japanese embarked on a program of forced assimilation of Koreans into Japanese culture and lifestyle. To this end the use of Korean language was prohibited at schools, and all students and teachers were required to memorise an oath of allegiance to the Japanese emperor. Other measures designed to obliterate Korean national consciousness include the forced adoption of Japanese-style names by all Koreans who had dealings with the government in 1939, the closing of all Korean language newspapers except the Japanese propaganda organ (Maeil shinbo), and the founding of pro-Japanese social organisations to ensure compliance on the part of Koreans and their social organisations. Thus Japan had established her presence in every aspect of Korean society in an attempt to destroy all traces of Korea’s traditions.

After the Japanese attack on Pearl Harbor in December 1941, Japan began a full-scale mobilisation of Korean human resources for her war effort. In actuality, this mobilisation had already begun in 1940 with the formation of Neighbourhood Patriotic Associations (Aikoku-han) throughout Korea, and numerous groups of these associations helped the colonial government institute rationing, the collection of ‘voluntary’ donations, and compliance with government edicts. Moreover, this period witnessed educational policies
aimed at supporting the war and students were required to contribute labour services to the government in addition to undergoing military training.

The large-scale mobilisation of Koreans during the war years contributed to the massive drain of Koreans from their country during the final years of the colonial period. Korean men were subject to conscription into the Japanese army while others were recruited to work as labourers in either mines in the north of Korea or factories in Japan. This resulted not only in the displacement of Koreans from Korea, but also from the southern provinces to the northern ones. In addition to the conscription of Korean men, the Japanese also conscripted women for the so-called 'Comfort Corps' that provided for the sexual needs of the Japanese army. In all some four million Koreans, nearly 16 per cent of the Korean population, were living outside of Korea by the time of liberation in 1945.

Conclusion

The colonial period in Korea came to an abrupt conclusion with the Japanese defeat by the Allied forces in August 1945. The day that the Japanese surrender was announced to the Korean people was one of unrestrained joy, as the Koreans now seemingly controlled their own destiny for the first time in almost forty years. This period witnessed some of the most momentous changes in Korea's historical experience: the 500-year-old Chosón dynasty ended, and with it the monarchical system as a whole; the nation lost its political and economic independence and became a Japanese colony, a development that has had a profound psychological effect on the Korean people; debate and division over liberal democracy versus communism commenced; the economy began its move in earnest from an agrarian to a secondary industrial economy, accompanied by an increase in the demographic, political and cultural importance of urban over rural areas; education changed in form and in content and began to spread more widely among the population, aided by a vigorous publishing industry; women participated in the public arena, in education, politics and economic ventures; and new religious movements arose and involved themselves in all the major issues of the times. This short period of thirty-six years is thus a pivotal one in the experience of Koreans in the modern era. Change was both rapid and dense. Although the fact of colonial rule has rendered the legacies of this period ambiguous, there is very little in the subsequent history of Korea, north and south, that does not relate back to phenomena that were initiated or developed in the previous four decades.

Contemporary Period

The Liberation and Partition of Korea (1945-1948)

As much as any one country can, post-war Korea has become a symbol of contemporary times. Humanity's tensions and conflicts as well as its expectations, successes and frustrations all have found themselves mirrored in its experiences.

The liberation of Korea came about through the defeat of Japan by the Allied Powers, and, as in Germany, the country's partition also emerged from this event. With the surrender of Japan on 15 August 1945, the Korean peninsula thus entered a new era of opportunities,
challenges and tragedies and they were all inextricably entwined with the tentacles of certain
decisions made much before the Pacific War ended.

At the Cairo Conference of December 1943 the United States, Great Britain and China had
pledged to dispossess Japan, after its defeat, of its colonial territories, and had agreed that
Korea should "in due course" attain full freedom and independence. Later, in its declaration
of war against Japan the Soviet Union had also echoed this intention.

The initial Korean euphoria over their nation's liberation against the backdrop of these
announcements soon dissipated, however, as the United States and the Soviet Union fell
out with each other over their global and Asian ideological and strategic ends. This mutual
gulf and antagonism between the two postwar superpowers, dubbed as the Cold War,
quickly spilled over into the Korean peninsula. It was not helped by the fact that the Korean
people themselves, whose loyalties and preferences were scattered among scores of
political groups on the left, right and centre of the ideological spectrum, could not develop
anything remotely akin to a national consensus on the future shape of Korea. The fact that
the United States and the Soviet Union had jointly decided to divide the peninsula
temporarily at the 38th parallel for the purely military convenience of accepting the
surrender of Japanese forces in Korea - in the southern zone by the American troops, in the
northern zone by the Soviet military - complicated the situation further. This arrangement
tended to be frozen into an enduring separation as the American - Soviet rivalry later
intensified amid the civil war developments in China, which ominously seemed to indicate a
future victory for Mao Zedong's Communist Party over Jiang Jieshi's Nationalist Party. All
this, however, came at the end of a fitful process of diplomatic negotiations between the
two superpowers to resolve the Korean problem.

Both the United States and the Soviet Union had initially wanted to establish a five-year
trusteeship over Korea involving them, Great Britain and China as the trustees. Ostensibly,
the Korean people needed to be trained, under a provisional government, for their future
role as a sovereign and independent nation. The proposal, first broached at the Yalta
Conference of February 1945 and later confirmed at the 7 December Conference of Allied
foreign ministers in Moscow, drew vehement opposition from almost all Korean groups at
the beginning as insulting to their dignity, although the communists among them
subsequently came to support the concept. A United States - Soviet Union Joint
Commission held several meetings between March 1946 and October 1947 to hammer out a
design of the trusteeship structure, but foundered on sharp disagreement over which
Korean organisations were entitled to participate in the provisional government.

In the Southern Zone, the United States Army Military Government (USAMGIK) under
General John R. Hodge tried to maintain a semblance of order and, though handicapped by
a severe lack of knowledgeable American specialists in Korean language, history and
culture and hampered by unclear policy directives from Washington, endeavoured to deal
with various Korean social and political organisations.

Hostile to the revived Korean Communist Party and to the 'Korean People's Republic' -- a
self-styled left-oriented government formed after Japan's surrender -- the U.S. military
authorities attempted to form a coalition regime of Koreans from the moderate left
represented by Yō Unhyōng (Lyuh Woon Hyung), and the moderate right led by Kim
Kyushik, a returned vice-chief of the Korean Provisional Government based in Shanghai.
Amid much tension and violent clashes between these groups and between them and the
communists, General Hodge created a South Korean Interim Legislative Assembly to help
govern the Southern Zone.

Ignored, however, by both the extreme left and the extreme right, the assembly remained a
non-actor on the political stage. Meanwhile, the artificial division of the country was daily
compounding its social and economic problems. Physical movement between the two zones
was tightly controlled, and the light industries and farmlands of the South were woefully
dependent on the mercy of the northern zone for many raw materials, heavy-industry products and hydroelectric power. Koreans returning from Japan and its former Chinese possessions aggravated the unemployment problem and labour unrest became endemic. Frustrated over its inability to resolve the Korean issue, the United States turned over the matter to the United Nations (UN).

The UN, through a temporary commission on Korea (UNTCOK) headed by India's K.P.S. Menon, decided to hold elections in Korea as a preparatory step toward forming an independent Korean government. Denied access to the Soviet Zone, the UNTCOK could hold elections only in the south. Many south Korean groups opposed such a move, fearing that it would sow the seeds of a permanent division. Amid this resistance, some further futile moves to reconcile the differences between the two zones, and the assassination or 'disappearance' of several leading political figures including Yŏ Unhyŏng, the elections were nevertheless held in May 1948. Dr Syngman Rhee (Yi Sungman), a freedom fighter in exile now back in Seoul, emerged as the chief victor and became head, first, of the new national assembly and then as president of the new Republic of Korea (ROK), which was officially inaugurated on 15 August 1948. This led the northern zone to sever all vital ties with the south, including the electricity supply, and to establish its own independent regime on 9 September, called the Democratic People's Republic of Korea (DPRK), based in Pyŏngyang. The leader of this northern government was Kim Il Sung (Kim Ilsŏng), a former guerrilla leader who is said to have conducted campaigns from Russian and Manchurian redoubts against Japan before liberation. The governing party of the north, forged earlier from the merger of all existing leftist groups, was called the Korean Workers' Party. American and Soviet occupation forces left the Korean peninsula upon the transfer of power in each zone.

The First Republic: From the Syngman Rhee Era to the April Nineteen Revolution (1948-1960)

While the North came to be ruled by a Stalinist regime with close military and economic ties to both the Soviet Union and, after 1950, the new People's Republic of China (PRC), Syngman Rhee's South Korea from the outset acted out all the patterns of a typical anti-communist, right-wing, authoritarian government tied to and dependent upon the West, especially the United States. These measures included the repression of political opponents; severe press controls; politicisation of the educational system, the military, police and judiciary; frequent recourse to national-security legislation; together with the intimidation of ideologically unacceptable elements by paramilitary thugs through midnight phone calls and violent acts, including assassinations. The unrestrained use of forced constitutional amendments and martial-law decrees strengthened and maintained the regime's hold over the citizenry. North Korea's 25 June 1950 attack on South Korea (The Korean War), leading to the most destructive and fruitless armed conflict on the Korean peninsula since the late 16th c., only heightened and accentuated the South's fears, weakened its already limited democratic potential and reinforced its tendency toward police-state methods of governance.

When Syngman Rhee was not crusading for reunification with the North on his own terms, he was trying to eradicate all ideas of accommodation with Kim Il Sung, who, it must be stressed, was the shaper of an even more recalcitrant system on his side. In accordance with U.S. Secretary of State John Foster Dulles' vision of the world as a stage for an epic struggle between the forces of good, represented by the West, and the forces of evil, represented by the Soviet Union's alleged goal to communise the world, Syngman Rhee rejected any official dealings with communist regimes anywhere (including that of Yugoslavia), was suspicious of the non-aligned countries, built up close ties with Jiang Jieshi's Nationalist regime on Taiwan and helped shape an even closer military and economic relationship with the United States and most of its 'Free World' allies. The centrepiece of the new configuration was the US-ROK Mutual Security Treaty of 1953.
under which American ground, air and naval forces and American strategic and tactical weapons came to be an integral part of South Korea's defence structure. However, from within this circle of Korean allies, the pro-U.S. Japan remained excluded due to its harsh colonial record on the peninsula.

With the use of martial law in 1952, two railroaded constitutional amendments in 1952 and 1954, election rigging and similar fraudulent means, Rhee managed to stay in power without interruption until the spring of 1960 under the banner of the Liberal Party, which was tightly controlled by him and a coterie of his loyal supporters in the National Assembly, the army, the police, and the civilian populace. In the March 1960 presidential election, however, the Liberal Party's misuse of power sank to an all-time low. While Rhee was easily reelected due to the sudden death of his chief rival Cho Pyŏngŏk in the United States -- in 1956 Rhee had 'benefited' from a similar circumstance when his main opponent, Shin Ikhŭi, died of a heart attack ten days before the election - his vice-presidential candidate Yi Kibung, a lacklustre henchman, garnered an extra-ordinary margin of 8.3 million votes against the 1.8 million votes of his popular opponent, Chang Myŏn (Dr. John M. Chang) of the Democratic Party. Suspecting blatant fraud, college and high school students in both Seoul and several other cities held massive protest demonstrations. On 19 April some thirty thousand youths marched to the Blue House - the presidential office-cum-residence. Fearing an attack on the president the police fired on the demonstrators to stop the march, causing at least one-hundred and forty-two deaths and one-thousand other casualties. On 25 April, three-hundred university professors expressed their solidarity with the students by holding a rally in front of the National Assembly and demanding Rhee's resignation. Meanwhile, the United States officially condemned the response of the police, and Martial Law Commander General Song Yŏch'ŏn refused to fire on the new protesters. Driven into a corner, Rhee resigned on 26 April, and two days later, Yi Kibung, his wife and their two sons committed group suicide, apparently as an act of atonement for Yi's role in causing the tragedy. At any rate, the First Republic had come to an end. The entire series of events soon acquired a legend-like aura as the April Nineteen Revolution.

The deeper reasons for this upheaval were, however, more complex than its immediate causes, i.e. Rhee's corruption and his deceitful governing style. They were economic, political and cultural. Despite the Korean War and its devastating toll, South Korea's economic development under Syngman Rhee was quite respectable. The G.N.P. was, for example, 5.5 per cent from 1954 through 1958, and a Seven-Year Economic Development Plan adopted in January 1960, if allowed to be put into effect, would surely have made further growth possible, given the expected inflow of an average $200 million in annual aid from the U.S. and additional hard-currency assistance from other foreign sources. In addition, a land reform program had been enacted in 1949 and fully implemented after the Korean War, reducing tenancy and increasing peasant proprietors. Yet the overall resources of South Korea could not keep pace with other occurrences. There was, for example, a much faster rate of educational expansion. By 1960, over seventy per cent of the populace was functionally literate and there was an explosive growth in the number of universities and colleges. By 1960, again, enrolments in these institutions had increased twelve times from the figures in 1945. The freedom and dissent-oriented print media, led by such major newspapers as the Dong-A (Tonga)Ilbo and the Chosŏn Ilbo - the former's circulation rose from 20 000 at the end of World War II to 400 000 in the mid-1950's - and the equally democratic content of higher education under the influence of South Korea's new Western nexus had steadily created serious pockets of alienation in the society over the years. Combined with rising unemployment and under-employment of the educated youth, this mix became a seething cauldron of discontent and anger in the urban centres of South Korea throughout the 1950s. The events of April 1960 were just the last straw.

Finally, cherishing the traditional Confucian self-image that as part of the educated elite of
the nation they should bear the burden of rectifying misgovernment, the students naturally fell into their role as idealistic guardians of moral purity against moral decay in high quarters. They were, of course, thoroughly outraged at the Liberal Party's and Syngman Rhee's misuse of the National Security Law, meant for national defence, as a political tool against the government's domestic political foes. This heroic and successful challenge to a despised regime created much exhilaration, but it could scarcely solve the many systemic problems festering in the body politic. At any rate, from the ashes of the First Republic took shape the Second Republic.

The Second Republic: 1960-1961:

Under the acting presidency of Hồ Chí Minh, the foreign minister until Rhee's resignation, the National Assembly revised the constitution to create a bicameral parliamentary system of government headed by a prime minister responsible to the legislature. To control future abuses of executive power this was considered essential by the law-makers. Rhee was also persuaded to go into voluntary exile in Hawaii, taking himself out as a potential rallying point for those still wedded to his leadership despite his advanced age (85). Under the new dispensation the Democratic Party emerged with a decisive majority in the July 1960 elections for the National Assembly. However, due to squabbles between the two leading factions of the new Prime Minister Chang Myon and the nominal President Yun Posôn, the party could not govern the nation effectively. Cabinet reshuffles became the order of the day. Raucous demonstrations and work disruptions by students for often unrealistic clean-ups and reforms in the economic and political systems and for the opening of an immediate dialogue with North Korean leaders became a tiresome routine. A self-styled reformist faction within the military also wanted the Chang government to purge those from the armed forces perceived by this faction as corrupt. The attitude of the government over these issues, when expressed in rare actions of decisiveness, sometimes led to yet more Rhee-like laws to suppress dissent.

Both the supporters of democracy and those opposed to it thus found the Chang government wanting - the former for its not being democratic enough, the latter for its not being tough enough, soon enough. Amid all this turmoil, Yun Posôn's faction broke away from the Democratic Party to form its own New Democratic Party in November, making the ruling party still weaker and totally bereft of its original unity, purposiveness and promise. Taking advantage of its vulnerability a small group of determined young army officers led by Major General Park Chung Hee (Pak Ch'onghui) and his nephew Colonel Kim Chongp'il decided to seize power through a coup d'etat. On 16 May 1961 they struck in a bloodless uprising, removed Prime Minister Chang from power but kept President Yun in place as the figure-head president over a junta-led Supreme Council for National Reconstruction (SCNR), a move clearly designed to put the stamp of legitimacy on an otherwise illegal and insubordinate action. Thus ended South Korea's first experiment in what at the beginning was seen as authentic democracy; and thus also began a long period of military overlordship of South Korea, first in uniform, then in civilian clothing, that did not yield to genuine civilian rule until late 1992.

The Third and Fourth Republics: The Era of Park Chung Hee (1961-79)

The SCNR's avowed goals were to restore and keep order, protect the nation from external threats, cleanse the government of corrupt elements, install morally upright leaders and rejuvenate the economy. The Korean Central Intelligence Agency (KCIA), a new creation of Colonel Kim Chongp'il, became the self-styled watch-dog of national security and well-being under the SCNR, but soon itself came to be dreaded for it ruthless pursuit of the junta's political opponents, both at home and abroad, in the manner of many secret-police organs in earlier Korean periods and in other contemporary authoritarian states. Abductions and illegal detentions as well as fraudulent trials, tortures, convictions and punishments of Park's political rivals and critics were soon being widely reported abroad as the methods by
which the KCIA kept the lid tightly closed on dissent.

Park's seizure of power was severely criticised in the United States. Recognising his country's heavy dependence on American military and economic aid Park and his cohorts decided to doff their uniforms and don civilian clothing. In part, of course, this was also done to obtain a fig leaf of legitimacy at home -- where the Confucianism-derived regard for men of culture (man) remained high and for men of arms (mu) low.

Using a newly-drafted constitution approved by a popular referendum in December 1962, Park decided to hold a new presidential election in October 1963, with himself as the candidate of the Democratic Republican Party (DRP) -- another handiwork of Kim Chongp'il. He won the election against Yun Posôn, the New Democratic Party candidate, by a margin of just 0.5 per cent, testifying to Park's new, yet by no means enduring sensitivity to the procedures of a democratic election. In the subsequent National Assembly elections, however, due to large-scale government-enforced purges of unacceptable politicians, his party won an overwhelming 110 seats out of the total 175. Park and the DRP also won the 1967 and 1972 presidential and National Assembly elections, but to ensure his continued command of power and leadership in the future Park soon resorted to another coup, this time without excessive show of military muscle, but nevertheless illustrating the base of his strength clearly by yet another proclamation of martial law. This took place in October 1972.

He also abolished the National Assembly, closed down all higher educational institutions, tightened controls on free political activity even further and gagged the press more categorically than before. A new charter called the Yusin ('Revitalisation') Constitution was put into effect after yet another national referendum, under which the president was to be elected by a rubber-stamp body called the National Conference for Reunification. Park also reserved the right to issue wide-ranging emergency decrees. Within the next three months many such decrees were issued, the most infamous of which was Emergency Decree No. 9. It made it a criminal offence to attack the new political order or even to cover such criticism in the press. Park defended these draconian orders as necessary to protect the country from North Korean threats. Former President Yun, many vocal dissidents, and eminent opposition leader Kim Dae Jung (Kim Taejung), who had contested the 1971 presidential election, soon found themselves in gaol for not heeding Park's stern commands. The most chilling incident of Park's new regime was the 1973 abduction from a Tokyo hotel of the outspoken Kim Dae Jung by agents of the KCIA. They had planned to kill him on their way back to South Korea, but according to official reports circulating much later (in 1993), were prevented from doing so by the timely intervention of U.S. Ambassador Philip Habib who had been alerted by U.S. surveillance agencies.

Park's repressive regime made him a much hated figure both at home and abroad. In 1974 a South Korean resident of Japan on a visit to Seoul tried to shoot him at a public function but ended up killing his wife, Yuk Yongsu. The DRP's standing in the National Assembly suffered much decline in 1978 as new opposition leaders like Kim Young Sam (Kim Yongsam) began to speak up with renewed boldness again. On 13 October 1979, all opposition members of the assembly resigned to protest Kim's forced ouster from it for having assailed Park's authoritarian methods. Student groups once again followed with massive demonstrations in Seoul, Pusan, Taegu, Masan and other cities, only to be met with yet another series of local martial-law orders and arrests. Park's style now alienated even the KCIA Chief, Kim Chaekyu (Kim Chaegyu). On 26 October 1979 at a dinner he shot and killed Park and several other officials, claiming that this was all done for the sake of making democracy safe in South Korea. Park's self-appointed role as South Korea's political steward thus came to an end as horrible as its beginning and course throughout.

While Park's political style is noted for its anti-democratic and anti-human rights features, most analysts, including many of his detractors, acknowledge his contributions, some even
calling them sterling contributions, to South Korean's economic development and his role in fostering a strong nationalistic consciousness among his people. Paradoxically, this latter role was played out at a time when South Korea was increasingly drawn into the economic embrace of both the U.S. and Japan.

Through a planned development model borrowed substantially from Japan, which involved close governmental guidance and direction of private enterprise to implement nationally determined economic priorities, Park goaded the South Korean economy toward great leaps in production, construction and exports. With massive investments, through successive five-year development plans, in infrastructure such as the Seoul-Pusan Expressway and other major arteries, favourable treatment through tax breaks, subsidies, loans, foreign-exchange allocations and access to raw materials, to carefully chosen private conglomerates (pejoratively called chaebol, or 'financial cliques', as in Japan, where they are known as zaibatsu), suppression of labour unrest, forced maintenance of low wages, expansion of existing industries and the building of new ones such as steel, petrochemicals and shipping, Park helped set the country on a course that in the 1980s came to be widely admired by observers as the 'Miracle on the Han [River]'. (It is, of course, a rhetorical flourish that obscures rather than illuminates the hard work of both the government and the people in achieving the goals). While the 1973 Oil Shock and inflation certainly took their toll, the GNP still registered a stunning average growth rate of over nine per cent per annum during the Park era. After 1972, the rural sector got special attention under Park's Saemaul undong ('New Community' Movement). Better credit, new agricultural technology, extension services, farm price supports, improved rural education, product diversification, better health facilities, and electrification transformed the rural scene dramatically. By the late 1970s many of the thirty-six thousand rural settlements of South Korea began to take on the appearance of prosperity, with tiled-roof dwellings, television sets, farm machinery, and private as well as cooperative commercial operations dotting the landscape.

Through the building and maintenance of patriotic symbols such as statues of heroic historical figures like Admiral Yi Sunshin of the 16th c. or freedom fighters of the 20th c., historical parks, battlegrounds, museums and similar other commemorative projects, Park sought to create a widely-shared national pride in Korea's past in order to stimulate a strong competitive urge for success in the international economic arena and for general nation-building mobilisation.

For vital financial aid and scientific and technological assistance Park first relied heavily on western sources, especially American, and on earnings from remittances of three-hundred thousand Korean soldiers, businesses and employees serving in combat, logistical or civilian duties or activities in Vietnam under contract with the United States, during 1965-1973. He also normalised relations with Japan which led to the inflow of one billion dollars in Japanese governmental and commercial aid between 1965-1975. Large construction projects overseas, especially in the Middle East, and increasing domestic savings proved to be equally vital. While the decision to send soldiers to Vietnam and normalise relations with Japan were highly controversial, Park did not, as usual, allow any opposition to come in the way, and from the strictly economic point of view they paid off handsomely in the long run. In diversifying and expanding the Korean economy, Japan's direct and indirect role later came to be as important as that of the United States and was much greater than that of all other western countries combined.

Park also opened South Korean foreign relations wider by setting up diplomatic or consular ties with many non-aligned countries, notably India, Egypt and Indonesia. He was determined to make South Korea strong enough to negotiate with North Korea from a position of strength when the time was ripe according to his own perceptions.

Reemergence of the Military and The Fifth Republic: The Kwangju
Uprising and the Chun Doo Hwan Regime, (1980-88):

With Park's assassination, the vacuum at the top was temporarily filled by Choi (Ch’oe) Kyuha, a long-time Park loyalist and premier who had no significant political following of his own in the DRP, the military, the bureaucracy, or the general public. He functioned effectively as president only until the end of 1979, when through a series of military actions the generals started to come back into power. Choi relaxed the political system by abolishing the hated Emergency Decree Number 9, freeing many political prisoners, including Kim Dae Jung, and restoring their civil liberties. He also promised to help enact a new, more democratic constitution. By May 1980, however, many college student groups were once again marching in the streets, demanding the lifting of martial law in force since Park’s assassination, labour rights, university and college autonomy, protective treatment of farmers, and full press freedoms.

In early December 1979, Lieutenant General Chun Doo Hwan (Chon Tuhwan), head of the Defence Security Command and a group of his cohorts including Major General Roh Tae-woo (No T’aeu), had already, through a number of politico-military manoeuvres, taken over leadership of the army and the KCIA. Strengthened by such power and emboldened by other ‘in-house’ purges, General Chun struck for full-scale seizure of power when the student troubles broke out again. On 17 May 1980 Chun ordered the closing down of all colleges and universities, arrested Kim Dae Jung and even some Park loyalists such as Kim Chong’pil, imposed fresh censorship, and decreed new restrictions on all political activity, designed to retract the concessions granted earlier by Choi.

Such a hard-line stance led to a gruesome massacre in the city of Kwangju, South Cholla Province, between 18 and 27 May 1980. Kwangju was the political base of Kim Dae Jung, the city's most celebrated son and political dissident. Angry demonstrations starting with 200 Chonnam University students, quickly expanded to include more students and, eventually, many citizens. Unable to control the demonstrators, the city police sought central government help. A Special Forces detachment sent by the Martial Law Command headed by Chun crushed the demonstrations by assault-type action, killing many in the crowd. Rumours soon gained currency to the effect that the special forces had been sent by Chun and his chief aides, most of whom were of Kyongsang Province background, in a diabolical attempt to wipe out all potential sources of political trouble from the traditionally despised and maltreated South Cholla Province.

The political cauldron in Kwangju now boiled to new heights. On 25 May a crowd of 50 000 people took to the streets demanding an end to martial law and the freedom of Kim Dae Jung. After some confused and abortive citizen attempts at defusing the situation, the army once again intervened through yet more attacks on the demonstrators. In the predawn hours of 27 May, a full division launched the attack, killing more people. The total death toll as a result of more than one week of turmoil was conservatively put at 200 by the army's own later investigation, but some disinterested observers put the figure as high as 1 000.

This bloodbath widened South Korea's civil-military chasm further, poisoned the already delicate relationship between two major provinces and created a more festering brand of antagonism in some social sectors, especially among left-inclined student leaders, toward the United States. The last consequence was in part due to the fact that the chief American military official in South Korea, General John A. Wickham, Jr., had freed South Korean troops under General Chun from the United States-South Korean Combined Forces Command, thus indirectly signalling support for the crackdown. (Later, President Reagan was to give this action more explicit support, lending apparent 'credence' to the theory that the American government was part of a 'conspiracy' to suppress South Korean democratic aspirations). Meanwhile, the increasingly hapless President Choi resigned under pressure. On 5 August, Chun retired from the military and then had himself elected as the president by the well-emasculated electoral college called the National Conference for Unification.
It rubber-stamped him with 2,524 of the total 2,525 votes, the lone dissenting voice being declared invalid.

Like the first military ruler Park, Chun promised a clean government, vigorous economic development and, once again, a new constitution. The draft of this constitution was approved by a national referendum vote of 91.6 per cent on 22 October 1980. While on the surface it offered some democratic freedoms such as an absolute guarantee of civil liberties, including the right to privacy, prohibition of torture and invalidation of trials based on forced confessions, it gave the new one-term, seven-year president the extraordinary power of dissolving the National Assembly at will. In addition, the Assembly could not hold the president accountable for his actions. Until the election of a new Assembly, the wholly appointive Legislative Council for National Security, yet another variation on South Korea's rubber-stamp legislatures, was to make laws unencumbered by political parties, all of which were dissolved. Coupled with the enforcement of yet new purges, designed to weed out several thousand 'corrupt and unclean' elements from central and local government bodies, private and public corporations, universities and the press, all this set the stage for Chun's unchecked control of South Korea until the summer of 1987. A sham trial of Kim Dae Jung, convicting him of treason and sentencing him to death was the most chilling evidence of Chun's constitutional despotism.

In foreign policy and economy Chun kept the tested Park policies essentially untouched. Relations with the United States were solidified further as the conservative Reagan administration took charge in Washington. It welcomed Chun into the White House and later used this connection to win commutation of the death sentence, and eventually freedom, for Kim Dae Jung. Japan's role in Korean economic development also continued to grow. The construction-production-exports orientation of the economy achieved even higher levels of performance, except in 1980. Growth rates between 1981-1988 regularly ranged above 7.0 per cent and sometimes exceeded 12.0 per cent. Consumer industries and labour wages also received much support and by the mid-1980s South Korea was showing all the signs of a prosperous middle-class steadily gaining ground, with private cars, apartments, fine clothing, modern furnishings and vacations becoming a part of the normal life style of an increasing number of people. Multi-billion-dollar conglomerates such as Hyundai, Daewoo, Samsung and Lucky-Goldstar became household names, not only in South Korea, but in many overseas markets on all continents.

Despite this record of economic accomplishment Chun remained perhaps the most despised president in all of South Korean history. The comparison was often drawn with Park Chung-hee, and Chun always seemed to come out worse. He had neither Park's charisma nor his patriotism and personal legitimacy. Park ruled at a time when economic development was the nation's top priority and the general public's political sophistication was low. Park's dedication to the nation and his apparent non-interest in amassing a personal fortune through misuse of power were widely acknowledged. Chun struck most people by contrast as a gangster-style usurper and his declarations of creating a clean government struck a ludicrous note when his family was discovered as being involved in unlawful land speculation, bribery, kickbacks and extortion schemes. His vindictiveness against those business groups that refused to support his subservient new Democratic Justice Party (DJP) was a frequent topic of conversation in Seoul, and the swelling number of political prisoners under his regime all made him a thoroughly distasteful political figure to most thoughtful people.

Student protests continued to erupt throughout the 1980s, but came to a new explosion during the spring and summer of 1987 when the torture and death of a college student at the hands of the police engulfed the capital and many other cities in month-long disturbances. Chun had picked his cohort Roh Taewoo as the DJP's presidential candidate in the next election, but the opposition groups would not subdue their chorus of protest until 29 June, when Roh pledged to implement most of their demands, which essentially boiled down to
enacting a genuinely democratic constitution before the next election.

Meanwhile, the more traditional opposition leaders had aligned and realigned under new political banners. Kim Dae Jung and Kim Young Sam, two leading voices of the NDP, fell out with each other on both personal and policy grounds, and by the time a new constitution installing the direct popular election of the president was enacted in late October both had declared themselves candidates for the office -- the former under his own party called the Party for Peace and Democracy (PPD) and the latter under a revamped former NDP faction renamed as the Reunification Democratic Party. (It had earlier been called the New Korea Democratic Party (NKPD)).

In the three-way contest that took place on 16 December, Roh won by only thirty-seven per cent of the votes while the two Kims scored considerably under thirty per cent each. On 25 February 1988, Chun transferred the presidency to Roh and the Sixth Republic was formally inaugurated. With the entry of South Korea into the Sixth Republic, presided over by Roh until February 1993 under the single, five-year term stipulated by the new constitution, the country saw much relaxation of central controls, starting a flowering of intellectual and political pluralism at home and dramatic diplomatic breakthroughs abroad, such as full-fledged relations with the Soviet Union (now CIS) and the People's Republic of China and many other (now former) communist regimes. With the election of Kim Young Sam as president, the first civilian head after thirty-one years, in the winter of 1992, South Korea appeared, for the first time, headed securely in the direction of authentic democracy.

The Sixth Republic: The Era of Roh Tae Woo and Kim Young Sam

Roh rode into office with several major expectations from the public trailing him: continued high economic growth, environmental improvement, rapid progress towards a democratic polity and society, a more respectable international profile for South Korea, a speedy resolution of the dangerous tensions with North Korea leading to steps towards eventual reunification, rectification of governmental corruption, solution of the critical housing shortage, and the like. During his non-renewable five-year tenure, despite his persistent image amongst his critics as the mul ("watery", i.e. spineless) president, Roh delivered substantially if not wholly on most of these expectations. Although of military background, Roh moved rapidly to restore virtually full democratic rights albeit within the National Security law, which was now less draconian than before. By 1990 the South Korean urban scene represented an intellectually and politically free society with all manner of ideas from the entire ideological spectrum vying for public attention without excessive fear of harsh censorship or punitive retaliation from the government. Newspapers, books, magazines, and the electronic media, as well as higher-educational institutions, were beginning to examine all ideas with the freedom associated with mature democracies.

The National Assembly became a more representative and vocal participant in policymaking, although manipulation of individual members by the executive branch remained a notable feature of this process. On the other hand, significant steps were taken to loosen the control of the central government over the nation by restoring local autonomy to provincial and municipal governments. By 1991 elected councils had been installed in the provinces, counties, and cities, and plans were being negotiated for the introduction of elected executive officials for these units and special cities, including Seoul by 1995.

The March 1992 National Assembly elections were a lively event, with existing political parties being joined by many independents and a new party, named the Unification Peoples Party (UPP), headed by Chung Ju-yung (Ch'ong Ch'uy'ong), South Korea's 'Ross Perot', who was the irrepressible honorary chairman of the Hyundai chaeból. The authentic multiparty makeup of the new National Assembly made it a vigorous forum for debate and discussion on national issues including the hitherto secretive conduct of the top military and
political officials, and the espionage organs, especially the Korean Central Intelligence Agency, now renamed Agency for National Security Planning (ANSP).

On the economic front, Roh's performance was the subject of mixed reviews domestically, although by international standards South Korean economic growth rate and other indices of development remained more than respectable. Accustomed to spectacularly sustained high growth rates during the previous regimes, most South Koreans expressed disappointment at the slower rates of 6.8, 8.4, and 4.8 per cent for the years 1989, 1991, and 1992, although no one could legitimately point to 12.4 and 9.3 per cent for 1988 and 1990 as evidence of poor productivity.

The most vociferous complaints were in regard to consumer goods prices, the housing shortage, and environmental pollution due to urban industrialism and an explosive automobile culture. While strong environmental protection laws were enacted and many government and private watchdog agencies emerged, the enforcement of controls remained ineffective due to alleged 'influence peddling' by powerful polluters. Grumblings about high prices, however, were partly contained due to continued growth in per capita income, which rose close to $US 700 by the end of 1992. Exports, likewise, continued to rise, reaching $US72 billion by 1991. In addition, the society's dream to join the middle class was given a new boost by government-supported construction of two million new housing units by the end of 1992.

Roh's most celebrated accomplishments were in the arena of foreign affairs. While he was not the architect of Nordpolitik ('Northern Policy') - it having been initiated under the Chun presidency - he expanded, refined, and finessed it to give South Korea a more diverse, active, and respectable international profile both politically and economically. Its chief new focus was on enlarging and improving the small openings toward the Soviet Union and Eastern European states to boost South Korean exports, diversify sources of raw materials and project Seoul as a truly viable representative of all Koreans, versus Pyōngyang which was an isolationist and paranoid political entity and an economic 'basket case'. The magnificent 1988 Summer Olympics in Seoul, which were partially staged as a national 'coming-out party' precisely for this purpose, played a major role in accelerating Nordpolitik. By the time Roh handed over power on 25 February 1993 to president-elect Kim Young Sam, South Korea had established diplomatic or consular ties with all countries that belonged to the erstwhile Communist bloc except North Korea and Cuba. (The People's Republic of China also formally joined the group later). No doubt, the breakup of the Soviet Union and the domino-like fall of other communist regimes in Europe in the wake of the 1989 demolition of the Berlin Wall and the resultant reunification of Germany, made Roh's Nordpolitik a much smoother process than during Chun's time. The cumulative result of these events was to make South Korea a truly global player, particularly economically, with the U.S.A., Japan, Western Europe, much of Asia, Oceania, Africa, and Latin America being already familiar territory to South Korean diplomats and businessmen. By the time Kim Young Sam took over as president, the only truly credible strikes that his opponents could make against Roh were the continued intractability of political and administrative corruption and the slow, fitful process in resolving tensions with North Korea. Defence modernisation projects and real estate speculation seemed particularly rife with charges of sleaze. Many government officials, both at the central level and local levels, as well as some lawmakers and judges were alleged to have unaccountably become multi-millionaires while in office.

In January 1990, in a clever strategic move Kim Young Sam had merged his party with the ruling party and helped create the new governing party called the Democratic Liberal Party (DLP -- in 1996 it was renamed the New Korea Party). Kim seemed confident that this way he stood a better chance at winning the ruling party's nomination for the presidency and the forthcoming December 1992 election, when he could count on a combination of his personal reputation as a relatively clean fighter for democratic rights and the legacy of stability with
growth expected to be left by the Roh Administration. This calculation paid off as Kim later won the DLP's nomination handily and the election by forty-two per cent against the charismatic Kim Dae Jung of a newly organised Democratic Party and Chung Ju-yung of the renamed United People's Party.

Kim's focus in the first year of his office was on keeping the economy steadily moving forward in a period of global recession, combating corruption and making new approaches toward North Korea. Overall, he seemed to be achieving more visible results on the corruption issue, reasonable success on the economic front, and appeared unsure of how to deal with North Korea. He launched a frontal assault on corruption, calling it 'the Korean disease' soon after his inauguration, required several thousand high officials to disclose their personal assets and fired or forced to resign a number of top-ranking civil and military officials, lawmakers, and judges if they were suspected of having amassed wealth through illegal or unethical means. Among these were the speaker of the National Assembly, the chief justice and a senior member of the Board of Audit. In August 1993 he began a larger crackdown on corruption in the society at large by decreeing that all 'false name' financial transactions be converted to 'real name' transactions. This was mainly designed to eradicate widespread use of 'black money' and tax evasion. While it caused considerable dislocation in the economy as the 'curb market' in private loans headed toward collapse, many hard working honest Koreans cheered Kim for his bold action. Partly as a result of Kim's reformist zeal and partly due to expanded import liberalisation, increased foreign competitiveness and unchecked inflation, the GNP remained sluggish and grew only by 4.9 per cent in 1993.

Politically, Kim projected an image of stability and progress both. He released two-thousand political prisoners and ordinary convicts upon his inauguration, employed a number of ex-dissidents in positions of responsibility, and generally seemed a champion of full-fledged democracy, as befit the first civilian president in thirty-two years and one with strong dissident credentials himself. Colleges and streets soon returned to normalcy. The occasional demonstrations now marking the South Korean political scene had more to do with bread and butter issues, such as import liberalisation, especially the emotionally-charged matter of allowing the import of a small amount of foreign rice by the late 1990s. The old radical left was now an irrelevant and spent force in South Korean politics. At the end of 1993, South Korean body politik was intellectually pluralistic, economically at least steady, and culturally open. The new democratic trends were now stimulating much spirited debates on many hitherto little-discussed social subjects including male-female equality. Media discussion seemed filled with new ideas about marriage, family, housework, inheritance and gender relations in general. President Kim stood as an authentic symbol of this new Korea. Abroad, he continued the policy of retaining solid ties with the West, especially the U.S., and steadily-improving relations with Japan.

The Korean Reunification Question

Both North and South Korea have since the beginning claimed that they were wedded to achieving the reunification of their divided land. Until the early 1970s, however, neither side ever seriously considered direct mutual negotiations as a possible means toward this end, each claiming to be the sole legitimate voice for all Koreans and holding the other side in utter contempt as a lackey of one or another superpower. While the rhetoric of mutual hostility continued, having been particularly intensified as a result of the Korean War, it was left to President Park Chung-hee, a staunch anti-communist, to take the initiative toward a limited dialogue with North Korea. In employing both the KCIA and the South Korean Red Cross he started talks with North Korea toward a step-by-step process of opening up relations for such non-political purposes as gradual reunification of divided families, sports and cultural exchanges, and exchange of controlled telephone and postal communications. After several rounds of slow negotiations between officials of the two sides, the process was brought to a screeching halt by the alleged North Korean-instigated
attempts to assassinate Park in 1974 and 1979, the second being successful, as noted above.

Later, President Chun Doo Hwan picked up the broken dialogue but he too was the target of an alleged North Korean-directed assassination plot. In 1983 he escaped a bomb explosion in Yangon (Rangoon), Myanmar (Burma) which was aimed at him but killed and injured several high officials in his entourage. Some progress was made in 1985 when a few divided families were reunited, but in September 1987 another terrorist act attributed to North Korean agents destroyed a South Korean civilian plane with 95 passengers and 20 crew members in mid-air when it was on its way from the Middle East to Seoul. With this incident all hopes of a resumption of dialogue with Pyongyang were dashed. North Korea seemed bent on preventing any trust-inspiring links from taking shape.

The severed thread was picked up again under the presidency of Roh Tae-woo, whose Nordpolitik, the collapse of Eastern European and Soviet communism between 1989 - 1991, the growing economic prosperity of South Korea, the isolation of Pyongyang and the rapid decline of the North Korean economy all combined to make Kim Il Sung a bit more responsive to Seoul's new overtures. The warming up of relations between Seoul and Moscow culminating in a visit by President Mikhail Gorbachev to Cheju-do in April 1991 and the subsequent opening of full diplomatic relations between South Korea and Russia made Pyongyang feel abandoned, alone, and vulnerable. Even the People's Republic of China was cozying up to South Korea, being much interested in its investment capital and technology. (Subsequently, this too led to full-fledged diplomatic ties between Seoul and Beijing.) Amid these developments, North Korea abandoned its longstanding demand for reunification on its own terms. Within South Korea also the earlier emotional desire for reunification was tempered by the huge financial and social burdens of such unity as the sobering effects of German reunification's economic costs began to sink into South Korean consciousness. In September 1991, both sides therefore decided to accept a temporary coexistence through separate memberships in the U.N., and they continued negotiations aimed at assuring mutual security and resuming economic, cultural and athletic exchanges. One product of these talks was a six-point 'denuclearisation' and mutual cooperation accord between the two regimes on 31 December 1991. It was expected that this would soon be followed by mutual verification procedures.

Meanwhile, economic and cultural exchanges would be pursued to reduce the climate of tension. The most remarkable thing about the process was that several rounds of talks were held at prime-ministerial level in both Pyongyang and Seoul. Some sports and cultural events involving both friendly competition and cooperative presentations both accompanied and followed this process, and a limited degree of trade also took place. There was much talk of developing South Korean tourism in North Korea, modernising its harbours and undertaking other industrial projects with South Korean capital and know-how.

Into this hopeful climate, however, a monkey-wrench was thrown as suspicions surfaced in the West and South Korea that North Korea was developing nuclear weapons and advanced missile-based delivery systems. The North denied the charge about nuclear weapons and countered by alleging, among other things, continued South Korean-U.S. aggressive intent behind the annual South Korean-American military exercises called 'Team Spirit'. Inspection teams sent by the International Atomic Energy (IAEA) to North Korean nuclear reactors in Yongbyon near Pyongyang seemed to confirm South Korean and American misgivings, once more throwing North Korean protestations of peacefulness into serious doubt. Angry recriminations marked the entire period from late 1992 through the summer of 1993. Pyongyang, a signatory to the Nuclear Non-Proliferation Treaty (NPT), even announced that it would withdraw from the treaty in June 1993. Negotiations in Vienna, however, soon led to a 'temporary suspension' of this intention.

A hectic round of further talks was held between the summer and winter of 1993 in
Vienna, Beijing, Washington and New York, involving mainly the US., North Korea, and the IAEA. Washington let it be known that if North Korea could prove by allowing the IAEA access to all its nuclear sites, including nuclear storage sites for inspection, that it did not have and was not developing nuclear weapons, substantial technological help, trading privileges and even American diplomatic recognition would be forthcoming to it as a result. While these events produced no formal accord, at the end of 1993 once again there were reports of a favourable response from North Korea and there was mild optimism that the crisis might be defused soon.

These events appeared to take all dramatic initiative on the reunification issue away from the Kim Young Sam government. It was now reduced to a reactive stance from an earlier proactive stance. Meanwhile, North Korea seemed caught on the horns of a dilemma. By opening itself widely to cooperative international behaviour, it stood to benefit in economic and technological terms, but this could also jeopardise its rigid ideological foundations drawn from Marxism-Leninism and Kim Il-Sungism. In early 1994, due to the zig-zag course of the preceding events there was no indication as to how the future would unfold on this issue.

Since the completion of the foregoing survey in late 1993, developments on the Korean peninsula have taken many new turns, some positive in nature, others quite unsettling for Koreans, at least in the short run.

President Kim Young Sam was enjoying popular support until 1996, when partly as a result of his own drive towards a cleaner, more transparent and more accountable administration, former presidents Chun and Roh, several other army officers and civilian bureaucrats and more than twenty chaebol heads and other leading business executives were indicted on charges of involvement in bribery, kickbacks and illegal slush funds amounting to hundreds of millions of dollars. Chun was also accused of gross insubordination to and unlawful overthrow of duly-constituted state authority and seizure of power through his coup d'état in 1980. In addition, his violent suppression of student protesters in that year came back to haunt him during the highly publicised court trials. In a singular triumph of South Korea’s new yet confident democracy organised public opinion and independent judiciary, both Chun and Roh were convicted of the charges. The former initially received the death sentence and the latter twenty-two years in gaol, though eventually Chun’s punishment was commuted to life imprisonment and Roh’s gaol term was also reduced. The two were also fined $276 million and $350 million respectively, for their bribery convictions. Kim’s association with Roh, suspicions that he had himself benefited from the latter’s slush fund, and the discovery that one of his own sons had misused his connection to the Blue House to line his pockets, all thereafter made Kim rapidly lose his high public standing. The sight of the highest former officials of the country convicted by due process was, however, a breath of fresh air that South Korea had never breathed before. It was a major triumph for the institutions of democracy in Korea.

This trend was reinforced by nation-wide local elections in June 1995 and another round of National Assembly elections in 1996 which broadened and deepened the experience of political participation. (A further round of such local elections in June 1998 appear to have made such participation as routine as in any mature democracy.) Although President Kim could take legitimate credit for having speeded up these changes and he might have recovered his lost popularity to some extent, his failure to devise a coherent and effective policy toward North Korea, his bewilderingly frequent cabinet reshuffles, his inability to reach an acceptable settlement of the festering 'comfort women' issue with Japan, and the dark clouds of a developing economic crisis in the autumn of 1997, all overwhelmed him and he found himself unequal to the challenges. At one point late in his term his public
approval rating sank as low as ten per cent, and most South Koreans began to look forward with eagerness to the 1997 presidential election, at the end of which his term was to expire and a successor was to take charge.

The nature of the economic crisis was complex but it showed that the much heralded ‘Miracle of the Han’ had been built on a rather shaky foundation. Japan’s deepening recession, with which South Korea’s economic destiny was inextricably linked, the ripple effects of a serious economic collapse in much of the rest of Asia, a heavy dependence on exports, currency devaluation, cronyism between banks and enterprises leading to massive amounts of bad loans, excessive private business indebtedness to foreign creditors, continued incidence of corruption and deceitful book-keeping among the chaebol, corporate and small enterprise bankruptcies due to loss of profitability, and stock market declines were some of the major problems that South Korea faced during late 1997. The prospect of a large number of Korean businesses not being able to meet their domestic and international debt obligations ultimately forced the South Korean government to seek, among other measures, help from the International Monetary Fund (IMF). The IMF rescue package put together finally amounted to over $57 billion. That a country that had prided itself on its legendary economic development during the previous three decades had suddenly been thrown back to the status of a supplicant for foreign aid under Kim Young Sam’s leadership became a label of shame for his presidency, and the sight of citizens donating cash and personal jewellery to help the government meet its own debt obligations vividly reinforced the image of a nation on its financial knees.

For Kim’s reputation there were also adverse consequences flowing from North Korea’s own worsening economic crisis, caused by both government policies and such natural disasters as flood and drought during 1995-97. P'yongyang’s mood swings on inter-Korean relations, its nuclear weapons potential, and its continued recourse to occasional provocations across the Demilitarised Zone (DMZ) also caused much headache for Kim. His inability to develop a sustained and workable approach toward the unpredictable P'yongyang regime unfairly added to his image as an incompetent leader, although his administration was not without its moments of thoughtfulness and imagination towards the North.

The death of Kim Il Sung in July 1994 had created a new window of opportunity for the United States, Japan, and South Korea to resume negotiations with Pyongyang toward a lessening of tensions on the peninsula. The North Korean nuclear weapons potential and related technology with presumed ‘terrorist’ states, such as Iran, served as a special impetus to the U.S. in seeking this dialogue with Pyongyang. North Korea’s increasingly vulnerable economy, its balance of payments crisis and the inclination of its new leaders under Kim Chongil -- Kim Il Sung’s son and defacto heir -- to explore new options, made a new series of parleys possible. With full support from South Korea and Japan, the United States and North Korea finally reached an agreement whereby North Korea would freeze its nuclear weapons capabilities in return for the construction of two light-water nuclear power reactors and the interim supply of heavy fuel oil to be financed largely by the U.S., South Korea and Japan. A Korean Peninsula Energy Development Organisation (KEDO) was to be created as the international body in charge of implementing this agreement. By the beginning of 1995 all this arrangement had been well worked out.

While work on this hopeful front proceeded and further talks with North Korea on related matters continued in P'yongyang, New York and Geneva, a series of crop failures caused by the natural calamities mentioned above focused a different kind of spotlight on P'yongyang. Reports of widespread malnutrition, disease and death in the North during 1995-1997 indicated a growing famine of rare gravity. After some reluctance, P'yongyang admitted as much and appealed for and welcomed international relief. The United States, South Korean and Japanese governments, the UN and many other governmental and non-governmental agencies from around the world pledged or rushed shipments of grain,
While accepting the aid, the North criticised what it perceived as the niggardly attitude of the South Korean government. Its animus against Kim was particularly pronounced. Pyongyng’s press and radio attacks on Kim continued unabated throughout this period.

The North’s schizophrenic stance also showed a more dangerous side in 1996 as it tried to infiltrate submarine-based armed commandos into the South. The attempt, though abortive and followed by a rare North Korean apology, strengthened the hands of hard-liners in the South and President Kim himself took an increasingly harsher stand against the North in response to this and several other instances of provocation. The February 1997 defection to South Korea of Hwang Jang-yop (Hwang Changyop), a senior secretary of the North Korean Workers Party and allegedly the intellectual father of the North’s Juche (chuch’e) ideology, further intensified the air of hostility between Pyongyng and Seoul as Hwang disclosed alarming details of Pyongyng’s warlike intentions. Kim now made it clear that any further South Korean aid to the North would depend on a guaranteed change in its behaviour. Seoul’s financial commitment to the KEDO projects also became jeopardised by the south’s domestic economic catastrophe. All this in turn made the North’s attacks on Kim even more venomous.

Parallel to this imbroglio was the seemingly intractable problem of getting a forthright and unqualified official apology and official compensation from the Japanese government on the emotionally-charged issue of ‘comfort women’. The World War II-era forcible sexual enslavement of scores of thousands of Korean women by the Japanese army remained the thorniest matter between Tokyo and Seoul, and despite the on-going discussions with Tokyo, Kim’s government was no closer to resolving it at the end of his term than at the beginning.

In sum, by late 1997, President Kim Young Sam’s achievements had become greatly overshadowed by his perceived failures, and when he handed over the presidency to his successor on 25 February 1998, there was little exuberant expression of public gratitude for his leadership, rather an audible sigh of relief at his ignominious exit. To make the sting sharper to him, just about that time south Korea was in the midst of a nostalgia boomlet centred on the assassinated dictator Park. He was seen by many as a patriot, a visionary, a decisive leader and a nation builder, whereas Kim, the former dissident, political prisoner, and nurturer of democracy, stood weighted down by a heavy political cangue around his neck.

As for Kim Young Sam’s successor, the story had all the elements of high drama. The winner of the December 1997 election was Kim Dae Jung, candidate of the National Congress for New Politics, largely a party of his own creation. a one-time exile from his country, a passionate fighter for democracy, a former political dissident who survived torture and both an assassination plot and a death sentence, a native of the underdeveloped and frequently despised Cholla area, a devout Catholic in a land dominated by Buddhists and Protestants, and a life-long and persistent candidate for his country’s highest office, Kim Dae Jung was anything but a run-of-the-mill candidate. Though by any standards a man of towering character amid a Korean ‘leadership’ crowd of moral dwarfs -- he was often compared with Nelson Mandela, Vaclav Havel and Lech Walesa -- Kim was not above a certain Machiavellian craftiness in enlisting the politics of strange bed-fellows with former enemies and adversaries in order to win power.

Running on a platform of economic recovery, reconciliation with the North through peaceful means, and abiding respect for democratic processes and human rights, Kim did not offer any radically new ideas but struck many as more authentic in his promises than his closest rival Lee Hoi-chang (Yi Hoech’ang) of the ruling New Korea Party, now renamed Grand National Party. While conscious of his assets in this multi-party contest, Kim was equally aware of his weak support base in the Kyongsang and Ch’ungh’ong areas -- the
former under the long domination of the associates of Park, Chun and Roh, and the latter under the sway of Kim Chongp’il -- a nephew of Park, the architect of the notorious Park-era organ, the Korean Central Intelligence Agency, and a perpetual politician. Kim Chongp’il had also formed his own party, called the United Liberal Democrats, as a vehicle for furthering his own designs for a high-profit role in national politics. Realising that by joining their forces they could both advance their ambitions with mutual support, their parties created a strategic alliance that proved not only effective during the election campaign but has also lasted into the present. (Kim Chongp’il, for example, became President Kim’s new prime minister.)

Upon election, Kim Dae Jung showed yet another master stroke -- an example of his skill in fusing compassion and forgiveness with political savvy. He and outgoing President Kim Young Sam agreed to confer upon Chun and Roh an unconditional pardon for their crimes. Kim Dae Jung knew that he would need the cooperation of all Koreans, including the powerful supporters of Chun and Roh, to meet the challenges before him, and so this gesture was an essential stepping-stone toward projecting his image as a national, as opposed to a sectarian and regional leader. While not popular with all segments of the populace, this act of magnanimity naturally drew expressions of gratitude from both Chun and Roh. They also made a stunning presence at Kim Dae Jung’s inauguration as honoured guests!

President Kim Dae Jung was now saddled with the task of addressing the major problems inherited from the past. He took another significant stride toward establishing a full-fledged democracy when he amnestied scores of political prisoners, including several who refused to renounce their pro-North Korean leanings, and promised to reexamine and reform the National Security Law and the intelligence organs to prevent them from being misused in the future. His speeches also reflected a genuinely conciliatory and generous attitude toward North Korea. During a June state visit to America, where he received a hero’s welcome in the Congress, he publicly urged the U.S.A. to be more accommodating toward P’yöngyang. In addition, he encouraged freer contacts between overseas South Koreans and North Koreans and called for expansion of South Korea’s limited economic and cultural ties with the North. He dubbed this new approach to the North ‘Sunshine Policy.’

The North’s response toward Kim personally was friendlier, but its general attitude toward the South continued to reflect its split personality. On the positive side, new exploratory meetings between delegates of Seoul and P’yöngyang took place in Beijing. In June, a flamboyant convoy of trucks conveying the first batch of a thousand cows, personally donated and led by the North Korea-born Hyndai chief Jung Ju-young, drove across the DMZ toward the welcoming arms of P’yöngyang officials and added a touch of civilian diplomacy, colour and entertainment to the usually sombre contacts between the two sides.

At the same time, the North was suspected of sending another group of armed agents into the South in July, making many wonder again what exactly was going on in the minds of P’yöngyang’s leaders. Spokesmen of the normally dovish Kim Dae Jung strongly condemned the incident amid familiar countercharges from the North of yet another Southern fabrication. The decibel level of confrontation between the two sides rose high again.

Kim Dae Jung was, however, much more occupied by the pressing economic issues facing the country. The IMF ‘bail-out’ terms led to demands for greater transparency and rationalisation in government-business relations, more deregulation, liquidations or mergers involving weak enterprises and banks, greater economic globalisation, acceptance of the painful pills of a short-term rise in unemployment and a disturbing reversal in GNP and per capita income trends. The last two conditions were clearly alarming to numerous individuals as well as the country. South Koreans were being told, for example, that unemployment in 1988 was likely to be about 7.0 per cent, vastly above the customary 2.5
per cent, and that the country must for the first time in more than three decades confront the prospect of a precipitous drop in both national and per capita incomes -- something that only North Korea had hitherto experienced. The grim statistics about suicide rates related to job losses and business failures were now disturbingly on the rise.

As of this writing (mid-July 1998), discussions on these matters within the South Korean government and among Seoul, Washington and the IMF were still going on and policies and actions were still being hammered out. President Kim's daily schedules were likely to remain filled with this kind of agenda in the early years of his administration. It was agreed by most experts, however, that South Korea had both the essential infrastructure, other potential assets and the will for a full economic recovery in the long range. Of course, what this 'long range' means, no one can ever precisely define. The atmosphere in Seoul therefore seemed to mirror both apprehension and hope stemming from this ambiguity. At this time, thus, it was premature for anyone to issue a verdict on President Kim but fitting to wish him success in his reconstructive endeavours.

Korean War, 1950-1953

The Korean War was by far the bloodiest military conflict in modern Korean history. War commenced partly as a result of internal political tensions but, as has so often been the case in Korean history, these tensions were greatly magnified by foreign influences and rivalry among great powers.

In August 1945, the Korean peninsula was liberated from Japanese colonial rule by the Soviet and United States armies. The 38th parallel, which divides the country's territory into more or less equal halves had been agreed upon as a temporary demarcation line between the North (to be occupied by the Soviets) and the South (to be occupied by the Americans).

It is likely that initially this division was considered to be temporary. In December 1945 the 'Three-Power Foreign Ministers' Conference in Moscow had accepted an American proposal for a five-year 'international trusteeship' which was to prepare Korea for a unified national government. However, the very logic of rivalry between the capitalist West and the communist East prevented the process of unification.. The Soviet military authorities and their American counter-parts were determined to promote 'friendly' elements in their respective zones of occupation. The Americans lent their support to the Nationalist Right and helped to outlaw the Communists and other radical leftists while the Soviets were busy creating a Communist government and purging real and potential opposition. Half-hearted attempts to promote the decisions of the Moscow Conference were fruitless : for all
practical purposes as early as 1946 both zones already had governments of their own. These governments depended on their foreign patrons and each was very hostile to the other. Each considered the other an illegitimate puppet regime which had to be overthrown.

The official inauguration of the Republic of Korea (ROK) in the South (15 August 1948) and the Democratic People's Republic of Korea (DPRK) in the North (9 September 1948) provided these rival groups with some semi-legal ground to justify their pretensions. Each government claimed itself to be the only legitimate authority on the Korean peninsula. Consequently, military tension between North and South mounted.

In spite of its belic平ity, the South's Rhee Syngman's government was not in a position to launch a full-scale war. It was corrupt, ineffective and unpopular, and the Americans refused to provide it with the heavy military equipment necessary for modern warfare. Meanwhile, the Soviet-backed North was determined to construct an effective military machine. The degree of cohesion in the North was remarkably high: partly due to ruthless extermination of "hostile elements" and intensive indoctrination, partly due to real economic and cultural success of the new regime.

The first North Korean military units (initially disguised as police detachments) were organized in 1946 and in February 1948 the Korean People's Army (KPA) officially came into being. Though reliable data is unavailable, according to reasoned estimations, in June 1950, the KPA numbered about 130,000 men. It consisted of 10 infantry divisions and an armoured brigade. It had about 700 pieces of field and 550 pieces of anti-tank artillery, with about 240 tanks and 200 aircraft. Though the Soviet Army left Korea in December 1948, a comprehensive network of Soviet military advisors was instrumental in forming the new army and educating its commanders in the conduct of modern warfare. The ROK Army then numbered about 100,000 men (plus 48,000 paramilitary in its police forces). In comparison with the KPA, it had by far the lower morale and training and it also lacked heavy weapons. When the war began it possessed only 22 planes and very few tanks and minimal artillery pieces.

The North Korean leaders were more or less enthusiastic about the military liberation of the South. There were signs a-plenty that the South was to be an easy prey: to civilian riots; the communist guerrilla movement (supplied from the North, but not without strong local support); an ineffective administration and a weak army. Some South Korean communist leaders insisted that a mass uprising would follow an outbreak of war, but even those less optimistic were of the opinion that the resistance would be short and weak.

The USSR and mainland China (communist from 1949) were more sceptical about the idea of military unification. Both powers wished to improve their strategic situation by destruction of a hostile pro-American regime near their borders, but the Soviets did not want to risk a major confrontation with the USA because of an adventure of their North Korean clients. But Kim II Sung and other North Korean leaders, during their visits to Moscow in 1948-1950, made great efforts to persuade Stalin that victory would be swift and the Americans would have neither time nor will for a military intervention. In spring 1950, a somewhat reluctant Stalin gave his permission. The initial plans of attack were redrawn by experienced Soviet advisers, and the scale of Soviet military assistance was increased. However, Moscow was not going to take any direct part in the coming conflict which was to be a Korean civil war.

The war began at dawn on 25 June 1950 with a sudden attack of the KPA across the 38th parallel. The strategy of the KPA's Soviet advisors reflected their experience during World War II. A massive deployment of armour at strategic points and concentration of all forces against Seoul, the main target of the assault, were distinctive features of the North Korean plan. A huge numerical superiority, better equipment and the patently higher morale of the KPA determined the outcome of the first battles fought.
In spite of the brave resistance of some units, in a few days the South Korean Army had collapsed. Dusk on 27 June saw the first invading units in Seoul, and on the next day the capital was firmly in North Korean hands. Rhee Syngman's government fled to Taegu and later to Pusan, while the remnants of its army withdrew in disarray.

On 25 June, an emergency meeting of the United Nations (UN) Security Council was summoned. The Soviet member was boycotting in protest against UN refusal to replace the Nationalist China delegation with the Communists. In his absence, the Security Council unanimously passed a resolution condemning the North Korean aggression. On 27 June the Council adopted a new resolution which asked UN members to "furnish such assistance to the Republic of Korea as may be necessary to repel an armed attack". Thus the way was paved for military intervention. On 7 July the Security Council requested that all troops sent to Korea by member countries be put under a unified command headed by the USA.

On 27 June the Council adopted a new resolution which asked UN members to 'furnish such assistance to the Republic of Korea as may be necessary to repel an armed attack'. Thus the way was paved for military intervention. On 7 July the Security Council requested that all troops sent to Korea by member countries be put under a unified command headed by the USA.

On 8 July, General Douglas MacArthur, America's most experienced general, was appointed commander-in-chief of the UN forces. Eventually, 16 countries sent their troops to Korea, but with few exceptions (United Kingdom, Turkey and Canada) these were token units up to battalion strength. Since it took much time for the South Korean Army to recover and reorganize after the initial onslaught, the main fighting was done almost entirely by the UN force, which was predominantly American.

By the beginning of August the KPA controlled the whole Korean Peninsula, except for a small pocket around Pusan, which the remaining South Korea units and some American reinforcements (which were organized as the 8th Army) held under siege conditions, the so-called 'Pusan perimeter'. During August and early September, the KPA formations were making unsuccessful attempts to penetrate the UN defences, but overstretched lines of supply, serious losses during the offensive to the South and American command of the air considerably reduced the military might of the KPA.

In the occupied territory the DPRK authorities tried to establish the same political and social system which existed in the North. People's committees were organized and agrarian reform began. However, these measures generally did not win the support of the South Korean population due to extreme political oppression launched by the North Korean administration. All right-wing parties and groups were banned; their supporters persecuted. Atrocities perpetrated by the new authorities averted even those who had pro-left sympathies before the war. The ruthless DPRK policy in the occupied territory greatly damaged the prestige of the political left there.

In August, MacArthur drew up a plan to land a huge force at Inch'on, the port city for Seoul, and then cut-off the KPA from its supplies. This was a tactic made possible by the fact that the main KPA force was now engaged in a determined attempt to break through the Pusan defences, far to the South. The Inch'on landing took place on 15-16 September and is recorded as one of the biggest amphibious operations in world military history. In spite of difficult tidal conditions about 70,000 men of X Corps (independent from the 8th Army) landed there, in close proximity to Seoul. The KPA command lacked resources in this vital region and on 25 September the first UN units entered the Korean capital, which was only secured by 29 September after hard fighting. Meanwhile, the 8th Army launched a highly successful counter-offensive from the beleaguered Pusan perimeter. By the end of September the KPA had collapsed. Most of its units were destroyed or entirely demoralised. It had to discard all its heavy weapons. By late September, the UN/ROK formations had reached the 38th parallel.

Although the fall of Seoul had effectively signified the end of the invasion, both MacArthur and the South Korean government thought it would not be enough to simply restore the status quo ante-bellum but wanted to unify Korea under Rhee Syngman's tutelage. On 1
October, a ROK force crossed the 38th Parallel, and soon was followed by the Americans. The shattered KPA withdrew, followed by the fall of Pyŏngyang on 19 October, just a few days after Kim II Sung and his government had fled to the Chinese border. On 25 October ROK troops reached the Amnok (Yalu) River; the Korea-China border.

However, the UN approach to the Yalu River raised serious concern in Beijing. The new Chinese Communist government considered the appearance of an openly hostile regime on its borders, close to the main Chinese industrial base in Manchuria, a grave threat. The Chinese leaders gave diplomatic warnings about possible intervention if the UN formations continued their offensive to the north, but these signals were ignored by the American and South Korean leaders who were sure the war was over. In this respect they had greatly underestimated the Chinese politicians and their military machine.

In early October the Chinese government decided to send its army into Korea to preserve the North Korean regime and to expel the threatening military formations far from the Chinese border. Marshal Peng De-huai was appointed Commander-in-Chief of the Chinese forces in Korea, which were called the Chinese People's Volunteers (CPV, which in western publications were often called CCF - Chinese Communist Forces) to formally avoid direct involvement in the war. It was the same fiction as labeling the joint American-South Korean Army ‘the UN forces’. The Chinese forces initially (in mid-October) consisted of the XIII Army Group which comprised four armies (3 infantry divisions each) and some other units.

The first Chinese units crossed the border on 19 October. During October and early November Peng De-huai concentrated up to 150,000 troops in North Korea. All troop and supply movements were done by night, with men and machines heavily camouflaged. As a result, the Chinese presence was not discovered by American intelligence until late October, when the first Chinese counter-attacks halted the UN offensive. On 25 November, the Chinese armies began a large-scale counter-offensive. In a few days many UN/ROK formations were annihilated or routed. In spite of enormous losses the CP pushed south. P'yŏngyang fell on 5 December. By the end of December, Chinese formations had reached the 38th parallel.

On 31 December Peng De-huai launched a new attack against Seoul. The Korean capital was in Chinese hands by 4 January, but the CPV’s offensive soon lost its momentum. By the end of January the UN command had stabilized the situation and a new UN offensive began on 7 March. This overcame all resistance and during the night of 14 March the CPV abandoned Seoul. A new frontline approximated the demarcation line along the 38th parallel from which the war had been launched.

In the spring and early summer of 1951 intensive fighting, local offensives and counter-offensives continued, but the territorial gains were indecisive and it was becoming clearer that both sides were deadlocked. The DPRK/Chinese had lost the opportunity to establish their control of the Korean Peninsula, but the ROK/UN also could not hope to repeat its success and unify Korea under Rhee Syngman’s government. On the frontline, both sides eventually constructed formidable fortifications against which any attack meant heavy losses with little or no gains.

It was in this situation that cease-fire talks began on 10 July 1951 in Kaesŏng (from 25 October the negotiations continued in P'anmunjŏm). In the first few months negotiations hinged on territorial problems, but by 1952 a provisional truce line (based on military positions) was agreed. Then the exchange of prisoners-of-war became the main object of discussion. The UN command insisted that captured soldiers could make a choice of whether to stay with their captors or return to their former homes. This proposal was unacceptable to the DPRK/Chinese mainly for propaganda reasons, because they knew that many of their soldiers would opt to stay in the south. The Communists were sure that
time was on their side and that the war-weary-public opinion of the West would sooner or later compel Western governments to conclude a peace settlement on less favourable terms. There is room for conjecture that Stalin himself wanted to extend hostilities, since the war had bled both the USA (the USSR's main enemy) and China (a potentially untrustworthy ally).

The Soviet Union itself was determined to avoid a direct confrontation with the West. During the war the Soviets had provided logistics and advisors, as well as some air cover. They did not, however, commit their ground forces to Korea and imposed restrictions on the actions of their pilots. The same self-restrained position was adopted by the Americans. MacArthur's persistent proposals to attack the Chinese mainland and escalate the war into a full-scale confrontation resulted in his dismissal, in April 1951, by President Harry Truman. Thus, the land, air and sea battle operations were restricted to the Koren peninsula.

After the summer of 1951 there were no drastic changes to the frontline positions. The ground forces were engaged in positional warfare, but the rare offensives and counteroffensives were of limited scale. The main fighting was done by the Chinese and Americans, with the South and North Korean armies gradually recovering after near-annihilation.

Trying to inflict heavy losses on the enemy, in 1951 the UN air forces launched a bombing campaign against the North. The main targets were military positions, roads, bridges and powerstations. Since throughout the war air superiority was maintained by the UN (though sometimes challenged by the Chinese and Russian pilots), the bombing itself was not a difficult task. It did, however, result in the devastation of towns and cities, the destruction of industrial plant and severe damage to North Korea's infrastructure. However, the bombing campaign failed to achieve its definitive purpose, since the CPV, the KPA and the civilian authorities had constructed numerous underground (bomb-proof) installations.

After many months of fruitless talks, in March, 1953 the situation in P'anjumon improved considerably. The Communists gave up their demands and agreed that every prisoner had a right of choice whether to return home or stay in the north. After some final deliberations the armistice agreement was concluded on 27 July 1953 at P'anjumon. However, the ROK government refused to sign the truce agreement, which it considered a perpetuation of national division. Thus it was signed only by the Chinese, the DPRK and the UN forces. According to the terms, the truce line was to be similar to the existing frontline and had only minor differences to the pre-war demarcation line. The truce was to be supervised by a commission of four neutral nations.

For Korea, the war was an economic and human disaster of unprecedented scale. Due to lack of reliable data, estimations of human losses vary greatly. Estimates for the ROK forces are 150,000 killed and dead from wounds; 200,000 missing in action and 250,000 seriously injured, while 100,000 - 150,000 civilians were abducted or went voluntarily to North Korea. The United Nations force suffered heavily too. The United States had 33,000 casualties and the United Kingdom 3,800, with the losses of the smaller contingents correspondingly heavy. The data about losses of the DPRK/Chinese forces and civilians is highly disputable. According to South Korean estimations, probably 500,000 North Korean soldiers and more than 200,000 civilians were killed during the conflict. The Chinese insist that their losses were 360,000 (killed and seriously wounded), but in all probability, the figures are much higher. According to some estimations, they number about one million. The economies of both North and South were devastated. In the south, almost half of the country's factories and plant, coal mining and electricity generation were destroyed or severely damaged. About one-third of all houses were lost and substantial amounts of the infrastructure were destroyed. Politically, the war strengthened the positions of both Rhee Syngman and Kim Il Sung's regimes. The supporters of oppositional groups
were either killed during mass repressions or escaped to another zone. Large amounts of foreign aid permitted both regimes to create military and police machines which were effective enough to provide necessary cohesion.

Internationally, the Korean War was of great consequence. It was the first limited war of the nuclear age, the first conflict between superpowers (the term was not coined yet) and/or their allies in which both sides imposed some self-restraint to prevent the conflict from escalating into full-scale nuclear war. The Korean War set a precedent for later conflicts (notably, Vietnam and Afghanistan). It increased the tensions between West and East, provoked the re-armament of the West and strengthening of the North Atlantic Treaty Organisation (NATO). At the same time, the disinclination of the USSR to give all-out support undermined Soviet credibility, both in Beijing and P'yōngyang.

North Korea, History of

The formation of an independent Korean State (1945-1948)

On 9 August 1945, the Soviet Government declared itself at war with Japan. On 11 August the units of the 25th Army (the 1st Far Eastern Front) crossed the Korean border. In the following week Soviet troops advanced into the country and marines were landed in major Korean ports. On 15 August the Japanese surrender was announced. Some Japanese units held out, but fighting lasted for only a few days.

Consultations between Soviet and American governments about drawing a demarcation line (in one form or another) had taken place ever since the Potsdam conference, and by 15 August, it had been decided that after the Japanese surrender the USSR would occupy the Korean Peninsula north of the 38th parallel and the USA to the south of this line.

By the end of August, the Soviet military assumed the control of the northern half of the Korean Peninsula, with Soviet troops stationed in major cities and taking responsibility for governing the country. However, the Soviet generals were hardly prepared for this governmental task, in contrast to Russia's role in the control of those European countries occupied by the Soviet Army after WWII. Moscow too, was unfamiliar with the Korean political situation. Although numerous Koreans resided in the USSR, none of them enjoyed any kind of popularity inside Korea and even a Communist Party - a recognized manipulatory tool of Soviet policy - was non-existent. A majority of prominent Korean leftists who fled to the Soviet Union before WWII and worked in the Komintern, fell victims to Stalin's purges, while Soviet-Koreans (with very few exceptions), being mostly second or third-generation immigrants, had no contact with Korea.

The 25th Army Commander, I.I. Chistiakov (Member of the Military Council); N.G. Lebedev and other senior officers were responsible for the practical implementation (and, to a certain degree interpretation) of Moscow's policy in Korea. Korean affairs were supervised by T.F. Shtykov (Member of the Military Council of the 1st Far Eastern Front). The main task of the Soviet authorities was to establish in Korea or, at least in its Northern part, a friendly (desirably communist) regime.
North Korea. However, the decision was not yet final, and Kim Il-sông (together with Cho Manshik, Pak Honyong and, probably a few more) was only one of several likely candidates.

The division of Korea was officially considered to be only temporary. The future of Korea was discussed during the Conference of foreign ministers of the USA, USSR, UK and China which took place in Moscow (16-26 December). The Conference adopted a proposition (initially American) to establish over Korea an International Trusteeship for a transitional period. These plans brought sharp protests by nationalists who considered it an insult to national dignity and an attempt to establish a new form of colonial regime in the country.

On 5 January 1946, at the session of the People's committee of the province of South Pyŏngan, Cho Manshik not only protested against the Trusteeship plan, but also refused to cooperate with the occupying authorities and resigned. Other nationalist members of the committee did the same. It was an open challenge to Soviet authority and could not, therefore, be tolerated. A repressive campaign against nationalists was then launched. Cho Manshik was arrested in early January 1946, spent five years in prison and was executed in October 1950. Cho Manshik's supporters were purged also from the Democratic Party which soon was transformed into a puppet organization led by government agents posing as nationalists. The Right answered by the organization of anti-Soviet, anti-communist revolts (the biggest one took place in Hamhung) and terrorist actions (including an attempt on the life of Kim Il Sung and some other leaders in spring, 1946). The result was the severance of all links between the nationalists and the Soviets and the latter had to deal entirely with the communists.

The Korean communists have never been a monolithic identity. In 1946 there were four communist factions, differing greatly in their background and experience. The kungnaep'a (domestic faction, led by Pak Hŏnyŏng) consisted of the former underground communists. Most of them worked in the South, but the growing anti-communism of the Americans and the Seoul authorities encouraged them to escape to the North and in 1946-1950 their number increased greatly. The ppalchisanp’a (guerrilla faction) led by Kim Il Sung, consisted of former guerrillas who fought the Japanese in Manchuria and after 1940 escaped to the USSR to serve in the 88th Brigade. The yonanp’a (Yanan faction, leader Kim Tubong) was composed of the Korean left-wing intellectuals who emigrated to China in the 1920-30s and were closely associated with the Chinese Communist Party (most of them spent their exile in the communist headquarters in Yanan) as well as a number of the Koreans who had served in the Chinese Red Army. The soryonp’a (Soviet faction) led by Hŏ Kai, was formed by the Soviet-Koreans, mostly former school teachers and medium-level officials. They were sent to Korea in 1945-1948 by the Soviet government to work in North Korean party and government institutions. Members of all four groups had very different education levels and had had very limited contacts with each other before 1945, therefore tension was inevitable (especially taking into consideration the strong tradition of factionalism, so endemic to Korean culture).

The Communist Party of North Korea initially was under the control of the 'guerrilla' and 'Soviet' factions while 'Yanan' faction members decided to establish a party of their own. The 'Yanan' faction led New People's Party (Shinmindang) came into being on 16 February 1946.

The practical management of the country's everyday life was vested in the Soviet Civil Administration which replaced the direct rule of the 25th Army on and from 3 October 1945. However, the Soviet authorities needed an organ of self-government in North Korea, which could form a proto-government, and thereby a nucleus of a pro-Soviet regime. The first attempt took place as early as in October 1945, when the 'Administrative Bureau of Five Provinces' was established in P'yŏngyang. The break with
Their conceptual political framework was viewed through the eyes of a 'people's democracy' which had been developed by the Soviet ideologists during and after World War II. According to this concept, every would-be socialist country had to pass through a transition period. This was a period of 'people's-democratic reforms' which were to eliminate the old order - land reform, partial nationalization, etc. - and thus create conditions for future 'socialist development' (practically- the establishment of a Stalinist mono-party regime). As such, it played a very important role in the North Korean politics of the 1940s and 1950s. As soon as the Soviets entered the North, they began to search for a force to fill the political vacuum and their first choice was Cho Manshik, a prominent right-wing nationalist politician. Just before the arrival of the Soviet troops to P'yongyang, the biggest North Korean city which was chosen as 25th Army Headquarters, Cho Manshik formed there a cell of self-government, the Preparatory Committee for National Construction (Kön'guk Chunbi Wiwonhoe). In August-September 1945, a number of these self-government bodies appeared everywhere in Korea. In the North they were sometimes ordered by or under the supervision of Soviet military authorities, but more often than not they were just a product of the local initiative and nationalist enthusiasm. These institutions initially had various names, but from September 1945 they were usually called 'people's committees'. Even though at that time nationalists were much more numerous than communists as members of the 'people's committees', the Soviet military authorities decided to support the committees as the nucleus of a future 'people's democracy' and began to enhance the communist influence in them. Under Soviet pressure many communists were co-opted to the 'people's committees' (including Cho Manshik's Committee in South P'yöngyan province) and obtained important posts.

Cho Manshik was probably the most influential politician of the North and the Soviet authorities did their best to establish a dialogue with him. It seemed as if they would make him a leader of the pro-Soviet administration. However, Cho Manshik's rigid opposition to communism as well as his deep distrust of any foreign power made him a very unsuitable partner and led to a number of minor clashes between him and the occupation authorities. On a lower level, cooperation between the Soviet Army (and Soviet-supported communists) and nationalists also was far from being smooth, as was well demonstrated during a riot of nationalist students in Sinuiju (November 1945). In this month Cho Manshik founded the right-wing Democratic party (Minjudang) which proved to be a very popular and influential rival. Reacting to this move, the Soviet authorities began their search for other possible leaders among Korean communists who previously had not been considered seriously due to their lack of influence. Since the most prominent communist leaders were in the South, the Soviets were interested in Kim II Sung (Kim Il-sŏng), a former Manchuria guerrilla who in 1940 fled to the USSR to become a captain in the Red Army. Kim had arrived in Korea towards the end of September 1945. However, prior to the autumn of 1945 neither the Soviet authorities or Kim II Sŏng himself had any plans concerning his participation in politics. This decision to transform a Red Army officer into a leader of local authorities of the Soviet-controlled North was a rather impulsive move.

On 13 October the Soviet authorities gathered a meeting of local communists to establish the North Korean bureau of the Korean Communist Party (Chosŏn kongsandang Pak Chosŏn pun'guk). Then the bureau recognized the supreme authority of the Central Committee in Seoul. Kim Yong-bom, a former underground communist, was elected its chairman, but in December he was replaced by Kim Il Sung. In winter 1945-46 the bureau ceased to be a local organ and, with the blessing of the Soviet authorities, gradually transformed itself into the Communist Party of North Korea, independent from Pak Honyong's leadership in Seoul.

On 14 October Kim Il Sung appeared in public for the first time. He addressed a mass rally held in P'yöngyang to welcome the Soviet Army. Since that time the Soviet authorities, without abandoning their efforts to establish a dialogue with Cho Manshik and his nationalists, began to stake on Kim Il Sung as a future leader of 'people's democracy' in
the nationalists undermined this body, but on 8 February 1946 a new organ of local self-
government, the 'Provisional People's Committee of North Korea' (Puk Chosŏn
imshi innin wiwŏnhoe), was inaugurated in P'yŏngyang. Kim Il Sung whose position
as the main Soviet protege by that time had been firmly established, was appointed its
chairman.

During the spring and summer of 1946 the Soviet Administration realised many
social reforms subscribed by the 'people's democracy' concept. The most important
was probably in land reform. It was proclaimed by way of a special Decree which was
issued by the Provisional People's committee, but in fact written by Soviet officials
and approved in Moscow. The maximum size of landholdings was limited to 5 chŏngbo
(slightly less than 5 hectares). The outright ownership of land ceased to exist and the
peasants' support of a future communist government was thus won overnight. Large-scale
nationalisation of industry was launched in August, only twelve months after the North
was occupied by the Soviet Army (much earlier than in the 'people's democracies'
of Eastern Europe, where this process took a few years longer).

In that relatively short period, full control over the country was exercised by the Soviet
Civil Administration. However, by the end of 1946, the North Korean embryonic
government also had a small, but ever-increasing share of power. The influence of this
government was strengthened by the merger of two Marxist parties - the Communist
Party of North Korea (Guerrilla and Soviet factions) and New People's Party (Yanan
faction) - into the North Korean Workers' Party (NKWP). The unification was decided
during Kim Il Sung's and Pak Hŏnyŏn's secret visit to Moscow and their consultations
with Stalin and other Soviet leaders in July 1946. The 1st Congress of the NKWP took
place in August. Kim Tubong, leader of the Yanan faction, become Chairman of the Party
while Kim Il Sung was elected his Deputy. Since Kim Tubong, an aged scholar, usually
avoided practical politics, real power in the Party eventually passed into Kim Il Sung's
hands. However, he did not hold supreme power, as this was still being curbed by rival
factions (of which Kim Il Sung's own Guerrilla faction was the least significant) as well as
by the paramount presence of the Soviet military.

In July 1946, the United Democratic National Front, a North Korean version of the
United Front, was proclaimed in P'yŏngyang. Its existence was considered to be
necessary to the 'people's democracy' concept and it was very useful for propaganda
reasons. But in North Korea it was only a formal, bogus coalition, since one of the two
non-communist parties (the Democratic Party) had lost its independence and the other,
a party with religious affiliation, called Ch'ondogyo-ch'ŏngu dang (Young Friends' Party),
lacked both strength and opportunity to challenge the Communist hegemony.

Initially, Moscow was uncertain about the desirable future of divided Korea, but as it
was becoming clear that only a right-wing nationalist government would be permitted by the
Americans in Seoul, the Soviet authorities began to lose interest in plans for a united
Korean state and concentrated their efforts on the formation of a separate communist
regime in the North. The Joint Soviet-American Commission was established in March,
1946 to supervise the realisation of Moscow Conference decisions, but it operated in a
very uneasy atmosphere because of endless altercation between the Soviet and American
delegations. The Soviet side realised, taking into consideration the greater population of the
South (where under the American occupation the communists were persecuted and
nationalist parties thrived) that the free elections throughout Korea would result in the
establishment in Seoul of a nationalist, right-wing and more or less anti-Soviet
government. Therefore, the Soviet side insisted on granting some privileges for the leftists,
which the Americans saw as unfit to adopt. After months of quarrels, the Commission
failed to achieve any results and was abolished in October 1947.

Meanwhile, the construction of an independent state in the North continued. On 3
November 1946 the local elections legitimated the system of the people's committees, which had hitherto been largely self-proclaimed institutions. On 21 February 1947, the 1st Congress of People's Committees elected a North Korean provisional government. This government, led by Kim Il Sung, completed the nationalisation of all big and medium-sized businesses (small merchants were tolerated, albeit restricted, until the late 1950s) and quickly re-shaped the North Korean economy according to standards common for all other 'People's Democracies'. Education, mass-media, cultural activities, also were drastically changed: the Japanese traditions were rooted out and replaced with new approaches, often based upon Soviet patterns.

As early as 1946, the North (just like the South) began to develop its own armed forces. Initially its army was disguised as a field police and border guard force, but on 28 February 1948 it was officially established as the Korean People's Army (KPA). The training of this force was organized by numerous Soviet advisers. Substantial support, both in well-trained personnel and logistics also was provided by the Chinese communists, among whom there was a number of Koreans.

By the summer of 1948 it was evident that ruling elites in both Koreas - the Soviet-backed communists in the North and American-backed nationalists in the South - were not going to fuse their zones of control at the risk of losing power, preferring instead to establish in the Peninsula two independent and hostile states. In the 1948 summer, the North Korean Constitution was drafted and on 25 August, ten days after the declaration of the Republic of Korea in Seoul, separate elections took place in the North. Certainly, they were strictly controlled and opposition of any kind was not tolerated. On 9 September, the first session of the People's Supreme Assembly was held and proclaimed the Democratic People's Republic of Korea (DPRK).

Just like its southern counterpart, the DPRK government insisted on being the only legitimate authority on the Korean peninsula and did not recognize officially the rival government. By the late 1940s, it was apparent there was no way of unifying the divided country, except by military force. The military decision then was favoured by all factions in P'yŏngyang as well as by the DPRK's main allies, though their reasons (apart from the idealistic, which are not to be neglected or under-estimated) were different. Moscow and Beijing hoped not only to strengthen the influence of communism, but also curb American expansion in Asia and crush an unfriendly regime near their borders. The Guerrilla faction hoped to increase the role of the military, where they were very influential, while the Domestic faction (consisting mainly of southerners) also hoped to have a bigger share of power after the 'liberation' of their native South, which was much more populous than the North.

An intensive military build-up began. The Soviet units had been completely withdrawn by December 1948, leaving behind numerous military advisers. The KPA General Staff designed a war plan against the South as early as in 1947, even before the official establishment of the Army, but all plans were drastically revised in spring 1950 by a group Soviet military advisers. At the same time, the North supported active guerrilla movement in the South which was to weaken Rhee Syngman's regime prior to the attack.

The decision to unify the country by a sudden stroke against the South was confirmed by Stalin during his private talks with Kim Il Sung in Moscow (March 1950) and, in all probability, was approved by Beijing also. Kim Il Sung and Pak Hŏnyŏng then insisted that it would be an easy task, since Rhee Syngman's regime was very unpopular and the war would be won just in a few days or weeks.
The invasion began at dawn on 25 June 1950. In spite of all Rhee Syngman's bellicosity, his army was no match for the North. On 28 June the KPA tanks were in Seoul and by mid-September firm control of nearly all the Southern provinces had been secured by the communists. A system of people's committees was introduced there, with the new authorities starting land reform and the partial nationalisation of industry. However, American intervention turned the tables.

On 16 September the United Nations began their amphibious operation in Inch'ŏn cutting the supply lines of the KPA troops concentrated on the southern tip of the peninsula. The North Korean units, though they were usually victorious over the lesser-trained and often demoralized army of the South, were overcome by the sophisticated American weaponry and had to retire in total disarray. On 19 October 1950 P'yŏngyang was occupied by the Americans. The North Korean government fled to Shinŭiju and then to Kanggye, a small city in a mountainous region near the Chinese border. By the end of October the South and the United Nations were convinced they were close to victory, just like their adversaries were only weeks before.

The United Nations high command had discounted the idea of Chinese entry into the conflict, However, Chinese intervention started at the end of November. Numerous battle-hardened Chinese units drove the United Nations and ROK Armies back to the 38th parallel and succeeded in capturing Seoul, for a short time (January - March 1951). From spring 1951, the conflict began to stalemate and both sides conducted positional warfare until 27 July 1953 when an Armistice was signed in Panmunjŏm. However, since the winter of 1950/51 the North Korean units had served largely as auxiliaries while the main work was done by the Chinese. On the other hand, the Chinese commander-in-chief, Peng De-huai and his subordinates, refrained from intervention in questions of North Korean domestic politics.

The war had contradictictory consequences for the domestic development of the North. The P'yŏngyang regime emerged from the war greatly weakened economically, but immensely strengthened politically. In spite of all the terrible devastation of war, ever since the DPRK authorities could rely on a strong army and police force. But they were considerably less dependent on direct foreign political support (though economic aid was vital still) and could disregard even the slightest possibility of internal opposition, since most former dissenters either left the country, were dead or, at least, silenced. The direct participation of the Chinese (not the Soviet) armies in the war inevitably led to a shift of the sphere of influence from the Soviet Union to China. Until the war, the Soviet position was a decisive factor, now it could be counterbalanced by Beijing.

Economic and social development of the DPRK during its early years was very like that of other 'people's democracies'. Small artisan-type private enterprise and trade were abolished and private agricultural firms were united under government supervision into cooperatives. In economic development the emphasis was on heavy industry. Such a scheme was in keeping with Stalinist tradition and well-matched the North Korean situation (deposits of ores and coal, and the existence of many plants constructed during the colonial period). Though reliable statistics are not accessible or even may not exist, the 1950s witnessed remarkable economic achievements. By 1960, the North Korea economy not only had recovered from huge war-time losses, but also had made substantial progress. Per capita GNP was higher than in the South, and there was a very considerable rise in industrial production of 10-25% annually, according to official data, between 1953-1960. The great role in this economic advancement was played by foreign, mostly Soviet, aid, both direct and indirect, through credits (which have never been repaid), artificially low prices on oil, raw materials and so forth.

All principal political decisions were made by party committees, which were considered
to be elected, but which in practical terms were partly appointed from above and partly co-opted. The legislative bodies and organs of self-government lost even the small degree of independence they had held before the war and were reduced to rubber-stamping activities. The ultimate power was now in the hands of the Party Central Committee and its Politburo.

After 1953, North Korea abandoned for a while her attempts at destabilising the South Korean regime and its policy towards the South calmed. Foreign policy was mainly confined to China, the Soviet Union and Eastern Europe, since throughout the 1950s the DPRK remained in diplomatic isolation and was recognized only by socialist countries.

In North Korean domestic politics the 1950s saw the eventual destruction of all factions other than Kim Il Sung's Guerrilla faction, as well as the gradual decline of foreign control over political life. In June 1949, the Workers' parties of South and North Korea had merged, with Kim Il Sung appointed Chairman of the new Korean Workers' Party (KWP). Both Kim Tubong, a leader of the Yanan faction and former Chairman of the North Korean Workers' Party and Pak Honyong, a leader of the Domestic faction and former Chairman of the South Korean Workers' Party, became Kim Il Sung's lieutenant. During the war, Hő Kai, an influential leader of the Soviet faction was purged and later died in uncertain circumstances. Pak Ilu, another remarkable leader of the Yanan faction, also fell victim to the purge. Each of these events resulted in the considerable strengthening of Kim Il Sung, who now sought unrestricted power for himself and who, due to endemic Korean factionalism, could rely only on his old comrades-in-arms from the Guerrilla faction. He used changes in the domestic and international situation to begin a campaign against party leaders from other groupings, his first target being the Domestic faction which was especially vulnerable since it had no foreign patron. In spring 1953, some leaders of the Domestic faction were arrested. Between 3-6 August 1953, during the biggest political show trial in North Korean history, prominent Domestic faction leaders, who had been outstanding members of the communist movement since the 1920/30s, were accused of spying for the USA and South Korea, or else of secret collaboration with the Japanese political police, and were executed. The Domestic faction leader, Pak Honyong, was arrested in August 1953, tried (on 15 December 1955) and subsequently executed as an American spy. After the liquidation of their leaders most of the remaining Domestic communists were purged and the faction dissolved.

The destruction of the Yanan and Soviet factions was, however, a much more formidable task because both had a deal of external support. Of the two, the Soviet faction was probably the more dangerous because it could conduct de-Stalinisation ideas, thereby threatening Kim Il Sung's power, which was modelled on the Stalinist pattern. It seemed that at first Kim Il Sung planned to concentrate on the Soviet faction - a campaign he started in the autumn of 1955, but events took a different course. In August 1956, Kim came under direct attack at the plenum of the KWP Central Committee. Some members of the Yanan factions severely criticised his methods and the leader personally. They hoped they could convince Central Committee members to condemn the Kim Il Sung's personality cult and hopefully, to replace him, but it was a fatal blunder. Kim Il Sung and his faction had secured firm support among the high and middle-level party officials and only few (mostly members of the Yanan faction) supported the opposition. In true Kim Il Sung tradition, large-scale purges of the Yanan supporters began just after the plenum.

In a vain attempt to stop such a development Beijing proposed that Moscow send to Korea a joint Soviet-Chinese delegation to study the situation in North Korea and persuade Kim Il Sung to stop the purges. This was the delegation of A. Mikoyan and Peng Dehuai, in September 1956. Bowing to pressure from these powerful neighbours, Kim Il Sung's faction had to make some concessions, but these proved to be short-lived. In 1957, large-scale purges against the Yanan faction recommenced. However, an
unrealized Chinese-Soviet intervention attempt reassured Kim Il Sung that to become an omnipotent master of his domestic policy he would have to disengage from all foreign control. Since both Yanan and Soviet factions were considered to be the tools of such external control, they were purged *ipso facto* between 1957-1960. Some officials, belonging to both factions, were either executed, imprisoned or banished, but most preferred to leave North Korea in haste. However, Chinese or Soviet intervention, which was considered inevitable only few years before did not occur, due to many factors. Among these were a degree of political instability both in China and the Soviet Union; the growing rivalry between these powers; Khrushchev's policy of relaxed control over other communist regimes; as well as Kim Il Sung's tactical skills.

The rise of Juche (*Chuch'e*): the DPRK in the period of political independence and radical experiments (1960-1985)

The failure of the so-called August Group had resulted in a noticeable transformation of the North Korean internal policy, which became increasingly totalitarian. The former standards of political and social life which imitated Stalin's models, appeared to be too liberal. There was, too, the great influence of China, where Maoist radicalism was at its height.

The early 1960s were marked by a radicalization of North Korean domestic and foreign politics. Such a development was influenced by Maoist China and met with enthusiastic support from some members of the DPRK ruling elite. However, by the 1970s, radical experiments had proved to be too costly and dangerous, or ineffective, and were gradually replaced by more moderate and traditionalistic approaches.

In economics, the beginning of the 1960s was a time of numerous experiments, mostly influenced by ideas of Maoist China. The *Ch'ollima* Campaign (Flying Horse Campaign) imitated the Chinese Great Leap Forward, and the agricultural cooperatives were remodelled to be more like the Chinese people's communes than the Soviet *kolhoz*. The self-sufficiency movement which was to become one of the main propaganda topics for decades, was also modelled upon Chinese patterns and even had the name written in the same characters, *charyŏk kaengsaeng*. As in Maoist China, the emphasis was now on ideological leadership of the party, political control, the omnipresence of government institutions, centralization and discipline, as well as on revolutionary enthusiasm rather than economic incentives. In the 'Taean system', introduced in industry in the early 1960s, at every plant or company the party secretary was placed above the director to stress the role of party and the inferiority of economics to politics. Even the slightest traces of economical independence were abrogated: the small individual kitchen gardens which peasants had been permitted to hold were withdrawn, as were the market-places. The control was eased slightly in the early 1980s, but, nevertheless, remained more rigid than in other socialist states.

The years 1960-1985 were not overly successful for North Korea in its dealings with the Soviet Union and China. The biggest challenge was the nagging quarrel between the two Powers, which began in the late 1950s and continued for several decades. P'yŏngyang, after some wavering, preferred to remain neutral and in July 1961, almost identical Treaties of Friendship, Cooperation and Mutual Help were concluded with both China and the Soviet Union. After 1961, however, North Korea aligned itself briefly with China in the conflict, but from 1965 firmly established itself as a neutral actor. The fierce rivalry between North Korea's two principal allies made possible some very delicate maneuvering in order to gain more independence. But this split, as well as the serious internal chaos in China during the cultural revolution, also created an atmosphere of instability and severely affected the flow of vital economic aid.

The economic situation deteriorated during 1960-1985, and did not recover. The rapid-
paced development of the 1950s slowed, and then, after 1980, stagnated. The command economy proved to be ineffective; foreign aid ceased to be as generous as before (critical of the DPRK's earlier economic record); the burden of massive military expenditure; world-wide ambitions and expensive propaganda, all had their effect. The reckless experiments of the 1960s, though much more cautious than in China, were nevertheless destructive enough to slow down economic development. Since the beginning of the 1970s, the South (where the so-called economic miracle was taking place) began to outstrip the North. However, the North Korean authorities managed to provide the people with minimum subsistence and thereby avoided famine. Living standards were at best moderate, but nevertheless stable.

The general radical trends of the 1960s also greatly influenced North Korean policy toward Seoul, and become even more violent and ambitious than in the 1953-1960 period. In the 1960s, the North Korean leaders (probably swayed by the impressive success of left-wing guerrillas in Vietnam) attempted to destabilize the South Korean government by starting a clandestine movement there. Meanwhile, the pace of military build-up in the North increased. In 1968-1969, North Korean troops used as guerrillas launched several attacks against military installations, as well as civilian targets in the South, including the president's residence. Concurrently, North Korean secret services supported some illegal communist groups in a vain attempt to create a wide left-wing movement in the South. Some direct actions against United States planes and ships also took place (such as the seizure of the US ship Pueblo on 23 January 1968, and the shooting down of an EC-121 aircraft on 15 April 1969). However, these operations achieved little.

This failure resulted in a more realistic approach toward the South, reinforced in 1970 when South Korea's president Park Chung Hee made his Liberation Day (August 15) Declaration, from which flowed (in November 1972) the formation of the South-North Coordinating Committee (SNCC). After 1972, however, the relations of the North to its rival remained very hostile, even dotted with some quasi-military actions, and both Korean states continued the policy of mutual non-recognition. But notwithstanding, a 'start and stop' arrangement continued the direct dialogue intermittently between Py'ongyang and Seoul. This dialogue continued, though with very few practical results, throughout the 1970/80s.

The 1960s and early 1970s were a period of diplomatic activity worldwide. The diplomatic isolation of the 1950s was broken and North Korea was recognized by many countries, especially in the developing countries. The number of countries which had diplomatic relations with North Korea increased from 15 in 1960, to 35 in 1970, and to 90 in 1975. Apart from efforts to gain recognition from left-wing and/or nationalist regimes, North Korea in the 1960s began to support a range of left-wing guerrilla groups, providing them with training, arms and money. Huge resources were dedicated to the overseas propagation of Kim Il Sung ideology. This policy continued, but after 1970 when the radical trends were exhausted, North Korea attempted to establish better relations with hitherto hostile Western countries in a search for alternative sources of loans and technology. However, since Py'ongyang could not manage its foreign-sourced loans well and ceased virtually all interests payment after 1975, these attempts were mostly in vain.

The domestic politics of the 1960s were more stable than in previous periods since all possible opposition inside and outside the party had been eliminated and Kim Il Sung could enjoy absolute control over the country. Some purges among party elite still took place at the lower levels, and the early 1960s saw massive repressions directed against those who were considered to be potential dissenters due to their lineage and biography. Tens of thousands were sent to concentration camps, while numerous others were executed (often in public) as counter-revolutionaries. After 1970, the scale of this campaign gradually decreased. To establish better control over the populace, the authorities relied on
measures unusually rigid even for many totalitarian states. Unauthorized domestic travel was forbidden and the whole population was separated into *inminbans* - small groups of a few dozen families - where the mutual responsibility for correct political behaviour encouraged mutual surveillance.

After 1970 the stability of the ruling strata remained, but the years were marked by growing nepotism. An ever-increasing number of Kim Il Sung's relatives appeared in both government and in party leadership positions. The most significant was the rise of his eldest son, Kim Jong Il (Kim Chongil b.1941- ) who was elevated to the KWP Central Committee and then to its Politburo with special responsibility for culture and ideology. It soon became clear that he was to succeed his father to the highest office. In fact, he was officially acknowledged as heir apparent in October 1980, on the occasion of the 6th Congress of the KWP.

The cultural policy of the period was marked by nationalistic tendencies as well as the tightening of controls over culture and arts. In the mid-1960s, the publication of foreign and non-political fiction was suspended for two decades and all art-forms were used only to glorify the Great Leader (as Kim Il Sung was known). The Soviet-modelled institutions and structures which had been widely introduced after 1945, were partly replaced by new ones which were considered to be pure Korean.

After 1960, the secretivity of the state greatly increased. The mass-media ceased to publish reliable statistics, almost all unofficial contacts with foreign countries were suspended, and the population was absolutely deprived of any unauthorized information about the foreign situation as well as all contact outside North Korea. Even the private ownership of radio receivers with a tuning facility was forbidden and established as a crime. Such isolation was becoming increasingly important for political stability, since it kept the population in the dark on the rapid economic development of the South. Kim Il Sung's Juche ideology (*Chuch'e sasang*) was officially proclaimed a new step in the development of progressive thought, and held superior to both Marxist and Leninist principles. A new Constitution (1972) proclaimed that the transitional period of people's democracy was over and that North Korea was now a socialist country.

Probably, the most striking feature of North Korea's political situation was Kim Il Sung's personality cult, which equated or exceeded that of some other notorious figures in modern world history. Thousands of Kim Il Sung's monuments were erected throughout the country, his portrait hung in every living room, every office and even in every railway carriage. Enormous resources were used for this propaganda. After 1972, all North Koreans over sixteen were obliged to wear a badge with the portrait of the Great Leader, and the song about General Kim Il Sung had almost replaced the national anthem. After 1980, Kim Il Sung's son and heir Kim Jong Il received similar adulation.

**The last years of Kim Il Sung's rule: the DPRK during the crisis of state socialism (1985-1994)**

Though the accelerating disintegration of state socialism in the U.S.S.R. and Eastern Europe after 1985 had no immediate consequences for North Korea, and the political system remained untouched until the death of Kim Il Sung in 1994, the general environment changed dramatically and it had very serious influence on North Korea. By the end of the 1980s the economical crisis had greatly deepened. In economic terms, the South was now far ahead of its northern neighbour. Though correct estimations are hardly possible, per capita GNP in the North by 1990 was not more than $US1 000 (probably even as low as $US500), or, about 6-10 times less than in South Korea. After 1990, the scale of the crisis was so great that North Korean authorities had to officially recognize the decline in industrial output.
After 1985, it soon became clear that the self-sufficiency of the North Korean economy was largely a myth and in fact its dependence on Soviet and Chinese economical support a matter of great concern. In spite of the deep crisis, North Korean authorities did not instigate serious reform - such being considered too dangerous for political stability. In the early 1980s, however, North Korea tried to improve its relations with the West. The most remarkable of all these attempts was a Joint Venture Law (1984), but results were disappointing as few foreign companies showed interest in investment in North Korea. The project of establishing a Chinese model free economic zone in the lower Tuman River region also failed, by and large, to gain international support.

An attempt to obtain more aid by improving relations with the U.S.S.R. was launched and some progress was indeed achieved after Kim Il Sung's 1984 and 1986 trips to Moscow. However, perestroika in the Soviet Union dramatically changed the entire situation. The DPRK and the U.S.S.R. grew apart, as the new Soviet leadership was more interested in establishing cooperation with the developed South than in supporting the impoverished North. In September 1991 Moscow and Seoul established diplomatic relations. In the late 1980s Soviet aid to North Korea diminished, and after the fall of the U.S.S.R. in 1991, it ceased. Conversely, relations with China improved (despite recognition of South Korea by Beijing in August 1992) indicating the ideological alliance of the two countries. But Chinese aid, which always had been less than that of the U.S.S.R., was insufficient to stem the decline of North Korean industrial and agricultural output.

The last years of Kim Il Sung rule were marked also by an intensive development of a nuclear program which led to a flare-up of confrontation with the USA between 1992/1994. The practical resolution of this problem acted, however, to soften to a slight extent, inter-Korean relations. The scheduled summit meeting between Kim Il Sung and South Korean president Kim Young-sam did not take place because of the North Korean leader's sudden death from a heart attack on 8 July 1994. He was succeeded as a leader by his son Kim Jong Il.

Literature on North Korea

A host of publications on North Korea exist in many languages, but they share some common defects. First, due to the esoteric nature of North Korea, and the systematical distortion of history by official North Korean publications, it is extremely difficult to get reliable information. Secondly, since North Korea was enmeshed in longstanding conflict with South Korea - which in turn was a small part of the global conflict between capitalist and state socialist systems - all too often scholarly studies were influenced by propaganda or the personal political bias of the author. Here mention is made of only a few English-language works, published outside of North Korea.

A Lankov
Hŏ Chŏng (1621-?)

Hŏ Chŏng was a civil official of the late Chosŏn period. His family’s ancestral home is in Yangch’ŏn, his courtesy name was Chungok and his pen name Songho. His father was a vice-minister (ch’amp’’an) of the Board of Rites (Yejo). In 1651 Hŏ passed the Special Civil Service Examination (Pyŏlsŏ mun’gwa) and began his official career. He was appointed in succession as magistrate (pusa) of Sŏngch’ŏn, royal secretary (săngjı) and a city governor (puyun). Of Hŏ’s literary works, three of his shijo have been transmitted to the present time in Haedong kayo (Songs of Korea) and Ch’ŏnggu Yŏngŏn (Enduring Poetry of Green Hills).

Hŏ Chun [Medicine; Science & Techn.]
Hŏ Hŏn [Communism, Korea.]
Hŏ Kai [History of Korea.]

Hŏ Kyun (1569-1618)

Hŏ Kyun (styled Kyosan) was born into a celebrated yangban family of distinguished lineage, Hŏ of Yangch’ŏn. His father Hŏ Yŏp was the governor of Kyŏngsang Province and commander of the military and naval force. Like his father, Hŏ Kyun was a noted Confucian scholar-official, and also a poet, prose writer and literary critic.

Well educated and talented, he had an insatiable appetite to study Confucianism, Buddhism, Daoism and Catholicism. However, his career in government fluctuated, mainly because of his non-conformity. He was dismissed many times, but his resilient just as often saw his return and he eventually attained high office, having passed the civil service examinations with distinction. But with rising social injustice and unrest he was increasingly attracted to Buddhism and religious Daoism, as a means of escape from the overpowering Confucian rigidity.

Hŏ Kyun was deeply influenced by Sŏn Daoism (neo-Daoism) which contributed substantially to his work. His father died when he was still young and a lack of parental discipline is said to be the cause of the unconventional life style he led. He was a dissenter; yet highly idealistic and forward-thinking in his own social reform policy. His aim was to create a progressive and liberal society by eliminating existing prejudicial and ultra-conservative elements. Yet, for all his self-discipline in his devotion to studies, a regulated life was not what he sought. His continuing association with thesŏdŏl and his secret involvement in the movement which opposed the deposition of queen-mother Inmok, eventually brought him much ill-will and misfortune. Finally, he was arrested on a charge of treason and executed in 1618.

The man who played a large part in Hŏ Kyun’s life was his tutor Yi Tal. Of illegitimate birth and with an associated social stigma, Yi Tal seems to have influenced Hŏ Kyun throughout the latter’s adult life. He too had a long-standing association with Sŏn Daoism and strongly supported the struggle of the sŏdŏl against discrimination. Hŏ Kyun’s Sŏngso pyŏkpugeo contains several fictional biographies of the Daoist recluse, written in Chinese, such as Chang Saninjon, Namgung sŏnsaeng chŏn and Ch’angsaeng chŏn. Hŏ wrote similar Daoist fiction including his famous Hong Kiltong chŏn (The Tale of Hong Kiltong), the first novel written in han’gul in the history of Korean literature. It was penned sometime during the reign of Prince Kwanghae (1608-1623), when Korea was experiencing a mixture of political division, recurring wars, and widespread confusion. Instability and insecurity gave writers grounds for turning to Daoism as a salve. Hong Kiltong chŏn is an invaluable
forerunner of the pre-modern Korean novel, one which opened the doors of literature to the common people, and paved the way for popular fiction.

Ho's Songsusiwa and Haksan ch'odam are two most valuable and vital sources for the study of Chosön poetry. He also compiled Kukcho shisan, a collection of verse written by thirty-five early to middle Chosön poets, which has a superb commentary on poets and poetic tradition.

Hŏ Nansŏrhŏn, a prominent Daoist poet, was Hŏ Kyun's sister. (see Hŏ Nansŏrhŏn.) His half-brother was Hŏ Sŏng, a respected scholar-official who held government posts as minister of three boards, and who, in 1590, accompanied the Royal Envoy to Japan. On his return, Hŏ Sŏng correctly predicted the Japanese invasion of Korea by forces under Toyotomi Hideyoshe

Hŏ Nansŏrhŏn (1563-1589)

Hŏ Ch'ohŭi (styled Nansŏrhŏn) was born in 1563 in Kangnung, Kangwŏn Province, into a Yangchŏn family of distinguished lineage. As a girl, aided by both an eminent family tutor, Yi Tal (styled Son'gok, 1561-1618) and by brothers who were to become renowned writers themselves, she showed aptitude for learning the Chinese classics. It was largely due to this encouragement, that notwithstanding the neo-Confucian restraint, she became a foremost poet and a master calligrapher and painter. Some information exists about her family, as well as writings by her family in which she is mentioned. The biographies of Nansŏrhŏn's father and brothers are included in Chosŏn wangjo shillok (The Veritable Record of the Chosŏn Dynasty). The most comprehensive and reliable biography of Nansŏrhŏn's family is considered to be the epitaph of her father, Hŏ Yŏp (1517-1580).

The years between Nansŏrhŏn's marriage at the age of fifteen and her death are little recorded. Considerable difficulty in reconstructing Nasŏrhŏn's biography arises because the material in her collected works, Hŏ Nansŏrhŏn shijip (Collected poems of Hŏ Nansŏrhŏn) which could have provided some information about her life, is largely Sŏn Daoist or neo-Daist poems - 214 in all. She wrote occasional poems marking momentous events in her life such as parting from a brother or her husband and, in a time of deepest grief, the death of her children. Regrettfully, these are the only works of Nansŏrhŏn which provide valid biographical information.

At the age of eight she was considered a prodigy after composing Kwanghanjŏn Paegongnu sangnangmun (Inscriptions on the Ridge Pole of the White Jade Pavilion in the Kwanghan Palace). Her brother Hŏ Pong (styled Hagok) was fully aware of his sister's talent and arranged for Son'gok, the foremost poet of the Tang style to teach her Tang poetry, an
opportunity that both guided her to a new literary genre and contributed to her development as an outstanding poet.

Nansŏrŏhn is believed to have been married to the son of a civil official, Kim Ŝŏngnip (1562-1592) of the Andong Kim lineage, a distinguished family. Kim Ŝŏngnip studied constantly from the time of his marriage and passed the Civil Service Examination in the year of Nansŏrŏhn’s death. Nevertheless, he was unable to match his wife either in scholarly achievement or literary talent. It is said that he was an unimposing man, and a philanderer, often frustrated by his wife’s superiority. His studies at the Reading Hall were often mere excuses for absence from home. Many of Nansŏrŏhn’s poems exemplify her heart-felt sorrow, in their depictions of the loneliness of a neglected wife.

With so much unhappiness in her marriage, it is hardly surprising that melancholy and despair are so deeply reflected in her verse. To compound her misery and frustration, she never found favour with her mother-in-law, as revealed by her younger brother Ho Kyun (styled Kyosan) in his Sŏngso pokpugo. Nansŏrŏhn was influenced more by Daoism than by either Confucianism or Buddhism. She was, nevertheless, like all other women of her time, confined to the inner quarters of the house. With this in mind, it is not difficult to understand why a substantial part of her poetry, more than half in fact, attempts to capture her dream-world and the visionary land of the immortals.

Several tragic happenings hit Nansŏrŏhn in a relatively short space of time. Her two children, a girl and a boy, died in consecutive years. From the time of these tragedies, until her own untimely death, she had to contend with increasing disappointment in her husband; resentment from her mother-in-law; the exile and eventual death of her dearest brother, Hagok, and her own indifferent health. After Nansŏrŏhn’s death, Kim Ŝŏngnip remarried, but died during the Japanese Invasions of Korea, 1592-98, while leading the Chŏngŭi kun (Righteous Army).

The compilation and the preservation of Nansŏrŏhn’s works is attributed to her brother, Kyosan. Nansŏrŏhn’s official biography as recorded in the epilogue of Nansŏrŏhn chip (Collected Works of Nansŏrŏhn) is written by Kyosan, and is one of the few reliable sources on her life:

‘The author’s name was Miss Hŏ, styled Nansŏrŏhn. She was my third elder sister and was married to an Eighth Counsellor of the Office of the Special Counsellors (Hongmun’gwan chŏjak), Kim Ŝŏngnip (1562-1592), but she died very young. Being childless, she could afford to spend much of her time writing, and consequently accumulated a great deal of literary work. However, according to her wishes, her works were burned and only a small portion, my own transcriptions, has survived. I have kept them for a long time, but have now engraved them on wood, as I fear losing them, and because I wish to introduce Nansŏrŏhn’s works to a wider circle of readers.’

**Ho-am Gallery**

Situated in the Joong-ang Ilbo Building in Seoul’s Chung Ward, the two-storey Ho-am Gallery (Hoam Gaellori) is one of the most popular art centres in Seoul, testimony to its many high-quality exhibits. Part of the 924-sq-m. ground-floor area has an 8.7 m.-high ceiling which allows for larger exhibits. The exhibition area on the second floor is 396 sq-m. There is also a 330-sq-m. outdoor display area for sculptures.

Hodge, General John R. [History of Korea]

**Hoengsŏng County**

Hoengsŏng County, situated in southwestern Kangwŏn Province, is surrounded by
Hongch’ón County to the north, P’yŏngch’ang County to the east, Yangp’yŏng County to the west, and Yongwŏl County and Wŏnju City to the south. The county is comprised of the town of Hoengsŏng and the townships of Kapch’ŏn, Kangnim, Konggŭn, Tunne, Sŏwŏn, Anhŭng, Uch’ŏn and Ch’ŏngil. All but the southwestern approach to the county is surrounded by the Ch’aryong Mountain Range and its branches. Run-off from these mountains flows down into the Han River. As part of a high inland basin, the area’s climate is characterised by cool weather and short growing seasons.

The majority of residents earn their living through farming. Although some rice is cultivated, most of the agriculture is centred around dry-field crops such as corn, red peppers and potatoes. Hops, used to make beer, are also grown here. The region is also a major producer of ginseng and silkworm larvae.

Taking advantage of the area’s good access to Seoul and Ch’unch’ŏn, cattle breeding operations and dairy farming have also become important parts of the local economy. In addition, there are several mining operations in the area, including an iron mine in Konggŭn Township and a gold mine in Ch’ŏngil Township.

There are a number of historical artefacts in the area. Relics from the late Neolithic period have been excavated in Tunne Township indicating that people were living in this area from 20,000 to 30,000 years ago. Other artefacts, discovered in 1983, indicate that a village existed here about 2,000 years ago. Near Mt. T’aegi, there is the Tŏkko Fortress which is said to have been built during the first to third century C.E.

There are also a number of ancient Buddhist artefacts, including a seated stone Buddha statue and a three-storey pagoda (Kangwŏn Province Tangible Cultural Assets No. 22 and No. 23 respectively) in Hoengsŏng’s Ŭpha Village, a three-storey pagoda and seated Buddha statue in Konggŭn Township’s Sangdong Village (Kangwŏn Province Tangible Cultural Asset No. 19 and 20 respectively) and a three-storey pagoda (Kangwŏn Province Tangible Cultural Asset No. 60) in Ch’ŏngil Township’s Shindae Village. There are also a number of active Buddhist monasteries in the area, including Pongpok and Songdŏk temples near Mt. T’aegi, Tohwa Hermitage south of Mt. Pyŏngmu and Pogwang Temple southeast of Hoesŏng Town.

Several old historical buildings can be seen in the area. Hoengsŏng Hyanggyo (Confucian school) was founded during the reign of King T’aejo (r. 1392-1398). Rebuilt after being destroyed in the Korean War, the Hyanggyo can now be seen in Hoesŏng’s Ŭpsang Village. In Sŏwŏn Township, there is the P’ungsuwŏn Catholic Church (Kangwŏn Province Tangible Cultural Asset No. 69). Catholics began to gather here in 1866 to avoid increasing prosecution by the Chosŏn government. The religious community thus formed practised slash-and-burn agriculture and manufactured storage pots.

With Mt. T’aegi (1,261 metres) on its eastern border and Mt. Ch’iak (1,288 metres) to the south, the county attracts visitors throughout the year. As a further attraction, the T’aep’ung Cultural Festival has been held in the area since 1981. The festivities held at this time include traditional music, mask dancing, wrestling, drama etc. In addition, the Kangwŏn Province Folk Village was recently set up on highway 441. With a number of dwellings reconstructed in the traditional style, the village offers visitors a glimpse into the unique customs and heritage of Kangwŏn Province.

Hogyŏng

Hŏjil (Tiger's Rebuke, A)

Hollym Publishing Company
Situated in Kwanch’ōl-dong in Seoul’s Chongno Ward, Hollym Publishing Company (Hallim Chulp’ansa) was founded on 18 January 1963. With Ham Kiman as editor, the company specialises in books related to technology, art, foreign languages, literature and children’s literature. It also publishes English translations of Korean works, particularly those that deal with traditional Korean culture.

Hong Ik University

Hong Ik University (Hongik tae hakkyo) is a private university located in Sangsu-dong in Seoul. Established as Hongmun College (Hongmun tae hak kwon) in April 1946, the school was officially associated with Hūnguk Temple in Yongsan Ward. In August 1948, the college’s name was changed and it became Hong-Ik College (Hongik tae hak kwon). By 1950, the college had expanded to include the Departments of Law; Liberal Arts; Political Science; and Science. During the Korean War, the college was forced to move to a temporary location in Pusan, with a consequent reduction in programs. Returning to Seoul in 1953, the college continued its growth, with the establishment of the Departments of Business and Economics; Education; Engineering; and Fine Arts and Handicrafts, as well as the Graduate School. The Hong-Ik School Foundation also established Hong Ik Junior Technical College; Hong Ik Junior and Senior High Schools; Hong Ik Girls’ Junior and Senior High Schools; and Hong Ik Primary School.

In 1971, Hong Ik College merged with Soo-Do Engineering College to form Hong Ik University. At this time, the university consisted of twenty departments in the Colleges of Business and Economics; Engineering, and Fine Arts. The Graduate School of Industrial Arts opened in 1971, while a night school and the College of Education were added in 1972 and 1973 respectively. In 1973, doctoral programs were initiated and in 1978, the law college opened.

In 1981, the Ministry of Education authorised the establishment of the College of Liberal Arts and the Graduate School of Environmental Studies, and these were closely followed by the Graduate School of Education (1982). To keep pace with the growth in its educational programs, the university’s buildings and facilities were expanded in the 1980s. In the late 1980s, there was further expansion in academic programs with the opening of the Graduate School of International Business Administration and the College of Law and Economics, as well as the Departments of Art Science; Print Making; and Visual Design in the College of Fine Arts.

In 1989, a second campus opened in Choch’iwon in South Ch’ungch’ōng Province. The new site includes the College of Industrial Sciences, which contains eleven departments. In the 1990s, academic programs were increased at both locations. 1996 statistics show that Hong-Ik University had 14,067 students in its nine colleges, the graduate school and six professional graduate schools. Future plans for the university emphasise the expansion of the Choch’iwon campus.

Hong Island

Situated 113.5 kilometres west of Mokp’o, Hong (Red) Island is part of Hūksan Township in South Cholla Province’s Shinan County. The island has a total area of 6.47 kilometres and as of 1985, had a population of 819. To meet the educational needs of local residents, two elementary schools have been built on the island. The island’s average temperature in January is 2c. and in August 25c. The island has an average annual rainfall of 1126mm and
an annual snow fall to the order of 8.8mm.

With virtually no arable land, most of the population is employed in fishing operations. Several abalone farms have been established. Ferries to the island land at Il-gu, the largest village. Here, and at I-gu Village to the north, are small coves for fishing boats. The two villages are linked by a trail that takes about an hour to walk.

Rising precipitously out of the sea and protected by high cliffs, this six-kilometre-long island is acknowledged for its breath-taking beauty. The highest peaks are Kittae Peak (386m) to the north and Yangsan Peak (231m) to the south. On the southwestern part of the island lies Hwangdo Beach. The island gets its name from the red glow that bathes the island at sunset.

**Hong Kiltong chŏn** (Tale of Hong Kiltong)

*Hong kiltong chŏn* is a novel of the middle Chosŏn period which has been transmitted to the present time as a work of the scholar-official Hŏ Kyun (1569-1618), and consists of one book. There are both woodblock-print and calligraphed han’gŭl versions, and this work is considered to be the oldest han’gŭl novel. The protagonist of this novel is thought to be based upon a real Hong Kiltong, a bandit with purported supernatural powers, who lived during the reign of Prince Yŏnsan (r. 1494-1506) and whose deeds are recorded in the Chosŏn wango shillok (Veritable Records of the Chosŏn Dynasty). Hŏ’s skill as a writer is revealed in the fact that he could take this historical figure and embellish his actions to create the protagonist for this. It is also notable in the fact that it displays a highly critical viewpoint of Chosŏn society.

This novel is surrounded by two questions that are the subject of much controversy. First, there is some question as to who the writer of *Hong kiltong chŏn* is. Generally, Hŏ Kyun is accepted as the writer of this work, but since there is no clarification of who the writer is in the original work, some consider this as a work of an unknown writer. However, Yi Shik, who was a contemporary of Hŏ’s, states in his *T’aedong chapcho* that Hŏ was the writer of *Hong kiltong chŏn*. Given this fact, it seems highly improbable that the writer of this work could be anyone other than Hŏ. The second topic that gives rise to much debate is whether or not it was originally written in han’gŭl or Chinese characters. The common opinion is that *Hong kiltong chŏn* was the first novel written in han’gŭl, but the basis for these assertions is not certain. Given the fluidity of the work and skill used in its descriptions, there is a school of thought that insists it was first written in Chinese characters and then translated into Korean script.

The content of this novel is as follows: Hong Kiltong was born the son of a chambermaid, Ch’unsŏm, in the house of Minister Hong in the capital of Chosŏn during the reign of King Sejong (r. 1418-1450). Before the conception of his son, Minister Hong had an auspicious dream of a dragon that foretold he would sire a noble son. He therefore sought to have relations with his wife but was rejected by her and instead slept with her chambermaid and fathered Kiltong. From an early age Kiltong displayed unusual talents and became well versed in Daoist magic. Moreover, his frame of mind and personality were righteous and of great integrity and he grew into an excellent individual. However, due to his illegitimate birth (sŏdl status) he could not call his father ‘father’, nor call his brothers ‘brother’ and thereby came to harbour a seething resentment. His family feared the rancour of their son and thought that his animosity would spell the ruin of the family and therefore hired an assassin to kill him. Kiltong escaped this threat by using his Daoist magic, *tungappŏp* (the power to shrink distances) and left his father’s home and wandered the countryside. He eventually became the chief of the thieves by outwitting these men. Through the use of Daoist magic, Kiltong organized the thieves and led them in a raid on Haein Temple where they looted the temple of its treasures. This became the calling card of Kiltong and his band of thieves as they roamed the countryside and repeatedly captured the unjust fortunes of
village chiefs through the use of Kiltong's sharp wit and his Daoist magic. They then distributed the bounty they had captured to the poor, from whom they never took property. The band became known as the Righteous Band and their fame spread throughout the country. They even raided government facilities, and after stealing the military equipment and provisions in the town of Kamyong in North Hamgyong Province, Kiltong left a note behind that read: "The one who stole the grain and arms here was none other than the leader of the Righteous Band, Hong Kiltong", ensuring that the common people would not be accused for the crime. Kiltong used *ch'ukchipop* (a Daoist magic that transforms straw figures into humans) to create seven straw effigies, invoking them with spirits and sending them out to the eight provinces. Now there was a Kiltong in each of the provinces who took from the wealthy exploiting class and redistributed this ill gotten wealth to the poor. There were none that could stop the actions of Kiltong. All of the Provinces reported to the capital that Kiltong had committed these crimes, on the same day and time. The King dispatched his Chief Constable to capture Kiltong; however, he was instead seized by Kiltong and ridiculed before being sent back to the capital. Eventually, Kiltong's father appealed to him to surrender to the King and Kiltong did so. The King then appointed him as Minister of Military Affairs. After his appointment Kiltong left the country and went to the south where he discovered Yuldo Island. He slew the evil gnome that controlled the land, rescued a beautiful maiden and then became king of the land. When he heard that his father had died, he returned to Choson where he mourned for three years. He then returned to Yuldo where he reigned over the land in a benevolent fashion.

Hong kiltong chon utilizes an unrealistic biographical method to create the protagonist of this work, Hong Kiltong. However, the protagonist is confronted with the harsh realities of Choson, which reveals that this work is not a biographical romance. It must fundamentally be viewed as a social commentary novel that reveals a deep-seated opposition to the social state that was predominant in Choson during this period. The inclusion of such elements as religious Daoism into the story reveals a desire on the part of the author to change the current situation through the use of supernatural means. Moreover, the Daoist elements in this work point at the strong beliefs of the author in religious Daoism, and it is the use of Daoist magic that allows the protagonist to accomplish many of his desires. The Daoist ideological underpinnings of the protagonist provide a righteous contrast to the corrupt Buddhist monks and Confucian officials. Another notable feature of this work is in the criticism of the social systems of Choson. Hö Kyun is known to have opposed the systematic discrimination against illegitimate sons (*soö*), and felt that this methodical neglect created a dangerously discontented underclass. Moreover, given the chaotic state of the Choson in which Hö lived in the aftermath of the 1592 Japanese Invasion, this work reveals the plight of the common people who were forced to live in abject poverty while the ruling class of the kingdom was engaged in factional political struggles. Therefore, it can be seen as an extension of the author's convictions to create a society that is just to all, provides for its people and governs in a compassionate manner.

This work, however, has been criticized for providing a fantasy-like solution to the problems of the people. The protagonist is initially motivated by a desire to overturn the oppressive social system that discriminates against those not born of a first wife. In addition, the actions of the protagonist to redistribute wealth among the poor exhibit a desire to create a more equitable social system in which the peasantry is not unfairly exploited by the ruling classes. However, once the protagonist achieves a high-ranking position, he no longer has an interest in assisting the poor. Moreover, through the action of pledging loyalty to Choson at the end of the work, Kiltong approved and accepted the realities of the Choson government. This was done by the protagonist despite the fact that he had yet to reform the social system and inequalities that he had risen up against in rebellion, and therefore reveals that Kiltong accepted the situation of the kingdom once he had gained personal comfort. The fact that once Kiltong had gained a position of power he no longer showed an interest in the social problems of the kingdom, is the major flaw of this work, and reveals that the protagonist was no more than a discontented individualist.
Hong kiltong chön was a very popular work in the Chosôn period due mainly to the anti-social, yet noble actions of its protagonist in the first half of the novel. However, the work reveals the limitations of the writer’s conceptions of reform, as he cannot see beyond the limits of his Confucian philosophy and ideology and in the end accepts the status quo. Nonetheless, this work can be highly praised for revealing the flaws in the social fabric of Chosôn, such as the corruption of the ruling class and the mercenary behavior of Buddhist monks. It is for this reason that the work remains popular until the present time.

Bibliography

HMMTS, vol. 25.

Hong Kyôngnae (1771-1812)

Hong Kyôngnae was the leader of a late Chosôn period peasant uprising named the Honggyôngnae Rebellion (1811). His family’s ancestral home was Namyang and he was born in Yonggam. He learned Chinese characters from his maternal uncle, Yu Hakkwôn, and mastered many of the classical writings and military documents, in particular the Chŏnggam rok (Chong’s Prophecies), but still failed in passing the civil service examination (kwagô) in 1798. Hong abandoned his hopes of entering Chosôn officialdom, left home and lived a life of poverty wandering about the countryside. At the time the civil service examination system had become corrupted, the Andong Kim family was conducting their so-called in-law government (sedo chôngch’i) and the samjong tax administration was in disarray. All of this led to lives of poverty and hardship for the common people and their contempt and dissatisfaction with the corrupt government seethed.

During his wanderings Hong met U Kunch’ik and they conspired together to rise up in rebellion against the government. Hong and his followers demanded that the discrimination against those from the northern provinces should cease and their ranks were swelled by the addition of yangban farmers, merchants and private tradesmen. At that time the conditions in P’yŏngan Province were quite bad due to severe famine and large bands of wandering peasants, and this mix created an unstable atmosphere. Soon Hong’s forces began an open rebellion against the government troops and swept through the northern regions. In a very short span of time, nearly the entire area north of the Ch’ŏngch’ŏn River was under the control of the rebel army. However, the rebel forces were soon defeated in the battle of Songnim in Paekch’ŏn and all the rebels could do was fall back to the fortress town of Chŏngju where they held out for four months. However, in the end the government forces overran the fortress, and the life of Hong, along with his rebellion, was ended.

Hong Kyôngnae is remembered in many ways. From a historical standpoint he was a rebel who was discontented with the status quo of late Chosôn and chose to combat this by an armed insurgence. However, his rebellion against the corruption and factional politics of late Chosôn was only the beginning of many and therefore, he can be seen as one of the first who saw that the only way to change Chosôn into a more equitable society was by revolution. Therefore, Hong can be viewed as a patriot who advocated the establishment of a fair and just society.

Hong Manjong (1643-1725)

Hong Manjong was a scholar, critic and literary man of the middle Chosôn period. His family’s ancestral home was in P’ungsan, his courtesy name was Uhae and his pen names
were Hyŏnmukcha, Mongbŏn and Changju. Hong’s father was the county magistrate (kunsu) of Yŏngch’ŏn and his mother was the daughter of the ch’amp’an (a Board vice-minister, 2B rank) Chŏng Kwanggyŏng. Hong was a pupil of Chŏng Tugyŏng and his associates included Kim Tŭkshin and Hong Sŏkkī. In 1675 Hong passed the chinsa kwa (Literary Licentiate Examination) and was appointed to positions including magistrate (pusa) and assistant curator (ch’ambong). In 1680, however, he was exiled due to being implicated in the affair surrounding Hŏ Kyŏn and the Sambok Incident. He was reinstated from exile in 1682 and served in other posts in the government after this time.

Hong wrote many works during his life of which Sunoj chi (Fortnight’s Record), a collection of essays, is perhaps the best known. He also wrote Haedong ijŏk (Korean Miracle), Sohwa ship’yŏng (Commentary of Gossip) and Tongguk akpo (Scores of Korean Music) among a total of ten works.

Hong Nanp’a (1897-1941)

Hong Nanp’a was a composer, violinist and conductor. His given name was Yŏngho. He was the composer of Pongsŏnhwa (Touch-me-not balsom) a favourite song during the Japanese occupation. Hong is further remembered for the large impact that he had in the cultural movements during the Japanese occupation.

Hong was born in Hwalch’o Village of Hwasŏng County in Kyŏnggi Province. At fourteen he entered the YMCA Middle School and this began his interest in music. In 1913 Hong attended the Chosŏn Chŏn’gak chŏnsūpso, the first specialised music institution in the modern period in Korea, and spent a year studying the violin under Kim Inshik in the Western Music Department. After graduating, Hong became an instructor at the same institution. In 1917 Hong entered the Tokyo School of Music and concentrated his efforts on a magazine that encompassed literature, music and art. He also became involved in the anti-Japanese movement among the Korean students in Japan and for this was forced to return to Korea. Back in Korea, Hong worked for the Taehan maeil shinbo (Korean Daily News) and also wrote music. Notably, in 1920 his song Pongsŏnhwa became quite famous among Koreans. In 1925 Hong’s Umakkye (The World of Music) was launched and this represented the first music magazine in Korean history. Hong continued to teach, write music and play the violin until 1931 when he travelled to America to study at the Sherwood Music School in Chicago. Upon returning to Korea, Hong taught at Ihwa Yŏja Chŏnmun Hakkyo (present Ewha Woman’s University) and in 1936 he founded the Kyŏngsang Orchestra.

Hong Nanp’a is remembered for his many contributions to the propagation of Western music and theory in Korea. His writings served to introduce a wide variety of Western music to Koreans. Most notable is the legacy that Hong left behind in his music, which continues to be enjoyed by Koreans. Hong was also a patriot who resisted the Japanese colonial occupation of Korea. It was this patriotic spirit that contributed to his untimely death in 1941 from an illness that resulted from his incarceration by the Japanese.

Bibliography

HMMTS, vol. 25.

Hong of Hyegyŏng Palace, Lady (1735-1815)

Lady Hong of Hyegyŏng Palace was the wife of Crown Prince Sado (1735-1762), the mother of King Chŏngjo (r. 1776-1800) and the grandmother of King Sunjo (r. 1800-1834). Her family’s ancestral home is in P’ungsan and she was the daughter of the Chief
State Councillor (yŏngŭijŏng), Hong Ponghan.

In 1762 her husband Crown Prince Sado met a cruel death at the hand of his father, King Yongjo (r.1724-1776). Lady Hong raised their son and two daughters. The son later succeeded to the throne as King Chŏngjo (r. 1776-1880), and Lady Hong outlived him. When Chŏngjo became king, her palace was elevated to the status of Hyegyŏng in honour of being the Queen Mother. Likewise, when her grandson King Sunjo (r. 1800-1834) took the throne in 1800, she was given the title of Queen Kyŏngguī.

Lady Hong is best remembered through her memoirs, Hanjung nok, which provides a vivid account of her life at the royal palace. This work provides a glimpse of court life during Chosŏn and moreover, details the tragic circumstances that led to her husband's death at the hands of his father, King Yongjo.

Hong Taeyong (1731-1783)

Hong Taeyong was a shirhak (practical learning) scholar of the late Chosŏn period. His family's ancestral home was Namyang, his courtesy name was Tŏkpo and his pen names were Hongji and Tamhon. Hong is particularly well known for his heliocentric views of the universe and for acting as a patron for Western science. Hong was a close friend with another renowned scholar of the day, Pak Chiwŏn (1737-1805).

Hong failed in several attempts to take the kwago (government service examination), but he was nonetheless rewarded with an official position due to the merit of his ancestors (the ŭmbo system) and appointed to the official post of kanyŏk (Supervisor) at the Sŏn'gonggam (Office of Public Works) in 1774. He was later appointed as an inspector (kamch'äl) at the Sahŏnbu (Office of The Inspector General) in 1777, and then as first the county magistrate (hyŏn'gam) in T'aein and then as the prefect (kunsu) of Yŏngch'ŏn.

However, Hong devoted more energy to his pursuit of Western science that he had been introduced to during his trip to Beijing in 1766, than he did towards his official duties. Hong wrote Tamhŏnsŏ (Writings of Tamhon), a collection of poetry, analysis of the Confucian classics and his experiences while in Beijing, over a ten-year period after returning from China. Hong’s experiences in Beijing over a sixty-day period would prove to have the most profound impact on his ideological views. During this period Hong was introduced to Western scientific thought in areas such as mathematics, astronomy and even social systems. Of his writings in Tamhŏnsŏ, ‘Ŭisan mundap’ (‘Dialogue at Úisan’) is notable in that it presents his vision of a heliocentric universe in the form of a debate between two scholars of the day. One is Hŏja who represented the conservative Confucian scholar of the day, and the other, Shirung, embodied the writer’s ideology. The two scholars debate matters concerning the formation of the cosmos, in which Shirung rejects the orthodox view of the universe and presents a heliocentric view that is heavily influenced by Western scientific thought.

Hong is chiefly remembered for his ideological slant that was strongly shaped by Western thought. His writings also include Chuhae suyong (Mathematical texts) among several other treatises that present his ideological views, but he is best remembered for Tamhŏnsŏ. Hong’s introduction and advocating of Western science had a profound impact on later generations of Korean shirhak scholars.

Hong Yonghu (see Hong Namp’a)

Hongch’ŏn County

Hongch’ŏn County, situated in western Kangwŏn Province, is comprised of the town of Hongch’ŏn and the townships of Nam, Nae, Naech’ŏn, Tong, Tuch’ŏn, Pukpang, Sŏ,
Sosok and Hwach'on. The entire county is extremely mountainous with numerous peaks over 1 000 metres high in its eastern sector. As an inland highland, the region’s weather is characterised by sharp variations between summer and winter.

The majority of the population is employed in the agricultural sector. Due to the area’s rugged terrain, chiefly dry field crops such as corn, hops and ginseng are cultivated. There are also a number of stock breeding operations which raise cattle, pigs and deer. Mines, excavating iron, alluvial gold, silver and asbestos, also make a significant contribution to the local economy. In addition, there are some manufacturing operations situated in the western part of the county.

With rugged mountains and picturesque valleys, the county has numerous tourist attractions. Tuch'on Township’s Yongso Valley is particularly famous for its serene beauty. Mt. P'albong (Eight Peaks) is a popular destination for hikers. Rising up from the plains surrounding the Hongch’on River, the mountain’s steep slopes and rugged granite spires belie its low elevation (only 302 metres).

As an additional attraction to tourists, Hongch’on County contains a large number of ancient historical sites. At the foot of Tong Township’s Mt. Kongjak, one finds Sut’a Temple. This ancient monastery houses a three-storey stone pagoda and a number of ancient stone stupas. Other Buddhist relics can be seen in Taesung Temple in Naech’on Township and around Mt. Nam in the town of Hongch’on. As for Confucian sites, there is Hongch’on Hyanggyo in the town of Hongch’on. The school’s founding date has been disputed, some claiming that it was first built during the reign of King Chŏngjo (r. 1776-1800), others claiming that it was founded in 1531. During the Korean War, the complex was completely burnt down, but was gradually rebuilt in the decades that followed. In Pukpang Township next to the Hongch’on River, is Nodong Sŏwŏn (private school), which houses the memorial portrait of the Koryŏ scholar Ch’oe Ch’ung (984-1068).

Hongsŏng County

Located on the west coast in South Ch’ungch’ŏng Province, Hongsŏng County consists of the towns of Kwangch’ŏn and Hongsŏng; and the townships of Kalsan; Kyŏlsŏng; Kuhang; Kūmma; Sŏbu; Ŭnha; Changgok; Hongbuk; and Hongdong. Formed in 1914 when the counties of Hongju and Kyŏlsŏng were amalgamated, the county covers an area of 421.6 sq. kms. and according to 1989 statistics, had a population of 111 933. There are mountains on the county’s northern, eastern and southern borders, with mountain streams feeding the Kongni, Hongyang, Hongdong and Kwangch’on reservoirs. With the county’s location along the Yellow Sea, the climate is affected by cold winter winds from the northwest. The area has an average annual temperature of 11.7 deg. C. and an average January temperature of minus 3.6 deg. C. The county receives an average rainfall of 1 167 mm.

About 16 000 hectares of the county are arable. Of this, over 9 000 hectares grow rice and almost 7 000 hectares cultivate dry-field crops such as grains, sweet potato, tobacco and hemp. Although the county has direct access to the Yellow Sea, the fishing and marine products industry is fairly dormant. Local fishermen bring in catches of yellow corbina, shrimp, clam, etc. In addition, there are laver farms and salt flats. Mineral deposits found in the area include asbestos and small amounts of gold, silver and tungsten.

Most of the county’s historical sites and relics are centred around the town of Hongsŏng. One of the most important is Hongsŏng Fortress just south of Hongsŏng High School. Of about 800 metres in circumference, this fortress is thought to be Churyu Fortress, a fortification known to have existed in Paekche. The first written mention of the structure is in the Chosŏn work Sejong shillok (Annals of King Sejong). In 1451, the fortification was rebuilt to conform to local administrative boundary revisions. It was repaired during the
reign of King Hyŏnjong (r. 1659-1674) and also in 1824. Several gates and other structures were added in 1870. Choyang Gate was completely rebuilt in 1975. In modern history, the fortress is famous for the 19 May 1906 battle in which Min Chongshik, Yi Seyŏng, Ch’ae Kwangmok and An Pyŏngch’an led a force of more than 1100 guerilla soldiers in an attack against the Japanese army units based at the fort. The guerillas seized the fortress and forced the Japanese to retreat to nearby Mt. Tŏk.

Buddhist sites in the area include a rock carving of a Buddha (Treasure No. 355) in Hongbuk’s Shin’gyŏng Village; Kosan Temple’s Main Buddha Hall (Treasure No. 399) in Kyŏlsŏng’s Muryang Village; stone banner-pole supports (Treasure No. 538) in Hongsŏng Ogwan Village; a three-storey pagoda and a seated Buddha figure at the old site of Kwanggyŏng Temple in Sohyang Village; a standing Buddha figure in Taegyo Village; a Maitreya figure in Hongbuk’s Sangha Village; a grinding stone, mortar and stone basin at the old site of Yongbong Temple in Shin’gyŏng Village; and a stupa and rock carving of a Buddha at Yongpung Temple.

Old county public schools include Kyŏlsŏng Hyanggyo to the north of Mt. Sŏktang (146m) and Hongju Hyanggyo in Taegyo Village. The former was founded in 1010 and the latter in 1871. As for old private schools, there are Noun Sŏwŏn (founded in 1676), Hyehak Sŏwŏn (founded in 1706) and Yonggye Sŏwŏn (founded in 1724). Promoting cultural awareness and patriotism, the Hongju Cultural Festival is held each year on 30 September and 1 October. The first day of the festival includes a parade, traditional dancing, games and various contests and exhibitions, while the second day is taken up with athletic events.

Horim Museum

Horim Museum is located in Taech’i-dong in Seoul. The museum was established in 1982 by the Sŏngbo Cultural Foundation, under Yun Changsŏp. He first set-up the museum with eight-hundred and thirty-five cultural treasures from his personal collection. Today, items in the collection include over two-thousand pieces of pottery and over three-hundred pieces of metalware, together with numerous paintings and calligraphic pieces. The museum is especially noted for its collection of ceramics and Buddhist art works. Key treasures in the collection include a punch’ŏng flask with lotus and fish designs (National Treasure No. 179); a blue-inlay white porcelain vase with plum and bamboo design (National Treasure No. 222) and a seven-volume edition of the Buddhist Saddharmapundarika-sutra (Lotus Sutra) written with ink on white paper (National Treasure No. 211).

Hŏsaeng chŏn (Story of Master Hŏ, The) [Literature]

Housing

History of Housing

Prehistoric Era

In the Paleolithic Era it is thought that the Korean people lived in caves or other natural structures. There are no vestiges of any man-made housing from this period. However, with the key development of pottery in which early man was able to store and preserve food, man began to settle into an agrarian lifestyle on the Korean peninsula. Instead of living in caves or other natural shelters for protection, by the Neolithic Era the first man-made housing appeared in Korea. Since man had begun to farm he had become accustomed
to using various wood and stone implements, which allowed him to build shelters. He could now easily dig into the ground, drive in support posts, and cover the crude frame he had erected with a thatch of twigs and straw, or animal hides. These first homes are called umjip, or dugout huts, and traces of them have been found at several sites throughout Korea. As the name implies, holes were dug to a depth of about one metre. Then posts were erected to form a conical shape. The huts were generally about 7 metres in diameter. In the centre was a fireplace that was used for both cooking and warmth. As time moved on, primitive man began to develop better tools such as stone axes, stone chisels and the like which enabled him to build even better designed huts.

The shape of the dugout huts underwent a gradual transformation by the end of the Neolithic Era and in the subsequent Bronze and Iron Ages there were tremendous changes brought about by great improvements in the tools that ancient man used. The iron axe allowed him to easily cut timber into various lengths, and the iron chisels that he made could easily fashion stone to exact sizes. The dugout huts changed from their original cone-shape, and huts began to be built in a rectangular form. Walls were also added to provide more height to the structure and comfort for the inhabitants. The size of the dugout huts also increased markedly, with sizes ranging to over 50 sq.m. In the Neolithic Era, the ends of the eaves of the dugout huts still reached to the ground, but gradually there was a change in this construction and the roof came to be supported entirely by the structure itself. It is known through ancient documents that by the early Iron Age, most structures had elevated wooden floors.

Three Kingdoms Period Through the Koryŏ Kingdom

The major changes in housing construction during the Three Kingdoms Period (B.C.E. 1st - C.E. 7th c.) came through contact with the advanced Chinese civilization and the importation of this into the Korean peninsula. The Koguryŏ Kingdom was the first to adopt the Chinese civilization, followed by Paekche and then much later, the Shilla Kingdom.

The changes in housing were gradual, and much of what is transmitted to the present time is through either written documents compiled at a later time, or in the case of Koguryŏ, through tomb paintings that reveal much about the lives of the people. Of the Koguryŏ tomb paintings that show the houses of the people, the most prominent structure is that of the kitchen, followed by barns and storehouses. The paintings do reveal that the most common construction material for homes was wood, although some had stone walls. The roofs were thatched and the homes were heated by an underfloor heating system known as kudul, which was the predecessor to the modern ondol heating system. Generally, the homes of Koguryŏ were surrounded by a stone wall. Of the early period countries in Korea, there is the most information available on the housing of Koguryŏ due to the tomb paintings. However, through recent excavations it is known that kudul was also used to heat the homes of Paekche. Moreover, it is thought that the construction styles of Shilla were influenced by Koguryŏ, and that the construction styles must have been quite similar.

The period of Greater Shilla (668-936 C.E.) was an extension of the Three Kingdoms Period in regards to the gradual development of more complex houses. Wood construction with thatched roofs is thought to have been the predominant style, but stone construction in this period also is thought to have increased. There is much extant stone work of the Shilla craftsmen, and the high quality of this work is still evident. Another development in this period is the increased use of roof tiles. There are various types of both clay and stone tiles that were used in houses of the ruling classes. Also, during the Shilla period distinctions in one’s social status became clear in housing as there were royal edicts that dictated the size of houses permitted for commoners and the various ranks of the ruling classes.

The construction styles of the Koryŏ period (918-1392) were mostly transmitted from the Shilla Kingdom. Along with the influence from Shilla was the new culture that was
imported from Sung China. However, since most of the structures from the Koryŏ period are no longer extant, this can only be surmised. It is thought that the primary construction material for the homes of the common people was wood, and this was topped by a thatched roof. Stone construction and the use of tile for roofs was most likely reserved for the homes of the ruling classes.

Chosŏn Period

Depending upon the region that they were located in, homes in the Chosŏn period (1392-1910) were either chiefly constructed of wood or stone, according to what material was readily available. Most often this was wood, but in the case of Cheju Island where basalt was abundant, this was the main material used in the construction of houses. Moreover, the size of a house and the materials used in its construction also hinged upon the social and economic status of the owner. Region, too, was a factor in the size and disposition of houses and their sites, with the areas of the homes in the northern regions being somewhat smaller due to the mountainous terrain, and the homes in the southern plains being built on a larger scale. The houses of the common people were generally built under a single beam with the rooms in a single line. A more prosperous home would have rooms extending from both sides of the beam. A wealthy farmer’s house was commonly designed in either a L or U shape. The home of an upper-class person would utilize a double L construction so that the courtyard in the centre of the housing compound was entirely surrounded by rooms. Roof composition was most often thatch for commoners and tile for the ruling classes.

Chosŏn period homes can generally be divided into two spheres, an inner zone that was the domain of the mistress of the house, and an outer portion where the master conducted his affairs. The inner sphere centred around the innermost room called the anbang. This was the women’s quarters and served as a sleeping chamber at night and the place where the mistress of the house conducted her household in the daytime. All other rooms of the house would radiate from this centre. The man’s quarters were called the sarangbang, and this is where the master would entertain his male guests and conduct his studies. The presence of these two rooms in the ruling class homes of the Chosŏn period reveals the strict Confucian social code that stressed the separation of men and women.

The homes featured rooms that were heated by an underfloor ondol heating system, and maru rooms that were open, wood-floored rooms designed to circulate the air and so keep family members cool during the oppressive summer months. The kitchen and storerooms of the house generally had earthen floors. The courtyard usually included a well and items necessary for everyday life such as a condiment stand where crocks of soy sauce, bean paste and various other seasonings were stored. In an area separated from the rest of the house by a fence, was the building which housed the ancestral tablets and where sacrificial rituals were performed. Houses were generally surrounded by a wall, and within its confines were front and rear gardens. Often the gardens in the homes of the ruling classes would contain ponds and pavilions from which the residents could view their gardens. The homes of the Chosŏn period are considered to be the so-called traditional housing of Korea. There are still many examples of these homes, called hanok, throughout the country in folk villages and historical sites. Rural homes often still retain many of the characteristics of hanok, except that nowadays it is not common to see a home with a thatched roof.

Furnishings in traditional homes reflected both function and beauty. Since Korean homes were heated from the floor, furnishings were built low to the floor, and most rooms consisted of several chests, small tables for writing or eating at, and cushions for the occupants to sit on. Of note is that the rooms were used for many activities in the course of the day, and their furnishings reflected this flexible nature. The anbang was the most elegant of the rooms, often having paintings, decorated wooden chests and elegantly embroidered cushions among its decor. The sarangbang was much more stern in its outlook than the anbang. The chief focus of this room was scholarly materials such as ink
brushes, ink stones, a water dropper, paper, books, along with a few chests and small tables. Often the walls would be graced by the calligraphy of the occupant with the whole focus of the room directed towards scholarship.

Modern Period

With the 1876 Kanghwa Treaty and the resultant opening of Korea to foreigners and their cultures, came the inevitable dismantling of the traditional systems that had guarded the social hierarchy in traditional Korea. In housing these changes could be seen in the adaptation of certain elements contained in the housing of the upper classes into the homes of the common people. Moreover, after the advent of the colonial period, the prices of dwellings in the city began to rise, which increased the importance of the appearance of one’s home. Therefore, the location of a dwelling and the view therefrom gained a new significance.

In the 1930s, major changes in housing saw the traditional-style homes of Korea beginning to incorporate features that heretofore were reserved for the upper classes, which gave the homes a more affluent appearance. Some examples of these changes include the shortening of roof eaves and the addition of rain-water gutters. Materials that had not been readily available to commoners in the past, such as granite, were now used in housing construction. Exposed wood parts of the house were varnished and rain-water gutters and pipes were painted in order to preserve the material from the elements. By the 1940s, Korean traditional housing had become much more Westernized, with an increase in the number of houses built with red brick, and in the construction of multi-story apartments. The continued adoption and adaptation of Western elements into Korean housing that had started at the end of the Chosŏn period would continue for several decades.

By the early 1970s, housing in Korea had begun a dramatic change. Up until this time, single family dwellings had been the predominant domestic housing form in Korea. However, with the rapid industrialization and the accompanying urbanization of South Korea, the supply of single-family homes could not keep pace. Moreover, based on the fact that the country has a paucity of land for housing development, government policies dictated that the majority of housing would have to be in the form of multi-storied apartment complexes.

The apartment complexes that dominated the landscape of Korea from the early 1980s marked a dramatic departure from the traditional style of Korean house. Instead of a construction style centred around a single room that served many purposes, apartments designated rooms for a single purpose such as bedrooms, dining areas and living rooms. Moreover, instead of the open design of the traditional house in which rooms all face towards a courtyard, apartments of this period were located in large buildings with very small communal open spaces. In addition, the apartment complexes to the end of the 1980s were of very monotonous design which provided little visual relief for those living in and around these buildings.

In recent years the architectural style of the apartment buildings has dramatically changed. The buildings are now of individual design, with each structure presenting a different visual experience. Also, the buildings now feature large open areas in which playgrounds, parks and other common areas are maintained for the residents. This has resulted in the apartment complexes becoming less like a ‘new town’ development and more like the traditional neighbourhoods of past times when residents gathered and relaxed together in the common areas.

Housing and Lifestyles

With the rapid urbanization that accompanied industrialization, South Korea suffered from
housing shortages resulting from the mass migration of workers from rural areas to the cities in the 1960s and forward. The solution to this problem was to build apartments which were designated as housing for the working classes. Although the first apartments in Korea were built in 1932, it was not until the late-1960s that they became widespread. The South’s Second Five-Year Economic Development Plan (1967-1971) called for an increased number of apartments to be built, and by 1985 Korea boasted 821 606 units that accounted for 13 per cent of total housing. This number has continued to rise as apartments are now not only found in large urban centres, but also in smaller rural towns.

Ownership of housing in the major urban areas of South Korea is becoming increasingly difficult to attain for the average citizen. Housing prices have soared due to a shortage in quantity and land speculation. There have been attempts to address the housing shortage such as the election campaign promise by the then presidential candidate Roh Tae-woo in 1987 to build 400 000 units for low-income citizens in Seoul by 1992, but even this number fell considerably short of the average annual increase of 100 000 households in Seoul. The government is now underway with projects to construct massive satellite cities around Seoul and the other major population centres in an attempt to provide more housing for its citizens.

As in many other countries, the affordability of housing is of real concern in South Korea. In recent years, a system of mortgage finance has been gradually introduced, and the government has supported this by introducing a guarantee program that protects the housing loan. However, it is still common practice to complete the purchase with a lump sum of cash, as many Koreans disdain the idea of a mortgage. With the price of real estate continuing to skyrocket in Seoul and elsewhere, buying a home is becoming an impossibility for many wage earners. For example, in 1987 a thirty-five pyong (one pyong equals 3.3 square metres) apartment cost about 50 to 60 million won (about US $71 500 - 85 700). But over the next three years the price increased four or five fold. The same apartment in 1990 cost 200 to 250 million won (US $285 000 - 360 000), which is far out of the range of possibility for most wage earners. Real estate prices have continued to soar throughout the 1990s.

The supply rate of housing in South Korea has been on a steadily rising plane for the past three decades. The housing supply rate which was below 70 per cent in 1988, climbed to 84.2 per cent by 1995. This increase in housing supply helped to ease the housing shortages which are still a problem in urban areas. Rural areas recorded a 96.1 per cent housing supply rate in 1995 compared to just 77.7 per cent for the cities. The average size of the home built in the early 1990s is larger than in the past measuring 84.3 square metres, which is an increase from 68.4 just ten years earlier. The types of housing being built are still predominantly multi-family structures such as apartments and multi-residence housing units. Of the 619 000 units built in 1995, 80.3 percent (497 057) were apartments, 10.7 per cent (66 233) multi-residence units and 9 per cent (55 710) single family homes. Allowing for land scarcity, this shows the continued preference of Koreans for apartment-style living accommodation over single family homes.

Another theme that is of the utmost concern to South Korean consumers in the 1990s, is that of quality in the construction of their homes. The last decade in Korea has brought about a series of disasters caused by shoddy construction practices that aimed only to generate greater profits for builders without concern for the safety of consumers. This crisis was brought to a head in 1995 with the collapse of the Sampoong (Samp'ung) Department Store that killed 501 and injured 930 people. Investigation revealed that the collapse was brought on by the use of substandard materials and that government officials had taken bribes to overlook the flaws. The result of this tragedy is a new awareness of construction quality and its consequences among Korean consumers.

In contrast, housing in North Korea is completely regulated by the state. Based on the established housing standards, the central government constructs two to four-bedroomed
apartmen and allocates each unit to a family according to its specific needs. It has been noted that the central government further provides essential necessities such as a desk, tables, cabinets, bookshelves, a refrigerator, a washing machine, and a television set for each newly-built urban apartment unit.

As each family progresses through its family cycle stage, including split-off family situations such as the marriage of children and other routine changes, the central government of North Korea also faces increasing shortages of housing. Since the ownership of housing belongs to the state and rents charged to residents are too nominal to be seriously considered in the nation's total housing budget, the maintenance of the existing buildings has persisted as a serious problem. Unless the central government distributes a significant amount of resources from the GNP for the construction and rehabilitation of housing, many socialist countries like North Korea and China will continue to face their own unique housing problems.

**Urban Planning**

Urban planning in Korea began in the modern sense during the colonial period in the 1930s. During this period both short and long-term plans were put forth for many cities including Seoul in 1936, and Pusan, Taegu and Inch’on in 1937. In all, by the time of liberation in 1945, there were master plans drawn up for a total of thirty-eight cities in Korea. In addition to the short range plans for the cities, there were also long-range plans established for periods of twenty-five to thirty years.

After liberation, urban planning did not come to the fore of government action until the 1960s. Then, in 1962, the Urban Planning Act was passed and for the first time urban planning was directed by Koreans. Following this, various other laws were enacted relating to urban construction and planning. Some of the important stipulations in the urban planning amendments included provisions that required public participation in the planning process through public forums, twenty-year long term plans, and many other provisions designed to ensure an open and all-encompassing planning method. Urban planning in South Korea exceeds just the institution of physical facilities, but also covers matters such as population, societal issues, the economy, industry, finances and the like, and is designed to achieve a betterment of all of these factors.

Some of the notable events in the history of urban planning in Korea include the establishment of the Special Regional Development Plan for the Seoul and Inch’on region in 1965, and a like plan for the development of Ulsan in 1966. These plans were designed to maximize the utilization of manpower, technology, resources and other items in these specific regions. Urban planning in the 1960s was characterized by the construction of highways which marked a major turning point of the nation’s transportation which up until then had focussed on railroads. The 1970s is characterized by focus on problems that were the result of traffic congestion and other improvements in transportation systems.

Urban planning also addresses issues in the redevelopment of areas within the cities. Three types of basic redevelopment can be done: the first is demolition redevelopment, the second reclamation redevelopment and the third is preservation redevelopment. In Seoul, for example, the central sections of the city have been undergoing demolition redevelopment since the late 1960s. This period has seen the demolition of many old residential neighbourhoods, which once were the dominant structures in central Seoul, and their replacement with modern office buildings and business complexes. The central feature of redevelopment in Korea has been one of modernization, basically translated into the destruction of old neighbourhoods and structures and their replacement with modern-design buildings.

In the past few years, however, there has been a movement to preserve some of the
traditional neighbourhoods that once dominated the large cities. This has been influenced by the steady increase in the awareness of Korean culture and its historical traditions. Notably, the City of Seoul has designated special preservation districts to keep intact the traditional style homes located in these areas. Moreover, there have been guidelines enacted for any new construction in these areas so as to preserve the traditional neighbourhood ambience. This preservation redevelopment has been well received by Koreans and the further expansion of the areas that it effects will help and maintain the traditional flavour of Seoul and other cities throughout Korea.

Bibliography

Hulbert, Homer Bezaleel (1863-1949)

Homer Bezaleel Hulbert was a missionary, teacher and scholar who arrived in Korea in 1886 and would continue to be involved in that country’s affairs for the remainder of his life. He was the son of Calvin Butler Hulbert, a Dartmouth College graduate, Congregational minister and president of Middlebury College, and Mary Woodward, a descendant of the founder of Dartmouth College and the daughter of American missionaries to India. Hulbert graduated from Hanover College in 1884, and then upon the request of King Kojong (r. 1863-1907) for young Americans to teach English, travelled to Seoul, along with Mr. and Mrs. George Gilmore and Dalzell Adelbert in 1886. For five years, from 1886, Hulbert taught English at the Royal English School (Yugyŏng Kong’wŏn). During this period he gained a keen insight into the political situation that was gripping Chosŏn, as well as becoming interested in propagating the knowledge of the West in Korea. He also published Sa’min p’ilchi (Knowledge Necessary for All) in 1889, a han’gul text that imparted what he deemed to be fundamental knowledge of the West. He became convinced that the future of education in Korea was in the study of han’gul, and as a result advocated that Korean students concentrate on their own language, rather than learn the Chinese characters that had heretofore been the focus of Korean education.

Hulbert left Korea in 1891 and took a teaching position at the Putman Military Academy in Ohio, USA, but returned to Korea in 1893 at the bequest of Henry Appenzeller to serve as manager of the Trilingual Press, the publishing house of the Methodist Mission in Seoul. Hulbert’s work for the Trilingual Press was highly successful and in a two-year span had made the enterprise highly profitable. By 1895, however, Hulbert had become deeply involved in the political turmoil that surrounded the Chosŏn court as foreign powers vied for hegemony over Korea. He worked closely with many reform-minded Koreans such as Sŏ Chaep’ill (1866-1951) and Yun Ch’iho (1865-1945), who shared his understanding of the importance of education to the future of Korea, and also served as a confidant of King Kojong.

After the establishment of the Great Han Empire (1897-1910), Hulbert focused his energies on educational activities as principal of the Imperial Normal School, which became the Imperial Middle School in 1900. There, he was able to continue his research into Korean history and the result of this was the publication of The Passing of Korea (1906), one of the first Western-authored histories of Korea. He also played a vital role in the struggle to maintain the sovereignty of Korea, serving as an envoy to the United States on behalf of
Korea in an effort to secure assistance to resist the 1905 Protectorate Treaty (Ulisa Poho Choyak), then being forced upon Korea by Japan. Hulbert also was part of the Korean mission to The Hague in 1907 in a final effort to preserve the national independence of Korea. He made the plight of Korea known to the world through his articles in the magazine *Review* and the aforementioned *The Passing of Korea*. These attempts for maintaining Korea's independence having failed, Hulbert was soon forced to leave Korea by Japanese suspicion of his involvement in the independence movements then being formed.

Hulbert remained in the United States until 1949, and participated in activities designed to help Korea regain her independence, along with men such as Sō Chaep’il and Syngman Rhee (Yi Sungman). Hulbert had known Rhee since the latter was a student at Paeje Academy in the late 1890s, and when Rhee took office as the first president of the Republic of Korea in 1948, he formally invited Hulbert to visit Korea. Thus, in 1949 Hulbert began the long rail and sea journey to Korea alone. The journey proved too trying for him, however, at the age of eighty-six, and by the time he arrived in Seoul on 29 July, he was exhausted and had to be hospitalised. He died within a short time of his arrival and was given a state funeral by the Republic of Korea as a national hero. His early works, such as *The Passing of Korea*, provide an insight into Korea at the turn of the nineteenth c., and his work *Hulbert's History of Korea* (published in 1962) served as the basic Korean history for Western readers for many years. He is remembered as not only a devoted educator and historian, but also as a tireless advocate for Korea's independence.

**Bibliography**

**Hŭngbu chŏn** (The Story of Hŭngbu)

*Hŭngbu chŏn* is a novel of the Chosŏn period of which neither the writer nor the date of composition is known. This work is in the *p’ansori* (one-man dramatic song) group which has been transmitted from long ago and became a song as the lyrics for *p’ansori* in the Chosŏn period. It has also been recorded as a novel in its process of settlement. The titles of this work are various and include Pakhŭngbu ka, Pak’t’aryŏng and Hŭngbu ka insofar as *p’ansori* works are concerned. In the genre of novels, it is known by titles such as *Hŭngbu chŏn*, *Yŏnŭi kak* and *Changhŭngbu chŏn*. At present there have been thirty-seven different versions researched.

The story is as follows: At the intersection of the three Provinces of Ch’ungch’ŏng, Chŏlla and Kyŏngsang, there lived two brothers. The elder brother, Nolbu, was evil and violent, while the younger brother, Hŭngbu, was kind-hearted. After their parents had died, Nolbu took sole possession of all their property and drove his younger brother off. Hŭngbu, with his wife and children, built a small hut on a hillside and tried to eke out a living, but the family was always near starvation. One day, Hŭngbu went to his elder brother’s house and begged him for some rice, but he was beaten by his brother and returned home empty handed. Although Hŭngbu and his wife tried various types of work for wages, there was no way for them to earn enough money to live. Hŭngbu even tried the work of being beaten, but that too, was unsuccessful. One day in the spring Hŭngbu found a young swallow which had fallen to the ground and broken its leg. He nursed it back to health and eventually the bird could fly away. The following year the bird returned with the seed from a gourd in its beak. Hŭngbu planted this seed and watched as it rapidly grew and yielded many large gourds in the fall. Inside of the gourds were gold, silver and other treasures, which resulted in Hŭngbu becoming very wealthy. Nolbu heard of his younger brother’s windfall and intentionally broke the leg of a swallow and then nursed it back to health. This swallow also returned in the spring of the following year with a gourd seed in its beak. Nolbu planted this seed and watched with anticipation as the plant grew rapidly. However
in the fall, out of the gourds came a myriad of evil creatures that brought ruin to Nolbu’s house. Hŭngbu heard of this calamity and then shared half of his property with his elder brother. After this, Nolbu saw the error in his ways and lived from this point forward in harmony with his younger sibling.

The structure of Hŭngbu chŏn is threefold. First there is the motif of an evil elder brother and a gentle younger brother, second the theme of animal gratitude, and third the motif of unlimited treasures. The first motif is realized in the characters of the two brothers and is a tale of imitation in which the elder brother seeks to accomplish what his younger brother has done but fails to do so. This motif is seen in other Korean tales such as Kŭm tokki, ŭn tokki (Gold Hatchet, Silver Hatchet) and Malhanŭn yŏmsŏ (The Talking Goat). The inclusion of this motif indicates the social realities present from the time of the 1592 Japanese Invasion onward in the Chosŏn period, these being a country in dire poverty in which harmony was not possible even among siblings. Therefore the eldest would take from his younger siblings to ensure his own well being. The motif of animal gratitude reveals that even animals return favor if they are indebted to others. There are many traditional Korean tales with this theme including Sae po'n sŏlhwa (The Tale of the Bird’s Gratitude) and Sastŭn po'n sŏlhwa (The Tale of the Deer’s Gratitude). The inclusion of the theme of animal gratitude is also reflective of the social situation at the time of the formation of this work. This theme reveals the desires of the people to live in a society that is so just, that even animals return kindness with like actions. This indicates the actualities of this period in which the quest for survival did not allow charitable acts to be prevalent. As for the motif of receiving boundless wealth, this inclusion reveals the wish of the people for their desires to be fulfilled with no limit. One such tale with this theme is Isanghan nambi (The Strange Pot). In a time of such desperate poverty, it is only natural for the people to wish for wealth from supernatural sources. This reveals that the consciousness of the composer group of Hŭngbu chŏn was cognizant of the fact that the only hope for the alleviation of their destitution was in supernatural powers. The awareness of the composer group of their social situation is revealed in the presence of these thematic concerns. As a result, Hŭngbu chŏn can be seen as an agglomeration of three separate tales with motifs as outlined above.

In addition to the influence of folk culture and its beliefs on the formation of Hŭngbu chŏn, there is also Buddhist input. In ‘Sŏn’gu akku sŏlhwa’ (‘The Tale of Seeking Good and Seeking Evil’) in Hyŏnu kyŏng and ‘P’agak toin sŏlhwa’ (‘The Tale of the Crippled Taoist’) in Chappiyu kyŏng there are very similar themes as in Hŭngbu chŏn. This reveals Buddhist influence in the formation of this work, and explains its Buddhist characteristics.

Hŭngbu chŏn is generally understood as a novel that is based on Confucian morals emphasizing harmony among brothers that dominated the society in which this work was formed. This theme of the promotion of virtue and the admonishment of vice based upon retribution has been the general view of this work in past times. However Hŭngbu chŏn, as a work that was based on the behaviour of those in the common classes of Chosŏn, also reveals the prevailing social realities of its time, and the characters reflect realistic models of this class. Accordingly, the intent of the composer group and the subject of the content of Hŭngbu chŏn can be viewed as a critical consciousness among the common people concerning the morals of the middle Chosŏn period, in addition to the Confucian concepts of rewarding good and rebuking evil. In these aspects Hŭngbu chŏn is a mirror of its times, and the characters of the two brothers represent the two faces of the farmers of this period. Specifically, Nolbu represents a wealthy and self-serving farmer who is skilled at accumulating wealth, while Hŭngbu is a model of the typical farmer who has lost his land and thereby has no means to earn a living. As for the subject of this work, there are two differing opinions as to its origin. One view is that it represents the mood of agitation and discord caused by the changes in society, thereby raising the social consciousness of the common class. The other view reveals a contradiction of social realities in which an evil person leads a comfortable life of abundance while a good person, regardless of his efforts,
is resigned to a life of poverty and hardships. This latter view reveals the social phenomena
that were manifested at the end of the Choson period.

**Hüngbu ka**

[Hungdok, King (r. 826-836)]

King Hüngdok (? -836) was the forty-second king of Shilla and reigned from 826 to 836. His family name was Kim, his given name Sujong, and also had names of Kyŏnghwi and Susŏng. He was the brother of King Höndok (r. 809-826), his father was King Wŏngsŏng (r. 785-798), his eldest son was Crown Prince Hyech'ung and his mother was Queen Dowager Sŏngmok. Hüngdok’s queen, Changhwa, was the daughter of King Sosŏng (r. 798-800). Upon the death of his brother in 826, Hüngdok was granted the throne by Queen Dowager Chŏngmok.

The political situation in which Hüngdok was confronted with when he ascended to the throne was essentially the same that his brother Höndok had. The two brothers schemed to carry out political reforms during the reign of King Aejang (r. 800-809), and by 809 had driven the monarch from the throne, allowing Höndok to take power. Even during the reign of his brother, Hüngdok participated greatly in the political affairs of the nation, thus solidifying his position as rightful successor to the throne. After taking the throne in 826, Hüngdok, like his brother had before him, sought to limit the power of the chingol (true bone) aristocrats and simultaneously strengthen the monarchy. One measure he took was to increase the authority of the Chancellery Office (Chipsabu) and he also attempted to enact various measures to impede the tremendous wealth that the aristocracy had been accumulating. During the decline of Shilla, ambitious members of the aristocracy sought to increase their power, and perhaps vie for the throne, through the accumulation of vast personal fortunes and private armies. The insurrection led by Kim Hŏnch’ang (? --822), which was successful for a number of years, was merely one of several that occurred in the final years of Shilla. Hüngdok recognised the growing power of the aristocrats, but was unable to halt its expansion during his short reign. The turmoil that ensued after Hüngdok’s death for the throne would become the pattern for the remainder of the Shilla period as personal power among the aristocrats became the sole determiner for the occupation of the throne.

Hüngdok is further noted for being the monarch under whose reign tea was brought from Tang China and established as a crop in Korea. In 828, his envoy, Kim Taeryŏm, returned from Tang with tea and Hüngdok had this cultivated at the base of Mt. Chiri, where it is recorded to have grown luxuriantly dense. Additionally, there is a legend in the *Samguk yusa* (Memorabilia of the Three Kingdoms) concerning Hüngdok, entitled *Hüngdok wang kwa aengmu sae solhwa* (The Legend of King Hüngdok and the Parrots), which recounts a song that the monarch wrote about his prized parrots.

**Hūngnam**

Located on the central coast of South Hamgyŏng Province, Hūngnam covers a total area of 130 sq. kms. The city consists of Chakt'o-dong; Ch'ŏn'gi-dong; Hado-dong; Honam-dong; Hunong-dong; Naeho-dong; Sŏho-dong 1 and 2; P'unghŭng-dong; Songsang-dong; Tŏk-dong; Úngbong-dong 1 and 2; Yujŏng-dong 1, 2 and 3; Majŏn Village; and Nūngdong Village;.

Ch'ŏnju Peak (562m) rises on the city’s northeast border while the Tongsŏngch’ŏn and Sŏngch’ŏn rivers flow along the western border into Hamhŭng Bay. While the warm coastal currents influence the city’s climate, the January average is minus 5.3 deg. C., and the average August temperature is 24 deg. C. Rainfall averages 900 mm annually.
There are several important historical sites in the city. In Kungso Village, next to the Hamgyŏng railway line, is the reconstruction of the palace where Yi Songgye lived before becoming King T'aejo (r. 1392-1398). Rebuilt after the Hideyoshi Invasions (1592-1598), the palace was again destroyed during the Korean War. Within the complex lie the tombs of Yi Songgye's paternal grandfather and grandmother. Two steles commemorating the royal tours of Shilla's King Chinhŭng (r. 540-576) are kept in a museum at the site.

During the Japanese occupation of Korea, Hŭngnam's industrial development was spurred by the construction of railways -- the Kyŏngwon line in 1914; the Hamgyŏng line in 1928; the Hamnam line in 1933; and the P'yŏngwŏn line in 1936. These railways linked the city with Wŏnsan; Seoul; P'yŏngyang; and North Hamgyŏng Province. As well as its railheads, Hŭngnam had a port with facilities able to load and unload large cargo ships. In 1927, a large nitrogen fertiliser factory opened, and in 1929 the Pujŏn River Hydro-electric Plant was completed, providing the basis for further industrial development. To service local industry, workers were attracted to the city and the population almost tripled between 1927 and 1943: by the latter date it was over 165,000. Hŭngnam was granted city status in 1945.

**Hunmin chŏngŭm** (Correct Sounds for the Instruction of the People, 1446)

The Korean alphabet (han'gul) is regarded as the crowning achievement of King Sejong (r. 1418-1450). Its completion was officially announced in 1443. The dynastic record states: 'His Highness has personally created the twenty-eight letters of the Vernacular Script. Although King Sejong had surrounded himself with able young scholars from the Academy of Worthies (Chiphyŏn chŏn), their role in Sejong's script project seemed to be an advisory one.

Three years later in 1446, the new script was promulgated. The promulgation document was given as its simple title the name of the script, Hunmin chŏngŭm (The Correct Sounds for the Instruction of the People). It was a kind of handbook for learning the alphabet. The text of the document contains a short preface, a list of the symbols used in the alphabet, and brief descriptions of the sounds associated with the symbols.

The main text contains the Preface by King Sejong and Yeŭi, a section in which the sound value of twenty-eight phonetic symbols used in the Korean alphabet, in comparison with Chinese characters, as well as the six spelling rules, are briefly explained. This basic text of the Hunmin chŏngŭm was supplemented by a second and much longer text, a scholarly commentary called Hunmin chŏngŭm haerye (Explanations and Examples of the Correct Sounds for the Instruction of the People).

Unlike the Hunmin chŏngŭm itself, this commentary was not authored by King Sejong but by a group of scholars, commissioned by him. Eight scholars, Chŏng Inji, Ch’oe Hang, Pak Paengnyŏn, Shin Sukchu, Sŏng Sammun, Kang Hŭian, Yi Kae and Yi Sŏnno undertook the task of writing a new detailed exposition and completed in 1447. It is an invaluable source of information about Sejong's alphabet and the Korean language. The Hunmin chŏngŭm sketches the outline, the Hunmin chŏngŭm haerye fills in detail and gives examples of usage.

With the passage of time, copies of the Hunmin chŏngŭm have disappeared and only one
copy is extant. This is now held in the Kansong Art Gallery as National Treasure No. 70. Discovered in Andong in 1940, it comprises one volume of thirty-three leaves (two of which are not original) and measures 23.3cm by 16.8cm.

The 'Haerye' or second part of the work consists of six chapters. It is in the first chapter, 'Chejahae', that the origins of the Korean phonetic symbols and the principles on which they are based, are explained. The five basic consonant symbols are schematic drawings of the speech organs articulating the sound. Other consonant symbols are made by adding strokes to the basic five shapes.

King Sejong also created a separate symbol for each vowel phoneme. Three vowel symbols, rationalized along the lines of Neo-Confucian philosophy, were considered basic: the roundness of 'a' is a depiction of Heaven; the flatness of 'i' is a depiction of Earth; the uprightness of 'i' is a depiction of Man.

The symbols for the other vowels in the system were formed by combining these three basic shapes. The Hunmin ch'ongum haerye then classifies all the vowels into two groups called yin and yang, the members of which interact phonologically with one another in ways that modern linguists term 'vowel harmony.' Thus linguistic analysis was merged with philosophy.

Prior to the discovery of the one extant copy of the original Hunmin ch'ongum, many theories, usually devised by Western scholars, had existed as to the origins of the script. It was said they were based on Sanscrit, Tibetan or even Balinese letters. The hypotheses of Korean scholars that they were based on an original Korean system were confirmed by the original manuscript found in 1940.

**Hunmong chahoe** (Collection of Elementary Chinese Characters)

_Hunmong chahoe_ was written by Ch’oe Sejin in 1527 in order to teach Chinese characters to children. Before the publication of this work, basic education in Chinese characters was accomplished with either Ch’önjamun (One Thousand Characters) or Yuhap. These works, however, were criticised as containing many abstract characters that were too difficult for children to understand. Ch’oe therefore arranged this work with those characters that represented concrete objects, such as the names of animals, birds, trees and the like, first, and then proceeded with the characters for more difficult concepts. This work is comprised of three volumes of beginning, intermediate and upper levels. Each volume contains 1,120 characters for a total of 3,360.

The work lists the Chinese characters with the han’gul pronunciation alongside with an explanation of the meaning of the character. This enabled the book to be used by learners without a teacher. Since it contains explanatory notes on how to use han’gul, it is a valuable document for research into the history of the Korean script. In the light of research into han’gul, the main features of this work can be summarized as follows: first, in providing the sounds for the Chinese characters, Ch’oe used but twenty-seven han’gul letters instead of the twenty-eight that had been present in Hunmin ch'ongum (Proper Sounds to Instruct the People); second, the author divided the han’gul alphabet into eight sounds that could be used in initial or final positions, eleven middle sounds and eight sounds that could be used as only initial sounds; and third, the author provided a fixed pronunciation for the han’gul letters.

There are several different editions of this work presently extant as it was published many times during the Chosön period. There are slight differences in content among these editions. This work is considered a valuable document for research into the changes and settlement of han’gul.
Hwaak Mountain

Situated north-west of Ch‘unch‘on on the border of Kyōnggi and Kangwŏn Province, Mt. Hwaak (1,468 metres) is the highest mountain in Kyōnggi Province. Along with Kungmang Peak (1,168 metres) and ŭng Peak, the mountain is part of the Kwangju Mountain Range which branches off from the T’aebaek Mountain Range. As a high peak just south of the 38th parallel, the mountain was the scene of many pitched battles during the Korean War. In one particular battle, a large division of communist Chinese troops suffered defeat. A war memorial in Sach‘ong Village has been set up in memory of those who fought in the battle.

Hwach‘on County

Situated in Kangwŏn Province to the north of Ch‘unch‘on, Hwach‘on County is comprised of the town of Hwach‘on and the townships of Kandong, Sanae, Sangsŏ and Hanam. The northern branch of the Han River flows down the eastern end of the county. Near Tongch‘on Village, the Hwach‘on Dam blocks the river, creating P‘aro Lake. The entire county is extremely mountainous. Mt. Samyŏng (1,198 metres), Mt. Obong (779 metres) and picturesque Mt. Yonghwa (878 metres) mark the county’s southeastern border, Mt. Kwangdŏk (1,046 metres), Mt. Paegun (904 metres) and the Mt. Hwaak (1,468 metres) mark the southwestern border, while Mt. Chaean (1,071 metres) and Mt. Il (1,190 metres) rise up in the northeast.

Although the western part of the county is linked to Ch‘unch‘on via Highway 5 and Highway 56, much of the area is not readily accessible. To the north lies Ch‘ŏrwŏn County and the DMZ. These factors, coupled with the rugged terrain, have hindered the county’s economic development. Many of the small towns in the county’s northern areas consists mainly of service industries catering to the needs of soldiers and their families. Only a small portion of the county’s area is under cultivation, and most of this is devoted to dry field crops such as corn, potatoes and beans. Specialty crops such as pine seeds, chestnuts, mushrooms and medicinal herbs are also grown here. In addition, many farmers supplement their income with sericulture and bee-keeping. Increasingly, cattle and pigs are being raised in the area. Due to the area’s poor infra-structure and strict pollution controls along the county’s rivers, there has been little industrial development in the region. However, a hydro-electric power plant has been set up at the Hwach‘on Dam.

With numerous lakes and rivers and unspoilt mountain scenery, the area offers a wide range of activities for visitors. On weekends during the summer, tourists from Seoul and nearby Ch‘unch‘on come to picnic along the county’s numerous streams and rivers. With over seventy varieties of freshwater fish, P‘aro Lake is particularly popular with sports fishermen. For those who love mountains, there is the scenic Mt. Yonghwa. The mountain’s hiking trails take one along huge rock cliffs and granite spires. Northeast of the peak, there is an old stone fortress which is said to have been built by the ancient Maek people during the period of tribal states.

The county boasts a number of scenic attractions, including Mirük Rock, P’allang Waterfall and Chiyŏn Waterfall. There are also numerous medicinal springs. The spring water at T’ongyŏng Temple is particularly famous for its medicinal qualities. Even during the summer, the water from the spring is cold, and it does not dry up even in times of drought.

There are several Buddhist artefacts in the area. In Hanam Township’s Wira Village, there is a seven-storey stone pagoda (Kangwŏn Province Tangible Cultural Asset No. 30) from the Koryŏ period, and in Hanam Township’s Kyesŏng Village, there is the old site of Kyesŏng Temple. The stone lantern at the site has been designated Treasure No. 496.

As for Confucian artefacts, there is the Hwach‘on Hyanggyo (Confucian school) in
Hwach’ön Town. Founded during the Chosŏn period, the school was burnt down in 1950 at the start of the Korean War. Gradually reconstructed during the decades that followed, the present building has been designated Kangwŏn Province Cultural Site No. 102.

Hwadu [Buddhism]

Hwang Chini

Hwang Chini was a famous kisaeng (female entertainer) of the Chosŏn period whose dates of birth and death are not known. Her given name was Chin, her kisaeng name was Myŏngwŏl, and she was also known as Chillang. She was from the city of Kaesŏng, and although her exact dates are unknown, there is evidence that she lived during the reign of King Chungjong (r.1506-1544). Since there are no specific biographies of her, information must be derived from indirect historical sources such as unofficial histories, which contain abundant references to her. However, it is difficult to verify the accuracy of the many stories about her found in these sources.

There are two common stories regarding the birth of Hwang. The first records that she was the illegitimate daughter of Hwang Chinsa (Esquire), while the second states that she was the daughter of a blind man. Although there are far more stories that name her as a daughter of Hwang Chinsa the theory that she was in fact the daughter of a blind man is rather convincing when one takes into account her social position as a kisaeng. As to the reason for her becoming a kisaeng, it is said that when a neighbour boy whom she loved died of disease, she rushed away and joined the world of the kisaeng at an age of fifteen. However, this can not be verified.

Hwang was described as beautiful, brilliant and talented, and she was also skilled at poetry and song composition. It is said that she loved the erudite scholar of that time, Sŏ Kyŏngdŏk (1486-1546), and often visited his retreat with her komungo (six-stringed zither), wine and refreshments, and composed eloquent Tang-style poetry there. One of the many stories that surround Hwang details that she seduced the Monk Chijok, who had been practising an ascetic lifestyle for over ten years and was called a Buddha incarnate, and caused him violate his Buddhist vows. There is also the tale that she tried, but failed, to seduce Sŏ Kyŏngdŏk and therefore became his pupil.

Hwang Chini, along with Sŏ Kyŏngdŏk and Pagyŏn p’okp’o (Pagyŏn Waterfall) have been called the three famous treasures of Kaesŏng. Hwang composed hansi (Sino-Korean poems) such as Pagyŏn, Yŏng panwŏl, Tŭng manwŏl tae hoegu and Yŏ soyanggok among others that have been transmitted to the present. She also composed shijo such as Ch’ongsalli pyŏkkyesu ya, Tongjittal kinagin pamŭl and Ŭyŏ naeiri yŏ and three others which are extant. Since her works were mainly composed for banquets or elegant gatherings and were also the product of a kisaeng, it is thought that many have not been transmitted to the present time. However, her hansi and shijo are highly praised for their literary quality and the depth of feeling that they express. They also reveal much about the luxurious lifestyle of the writer.

Hwang Chipchung [Painting]

Hwang Sayŏng [History of Korea]

Hwangbyŏng Mountain

Situated in P’yŏngch’ang County in Kangwŏn Province, Mt. Hwangbyŏng (1,407 metres) is part of the coastal range which includes Noin Peak (1,338 metres), Mt. Tongdae (1,434
metres), Ch’önma Peak (999 metres) and Mae Peak (1,173 metres). This range is, in turn, part of the long T’aebaek Mountain Range. The north side of the mountain is characterised by spectacular crags and picturesque gorges. Known as Sogūngang (The Lesser Diamond Mountains), the area gets its name from the Chosŏn Confucian scholar Yi I, styled Yulgok (1536-1584). In his travelogue Ch’ŏnghak san’gi, Yulgok described the area as a miniature (so) version of the Diamond (kŏnggang) Mountains. This scenic valley contains many famous sites, including Shipcha Pool, Shiktang Rock and the gorgeous Kuryong (Nine Dragons) Waterfall. Easily accessible from the highway connecting Seoul and Kangnûng, the area is a favourite tourist destination. In 1975, in order to preserve the area’s pristine natural environment, the area, along with Mt. Odæ to the west, was designated Odæ-san National Park.

Hwangnyong Temple Site

The Hwangnyong Temple Site (Historical Site No. 6) is situated in Kyŏngju in North Kyŏngsang Province. During its heyday, the monastic complex that stood here was perhaps the largest in East Asia. According to records, the monastery was founded during the reign of King Chinhung (r. 540-576). The King had ordered the construction of a new palace east of Panwûl (Half-moon) Fortress. However, a dragon was seen at the site, prompting the king to change his plans and order the construction of a monastery, to be called Hwangnyong (Imperial Dragon) Temple. According to another legend, the temple was constructed on the ancient site of a temple from the time of Kasyapa, the Buddha who preceded Sakyamuni.

The temple’s construction began in 553 and was completed sometime between 566 to 569. Around 575, the temple’s statue, an image of Sakyamuni Buddha, was cast. According to legend, the bronze and gold used to make the image was found on an abandoned ship seen floating in Korean waters. An inscription is said to have revealed that the ship was sent by India’s King Asoka. In 584, the Main Buddha Hall (Kūm-dang) was completed, and the nine-storey pagoda was finished in 645. Notably, a construction expert by the name of Abaji was sent from the Paekche Kingdom to Shilla to help with the construction. When completed, the approximately eighty-metre high pagoda was probably East Asia’s largest wooden structure. In 754, the temple’s enormous bronze bell, approximately three times the size of the famous Emmie Bell, was cast.

From the beginning, the temple was associated with Shilla’s ‘state-protection Buddhism’ (hoguk pulgyo). When Buddhism was first accepted by the Shilla elite, it was seen as a force providing spiritual protection to the country. This idea was reflected in the large ceremonies that were held at this time, such as the Assembly for Sutra Recitation by One-hundred Monks (Paekchwa Kanghoe) during which the Benevolent King Sutra (Renwang jing) was recited. This ceremony was performed in response to specific situations; but in general, it served to insure the well-being of the king and the prosperity of the nation. It was also held in conjunction with military campaigns to quell rebellions or expand Shilla’s territory.

Wûn’gwang and Chajang are two of the most famous monks to have resided at the temple. Wûn’gwang (?-630), one of the earliest Shilla monks known to have studied in China, created the Five Secular Injunctions - a code of conduct for Shilla’s young hwarang warriors. Vinaya Master Chajang also stayed at the temple. After his return from study in China, Chajang urged Queen Sindûk to construct the nine-storey wooden pagoda in order to protect the nation from invasion.

From the mid-1970s to the early 1980s, there was a major excavation of the site. Through detailed research, scholars were able to piece together the extensive layout of the original monastery. Over the years, approximately forty-thousand artefacts have been found. In addition to numerous foundation stones, archaeologists have found stone statues, bannerm
pole support pillars, tiles, gilt-bronze figurines and various other metalwork objects, as well as pottery - including pieces imported from Tang China.

Hwanin

[Mythology]

**Hwanjae chip** (Collected Works of Hwanjae)

*Hwanjae chip* is an anthology by literary man Pak Kyusu (1807-1876), and the title is taken from the pen name of the author, Hwanjae. This work of eleven volumes in five fascicles was printed with moveable type and published in 1911. At the beginning of the first volume there is a preface written by Kim Yushik. The first three volumes contain 201 poems written by Pak. Volume four holds various miscellaneous writings and the fifth volume records various memorial addresses and epitaphs. The sixth includes official letters of the author and several memorials he presented to the throne, and the seventh volume carries a speech for the king that Pak wrote, epilogues and letters that the Korean court sent to Qing China with regard to the American intrusion on the Taedong River. Volumes eight to eleven contain 163 letters that Pak wrote and other miscellaneous works.

This work is a valuable source for study of the late Chosŏn period and many of the documents provide useful insights into the working of the Korean government during this turbulent period. Particularly notable is the role of Pak, who was governor of P’yŏnyang at the time, in the burning down of the U.S.S General Sherman when it sailed up the Taedong River in 1866. This work is now stored at the Kyujanggak and National Central Libraries among other places.

Hwaŏm Sect

Hwaŏm Temple

[Architecture]

**Hwarang** (Shilla warrior youth corps)

[History of Korea; Society]

Hwasŏng County

Situated in southwest Kyŏnggi Province, Hwasŏng County is comprised of the town of T’aean and the townships of Namyang, Tongt’an, Mado, Maesong, Panwŏl, Pongdam, Pibong, Sŏshin, Songsan, Yanggam, Ujong, Changan, Chŏngnam, P’alt’an and Hyangnam. The area’s terrain is characterised by low hills in the north and east, and plains in the west.

Agriculture is the largest sector of the economy. With relatively flat terrain and good irrigation, roughly 41 per cent of the county is arable. Stock breeding and dairy farming are another important source of income. Many farmers supplement their income by fishing for oysters, clams, shrimp, yellow corbina and various small fish varieties in the Yellow Sea. Taking advantage of the county’s close proximity to Inch’on and Seoul, numerous factories have been established in the area. These factories manufacture a wide array of goods, including communications equipment, electronics and clothing.
The county’s tourist industry is primarily centred around its lakes and coastline. In particular, Chebu Island, located in Sōshin Township, is popular for its beach and beautiful pine forest. Visitors also come to see the area’s historical sites and relics. Founded in 854, Yongju Temple in particular contains a great number of artefacts, including a large bronze bell (National Treasure No. 120) from the Koryō period, a gilt-bronze incense burner, a bronze incense burner, a folding screen given to the temple by the royal family in 1796, an altar painting made in 1791 and printing blocks for the Pulsŏl pumōn chung kyŏng. Pongnim Temple also contains several important Buddhist artefacts.

Confucian sites include Namyang Hyanggyo (county public school) which was founded in 1397 and An’gok Sŏwŏn (private school) founded in 1667. As for modern schools of higher learning, in Pongdam there is Hyupsung University, Suwon Catholic University and University of Suwon.

In Namyang Township’s Pugyang Village, one finds the Ch’ungjŏlbi (Loyalty Stele). Legend has it that when Qing China forced Hŭngsŏn Taewŏn’gun (1820-1898) to go to China as a hostage, an old man blocked the king’s procession and admonished him, ‘If you desert the people, what will become of this country?’ Sympathising with the old man, Taewŏn’gun shed tears of sorrow. When he eventually returned from China, Taewŏn’gun searched for the old man only to discover that he had passed away. In memory of the old man’s loyalty to his country, Taewŏn’gun had a stele erected at the site.

**Hwasun County**

Situated in South Chŏlla Province, Hwasun County is comprised of the town of Hwasun, and the townships of Nam, Nŭngju, Togok, Toam, Tong, Tongbuk, Isŏ, Iyang, Ch’ŏngp’ung, Ch’unyang and Hanch’ŏn. Except for the western area, the county is characterised by mountainous terrain with peaks from 400 to 900 metres. Mt. Mudŏng (1871m), rising in the north, is the county’s highest peak. Due to the area’s high elevation, the county tends to be relatively cool in summer and is often foggy.

Although the county has little arable land, most of the residents are employed in the agricultural sector. Due to the rugged terrain and cool temperatures, rice cultivation is limited. Dry field crops such as barley, sweet potatoes, potatoes, beans, corn, hot peppers and peaches are common. Isŏ Township’s Tongbuk Lake, Hanch’ŏn Township’s Kŭmjŏn Reservoir and Ch’unyang Township’s Kadong Reservoir provide irrigation water to the area’s farms. Mining also makes a significant contribution to the local economy. Coal is extracted from mines in the townships of Ch’unyang, Tong, and Tongbuk. In addition, silica is mined in Nam Township, lime in Ch’unyang Township and pagodite in Iyang Township. Primarily based in the town of Hwasun, the county’s factories produce processed farm products, liquor, textiles and other manufactured goods.

Tourism is another important source of income for local residents. Situated just southeast of Kwangju, the county attracts large number of visitors who come to enjoy the area’s natural beauty and ancient temples. In Toam Township, there is Unju Temple, famous for its reclining Buddha and other artefacts, and Ssangbong Temple, located in Iyang Township, is also well-known for its large number of ancient relics. Mt. Mudŏng and nearby Mt. Manyŏn are popular areas for hiking and picnics. In the lush valley at the foot of Mt. Manyŏn lie Manyŏn Temple and Manyŏn Waterfall. Legend has it that the waterfall’s name comes from the names of two lovers in the Paekche Kingdom. When the Koguryŏ Kingdom attacked Paekche, Mansŏk was crippled in the battle. Mansŏk and his girlfriend Yŏnsun, aware that their love could never be realised, committed suicide at the falls. From this time on, local people named the falls after the first syllables of the couples names.

Confucian sites in the area include Nŭngju Hyanggyo (county public school) which is said
to have been founded in 1392, Hwasun Hyanggyo founded in 1434, Tongbuk Hyanggyo, founded in 1445, Chuksu Sŏwŏn (private school) built to commemorate Cho Kwangjo (1482-1519) and Yang P’aengson, Towŏn Sŏwŏn which was built to commemorate Ch’oe Sandu, and Haemang Sŏwŏn which was built in memory of Kim Chongjik, Chŏng Yŏhae, etc.

**Hyangyak chipsŏng pang** (Compilation of Native Korean Prescriptions, 1433)

*Hyangyak chipsŏng pang* is a comprehensive reference work of 85 volumes on Korean medicine. It is a synthesis of native medicine used since the time of the Koryŏ Dynasty.

The work has its antecedents in earlier studies of Korean medicine. A medical prescription book based on Korean herbs (*Hyangyak hyemin kyŏnghŏm pang*) was compiled during the Koryŏ Dynasty and later adopted as a textbook for students. Another early medical work was a collection of prescriptions for emergency cases (*Hyangyak kugŭp pang*), an edition of which is to be found in the Bureau of Mausolea and Books of the Imperial Household Agency in Japan and is the oldest extant Korean medical book. These and other works were the basis for a large compilation of thirty volumes in the reign of King T’aeko (r. 1392-98) called the *Hyangyak chesaeng chipsŏng pang* (Collection of Native Prescriptions to Save Life) which had the purpose of popularizing folk medicine and extending medical care. Unfortunately, this work is no longer extant, and we know of its existence only from the preface of *Hyangyak chipsŏng pang* which was subsequently compiled from it.

While, therefore, by the beginning of Chosŏn, there were compilations of Korean herbal medicines and treatments, there was a lack of standardization regarding terms and prescriptions, particularly with the Chinese equivalents. When forced to substitute local medicines for the Chinese ones, the medical profession faced many difficulties. In consideration of this situation, King Sejong (r.1418-50) frequently dispatched medical officials to Beijing to collect prescription books and to correct erroneous medicine names used in Korea.

In 1413, King Sejong instructed Yu Hyot’ong, No Chungrye and Pak Yundŏk to compile various books in the field into a single prescription book, while adding 'folk medicine' to prescriptions in *Chesaeng chipsŏng pang*. As a result, the number of diseases covered increased from 338 in the *Chesaeng chipsŏng pang* to 959 in the *Hyangyak chipsŏng pang*, and the number of prescriptions from 2 803 to 10 706. With appendices which deal with the 1 476 methods of acupuncture and moxibustion, local herbs and methods of parching, the book consisted of 85 volumes. The compilation was completed in 1433 and publication commenced straight away.

The main text of each volume begins by describing the various kinds of diseases, explaining them within the theoretical framework of Eastern medicine. Diseases are classified into 959
kinds, with most of the diseases known to modern medicine included. Next, the work introduces methods of treatment and various prescriptions, indicating the sources from which the treatments originated. Traditional Oriental medicine relies on the theory of the five elements, namely wood, metal, soil, fire and water, and diseases such as paralysis and frostbite are treated differently from the way modern Western medicine treats them. Other diseases are classified into intestinal medicine, ear, nose and throat, ophthalmology, dermatology, etc.. There are also prescriptions for a number of antidotes, as well as sections on gynecology, pediatrics, infant nursing and treatments for fainting and drowning.

Volumes 76 to 85 deal with 630 medicinal plants, animals and minerals produced on the Korean peninsula, describing where they are to be found, their taste, their qualities and effects, and in the case of plants, at what time of the year they should be harvested. In short, it is a comprehensive work based on Chinese sources as well as original Korean works handed down from the Koryô dynasty.

*Hyangyak chipsŏng pang* was used as a textbook by medical students and as a handbook for selecting worthy new students. It lost some of its popularity after the introduction of Chinese medicine during the Ming Dynasty, only to be revived after the Qing invasion of Korea, to be reprinted in 1633.

**Hyech’o (704-787)**

Hyech’o is famous as a specialist in esoteric Buddhism. Around 723, he went to Kuangzhou in Tang China. While there, he became the disciple of Vajrabodhi (671-741), the founder of the Vajradhatu branch of esoteric Buddhism. Following his teacher’s advice, Hyech’o went on a pilgrimage to the Buddhist sacred sites. Travelling by sea to the Nicobar Islands in the Bengal Gulf and then on to India, he visited Magadha, Kusinagara and Bodhgaya and then travelled extensively in both central and south India. From there, he passed through northern India to Samarkand, Eastern Turkestan and Kucha, reaching China in 727. He wrote a four-volume account of his travels to India, known as the *Wang Och’ŏnch’ŏkkuk chŏn* (Memoirs of the Pilgrimages to the Five Regions of India). The text was discovered by the Frenchman Pelliot in the Dunhuang Caves in 1910.

After his return to China, Hyech’o studied with Vajrabodhi in Changan. In 733, he participated in the translation of the *Dasheng yushu jingang xinghai manxu xili qianbi qianbo daqiawang jing* (Treatise on Anuttarasamyaksambodhi Thought in the Amoghavajrayoga). He was regarded, along with Huiguo, as one of the master’s six major disciples. He later studied with Amoghavajra (705-774). He spent the last years of his life living in a temple on China’s Mt. Wutai. Although he never returned to Shilla, he was part of a circle of famous thinkers who were to have a profound impact on the Buddhism of East Asia. His fellow student, Huiguo, later taught Kukai, who founded the Shingon Sect in Japan.

**Bibliography**

**Hyegong, King (758-780)**
King Hyegong was the thirty-sixth king of Shilla and reigned from 765 to 780. Hyegong’s surname was Kim and his given name Kønun. He was the son of King Kyøngdøk (r. 742-765) and a direct descendent of King T’aejong Muyol (r. 654-661), the architect of the Shilla conquest of the peninsula, and the last of the mid-Shilla kings. His mother was also of the Kim family. Hyegong was designated crown prince in 760 and he ascended to the throne at eight years of age under the regency of the Queen Mother.

The period surrounding the reign of Hyegong is notable in that it marked the height of the power struggle between the chingol (true-bone) aristocracy and the king for control of Shilla. The middle period of Shilla is considered to be the high-point of the kingdom, yet even by the reign of King Kyøngdøk (r. 742-765) the balance of power between the chingol aristocracy and the monarchy had begun to alter. Hyegong sought to increase the authority of the monarchy through the Chancellery Office (Chipsabu), and this was the focus in the early years of his reign. Naturally, the attempts to strengthen the monarchy came at the expense of the power of the aristocracy and thus were vehemently opposed by the chingol aristocrats. Hence, the sixteen year reign of Hyegong is marked by a number of political uprisings in the struggle for supremacy between the throne and the chingol aristocrats.

An uprising began in 768 with a plot against Hyegong, led by Kim Taegong. This incident, which lasted three years and was ultimately unsuccessful, grew in magnitude and is said to have involved up to ninety-six members of the aristocracy who held the highest official rank of kakkan. In 774, however, a member of the chingol aristocracy, Kim Yangsang, was able to seize power and reduce the young king Hyegong to little more than a figurehead. There were repeated attempts by supporters of the throne, most notably Kim Ùngø, to restore the authority of Hyegong, but each of these failed. It was at this time that the balance of power in Shilla shifted decidedly to the chingol aristocracy, and so marked the end of the prosperous middle Shilla period. There were various attempts by the factions surrounding Hyegong to restore his power, with the most visible of these aimed at implementing reforms based upon the Tang China systems. Kim Yangsang effectively thwarted these attempts and in 780, Hyegong and his queen were assassinated. Kim Yangsang then declared himself king (King Søndøk, r. 780-785), an event which effectively ended the line of King T’aejong Muyøl and thereby the mid-Shilla period of Korean history.

**Hyeja (?-624)**

Hyeja was a Koguryø monk who crossed over to Japan in 595. Hyeja, along with Hyech’ong, who went to Japan at the same time, resided at Høkø Temple. There, they taught Prince Shøtoku, the eldest son of King Yømei. Their instruction covered a wide range of Buddhist thought, including works from the Three Treatise (Sanlun) School, as well as basic works such as the *Lotus Sutra* and the *Vimalakirti Sutra*. Through their missionary efforts, the two monks helped lay the groundwork for the Japanese acceptance of Buddhism. In 615, after having spent over twenty years in Japan, Hyeja returned to Koguryø.

**Bibliography**

**Hyep’yøn**

Hyep’yøn, a Koguryø monk, is best known for his missionary activities in Japan. In 584, Paekche had sent an envoy to Japan with a Maitreya statue. Søga no Ùmako built a temple
near Ishikawa’s residence and enshrined the statue. At the time, there were no monks available to reside at the temple. After searching far and wide, Hyep’yŏn was discovered living in Bansho. Soga put him up in the temple as his teacher. In this way, Hyep’yŏn became the teacher of Soga, an important Japanese convert to Buddhism. In the same year, Hyep’yŏn ordained three Japanese women: Zenshin, Zenzo and Keizen. These three women became the first Buddhist nuns in Japan.

Bibliography

Hyobong

Hyobong was a general of the Later Paekche Kingdom. Neither his date of birth nor death are known. He along with three other Paekche generals, Tŏksul, Aesul and Myŏnggıl, surrendered to King T’aeso (r. 918-943) at Ilsŏn (present day Sŏnsan) in the ninth month of 936. Then the newly founded Koryŏ Kingdom crushed the remaining military forces of later Paekche in the last of the unification wars of the period.

Hyojong, King (r. 1649-1659)

King Hyojong (1619-1659) was the seventeenth king of Chosŏn and reigned from 1649 to 1659. His name was Ho, his courtesy name Chŏngyŏn and his pen name Chugo. He was the second son of King Injo (r. 1623-1649), his mother was Queen Inyŏl and his queen, Insŏn, was the daughter of the Third State Councilor (Ŭuijong), Chang Yu. Hyojong was born in Seoul and married at the age of twelve. With the 1636 Manchu Invasion, Hyojong together with his brother Grand Prince Inp’yŏng, the queen, royal consorts and various officials, were ordered to take refuge on Kanghwa Island by King Injo. However, after Injo capitulated to the Manchu in the following year Hyojong and his brother Crown Prince Sohyŏn were taken as hostages to ensure the compliance of Chosŏn. Hyojong and Sohyŏn remained in the Manchurian court for eight years, with the Crown Prince returning to Chosŏn in the second month of 1645. In the fourth month of the same year, however, Sohyŏn died suddenly, and as a result Hyojong returned to Korea one month later and was named crown prince. Four years later when Injo died, Hyojong took the throne.

Since the high officials and court of Chosŏn regarded the Manchu as little more than barbarians, the forced submission to their suzerainty gave rise to hostility towards their conquerors. Hyojong, who held clear memories of eight years spent as hostage in various locations of the Manchu domain, shared these feelings and with like-minded government officials began to plan a northern expedition to restore the Ming dynasty. However, the plans of Hyojong and the pro-Ming faction of the Chosŏn court were revealed to the Manchu by members of the pro-Qing faction in Chosŏn led by Kim Chajŏm (? —1651). As a result, the planned expedition came to nothing. The pro-Qing faction was purged in 1651 and other plans were formulated for an invasion of the northern regions, but these also did not materialise. Perhaps the most notable military achievements of this period were the strengthening of the border defences in the north, and the development of new and more powerful weapons. In particular, the new artillery pieces and muskets which were developed with the assistance of Hendrik Hamel, a Dutchman who had been shipwrecked in Korea. This new weaponry aided the strengthening of the Chosŏn army.

Aside from his plans to retaliate against the Qing, Hyojong also implemented various economic reforms so designed to help Chosŏn recover from the calamitous Japanese invasions that had begun in 1592. In a move aimed at lessening the tax burden on farmers, the amount of tax per kyŏl of land was reduced. Insofar as scholarly achievements during
the reign of Hyojong are concerned, the official history *Kukcho pogam* (Precious Mirror for Succeeding Reigns) was published in 1654, and *Nongga chipsŏng* (Compilation for Farmers), a collection of previously written works on farming, was published and distributed. However, matters concerning a military action against the Qing continued to dominate Hyojong’s life and reign, and these remained unfulfilled when he died at age forty-one in 1659.

*Hyŏl ūi nu* (Tears of Blood) [Literature]

Hyŏn Chemyŏng (1902-1960)

Hyŏn Chemyŏng was a composer and an educator. His family’s ancestral home is in Yŏnju; his pen name was Hyŏnsŏk and he was born in Taegu. He studied at Kyesŏng School and then at Sungshil College in P'yŏngyang (Sungshil Chŏnmun Hakkyo). It was at this time that Hyŏn showed an interest in music, particularly in vocal music and the piano. He graduated in 1923 and then became a music teacher at Shinhŭng School in Chŏnju. In 1925 he travelled to the United States and studied at both the Moody Bible School and Gunn Music School. Upon his return to Korea in 1929 he took a position teaching at Yŏnhŭi College (present Yonsei University) in Seoul. The following year he began his professional recording career and made records with the Victor and Columbia recording companies. In 1933 along with Hong Namp’a (1897-1941) he founded the first music publication company in Korea and concentrated on this business until liberation in 1945. In 1950 he composed the first opera in Korea entitled *Ch’ŭnhyang chŏn* (The Story of Ch’ŭnhyang) and went on to compose others such as *Wangja hodong* (1958). Hyŏn is also known for leading Korea’s first full-scale symphony orchestra from 1945-1948. In 1945 he founded the Kyŏngsang Music School (Kyŏngsang Umak Hakkyo) and in subsequent years he was active in music organisations in both Korea and on the international stage.

Hyŏn is remembered for his impact on the propagation of Western music in Korea and for his educational activities which enabled him to train a new generation of musicians in Korea. Hyŏn is also praised for his compositions such as *Kohyang saenggak* (Hometown Reminiscing), *Ku chip ap* (In Front of that House) and *Sandŏl param* (Gentle Breeze).

Hyŏn’gwang

Hyŏn’gwang was born during the reign of King Chinhŭng (r. 540-576). He is famous as the first monk to introduce Tiantai (Kor. Ch’ŏnt’ae) thought to Shilla. Having been ordained as a boy, Hyŏn’gwang later journeyed to China’s Chen Kingdom (557-588) where he achieved realisation under the guidance of Nanyue Huisi. After receiving formal recognition from his master, he returned to Shilla where he founded the Pŏphwa Sect, based at a temple on Mt. Ong in Ungju. In China, he was considered to be one of the patriarchs of the Tiantai sect. Likewise, during the Koryŏ Period when National Msect at Chuch’ŏng Temple in Kaesŏng, Hyŏn’gwang’s picture was kept in the temple’s Chosa-dang (Hall of the Patriarchs).

[Legal system]

**Hyujŏng** (1520-1604)

Hyujŏng, styled Ch’ŏngghŏ, was born in Anju, P’yŏngan Province. His father, Ch’oe Sech’ang, worked as a government official. His parents were both forty-six years old when Hyujŏng was born. Around the age of eight, he lost his mother, followed by his father a year later. Hyujŏng, a highly prodigious boy, caught the eye of Yi Sajung, a county magistrate. Yi, seeing much promise in the orphaned boy, adopted him and brought him to Seoul. When Hyujŏng turned eleven, Yi enrolled him in the famous Sŏnggyuengwan Confucian academy. At this time, Hyujŏng also started studying with the official No, an old friend of his father’s. Around the age of fourteen, he took the civil service examination but failed.

Disappointed with life in the capital, Hyujŏng travelled through the country until he came to Mt. Chiri. There, he stayed at various temples, receiving instruction from famous teachers such as Grand Master Yonggwang. One morning while hauling water, Hyujŏng looked into the distance at the cloud-covered mountains and suddenly achieved awakening. The second morning after this happened, he entered the order under the direction of the elder Sungin. In 1540, he received his higher ordination. Eventually, he received formal recognition (in’ga) of his enlightenment from Grand Master Yonggwang.

In 1549, Hyujŏng passed the monk examination and was selected to be head of both the Kyo (Doctrinal) and Sŏn (Meditation) sect. However, in 1556, feeling that such a position was not the proper role for a monk, he resigned. In the years that followed, he travelled through Mt. Kŭmgang, Mt. Turyu, Mt. T’aebaek, Mt. Odae and Mt. Myohyang, studying and engaging in spiritual practices. At this time, the band of disciples that gathered around him grew to number over a thousand.

In 1589, when Chŏng Yŏrip’s (?-1589) rebellious plot came to light, the monk Muŏp fabricated charges leading to Hyujŏng’s arrest. King Sonjo (r. 1567-1608), however, soon proclaimed the charges erroneous and had him released. The king went so far as to write a poem in Hyujŏng’s honour. Hyujŏng retired to Mt. Myohyang, also known as Sŏsan (Western Mountain), in order to practice more intensely. Around this time, he became known as Grand Master Sŏsan.

In 1592 when the Hideyoshi Invasion broke out, Sŏnjo, who had fled north to P’yŏngyang and then to Ŭiju, sent for Hyujŏng by means of an envoy. When Hyujŏng arrived, the king asked for his advice. Hyujŏng recommended that all able-bodied monks be called on to fight, and that the older monks, who were too old to go into battle, look after the temples and pray for the welfare of the nation. After the king consented, Hyujŏng sent a call to arms to monks throughout the nation. He gathered together a monks’ army over 1 000 strong, which then headed for P’yŏngyang under the leadership of Kwŏnyul. He then mobilised a militia of 1 500 disciples at Pŏphūng Temple in Sunan. These troops, under his personal direction, fought alongside Ming troops to recapture P’yŏngyang. In return for his services, Sŏnjo awarded Hyujŏng with the position of commander of monk armies of the eight provinces. Due to his advancing age, Hyujŏng passed on the position to his disciple Yujŏng.

Hyujŏng wrote a number of works, including the *Samga kwigam* (Mirror of the Three Teachings), *Sŏn’gyo sŏk* (Explanations of Sŏn and Kyo), *Sŏn’gyo gyŏl* (Secrets of Sŏn
and Kyo), Unsan kasa (Cloud River Platform Verses), Chônghô tanjip (Collection of Ch’ônghô’s Works), Shimbôp yo (Essentials of the Mind Dharma). In the Sanga kwigam, Hyujong attempted to show that Confucianism, Taoism and Buddhism ultimately transmitted the same truth. This eclectic approach is also seen in Hyujong’s attitude toward Sôn (meditation) and Kyo (doctrine). Hyujong, like Chinul before him, felt that Sôn and Kyo were mutually compatible aspects of the teachings. One section of the Sanga kwigam was also published separately as the Sôn’ga kwigam (Mirror of the Sôn School). This work is one of the most widely read Sôn texts in Korea.

Hyam Mountain

Mt. Hyam (1,107 metres) is situated on the border of Hwanghae and Kangwôn Province, about 10 kilometres east of Koksan. The name ‘Hyam’ (Standing Boulders) probably comes from the mountain’s steep cliffs and exposed granite faces. Numerous streams flow down the mountain, creating picturesque gorges and valleys. Posal Temple lies at the southern base of the mountain.

Ich’adon (506-527)

Ich’adon, Korea’s most well-known Buddhist martyr, is also named Kôch’adon, Ch’ôdo and Yômch’ok, and is said to have been of the Pak clan. The oldest references to Ich’adon come from the Samguk yusa (Memorabilia of the Three Kingdoms), Samguk sagi (The History of the Three Kingdoms) and Haedong kosiing chôn. (Lives of Eminent Korean Monks). Also, there is a hexagonal, inscribed pillar in the collection of the Kyongju National Museum, which is thought to have been carved in 817, and which depicts Ich’adon’s martyrdom, along with an explanation of the event. Because of severe erosion of the pillar has, however, erased almost half of the text, but it seems to generally agree with the Samguk yusa and Samguk sagi accounts. In particular, it confirms the story of milk flowing out of Ich’adon’s severed neck.

The three accounts vary in matters of detail. According to the Samguk yusa, Ich’adon was a minor court official of the rank of sain, but was descended from Sûppo Kammunwang, the father of King Chiijing (r. 500-514). This work also suggests, at one point, that Ich’adon was a monk, but this would appear to be an added opinion. The three sources generally agree that both Ich’adon and King Pophiing (r. 514-540) planned the martyrdom as a means to overcome the opposition of the aristocratic Hwabaek council to the official acceptance of Buddhism.

According to the Haedong kosiing chôn, an order for the erection of a monastery in the Shilla kingdom was given, thereby inviting the opposition of court officials. When King Pophiing pretended not to have issued the order, Ich’adon (as previously planned) claimed responsibility. The council of ministers demanded Ich’adon’s execution, and the king
concurred, noting that Ich’adon was at odds with majority opinion. Ich’adon’s martyrdom is said to have occurred in 527 (Samguk yusa), 528 (Samguk sagi) or 529 (Haedong kosung chon). As Ich’adon predicted, when he was beheaded, his blood ran white like milk and his severed head flew to the peak of Mt. Kündigang.

According to legend, this miracle, along with other strange portents, induced the council members to immediately allow Shilla’s formal acceptance of Buddhism. However, the postponement to 534 of the construction of Húngnyn Temple, Shilla’s first monastery suggests that the official acceptance of Buddhism may have actually occurred a little later, in 534 or 535. It is generally agreed, though, that Ich’adon’s martyrdom marks the beginning of Buddhism’s flowering in Shilla. In the following years, King Póphûng and his queen both entered the Buddhist monastic order. Ich’adon became a symbol of Buddhist piety, with Buddhist devotees regularly gathering at Húngnyn Temple in commemoration of his martyrdom. In 544, when the temple’s Kûmdang (Gold Hall) was completed, he became one of the ten sages worshipped there, and he was further honoured with the construction of Chach’u Temple on Mt. Kûmgang.

Bibliography

Ich’ôn

Situated in southeast Kyŏnggi Province, Ich’ôn is comprised of the townships of Pubal, Ich’ôn and Changhowon, and the townships of Taewŏl, Majang, Moga, Paeks’a, Sŏlsŏng, Shindun, Yul and Hobŏp. Except for the mountainous terrain along the northern and eastern borders, the city’s area (462.59 square kilometres) is relatively flat. Both the Chungbu and Yongdong Expressway pass through the city, providing ready access to Korea’s large cities.

The soil of the area is particularly fertile and, unlike many places in the Korean peninsula, is not rocky. As a result, farming plays a key role in the local economy. Although fruits and vegetables are grown here, rice remains the main crop. In fact, the rice grown here, known as chach’ae (purple hue) rice, was previously sent in tribute to the king. The kegŏlmu, a variety of radish, is also grown exclusively in this area. In addition to agriculture, numerous industries have set up factories here in order to take advantage of the region’s excellent transportation networks.

Located within an hour’s drive from Seoul, the area has a number of tourist sites. The Ich’ôn Hot Spring is famous for its curative powers. Discovered over 100 years ago, this spring produces 6 500 litres of 30 degrees Centigrade water per day. The hiking course past Sŏlbong Lake and Yŏngwŏl Hermitage to Mt. Sŏlbong (394 metres) is another popular tourist destination. At the numerous pottery kilns in Ich’ôn’s Saum Village and Shindun Township’s Sugwang Village, visitors can witness Korea’s pottery tradition.

Scattered throughout the city, there are numerous relics and historical sites. In addition to artefacts from the prehistoric era, there are what appear to be stone fortress remains from the Three Kingdoms period on Mt. Sŏlbong, Mt. Sŏlsŏng, Mt. Wŏnjŏk, and Mt. Hyoyang, and at the villages of Chin’ga and Chûngil. There is also a relatively intact stone fortress on Mt. Mai (472 metres) at the southern edge of the city.

There are a large number of Buddhist artefacts, including a standing stone Buddha in
Changhowon Township’s Osok Village (Kyŏnggi Province Tangible Cultural Asset No. 107), a standing stone Buddha in Sŏlsŏng Township’s Chisŏk Village, a three-storey pagoda (Kyŏnggi Province Tangible Cultural Asset No. 106) from the Koryŏ period in Ich’ŏn’s Chung Village and a Buddha in relief (Treasure No. 822) at Yŏngwŏl Hermitage. Carved during the Koryŏ period, the 9.6-metre high figure at Yŏngwŏl Hermitage, unlike most works of its kind, occupies the entire surface of the rock. In Moga Township at the foot of Mt. Maok, there is another Buddha in relief (Kyŏnggi Province Tangible Cultural Asset No. 119) which is believed to date from the early Koryŏ period. Confucian artefacts in the area include the shrines Hyosan-sa and Ch’ungjang-sa and the Ich’ŏn Hyanggyo (County public school).

Idiophones

Idu (see Language, Korean)

Iksan

Situated in North Cholla Province, Iksan is comprised of the townships of Kŭmma, Nangsan, Mangsŏng, Samgi, Sŏngdang, Sŏngna, Yŏsan, Osan, Wanggung, Yongdong, Yongan, Unp’o, Ch’unp’o, Hamma and Hwangdŭng. The city was created by combining Iksan County with Iri City. Except for a few mountains and hills along the eastern border, the area’s terrain consists of flat plains. The Kŭm River flows past the northwest border of the county on its way to the Yellow Sea, while the Man’gyŏng River flows along the southern border.

Most of the area’s agriculture is devoted to rice cultivation. In the townships of Nangsan, Yŏsan and Kŭmma, grapes and other fruit crops are grown, and there are a number of stock breeding operations in the townships of Nangsan and Wanggung. Located just off the Honam expressway, Iksan is easily accessible from Taejŏn. In addition, several major highways link the city with Chŏnju to the southeast and Kunsan to the east. Taking advantage of the area’s excellent transportation networks and its proximity to the Yellow Sea, there has been extensive development here beginning with the construction of a large industrial complex in 1969. At present, factories in the city produce a wide array of goods including textiles, metalwork and chemicals.

With extensive industrial development and flat terrain, the area does not attract large numbers of tourists. Yet a limited number of visitors come to the city to see the local historical sites. In addition to the large number of prehistoric artefacts found throughout the area, there are many ancient fortresses, including the Miru̇k Fortress in Kŭmma Township’s Shinyong Village and the Nangsan Fortress in Nangsan Township’s Nangsan Village. Many of the region’s relics are from the Paekche kingdom. In Kŭmma Township’s Shinyong Village and Wanggung Township’s Wanggung Village, there are remains of ancient Paekche kilns.

There are a large number of Buddhist sites in the area. Outside of Iri Girls High School, there is a five-storey pagoda, and another five-storey pagoda (Treasure No. 44) can be seen in Wanggung Village. Ancient stone Buddha statues are located in Samgi Township’s Yŏndong Village and Kŭmma Township’s Tonggodo Village (Treasures No. 45 and No. 46 respectively). At Taesŏng Temple, there is a stone Buddha with attendant Bodhisattvas (North Cholla Province Tangible Cultural Asset No. 12). In addition, a gold Buddha figurine was found in excavations near Yŏsan Township’s Tosŏng Temple.

Perhaps the most interesting Buddhist site in the area is the stone pagoda (National Treasure No. 11) at the Miru̇k Temple site. Located in Kŭmma Township’s Kiyang Village, this 14.24-metre high structure was built in imitation of a wooden pagoda. Much of the front
section has deteriorated and only six-storeys are extant. In 1910, cement was applied to the pagoda in an urgent effort to prevent further damage. The original structure is believed to have been approximately 20 metres high and to have consisted of nine storeys. Thought to date from the reign of Paekche's King Mu (r. 600-641), this is both the oldest and largest stone pagoda in Korea. Near the site, there is also a pair of banner-pole supports (Treasure No. 236).

Confucian sites in the area include Usanjongsa, which was used by Song Yonggu as a ceremonial hall during the reign of Prince Kwanghae (r. 1608-1623). The hall now houses various paraphernalia associated with Song. There are a number of old Confucian schools in the area including the Iksan Hyanggyo (founded in 1398) in Tonggodo Village, the Yosan Hyanggyo in Yosan Township, the Yongan Hyanggyo in Yongan Township and the Hamyol Hyanggyo in Hamna Township. Shrines in the area include Mohyon-dong's Maegoksa founded in 1927 in commemoration of Kim Kunbae who committed suicide in protest over the Japanese occupation of Korea.

As for modern educational institutions, there is Wonkwang University north of central Iksan. Founded by the Won Buddhist Order, the university contains a number of colleges including a College of Won Buddhism and a College of Oriental Medicine. The university also runs a museum, gallery and the Wonkwang Medical Center.

Ilchin Hoe (see Advancement Society)

Ilchogak Publishers

Situated in Seoul's Chongno Ward, Ilchogak Publishers was established on 3 September 1953. The company specialises in works related to the social sciences, technology, history and foreign languages.

Ilsongnok (Record of Daily Reflection)

The Ilsongnok is a monumental record, in diary form, promulgated by King Chongjo (r. 1776-1800), which exceeds two-thousand three-hundred volumes, and spans one-hundred and fifty years, from 1760 to the end of Choson (1910). It embraces the regnant period of six Korean kings, as follows: 1760-75 - pre-accession of King Chongjo, 30 vols; King Chongjo, 646 vols., and 2 supplementary vols. : King Sunjo, (1800-34) 637 vols. : King Honjong (1834-49), 199 vols.: King Ch'olchong (1849-63), 200 vols.: King Kojong (1863-1907), 562 vols.: King Sunjong (1907-10), 33 vols.

The Ilsongnok, like the earlier Oje chasongpyon, was compiled as a vehicle for the self-examination of kings. In its earliest stages the manuscript was edited personally by King Chongjo, but this task was later performed by librarians of the Royal Kyujanggak Library. The manuscripts were written by the Ipchik Komsó (compiler on duty) who placed the daily entries before the king every fifth day. Each entry was arranged according to the importance of the subject or person therein, in eleven descending classifications, and a brief synopsis was kept separate from the main article. However, commands of the king were entered unabridged. Each month's writing was bound into book form, and submitted for the king's approval, with any lacuna inserted in the first month of each year.

There are eleven classifications of the contents of the Ilsongnok, as follows:

(i) On astronomy; (ii) On memorial rites to the king's ancestors; (iii) On the king; (iv) On the grace of the king; (v) On the appointment and dismissal of officials; (vi) Memorials to the throne; (vii) The letters of prosecution; (viii) Stenographs and reports; (ix) Long reports; (x) On the government service examinations; (xi) On penal administration.
The *Ilsŏngnok* contains many diverse accounts which are unrecorded elsewhere, rendering it an extremely valuable source of historical material. Some other accounts of late Chosŏn, such as the *Veritable Records of King Sunjong* and the *Veritable Records of King Kojong* (posthumous records of the monarchs) were scrutinised and edited by the Japanese administration. They are, therefore, a less reliable collection than the *Ilsŏngnok*. A considerable number of the 2307 vols. of the *Ilsŏngnok* has not survived, but the last 33 vols. (during Sunjo's reign) are extant.

**Im Kkŏkchŏng**

Im Kkŏkchŏng (?-1562), also known as Im Kŏjŏng and Im Kŏjiljŏng, was a Robin Hood-like figure from the middle Chosŏn period during the reign of King Myŏngjong (r. 1545-1567). Im was a man of low birth (*ch'ŏnmin*) in a highly stratified society where *ch'ŏnmin* had no choice but to accept social discrimination and resign themselves to poverty.

Cunning and resourceful, Im vented his dissatisfaction with his low social position by organizing a small band of thieves which robbed wealthy private estates. As soon as his influence had increased sufficiently, Im moved into Hwanghae Province and set up his lair in the Kuwŏl Mountains and pillaged surrounding villages. In Hwanghae and neighboring Kyŏnggi Provinces, Im's band attacked officials, raided granaries, and distributed the spoils to the common people. Such actions contributed to his popularity with the lower classes and with lower officials, who helped Im elude capture.

In 1559, Im moved south to Kaesŏng where he was seen frequently. The governor of Kaesŏng, Yi Ŭkkŭn, dispatched a force of about twenty to attack Im's lair, but they were all killed. In response, the king ordered Im's arrest. After a month of unsuccessful attempts, the king threatened the regional governors with serious punishment for failure to catch Im, and offered a reward for his capture. Nevertheless, they were able to catch only a few of Im's band.

In August of 1560, Im and his band were seen as far south as Seoul where a magistrate was killed by an arrow when he attempted to apprehend Im. A number of Im's band were arrested, and his wife was captured and imprisoned. In October of that year, the road running into Seoul through the Kŭmgyo Post Station was blockaded and heavily defended against the robbers, but Im had already moved his central lair and plundering activities to the north. In December of the same year, a chief member of Im's band, Sŏrim, was captured and interrogated. Sŏrim disclosed Im's location, as well as plans to destroy the prison, rescue Im's wife, and kill munitions officer Yi Hŭmnye in Pongsan, who had previously captured members of Im's band.

The king promptly sent an army of five hundred to Pongsan, but an attack from the mountains by the robbers drove them back. The commander was killed and many of the army's horses were stolen. In response, the king personally charged the magistrates from Hwanghae, P'yŏngan, Hamgyŏng, Kangwŏn, and Kyŏnggi Provinces to capture the robbers. The deputy of Sŏhŭng, Shin Sangbo, arrested and imprisoned the wives and children of a few of the robbers, but they were rescued by members of Im's band from Paekchu. Also in December of 1560, Yi Sajung, who was newly dispatched to Hwanghae, reported to the king that he had captured Im Kkŏkchŏng. Further interrogation by the king's officials showed the prisoner to be not Im, but Im's older brother, Ka Toch'i. Yi Sajung was relieved of his duties.
While officials in the five provinces focused their efforts on eradicating the robbers, the people were thrown into a panic. Supplies and commodities were appropriated for use by armies, and commoners who complained were executed. In September of 1561, a message was sent to the king from P'yŏngan Province claiming that Yi Such'ŏl, a priest from Úiju, had captured the robbers Im Kŏkkŏch'ŏng and Hanon. They were exposed by Sŏrim as fakes, and Yi Such'ŏl was relieved of his position. In October, a band of Im's robbers moved into P'yŏngsan in broad daylight, setting thirty or so local granaries on fire, and killing many people. Following this event, the king took desperate measures. He appointed Kim Sehan leader of a select military unit. Kim raided Kaesŏng and P'yŏngyang and, on a predetermined date, his forces secured the gates of Seoul and scoured the city from dawn to dusk. The people were terrified. Those who were guilty of even the smallest misdemeanor fled the intruding forces, and were captured and jailed on the slightest suspicion. Many of Im's band were discovered and arrested.

In the first month of 1562, the hunt finally came to an end. News came of Im's capture by two officers from Sŏhung. According to the report, Im was spotted at Mt. Kuwŏl after the rest of his band was killed. Sŏrim identified him on the spot, and he was finally apprehended and brought to the capitol. It had taken the government three years to find him. He was executed fifteen days later. The dynastic Annals (Yijo shillok. Myŏngjong shillok) makes the following observation: "When there is no good government, then culture and morality cannot thrive. The ministers fulfil their greedy desires as they please, and the magistrates torture the people, rending their flesh and bones and exhausting their blood and tears. There is nowhere to turn for help. He became a thief as a means of survival, after months of starvation and cold. If anyone is to blame, it is the royal court, and not these individuals." After his death, he became revered by outlaws as a bandit and champion of the common people, and inspired numerous tales and novels. He and Chang Kilsan were two great robbers of the Chosŏn period.

Bibliography

Herbert Mahelona

Im Kŏjŏng (see Im Kŏkkŏchŏn)

Imha p'ilgi (Notes on Imha)

Imha p'ilgi was written by the civil official Yi Yuwŏn (1814-1888) of the late Chosŏn period. This calligraphed work consists of thirty-nine volumes in thirty-three fascicles. Yi compiled it while living in a temporary abode at the foot of Mt. Ch'ŏnma in Yangju County about forty kilometers to the east of Séoul. Imha p'ilgi contains writings on the Confucian Classics, history, biographies, customs, geography, poetry and many other topics recorded in the refined calligraphy of Yu.

The first volume of this work is entitled 'Sashi hyangch'un kwan' and discusses the Four Books and Five Classics of China. The second volume, 'Kyŏngjŏn hwashi' covers the poetry of ancient China, and the third and fourth volumes designated 'Kŭmsŏk haesŏngmuk' deal with inscriptions on monuments and tombstones in China. The fifth and sixth volumes are entitled 'Kwaegŏm yŏnwa' and contain discussions on the military strategies of ancient China, and the seventh, 'Kŭnyŏl' introduces personages from Chinese
history. Volume eight, 'Inil', contains the stories and teachings of the ancient sages of Korea, and the ninth and tenth volumes designated 'Chónmo' contain writings about the proper conduct for a lord and a vassal. The eleventh to twenty-fourth volumes, which are named 'Munhòn chijang', cover a vast array of topics ranging from the histories of ancient Korean states during the Koryó period, politics, economics, geography, climate, astronomy, customs and many other topics. Volumes twenty-five to thirty are entitled 'Ch’unmyǒng isla' and are supplementary volumes that cover a wide range of topics. Volumes thirty-one and thirty-two are named 'Sunil' and are also supplements as are the remaining volumes in this work.

*Imha p’ilgi* provides much insight into the situation towards the end of the Chosôn period. A copy is now kept at the Kyujanggak Library at Seoul National University.

**Imjin River**

With its source around Mashik Ridge to the north of Mt. Paegam, the Imjin River flows to the southwest through Kangwón Province where it joins with Komit’an Stream and P’yǒnggan Stream. In Kyǒnggi Province’s Yǒnch’ón County, it merges with the Hant’an River. Near Munsan, it joins Munsan Stream and then the Han River before entering the Yellow Sea near Kanghwa Island. From Yǒnch’ón to the coast, the river is flanked by fertile plains which grow rice, wheat, millet, corn, red pepper and tobacco. Before the division of the Korean peninsula, vessels could navigate upstream as far as Korangp’o and smaller boats even as far as Anhyŏp. In ancient times, this area served as the border between the Three Kingdoms. As a result, the river, then known as the Ch’ilchung-ha, was the scene of many battles. In the Korean War, the Imjin was a line of defence for United Nations forces -- the British contingent (the Gloucestershire Regiment) was heavily engaged at this point, in April 1951. Nowadays, the river staddles the contentious border between North and South Korea.

**Imshil County**

Situated in North Cholla Province, Imshil County has the town of Imshil and the townships of Kangjin, Kwanch’ón, Tunnam, Tókch’i, Samgye, Sǒngsu, Shindók, Unam, Chisa and Ch’óngung. The county has a total area of 599.16 sq. kms. and as given by 1989 statistics, a population of 53,081. Most of the county lies on the eastern slopes of the Noryǒng Mountain Range. In the southeastern area, there is a basin at about 250 metres elevation that extends downwards into Namwŏn.

Roughly one-fifth of the county consists of arable land. Of this, some two-thirds is used as rice paddy and much of the remainder for dry-field crops and dairy-farming, the latter on the area’s extensive pasture land found in Shinp’yǒng. Strawberries are grown commercially in Sǒngsu Township and alpine vegetables in Kangjin and Unam. There is a large dairy-products processing plant in Tae Village. Sericulture is another source of income for local residents.

The county offers a number of scenic areas and historical sites. Okch’óng Lake in Kangjin Township’s Yongsu Village has been developed as a fishing resort since the 1970s. Covering 16 sq.kms., the lake has a wide variety of fish including carp, catfish, mandarin, perch and snakehead mullet. Popular tourist destinations include Sasŏndae (a spectacular bluff that overlooks Owŏl Stream in Kwanch’ón Township) and Mt. Sǒngsu in Sǒngsu Township.
Buddhist sites exist at Shinhŭng Temple in Kwanch'on Township, Tot'ong Temple and Unsu Temple. Established in 529, Shinhŭng Temple's Main Buddha Hall has been designated North Cholla Province Tangible Cultural Asset No. 112. A number of Confucian schools exist in this area, including Imshil Hyanggyo founded in Imshil's Ido Village in 1413; Yŏngch'ŏn Sŏwŏn founded in Chisa Township's Yŏngch'ŏn Village in 1619; Chuam Sŏwŏn in Chisa Township's Panggye Village; Kwan'gok Sŏwŏn in Chisa Township east of Ongnyŏ Peak; Shiman Sŏwŏn in Imshil's Shiman Village; and Hakjŏng Sŏwŏn in Ch'ŏngung Township's Kugo Village.

In order to promote the area’s cultural traditions, festivals and celebrations are held on a regular basis. The Soch'ung Festival, held on the 9th day of the 9th lunar month, is the county’s most important celebration. One of the more interesting festivals in the area is the Uigyon (Loyal Dog) Festival. Held since 1984 on Mt. Wŏndong in Tunnam Township, the festival commemorates a faithful dog that died while trying to save his master’s life.

**Imsul nok** (Record of the Year Imsul)

*Imsul nok* is an account of the peasant uprisings that sprang up throughout Korea in 1862 and 1863. The title of this one-volume work was taken from both the fact that the year in which the uprisings began was known as Imsul in the sexagenary calendar of traditional Korea, and that *Imsul nok* is the work in this collection that is considered most representative. This work includes a total of six documents, 'Imsul nok', 'Cheju mok anhaeksa changgye tungnok', 'Chongsan chip ch’orok', 'Ijong ch’ŏng tungnok', 'Samjŏngch’aek' and ‘Yŏnbuk samjon ch’orok’.

The writer of ‘Imsul nok’ is unknown and the work covers the peasant uprisings in areas such as the Kyŏngsang, Chŏlla and Hamgyŏng Provinces. The work includes reports by government officials such as special inspectors (anhaeksa), temporary officials (sŏnmusa) and governors (kwanch’alsa). This work uses much idi in its composition. ‘Cheju mok anhaeksa changgye tungnok’ was written by Yi Kŏnp’il who was a special inspector dispatched to Cheju Island after the outbreak of riots and contains records of his investigation of the chief culprits in the uprising. ‘Chongsan chip ch’orok’ is a collection of writings by Yi Samhyŏn who was charged with putting down the insurrections in Kyŏngsang Province in the first half of 1862 and then later with quelling the uprisings in Hamhŭng Province. This work is in the form of a diary. ‘Ijong ch’ŏng tungnok’ is a record of special measures that were taken to reform the samjŏng system of taxation and thereby ease the tax burden on the peasantry. ‘Samjŏngch’aek’ was written by Hŏ Chŏn who was Deputy Commander (puhogun) and includes the author’s counter-measures to pacify the uprisings. Of all the works that deal with the reforms of the samjŏng system of taxation, this is the most famous. ‘Yŏnbuk samjon ch’orok’ was written by Yun Chongui and is his opinions on reforms for the samjŏng system.

*Imsul nok* as a collection of these six documents was published by the National History Compilation Committee (Kuksa P’yŏnch’an Wiwŏnhoe) in 1958 in the eighth volume of Han’guk saryo ch’ongsŏ. The original documents of this collection are now in the possession of private collectors or various educational institutions. *Imsul nok* is a valuable document for research into the turbulent times at the close of the Chosŏn period and the rise of various popular movements against excessive taxation and governmental corruption.

**Imun chimnam**

*Imun chimnam* is a work that explains how to use the *imun* writing style of the Chosŏn government. It was written by Ch’oe Sejin (1473? -1542) in 1539 and is of four volumes and one fascicle. Ch’oe explained the need for this book in that it would aid in understanding the difficult language and writing styles that were used in diplomatic
documents that involved the government’s relations with China. The first volume of this work was omitted by the author at the time of compilation since it only contained the King’s order (Chungjong) and did not contain any explanation of the imun or idu system of writing Chinese characters.

This work was published several times during the Chosón period, but the original version has not been transmitted to the present age. There is, however, a late sixteenth century edition that has survived to the present and is now stored at Dongguk University Library in Seoul. Along with the explanation of the Chinese character writing systems used by the Chosón court, this work also includes about eighty examples of slang written in either han‘gul or Chinese characters. These inclusions are of great value to linguists studying the changes in colloquial Korean from the middle period. This work was issued as a supplement to Hundok imun which was published in 1942.

Imundang

Imundang was a book store and publishing firm established in 1916 in Seoul’s Chongno Ward. Its publications included Korean folktales, poetry and Yi Kyubang’s noteworthy book on the Korean language Shinch’ an Chosón Öbop (New Korean Grammar)

Imwön shimnyuk chi (Sixteen Treatises upon Retirement)

Imwön shimnyuk chi is the work of the late Chosón period shirhak (practical learning) scholar Só Yugu (1764-1845). It is also known by the title of Imwön kyôngje chi and is a calligraphed work consisting of 113 volumes in fifty-two fascicles. In the preface of this work, the author reveals that he wishes to pass on to the country gentlemen the essential knowledge and technology needed for life in the countryside. Therefore this work is quite characteristic of an encyclopaedia of pastimes and handicrafts of life in the rural areas.

The 113 volumes of this work are divided into roughly sixteen major categories. The first section is ‘Polli chi’ which covers the first thirteen volumes of the collection and deals mainly with farming methodology. Irrigation and field management techniques are outlined in this section along with the use of fertilizer, the cultivation of certain crops and climatic data of various regions. The second section is ‘Kwanhyu chi’ and covers the fourteenth to seventeenth volumes of this work. This section covers edible and medicinal plants including wild greens, herbs, seaweeds and medicinal plants. Following this is ‘Yewön chi’ which includes the eighteenth to twenty-second volumes and covers mainly flower cultivation methods. The fourth section is ‘Manhak chi’ which is composed of volumes twenty-three to twenty-seven. This portion of the work covers the cultivation of thirty-one types of fruit trees, fifteen types of cucumbers and twenty-five varieties of trees. The fifth section, ‘Chôn’gong chi’ (volumes twenty-eight to thirty-two) explains how to foster mulberry trees along with how to produce silk and make this into silk thread. The sixth section is ‘Wisön chi’, volumes thirty-three to thirty-six, which details various astronomical phenomena concerning agriculture. The seventh is ‘Chôn chi’ which includes volumes thirty-seven to forty and explains stockbreeding, hunting and fishing techniques. The eighth section is ‘Chôngjo chi’ (volumes forty-one to forty-seven) which explains how to make all kinds of food and drink. In the ninth section ‘Somyong chi’, which entails volumes forty-eight to fifty-one, such items as housing construction, furniture, modes of transport and clothing are clarified. ‘Poyang chi’, the tenth section, includes volumes fifty-two to fifty-nine and explains various aspects of health care such as the care of the elderly and the young. The eleventh section ‘Inje chi’ (volumes sixty to eighty-seven) explains Korean medicine. The twelfth section entitled ‘Hyangnye chi’ covers volumes eighty-eight to ninety and deals with local rituals and observations. The thirteenth section contains volumes ninety-one to ninety-eight and is entitled ‘Yuye chi’. This section explains the art and leisure time activities of the countryside gentry such as calligraphy and painting. ‘Jun chi’ (volumes ninety-nine to 106) is the fourteenth section and covers other hobbies of the rural intellectuals. The
fifteenth section, ‘Sangt’aeck chi’ (volumes 107-108) explains the geography and
topography of Korea. The final and sixteenth section of this work is entitled ‘Yegyu chi’
and covers volumes 109 to 113. This section explains the economic theory of the author
and puts forth suggestions for the nation as a whole.

This work contains a great number of documents relating to agriculture and rural lifestyles.
It is representative of the works of the shirhak scholars of the late Choson period who
advocated knowledge that could be practically applied to real-life situations. It provides
valuable data for research into the lives of those who lived in rural areas during the Choson
period. In 1966 it was republished by Seoul National University as part of their series on
classical documents entitled Kojön ch’ongso.

Inch’ön Metropolitan City

Inch’ön is a port city located to the west of Seoul. The city covers an area of 955 square
kilometres and as of 31 December 1996, had a population of 2,390,000. Several islands in
the area, including Yongjong, Yongyu, and Mu’i Island, are also included in the city limits.
Located across from China’s Shandong peninsula, the port has historically served as an
important sea-link between China and Korea. Even now, the city has a small Chinatown,
which is inhabited by approximately 3,000 Chinese. Up to the nineteenth century, however,
Inch’ön, then called Chemulp’o, was merely a small fishing village at the mouth of the Han
River.

As Western powers attempted to force open Korean ports in the late nineteenth century, the
area took on strategic importance. In 1871, American ships launched two attacks on the
harbour to avenge the General Sherman incident of 1866. A few years later, after the
signing of the Corean-American Treaty of Amity and Commerce, Westerners began to enter
Korea through the port, which was officially opened under the name of Inch’ön. During the
1890s, there was also a large presence of Japanese entrepreneurs working in the city.
Several years later, these Japanese residents served as a justification for the landing of 8,000
Japanese troops during the Tonghak rebellion.

During the Korean War, Inch’ön was the site of a daring amphibious assault by American
forces under the leadership of General MacArthur. Since the harbour’s tides are some of the
highest in the world, the landing had to be meticulously planned. On September 15, 1950,
MacArthur’s troops made a successful landing. By cutting off the supply lines to North
Korean troops fighting in the south, the invasion led to an abrupt turn-around in the war.

In modern times, Inch’ön, located in close proximity to the heavily populated Seoul area,
has served as one of Korea’s leading ports. With two tide locks and eight dolphins for
mooring, the harbour has an annual cargo handling capacity of 25 million tons. The city,
with its large iron and steel mill, is also an important industrial centre. Inch’ön’s industries
also produce flour, plywood, sheet glass, boats and autoparts. Due to its economic and
strategic importance, Inch’ön is a directly administered municipality.

The city’s role as a transportation hub is being further enhanced by the construction of the
Inch’ön International Airport. Urgently required due to the continuously increasing demand
for more international flights to and from Korea, the new airport is scheduled for operation
in the year 2000 with two runways. For the final phase in 2020, four
4,000 metre runways will be constructed.

The city has a number of popular tourist destinations. There is Wölim Island, which has
actually been reconnected to the mainland through land reclamation projects. On Wölim, one
finds the popular ‘Culture Street’ which is clustered with cafes and raw fish restaurants.
Chayu (Liberty) Park on Ungbong Mountain contains a statue of General MacArthur and a
monument commemorating one hundred years of friendship between Korea and the United
States. The area offers a view of downtown Inch’ŏn and the sea. Subong Park, located in Sungūi-dong contains an amusement park for children and a monument to the soldiers who died during the war.

Inch’ŏn has several important educational institutions. In previous times, the Inch’ŏn Hyanggyo (Confucian Academy), located in Kwan’gyo-dong, taught about thirty students. The Hyanggyo contains the mortuary tablets of eighteen Korean scholars renowned for their learning. During the Chosŏn period, the academy received an allotment of land and servants, but it ceased to function as an educational institution after the Kabo reforms of 1894. In modern times, numerous educational institutions, such as Inha University, Inchon National University of Education and Inchon Catholic University have been founded in the city.

**Inch’ŏn Municipal Library**

Situated in Yulmok-dong in Inch’ŏn, the Inch’ŏn Municipal Library (Inch’ŏn Chikhal Shirip Tosogwan) was established in November 1921 under the name Inch’ŏn Purip Tosogwan at what is now the site of Chayu (Liberty) Park. The library was moved to its present location in November 1946. Over time, its collection has expanded from the original holding of nine-hundred volumes to more than seventy-thousand. More than two-hundred and sixty-thousand people are estimated to use the library’s facilities every year.

**Inch’ŏn Municipal Museum**

Situated in Songhak-dong in Inch’ŏn, the Inch’ŏn Municipal Museum (Inch’ŏn Shirip Pangmulgw’an) was established in April 1946. Its collection includes stone and earthenware from the Inch’ŏn area; handicrafts; paintings; calligraphy and ancient texts; as well as bronze bells; Buddhist images; and canons from China. Of note are remnants of Japanese armaments and other items from the Sino-Japanese War (1894) and the Russo-Japanese War (1904-1905). In addition to its exhibitions, the museum conducts archaeological surveys of local historical sites and records local folklore. Through regular publications, it makes the results of its research available to specialists in the field.

**Independence Club, The** (see Tongnip Hyŏphoe)

**Independence Hall of Korea**

Situated in the city of Ch’unan in South Ch’ungch’ŏng Province, the Independence Hall of Korea (Tongnip Kinyŏmgwan) is an exhibition hall for articles related to the independence movement against the Japanese annexation of Korea (1910-1945). The facility opened on 15 August 1987 in commemoration of the forty-second anniversary of Korea’s liberation. Situated on a 3 993 936-square-metre site, the facility houses over 8 000 items which were shown in seven halls. Progressing from the ancient past to the present, the exhibitions in these halls represent: the Prehistorical period to Chosŏn period, the nation’s struggle with Western imperialism at the end of the nineteenth century, the Japanese occupation from 1894 to 1945, the March First Movement of 1919, independence fighters against the occupation, governments in exile and Korea since independence. In the plaza in front of the museum stands a towering 51.2-metre-high stone structure symbolising the Korean people’s dream of reunification.

**Independent, The** (see Tongnip shinmun)

**India and Korea**
India's relations with Korea commenced in the late fourth century when Buddhism was introduced to Koguryo. Korean Buddhism grew, particularly, in its formative phase under the shadow of Chinese influence. However, not content with the knowledge of Buddhism acquired in China, a number of Korean monks travelled to India in search of scriptures. The list of Korean pilgrims who negotiated the hazardous journey to India is long -- Hyonyu from Koguryo, and Hyönjo, Hyön'gak Hyeryun, Chöllyun, Hyeyöp, Taebom, Hyöntae and Hyech'o from Shilla. Hyeryun, Chöllyun, Hyeyöp and Hyöntae studied in the renowned monastery of Nalanda in North India, the last named monk being so erudite that he was given a Sanskrit name Sarvajna deva (an all-knowing god). The Paekche monk Kyŏmik is also believed to have visited India in the early sixth century, but the singular record Mirilk pulkwang-sa sajok which records his pilgrimage in an Indian monastery appears to be of doubtful provenance.

Though numerous Korean monks visited India during the Three Kingdoms and Unified Shilla era, names of only a few of them have survived the ravages of time. The only Korean monk whose career in India emerges clearly from the shadows of the past is Hyecho. A fragment of his travelogue named Wangoch'on ch'ukkuk chŏn (translated in English as the Hyecho Diary) was discovered by Paul Pelliot in the Dunhuang grotto early this century. Hyech'o studied esoteric Buddhism in Tang China under Indian masters, Subhakarsinha and Vajrabodhi. Vajrabodhi praised him as 'one of the six living persons, well-trained in the five sections of the Buddhist canons'. On the advice of his Indian teachers in China, he set out for India, to drink deep of the teachings of Buddha. Like travelogues of Xuancang and Yijing, Hyech'o's work is an invaluable source for the study of the social and religious history of early medieval India. The extant copy of Hyecho's travelogue starts with the account of a place in North India where Buddhism was no longer a living faith and where people went barefoot and naked. Subsequently Hyech'o visited Kusinagara, a place where Buddha attained Nirvana. His description of the city as desolate and without any human habitation attests to the decline of Buddhism in India at the time. He visited all the major Buddhist sites, including Deer Park near Varanasi where Buddha gave his first Sermon, Rajgriha, where Buddha spent many years preaching his doctrines and Bodhgaya where Buddha attained enlightenment under the Bodhi tree. Hyech'o also visited many important cities in Central India and West India, including Kanyakubja, presently Kannauj and Jalandhara.

Many Indian monks, too, took their monastic staffs and embarked on an assiduous journey to Korea. An Indian monk, Marananda (perhaps a corruption of Kumarananda), reached Paekche from Eastern Jin in south China, bringing incense and Buddhist Scriptures along. Mukhoja (literally, Dark Barbarian) who visited Shilla and cured a Shilla princess during the reign of Nulchi Maripkan (417-458), the nineteenth ruler of Shilla is also believed to be from India or the Western Region. According to the Samguk yusa (Memorabilia of the Three Kingdoms) he lived stealthily in the house of Morye, and later when a Chinese envoy presented incense to the court of Shilla, Mukhoja was the only person in the kingdom to know its name and use. It is also mentioned that Mukhoja cured a Shilla princess by praying and the burning of incense.

In the heyday of Buddhism, invocation of paradigmatic India and the related Buddhist elements became a common phenomenon, apparently because it reaffirmed sacrality of the land as the Buddhist realm (pulgukt'o) and its rulers as moral exemplars of the Buddhist kingship. The rulers of sixth and early seventh century Shilla proclaimed their faith in the Buddhist concept of cakravartin (Universal Ruler) and employed Asokan symbolism in order to legitimate and reinforce the centralised political structure of the kingdom which faced relentless challenge at the time from the powerful aristocratic class. King Chinhung (r. 540-576) demonstrated his allegiance to the concept of cakravartin by naming his sons Tongnyun (Bronze Wheel) and Saryun/ Kunryun (Iron Wheel / Gold Wheel), two of the four categories of cakravarin described in the Buddhist sutras. When monk Hyeryang escaped from Koguryo, he was asked to recite Inwang kyŏng (Benevolent King Sutra)
which contains references to the glory and magnificence of a cakravartin king. Additionally, *Samguk yusa* and *Haedong kosung chōan* (Lives of Eminent Korean Monks) record that a shipload of gold and iron sent by King Asoka drifted to a number of kingdoms and several kings sought to mould the metal into statues of Buddha, but failed. It was the Shilla king Chinhŭng who succeeded in casting the metal into a Buddha triad (statues of Buddha flanked by two Bodhisattvas). He is said to have installed the 'Asokan' statues in the Hwangyong temple, the palladium of Buddhist culture in Shilla.

King Chinp'yŏng (570-632) revived the tradition of King Chinhŭng and used Buddhist rhetoric to articulate his political concern and strengthen his hold over power. He named himself Chŏngban (Suddhodana) and called his wife Maya puin (Lady Maya), and the king's two brothers, also, were named after the two brothers of Suddhodana. Symbolism of the names of Buddha's parents which Chinp'yŏng adopted had an obvious political implication. It signified the sacred character of Shilla kingship and complete unity between Buddhism and royalty.

During the reign of Queen Sŏndŏk (r. 632-646), the twenty-seventh monarch of Shilla, Buddhist myth was invoked once again. She faced threat to her power from a faction of powerful aristocracy which used Confucian values to question her right to rule. And externally, she was perceived by the rival kingdoms on the peninsula as weak, and they plotted to attack Shilla. Monk Chajang proclaimed her as a queen of the Ksatriya caste, the warrior caste of India to which Buddha belonged and thus accorded her a status crowned with virtue and valour. Chajang described Shilla as the Buddhist realm, an abode of the Past Buddhas to give spiritual comfort to his countrymen and to instil in their mind confidence and a sense of pride. Indeed, so heavily undergirded was the age with Buddhist lores that Kim Ch'ŏlcchun called it, 'an age of Buddhist royal names'.

It appears that the legend of Hŏ Hwangok, an Indian princess from Ayodhya sailing to the shore of Kaya to marry King Suro (r.42-199) in 51 C.E., was manufactured in the seventh century. When Kaya was absorbed by Shilla in the sixth century, its ruling house was integrated into the social and political structure of Shilla and given the chin 'gol (true-bone) status. Later, King Muyŏl (r. 654-661) took a Kaya woman as his queen, and it appears that at the time clan of the former Kaya royalty borrowed several myths and motif of Shilla in order to retroactively sacralise its geneology. It could well have been intended to maintain its privileges which accrued from its status as a clan of royal consort. The theme of birth from an egg that we find in the origin myths of both Shilla and Kaya royalty may not be an example of Kaya's borrowed motif. However, appearance of the symbolism of Ayodhya in the career of Queen Chindŏk (r. 647-654) as well as the consort of Kaya's legendary founding ancestor appears to suggest Shilla's influence on Kaya. It is to be recalled that the maiden name of Queen Chindŏk was Sungman (Srimala), a queen of Ayodhya according to Buddhist scriptures. It is quite likely that the former royalty of Kaya, which was known in Shilla as the New House of Kim, learnt about the significance of Ayodhya symbolism in the seventh century during the reign of Queen Chindŏk and employed it adroitly to acquire greater political legitimacy in the Shilla court. Apparently, the apocryphal tale was accepted by later generations as an authentic historical reality and marriage between the Kimhae Kim clan and the Kimhae Hŏ clan became a taboo. The legend of Hŏ Hwangok together with several other mythological accounts which connect Korea with India may not have much historical value, but they are important as sources of romantic imagination of the Korean people about India, the land of Buddha.

India's cultural dialogue with Korea continued during Koryŏ. According to the *Koryŏsa*, Srivajra from Magadha in India reached the court of Koryŏ and was accorded a warm reception by the Koryŏ royalty. *Koryŏsa* also records that the famous Monk Úich'ŏn met an Indian monk Chŏngil Sang during his sojourn in Song China, and later, when a portrait of the Indian monk was brought to Koryŏ by royal command, he was overcome with nostalgic feelings and composed a poem on the occasion. The last recorded monk to visit
Korea was Dhyanbhadra (Buddhist name Sunyadisya: Chigong in Korean) who reached Koryo in 1326 and returned to Yuan China two years later. Chigong was a dharma master of several Korean monks including Naong, Baegun and Muhak. At the time of Chigong’s visit, Koryo Buddhism had lost its spiritual purity and ideological strength because of its close collusive links with power struggles amongst the aristocracy, and its engagement in profitable commercial enterprises. Chigong was distressed at the degeneration of the glorious Buddhist tradition of Korea and emphasised the need to understand and recover the true spirit of Dhyana (Sõn) Buddhism. The fact that a stupa monument was constructed in his memory and an account of his life and activities engraved at Hoeam temple illustrates the extent of Chigong’s influence on the world of Koryo Buddhism.

With the adoption of neo-Confucianism as a guiding ideology by the Choson dynasty founded in 1392, along with the decline of Buddhism in India, the rhythm of vibrant interaction between the two countries ceased and India lingered in the Korean consciousness as a distant and fading memory. Choson’s lingering nostalgia for India found its articulation in such Buddhist works as Sōkpo sangjöl and Worin sōkpo, and in the dreamland of fiction written by Kim Manjung, while the confucian literati would read works like Tongmun Kwanggo (A Broad Survey in Sino-Korean Writing) to quench their intellectual curiosity about Indian society. Tongmun Kwanggo, written by Yi Tongjung, has a section on history, geography and society of India and it represented the first major attempt to overcome the limitations of its Sinocentric channel of information and form an independent perspective of the various Asian countries. The situation of mutual indifference between Korea and India during Choson changed in the twentieth century when the common colonial experiences served as a major reference-point and fanned the dying embers of mutual interest. The credit for revitalising the bilateral relations in the twentieth century goes to Mahatma Gandhi, Jawaharlal Nehru and Rabindranath Tagore.

In the early twentieth century, the world knew little about the Korean reality, and even Western writers described Japan as a harbinger of modernisation and progress in Korea. India could not really understand or appreciate the legitimate nationalist aspirations of the Korean people. The Korean question was not raised in any of the meetings of the Indian National Congress, nor did any political leader engaged at the time in India’s freedom movement write about it. Gandhi was the only Indian to pen his thoughts (random though they were) on the developments on the Korean peninsula. During the initial years of the twentieth century Gandhi was in South Africa, engaged in what he himself described as ‘experiments with truth’. And it seems that some political events of the Korean peninsula confirmed his belief that truth and non-violence were the most effective instruments of resistance against a mighty imperialist power.

In a short note which Gandhi originally wrote in Gujarati on 25 April 1908, he pointed out that the Chinese in Korea resorted to a boycott of Japanese goods to protest against Japanese atrocities, and that Japan was frightened, because it knew that it needed their support in order to stay on in Korea or anywhere in China. Gandhi concluded, ‘Such is the power of boycott, and boycott is the only one aspect of Satyagraha. If by itself it can be so much stronger than hundreds of guns, what may we not expect of Satyagraha?’

Again in an article dated 26 October 1909, Gandhi pondered over another event on the Korean peninsula—the assassination of Japan’s leading statesman of the times, Itō Hirobumi, at the hands of a Korean patriot, An Chunggün. Itō Hirobumi was instrumental in imposing on Korea the Protectorate Treaty of 1905, which reduced the Korean sovereign to the status of a Japanese marionette, and paved the way for the annihilation of the Korean national identity.

It is not known how knowledgeable Gandhi was about Korea. However, he was politically shrewd enough to see through the Japanese propaganda about the history of Korea-Japan relations. He felt that Itō was a brave Japanese soldier, but unfortunately his patriotic zeal
was misguided. He wrote that, 'in subjugating Korea, Itō used his courage to a wrong end.' Gandhi further observed, 'They (the Korean people) have always regarded Japan with hatred. Itō had been attacked twice before this. But Japan, having once tasted Russian blood, was certainly not likely to pull out of Korea so easily. Such is always the intoxication of power.'

The Korean people too took note of the Gandhian strategy of political agitation and explored ways of adapting it to their own struggle for national liberation. In its editorial dated 13 November 1922, Korea's leading newspaper, the Donga ilbo, admired Gandhi for his 'sagacity in pointing out the way towards the eternal welfare and happiness of the Indian people', and underlined the 'necessity of devising a means of self-production' in Korea as well. In the 1920's the ideals and ideas of Gandhi gained so much momentum in Korea that many organisations emphasising self-production mushroomed, causing immense damage to the colonial industry of Japan. Apparently, Gandhi's influence seems to have played the role of a catalyst to the promotion of native industries in Korea in the twenties.

Gandhi was held in such high esteem in Korea that he struck some Korean intellectuals as an emblem of Christian values, and an attempt was made to understand the Gandhian philosophy in a Christian framework in the same way that Romain Rollands did in the West. In Korea, Yi Kwangsu, a celebrated nationalist thinker, argued that Gandhi emulated the ideas and ideals of Jesus. In post-liberation Korea when the military junta unleashed a reign of terror on the champions of democracy and justice, Korean Christians once again recalled Gandhi as the embodiment of Christian values, and turned to his principles and precepts for the salvation of the nation, as is evident in the writings of Ham Sŏkhŏn and Kim Dae Jung. The Christian philosopher Ham Sŏkhŏn based his thoughts in such close parallel to Gandhi that he was given the sobriquet, 'Gandhi of Korea'. Ham translated into Korean the Bhagavadgītā, Gandhi's favourite Hindu scripture, and discussed its influence on the life and thought of Gandhi in an informed introduction to his translation. Like Gandhi, Ham also established an asrama (hermitage) for moral regeneration of the Korean youth, and used his pen as an instrument for the spiritual uplift of the nation. When Park Chung Hee seized power in the coup d'état of 1961, Ham criticised him for using the wrong means to achieve his stated objective. Apparently, Ham drew his ideological sustenance in his unyielding opposition to military rulers of Korea from Gandhian thought. Gandhi believed that it was impossible to define a just and noble goal, and employ unjust and ignoble means to achieve it, because 'ends do not justify means !'. In one of his essays Gandhi and Christ, Kim Dae Jung, Korea's intrepid champion of democracy, acknowledged his ideological and spiritual debt to Gandhi. He compared Gandhi with Jesus Christ and praised him for using non-violence to instil 'a sense of righteous wrath in the masses who were watching and in arousing sympathy in world opinion'.

While Gandhi built a political bridge of understanding between the two countries, the voice of Tagore appealed to the Korean people as an echo of India's rich spiritual civilization. Tagore's first Korean experience can be traced to 1916 when during his first trip to Japan he met several Korean students and learnt about Japan's harsh colonial policies in Korea. During his sojourn in Japan he wrote a poem entitled The Song of the Defeated. He gave this poem to Chin Hangmun, a Korean student in Japan who visited him at his Yokohama residence on 11 July 1916. The poem reads:

My master has bid me while I stand at the roadside, to sing the
Song of defeat, for that is the bride whom he woos in secret.....
She is silent with eyes downcast; she has left her home behind her.
From her home has come wailing in the wind.
But the stars are singing the love-song of the eternal
To a face sweet with shame and suffering.

By giving the poem to a Korean student the poet wished to underscore the common destiny of India and Korea. He also intended to provide moral fortitude to the Korean people,
suffering under the yoke of Japan's repressive colonial rule. The poem is a testament of the Tagore's belief that it is not defeat and humility but conquest by swords that calls for shame. Chin published Tagore's original (English) poem together with its Korean translation and an introductory note in the magazine Ch’ongch’un.

Tagore visited Japan twice more, once in 1924 on his way back from China and finally in 1929. During his last trip to Japan Tagore made a vitriolic attack on Japan's imperialist rule in Korea. Some Korean students visited Tagore soon after he reached Japan, and apprised him of the exploitation and suffering to which his countrymen were subjected by the colonial rulers. As 1929 marked the tenth anniversary of the famous March First Movement, some Korean students requested Tagore to contribute a poem to commemorate the greatest expression of protest in the colonial history of Korea. Tagore quickly composed the quatrain:

In the golden age of Asia
Korea was one of the lamp-bearers
That lamp waits to be lighted once again
For the illumination of the East

In the 1930s, when Japanese imperialism reached its most vigorous stage, Tagore gave a stern warning to Japan, and in a letter to his poet-friend Noguchi Yonejirō he stridently criticised the Japanese slogan, 'Asia for Asia'. He wrote, 'You are building your conception of an Asia which would be raised on a tower of skulls.'

During the 1920's many of Tagore's works were translated into Korean. However, his poetry represented to the Korean mind 'a glowing warmth, not a boiling turmoil', as Yi Kwangsu once observed. It is generally believed that Tagore's influence found its best expression in the poetry of Han Yongun (1879-1944). Indeed, Han Yongun adopted the motif and the metaphorical implications of Tagore's verse and produced Nim ìi Ch'immuk (The Silence of Love) which is considered a milestone in modern Korean poetry for its departure from the traditional poetic conventions. Like Tagore, Han made an effort in his poetry to transmute human passion into a yearning for an eternal and divine bliss, but Han Yongun was much more particularistic and practical in his enunciation of political views than Tagore. Han imitated the motifs of Tagore -- separation, sighs, silent tears -- but there is a manifest attempt in his verse to ignite the dormant Tagorean sparks into fervent flame. 'Do not wash fallen flowers with tears, wet instead the dust beneath the flower-tree', a line from Han Yongun's poem, After Reading Tagore's Poem Gardinesto', attests to Han's ambivalent attitude to Tagore.

Jawaharlal Nehru seems to have closely followed the flow of the Korean nationalist movement. In a letter to his daughter Indira, (30 December 1932), Nehru lauded the patriotic spirit which the Korean youth displayed during the patriotic Korean nationalist uprising of 1 March 1919. He noted that, 'the people of Korea, and particularly the youth, struggled gallantly against tremendous odds', and described the suppression as a very sad and dark chapter in history'. Nehru met some nationalist leaders from Korea at the Brussels Congress of the League against Imperialism which he attended as a representative of the Indian National Congress. He was instrumental in appointing a committee of four with its seat in Paris to cooperate with the League against Imperialism, and especially to look after the interests of small countries like Korea and Persia, which had no special organisations to watch over their interests. He noted that delegates from Korea along with some other Asian countries like Syria and Indonesia, wished to form an Asiatic federation which represented a unity amongst Asian countries; the idea, however, did not find favour with the western organisers of the Conference. Nehru also noted that the international community did not take a firm stance on Korea, and that delegates from Korea were considerably put off.

On 15 October 1945, exactly two months after the Japanese war machine had collapsed on
the Korean peninsula, Nehru handed a statement to the press in which he mounted a strident criticism on Japanese imperialism for depriving Korea of its freedom and subsequently wreaking havoc on a number of weaker nations of Asia. As the prime minister of an independent India in 1947, Nehru continued to take a keen interest in Korean affairs and played an active role in the resolution of Korean crises at different stages.

India got involved in the Korean affairs soon after it achieved its own independence in 1947. After the conclusion of the Second World War Korea was arbitrarily divided across the 38th Parallel and negotiations between the USA. and the USSR. broke down over plans for a Korean trusteeship. At that time, K. P. S. Menon, an Indian diplomat, was voted chair of the United Nations Temporary Commission on Korea (UNTOK), which was charged with the responsibility of supervising and conducting elections throughout Korea, and setting up a unified national government. The prevailing political chaos and social upheaval made the task of the commission singularly difficult, a situation which was further complicated by the Soviet refusal to cooperate with the United Nations (UN) with the result that the Commission could not follow its mandate in Soviet-occupied North Korea. When the proposal was made before the UN Interim Committee to hold elections in those areas accessible to the Commission, Menon voted in favour. He originally believed that the UN-supervised elections only in the southern part of the peninsula would lead to chaos and instability and perpetuate national division across ideological lines. However, he compromised his conviction and 'allowed his heart to rule his head', because he did not wish to disappoint the Korean poet, Marion Moh (Madame Mo Yunsuk). India's vote clinched the issue in favour of the electoral process.

In June 1950, when the Korean War broke out India condemned North Korean aggression and voted in favour of the Security Council resolution at the UN. It sent an ambulance unit as a token of its support to the UN action, but did not commit itself militarily. During the difficult years of the Korean war India made concerted efforts to mediate a negotiated settlement. The major provisions of the Indian peace initiatives which its ambassadors unfolded in Washington, Moscow and Beijing were seating the Peoples Republic of China in the UN; ending the UN Security Council boycott by the Soviet Union; and a coordinated effort by these powers to bring about a ceasefire in Korea. The Indian proposals evoked irate reactions in both Seoul and Washington and in the end nothing substantial came of the overtures. Nevertheless, India's experience of unsuccessful diplomacy in Korea prepared her for a more meaningful role in international relations in future years. After conclusion of an Armistice Agreement in July 1953 India was chosen Chair and Executive Agent of the Neutral Nations Repatriation Commission to solve the issue of the prisoners of war, perhaps a belated recognition of the Indian insistence on positive neutrality during the war years.

Diplomatic ties between India and Korea commenced in April 1962 when Korea established its consulate in India. The relationship was elevated to ambassadorial level in 1973 and since then it has expanded slowly but steadily to new horizons. A number of positive and concrete measures taken by both governments, which include the exchange of numerous high level visits, academic and cultural exchange programs, and the establishment of a joint commission and joint business councils have doubtless strengthened mutual understanding between the two countries. The major underpinning of the current bilateral ties is, however, trade and investment.

Korea Economic Relations fall into three broad categories: Trade, Investment and Aid. Trade relationship has grown significantly over the years, from a modest $US301 million in 1981 to a massive $US2.32 billion in 1996. During the period, Korean's export to India consisted mainly of plant and machinery equipment, and India's exports to Korea comprised mostly raw materials, such as iron ore, cotton, and animal feed. The changing composition of India's exports to Korea in the recent years is, indeed, a cause of satisfaction; however, the present level of total turnover is hardly commensurate to the size
of the two economies.

In the investment arena, Korea's recognition of India's vast potential is becoming increasingly manifest. Until June 1996, the aggregate value of Korean investments in India amounted to $US700 million. By the end of 1997, however, the amount of Korea's direct foreign investment in India had soared to $US1.5 billion. The major Korean conglomerates (chaebol), including Hyundai, Daewoo, Samsung, LG, are represented in India. Aid represents a new facet of India-Korea economic ties. With the recognition of its developmental strategy, Korea initiated a number of modest programmes to share its experiences with and render assistance to the developing nations. Though India benefitted from some of the Korean scheme of grants-in-aid and technical assistance, aid per se has not been an important component of the bilateral economic ties.

An official visit by India's Prime Minister Sri P. V. Narasimha Rao to South Korea in September 1993 was the first ever by an Indian prime minister and it was reciprocated six months later by President Kim Young-sam who visited India in March 1997. These summit meetings cemented bilateral ties and created a momentum for closer collaboration for the mutual benefit of both countries in various areas. The climate of political understanding, together with phenomenal growth in economic linkages has led in recent years to the realisation of the need to forge cooperation in other fields such as science, technology, culture and education.

Because of the flourishing Buddhist civilization of Korea, the study of Indian philosophy was always present on Korea's academic landscape. Donguk and Wonkwang universities have offered courses in Sanskrit, Pali and Indian philosophy for several decades. The study of Hindi and Modern Indian culture in Korea started in the early 1970s, when a department of Hindi was opened at Hanguk University of Foreign Studies, Seoul. The Hindi department at the Pusan University of Foreign Studies, opened in the mid-1980s. Koreans have published several original works of research in various fields of Indology and their achievement in the field of translation of Indian texts is also impressive. Many works of fiction and non-fiction written in classical and modern Indian languages, as well as works by Indian scholars are available in their Korean translation. Tagore, Gandhi, Nehru, Radhakrishnan, Premchand Bhisma Sahni and R. S. Sharma are only some of the many writers whose works have been translated into Korean. Such India-related journals as Hanin yŏn'gu, published by the Tagore Society of Korea; Indohak pulgyohak Yŏn'gu, published by Dongguk University; and Sŏnama Yŏn'gu (Journal of West Asian Studies) published by Hanguk University of Foreign Studies have also made significant contributions towards the dissemination of knowledge and the attendant enhancement of awareness about India in Korea. Compared to the Korean enthusiasm for India, India's academic interest in Korea is rather abject. Courses in Korean studies are offered only at Jawaharlal Nehru University, New Delhi.

Indigenous religion

Besides native shamanism, the majority of new religions in Korea are classifiable as indigenous, for although they have borrowed from the imported Buddhism, Daoism, Confucianism and Christianity, their syncretism reveals native interpretations and predilections. The four main indigenous religions now are Ch'ondogyo, Taejonggyo, Ch'ungsan'gyo and Wŏn Pulgyo.

Ch'ondogyo is the direct successor to Tonghak, a religion founded in 1860 by Ch'oe Cheu after a revelation from Sangje (Emperor on High). A marginalised intellectual, trained in Confucianism, Ch'oe practiced Buddhistic austerities. Suffering a shaman's sickness, he was unexpectedly spoken to by an immortal and given a mandate of Heaven with the words, "I have a numinous talisman called the medicine of the immortals, shaped like the Supreme Ultimate (t'aeguk) ... Accept the talisman and heal people. If you receive my incantation and teach it to people, you will have long life." Eaten, the talisman cured Ch'oe and those who believed in Hananim (God - usually written Hanullim by Ch'ondogyo). The twenty-one character incantation, 'The supreme ki (energy /pneuma) now imminent, I pray for its great descent. I will serve the Lord of Heaven and creation will be established. I will never forget (God) and all things will be known', contains many of the fundamentals of Ch'ondogyo doctrine.

Ch'oe called his teaching the Heavenly Way (ch'ondo) or Tonghak (Eastern Learning) to contrast with Christianity (sŏhak, Western Learning). The Supreme Ki and the emphasis on sincerity and respect derive from Neo-Confucianism. The long life, talisman and promised utopia originate in folk immortals' Daoism. Ch'oe's experience was then rationalized via borrowings from Confucianism, Buddhism, Daoism and Christianity, which he had been studying previously. Having attracted followers by populist faith-healing and by selecting elements from known doctrines, the authorities executed him for heresy in 1866.

One only required, he claimed, faith in Hanullim (Lord of Heaven), sincerity and reverence. As the Lord of Heaven is all creation, which is manifested via the Supreme Ki or the oscillations of yin and yang, the most spiritual beings, humans, need only constantly serve Heaven, and an immortals' paradise will eventuate. The mind of Heaven is the human mind, and so the mind is innately pure, and all the phenomena of the universe are an evolution of the Supreme Ki, with which unity humans can identify...and become immortal.'

The successor, Ch'oe Shihyŏng, expanded these unsystematic doctrines, creating an organization, ethical code and scriptures. He taught reverence for Heaven was reverence for one's mind, which leads to respect for others and finally for all creation. Thus, pantheistically, Nature serves Heaven, the inner meaning of the 'great descent'.

Initially, Ch'oe Shihyŏng tried to avoid politics, but Tonghak resentment over the execution of their founder and the increasing exploitation of the farmers exploded into the Tonghak Uprising (1893-1894) led by Chŏn Pongjun. Ch'oe Shihyŏng was captured and executed in 1898.

Son Pyŏnghŭi succeeded as leader, and fearing for his life, spent most of 1901-1906 in Japan. Son reacted to the pro-Japanese political activities of Yi Yonggu and the Iljinhoe, proclaimed Tonghak purely a religion, renaming it Ch'ondogyo. He expelled Yi Yonggu's group, who formed Sich'on'gyo. Son consolidated doctrine and practice, a process still continuing. He announced that humans are Heaven (God) - inmaech'on - that humans bear divinity, the purpose of which is the creation of a divine paradise on earth. Cultivation of
the mind leads to communion with Hanullim, and by serving humans like Heaven, mind and body are perfected. Thus are the people aided and saved. Similarly, one is neither mired in the mystical idealism of the impersonal and formless Heaven nor in the materialism of the Supreme Ki.

Sunday was made the day of observance, daily prayer was worship before a bowl of water symbolizing awareness of the foundations of the universe. Believers chant the incantation, and daily offer a spoonful of rice for religious works. This organization enabled Ch'ondogyo to play a pivotal role in the March First Movement, overcoming the pro-Japanese taint. Son read the independence proclamation, was arrested and died in prison in 1922. The Japanese repression produced factions and new 'sects'. Despite Japanese and then communist suppression, Ch'ondogyo survives in South Korea, where it had an estimated 2 000 000 followers in 1950, and in 1995 had 29 623 believers.

Taejonggyo was founded in 1909 by Na Ch'ol, a former bureaucrat, under the name Tan'gun'gyo. Faith in Tan'gun, the mythical divine founder of Korea, had been revived by Kim Yömback in 1893. Kim claimed Tan'gun was the god behind all religions, and salvation was thus through belief in Tan'gun. Na Ch'ol, on a voyage to Japan in a bid to save Korea in 1908, supposedly received a book written on Mt Paekdu. Through this re-illumination of the ancient holy teaching and other revealed texts, Na Ch'ol and sympathizers hoped to revive Korea by worshipping Tan'gun and Heaven, for Koreans were the descendants of Heaven via Tan'gun. To avoid offending the imperial Shintoist beliefs of the Japanese who had annexed Korea, the religion's name was changed to Taejonggyo. The religious headquarters shifted in 1914 from Seoul to near Mt Paekdu, the mountain of Tan'gun's advent. Their 30 000 membership seemed a threat to the Japanese, who began repression. Na Ch'ol suicided, and his successor and many believers fled to Manchuria from where they led a military resistance to Japan until 1945, being almost annihilated. But membership in 1973 reached 145 000.

The faith's three gods are Hwan'in (Sangje), Hwan'ung (Shinshi) and Hwan'gom (Tan'gun) who function as creator, teacher and ruler, and are united in substance as Han'ollim or Hanbae'gom. Han means universal, the one, primal originator of the chosen people, the Koreans or Han. All humans at birth receive the three truths of human nature, life and vitality from Han'ollim. But the three truths are overcome by mind, energy (ki) and the body, producing evil. The three truths can be restored by suppressing the three errors via ascetic practices (halting emotion is the Buddhist seeing of the nature; regulation of the breath or ki is the Daoist immortality technique; the restriction of sensation is Confucian cultivation of the self/body, or divine assistance. Humans, situated between the good gods and evil demons can gravitate to either. The triune principle is applied to this cosmology, to the gods and the three teachings of Confucianism, Buddhism and Daoism. Ceremonies are performed with symbolic utensils (round=Heaven, square=earth, triangle=humans) in which dew, grain, silk and money are offered to Han'ollim. Believers numbered 11,047 in 1995.

Chüngsan'gyo is a general name for approximately sixty current new religions that claim Kang Ilsun (1871-1909) as their founder. Chüngsan was Kang's style. He claimed he was an incarnation of Kuch'ŏn Sangje (Emperor on High of the Ninth or highest Heaven) come to found an earthly paradise by reordering the relations between the human and spirit worlds via ritual magic, and that after death he would return as the future buddha, Maitreya. Disillusioned with Confucianism, Daoism and Buddhism, and disappointed at the failure of the Tonghak Uprising, Kang sought other remedies, such as the t'aėolju - (Incantation of the Great Primal), Kim Hang's Chŏng yŏk theories of the order of the imminent universe, and traditional medicine. Through prayer at Taewŏn Monastery on Mt. Mo'ak, he realized he was humanity's saviour. Perceiving that the gods, spirits and demons influenced the human world, and vice versa, because the souls of the dead become gods, spirits, demons or immortals according to their circumstances in life, he asserted that a future world order of
immortals could be created by transforming the spirit and human worlds.

The past world had now reached nadir due to disputes within the spirit and human realms. Aided by the leading god (Sangje / Kang Il-sun), the regulation of the universe can be achieved via cosmic magic ritual (ch'ŏnji kongsa) incantations reordering the spirit world. This changes human behaviour, for the spirit realm is basically a projection of human mentalities. As humans are the highest existence, the human action of expunging accumulated grievances, especially primal resentment, and replacing mutual conquest with mutual aid, will reform the universe. So gods and humans develop together, and the spirit and human realms will be harmonized. In the new cosmos humans are mentally deified via humaneness and righteousness, which remove grievances and disease. As Kang manifested Sangje, the utopia would commence in Korea.

The magic rituals involve offerings to gods, incantations and prayers. The common scripture is the Taesun chŏn'gyŏng, and incantations the T'aedŏju, Tonghak Shich'o nju or the Buddhist spell to expel the disease demons, which contains the Sanskrit-derived word humch'i that was used derogatively for the religion, Humchi'gyo (Thieving Religion).

Because Kang died without any nominated heirs, or institutions, or set doctrines or name for his teaching, his widow and many pupils established their own religions; some Buddhistic (using the name Maitreya), some Daoistic, some stressing Tan'gun worship. Spreading initially from areas once supportive of the Tonghak Rebellion, one sect, Poch'ŏn'gyo, gained a reported following of 6 million in the 1920s. It was suppressed because its leader, Ch'a Kyongso was rumoured to be an emperor. Most Chungsan'gyo religions were suppressed by the Japanese, but many survived. The largest is the Taesun chillihoe with 676322 believers in 1995.

Wŏn Pulgyo or Wŏn Buddhism is a reformist Buddhism directed at the laity, with a Buddhist metaphysic and a practice and morality with Confucian nuances. The founder, Pak Chungbin (1891-1943), the son of a peasant, after failing to meet a mountain god or an enlightened master, fell into a shaman's sickness. In 1916, sitting quietly at dawn, he suddenly found his mind cleared of doubts and felt refreshed. Hearing the lines of the mandate given to Ch'oe Cheu, and lines from the Zhou Yi, he understood them instantly, unlike before. Realizing he was enlightened, he announced, "All existence is of one essence and all dharmas are of one source. In this the Way which lacks origination or cessation and the principle of cause and effect (karma) are mutually grounded, forming a clear framework." According to personal testimony, after he studied Confucian, Buddhist, Christian and Tonghak texts, he understood that his realization was Buddhist.

This independent enlightenment is used as evidence that Wŏn Buddhism is indigenous, but some observers claim Pak had been a child monk or had assistance from an eminent monk in compiling his scriptures. The language encapsulating his enlightenment experience is Buddhist, and Mahayana Buddhist scriptures and sayings of Chan/Sŏn monks are included in the Wŏn Buddhist canon. Pak practiced contemplation and meditation at Wolmyŏng Hermitage in 1919, called his original thrift association Pulbŏp yŏn'gyuhoe (Buddha-Dharma Study Society) and published a Chŏsŏn pulgyo hyŏksshin'on (Thesis on the Reform of Korean Buddhism) in 1935, criticizing established Buddhism for being unproductive, monastic-centred, and deliberately abstruse in doctrine and ritual.

Through religiously-inspired labour, Pak built an economic base for religious ends, welfare, education and improving women's rights. Believers were free to marry, but had to be diligent, thrifty and moral. Establishing a base at Iri in 1924, the membership has grown to a reported 1000000 believers and 5000 religious functionaries. It has adopted Christian organizational practices (set scripture, hymns, Sunday observance and sermons) and welfare activities (old-people's homes, orphanages, pharmacies, agricultural extension agencies, schools and a university). Some of this may also have been modelled on the
active Japanese Buddhist denominations or on Tonghak.

The name Won Pulgyo was adopted in 1946, won meaning circle or perfection. Won is used to symbolize the Dharmakfiaya Buddha (pophsin pul), the corpus of the enlightened Law, which is essentially the source of the phenomenal or dharmic universe and the original nature of all sentient beings that is realized by the buddhas, wherein karmic retribution has ended, but which manifests itself in the particulars of phenomena and karmically under the influence of Awareness. This circle (ilwonsang) symbolizes the noumena within phenomena, both of which are empty. The formula, 'Everywhere is a Buddha image, every event an offering to Buddha', shows that the practice of the 'Buddha-Dharma is life' itself, in which meditation (son) is timeless and unrestricted by place, a legacy of the Korean Sôn tradition of Pojo Chinul (1158-1210).

As quotidian phenomena are enlightenment or noumena, there are means to that enlightenment. Four graces (saon) emanate from Dharmakfiaya Buddha: the grace of heaven and earth which provide the basis of existence; the grace of parents to whom one owes one's life; the grace of brethren who provide mutual aid; and the grace of legal regulations which facilitate peace and justice. In this Buddhist-Confucian morality, one should know and requite these kindnesses via the four essentials (sayo): cultivating one's nature, acting morally and identifying with heaven and earth; filial respect and repaying parents by achieving wisdom, and treating everyone as parents and helping the helpless: educating the brethren, cooperating with others and not needlessly harming animals or vegetation; and respecting public laws and acting fairly. These articles of faith are the selfless service to the public.

This is put into practice and achieved in gradual stages. Practice begins with calming the mind by meditation, the study of events and principle by learning about karma, and by proper conduct. Resentment is converted to gratitude by these means, true awareness is realized through correct conduct, which activates the Buddha-Dharma as a timeless and placeless meditation in daily life. The sorrows of the current materialistic civilization will be overcome by the creation of a new spirituality appropriate to the modern scientific age, in which body and spirit are both perfected through labour and morality.

Won Buddhism is currently the best organized and most active of these indigenous religions, with 84,918 believers in 1995.

Industry (see also Korea)

Introduction

Basic to Korea's rapid growth has been the change in the sectoral composition of output. It has quickly shifted from an agricultural base to an industrial one. Implicit in this as well was the associated growth of service industries - electricity, gas, and water; construction; transport; distribution; government; and so on. Mining output, which never accounted for much of the total has actually fallen in recent years. These changes are presented in Table 1.

Within the manufacturing sector (and some of the most closely related sectors like trade, construction, and electricity), there have also been significant shifts, as Korea had gone through the stage in which it produced labour-intensive, low-value-added, low-wage, low-technology products like textiles, footwear, stuffed toys, and wigs. It has gone on to a higher stage, in chemicals and heavy industry like steel, autos, and shipbuilding. These changes are clearly brought out in Table 2, which shows the current composition of manufacturing by product type.

Table 3 and 4 communicate much the same message at a level of greater detail for example, showing the decline of mining and textiles and the growth of motor vehicles from 1981 to 1992.

Banking system (See Financial Institutions)

Industrial estates and free export zones

Korea has both industrial estates and free export zones. The former continue to play an
important role in the economy. The latter, however, have diminished to insignificance because the reason for their attractiveness, low wages, has disappeared over the last 15 years, causing tenants to move their operations elsewhere. The free export zones were largely established to attract foreign investors in labour-intensive assembly industries. The most important is at Masan, near Pusan on the southern coast. The zones offered the usual amenities - existing facilities, power, water, tax exemptions, and simplified procedures for importing and exporting.

Industrial estates were established primarily to induce domestic investment in areas distant from Seoul which has become overcrowded and currently accounts for more than a quarter of the population and perhaps half of the investment in physical plant and equipment. By establishing industrial activity remote from the capital it was hoped to reduce the rate of growth there.

The industrial estates offer many of the same amenities as the free export zones, as well as tax and financial advantages. They are specialised in that, for example, the one at Iri is devoted to electrical and electronic products while that at Changwón is dedicated to machinery and heavy industry products. By specialising, it was expected that linkages would emerge close by and that synergy would develop.

The industrial estates must be considered at least a partial success. Although Seoul remains the centre of industry and population, a considerable amount of industry is located outside the capital area. The development of specialised regional centres has proved attractive, inducing the location of related plants nearby.

**Industrial organisation**

Distinctive in Korea, as in Japan, has been the emergence of the large company groups, the chaebol (akin to the pre-World War II Japanese zaibatsu, but lacking a bank in the group). These are under the control of a single family, usually led by the senior member. The component companies are held together through cross holdings of stock, in which Company A holds stock in B, which holds stock in C, which holds stock in A. The effect of this arrangement is that control is retained but after netting out the cross holdings, little equity investment is actually required. They serve the same purpose, elsewhere in the world, as holding companies, which employ considerable equity, but whose structure often permits the controlling interest to be exerted by a minority owner.

While Korea has laws now which require the chaebol to eliminate their cross holdings (as well as their total stock holdings in other companies) the per cent of equity in cross holdings had only declined from 46 per cent in 1987 to 32 per cent in 1990, and the original families have been able to retain control. The government had two motives - to get the chaebol to sell stock to the public, thus giving a broad group a stake in the success of the conglomerate and to get the companies to depend less on bank loans and debt. The issue of family control remains, and the government is seeking ways to make senior management professional.

In early 1994, the government announced that the top thirty chaebol would be required to focus their efforts on core sectors. The ten largest would be required to declare three and the next 20 largest, to opt for two. They have all now announced their choices. Presumably, they intend to spin off the others, though how this is to be done remains unclear. The top ten would be required to divest themselves of their operations in an average of eight sectors, and the next twenty, an average of five - a major shift in Korea's industrial structure. The ten largest had been required to declare their intended core businesses several years earlier if they were to continue to get access to bank credit, but this condition was not enforced. There is some question whether it will be enforced on this occasion. The government's intention is to make the chaebol more efficient and competitive
and to give a boost to small business, but business conditions will probably have to improve before it strictly enforces the rule.

The chaebol emerged during the 1970s when they proved the most cooperative and successful in working with the government in carrying out its industrial policy, as well as in exporting and selling in the domestic market. The groups are highly competitive among themselves, moving into many of the same product sectors. For example, Hyundai, Daewoo, and Ssangyong all produce diesel engines. The government, however, became concerned about excessive competition. It therefore established limits on the size of engines each could produce and barred other entrants to the industry. The companies, however, continue to try to move into their competitors' product range. (See also the sections on construction and vehicle manufacture below.)

The chaebol have organised their own association, the Federation of Korean Industry. For many years, its chairman was a retired senior government official. The FKI spoke quietly and appeared to be dominated by the government. Since the advent of real democracy in the presidential election of 1987, however, it has voiced an increasingly independent and critical view of government policy. The emergence of Hyundai-founder Chung Ju Young as a presidential candidate in 1993 constituted another step in freeing the chaebol from government control although it did provoke a government reaction in which Chung was indicted for tax evasion, seemingly as a consequence, but has yet to be convicted.

While the government favoured the chaebol in the 1970s, it also adopted policies to assist small business, including the ear-marking of bank funds for them, preferred terms for credit, and the provision of information on markets and technology. It has also intervened to prevent their being taken over by a large company when that threatened to diminish competition. Despite these measures, the chaebol retained relative advantages so that they grew proportionately faster.

Small business has its own organisation (the Federation of Small Business) which also participates in industry associations, such as the Spinners and Weavers Association of Korea (SWAK), or the Korea Toy Industry Cooperative which speak for the industry as a whole in dealing with the government and foreign entities.

In the 1970s, the chaebol and industry associations were regularly consulted by the government, both at the working level (e.g., by the industry bureaus in the Ministry of Commerce and Industry) and at the highest level in the monthly meeting of the Export Promotion Conference presided over by the President. The title was subsequently changed to Trade Promotion Conference and the meeting schedule has become somewhat irregular, but frequent, high-level as well as constant low-level attention continues.

In any case, the proliferation of business organisations has permitted Korea to develop a well-used and effective means of consultation with the government and of cooperation among companies that nevertheless preserves a high level of competition in the market place. It has allowed the government to monitor economic developments almost as they happened, to consult on remedies for problems, and to take rapid and effective action.

It has also become an integral part of the national economic planning procedure. This uses an interactive process of proposal and comment between the private sector and the government. The plans themselves are more indicative than compulsory but establish a common assessment of the situation and a consistent vision of the future, against which the government tracks actual experience and makes changes where called for. For example, the Five-Year Plans are built up from discussions with industry and checked for adequacy measured by whether they create enough jobs to absorb new entrants to the labour force and keep those currently employed after taking account of their growing productivity.
Industrial structure (See also Introduction above)

In addition to the information given in Tables 1 and 2, which examine the total economy, Tables 3 and 4 provide a somewhat more detailed account of industry. Table 3 shows which sectors expanded in the last 11 years and which contracted. The weights used for calculating the industrial production index, based on the value of output in 1990, offer a measure of relative importance of different industry sectors. One point it clearly makes is that the manufacturing sector is highly diversified, particularly considering the small size of the country.

</table>
Pollution has become much more serious as a result of Korea's growth. More democratic practices have made protest over pollution more frequent as well. Finally, growing household wealth has made the public more willing to pay the cost of improving the environment.

Twenty years ago when Korea had just begun its industrialisation and was still poor, pollution of rivers and coastal waters created problems for farmers and fishermen. Little, however, was done at the time, despite periodic protests. It is no longer possible, however, to ignore such complaints.

Seoul itself sits in a bowl of mountains which trap air pollution. The city was severely affected by the burning of soft coal for heating and cooking. It has largely switched to natural gas in recent years. Air pollution is now mainly created by vehicles and by industry. The country is switching to unleaded gasoline and controls on industrial pollutants are increasing.

Growing concern over water pollution both in the Seoul area and in other industrial centres like Taegu has been highlighted in recent years by cases in which spills or dumping of chemicals has occurred, making the city water supply unhealthy or undrinkable.

Environmental awareness has made nuclear generating plants, on which Korea depends heavily for electricity, controversial. Both the plants themselves and storage of the nuclear waste they produce have been the objects of demonstrations and mass protests. The government, nevertheless, continues to plan further expansion (see Energy generation below).

Environmental awareness in Korea increased greatly as a result of the Environmental Summit in Rio de Janeiro in 1992. Korea participated and the associated publicity has raised the level of public concern greatly.

Industries

Construction

The construction industry has grown rapidly since the early 1970s. That growth got an additional spurt from a government housing program in the late 1980s, so that the compound annual rate of increase in real value added was 11 percent from 1987 to 1992.

In 1991 there were 19,477 establishments (11,731 of which were self-employed individuals) employing more than a million people, producing value-added of $27 billion. Domestic work accounted for 54 percent of total orders received. The balance overseas is handled by a group of large firms, most of which are members of the large company groups, like Daewoo and Hyundai.

The large companies got started overseas in the 1960s and expanded quickly, particularly during the Vietnam War. Their next great period of growth began after the first oil shock, when high oil earnings started the middle east off on an investment boom. The overseas business hit a peak in 1980 when the industry contracted for $13 billion in new overseas

### Industries

**Construction**

The construction industry has grown rapidly since the early 1970s. That growth got an additional spurt from a government housing program in the late 1980s, so that the compound annual rate of increase in real value added was 11 percent from 1987 to 1992.

In 1991 there were 19,477 establishments (11,731 of which were self-employed individuals) employing more than a million people, producing value-added of $27 billion. Domestic work accounted for 54 percent of total orders received. The balance overseas is handled by a group of large firms, most of which are members of the large company groups, like Daewoo and Hyundai.

The large companies got started overseas in the 1960s and expanded quickly, particularly during the Vietnam War. Their next great period of growth began after the first oil shock, when high oil earnings started the middle east off on an investment boom. The overseas business hit a peak in 1980 when the industry contracted for $13 billion in new overseas
The industry became very attractive and more and more companies began to bid for overseas work. Competing against the early arrivals, they drove down contract prices, eliminating profit. The Korean government then intervened, limiting the amount of contracts that each company could undertake, both to firm up prices and to assure buyers like Saudi Arabia that commitments would be fulfilled. Government controls remain in effect on the overseas industry.

The overseas industry has changed since the 1970s. Few Korean tradesmen or labourers are willing any longer to go overseas to work in difficult and demanding conditions, as they can do as well at home. The overseas industry has come to depend on labourers from poorer countries, like Pakistan, India, and the Philippines. However, Korean engineers and construction managers have continued to be willing to work overseas, increasingly building more complex and remunerative structures and plants.

**Energy generation**

Electricity generation has grown with industry and to a lesser extent, with household consumption, as Koreans have become wealthier and wish to live better. Total power generated by the government owned monopoly, the Korea Electric Power Company (KEPCO), rose from 9.2 billion kilowatt-hours in 1970 to 131 billion in 1992, a 14-fold increase and an annual compound rate of growth of 25 percent.

In 1992, 19 percent of total generation was consumed by households, 58 percent by manufacturing, 17 percent by service activities, and the remaining 6 percent by agriculture, mining, and government. In the same year, 11 percent of total generation was produced by hydro plants, 53 per cent by thermal (mostly oil), and 43 per cent by nuclear plants.

Because it was able to expand output at lower capital cost and because additional capacity could be added relatively quickly, Korea opted to use oil-based generating facilities until the 1970s when it shifted to nuclear generation. It had previously largely exhausted the potential for hydro power. Its own small output of low quality coal was devoted to space heating.

In the 1970s, nuclear generation seemed the most attractive, and Korea planned to become the most heavily dependent on it of any country in the world. However, its heavy use of capital, the high rate of return on capital invested in competing uses like manufacturing, and ceilings imposed by foreign lenders led Korea to diversify to other fuels. It has, for example, built thermal generating facilities using imported coal, driven in part by its relative cost, uncertainty about future oil prices and the high capital costs of nuclear facilities. Environmental and safety concerns and growing doubts about how low the generating cost of nuclear power really is subsequently raised new questions about devoting so much to nuclear capacity.

Current government plans call for tripling generating capacity by 2006 from the current 18 million kw. to 54 million kw.. It would come with the addition of 14 nuclear units (12.8 million kw.); 25 soft-coal thermal units (13.17 million kw.); 12 liquefied-natural-gas units (6.3 million kw.); 19 hydro units (3 million kw.); 4 oil-based units (0.44 million kw) and one hard-coal thermal unit (0.2 million kw).

**Fisheries**

Fishing contributes a smaller and smaller proportion of Korean output, while the absolute level of output has remained roughly constant over a decade. In the same period, the population of households classified as dependent on fishing has declined 40 percent.
Most of the fish are produced from the ocean. By comparison, inland fishing is insignificant. Korean ships participate in the major fisheries around the world.

Fish processing is dominated by the frozen sector. Large processing ships, for example in the pollack fishery, account for most of this. Much of the frozen product is exported.

The total value of output from the fisheries sector was $3 billion in 1988, and in the fish processing sector, $2 billion. The industry lost money in 1990 and 1991.

The low incomes earned in fishing and the demands of being at sea for months at a time are increasingly unacceptable to Koreans who have more attractive alternatives. In addition, the extension of exclusive fishing zones has placed limits on Korean catches.

**Manufacturing**

**Mining and exploration**

Mining has clearly fallen to insignificance, adding only 0.4 percent to the GDP. The sector has been losing money since 1989.

The major product is low grade anthracite. Output in 1992 was 12 million metric tons, less than half the output in the peak years of 1985-88.

The other major mineral product is limestone, used in the manufacture of cement and steel. Small amounts of iron ore, tungsten ore, gold, silver, silica sand and stone, etc. are also produced.

In 1991, 37,824 (0.2 percent of the those working) were employed in coal mining, 2,063 in metal mining, and 21,096 in other mining. A total of 307 establishments were reported in coal mining, 20 in metal mining, and 1,461 in other mining. Many of the establishments, 1,306, were proprietorships employing an average of 17, while 482 were companies with an average of 80 on the payroll. The sector was thus composed primarily of small enterprises.

Korean companies have engaged in considerable mineral and petroleum exploration overseas. Exploration and development has occurred in Indonesia and the middle east. Much of this was done in the 1970s when importing countries became concerned about assuring themselves of raw material supplies.

**Primary industry** (see Agriculture)

**Service industry**

The structure and relative contribution of different service sectors is portrayed in Table 1. Financial services are the most important, followed by wholesale and retail trade. Government is next but is disproportionately large because of the importance of defence and security which account for about 4 per cent of GDP by themselves. Transport and communication is the smallest of the service sectors. All of the service sectors have been growing rapidly.

In the transportation sector, motor vehicles in service have grown by 22 times between 1975 and 1991. Most of this is private cars (25 million), followed by trucks (948,470) and vans/buses (373,187). Commercial trucks were up a modest 3.3 times and commercial buses, 2.6 times between 1975 and 1991. Road transportation currently suffers from an inadequate road network. Transport on the government-owned national railway has also grown. Passenger-
kilometers increased 60 per cent from 1983 to 1992. Tonne kilometres of freight were up 24 per cent in the same period.

While the tonnage of registered vessels of all types has grown by a modest 13 percent from 1983 to 1992, the tonnage of cargo carried has risen 44 percent. Shipping has been a troubled industry, partly because of intense competition and partly because the Korean industry had bought a lot of second-hand, energy-inefficient ships when they were cheap. The industry has been distressed for some years and kept alive in some measure by government guaranteed credits extended through the banking system.

Overall the transport sector (including storage) has been profitable since 1985, before which it suffered from over-capacity and the recession that began in 1980.

The growth in telecommunications is indicated by the increase in the number of telephones which have increased by a factor of 25 between 1985 and 1992. Korea now has 36 telephones for each 100 people.

Wholesale and retail trade has grown in constant-price terms by 66 percent between 1986 and 1992. The sector has been consistently profitable.

**Shipbuilding**

In 1993, Korea became the world's largest shipbuilder, measured in terms of new orders, finally overtaking Japan, primarily because of the rise in the yen. It was also the best year ever for the Korean industry. At the end of 1993, the government announced that it would remove the embargo on expanding shipbuilding capacity which it had imposed in 1989 when the industry became troubled. Another reason for the change may be that Japanese yards can no longer keep up.

Three companies, Hyundai, Daewoo, and Samsung dominate the industry. Chosen by the government as one of the priority heavy industries in the 1970s, it received favoured tax and financing treatment. Hyundai is the largest of the three, operating ship-breaking, repair, and new construction facilities. Daewoo follows and has one of the largest dry docks in the world, built both to construct very large crude carriers and floating manufacturing plants that can be towed and installed anywhere in the world that has deep water access. Samsung has the smallest yard and is reportedly eager to expand as its existing facility is too small to be really profitable, while Hyundai and Daewoo are more cautious.

Although shipbuilding is considered capital intensive, it is in fact labour intensive; although the total investment in a world class yard is large, the number employed per unit of capital is high. In the late 1960s, Korea's planners saw the industry's decline in Europe, potential trouble for Japan's industry as wages rose, and the superiority of their yards which would be new and state-of-the-art. Nevertheless, the industry experiences large swings in demand and in prices which has put the Korean companies on a roller-coaster and threatened the survival of the financially weakest.

**Textiles**

Rising wages have made this, one of Korea's most labour intensive industries, look for alternatives. The number of firms has declined 40 per cent from the peak, though most of those that disappeared were small. Many, mostly the labour-intensive apparel companies, have moved to Southeast Asia, where salaries have kept them competitive.

The industry is classified two ways, based on material (cotton, wool and synthetic), and process (spinning, weaving and knitting, dyeing, and sewing). Most of the firms are small but the large company groups like Daewoo and Samsung are also important in the industry.
While portions of the industry have been shrinking, others have been growing. Yarn and fabric, which are less labour-intensive, have expanded, while apparel has contracted. The industry remains predominantly dependent on exports which take almost 70 per cent of output and which are expected to continue to grow. Industry advocates note that while it has lost first place as an exporter, net of imports it remains Korea's most important exporter.

The key to the industry's future remains improved technology and investment, as well as moving labour-intensive operations overseas. In part this is related to developments in the chemical industry which supplies the raw material for synthetic fibre and fabrics. But even the apparel sub sector has partially adapted by going into high fashion.

In some measure, the industry's prospects have been dominated by access to foreign markets as determined by the Multilateral Fibre Agreement which determines access to Korea's major foreign markets - the US and Europe. Korea has done particularly well in the American market over the long run, but with the shift in consumer demand away from synthetics, where Korea's quotas have been large, to natural fibres, in which it is weaker, the industry has not done so well recently. With agreement on the Uruguay Round, which will phase out the Multilateral Fibre Agreement, apparel exports are likely to decline further.

Overall, the industry has nevertheless continued to be profitable, though at sharply lower rates of return. Much of this is apparently due to continued strength in the production of yarn and fabrics as contrasted with finished apparel. Exports of apparel reached a peak of $9.1 billion in 1989 and have declined by 26 per cent by 1992. In contrast, yarn and fabrics of all kinds continued to grow rapidly, reaching $6.7 billion that year.

**Iron and Steel**

Iron and steel are the principal products in the basic metal category in Tables 3 and 4. They constitute a major part of the manufacturing sector and have quadrupled between 1981 and 1992.

The Pohang Steel Company (POSCO) is Korea's only integrated steel company. It has become one of the largest primary producers in the world. With plants in Pohang and more recently at Kwangyang built on green fields or filled land with ocean access, they used the latest technology and have very low costs. Ore and coking coal are imported, while limestone is available from domestic sources. POSCO has the capacity to produce 20 million tons of steel a year in its eight blast furnaces.

In addition, a score of small producers smelt from scrap using electric furnaces. Their capacity is 10 million tons. This group is currently planning further expansion. A large number of fabricators of steel shapes and semi-finished products compete with and supplement POSCO in the production of sheet, plate, and cast and forged products.

The industry has expanded based on domestic demand, exporting the excess part of its output while balancing the need for those products it could not produce competitively with imports. Its dependence on exports, however, has made it subject to restraints in its major foreign markets, the US and Europe. It is currently finding an expanding market in mainland China.

**Chemicals**

Chemicals (including petroleum refining and coke manufacture) is the largest sector in manufacturing as Korean companies have made a major commitment to it. Its growth has been explosive (see Table 3 and 4) and today it is the largest manufacturing sector.
Korea entered the chemicals industry in the 1960s, with major investments in the production of fertiliser and petroleum refining. Subsequently, it expanded into synthetics for fibre production. Since the heavy and chemical industry program of the 1970s, it has branched out to produce plastics and such major components for other chemicals as naphtha, mostly in joint ventures with foreign companies that had the necessary technology. It has become a major supplier to world markets.

Petroleum refining is in the hands of five companies, of which Yukong and Honam (in the Goldstar group) are the major players, but also includes Ssangyong, Kyung In (a Hanwha group member) and Hyundai. In mid 1993, the government approved a major refinery expansion program for four of the companies which will add 48 percent to total capacity by 1997, in anticipation mainly of growing gasoline consumption, making it possible for the domestic industry to supply 90 per cent of estimated demand by 1997.

The chemical industry is dominated by the chaebol because of the high investment requirements and scale required by the industry. Some concern has been expressed at the possibility of an over commitment, particularly since Korea depends on imported crude oil as the base for the industry and the amount of capacity available elsewhere in the world. This fear seemed warranted when one of the ten petrochemical makers declared bankruptcy in 1993. The others reportedly began organising a 'depression cartel' (authorised under the Fair Trade Law) to allocate domestic market quotas (but not exports) and put a floor under prices.

Motor Vehicles

Counting transport equipment with it, motor vehicles are the second largest sector in manufacturing. It has also experienced one of the most rapid rates of growth from 1981 to 1992. Another of Korea's chosen industries, the industry is dominated by four chaebol companies Hyundai, Daewoo, Kia, and Ssangyong. For many years, Samsung, another chaebol, has also wanted to enter the business, but the government has refused to approve. Samsung recently tried to buy Kia, but the government again barred it.

Korea has set out to be a major producer of motor vehicles. It produced 1.26 million cars, 122,000 buses and 286,000 trucks in 1992. Preliminary figures suggest it built 2 million cars in 1993 and would build 2.6 million in 1994, which would make it the fifth biggest maker in the world. In any case, it currently plans to expand capacity substantially, despite the seeming excess facilities around the world.

A substantial parts and components industry has grown up with the industry, particularly in the last 15 years when it became apparent that Hyundai would succeed in the US market.

General Motors was the joint venture partner with Daewoo until 1992 when it decided to sell its share of the assembly operation to its partner. GM maintains joint venture relationships in the manufacture of parts and components.

Kia, which had marketed its cars in the US through Ford, now intends to establish its own network of dealers.

Electronics

The electronics industry consists of three sub sectors: parts and components, consumer products, and industrial products. For many years, Korea produced parts, then moved into assembly of house brand consumer products, later became a major producer of its own brands of consumer products, and finally, with the computer age, has become a significant producer of chips and monitors.
Production of parts and components made it the largest sub sector, with output totalling $16.7 billion in 1993, more than half of which was semiconductors, and most of the rest, colour picture tubes and magnetic tape.

It was followed by the consumer products sub sector (including appliances like refrigerators and microwaves), with output of $11.3 billion. In last place was industrial products, whose output was valued at $8.2 billion. Most of this, more than $2 billion, was computer monitors. Computer output was recovering, after faltering because Korean makers failed to keep up in the shift in demand for computers using upscale central processing units as 286-class machines were replaced by 386- and then 486 class units.

The chip industry is dominated by Samsung, said to be the largest producer in the world. Hyundai, Goldstar, and Anam are producers as well. For the most part, they produce memory chips. Capital intensive, production is only feasible by the largest firms. Korea has become the number three producer in the world, after the US and Japan.

The large companies are also the major producer of branded consumer electronics—again, Samsung and Goldstar are the outstanding names, closely followed by Daewoo and Hyundai. All four have chosen this sector to which to make a major commitment.

The industry has grown very rapidly in the last decade, as demonstrated in the radio, TV and communication category in Table 4. It is one of the largest sectors in manufacturing, as shown in Table 3.

Inje County

Situated in eastern Kangwŏn Province, Inje County is comprised of the town of Inje and the townships of Kirin, Nam, Puk, Sangnam and Sŏhwa. The demilitarised zone which divides North and South Korea runs through the northern tip of the county. Mt. Mu (1 320 metres), Hyangno Peak (1 296 metres), Mt. Sŏrak (1 708 metres), Mt. Chŏmbong (1 424 metres) and Kalchŏn’gok Peak (1 204 metres) run along the county’s eastern border, while Mt. Taem (1 304 metres) and other peaks of the Tosol Mountain Range mark the western border. Streams flowing down from these peaks form the Soyang River to the southwest of Inje. Geologically, the area consists of gneiss layers of rock that formed prior to the Paleozoic Period along with layers of granite that intruded during the Mesozoic Period. As a result, the terrain is characterised by oddly-shaped granite formations and exposed crags.

Highways number 46, 44 and 31 link the area with Ch’unch’ŏn and Seoul while Highway 46 and 44 connect the area with Sŏrak National Park and the east coast. Road access is hindered by the Soyang Reservoir and rugged terrain to the west and the high Mishiryo and Han’gyeryŏng passes to the east. In addition to these overland routes, it is also possible to travel all the way to Ch’unch’ŏn from the Kunch’ungnyŏng Ferry terminal in Inje.

Only about three per cent of the county’s area is cultivated. Most of this farmland is dedicated to dry field crops such as corn, beans, potatoes, garlic and hot peppers. Alpine vegetables are also grown here. In the thick forest, local residents supplement their income by gathering medicinal herbs and mushrooms, and by keeping bees. Inje honey, in particular, is famous throughout the country for its quality.
Inje County's tourism is primarily centred around Mt. Sŏrak National Park (See Mt. Sŏrak). The park's picturesque Paektam Valley, Sosŏng Waterfall and Twelve Fairy Pools (Shibi Sŏnnyŏ t'ang) all lie within the county's borders. Soyang River is also popular with both sightseers and sport fishermen who use either fishing poles or nets to catch pond smelt and other cold water fish. Some pond smelt fish farms have also been set up in the area in an effort to maintain the pond smelt population in the lake.

There are several historical sites in the area. Prehistoric relics discovered in Puk Township's Wŏrhak Village indicate that human beings were living here as early as the Bronze Age (c.1000 B.C.- 4th century B.C.E.) In addition, three dolmen have been discovered in the area around Wŏnt'ong Village. There are also a number of Buddhist artefacts. Besides those found in Mt. Sŏrak National Park, there are a three-story pagoda and a seated Buddha image near Paengnyŏn-jŏng Temple. These artefacts were moved from their original location when the Soyang Reservoir was constructed. There is also a three-storey stone pagoda at Wŏldae Village in Inje.

There are several stone fortifications in the area, including remnants of a fortress at Inje's Hapkang Village and in Sŏhwa Township's Sŏhwa Village. The Han'gye Fortress, situated just south of Mt. An in Puk Township, was originally built during the reign of Greater Shilla's King Kyŏngsuns (r. 927-935) and was later repaired during the Koryŏ and Chosŏn periods.

Several examples of Chosŏn period architecture can be seen here. The Inje Hyanggyo (Confucian school) was originally founded in 1610 but was moved several times before it was brought to its present location in Inje Town. Everything but the main hall was destroyed during the Korean War. In the decades after the war, new halls were built and the main hall was repaired. In Inje's Hapkang Village, there is also the Hapkangjŏng. Large official ceremonies were held in this pavilion during the Chosŏn period.

Injo, King (r. 1623-1649)

King Injo (1595-1649) was the sixteenth king of Chosŏn and reigned from 1623 to 1649. His rule began with the usurpation of the throne from Prince Kwanghæ (r. 1608-1623) and was cursed throughout with domestic upheaval and foreign invasion. Injo, personal name Yi Chong was a grandson of Sŏnjo, the fourteenth king of Chosŏn. After Sŏnjo's death in 1607, Kwanghæ, his son by a concubine, became the new king, but Kwanghæ's legitimacy was seen as being somewhat dubious. Fierce rivalry of the court factions increased and this undermined political stability. Kwanghæ relied to a large extent on the Big Northern (Taebuk) faction, while other groupings, notably the Western and Southern factions, were out of power, and their adherents had few if any chances to gain high official positions. Moreover, Kwanghæ executed or exiled some members of the upper echelon whom he viewed as potential rivals and thus alienated members of the royal family and the ruling elite.

The discontented literati of the Western and other factions now conspired to remove Kwanghæ from the throne. They contacted Yi Chong (the future Injo) who agreed to become king. In 1623, their coup d'état moved with lightning speed to capture Kwanghæ and his supporters, and proclaim Injo the new king. Injo's ascension, therefore, was less than legitimate and it heralded a lingering period of political instability, so typical for the Chosŏn court in the seventeenth c. This unrest came to a head in a fresh rebellion. In 1624, Yi Kwal, a military leader and one of the conspirators in the initial move against Kwanghæ, was so dissatisfied with the relatively minor position he was given after the coup, that he instigated an uprising. His troops were initially successful and even managed to occupy Seoul, which caused Injo to flee to the south. Within a short while, however, the more powerful government forces routed Yi Kwal's army. Though later, Injo sought to avoid major clashes between political groups, his reign was to remain a time of lingering
political instability.

The last years of Injo's life were full of court intrigue, clashes in his immediate family and increasing hostility and alienation between factions. Although Injo continued to favour the Westerner faction, adherents of other groups were not totally denied career opportunities in official circles. Chosŏn's domestic strife was followed by incursion from without. In 1627 the peninsula was invaded by Manchu tribes who by then had proclaimed the Later Jin dynasty and were preparing an expedition against ailing Ming China. Their task was to provide safe flanks during the impending war against China. Kwanghae was prudent enough to keep Korea out of Manchu-Chinese conflict, but Injo’s diplomacy proved to be less successful. After the invasion started, the government withdrew to Kanghwa Island, but soon had to bow to pressure and sign a treaty with the invaders, promising to break the union with the Ming and to establish friendly relations with the Manchu. It was a compromise, since the Confucian public opinion despised the Manchu as ‘savage barbarians.

In 1636 another invasion followed. This time the Court could not escape to Kanghwa Island and Injo, together with his dignitaries, was surrounded by Manchu troops in a fortress near Seoul. After difficult negotiations, the Korean court had to reluctantly recognise its dependency on the new Manchu state, which by then had been renamed Qing and which was soon to establish its dominance in China. The Manchu dominance was seen by the Korean Confucian-educated elite as both repugnant and humiliating, but Korea obviously lacked means to overcome it and had to adjust to the new situation. Though Injo and his government tried to stabilise the Korean economy which had not recovered from the Japanese invasions (1592-1598), the rebellion of Yi Kwal and these new invasions considerably undermined their economic policy. Moreover, the political infighting among various factions further weakened Chosŏn and resulted in an extended period of decline for the nation.

Institute of Advanced Engineering

Located in Seoul, the IAE (Kodŭng kisul yŏn'guwŏn) is a research and training Institute founded in July 1992 by Kun Mo Chung, a former Minister of Science and Technology and NSF program director, and Woo-Choong Kim, chairman and founder of the industrial giant Daewoo. The Institute is supported by a substantial funding through a consortium of Daewoo companies. Daewoo is committed to providing up to ten per cent of its research and development budget to IAE.

In general, the IAE serves two functions. It is an engineering research laboratory aided by member companies which provide guidance and priorities for research projects. In particular, the Institute accepts specific research that its member companies are not prepared to undertake themselves. By doing so, IAE aims to foster new technologies for use by Korean industry. IAE's facilities include laboratories for Electronic Signal Processing; Automotive Technology; Manufacturing Technology; Electric Power Systems; Technology Management; Environmental Engineering; Bio-medical Engineering; and Electronic Materials.

The Institute, in its role as an academic institution associated with Ajou University's Systems Engineering Department, provides doctoral courses in systems engineering and master's degree courses in technology management. Doctoral students receive a stipend
and other benefits from Daewoo for the duration of their courses. Through its academic curriculum, IAE aims to train engineers who are also qualified to work as research development managers and as leaders in various social and political fields. The Institute is primarily focused on systems engineering, but also seeks to integrate skills from traditional engineering and science.

To assist in developing IAE into an internationally recognised research institution, its researchers are required to be fluent in a second language (with English preferred). Some courses are run in English.

Introduction

Ancient States

Since the earliest Korean states developed, international relations have been a factor in Korean societies and their development. The early Korean states encompassed a much larger area than the present Korean peninsula, and ranged far into Manchuria and the Liaodong Peninsula, thus inviting contact with Chinese states from an early point in history. Most of the records concerning the early association between Korean and Chinese states are of territorial battles, suggesting that there were ongoing struggles over territory. The first recorded invasion by a Chinese state is the Yen invasion of around 300 BCE, and from this point forward there was an almost continual penetration of Chinese military, political and economic influence to the northern reaches of the Korean states. The state of Wiman Chosón was formed as a result of Chinese pressure on Ko Chosón, which allowed Wiman (r. 194 BCE-?) to usurp Ko Chosón and form his own kingdom. Moreover, the advanced culture that Wiman had command of, such as iron culture, allowed him to subjugate the less advanced states to the north, east and south. Hence, it was through the contacts with China that early Korean states were able to develop into a higher-level civilisation and to grow in strength.

There were also early attempts by the Chinese states to incorporate the territory of the Korean states into China, as is evidenced by the establishment of the Four Han Commanderies. This was an attempt by the Han dynasty to establish her hegemony over the Korean peninsula. The reaction of the indigenous Korean people was openly hostile to the Chinese presence and caused two of the Commanderies to be abandoned within twenty-five years. The Lolang Commandery in the Taedong River basin did, however, survive for over two-hundred years, and had a substantial impact on the indigenous Korean societies that adopted many of the administrative systems of the Chinese compound. Thus, the cultural influence of the Chinese outposts is significant in its having the greatest impact on the early Korean societies. The adoption of Chinese cultural systems allowed the early
Korean states such as Koguryŏ and Puyŏ to expand their own domains, and by the early third c., Koguryŏ had become strong enough to defeat Lolang and end the Chinese presence on Korean soil.

Three Kingdoms

Contacts with China were the most important foreign interactions during the Three Kingdoms era, and these ranged from cultural exchange to outright war. Koguryŏ, by virtue of its proximity to China, was engaged in constant territorial conflict with her northern neighbour, while at the same time importing much of the higher Chinese civilisation. Koguryŏ’s domain took in much of modern day Manchuria and the Liaodong Peninsula and at its peak in the fourth, fifth and sixth centuries rivalled the Chinese states in power and development of its civilisation. Koguryŏ adopted Chinese writing, administrative systems, and even Buddhism, Confucianism and Daoism from China. However, due to its location at the border with China, Koguryŏ was perceived by the Chinese states as a threat, and when Sui had managed to unify China in the late sixth c., she turned to deal with the danger at her northern boundary. But Koguryŏ proved her worth against the Sui divisions and the major battle fought at Salsu left the Sui army devastated and forced to withdraw from Koguryŏ territory.

Paekche also imported many aspects of Chinese civilisation in building its territory. Specifically, it developed relations with the Eastern Jin Kingdom located across the Yellow Sea as a balance to the power of Koguryŏ in the north. It imported Chinese writing and administrative method, along with Confucian and Buddhist belief systems. Paekche also established contacts with the Japanese Wa Kingdom, which gave it a military edge against the Shilla Kingdom that was developing to her east. It also represented an important conduit for the flow of higher civilisation to Japan. In much the same way that Chinese culture had flowed to Paekche, this was now further transmitted to Japan, through the latter’s cultural contacts with Paekche.

Shilla developed at the slowest rate of the Three Kingdoms, in part due to her cultural isolation in the southeast corner of the Korean peninsula. Nevertheless, by the early sixth c., many aspects of Chinese civilisation had been incorporated into Shilla, including the Chinese writing system and the adoption of Buddhist and Confucian ideology. Shilla further cultivated close contacts with Tang China as a means of survival, with the powerful Koguryŏ Kingdom to her north and Paekche to the west. The Shilla-Tang alliance allowed first the defeat of Paekche in 660 and then the subsequent subjugation of Koguryŏ in 668. This alliance with Shilla served the Tang as well, as it allowed the Chinese to remove the onerous presence of Koguryŏ. Moreover, Tang sought to use the occasion of eliminating Paekche and Koguryŏ as a way to incorporating the whole of the Korean peninsula into her domain.

The intentions of Tang became evident after the defeat of Paekche as she established five commanderies in the area of the former kingdom and also created additional commanderies to administer the Koguryŏ domain and that of Shilla. Thus, as soon as Koguryŏ had been defeated, Shilla launched a campaign against her former ally to drive it from the territories that Shilla considered her own. Through a series of battles over a ten-year period, Shilla was able to establish hegemony over most of the Korean peninsula and force the Tang to retreat, and by such means preserve her independence. Moreover, to the north the refugees from the former Koguryŏ kingdom, under the leadership of Tae Choyong, formed the Parhae kingdom that occupied much of the former domain of Koguryŏ. Hence, despite the Tang intentions of incorporating the Korean peninsula into her territory, she was foiled by the sovereign desires of the Korean people.

Greater Shilla and Parhae
Shilla culture benefited greatly from her contacts with Tang, and many aspect of Tang civilisation were brought into Shilla such as literature, religion and administrative systems. Shilla entered a somewhat tributary status with Tang through the exchange of diplomatic missions and gifts, and this was solidly in place by the late eighth c. There was also informal exchange between the two nations that often occurred through either merchants or scholars travelling to China. In the sphere of education, Chinese literature in the form of the Confucian classics became firmly entrenched as the locus standi of education in Shilla, and what is more, a great number of Shilla scholars travelled to China for further study. The Shilla education system, with the Kukhak (National Academy) at its core, was based upon similar Tang institutions and there was even a civil service examination developed in Shilla that stressed proficiency in Chinese literature (toksŏ samp’ungwa). The frequent journeys by Korean monks to China to study Buddhist scriptures, which led to the establishment of various Chinese Buddhist sects in Shilla such as the Pure Land sect, were no less important. Merchants are best represented with the Ch’onghae Garrison established by Chang Pogo (? -846) on the Yellow Sea that came to control the sea-lanes between Tang, Japan and Shilla. Records also reveal a sizeable community of Koreans living on the east coast of China at this time, providing yet another means for the transmission of Chinese civilisation to Korea.

Parhae, by virtue of it precarious international position, had a strong need for developing its contacts outside its borders in order to ensure its survival. The kingdom itself was governed by a numerically small Koguryŏ refugee population with the majority of its subjects being the indigenous Malgal people -- members of semi-nomadic Tungusic tribes scattered over a wide expanse of Manchuria, southern Siberia, and north-east Korea. Many aspects of Parhae society were modelled after those of Tang, including its administrative apparatus and educational system. Parhae developed international relations with Japan and the Tuque (Eastern Turks) people to the north of China as a means to create a balance of power with the Tang-Shilla alliance. This enabled Parhae to flourish and survive until 926 when it was destroyed by the Khitan (Khitan Tartars).

Koryŏ

Koryŏ was born of a period of internal conflicts within the decaying Shilla kingdom and thus the importance of military strength was substantial. After the defeat of Shilla and the unification of the Korean peninsula, Koryŏ was immediately threatened by the peoples to its north. The Khitan, who had earlier destroyed Parhae, posed the first threat to Koryŏ, and this situation was magnified by the northern expansion policies that were prominent under King Chŏngjong (r. 945-949). The Khitan had initial success in their battles with Koryŏ, but were forced to sue for peace after being crushed in a battle at Kuju by Koryŏ forces led by General Kang Kamch’an (948-1031). Koryŏ experienced difficulties also with the Jurchen (a proto-Manchu people of Eastern Manchuria) to their north, and these were finally resolved by Koryŏ entering into a a tributary relationship.

The relationship that Koryŏ maintained with the Chinese Song dynasty sought to reap benefits from the highly developed civilisation of the Chinese. Koryŏ modelled her administrative, educational and cultural systems after those of Song. The most important may have been the adoption of a true civil service examination system by Koryŏ in 958 that firmly established Confucian ideology as the dominant force in governmental matters. Thus, the study of the Chinese classics became increasingly important and the status of the class of Confucian scholars increased to levels heretofore not experienced in Korea. Other cultural aspects of China were transmitted to Koryŏ, such as porcelain, medicine and even spices, contributing to the overall development of the recipient society. The relationship between Song and Koryŏ can be viewed as one of peaceful economic and cultural exchange and this too, greatly contributed to the vigour of Koryŏ society.

The rise of the Mongol people in the early thirteenth c. created many crises for the Koryŏ
rulers. The Mongols desired that Koryo enter a tributary relationship with them, but Koryo resisted since they believed the Mongols to be little more than barbarians. The result was a number of disastrous incursions by the Mongols that saw the eventual surrender of sovereignty to the invaders. The result of the Koryo capitulation was the complete domination of Koryo society by their Mongol masters. For example, Koryo kings were appointed by the Mongols and required to take Mongol queens, the royal family resided mostly in Manchuria, Mongol military headquarters were established in Koryo, and heavy tributes were levied in the form of gold, silver and young women. Koryo also served as the base for the ill-fated Mongol invasions of Japan, which not only cost Koryo dearly in monetary terms and loss of life, but also served to sour relations with Japan. The subsequent attacks on the Korean coast by Japanese marauders contributed to the social instability that led to the downfall of Koryo.

With the weakening of the Mongol Yuan dynasty at the end of the fourteenth c., some forces in Koryo sought to establish a relationship with the newly-rising Ming dynasty in place of the humiliating subservience to the Yuan. Thus, with the kingship of Kongmin (r. 1351-1374), Koryo adopted pro-Ming policies and exchanged embassies with the Chinese state. This was opposed by many in Koryo, who had a self-interest in preserving the relationship with the Yuan, since this was the basis for much personal power in Koryo. Resultant from the conflict in personal and national interests was a great deal of political turmoil that led to the downfall of Koryo. In fact, it was the dispatch of Yi Songgye (King T'aejo, r. 1392-1398) on the command of the Koryo king, to launch an attack against the Ming, that led to the general turning on the throne and seizing power for himself, thereby establishing the Choson dynasty.

Choson Period

The foreign relations of Choson can be characterised through the term sadae (serving the great), used to describe its relationship with Ming. The pro-Ming policy of the founder of Choson was evident from his reluctance to attack the Chinese state and this remained as the foremost pillar of Choson foreign policy until the downfall of the Ming in the early seventeenth c. The tributary status of Choson to Ming was formalised through the dispatch of three tribute missions each year on the occasions of the New Year, the emperor's birthday and the crown prince's birthday. These missions provided an opportunity for both cultural and economic exchange between the two nations. From its subservient relationship with Ming, Choson was granted access to Ming culture and security from encroachment by the Chinese on Korean territory.

As in the prior Koryo era, Choson experienced problems in the settlement of its northern regions due to the presence of nomadic peoples such as the Jurchen, as well as coastal attacks from Japanese pirates. Choson fortresses were established along the Yalu River to secure this area and to defend against possible northern attacks. Aside from occasional uprisings, the northern areas were kept under control during early Choson. To discourage the raids of Japanese marauders, Choson attacked their base on Tsushima in 1419, thus largely ending the threat. After this time, the Choson government established three ports on the south-eastern coast for trade with the Japanese. Choson's aims for this economic exchange were principally to maintain peaceful relations with Japan and control pirate raids.

Perhaps the most devastating event during the five-hundred year Choson dynasty was the 1592 Japanese Invasion that affected every aspect of Korean society. The war continued until 1598, although it was largely contained to the southeastern regions of Korea after the early stages. In the end, Choson required assistance from Ming to overcome the Japanese forces, but this was not accomplished until great losses were inflicted upon the land and people of Choson. Moreover, thirty years after the conclusion of the Japanese invasion, there followed a series of invasions from the north by the Manchu people as they sought to force Choson to submit to their state. Hence, the massive invasions of Choson in this
period marked her decline and the beginning of a long era of hardships for her people.

The rise of the Manchu nation in the early seventeenth c. created problems for Chosŏn much like the rise of the Yuan had four hundred years earlier for Koryŏ. Chosŏn considered itself fundamentally superior to the Manchu people, and its unyielding allegiance to Ming resulted in another series of disastrous invasions before its capitulation to the Manchu emperor by King Injo (r. 1623-1649) in 1636. The Manchu dynasty, the Qing, sought with Chosŏn the same type of suzerain-subject relationship that the Ming had enjoyed, but those in the Chosŏn government still looked on the Manchu with disdain. Nonetheless, Chosŏn was compelled to honour Qing as it had the previous Ming, and the two nations co-existed on peaceful terms until the late nineteenth c.

The relationship with China continued to be one in which Korea benefited to a great degree through the importation of knowledge. Unlike in previous ages, when it was primarily the higher Chinese culture that the Koreans sought, by the seventeenth and eighteenth centuries it was knowledge from the West that had entered China that most interested Korean scholars. Thus, intellectual movements such as shirhak (practical learning) came to the fore in late Chosŏn through the international contacts that Korea enjoyed with China. On the other hand, relations with Japan diminished as the nineteenth c. drew near. Insofar as contacts with other nations are concerned, Chosŏn maintained a strict isolationist, China-centred foreign policy, and visits from the ships of other nations were discouraged.

The end of the nineteenth c. proved to be a tumultuous period for Chosŏn's international relations. With her nearest neighbours, Japan and China, having already been compelled to enter trade and diplomatic treaties with Western nations, it was simply a matter of time before Chosŏn would undergo a similar fate. Ironically, the first nation to force the so-called Hermit Nation to open open its trade barriers was Japan, which had rapidly accepted Western culture and systems in the twenty or so years since she herself had to let in the Western ships. The 1876 Treaty of Kanghwa (Kanghwa-do Choyak) marked the beginning of a series of diplomatic measures that allowed access to Korea by American, French, Russian and British merchants and diplomats among others, and would fundamentally change Korea.

The close of the nineteenth c. in Korea witnessed the struggles of several nations for hegemony over the weak Korean State. Initially, it was China and Japan who sought to control Korea, and consequently the Sino-Japanese War of 1894 occurred. This skirmish, fought on Korean soil, revealed that Japan had become the new power in Asia as she easily defeated the Chinese. When Japan attempted to assert her will on Korea, however, the Chosŏn rulers sought the protection of Russia. Russia also had designs on Korea as it would give Siberia access to ice-free ports, and thus it entered the struggle for supremacy in Korea. After Japan defeated Russia in the Russo-Japanese War of 1904-05 for control of Korea, however, no force could prevail over the colonisation of Korea by Japan. Predictably in 1910, Japan annexed Korea as her colony, thereby ending the five-hundred year long Chosŏn dynasty.

Modern International Relations

International relations for Korea directly after liberation from Japan in 1945 are characterised by the polarisation of Korea into the two camps of the pro-United States right, and the pro-Soviet Union communist left. National division was essentially guaranteed with the Soviet occupation of the north and the American presence in the South, and the political development in each sphere followed the ideology of its occupying army. Accordingly, the Republic of Korea (ROK) that emerged in the south in 1948 had a political ideology that closely adhered to that of the United States, while the Democratic People's Republic of Korea (DPRK) in the north adopted a communist ideology that matched that of its benefactor, the Soviet Union. Diplomatic issues from the time of the national division...
have been distinguished by the various attempts to bring about national reunification through either diplomatic or military means.

The outbreak of the Korean War in June 1950 revealed the desire of the DPRK to bring about a forcible unification of the peninsula. The War quickly divided much of the world into either the camp of the ROK, which was backed by the United Nations (UN), and that of the DPRK, supported by the Communist Bloc. The Korean War represented a manifestation of the Cold War that dominated international politics throughout the 1950s and 1960s, and the stalemate that eventually resulted from the conflict was also highly reminiscent of the Cold War confrontations. In the aftermath of the Korean War, both the ROK and the DPRK sought to increase their international standing by engaging in diplomatic intercourse with the nations of the world. Predictably, the ROK concentrated on expanding its contacts within the Western powers led by the United States, and the DPRK largely maintained contacts in the Communist Bloc led by the Soviet Union. Relations between South and North were non-existent, except for occasional border skirmishes.

The 1960s were a time of important diplomatic milestones for both the ROK and the DPRK. In the ROK, the normalisation of relations with Japan in 1965, which provided the South with the capital and technology that would enable it to become a regional economic power in the space of two decades, was a major diplomatic achievement by President Park Chung Hee (Pak Chonghŭi). The ROK also remained committed to participation in American foreign policy in Asia, and sent troops to Vietnam to support the American forces fighting there. This was the first time that Korean troops had fought in a war or battle not waged on or concerned with Korean territory. At the same time, the DPRK was attempting to expand its international prestige by increasing its influence among the non-aligned nations as a counter to the ROK’s diplomatic success on the international stage. An essential factor in DPRK policy was the establishment of Juche (chuch'ě) Institutes, which sought to propagate the unique doctrines of self-reliance advocated by the North, throughout the world as a means of increasing its international standing.

By the late 1980s and the early 1990s the international situation had changed with the conclusion of the Cold War, and thus the respective foreign policies of both the ROK and the DPRK reflected this. Foreign policy in the ROK was characterised by the ‘Northern Policy’ of President Roh Tae Woo (No T'aeu), which focused on the establishment of diplomatic relations with both the Soviet Union and China. Moreover, the hosting of the 24th Olympiad in 1988 allowed the ROK to entertain nations and their ideologies from across the world, and thus concurrently increase its international prestige. The ROK and the DPRK were admitted to membership of the United Nations in 1991, which allowed both full participation in the international arena. Also, the two countries entered into a series of agreements concerning the future of the Korean peninsula, most notably the Joint Declaration for the Denuclearastion of the Korean Peninsula. The early part of the 1990s represented a time of significant improvement in inter-Korean relations that were a direct result of the increased international contacts of both the ROK and the DPRK.

The government of the ROK under the leadership of Roh Tae Woo and his successor Kim Young Sam (Kim Yŏngsam), embarked on a program to increase the international prestige of the nation through expanded international contacts. This also was a part of the economic policy of the ROK that often used economic relations as a first step in building international ties. As a result, by the end of 1995 the ROK maintained diplomatic relations with a total of 176 nations and had joined international organisations such as the World Trade Organization (WTO) and the Asia Pacific Economic Cooperation (APEC) summit. Moreover, the ROK participated in UN peacekeeping missions in various global trouble spots. The increased diplomatic activity along with a powerful economy resulted in the ROK gaining a great amount of international prestige.

The DPRK, on the other hand, saw its traditional allies enter into relations with the ROK
after the collapse of the Soviet Union and thus entered a period of decline, both domestically and internationally. The situation was complicated by the sudden death of Kim Il-Sung (Kim Ilsong), the long time leader of the North, in 1994 and the economic turmoil resultant in the loss of aid from the Soviet Union. Nonetheless, the DPRK strove to establish new international contacts and by the end of 1995 had relations with 133 nations, with 125 of these nations also maintaining contacts with the ROK. The major allies of the DPRK remain China and other nations of the former Communist Bloc such as Cuba and some Southeast Asian nations. However, the economic and physical hardships that the north continued to suffer in the mid and late 1990s, caused the nation to become a chief recipient of international aid to provide food and medical supplies to its impervious population.

Inwang Mountain

Mt. Inwang (338 metres), a low mountain made up of exposed granite, is situated in Seoul, just south of Mt. Pukhan. According to the science of geomancy, the mountain is an important feature of the Seoul landscape. When Seoul was chosen as the capital at the beginning of the Choson Period, geomancy experts claimed that the mountain served as the ‘white tiger’ (paekho) ridge coming down to the west of the city’s main protective mountain (chusan), Mt. Pukhan. Mt. Nak, on the other hand, formed the corresponding blue dragon (ch’ongnyong) ridge to the east. Situated to south, Mt. Nam served as the opposing mountain, or the ‘an-san.’ Considered by many to be a sacred area, the mountain is popular with shamans who go there to perform kuts. With numerous springs and striking scenery, the mountain is also a favourite hiking spot for residents of Seoul.

Irkutsk Communist Party

[History of Korea]

Iryŏn (1206-1289)

Iryŏn Sŏnsa, the compiler of the Samguk yusa (Memorabilia of the Three Kingdoms), whose appellation was Haeyŏn, given name Kyŏnmyŏng, was of the Kim clan of Chango county in Kyŏngju. He joined the priesthood at the age of nine and was eventually promoted to Kukchon (National Preceptor), the highest degree conferred by the state on the priesthood. He was invited to court as royal priest, a position he resigned from to care for his mother when she was over ninety. After her death, in 1284, the government reconstructed In’gak-sa, a temple in Iryŏn Sŏnsa’s native province (presently Hwasu-dong, Kojae-Myŏn, Kunwi County, North Kyŏngsang Province), and appointed him as Chief Priest of the temple.

His works include Hwarok, 2 fascicule; Kesong chapchŏ, 3 fascicule; Chungp’yon chodong owi, 2 fascicule; Chop’a to, 2 fascicule; Taegang suji rok, 3 fascicule; Chésŏng pŏpsu, 7 fascicule; Chŏjŏng sawŏn, 30 fascicule; Sŏnmun yŏmsŏng sawŏn 30 fascicule; and Samguk yusa (Memorabilia of the Three Kingdoms) 5 fascicule.

As neighboring countries separated by the Straits of Korea, Japan and Korea have had a close relationship which can be traced back to prehistoric times. According to remains unearthed in Japan, one can assume there were some exchanges between the two countries beginning at least from the Jōmon period of Japan in the Neolithic age. However more extensive cultural exchanges started in the Yayoi period, 3rd century B.C. At the time, manufacturing techniques in pottery, bronze ware and iron ware as well as agricultural technologies were transmitted to Japan. Yayoi culture enjoyed rapid development through these exchanges. Around the beginning of the Christian era, the kingdoms of Koguryō, Paekche, Shilla and Kaya were established on the Korean peninsula and political society was developed in Japan. The Kaya kingdom of Korea had the most active exchanges with
Japan at the time. This is well supported by archaeological remains as well as myths. The founding myth of Japan is very similar to those of Tan'gun Chosôn, Puyo, Koguryô and Kaya. The King Kim Suro myth of Kaya isstrikingly similar to the descent of heavenly children myth of Japan in their style, motif and names of holy places. Other Japanese founding myths mostly include the story of the heavenly deities defeating native deities in conflict with each other. This is the symbolic representation of the historical fact that emigrants from the continent conquered indigenous powers and established ancient kingdoms. The distribution of remains excavated in both countries corresponds with the route of heavenly deities. Ancient Japanese myths are also dubbed as "emigration of gods" in the sense that most of them are related to the Korean peninsula. According to the "horserider theory" of professor Egami of Japan, horseriding nomads from Puyo origin advanced into northern Kyushu by way of the Korean peninsula, conquered the Ginai area subsequently and established the Yamato government. On the other hand, emigrants from Silla origin moved to the Izumo area adjacent to the East Sea and established a kingdom in rivalry with Yamato court.

Ancient Relations

Relations between Korea and Japan became bilateral with the emergence of ancient kingdoms in Japan in the fourth and fifth centuries. The framework of international relations in East Asia at the time consisted of two blocs: the Northern bloc comprised of the Northern Dynasties of China, Koguryô and Silla and the Southern bloc comprised of the Southern Dynasties in China, Paekche and Wa in Japan. Paekche tried to overcome the crisis incurred by the external expansion policy of Koguryô by forming a military alliance with Wa. Paekche-Wa relations further strengthened after Shilla conquered Kaya around the mid-sixth century. Wa provided military assistance to Paekche during Shilla's unification process in the mid-seventh century. The Paekche-Wa alliance, however, was defeated by the Shilla-Tang alliance.

The 'culture flowing eastward' phenomenon continued throughout ancient times. Paekche maintained the most amicable relations with Japan and transmitted its culture there from the fourth century. Near the end of that century under the reign of King Kûn Ch'ogo, Ajikki and Wangin brought the Thousand Character Text and Analects of Confucius to Japan thereby introducing Confucianism and Chinese ideographs there for the first time. Experts in Chinese scriptures from Paekche were dispatched to Japan at the beginning of the sixth century. Buddhist scriptures and Buddha images were transmitted to Japan by the middle part of the sixth century during the reign of King Song. This event marks the historical introduction of Buddhism to Japan.

Confucianism and Buddhism played a pivotal role in the development of the ancient states in Japan. Confucianism contributed to the establishment of ruling system such as its legal code. The universalism of Buddhism functioned as an ideology to form a unified government, breaking down the centrifugal tendencies of local gentries. Paekche also dispatched experts in calendar making, healing, and herb collection who transmitted their skills to the Japanese. In the Records of Japan, there are references to the dispatch of skilled artisans in temple construction and the creation of Buddha statues and roof tiles, painting, music, weaving, dress making, and the transmission of embankment building skills. It is quite clear then that there was a transmission of the features of Korean civilization to Japan in wide-ranging fields such as Buddhist art, architecture, music, handicrafts, and engineering skills. Besides technical specialists and artisans whom the states dispatched, there was also an extensive migration of the populace. This was especially notable at the end of seventh century with the fall of Paekche and Koguryô. People who were subjects of the two former kingdoms emigrated en masse. The numbers were surprisingly high. According to the New Compilation of the Register of Families compiled in 814 A.D. in Japan, one-third of the tribal groups that lived in Gisai area were emigrants originating from the Korean peninsula. These people played an important role in
the development of Japanese civilization during the Heian Period.

Shilla, which unified the Korean peninsula by defeating Kaya, Paekche and Koguryo in turn, had hohilla even fought directly against Japanese troops which had assisted Paekche during the hostilities. Shilla needed to make peace with Japan after unification, however, since it was in conflict with Tang China. Five years after Shilla's unification, the two countries exchanged envoys. But Silla's relations with Japan were not as close as that of Paekche's. Tension over the diplomatic protocol system (woegyo ch'eje) arose and hostility persisted between the two countries which resulted in quite a few military clashes. Meantime on the Korean peninsula, the new kingdom called Parhae was established by former subjects of Koguryo in 698. Parhae established an amicable relationship with Japan as a consequence of its confrontation with Tang and Shilla. Around the eighth century, Wa improved its administrative and legal system (yullyong ch'eje), changed its name to Japan, and established the imperial throne. Japan's relations with the continent dwindled slowly. Dispatches of emissaries to Shilla ended in 779. Its last embassy to Tang was dispatched in 838. Relations with Parhae persisted to the beginning of the tenth century, but exchanges between the two countries were limited to trade only after the eighth century. No state level exchanges between Shilla and Japan took place at this time even though trade and cultural exchanges continued.

Medieval relations

Koryo, which unified the Later Three Kingdoms in 936, sent envoys to Japan and tried to reopen diplomatic ties in vain. Japan, at the time in its Heian period, was absorbed in the glory of being a small China centering around the imperial throne and its unique style of national culture. It was indifferent to foreign relations. Koryo likewise responded and became passive in opening friendly relations with its island neighbor. After the mid-eleventh century, however, local gentries and merchants in Japan actively sought to resume regular contacts with Korea for the benefit of importing the accoutrements of civilization and trade. Koryo was extensively involved in the international trade with countries like Arabia at the time. As the number of Japanese traders who visited Korea increased, the Koryo government made an agreement with Tazaifu of Kyōto who was in charge of foreign relations in 1263 to allow two trading vessels to Koryo once a year. This was the so-called Shimpfosen trade system which was a form of tributary trade.

Even though there were no formal relations between the two governments, Koryo and Japan maintained amicable exchanges until Koryo and Yuan allied to invade Japan twice, in 1274 and in 1281. The allies failed both times near Kyushu because of typhoons. Due to the heavy burden imposed on Koryo during the two wars, Koryo became weak and suffered from peasant uprisings internally and raids of Japanese marauders (waegu) externally. In Japan, the wars contributed to the collapse of the Kamakura Shogunate. Hostility toward Yuan and Koryo followed and the Japanese notion of being a nation favored by the gods (shin'guk ūisik) was reinforced.

At the end of Koryo, the most important issue between Korea and Japan was the Japanese marauders. Japan was in a chaotic state called the Period of the Southern and Northern Courts (1331-1392). Amid political chaos, ruined warriors and the poor from the western area of Japan resorted to piracy. Koryo's limit on trade was also a source of dissatisfaction. From the mid-eleventh century, raids of Japanese marauders became rampant and caused much damage to Koryo. Koryo's three-fold policy toward the marauders consisted of military measures, diplomatic negotiation and economic conciliation. These various efforts were successful in holding off the Japanese but they contributed to the Koryo kingdom's exhaustion and eventual overthrow. Yi Song-gye, who distinguished himself in the struggle against the Japanese marauders, established a new dynasty.
Relations Between 1392-1868

The international situation in East Asia changed significantly around the end of fourteenth century. The Ming Dynasty replaced the Tang in China and the Yi Dynasty was established in Korea in 1392. In the same year, Japan was unified ending the Southern and Northern Courts Period. Amid these changes, a new international order led by Ming China was formed in East Asia. As for Korea-Japan relations negotiations resumed concerning the waegu issue and progressed rapidly after Ashikaga shogunate and Choson were conferred legitimacy by the Ming emperor in 1401. Yoshimitsu, the third shogun of the Ashikaga shogunate, sent a message to Choson which was accepted in 1404 and, as a consequence, formal diplomatic relations were established. It had been 625 years since relations between the two countries were severed. The intent of Choson policy toward Japan was to keep peace in the south by curtailing Japanese marauders. To this end, Choson used military confrontation like the Tsushima Attack in 1419. However the basic policy of Choson toward Japan was to employ economic conciliation measures in order to transform the marauders into peaceful traders. Through these activities, Choson government accepted the demand for trade by various factions as well as the shogunate generals. Commercial and living quarters for the Japanese (waegwan) were established for trading. Diplomatic relations with Japan in early Choson period was not unitary at the governmental level but pluralistic by means of negotiations with various partners in Japan. The Choson government interacted with the shogunate on an equal basis but had tributary relations with others.

The two countries actively exchanged envoys after opening diplomatic ties. Over two hundred years, Choson dispatched sixty envoys in all. Korea received sixty royal envoys from Japan (envoys from the shogunate) and 4,000 envoys others. Japan sought relations with Choson for profitable trade but Choson's prime motive was political: to deter marauders and maintain peace. After relations between Korea and Japan stabilized, Choson reinforced a limited trade policy with Japan. Choson's early relations with Japan were smooth and peaceful except for a few disturbances by Japanese from Tsushima who were dissatisfied with the limited trade policy. Items exported to Japan were cotton, fabrics and cultural items like Buddhist scriptures, books, and stationary while imports from Japan were produce from the south such as dyes, spices and medicines, and minerals and handicraft products. There were technical and cultural exchanges as well. Buddhist cultural assets like the Tripitaka and Confucian writings were brought to Japan. Choson had great interest in the Tripitaka and sent envoys requesting grants of the Tripitaka eighty two times and, as a consequence, about 3,800 volumes were sent to Japan. As for technical exchanges, metal workers accompanied Choson envoys to Japan and manufacturing methods to construct water mills and ships and manufacture swords were offered to Korea in turn.

Peaceful relations between the two countries were disturbed by Japan at the end of the sixteenth century. Toyotomi Hideyoshi ended the Age of Warring States in Japan which had lasted over one hundred years, unified the country in 1590, and began to eye the continent for expansion. The Japanese army invaded Choson with 160,000 soldiers on April 1592 and initially won the battle on land. But before long they retreated repeatedly due to military assistance offered by Ming China, great defeats inflicted by the Choson naval forces, and the uprising of guerilla forces called "righteous armies" (iibyong) throughout the country. The war lasted for seven years including peace negotiations and yet another invasion by the Japanese. Finally Hideyoshi's death in 1598 led the Japanese to completely withdraw from the peninsula. Besides Choson, Japan and Ming China, southeast Asians like Thais and Ryukyus also participated in the war with Ming troops. The war might well be called a "world war within East Asia." Its impact was tremendous. Nearly all of Korea suffered severe damage including the destruction of land, lives and the loss of cultural assets. Korean animosity toward Japan became extreme. It took a long time for Choson to recover from the war. The Ming who had assisted Choson during the war
were soon conquered by the Ch'ing and the Toyotomi regime which brought about the war in Japan collapsed. Japan did not achieve its original ambition in the war but it reaped some benefits from it.

The Japanese Invasion of 1592-1598 (Imjin waeran) is referred to as 'Japanese marauder attacks on a national scale' or 'a war of pillage' because the Japanese systematically looted Choson of many of its cultural assets and treasures on a massive scale. The study of Zhu Xi, metal printing type and skill in the ceramic arts taken from Korea contributed significantly to the development of modern Japanese civilization. The study of Zhu Xi was originally introduced to Japan by a Korean Confucian scholar named Kang Hang who was taken as a prisoner of war. Followed by Fujiwara and Hayashi, Confucian studies developed as a discipline in Japan and was consequently recognized as an official college of the shogunate. More than 200,000 letters of very advanced metal printing type, which had been devised and manufactured in Choson for the first time in the world, were pillaged by Japan. This along with books greatly influenced the development of modern typography and publication in Japan. The way of tea was becoming popular among the Japanese at the time and their interest in Choson ceramics led to the abduction of skilled Korea potters who advanced the ceramic art of Japan tremendously. This eventually became the biggest export trade item with Europeans.

Tokugawa who established a new shogunate in 1600 after defeating Toyotomi forces sought normalization with Choson. After more than ten years of negotiation, the two countries resumed diplomatic ties again with some changes in their mode of diplomacy (woegyo ch'eje). The Choson government allowed trade with the lord of Tsushima after the Ulyu Treaty (Ulyu cho'yak) in 1609. But the trade volume was strictly controlled in order to call Japan to account for the war. Dispatch of embassies from Japan stopped due to a Choson prohibition against Japanese envoyosn envoyos visited Japan. Practical diplomatic issues were expedited by the lord of Tsushima and a Choson official from Pusan (magistrate of Tongnae). Diplomatic missions (t'ongshinsa) from the Choson government were dispatched twelve times by the invitation of the shogunate general. The political intent of Japan's mission diplomacy (t'ongshinsa woegyo) was to project a grander image of the shogunate general internationally than the feudal lords. Meanwhile the Choson government justified its relations with the Japanese as a way to educate them through the introduction of Confucian culture. As a result, envoys of more than five hundred people included a number of people in charge of cultural exchanges such as the literati, painters, calligraphers, doctors, and military bands. These personnel interacted with people from various parts of Japan. Japanese scholars and the general populace of Japan under the government's isolationist policy had abnormally high cultural regard for the Choson envoys, and their influence was considerable as a consequence. Japanese civilization was also introduced to Choson by the envoys who provided new information about Japan.

Peaceful relations between Korea and Japan lasted about two hundred years after the Imjin War. The situation changed as Western forces advanced into Asia in the nineteenth century. Japan delayed the invitation of official envoys from Choson by claiming financial restraints as the importance of relations with that country dwindled. The last official envoy was sent to Japan in 1811. The Korea-Japan relations afterwards became estranged and cold. As the Meiji Restoration took place in Japan in 1868 and changed its domestic administration, relations between Korea and Japan entered a new phase.

**Early Modern Relations (1876-1909)**

The new government of Japan after the Meiji Restoration sent a sovereign's message (kuksô) to Choson announcing the establishment of a new administration in Japan and requesting a new diplomatic relationship with the Choson government. Choson refused to accept the message however because it employed an expression which subordinated the king of Choson to Japanese emperor. Since Choson had established the relationship on an
equal basis with Japanese sovereignty in the international arena, it did not matter whether it was the emperor or the shogun. The message from Japan was considered detrimental to the existing friendly relationship between the two countries. When success in establishing diplomatic ties with Chosón as it dictated did not materialize, the idea of subjugating Chosón to its will was raised in Japan. Japan finally brought about the Unyo Incident in 1875 in order to force Chosón to open its doors. Using the incident as a pretext, Japan dispatched Minister Plenipotentiary Kuroda to Korea on February 4, 1876 along with six warships and began negotiations with Chosón on Kanghwa Island. Japan demanded reconciliation amid intimidations and a show of armed force. The Chosón government, after vehement argument, finally decided to open its ports on February 18. The conclusion of the treaty was influenced by the need for amicable trade relations by the enlightenment faction in Chosón and a recommendation by Ch'ing China. Important elements of the twelve articles in the Kanghwa Treaty (Korean-Japan Treaty of Friendship) concluded on February 26 were the mutual dispatch of diplomatic missions, the opening of the ports of Pusan, Inch'on and Wonsan, the acknowledgement of a Japanese consul to Korea and consular jurisdiction, the establishment of a leased territory, and freedom to survey the coastline. Article 1 of the treaty read "as an independent nation, Chosón has equal rights with Japan" and was intended to eliminate Ch'ing influence on Chosón. In August of the same year, the Trade Regulations (T'ongsang changjong) was signed as an addendum to the treaty. This allowed the circulation of Japanese currency in Korea and tariff-free trade, thereby legalizing Japan's economic invasion. The Korea-Japan Treaty of 1876 which copied the U.S.-Japan Treaty of 1854 and the England-Japan Treaty of 1859 was a forced, unequal treaty unfavourable to Korea. The Kanghwa Treaty however was an impetus for Chosón to enter the new modern international order by breaking away from traditional relations in East Asia centering around China. Korea concluded treaties with the US (1882), England (1883), Germany (1883), Russia (1884), Italy (1884), France (1887) and other western nations and as a result, modern culture from the West was introduced. On the other hand, opening ports was a prelude to invasion by the imperial powers including Japan.

After opening its ports, the Korean government was divided into two factions, a conservative faction which insisted on isolation, and an enlightenment faction which advocated modernization. In the 1880's, the enlightenment policy was pursued with King Kojong's support. The Soldiers' Riot (Imo Kullan) of 1882 was a military mutiny by conservative forces and soldiers against the enlightenment policy. During the rebellion, one Japanese training officer was killed, the legation office was burned, and Qing entered Korea reinforcing its influence on Korea. The enlightenment faction, meantime, split into two factions. The progressive party favored rapid changes with Japan as its model. The moderate party advocated gradual enlightenment with aid from Qing China. Japan tried to strengthen its influence on Korea by supporting the pro-Japanese progressive party, Pak Yonghyo, Kim Ok-kyun and others. They brought about the Coup d' Etat of 1884 (Kapshin chôngbyŏn) but failed due to their mistaken judgement of the situation at the time and Chinese intervention. China and Japan maintained peaceful relations after the Convention of Tientsin of 1885 but Qing's influence on Korea grew. When the Uprising of the Tonghak Peasant Army (Tonghak nongmin undong) arose on February 1894 and extended to Chŏnju, King Kojong requested military assistance from Qing to quell the uprising. Chinese troops were dispatched to Korea and, in accordance with the Convention of Tientsin, Japan which had been looking for an opportunity to advance into Korea, also sent troops. Japan suggested that the two powers jointly undertake to reform Korea's internal administration but this proposal was rejected by China. At this, Japan independently demanded Korea to reform and started the Sino-Japanese War on August 1 which ended in a Japanese victory in 1895. The Treaty of Shimonoseki of 1895 successfully eliminated China's influence in Korea though Japan's advance was restrained by the intervention of Russia, Germany and France. Japan was forced to return the Liaotung Peninsula due to international containment. A new faction within the Korean government arose at this juncture which sought reliance on Russia which seemed to be
more powerful than Japan at the time. Anxious Japan abetted the Japanese minister Miura to perpetrate the murder of Queen Min who supported the pro-Russian faction. Japan's attempt to expand its influence on the Korean peninsula failed due to the brutal suppression of the Tonghak peasant army and the Queen Min Incident (울미사변). The atmosphere of hostility toward Japan peaked and 'righteous armies' rose up throughout the country to wage an armed struggle against Japan.

The Anglo-Japanese Alliance was signed in 1902 in an effort to curb the growth of Russia's influence in China and Korea after its military occupation of Manchuria in 1900. The Russo-Japanese War broke out after negotiations between Russia and Japan over Manchuria and Korea failed in 1904. In August of the same year and still in war, Korea and Japan signed a new agreement stipulating the employment of Japanese financial and foreign advisers in the Korean government and advance approval from Japan regarding diplomatic matters. In 1905, Japan signed a secret agreement between the US Secretary of the Army Taft and the Japanese prime minister Katsura recognizing Japan's suzerainty over Korea. The second Anglo-Japanese Alliance in August of 1905 acknowledged Japan's exclusive authority over Korea. The Treaty of Portsmouth was concluded between Japan and Russia in September with Japan winning Russia's concession not to interfere with the internal affairs of Korea. Through victories in the Sino-Japanese and Russo-Japanese wars, Japan removed its rival from Korea and won approval from the world powers for the colonization of the peninsula. Japan divested Korea of sovereignty in foreign relations and appointed a Japanese resident-general in charge of foreign affairs after signing the Protectorate Treaty in November 1905. King Kojong sent secret envoys to the Hague Peace Conference held in the Netherlands to appeal the injustice and the validity of this treaty but they failed to get a hearing from the world powers represented there because of Japan's interference. Japan instead used this incident to force King Kojong to abdicate. The first Resident-General, Ito, and the Korean prime minister, Yi Wanyong, signed a new agreement which gave complete authority over Korea to the resident-general and dissolved the Korean army which was the biggest obstacle to annexation.

Koreans rose against Japan in response to their loss of national sovereignty. After the opening of the ports, there were three political forces in Korea: conservatives, Confucian scholars who were out of office, and populists which comprised enlightenment faction, intellectuals and Tonghak. They had repeated confrontations over ways to modernize the nation and protect national sovereignty. However, they did collaborate with each other to instigate and propel the independence movement at this time. After failing in the Kabo Reform (카보개정) and the Independence Club Movement (통일협회운동), the enlightenment faction instead took up an enlightenment campaign (개명운동) through political societies, education, the press and national religions. The most intense resistance against Japan was the armed struggle joined by the peasant army and Confucian scholars. With the signing of the Protectorate Treaty, the resistance of the Righteous Armies spread nationwide, and was strengthened when joined by disbanded Korean army troops in 1907. The Righteous Armies even advanced to Seoul with the union of thirteen provincial units in 1909. However their major force was defeated by a massive Japanese punitive military action which obliged them to relocate to Chientao, the Russian maritime territory and Manchuria to continue their battle for independence. Their last act of defiance was the assassination of Resident-General Ito by a Righteous Army chief, An Chunggun in October 1909 at the Harbin train station in Manchuria when Ito was visiting Russia to prepare the annexation treaty. The Resident-General Terauchi and Prime Minister Yi Wanyong finally signed the annexation treaty on August 22, 1910. As a result, king of Korea yielded sovereign power to the Japanese emperor. Thus Korea's independent modernization efforts over thirty five years beginning with the opening of ports failed and Korea became a colonial subject to another nation for the first time in its history.

The Japanese Colonial Period (1910-1945)
Japan established a Government-General to rule Korea and appointed General Terauchi to be the first governor-general. As a direct appointee of the emperor, the governor-general commanded all legislative, executive, and judicial powers and directed the Korean army and navy. He implemented a military police administration through a gendarmerie system to quell resistance against annexation. At the same time various measures were taken to disband political organizations, ban public political assembly, and shut down the Korean press. A harsh economic policy was also implemented. Japan's purpose in the management of Korea was in line with classical colonial strategy to make Korea not only a supplier of food grains and raw materials but also a market for Japanese products in order to develop its capitalist economy. The Government-General promulgated two important laws to this end, a Land Survey Law and a Company Law. Korean farming villages throughout the country collapsed in a few years after the Land Survey Law of 1912 was implemented. The Government-General became the largest landowner possessing forty per cent of the total land area of the country. This property in turn was distributed to Japanese agricultural companies and farmers in Korea almost free. Korean farmers whose land was confiscated found their way to Manchuria, Siberia, and Japan. The heart of the Company Law promulgated in December 1910 was that all the companies in Korea should obtain permission for their establishment and managerial supervision from Government-General. Its purpose was to restrain Japanese investment in Korea and suppress capital investment in industries by Koreans as well. The Government-General had a firm grip on the industry and economy of Korea through the establishment of the Oriental Development Company and various monopolies. Education and academic research on national culture were banned through the promulgation of the Education Ordinance.

Resistance by Koreans to the cruel colonial policy persisted from the beginning. The movement of underground organizations within Korea persisted and Koreans in exile continued their struggle after annexation. There were armed anti-Japanese activities in Manchuria and the Russian Maritime Territory, joint activities with Chinese revolutionaries in Shanghai, and the formation of national movement organizations and diplomatic activities in the U.S. The largest independence movement at the time was the March First Movement which began in Seoul in 1919. The March First Movement was originally a peaceful petitioning for national independence but changed into popular demonstrations crying "long live independent Korea" led by students and youthful forces. Confronted with brutal suppression by the Japanese police and army, demonstrations erupted nationwide which lasted for over two months. More than two million Koreans participated in more than 1,500 protest meetings which occurred in 211 out of the 218 counties (kun) within the country. The March First Movement has great historical significance in that it united all the existing independence factions throughout the country, provided a foundation for nationalist movements afterwards such as the Korean Provisional Government and heralded an anti-imperialist movement in Asia. The March First demonstration took place during the Paris Peace Conference. It influenced international opinion and was a great shock to Japan. As a consequence, Japan changed its colonial rule from a military administration to a so-called 'enlightened' cultural administration. Cultural administration implemented a divide and rule policy through conciliation, the abolition of the gendarmerie police system, some freedom of speech, press and publications, and an easing of restrictions on educational and cultural activities.

The Korean national movement entered a new, expanded phase in the 1920s. Relaxed legal restrictions allowed, first, a nationalist enlightenment movement in the press and education, second, a civil rights movement within the general populace including the farmers' movement, labor organizations and a social equality movement. The main force in all these movements was the Korean public itself and the prime motive was economic.

Japan's colonial policy in the 1920s entailed a plan to increase rice production that lasted from 1920 to 1934. Rice production increased as planned and Korea was forced to become a supplier of food grains to Japan whilst the land lost its ability to replenish itself due to
repeated mono-crop cultivation. Japan, caught up in the worldwide depression of 1929, incited the Manchurian Incident in September 1931 as its military secured political influence. This eventually led to the Sino-Japanese War of 1937 and the Pacific War of 1941.

Japan, in a state of war for fifteen years, used Korea as its supply base to advance onto the A'cultural administration' and resumed its policy of cruel suppression with the expansion of the war. Japan forcibly mobilized Korean labor to fill its urgent manpower needs through the promulgation of the National General Mobilization Law in 1938 and forced Koreans to perform dangerous work in mines and military facilities. As the Pacific War progressed, Japan drafted 210,000 Koreans through its National Government Service Ordinance (1942) and Student Enlistment (1943). Japan even mobilized 370,000 Korean women under the name of the Comfort Corps (chôngshindae) to work and serve the sexual needs of Japanese soldiers. They also enforced an assimilation policy to obliterate Korean identity as well as forced mobilization campaigns. Accordingly, Japan forcibly enforced emperor and Shinto shrine worship, a ban on Korean language, obligatory Japanese language education, and the Name Order forcing Koreans to change their names to Japanese style. Japan's cruel and primitive colonial policy can be safely characterized as 'land exploitation in the 1920s, rice exploitation in the 1920s, labor force exploitation in the 1930s, and life exploitation in the 1940s.'

Korean resistance to Japan was as intense as the Japanese suppression. The centripetal point of the Korean national movement was the Provisional Government. The Shanghai Provisional Government was established by national leaders in exile in April, 1919. As a government-in-exile, it led the Korean people both within and outside Korea to struggle against Japanese militarism for the next twenty five years. Independence fighter organizations in Manchuria combined under the Korean Provisional Government to form the Restoration Army in 1941. These forces continued their struggle against Japan in cooperation with the Chinese army and fought against Japan with the Allied forces during the Second World War. In February 1945, the Provisional Government declared war against Japan and Germany, the Restoration Army engaged in India and Burma and made preparations to join the landing operation on the Japanese mainland in cooperation with American troops. In 1941, an overseas Koreans gathering was held in the US. Some joined the OSS and participated in battles against Japan.

There were also various resistance movements in Korea. The two largest demonstrations since the March First Movement were the June 10 Independence Demonstration in 1926 and the Kwangju Student Movement in 1929. Sin'ganghoe and Kunuhoe which were created in 1927 as a national unification front of left and right factions, led the nationalist movement. Since 1930s, these nationalist activities continued through the activities of national movement organizations like the Hungsadan, the Korean Language Society, and the struggle against Shinto shrine worship.

**Korean Residents in Japan**

By 'Korean residents in Japan' we here refer to Koreans who migrated to Japan during the colonial period and remained there after the war. There were 790 Koreans in Japan in 1909 before the annexation of Korea, but by 1945 the figure had swollen to 2.1 million. In short, the Korean population in Japan was resulted from Japan's colonial rule. The influx of Koreans to Japan occurred in two stages. The first stage between 1910 and 1938 was the emigration of impoverished Korean farmers. Japan was in need of cheap labor due to the development of capitalism. Korean farmers who were ruined as a result of the land survey were obliged to migrate from their homeland to Manchuria and Japan. In the 1920s, 300,000 Koreans migrated to Japan and in 1938, 800,000. The second stage was forced migration from 1939 to 1945. Japan, embroiled in the Pacific War soon following the Sino-Japanese War, had to mobilize many laborers for the war industry. It passed the National
General Mobilization Law of 1938 and the Labor Mobilization Plan of 1939 and took Korean laborers by force. The number of Koreans who were forced to migrate to Japan was no less than one million. They were unskilled workers who performed manual labor, and they were paid one third their Japanese counterparts. They maintained a very minimal standard of living, and resided mostly in the industrial and mining areas or in slums near cities. More than 6,000 innocent Koreans were slaughtered at the time of the great Tokyo earthquake of 1923.

The liberation of Korea brought major changes in the standing and attitude of Korean residents in Japan. Naturally they wasted no time to return to Korea. The number of Koreans who returned to Korea in the eight months after liberation to March 1946 exceeded 1.4 million. 600,000 Korean residents in Japan registered in accordance with the Alien Registration Ordinance Japan promulgated on May 1947. They can be considered the 'first' Korean residents of Japan. They remained in Japan for two reasons: the political and economic situation of Korea was chaotic and the Japanese government placed restrictions on the amount of money and goods they could take with them. The Japanese government revoked the Japanese nationality of Koreans in Japan unilaterally in April 1952. The legal status of Korean residents in Japan was guaranteed by the Korea-Japan Basic Treaty in 1965. The Agreement on the Legal Status and Treatment of Korean Nationals Residing in Japan, the accessory agreement to the Basic Treaty, stipulates that the Japanese government should assist them to lead a stable life in consideration of their special relationship with Japanese society. The Ministers of Foreign Affairs of the two countries exchanged a note on January 1991 in order to supplement sections of the Basic Treaty. According to the note, Koreans from the third generation and after shall obtain the right of permanent residence, be exempted from fingerprinting, and be allowed to be employed as teachers and local public officials. National education is also allowed on the decision of local government authorities. This is some improvement on the Basic Treaty. The Japanese government, however, still places restrictions on national education and keeps more than 200 discriminatory clauses in social security and welfare.

Korean society in Japan has experienced significant changes in the forty years since the war. Distinctive trends are the shift in generations, the increase in naturalization, and permanent settlement. Second and third generation Koreans constitute the majority of Korean residents in Japan now. As of 1974, 80% of Koreans in Japan were born after the war. Unlike the first generation, they set 'living in Japan' as a premise. International marriage has also become popular. As of 1992 more than 80% of Korean residents in Japan marry Japanese. According to the Japanese Nationality Act revised and enforced in 1985, children with at least one Japanese parent can acquire Japanese nationality. Due to these changes, the number of Korean residents in Japan is decreasing. The figure for naturalization is larger than the rate of natural population growth since 1985. The figure for naturalization has increased every year since it began in April 1952 and reached 168,000 by 1992. However, the naturalization policy of Japan is to Japanize naturalized citizens under the ideology of 'a unitary nation-state.' There is a fundamental difference between the Japanese system and obtaining citizenship in multi-ethnic America.

Policies regarding Korean residents in Japan serve as a test of desirable Korea-Japan relations. Korean residents have been treated as foreigners or as Japanese according to the arbitrary judgement of the Japanese government. They fulfill 100% of the duties of Japanese citizens but enjoy only 50% of their rights. As the generation of Koreans in Japan shifts, they wish to continue living in Japan. Yet they also want to preserve the national characteristics. The International Human Rights Covenant (Kukje ingwon kyuyak) which Japan joined in 1979 recognizes equal principles for natives and foreigners, the securing of the right to work and livelihood, and cultural self-determination of minorities. However it is yet to be determined to what extent the Japanese government abides by the agreement. The Japanese government should abolish discrimination and discard an assimilation policy that obliterates national identity based on the fabricated theory of a unitary nation-state.
Contemporary Relations  (1945-present)

The liberation of Korea was a direct result of the victory of the Allied Forces and the defeat of Japan in the Second World War. At the same time, it was also the result of the persistent Korean national movement for independence. As the prospect of the Allied Forces' victory became certain, a summit conference was held in Cairo, Egypt in November 1943 among the leaders of the US, Great Britain and China. The independence of Korea was declared among the postwar matters which were discussed. The leaders of the US, Great Britain, China and the Soviet Union who met in Potsdam, Germany in July 1945 recommended the unconditional surrender of Japan and reaffirmed Korea's independence as agreed to in the Cairo Declaration. When Japan ignored this recommendation, the United States dropped an atomic bomb on Hiroshima on August 6. The Soviet Union declared war against Japan and attacked Manchuria and the Korean peninsula at the same time. Japan finally announced unconditional surrender to the Allies on August 15, 1945. With this, the fifteen year long Japanese war of aggression beginning with the Manchurian Incident came to an end with 2.6 million war casualties.

On August 15, 1945 when Japan unconditionally surrendered, the Committee for the Preparation of Korean Independence was immediately organized. The Committee comprised of both left and right wing forces guaranteed the safe repatriation of 700,000 Japanese in mutual agreement with the Government-General and maintained peace and order during the transitional period. Korea went through great confusion after liberation. The United States and the Soviet forces occupied the southern and northern halves of the Korean peninsula respectively divided at the 38th parallel. Koreans were torn by the ideological confrontation. The Committee for the Preparation of Korean Independence weakened because of the confrontation between its right and left wings and finally dissolved as the US started its military administration in the South. Eventually the Republic of Korea in the south and the Democratic People's Republic of Korea in the north were established in 1948, and thus the division of Korea began. In June 1950 the Korean War began with an attack launched by North Korea. The war became an international war when sixteen countries led by the US entered the war under the flag of the United Nations. Communist China supported North Korea. Warfare came to an end with a truce in 1953 but Korea remained frozen in division while Japan, under US occupation, overcame its postwar crisis and laid a foundation for economic revival owing to the war in Korea.

With the Korean peninsula becoming an outpost of the international cold war, the United States strongly recommended reconciliation between Korea and Japan to form a united front against the communist bloc in northeast Asia. A preliminary meeting was held in Tokyo in October under the direction of General Headquarters of the Supreme Commander for the Allied Powers (GHQ/SCAP) shortly after the San Francisco meeting and the signing of the US-Japan Security Treaty in September 1951. This was the first of meetings to reopen diplomatic relations between the two countries. Formal negotiations for the normalization of diplomatic relations between Korea and Japan was held in February 1952 but mutual agreement did not occur because of disputes over unresolved issues such as property claim rights. The meetings were discontinued because of a remark rationalizing Japan's colonial rule by Kubata, a Japanese representative to the third meeting in October 1953. A fourth meeting was held in April 1958 four years later but again failed due to differences regarding the repatriation to North Korea of Korean residents in Japan. Park Chung Hee (Pak Ch'onghŭi) who seized power through a military coup d'état actively pursued results in Korea-Japan talks while putting economic development as the first priority of his government administration. Thus there was rapid progress from the sixth talk resumed in October 1961. Agreements on major pending issues like property claims against Japan, the Lee line, the legal status of Korean residents in Japan, and the return of cultural assets transpired and a basic treaty was provisionally signed in Seoul in February 1965. A strong anti-normalization movement arose in Korea, followed by a declaration of martial law.
There were demonstrations in Japan against the normalization as well. But the governments of the two countries officially concluded the Korea-Japan Agreement which was composed of one basic treaty with four auxiliary agreements on June 22, 1965. The general agreement stipulates the opening of diplomatic and consular relations between the two countries, reaffirmation of the invalidity of the annexation treaty and all other agreements and treaties signed prior to the annexation, and the acknowledgement of the Republic of Korea as a sole legitimate government on the Korean peninsula. In accordance with the Claims Agreement, Japan provided Korea with $300 million in grants, $200 million in public loans, and $300 million in commercial credits over a ten year period. The amount of money was meager compensation for its long colonial rule but it helped to rebuild the Korean economy. Korea has pursued intensive economic development and in the process has received economic cooperation from Japan. At present, Korea and Japan are major trading partners but there is a serious trade imbalance. As of 1993, the total trade deficit with Japan was $8 billion, equivalent to twice the total foreign trade deficit of Korea after the war. Upon restoring diplomatic ties, Korea and Japan have consulted on pending diplomatic matters at the Korea-Japan Ministerial meeting which has been held as a courtesy visit every year since 1967. A Trade Agreement, an Aviation Agreement and a Korea-Japan Agreement on Joint Continental Shelf Development were concluded respectively in 1966, 1967, and 1974. President Chun Doo Hwan (Chŏn Tu-hwan) visited Japan in 1984. He was the first Korean head of state to do so. At the time, the Japanese emperor apologized for past affairs and Korea received $4 billion in security cooperation funds. Korea-Japan relations have progressed smoothly centering around economic exchanges.

North Korea-Japan relations have been restricted since Japan acknowledges the Republic of Korea as the sole legitimate government on the Korean peninsula in accordance with the Korea-Japan Basic Treaty. However Japan has maintained economic and technical exchanges with the North through a policy of separating political and economic matters. Exchanges between the North and Japan began as the North-South dialogue began on the peninsula and as the international order became more complex in the 1970s. North Korea and Japan concluded a treaty regarding trade in August 1965 and a fisheries agreement in November 1984. Broadcasting Commissions of the two countries also signed an agreement on the exchange of broadcasting materials. Efforts to normalize diplomatic relations between North Korea and Japan are progressing as the Cold War subsides in the 1990s. The Pro-North Korean Residents' League in Japan mediates trade and joint enterprises in the North. Trade volume however is no more than one-fiftieth of that between South Korea and Japan.

Korea and Japan have had a peaceful relationship over most of their long history with only relatively short periods of conflict and confrontation. Relations in modern times have often been distorted and uncomfortable, however, especially in the early 20th century with the blight of Japanese colonial rule and Korea's inevitable resistance. Japan maintains a cooperative relationship with South Korea but it has not yet established diplomatic relations with North Korea in the latter half of the 20th century. Relations between Korea and Japan have often been dubbed "close yet distant." Bitterness over responsibility for the war, postwar settlement, and other differences are shared by citizens in both countries. Korea and Japan must learn how to restore amicable mutual understanding while maintaining equal and friendly relations in the global era of the 21st century.

Joong-ang ilbo

The Joong-ang ilbo (Chungang ilbo) is a nationwide daily newspaper that is published in Seoul. It was launched on 22 September 1965, with Yi Pyôngch’ol as president; Hong Chin’gi as vice-president; and Yi Wôn’gyo as editor-in-chief. The newspaper strongly reflected the convictions of its first president as it sought to establish itself as a pundit for social welfare and social justice. These high ideals were met through neutral editorial policies, new-style columns, rigid political neutrality, and the unwavering cultivation of moral culture. Initially, the newspaper was an eight page edition and provided coverage on national news, world news, sports, weather, culture and fashion, together with topical editorials and columns, thus offering the Korean public a somewhat differently formatted newspaper than others published at that time.

The management of the Joong-ang ilbo was reorganised in 1968 with Yi Pyôngch’ol assuming the chairmanship; Hong Chin’gi as president and Yi Kyuhyon taking over as editor-in-chief. By early 1970, the size of the publication had increased substantially to forty-eight pages. Another major development was the December 1974 merger with Tongyang Broadcasting Company to form the first print-broadcasting mass media company in Korea. The size of the newspaper continued to grow and was further increased to seventy-two pages in 1981. A further expansion in the early 1990s denoted it as among the first of the so-called ‘section’ newspapers in Korea. The Joong-ang ilbo has maintained its growth and has increased its activities, establishing a research centre (Tongsŏ Munje Yŏn’guso). The newspaper has been at the forefront in its reporting of the many domestic events, incidents and scandals of recent years, and it is widely respected for its journalistic integrity.

Juche Ideology

The juche (chuch’; self-reliance) ideology is the cornerstone of the Democratic People’s Republic of Korea (North Korea -- DPRK) society and is manifested in many aspects of its politics, society and philosophy. Juche is said to be a new philosophical thought that centres on man, and in which man is the master of all and decides on everything. The juche philosophy promulgated by Kim II Sung (Kim Ilsŏng) states that man is a social being with Chajusong (autonomy), creativity and consciousness. Juche is claimed to be a truly revolutionary philosophy that will enable men to transform the world and shape their destiny independently, creatively and consciously, with a high degree of awareness that they are both masters of the world and their own destiny. Insofar as DPRK literature is concerned, juche is viewed as the paramount ideology on which the foundations of society are built.

Formation of the Juche Ideology

Some scholars hold that the beginnings of juche ideology are found in the shift from a Soviet-orientated policy to one that was focused on self-reliance, which occurred in the late 1950s. After the formation of a five-year economic development plan in April 1956, a North Korean delegation, headed by Kim Il Sung, travelled to the Soviet Union and countries in Eastern Europe to secure the necessary aid for the implementation of the grand plan. The mission was not successful, however, and consequently the focus of the DPRK development shifted to one of self-reliance, or juche, a measure necessitated by a dearth of economic resources. Initially the policies of the DPRK were somewhat similar to the Maoist
ideology of self-reliance, and simply stated, they were aimed at the mass mobilisation of domestic human and natural resources to meet the needs of economic development. Along with this shift from foreign dependence to self-reliance, there was an accompanying purge of the ranks of the North Korean government, of those who opposed this new direction of the state. Hence, as a co-product of the shift, the political position of Kim Il Sung was further consolidated, as he seized the opportunity to eliminate all factions in the Korean Workers' Party (KWP) that were not completely loyal to him.

The process of creating the ideology of self-reliance required mass indoctrination of the people to the new direction of the state, and this was the genesis of juche ideology. The brain-washing of the people for their acceptance of the juche concept commenced in speeches and in propaganda issued by the KWP and its organs. Its first mention was in a speech by Kim Il Sung in December 1955, in which he espoused juche as a means of creating a national identity. Juche was to function as an ideology by which both international obligations and national goals were to be integrated in external affairs, and by which the leadership and the masses would be closely linked in domestic matters. Kim insisted that juche was not a self-aggrandisement policy, but was rather a general policy to determine how best to apply the principles of Marxism-Leninism to North Korea, and how to avoid the basic mechanical duplication of foreign systems and ideologies.

The result of the adoption of juche ideology as the main tenet of the state, was a decided shift from the former policy of 'learning from the Soviet experience', to one of the promotion of every virtue of Kim Il Sung, and by extension, the North Korean state. Hence, the writings that had formerly praised the 'great liberating Soviet Army' disappeared and were replaced with those that praised the 'revolutionary tradition of the guerrilla armies in Manchuria' led by Kim. The shift from a pro-Soviet policy in North Korea was remarkably similar to the one in China in the mid 1950s, and both movements served the same fundamental purpose of mobilising the nation for economic development. The process of shifting the focus of DPRK ideology away from the Soviet Union was not an easy task, however, as the people and ruling elite had been thoroughly indoctrinated in accepting the Soviets as both their liberators and as their models for development. Thus, as an outgrowth of the self-reliance policies, the process of glorifying the revolutionary accomplishments of the Manchurian guerrillas, led by Kim, was intensified. In the juche ideology, then, are the beginnings of the creation of the Kim Il Sung cult and the deification of the North Korean leader.

Developments in the Juche Ideology

The juche ideology underwent transformation as circumstances in the international arena demanded that North Korea adapt. Namely, as relations became strained with first the Soviet Union and then China, the North was forced to become even more self-reliant, and so the juche ideology became even more prominently manifested. The international events of the 1960s and 1970s, such as the Cultural Revolution in China, the Vietnam War, the establishment of relations between China and the United States, and the policy of détente between the Soviet Union and the United States, all served to force North Korea to become increasingly isolated and even more reliant on juche ideology. Therefore, the party line of 'avoiding the mechanical imitation of foreign systems' was escalated, and moreover, North Korean society became even more inward-looking and more concentrated on Kim Il Sung.

The international political activities of the DPRK became more focused on the so-called non-aligned movement of the 1970s. The North sponsored the establishment of Juche Centres in many nations around the world in an attempt to establish itself as a leader of the non-aligned movement. This shift in North Korean philosophy reflected the changing international situation, as global politics at this time were moving away from the polarised world of the Cold War, and shifting to a multi-faceted world in which many diverse interests and relationships were being formed among nations. The juche ideology of the
North prevented it from aligning with any one country or group, and this resulted in even greater isolation internationally.

The collapse of the Soviet Union and the Communist Bloc in the late 1980s and early 1990s, created even more international isolation for the North. Compounding this was the loss of almost all foreign aid, and of necessity, this brought a corresponding increased emphasis on self-reliance.

Today, the focus of the North Korean state is directed almost completely inward, with Kim Jong Il (Kim Chŏngil) now leader of North Korean society in place of his father. While DPRK propaganda continues to promote the virtues of juche and the benefits it brings to the people, the fact is that this introverted ideology has doomed its own economy and resulted in the state not being able to deal adequately with national emergencies, such as the nationwide famine of the mid-late 1990s. While North Korea promotes its society as a ‘proletariat eldorado’ that has resulted from the juche ideology (in which man is his own master), the truth of the matter is that the North’s economy is moribund and the country must now rely upon international aid in order for the common people to subsist.

Bibliography

Jungeumsa

Jungeumsa (Chŏngūmsa) is a publishing company situated in the Chongno Ward of Seoul. Its origin was in a small publishing house established in Seoul in July 1928 by Ch’oe Hyŏnbae, a professor at the junior college Yŏnhŭi Chŏnmun Taehakkyo. The company did not take on the vestiges of a modern publishing company until May 1941. It was shut down by the Japanese colonial government, but reopened after Korea’s liberation, with Ch’oe Yŏnhae as president. From this time on, it published numerous works on the Korean language, literature, poetry, history and other subjects, as well as textbooks. From 1946, it also published the monthly magazine Hyangt’o (The Country). The company’s operations were disrupted during the Korean War, but later it continued to publish works ranging from Korean literature, poetry, and music, to doctoral theses and literary criticism. Jungeumsa has received many awards for the high standard of its publications.

Justice, Ministry of

Ka Island

Ka Island is part of Ch’ŏlsan Paengnyang Township in North P’yŏngan Province’s Ch’ŏlsan County. The island, also known as P’i Island, covers an area of 19.2 sq. kms. and has a 35km.-long coastline. Geologically, the island is at the extremity of the submerged Kangnam Mountain Range. Most of the residents work in both fishing and agriculture. Off-shore fishing brings in catches of yellow corbina, bream, croaker and shrimp. Crops grown in the area include bean, com and rice. At times during Chosŏn the island was used to breed horses.

Kabo kyŏngjang (see Reforms of 1894)

Kadŏk Island

Located to the immediate west of the Naktong River estuary, Kadŏk Island is part of the
port city of Pusan. The island has an area of 20.7 sq. kms. Kadok has a number of large peaks, including Yondae (459m) and Ungju (330m). Except for the northern coast, the island’s coastline consists of cliffs which have been eroded by the sea. Kadok’s southern location makes for a temperate climate, with an average yearly temperature of 13.7c. and an average yearly rainfall of 1250mm.

The island’s main agricultural crops are garlic, barley and onion. Fishing is an important part of the local economy, as is oyster farming. However, both fishing and oyster farming have been adversely affected by the industrial waste coming out of Chinae Bay.

There are four primary schools and one junior high school on the island.

**Kaebyŏk** (see Magazines)

**Kaebyŏksa**

Kaebyŏksa was a publishing company founded by the Ch’ŏndogyo religious organisation during the Japanese occupation. The company published numerous books, as well as the monthly magazine *Kaebyŏk* (The Genesis). Because of its anti-Japanese sentiments, the company was severely supressed by the colonial authorities.

**Kaech’ŏn**

Kaech’ŏn is situated to the north of Sunch’ŏn in South P’yŏngan Province. The Ch’ŏngch’ŏn River marks the city’s border with North P’yŏngan Province while Mt. Wŏlbong (1033m), Karin Peak (1088m), Mt. Kosa (1011m) and other peaks of the Myohyang Mountain Range rise in the east. The city’s weather is characterised by extremes between summer and winter temperatures and an average yearly rainfall of 1148mm.

Approximately 21 per cent of the city is arable land. Although the western plains are not particularly fertile, a ready supply of irrigation water and a moderately heavy rainfall makes the area suitable for rice growing. Other grains are grown, as well as legumes, tobacco, cotton, and Chile pepper. Orchards grow apple and peach in marketable quantities and cattle and pigs are farmed. Others engage in sericulture. Outside the rural sector, there are chemical product factories, and north of Mt. Piho, there are graphite mines. High quality anthracite is mined at Yongdam, and in the western part of the city there are iron ore mines.

Several important historical sites exist in the area. Northwest of Mt. Kosa (1011m), one finds Kosa Fortress. Once an extensive stone fortification, only a section of the wall now remains. Next to the fortress in Pongha Village is Kwanŭm Temple. Other sites include a nine-storey stone pagoda to the south of Mt. Piho and remains of the Choyangjin Fortress in Mijang Village.

During the twentieth c., the indigenous Ch’ŏndogyo religion was prominent here with a large church in Pongmyŏng Village in the centre of the city and missionary centres in each of the city’s townships. The Presbyterian church also carried out missionary activities here. In 1935, a church elder by the name of Pak Kwanjun openly opposed worship at the Japanese Shinto shrines. After sending an official letter of protest, he was arrested and sent to a P’yŏngyang prison, where he died.

**Kaech’ŏn chŏl**

[Customs and Traditions]

Kaehwa Tang (see Enlightenment Party)
Kaesŏng

Located to the northwest of Seoul in North Korea, Kaesŏng was previously part of Kyŏnggi Province. In 1955, the city limits were expanded to include the counties of Kaep'ung, Changp'ung and P'anmun. From this time, the city was directly administered by the central government. Kaesŏng’s population is about 380 000.

Kaesŏng’s climate is characterised by sharp seasonal fluctuations with January temperatures averaging minus 6.2 deg. C., and August 25.3 deg. C. The city area averages 1 253mm of rainfall annually.

Factories in Kaesŏng produce textiles; leather goods; food stuffs; household products; timber products; metalwork; shoes; electronics; pottery; and handicrafts. The city is particularly well-known for its plaited articles such as rugs; mats; mesh bags; cushions; baskets; and fans. It is also a leading producer of ginseng and ginseng products.

Archaeological artefacts indicate that people first lived in the Kaesŏng locality during the Neolithic era. The area was known as Pusogap during Koguryŏ, but Shilla renamed it Songak County, and built a fortress, in 694. About 899, Kŭngye, the founder of Later Koguryŏ, used the area as his capital before changing it to Ch’ŏrwŏn. After Wang Kon succeeded Kŭngye, he switched the capital of the new Koryŏ kingdom back to Songak, his local power base. After several alterations to administrative boundaries, the capital’s name was changed to Kaesŏng-bu in 995. During Koryŏ, Kaesŏng developed into the prosperous (and overcrowded) cultural and political centre of the new kingdom.

A number of historical artefacts and sites attest to Kaesŏng’s rich history. About one kilometre north of Sŏnjuks Bridge, lies Kaesŏng’s Sŏnggyun’gwan. Originally founded as Kukchagam (National Academy) in 992, the Confucian academy’s name was changed to Sŏnggyun’gwan during the reign of King Ch’ungnyol (1274-1308). The academy was expanded in 1367, the school’s instructors included the renowned Yi Saek (1328-1396) and Chŏng Mongju (1337-1392). The complex was rebuilt after its destruction by fire during the first Hideyoshi Invasion (1592). Today, the school contains the Koryŏ Museum, which displays pottery, pagodas and a number of Buddhist relics. Confucian ceremonies are occasionally re-enacted at the school.

One of the most important of the city’s relics is Nam (South) Gate at the Panwŏl (Half Moon) Fortress site. Constructed in 1393 and restored in 1955, the structure is the only gate of the seven gates that made up Kaesŏng’s inner fortress to have retained its upper storey. The Yŏnbok Temple bell, which was moved to the gate when Yŏnbok Temple was razed in 1563, is contained in the upper storey. Cast from copper alloy, the bell is 3.3 metres high, 1.9 metres in diameter at its mouth, and is 23 centimetres thick. It weighs about 14 tonnes. It is decorated with fish, dragons, phoenix, giraffes, crabs and wave designs.

South of Mt. Songak lie the foundation stones of Mangwŏldae, a Koryŏ palace. A short distance to the west of the site are the remains of an observatory -- four stone pillars holding up a square stone slab. The structure is surrounded by small pillar-shaped stones spaced evenly apart. Other important artefacts include Sŏnjuks Bridge (built in 1216); the tomb of King Kongmin (r. 1351-1374) and his queen; and Sungyang Sŏwŏn (private school) founded by Nam Ungun on the slope of Mt. Namja in 1573. Modern monuments include a statue of Kim Il Sung (Kim Ilsŏng) on Mt. Chanam.

Kagok

[Kagok wŏllyu (Headwaters of Kagok)]
Kagok wollyu is a collection of kasa compiled by Pak Hyogwan and An Minyöng in 1876. This work was originally hand written and is composed of one volume and one fascicle. Kagok wollyu along with Ch’onggu yöngôn (Eternal Words of Green Hills) and Haedong kayo (Songs East of the Sea) are considered as the three great shijo collections of Korea. There are some ten editions of this work extant, with the one in possession of the Korean Traditional Performing Arts Center (Kungip Kugagwön) considered to be closest to the original.

The content of Kagok wollyu (Kungnip Kugagwön edition) is divided into 665 songs for men and 191 songs for women making a total of 856 works. These are arranged into thirty categories depending upon their musical style. Other factors such as the writer’s social status or class were not taken into consideration in the compilation of this work. At the end of those items which are not anonymous, there is a brief biography of the writer. The works in this collection range from Ülp’aso (? — 203 CE) of Koguryö to An Minyöng of the late Chosön period. With but a few minor differences, the other editions of Kagok wollyu are quite similar to the Kungnip Kugagwön edition. All of the works pay close attention to both the melody and singing technique of the songs. There are thirty musical categories used to arrange the melodies of these works, which is remarkable considering that there are but ten in Ch’onggu yöngôn and fourteen in Haedong kayo.

Kagok wollyu is a valuable resource for the study of shijo and musical styles in Korea from early times through the final years of Chosön. When this work is examined in conjunction with Ch’onggu yöngôn and Haedong kayo, the development and progression of the shijo form can be traced throughout the Chosön period. In particular, Kagok wollyu provides valuable data for the study of traditional musical styles of Korea.

Kaji Island  (see Tok Island)

Kanbaek Mountain

As part of the Mach’onnyöng Ridge, Mt. Kanbaek (2,164 metres) is a subsidiary peak of Mt. Paektu. Connected with Taeyöngji Peak (2,360 metres) and Soyöngji Peak (2,123 metres) to the north and Mt. Sobaek (2,174 metres) to the south-east, Mt. Kanbaek is one of the mountains that make up the border between North and South Hamgyöng Province. The mountain’s steep and rugged terrain accounts for the linguistic and cultural differences between the people living in these two provinces.

Kang Ilsun

Kang Kamch’an (948-1031)

Kang Kamch’an was a famous military commander of the Koryö period. His ancestral home was in Kömür (present day Shihüng) and his given name was Unch’on. In 983 after passing the government service examination (kwagö) with the highest mark, Kang was appointed to the position of shirang, the second highest position, on the Board of Rites (yejo). In 1010 after the military ‘strongman’ Kang Cho (?—1010) had disposed of King Mokchöng (r. 997-1009) and replaced him with King Hyönjong (r. 1009-1031) the Khitan invaded from the north led by their emperor Shenzong and took advantage of the political disarray in Koryö to sack Sögyöng (present day P’yöngyang) forcing the Koryö court to flee south to Naju. After the Khitan retreated, Kang continued his political career and was appointed to various offices before being commissioned as the Commandant of Sögyöng (yusu) in 1018 in addition to duties in the central government. As Commandant of Sögyöng, Kang was charged with the command of the northern forces and for making preparations against another Khitan invasion. Subsequently, later in the same year the
Khitan again attacked Koryŏ, this time led by Xiao Paiya, with a force of 100,000 men. This time Kang’s troops, along with those of the northwestern command and the general command, harassed the Khitan at every turn causing them to retreat. Then at Kuju, Kang executed a massive attack on the retreating Khitan and annihilated their forces in such a devastating manner that only a few thousand Khitan troops survived. At the conclusion of this disastrous invasion, the Khitan sued Koryŏ for a peace treaty.

After leading the Koryŏ forces to the brilliant victory over the Khitan, Kang received many honors from the King and continued to serve the state in various official capacities. Kang is not only remembered for his military brilliance, but also for matters such as building Nasŏng Fortress at Kaegyŏng (present day Kaesŏng) and greatly improving the border defense systems of Koryŏ. Presently Kang’s grave is located in North Ch’ungch’ŏng Province in Kuksa Village. In addition to his military exploits, Kang was also an accomplished literary man writing works such as Naktogyŏgŏ chip and Kusŏn chip. However, these works are not now extant.

**Kang Sehwang** (1713-1791)

Kang Sehwang is a representative literary man, painter and critic of the Chosŏn period. His family’s ancestral home is in Chinju and his courtesy name was Kwangji. Kang also had many pen names including Ch’ŏmjae, Sanhyangjae, Pagam, Üisangja, Kyŏnam, Nojuk, P’yoam and Haesanjong among others. He was born in Seoul, the youngest of ten siblings and he received much of his education under the affectionate tutelage of his father and his elder sister’s husband. His wife’s brother Yu Kyŏngjong, and friends such as Hŏ P’’il and Yi Subong were his closest companions, while other acquaintances included Yi Ik, Shim Sajŏng and Kang Hŭiŏn. Notably, future painting masters that learned from Kang include Kim Hongdo and Shin Wi.

At eight years of age, Kang began to write poetry and his writing style was so skilled that by the age of thirteen or fourteen his writings were put on decorative folding screens. At thirty-two he moved to Ansan in poverty and for a long period concentrated on cultivating his scholarship, writings and painting skills. Through the good offices of King Yongjo (r. 1724-1776), Kang started on the road towards an official position at the age of sixty-one; at sixty-four he took the kigugwa (special government service examination for those over sixty) and at sixty-six he had the highest score on the munshin chŏngshi (a special civil service examination held by order of the king). Kang then held official positions such as Assistant Curator (ch’ambong), Third Minister (ch’amu, 3A rank) of the Board of War (Pyŏngjo) and as Mayor (p’anyun) of Seoul among others. At the age of seventy-two he was appointed as envoy to Beijing and the travel account and drawings from his sightseeing trip to the Kŭmgang (Diamond) Mountains at age seventy-six are extant. Kang’s official and artistic activities were greatly influenced by the good favour that he received from both King Yongjo and King Chongjo (r. 1776-1800).

Kang is praised chiefly for his excellence as a painter and there are a number of his works presently extant. His paintings include both landscapes and portraits and display his excellent ability and keen eye for detail. Kang was also a renowned art critic and influenced the work of future generations through his insight. In his autobiographical work, P’yoong chaji, he included several scrolls of his artwork including two self-portraits, which was quite unusual. Kang’s grave is located in Toha Village of North Ch’ungch’ŏng Province and an annotated collection of his literary works was published by the Academy of Korean Studies in 1979.

Kang Sŏkhŭi

**Kang Sehwang** (1713-1791)
Kang Sehwang is a representative literary man, painter and critic of the Choson period. His family’s ancestral home is in Chinju and his courtesy name was Kwangji. Kang also had many pen names including Ch’omjae, Sanhyangjae, Pagam, Ùisangja, Kyŏnam, Nojuk, P’yoam and Haesanjŏng among others. He was born in Seoul, the youngest of ten siblings and he received much of his education under the affectionate tutelage of his father and his elder sister’s husband. His wife’s brother Yu Kyŏngjong, and friends such as Hŏ P’il and Yi Subong were his closest companions, while other acquaintances included Yi Ik, Shim Sajŏng and Kang Hŭiŏn. Kang’s grave is located in Toha Village of North Ch’ungch’ŏng Province and an annotated collection of his literary works was published by the Academy of Korean Studies in 1979.

Kanggang suwŏllaes

[Custums and Traditions]

Kanggye

Kanggye is located on the Tongno River in the area previously known as North P’yŏngan Province and has a population of 217,000 (1986). Serving as the capital of Chagang Province, an administrative region created in 1949, the city is comprised of the townships of Öroe, Kokha, Chongsŏ, Chongnam, Kongbuk, Kanggye and Tongmun.

As a recently formed industrial city, Kanggye manufactures electronics, machinery and military supplies. In addition, the city has a pencil-making factory and a winery. The Manyŏp’o and Kanggye railways link the area with other cities in the region, and of roads connects the area with Hŭich’ŏn and Changgang County. As well as being an industrial city, Kanggye serves as the educational centre for the region, with Kanggye Industrial College, Kanggye Educational College and Kanggye Medical College.

Rice is cultivated in the low areas on the banks of the Tongno River and Nam Stream; but most of the city’s agriculture is devoted to potato, legumes, and grains With over 80 per cent of the city’s environs covered by forest, the area also produces timber, firewood, charcoal, pine nut, mushroom, edible fern, and wild walnut.
There are several historical sites in the area. Pavilions include Kŏyŏnjŏng (built in 1890 by Yi Yongik), Mangmijŏng and Inp'ungnu. Mangmijŏng sits on a cliff overlooking the Tongno River, while Inp'ungnu is sited on a bluff where the Tongno River and Puk Stream meet. The Kanggye Fortress is nearby.

Kangwha County

Administratively part of the Inch'ŏn Metropolitan Area, Kangwha County is comprised of 24 islands totalling 358 square kilometres and has a population slightly under 100,000 (1994). The main island of Kanghwa accounts for 75 per cent of the county’s territory. Several low mountains rise on the Kanghwa Island, including Mt. Mani (469m), Mt. Hyŏlgu (466m), Mt. Chin’gang (443m), Mt. Pyŏllip (400m) and Mt. Kilsang (336m). The county was once connected with the mainland, but became islands as a result of continuous erosion by the sea. Since 1970, the county has been linked to the mainland by Kimp’o Bridge.

Originally, Kanghwa Island primarily consisted of mountainous terrain, but extensive reclamation projects have created level areas suitable for rice cultivation. In addition to rice, dry field crops such as barley, beans, potatoes and lettuce are grown in the region. Since the Korean War when many ginseng farmers from nearby Kaesŏng moved here, the area has produced ginseng famous for its fine quality. In addition, local farmers grow a special variety of radish called sunmu which has reddish skin on its upper section. As for specialty products, the area produces colourful sedge mats known as hwamunsŏk (flower-pattern mats) which are sold in a local market every five days. During the Chosŏn period, both sunmu and hwamunsŏk were given in tribute to the king. Fishing also makes an important contribution to the local economy. Boats operating out of the island’s small ports bring in catches of sea bream, croakers, Spanish mackerel, yellow corbinas and shrimp.

Situated in close proximity to Seoul, the county attracts a large number of tourists who come to witness the area’s scenic beauty and vast array of historical sites. There are several hiking courses here. Mt. Mani (See Mani Mountain) is popular since it offers a panoramic view of the surrounding area. On top of the mountain, there is an altar dedicated to Tan’ gun, the mythological founder of Korea.

The area’s historical sites range from the prehistoric era to the late nineteenth century. A dolmen in Hajôm Township provides evidence of the island’s prehistory. The largest megalith in all of Korea, the dolmen is 2.6 metres high and has a capstone 7.1 metres long and 5.5 metres wide.

There are also several Buddhist temples on the island. In Kilsang Township, one finds Chŏndung Temple. According to legend, the stone fortress that surrounds the temple grounds was built in one day by Tan’gun’s three sons. The temple’s Main Buddha Hall, Yaksa (Medicine Buddha) Hall and large bronze bell have been designated Treasures No. 178, No. 179 and No. 393 respectively. Cast in 1097 in China, the bronze bell is a good example of Northern Sung style bells. On Sŏngmo Island, a seventh century carving in relief of a Buddha looks over Pomun Temple. About ten minutes by boat from Kanghwa Island, this picturesque temple receives large numbers of visitors throughout the year.

In addition to Buddhist sites, many celadon and punch’ŏng kiln sites have been discovered around the island, especially in the Hajôm and Hwado Townships. These kilns indicate that regional potters played an important role in the development of celadon and punch’ŏng pottery styles.

Many sites on the island are associated with the invasions and foreign intervention that Korea has had to deal with throughout its history. When the Mongols launched their first invasion of the peninsula in 1231, the Koryŏ court fled to the island, taking advantage of
the Mongols’ fear of the sea. The court selected the island since it was situated in close proximity with the capital Kaesŏng and was strategically well placed, offering ready access to the Yesŏng, Imjin and Han Rivers. During the 39 years that the court stayed on the island, it built various stone fortifications including the one on Mt. Munsu, remnants of which can still be seen today. From 1236 to 1251, a wood block edition of the Buddhist canon was carved in order to replace the one burnt by the Mongols in 1231. This massive work (National Treasure No. 32), consisting of 80,000 printing blocks, can now be seen at Haein Temple.

During the Manchurian Invasion of 1636, the island was again used as a refuge. At this time, the Chosŏn court built stone fortifications and cannon batteries to reinforce the island’s natural defences. Legend has it that when the Manchu soldiers swarmed through the South Gate after a long siege, Kim Sangyong gave his life when he blew up the gunpowder stored in the gate’s roof. His memorial tablet can now be found near the city bell (Treasure No. 11). This bell was cast during the reign of King Sukchong (1674-1720). When the French attacked and burned the city in 1866, they attempted to steal this 3,864 kilogram bell, but finding it too heavy, abandoned it at the edge of the city. In 1876, Japan sent a battleship called the Unyŏ to the island on the pretext of surveying sea routes, but was fired upon and thus forced to withdraw. The ‘Unyŏ incident’ resulted in the signing of an unequal Kanghwa Treaty with Japan in 1876.

There are several old buildings on the island. The Kanghwa Hyanggyo (county public school) was originally founded in 1127. It was moved several times before being reconstructed at its present location in Kwanč’ŏng Village. The Episcopal Church on the island is one of the oldest churches in Korea. This interesting church, built here in 1900, incorporates Daoist, Buddhist and Confucian elements into its design. A bodhi tree (a Buddhist symbol) was planted in the southwestern corner of the compound at the time of the church’s dedication.

**Kanghwa-do choyak, 1876 (see Treaty of Kanghwa, 1876)**

**Kangjin County**

Situated in the southern part of South Chŏlla Province, Kangjin County includes the town of Kangjin and the townships of Kundong, Toam, Taegu, Maryŏng, Pyŏngyŏng, Sŏngjŏn, Shinjŏn, Omch’ŏn, Chakch’ŏn and Ch’illyang. The county occupies 460.56 sq. k.ms. and 1986 statistics give a population of 78,357. The tail-end of the Sobaek and Noryŏng Mountain Ranges runs through the north, west and eastern areas of the county with Kangjin Bay to the south. Mt. Wŏlch’ul (809m), the county’s highest peak, rises in the northwest.

About 31 per cent of the county is arable land. Rice, the area’s principal crop, is grown along the Kum and T’amjin Rivers. Pear and grape are also grown in commercial quantities. Kangjin strawberries, said to be superior to those of many other areas, command a high price in provincial markets. Fishing boats operating out of Kangjin Bay bring in catches of anchovy, eel and shellfish, and laver is gathered along the shoreline. Ch’illyang Township has a number of cockle-farms. In Ponghwang Village, the 30-hectare cockle farm produces almost two tonnes of cockles daily, which are processed at the site’s refrigeration plant and then transported to both domestic and foreign markets. Mining/quarrying in the county consists of silica and clay excavation.

With an interesting combination of ocean and mountain scenery, the county offers a number of tourist attractions. On the southern slopes of Mt. Wŏlch’ul in Sŏngjŏn Township’s Wŏllam Village, is Kŭmnŭng Kyŏngp’odae, a scenic area that includes waterfalls, sparkling streams and rock-pools of crystal-clear water. The name ‘Kŭmnŭng’ comes from one of the old names for Kangjin County.
The county contains a number of important historical sites. In Taegu Township’s Sadang Village, excavations have revealed twelfth c. kilns and in nearby Yongun Village, remains of kilns from the tenth-eleventh c. have been found. The latter site is significant since finds at the site provide proof that Korean celadon was directly influenced by the celadon of Tang China.

In Sŏngjŏn Township’s Wŏrha Village on the southeastern slopes of Mt. Wŏlch’ul stands Muwi Temple, a branch of Taehung Temple. When the temple was founded by Wŏnhyo, it was called Kwantum Temple, and its name was changed to Karok Temple when it was reconstructed by Tosŏn in 875. After its third reconstruction by Sŏn’gak in 946, it was known as Pangok Temple. Its present name comes from T’ae’gam’s reconstruction in 1550. The temple houses a number of artefacts including a stele commemorating Grand Master Sŏn’gak (Treasure No. 507) and a standing Buddha figure thought to date from late Koryŏ. In front of this stone statue there is a stupa set up by Tosŏn in 875. The stone structure is said to hold the sarira from Sakyamuni Buddha. In addition, within the temple complex stands Kŭngnakjŏn (Paradise Hall), which has been designated National Treasure No. 13.

In Toam Township just east of Highway 18 stands Paengnyŏn Temple. The area around the temple is famous as the place where the distinguished shirhak philosopher Chŏng Yagyŏng (styled Tasan, 1762-1836) lived in exile. Here, on Mt. Mandŏk, is Tasan Ch’odang, the old house where Tasan lived for more than ten years from 1808.

Kangnŏng

Situated on the east coast of Kangwŏn Province, Kangnŏng is comprised of the town of Chumunjin, and the townships of Kangdong, Kujŏng, Sach’on, Sŏngsan, Okkye, Yŏn’gok and Wangsan. With the Yŏngdŏng Expressway and Tonghae Expressway passing through the city, and a railway line and domestic airport, Kangnŏng serves as a regional transportation hub. The area’s farmers produce rice, potatoes, beans, barley, com and persimmons. Less than one per cent of the population is employed in the fishing industry. In the winter, commercial fishing boats catch cod and walleye pollack; in the summer, warm current marine life such as cuttlefish are caught.

Kangnŏng is best known as a popular tourist destination. In the summer, crowds of tourists come to enjoy Kyŏngp’odae Beach. The area also has a number of annual festivals. On the fifth day of the fifth lunar month, the Tano Festival (Important Intangible Cultural Relic No. 13) is held. This festival was the most important yearly celebration during Koryŏ times, but is now almost exclusively associated with the Kangnŏng area. The entire festival takes about fifty days, beginning with the brewing of the sacred wine to be used in the rite (begun on the twentieth day of the third lunar month) and ending with the burning of the ritual tree (sixth day of the fifth lunar month). Most of the festivities take place beginning from the first of the fifth lunar month. At this time, the Tano kut (shaman ritual) is performed and traditional contests such as wrestling, tug-of-war, and yut (a Korean stick throwing game) are held.

Kangnŏng has a large number of important historical sites and relics, including comb-pattern pottery from the Neolithic Age. In Ch’odang-dong, plain style pottery from the Bronze Age has also been unearthed. Dolmen as well as early stone tools have also been discovered here as well.

There are also a great number of Buddhist relics in the area. Two pairs of ancient stone banner pole supports have been found in the area, one in Taech’ŏng Village (Treasure No. 82) and one in Sumun Village (Treasure No. 83). At the Shinbok Temple site, there is a seated stone Buddha (Treasure No. 84) and a three-storey stone pagoda (Treasure No. 87).
At the Hansong Temple site, there is another seated stone Buddha (Treasure No. 81), but the statue's head and right arm have unfortunately been broken off.

The city also contains a number of important historical buildings. Next to Kyôngp’o Lake, there is the pavilion known as Kyôngp’o-daе (Kanwón Province Tangible Cultural Asset No. 6) and in Unjông-dong, one finds Haeun-jông (Sea and Clouds Pavilion, Treasure No. 183), a small complex built in 1530 when Shim On’gwang served as Kangwón Province’s governor. In Nam’gok-dong, there is Hwangsan-sa (Kangwón Province Tangible Cultural Asset No. 58). Built in 1936, this shrine commemorates the Kangnung Ch’oe family. There are a number of other important buildings and pavilions in the area, including the extensive Sŏng’yo-jang complex and the Kangnung Guest House Gate (National Treasure No. 51), an extant building from the Koryó period.

In both the past and present, Kangnung has been a regional educational centre. In the centre of the city next to the train station, there is the Kangnung Hyanggyo (Treasure No. 99). This Confucian school is believed to have originally been founded in the late Koryó period. In modern times, Kangnung National University has served as the area’s largest school of higher education, teaching over 1,500 students and in Naegok-dong, there is Kwandong University.

**Kangnung National University**

Kangnung National University (Kangnung Taehakkyo) is situated in Kangnung in Kangwón Province. The university was preceded by Kangnung Sabôm Hakkyo, a teachers’ college which was in being from 1946 to 1963. In 1969, Kangnung Kyoyuk Taehak was founded with Yu Sŏngnyŏl as its first president. In 1978, the school was reorganised as the junior college Kangnung Ch’o’gup Taehak and in the following year, it became the four-year Kangnung College (Kangnung Taehak) with Kang Yŏngsŏn as its president. In 1983, the campus was moved to its present location in Chibyon-dong. In the ensuing years, the college’s undergraduate curriculum was expanded and a post-graduate program instituted.

The university now consists of the Colleges of Arts & Physical Education; Dentistry; Engineering; Humanities; Life Science; and Social Science. For post-graduate studies, there is the Graduate School, and the Graduate Schools of Education; Industrial Technology; and Management & Policy Science.

**Kangsong Art Museum**

The Kangsong Art Museum (Kangsong Misulgwan) was established by Chon Hyong Pil, a private art collector, in 1938. The museum’s collection contains approximately twelve-thousand items, with over ten-thousand books, five-hundred paintings and drawings, and two-hundred ceramic works. National treasures in the collection include two gilt-bronze Buddhist figures, Hunmin ch’ôngum (Correct Sounds for the Instruction of the Korean People).

**Kangweon National University**

Kangweon National University (Kangwón National University) is situated in Ch’unch’ón in Kangwón Province. Founded as Kangwón Torip Ch’unch’ón Nonggwa Taehak in June 1947, the name was changed to Kangwón Torip Ch’unch’ón Nonggwá Taehak in December 1951. In 1953, it became a national college, and underwent a further name change to Kungnip (National) Nonggwá Taehak. A graduate school was established in 1968, and in 1970 there was a merger with the private college Ch’unch’ón Taehak. It then became Kangweon College (Kangwón Taehak). In 1978, the college was given university status. At that time it consisted of four colleges, with Ham Insŏp as the first president.
In the years that followed, the university continued to expand. It now consists of thirteen colleges: the Colleges of Agriculture & Life Sciences; Animal Sciences; Arts; Business Administration; Education; Engineering; Forest Sciences; Humanities; Law; Medicine; Natural Sciences; Pharmacology; and Social Sciences. For post-graduate studies, there is the Graduate School as well as the Graduate Schools of Business & Public Administration; Education; Industry; and Information Sciences.

Kangwŏn Province

Overview
Province located in the east-central part of the Korean Peninsula, bounded to the north by South Hamgyŏng and Hwanghae provinces, to the west by Kyŏnggi Province, to the south by North Ch'ungch'ŏng and North Kyŏngsang Provinces and to the west by the East Sea (Sea of Japan). The division of the peninsula in the aftermath of the Korean War (1950-53) left the province divided into two sections, the northern third and the southern two-thirds administered by the North and South Korean governments respectively. Although the largest province in South Korea, accounting for almost one-fifth of the total land area, Kangwŏn Province has the lowest population density in the nation. Part of Yemaek territory in ancient times, the area occupied by present-day Kangwŏn Province became a vassal state of the Koguryŏ Kingdom during the reign of T'aejo, and was later annexed during the reign of Kwanggaet'o. Incorporated into Shilla territory in 551AD, this area came under the administration of the Later Koguryŏ during its brief existence in the early tenth century before becoming part of the Koryŏ Kingdom in 918AD.

Geography and Climate
The topography of Kangwŏn Province is dominated by the T'aebaek Range which forms the backbone of the Korean Peninsula, following the East Sea coastline in a roughly northwest-southeasterly direction. With an average elevation of approximately 1,000 meters (rising to 1,708m at Mount Sŏrak), this range has constituted a major obstacle to transportation between the narrow coastal plain in the east and the rugged hinterland which occupies the bulk of the western part of the province. The majority of this hinterland falls within the catchment areas of the North and South Han Rivers and their tributaries, and although steep, winding gullies formed by these waterways pose difficulties for transportation in many areas, regional development has been aided by the construction of a series of dams along the North Han in the vicinities of Hwach'ŏn and Ch'ungh'ŏn. The northeastern corner of the province lies within the catchment area of the Imjin River, however Ch'ŏlhwŏn is the only major center in this region. Gentler terrain along the western borders of the province has permitted the development of regional centers at Ch'ungh'ŏn, Wŏnju and Hongch'ŏn. The East Sea coastline is relatively smooth, although local topography ranges from rocky headlands south of the port city of Kangni:ing to small alluvial plains and lagoons at various points along the northern coast.

There are significant differences in seasonal climatic conditions between the coastal plain and the mountainous hinterland. Cool, humid northeasterly winds keep temperatures relatively low throughout coastal districts during early summer, while the same winds become warmer and drier as they pass over the T'aebaek Range and further inland. Conversely, temperatures plummet in inland districts during the winter months due to the effects of prevailing northerly winds, while coastal districts experience comparatively mild conditions due to the blocking effect of this range. Almost half of annual precipitation is recorded during the two months of July and August, and upper regions of the Imjin and North Han River catchment areas rank among the wettest parts of the peninsula with average annual precipitation of 1,300mm. Coastal districts and inland areas adjoining the T'aebaek Range typically experience heavy snowfall, which is generally concentrated during the months of February and March.
Agriculture and Industry
Agriculture, forestry and fishing have traditionally played a dominant role in the provincial economy, and the industrial sector is comparatively small, however prospects for future development in the secondary and tertiary sectors are bright due to the existence of numerous mineral deposits, an abundance of natural resources, and a wide variety of tourist attractions. The province's rugged terrain imposes major limitations on agricultural activities, and the proportion of cultivated land (10%) is the lowest in South Korea. Rice cultivation is largely restricted to terraced paddies, and rice production is second-lowest in the nation following Cheju Province. However, although the province accounts for only 5% of national crop production, Kangwŏn produces approximately half of the nation's cereals, and major crops include potatoes, corn and millet. In addition, flax, tobacco, ginseng, mountain vegetables, hops and tobacco are among specialized crops which combine to make the province's agricultural sector the most varied in the country. Approximately 80% of the province's land area is forested, and forestry therefore constitutes an important element of the local economy. Reforestation projects are gradually restoring the province's resources following severe depletion during the period of Japanese colonial rule and in the turmoil of the Korean War (1950-53), and forest products now include timber, pine nuts, acorns, mushrooms, resin, oriental oak bark, edible mountain herbs and medicinal herbs. Although the East Sea coastline is relatively unindented with few natural ports, the nearby convergence of cold northern and warm eastern currents creates rich fishing grounds. Annual catches of Alaska pollack and squid together account for half of the nation's total annual fish catch, while other common varieties include codfish, pike and mackerel. Seaweed production also constitutes an important element of the local coastal economy. The nation's richest mineral deposits are concentrated in the Taebaek Range in the southern part of the province, and include anthracite coal, iron ore, tungsten, graphite and limestone. The development of a coastal industrial zone in the vicinity of Samch'ŏk and Tonghae producing cement, slate, carbide and lime has been greatly facilitated by easy access to mineral deposits and transportation links, while electricity production in the province has been greatly aided by the ready availability of coal and the construction of a series of dams throughout the upper Han catchment area. Further industrial zones have been developed at Wŏnju, Ch'unch'ŏn and Kangnung, while the principal ports are also home to small-scale seafood processing plants.

Tourism
An abundance of natural beauty makes Kangwŏn Province a popular tourist destination, and major attractions include Mount Sŏrak and Mount Odae National Parks, Wŏlch'ŏng Temple, Yongp'yŏng and Chinhuryŏng skifields, beach resorts along the East Sea coast (notably Kyŏngp'odae located near Kangnung), in addition to Mount Ch'iaek and the East Sea Provincial Parks. Traditionally ranked among the nation's most beautiful peaks, Mount Kŭmgang is now located north of the Demilitarized Zone dividing North and South Korea.

General Information
Area: 16 784 square kilometers; population: 1 421 000 (1995 est.); provincial headquarters: Ch'unch'ŏn. Other major centers include Wŏnju, Kangnung and Taebaek.

Kap'yŏng County
Situated in Kyŏnggi Province, Kap'yŏng County is comprised of the town of Kap'yŏng and the townships of Puk, Sŏrak and Oesŏ. The Kwangju Mountain Range runs through the county from the north to the southwest, while the northern branch of the Han River flows past the town of Kap'yŏng on its way to Seoul. Mt. Hwaak (1 468m), Kyŏnggi Province's highest peak rises to the north along with Úng Peak (1 436m) and Mt. Myŏngji (1 267m). As a result of the area's rugged topography, it has a relatively low population of around 80 000 (1993). Both Highway 46 and a railway line connect the
county with Seoul to the southeast and Ch’unch’ŏn to the east.

Less than 10% per cent of the land is arable and even this land does not give high yields. In addition to rice and vegetables, a number of specialty crops such as pinenuts, shiitake mushrooms, ginseng, jujube, aralia shoots, balloonflower roots and tŏdŏk (*Codonopsis lanceolata*) are grown here. The area’s rivers and lakes also serve as an important source of income. Located on the road from Taesŏng Village to Sŏrak Township, the Ch’ŏngp’yŏng Dam houses the second hydro-electric plant to be built in Korea. The plant is an important energy source for Seoul. Ch’ŏngp’yŏng Dam creates Ch’ŏngp’yŏng Lake, which is used for water-skiing and boating. Several of Korea’s largest fish farms are located here.

With scenic mountains and rivers and easy access to Seoul, tourism is the county’s most important industry. In particular, the area surrounding Lake Ch’ŏngp’yŏng, designated as a National Tourist Compound in 1969, has been developed as a popular resort with bungalows, vacation homes and swimming pools. In the summer, large groups of students take the train here to camp out by the river. The area’s specialty dish is *maeun’t’ang*, a spicy stew cooked with carp or mandarin fish from the lake.

At the upper reaches of Chojong Stream, one finds Mt. Unak. With picturesque gorges and magnificent rock formations, the area is known as the Diamond Mountains of Kyŏnggi Province. Part way up the mountain lies Hyŏndŭng Temple, an ancient monastery founded during the Shilla period in honour of the Indian monk Maraharni. At the temple, there is a three-storey stone pagoda (Kyŏnggi Province Tangible Cultural Asset No. 63) from the Koryŏ period, which houses the remains of Chinul (National Master Pojo, 1158-1210). On the temple grounds, one also finds stupas commemorating Grand Master Hamhŏ and Pugak. The temple’s large bronze bell, cast in 1619, is an important source of information on bells of the Chosŏn period.

**Kapshin chŏngbyŏn** (coup d’Etat of 1884) [Communications; Japan and Korea]

**Kariwang Mountain**

Mt. Kariwang is situated in southern Kangwŏn Province, between Chŏngsŏng, Sugam Village and P’yonch’ang County’s Changjon Village. At 1,560 metres, the rounded peak of Mt. Kariwang rises above Mt. Ch’unghang (1,377 metres) to the west, Mt. Paeksŏk to the north-west and Mt. Ch’ŏng’ok to the south-west. Odae Stream flows past the northern slopes of the mountain before joining with the Choyang River at Namjŏn Village.

The mountain is believed to be named after a ‘King Kari’ (*Kari-wang*) who supposedly ruled over the ancient ‘Maek people.’ According to some scholars, the Maek people lived along the middle reaches of the Yalu. According to the legend, when the Maek were attacked, King Kari fled to Mt. Kariwang and established a fortress, traces of which can still be seen in one of the mountain’s northern valleys.

Although Mt. Kariwang does not have any famous temples or tourist sites, its forests and valleys have a serene beauty, as well as a relatively large amount of wildlife. At different seasons of the year, herb gatherers frequent the area. Bee keepers also come to the mountain. The abundant wild-flowers that grow on the slopes are ideally suited for the cultivation of high-quality honey.

**Kasa** [Literature; Music]

**Kasa Island**

Located 20.5 km. northwest of Hajo Island, Kasa Island is part of Chodo Township in
South Cholla Province’s Chindo County. The island covers a total area of 5.64 sq. kms. and has an 18.5-km.-long coastline. The northwest coast consists of steep cliffs, while the southwest has sandy beaches. An embankment has been built across a bay in the northeast to create extensive salt flats.

The islanders’ employment is mainly in agriculture, but this is often supplemented by income from fishing. Only 0.15 sq k.ms. of land is used for rice cultivation, whereas 1.08 sq. kms. grows dry-field crops such as sweet potato, barley, bean, garlic and rape. Local marine products include anchovy, eel and seaweed. For transportation, residents rely on ferries that regularly stop at the two landings on the east coast. Educational facilities are limited to Kasa Primary School located in the centre of the island next to Kasa Reservoir. At the southern end of the island there is a mine and a lighthouse.

Kashiri (Would you go) [Literature]

Kaya Mountain

Mt. Kaya, also known as Mt. Udu (Ox-head), is situated in Kaya-san National Park west of Taegu, on the border of North and South Kyongsang Province. The mountain’s highest point, Sangwang Peak (1,430 metres) is surrounded by numerous other peaks and ridges that reach around 1,000 metres. Nestled amidst the rugged slopes lies Haein Temple, one of the three main monastic training centers in Korea. The temple is famous for its thirteenth century copy of the Tripitaka Koreana, a set of woodblocks for printing the Buddhist canon. Numerous hermitages are found within walking distance of Haein Temple. On the Ch’ain Village route to the summit, there is also a nine-meter high, ninth-century carving of a Buddha on the face of a cliff.

With numerous maples and oaks, the mountain is particularly beautiful in autumn when the leaves change colour. Over 300 varieties of trees, including various pines and firs, make up the dense forest leading up to the 1,000 meter level. Above this level, there is a diverse assortment of shrubs and bushes. Small springs flow around the large granite boulders found throughout the area, descending into streams running through the mountain valleys.

The most famous valley in the park is called Hongnyu-dong. Munung Bridge, which once lay at the valley entrance, has been eulogised in Korean poetry for its great beauty. The entire area has important links to traditional Korean literature. Poets and writers have left their names inscribed on many of the large boulders that line the valleys. The area even has connections with Ch’oe Ch’iwon, one of Korea’s greatest poets and writers. Ch’oe, who lived during the late Shilla Period, was disgusted with the political climate of the time. Wandering throughout the mountains of Korea, Ch’oe is last mentioned residing on Mt. Kaya.

There are two theories concerning the mountain’s name. Some believe that it comes from the ancient Kaya Kingdom which existed in the area until the first century C.E.. After Tae Kaya fell to Shilla, the area surrounding the mountain was called Tae Kaya County, and the mountain, as the most representative peak in the area, was called ‘Mt. Kaya.’ Others claim that the mountain was considered to be a sacred place where the mountain spirit (sanshin) was worshipped. Later, with the introduction of Buddhism, the mountain took on the name ‘Kaya’ from the Sanskrit word ‘Buddha Gaya’ -- the holy site where the Buddha preached his most important sermons.

Kaya states, The (see History of Korea)
Kyemyung University

Kyemyung University (Kyemyŏng Taehakkyo) is a private university with two sites, both situated in Taegu. The original school was founded by the Presbyterian Church in March 1954 as Kyemyŏng Kidok Hakkwan (Kyemyung Christian School). In 1956 the school became Kyemyŏng Kidok Taehak (Kyemyung Christian College). The name was changed to Kyemyŏng Taehak (Kyemyung College) in 1965. In 1966, a graduate school was created and in 1973, a doctoral program commenced. The college became a university with Shin Ilhŭi as its first president, in 1978.

At the school’s Shindang-dong campus are the Graduate School and the Graduate Schools of Arts; Business Administration; Education; Industrial Design; Policy Development; and Women's Studies, as well as the Colleges of Business Administration; Fine Arts; Home Economics; Medicine; Music; the Teacher’s College; and the Evening College. The Songso Campus in Taemyŏng-dong has the Graduate Schools of Industrial Sports; Industrial Technology; International Studies; and Pastoral Theology, as well as the Colleges of Engineering; Environmental Science and Technology; Humanities; International Studies and Commerce; Law; Natural Science; Physical Education and Social Sciences.

The university’s newspaper Kyedae hakpo (Kyemyung University Gazette) is published in Korean once a semester.

Kido-wŏn

Kijang County

Situated in South Kyŏngsang Province, Kijang County is a coastal region surrounded by Ulsan to the north, Yangsan to the west and Pusan to the south. In the centre of the county, run-off from Mt. Ch’olma (605 metres) and Mt. Yongch’ŏn (543 metres) forms the Chwagwang Stream, which runs past Panggok Village into the East Sea.

Fishing makes a significant contribution to the local economy. Boats operating out of Kijang or Changan catch anchovies and other fish varieties. Kijang seaweed, with its thick, wide leaves, is famous throughout the nation for its delicious flavour and quality. In addition to fishing, the area has a large number of factories and service industries. To meet the needs of these industries and the expanding population, a nuclear power plant was built in the northern area of the county in 1977.

In close proximity to the large population centre of Pusan, the county also has an important tourist industry. During the summer, crowds of visitors come to Ilgwang Beach. Other popular destinations include Changan Temple, Paegyon Hermitage, Kwanŭm Temple and the Kijang Hyanggyo.

Kil Chae (1353-1419)

Kil Chae was a scholar of the late Koryŏ and early Chosŏn periods. His family’s ancestral home is in Haep’yŏng, his courtesy name was Chaebu, and his pen names Yaŭn and Kŭmosanin. At eleven years of age, Kil went to Mt. Naengsan where he learned Chinese characters at Tori Temple. At eighteen he went to Kaegyŏng, the capital of Koryŏ, where he learned the neo-Confucian ideology from such masters as Yi Saek (1328-1396), Chŏng Mongju (1337-1392) and Kwŏn Kŭn (1352-1409). In 1374 he entered the Kukchagam (National College) and first passed the Classics Licentiate Examination (seangwŏn shi) and then in 1383 he passed the samagam shi. In 1387 Kil was appointed First Proctor (Hakchŏng) at the Kukchagam and then in the following year he was promoted to sunyu
Kil is an important scholar in the lineage of neo-Confucianism in Korea. He was a student of Ch'ong Mongju and passed his knowledge on to disciples such as Kim Sukcha who later passed on these teachings to others. Therefore, in the assimilation and adaptation of the neo-Confucian ideology to Korea, Kil played a very important role. After his death at age sixty-seven, Kil was honoured by his disciples with the establishment of the Songgok Sowon (Private Academy), the Kumo Sowon and the Osan Sowon. He is also remembered as one of the three great neo-Confucianists of Koryŏ along with Ch'ong Mongju and Yi Saek. His literary works, *Yaun chip* (Collected Works of Yaun), *Yaun sok chip* (Supplementa to the Collected Works of Yaun) and *Yaun دونهاeng sůhyu* (The Teachings and Deeds of Yaun) are all extant.

**Kim Ch’angjip** (1648-1722)

Kim Ch’angjip was a scholar-official of the Chosŏn period. His family’s ancestral home was Andong, his courtesy name was Yŏsŏng and his pen name Mongwa. He was the great grandson of Kim Sanghŏn who was the Second State Councillor (chwa ŭijong, 1A rank) and the son of Kim Suhang who held the position of Chief State Councillor (yŏngŭijong, 1A rank), and his older brothers were Ch’anghyŏp and Ch’anghup. In 1672 Kim passed the Literary Licentiate Examination (*chinsa shi*), in 1681 he was appointed as instructor for the palace eunuchs (*naeshi kyogwan*) and in 1684 while serving as Assistant Section Chief (*chwarang*) of the Board of Works (*Kongjo*) he passed the Garden The Final Civil Service Examination in the Palace (*chŏngshi mun’gwa*). After this Kim held successive posts as Fourth Censor (*chŏng6n*) and as Fourth Minister (*ch’amu1*) of the Board of War (*Pyŏngjo*). In 1689 when his father was exiled to Chindo Island, Kim accompanied him and studied with him. After that Kim held various official positions, including Third Minister (*ch’amiiI*) of the Board of Rites (*Yejo*) and served as an envoy to Qing China in 1716 before being appointed as Chief State Councillor in 1717.

Kim was a key player in the factional struggles that marred the politics of the late Chosŏn period. He was a member of the Noron, or the Old Doctrine Faction that was in constant skirmishes with the Soron (Young Doctrine) for political power. In the end, Kim was exiled during one of the power shifts that frequently occurred, and retired from political life in Sŏngju. However, when King Yŏngjo (r. 1724-1776) acceded to the throne, Kim’s rank and title were restored. After Kim’s death, the Pan’gok Sŏwŏn (private academy) was established in his honour and sacrificial rites were held for him there. He was posthumously granted the name of Ch’unghŏn by King Yŏngjo. Extant writings of Kim’s include *Kukcho chagyŏng p’yŏn* and *Mongwa chip* (Collected Works of Mongwa).

**Kim Ch’ŏnt’aek**

Kim Ch’ŏnt’aek was an active *shijo* and song writer of the King Yŏngjo (r. 1724-1776) era. His courtesy names were Paekham and Isuk, and his pen name Namp’a. It is not known for certain where his family’s ancestral home was or his date of birth. However, based on historical records and the ages of his contemporaries, it is thought that he was born sometime in the late 1680s. Kim’s lineage and social status are also not known for certain, but it is thought that he was probably of the middle class and entered the service of the government as a singer or musician at an early age.
Kim is well remembered for his prolific composing of shijo, many of which have been transmitted to the present time. In the 'Chin pon' of the Ch'ônggu yôngôn (Enduring Poetry of Green Hills) there are thirty of his works, and in the 'Chussi pon' of Haedong kayo (Songs of Korea) there are fifty-seven of his poems. In the various versions of Haedong kayo Kim is the second most often represented poet after Kim Sujang (1690-?). Most of Kim's shijo praise the beauty and splendour of nature and are valued for their excellence in the use of language and imagery.

Kim Chebong

Kim Chaegyu

Kim Chiha (1941-)

Kim Chiha is a writer who was born in Mokp'o of South Cholla Province and educated at Seoul National University. Kim's given name is Yongil. He has received numerous literary awards including the Lotus Special Award of the Asian and African Writers in 1975, the Great Poet Award by Poetry International in 1981, the Bruno Chrsiki Human Rights Award in 1981 and the Isan Literature Prize in 1993. Kim made his début in the magazine Shirin (Poets) with the publication of 'Seoul Street'. Kim was at the vanguard of the democracy movements in Korea during the 1970s and this led to his arrest in 1970 after the publication of an anti-government work, 'Ojok' ('Five Traitors') in the literary magazine Sasanggye. He was released after one month but did not abandon his participation in movements that opposed the government. His subsequent anti-government activities led to his arrest under the anti-Communism laws of Korea and to his ensuing life prison sentence. He was the subject of an international movement for his release, and eventually in 1980 his sentence was suspended.

Kim is known not only for his political activities, but also for his excellent poetry and essays. His poetry collections include Hwangt'o (Yellow Earth, 1970), T'anun mongmarumiro (With a Burning Thirst, 1982), and Pyölpat'ül urörümyǒ (Looking up at the Field of Stars, 1989). He has also published collections of his essays including Pap (Meal, 1984), T'anun mongmarum esó scangmyǒng úi padaro (Towards the Sea of life With a Burning Throat, 1991) and Saengmyǒng (Life, 1992). Kim has also written a play, Nap'olleong K'on'ya (Napoleon Cognac, 1972).

Bibliography

Kim Chŏnghŭi (1786-1856)

Kim Chŏnghŭi was a painter, calligrapher, literary man and a shirhak (practical learning) scholar of the late Chosŏn period. His family's ancestral home is in Kyŏnji and his courtesy name was Wŏnch'ŭn. Kim had many pen names including Ch'usa, Wandang, Yedang, Shiam, Nogwa, Nongjangin, and Ch'ŏnch'ukko sonsaeng among others. Kim is best remembered as not only one of the most talented calligraphers in Korean history, but also as a scholar of epigraphy and an innovator in a new calligraphy style of the late Chosŏn period. Kim's ancestors had long held powerful positions in the Chosŏn government and he entered government service after passing the civil service examination (mungwa) in 1819. Kim held positions such as Secret Inspector (amhaeng ᄆ_socket), Third Minister (ch'amŭn) of the Board of Rites (Yejo), and various positions in the Crown
Prince's Tutorial Office (Seja Shigsangwŏn) including First Tutor (podŏk). Kim had several falls from power as he was the subject of various scandals and purges related to the factional politics of the late Chosŏn period, most notably the period from 1840 to 1848 when he was exiled to Cheju Island. However, he was resilient and was reinstated only to be again involved in a political scandal and exiled to Hamgyŏng Province. After two years he was reinstated but chose to retire to private life in Kwach'on where he could concentrate on literary and other pursuits.

From an early age Kim was marked as a prodigy and he was given many opportunities for study. One major moment in Kim's life came when he was twenty-four and accompanied his father on an embassy to Qing China. At this time Kim came into contact with the great Confucian scholars of the day in China such as Weng Fanggang and Ruan Yuan. In particular under Weng's tutelage, Kim was introduced to the Confucian classics, epigraphy, history, phonology, geography and many other fields of scholarship. Among all of these areas, Kim took particular interest in epigraphy and ardently researched and pursued this discipline. In addition his adherence to the shirhak ideology resulted in new theoretical foundations for scholarship in epigraphy in Korea. His work Yedang kŭmsŏk kwaan rok, which was an analysis of ancient Korean inscriptions, was the first of its kind in Korea.

In the spheres of painting and calligraphy, Kim is also renowned as a visionary and innovator who had lasting impact in both realms. In calligraphy he developed his own style, ch'usach'ě, which he perfected while exiled to Cheju Island. By studying the works of past great calligraphers, Kim was able to fuse their styles and create an unique style that exploded with a boldness of spirit. Kim's artistic excellence is also manifested in his paintings, which are the first ventures into an abstract style in Chosŏn. His most acclaimed work is Sehan to (Winter Scene) which not only is a landscape painting of Chosŏn, but also reveals an abstract portrayal of an idealised world of another dimension. Kim's works had great influence on subsequent generations of artists and are still praised today.

Kim is remembered by the present generation as a man who raised the level of art and by doing so increased the breadth of the art audience in Korea. His calligraphy style is still emulated today which reveals the strength and power of his work. Kim's literary collections are also extant such as Wandang ch'ŏktŏk (Collection of Letters by Wandang), Wandang sŏnsaeng (Master Wandang) and Wandang sŏnsaeng chŏnjip (The Complete Works of Master Wandang).

Kim Chongjik (1431-1492)

Kim Chongjik was a literatus of the early Chosŏn period. His family's ancestral home is Sŏnsan, his courtesy names were Hyogwan and Kyeon, and his pen name was Chŏmp'’iljae. Kim was born in Miryang and his father, Kim Sukcha, was the Second Assistant Master (saye) at the Sŏnggyun'gwan (National Confucian Academy). In 1453 Kim became a chinsa (literary licentiate) and in 1459 he passed the Triennial Literary Examination (shignyon mungwa). In 1453 Kim became a chinsa (literary licentiate) and in 1459 he passed the Triennial Literary Examination (shignyon mungwa). In 1462 he held positions as Reference Consultant (paksa) at the Office of Diplomatic Correspondence (Sŭngmunwŏn) and as First Diarist (ponggyo) at the Office of Royal Decrees (Yemungwan). In the following years he held various positions such as Inspector (kanch'al), Army Aide (pyŏngma pyŏngsa) in Kyŏngsang Province, Assistant Section Chief (chwarang) at the Board of Personnel (Ijo) and as the Prefect (kunsu) of Hamyang.

In 1476 Kim was appointed as Magistrate (pusa) of Sŏnsan and in 1483 he was appointed to the Royal Secretariat (Sŭngjŏngwŏn). At the Royal Secretariat he served as Fourth Royal Secretary (ch'wabu sŭngji) and then at the Board of Personnel he was nominated as Second Minister (ch'amp'an). Other positions that he held include Deputy Director (chehak) of the Office of the Special Counsellors (Hongmungwan), Deputy Director of the
Office of Royal Decrees and as Second Minister at the Board of Works (Kongjo).

Kim represents a link in the neo-Confucian literati that began with the late Koryŏ scholars Chŏng Mongju (1337-1392) and Kil Chae (1353-1419). From an early age Kim wrote a great deal including poetry and various essays, and a notable example of his work is the Tongguk yŏji sŏngnam (Augmented Survey of the Geography of Korea) that he compiled along with Shin Chongho. Kim’s devotion to scholarship is evident in the large number of dedicated disciples that studied under him including Kim Koengp'il (1434-1504), Chŏng Yŏch'ang (1450-1504) and Kim Ilson (1464-1498), who became prominent scholars in their own right. However, Kim is best remembered for being at the centre of the Purge of 1498 (muo sahwa) that was carried out under Prince Yŏnsan (r. 1494-1506) even though he had been dead for some years when this occurred. This event erupted during the compilation of the official records of the reign of King Sŏngjong (r. 1469-1494) in which Kim Ilson incorporated into the draft Kim Chongjik’s Choui chemun (Lament for the Righteous Emperor). In this work Kim had used the metaphor of mourning the death of a young Chinese emperor as a way to criticise the usurpation of the throne by King Sejo (r. 1455-1468) and his subsequent execution of his nephew, the boy King Tanjong (r. 1452-1455). When the meritorious elite discovered this inclusion, they induced Yŏnsan to order Kim Ilson and the other disciples of Kim Chongjik to be either executed or imprisoned. Kim, although he had been dead for six years, was exhumed and posthumously executed.

Kim’s literary remains include Chŏmp'ilchae chip (Collected Works of Chŏmp’ilchae) which includes not only his literary works, but also a chronology of his life and an interpretation of the events that surrounded his life and the Purge of 1498 which came after his death. Sacrificial rites were held for Kim at such sŏwŏn (private schools) as the Yerim Sŏwŏn in Miryang, the Kūmo Sŏwŏn in Sŏnsan and the Paegyŏ Sŏwŏn in Hamyang among others. Kim was also honoured with the posthumous name of Munch’ung.

Kim Chongp'il 

Kim Chŏngshik (see Kim Sowŏl)

Kim Chun’gŭn

Kim Chun’gŭn, styled Kisan, was a painter of the late Chosŏn period. Many details of Kim’s life are unknown such as the date of his birth, his family background and from whom he learned his painting skills from. While Kim was living in Pusan in 1886, he was summoned by King Kojong (r. 1863-1907) to draw sketches of Korean folk customs for the daughter of R. W. Shufledt. Kim also befriended the missionary Gale while he was in Pusan and eventually followed him to Wŏnsan and entrusted him with a painting. From this time Kim became quite close to a number of Westerners and presented them with numerous drawings and paintings that reflected the indigenous customs and practices of Korea. Of his extant works, there are over sixty sketches that he made for the Netherlands official Rhein which were shipped to Germany and are now in possession of the Hamburg Cultural Museum in Hamburg, Germany, and also those collected by P.G. von Molendorf. There are over three hundred drawings, sketches and paintings by Kim that reflect the lives of the common people at the end of the Chosŏn period. These works are a great aid in trying to understand the modes of living at this time.

Kim Dae Jung (1924 - )

The eighth president of the Republic of Korea, Kim Dae Jung (Kim Taejung) was born on Hauri Island off the Cholla coast. His family moved to the port city of Mokp’o when Kim was young and he attended school there, graduating with first-place in his high school class.
in 1943. He received his Master’s degree in Economics from Kyunghee University in 1970.

On completing high school, Kim worked for a freight company and did so well that before long he was able to form his own business with a fleet of nine small ships operating out of Mokp’o. He also served as president of the Mokp’o ilbo newspaper in 1948. With the outbreak of the Korean War in 1950, Kim left Seoul to walk to his home in Mokp’o, and was apprehended by North Korean troops, but was able to escape.

After the Korean War ended, Kim began his political career. He made several unsuccessful attempts for election to the National Assembly before being appointed as spokesman for the Democratic Party, which had come to power following the 19 April 1960 student revolt that deposed Syngman Rhee’s regime. Kim won his seat in the National Assembly in early 1961, but this was short-lived as Park Chung Hee (Pak Chônghŭi) dissolved the Assembly after seizing control of the country power in the coup d’état of May 1961. Kim was among the many opposition members arrested as a result of Park’s military junta. In 1963 when Park reinstated the Assembly, Kim was again elected as the representative from the Mokp’o district. He was re-elected in 1967 with a substantial majority and he emerged as one of the leading opposition figures to Park’s government. In 1971, he was the presidential candidate for the New Democratic Party and almost defeated Park by winning forty-five per cent of the vote. Kim had a substantial following in the Cholla region as well as in the Seoul-Kyŏnggi area. However, he suffered from the regional antagonism that divided the Cholla and Kyŏngsang areas, thus he did not perform well in the heavily populated areas of Southeastern Korea, which certainly cost him the election.

After his unsuccessful presidential campaign, Kim remained an outspoken critic of Park’s regime. This opposition to the authoritarian president almost cost him his life when he was abducted from Japan to Korea by agents of the Korean Central Intelligence Agency (KCIA), in August 1973. He was sentenced to an eight-year prison term for conspiring to overthrow the government, but was released in December 1978 because of failing health. After Park’s assassination in 1979, Kim returned to the political arena and announced his candidacy for the presidency. At this time, massive demonstrations were taking place among the supporters of Kim, Kim Young Sam (Kim Yŏngsam) and Kim Jong Pil (Kim Chongp’il), the so-called ‘three Kims.’ After the May 1980 Kwangju Uprising, which resulted in the death of hundreds of students and citizens at the hands of the ROK armed forces, Kim was arrested, tried and sentenced to death for his complicity in the incident, by the new regime of Chun Doo Hwan (Chŏn Tuhwan). His sentence was later commuted to a twenty-year gaol term, but he was released in December 1982 under an agreement that he leave Korea. He then travelled to the United States for medical treatment and to accept a fellowship at Harvard University. Kim remained in the USA until 1985, then returning to Korea and to house arrest once again.

By 1987, the ROK was undergoing a phase of liberalisation and democratisation, and at this time, Kim again entered national politics as presidential candidate. With the first true democratic presidential elections in almost two decades, the choice of the people lay between Kim Dae Jung, Kim Young Sam and the ruling party nominee, Roh Tae Woo (No T’aeu). But the two opposition leaders were unable to form a coalition and so split the vote, thereby paving the way for Roh’s victory. Roh had about thirty-seven per cent of the vote while Kim Young Sam and Kim Dae Jung received about twenty-eight and twenty-seven per cent respectively. Thus, factionalism had prevented Korea from having a true opposition-party president for the first time. Kim continued to be active in politics and served as leader of the opposition in the National Assembly, along with his rival Kim Young Sam. Prior to the 1992 presidential elections, however, Kim Young Sam merged with the ruling party in a bid to secure the presidency. Kim Dae Jung opposed him in the elections, but the combination of the support of the conservative ruling faction and Kim Young Sam’s Kyŏngsang region power base proved too great an obstacle, and so Kim Dae
Jung was defeated.

After the 1992 election, Kim retired from active politics, but maintained a powerful voice as a leading critic of President Kim Young Sam’s policies. As the country began to falter under Kim’s leadership, Kim Dae Jung again emerged as the principal opposition candidate for the 1997 presidential elections. Ironically, the ruling party saw its ranks break as the election drew near and as a result, the vote for the ruling party was split among Lee Hoi-chang and Rhee In-je, allowing Kim to win the presidency with a vote of marginally more than forty per cent. Kim Dae Jung’s success marks the first time in Korean history of an opposition candidate being elected to the nation’s highest office.

Kim’s initial tasks on being confirmed as president 25 February 1998 were daunting, the country being in the grip of its worst economic crisis since the Korean War. He formed a steering team, took personal charge of the country’s financial management as president-elect from December 1997, and worked unceasingly to put Korea on the right path for economic recovery. He extended a conciliatory hand towards the former ruling party and his past oppressors -- Chun Doo Hwan and Roh Tae Woo, arranging for both former presidents to be granted presidential pardons for their past crimes.

Bibliography

Kim Hongdo (1745-?)

Kim Hongdo was a foremost genre painter of late Chosŏn. His family’s ancestral home is in Kimhae, his courtesy name was Sanŭng, and his numerous pen names include Tanwŏn, Tan’gu, Sŏho, Komyŏn-kosa, Ch’wihwasa, and Ch’ŏpch’wiong. At twenty-nine years of age, Kim painted a portrait of King Yongjo (r. 1724-1776) and also the crown prince. He was then assigned to the Kammok kwan (Office of Horse Breeding) and began his official duties. Kim’s talent as a painter spread and in 1788 he and Kim Unghwan were sent by King Chongjo (r. 1776-1800) to Kumgang Mountain to paint landscapes. In 1791 Kim was involved with the completion of the royal portrait of Chŏngjo and was then in government service until 1795 when he retired from his official duties. His last years were plagued by illness and poverty.

Kim’s paintings are considered among the best of Chosŏn, and he was adept in landscapes. His other subjects included Daoist immortals, common folk going about their daily business, and the branches of trees. Among his best known works are Muak (Dancer and Musicians) and Ssirŏm (Wrestling), which display the festive activities of the commoners. Other acclaimed paintings are Masang ch’ŏngaeng to (Hearing an Oriole on Horseback) and Tanwŏn to (Tanwŏn’s Paintings). Kim is known as one of the three great masters of Chosŏn painting, along with An Kyŏn and Kim Chŏnghŭi (1786-1856).

Kim Hongjip (1842-1896)

Kim Hongjip was a late Chosŏn period bureaucrat and politician. His family’s ancestral home is in Kyŏngju, his given name was Koengjip, courtesy name Kyŏngnŭng, and pen names Towŏn and Yijŏnghakchae. His father, Kim Yongjak, was the Commandant (yusu) of Kaesŏng City. In 1867 he passed the literary section of the Kyŏnggwaw chŏngshi (a special government service examination held on national celebratory occasions), and in the next year he was appointed to a position in the Royal Secretariat (Sŭngjŏngwŏn). After a
few months his father died. Kim went into mourning and then in 1870 his mother died, so Kim retired from his official position and was in mourning for a total of about five years. In 1873 Kim resumed his official career and was simultaneously appointed as Reference Consultant (paksa) in the Office of Diplomatic Correspondence (Sùngmunwŏn) and as Supernumerary Third Copyist (kwŏnji pujŏngja). In 1875 he was appointed as Junior Sixth Rank Military Officer (pusagwa) among other military positions and was then appointed as County Magistrate (hyŏngam) of Hŭngyang where he won acclaim from both his superiors in the government and from the people. As a result of this, Kim was promoted to a higher position in the central government, first as Sixth Rank Military Officer (sagwa) and then in the next year as Instructor (kyosu) at the Southern School in Seoul. After this he held various positions on the Board of Taxation (Hojo), Board of Works (Kongjo), Board of War (Pyŏngjo) and the Board of Rites (Yejo). In 1879 he was appointed as First Secretary (tojŏng) of Royal House Administration (Tollyŏngbu).

In 1880 Kim embarked upon a mission to Japan as Ambassador (sushinsa) with an entourage of fifty-eight government officials in an attempt to solve the problems between the two nations concerning trade and other matters. However, no agreement could be reached. Before returning to Korea, Kim met Huang Zunxian, a counsellor to the Chinese delegation in Japan, who gave him two treatises on Korea that were to have considerable impact on Chosŏn. One of these works, entitled Chaoxian celié (A Policy For Korea) was written by Huang himself, and stressed that Korea should adopt Western institutions to strengthen herself from foreign aggression and form treaties with China, Japan and even America to keep Russian imperialism at bay. After returning to Korea, Kim was appointed as Second Minister (ch'amp'an) of the Board of Rites. Kim continued to play an important role in negotiations between Japan and Chosŏn concerning the opening of Inch'on as the third port stipulated in the 1876 Treaty of Friendship (Pyŏngja suho choyak), and eventually Inch'on was opened to foreign trade. Kim also figured prominently in the 1882 Treaty of Chemulp'o (Chemulp'o choyak) that served to open this port to foreign trade. In 1884 Kim served as Minister (p'anso) of the Board of Rites and at the same time as Supervisor (tokp'an) in the Office of Foreign Affairs (Oemu). Kim had become at this point the foremost shaper of Chosŏn foreign policy.

After the failed Coup d'État of 1884 (Kapshin Chŏngbyŏn) Kim took further control of the Chosŏn government and was appointed as Second State Councillor (chwaŭijŏng) in addition to his duties as Supervisor of the Office of Foreign Affairs. It was in these capacities that he negotiated the 1885 Treaty of Hansŏng (Hansŏng choyak) with Japan. In the next year, Kim retreated to the less demanding post of Minister-without-Portfolio (chungch'ubu). In 1887, however, Kim was again appointed as Second State Councillor but shortly resigned this post. With the outbreak of the Tonghak Rebellion in 1894 and the intervention on Korean soil by Qing, Japanese and British troops, Kim was again brought back into the Chosŏn government. Japan refused to withdraw its troops after putting down the Tonghak Rebellion and instead used this opportunity to gain more control in Chosŏn. The Japanese removed King Kojong (r. 1863-1907) from power and instead restored his father, Hŭngsun Taewon'gun (1820-1888) to power. Next a new government composed of pro-Japanese elements was formed, and it was this cabinet headed by Kim Hongjip that pushed through the Reforms of 1894 (Kaba kyŏngjang).

The Reforms of 1894 were carried out by the Deliberative Council (Kun'guk kimuch'o) which was headed by Kim. This group had authority over all matters of government, and carrying out sweeping reforms and actually operated outside the reach of King Kojong and Queen Min (1851-1895). It also defied the power of the Taewŏn'gun to whom the King had delegated authority. However, when this was realised, the council was abolished, but not before major changes to the face of the Chosŏn government were executed. The Taewŏn'gun attempted at this juncture to seize control of Chosŏn's destiny and tried to bring the Qing in to supplant the Japanese. This was discovered and the Japanese Prime Minister Inoue Kaoru forced the Taewŏn'gun to retire. He then appointed to Kim's
cabinet Pak Yŏngho (1861-1939) who had been in exile in Japan, creating a coalition government between the two men. This government was blatantly pro-Japanese in its actions, which caused Queen Min to seek Russian assistance, at which time the pro-Japanese elements were purged from the government by those supporting increased ties with Russia. However, this was short-lived as the Japanese brutally carried out the assassination of Queen Min, which again returned Kim Hongjip to power as the head of a new cabinet. Kim then proceeded to then carry out many more reforms that brought Chosŏn ever closer to Japan. The barbaric slaying of Queen Min created public outrage and also caused King Kojong to fear for his life. He fled to the Russian delegation to seek refuge and with this reversed the political situation in Chosŏn to one that favoured the pro-Russian elements. Accordingly, Kim and other pro-Japanese elements were ousted. At this time in front of the Kwangha Gate to Kyŏngbok Palace, Kim, along with his cronies, was executed for treason.

Kim Hongjip, while a great advocate of reform and modernisation for Chosŏn, will chiefly be remembered as a traitor to Korea whose actions allowed Japan to make major inroads in their colonial designs on Korea. Kim did carry out many beneficial reforms for Korea, but in the end his pro-Japanese policies resulted in the murder of the Korean Queen and the weakening of the Korean state.

**Kim Hwallan (1899-1970)**

Kim Hwallan was an educator and woman’s rights advocate of this century. Kim’s given name was Kidŭk, pen name Uwŏl and baptismal name Helen. Kim was born in Inch’ŏn and with the opening of the port at Chemulp’o her family moved there and her father, an ardent Christian, operated a warehouse. Kim was the last of six daughters in her family and also had two brothers. When Kim was eight she entered Yŏnghwaso School, but a year later when her father’s business failed and the family moved she entered Ehwa School in Seoul. Kim finished elementary, middle and high school at Ehwa and then graduated from college in 1918, making her the first Korean woman to do so. After graduating, she taught at Ehwa and while doing so met the Methodist missionary H. Welch, whose recommendation allowed her to travel to the United States and attend Wesleyan College in Ohio where she studied philosophy and education among other subjects. In 1924 after graduating from Wesleyan, she entered Boston College where she received a Master’s degree in literature. Kim returned to Korea in 1925 where she assumed duties as both an instructor and as a dean at the present Ehwa Women’s University. In 1930 she again returned to the United States and entered Columbia University where in October of 1931 she received her doctorate of philosophy. In doing so Kim became the first woman to hold a Ph.D. in Korea. Kim’s dissertation, *Rural Education for the Regeneration of Korea*, outlined the problems in Korean agriculture under the Japanese policies and revealed a thesis stressing that the education and mental rehabilitation of Koreans was required to realise improved results in agriculture.

Kim was also very influential in spheres outside academia in Korea. In 1923 along with Kim P’illye and Yu Kakkyŏng she helped found the Young Women’s Christian Association (YWCA) and through this organisation she helped promote women’s rights in Korea and sought to overturn the systematic societal discrimination continued from the Chosŏn period. In 1939 when she assumed the position of director of Ehwa Women’s College and Ehwa Kindergarten, she became the first woman to hold such a high position in Korean history. In her role as the head of these institutions, she helped shape the educational structure of Korea. She also represented Korea in many international forums such as at various United Nations conferences. Another of Kim’s many accomplishments is the publishing of Korea’s first English language daily newspaper, the *Korea Times*. In September of 1961 she retired as head of Ehwa Women’s University and then acted as an ambassador-at-large for the Republic of Korea until her death in 1970.
Kim is praised as a pioneer in many fields and particularly for helping to advocate equality among the sexes. Her contributions to Ehwa Women’s University are innumerable, as they are to numerous other fields.

**Kim Il Sung** (1912-1994)

Kim Il Sung (Kim Ilsōng) was anti-Japanese guerrilla and North Korean statesman. Leader of the Communist regime in North Korea in 1946-1994.

Born in Man'gyŏndae near P'yŏngyang on 15 April 1912. Kil Sung's real name was Kim Sŏngju. His father Kim Hyŏngjik (1894-1926) was graduated from a missionary school and earned a livelihood by teaching and, sometimes, herbal healing. The D.P.R.K. official history insisted that Kim's father played an active role of anti-Japanese movement. This is an exaggeration, but Kim's family definitely was sympathetic toward the nationalist movement. Around 1920, Kim's parents moved to Manchuria where he studied at a Chinese school. As a student Kim established first contacts with the communist underground. In 1929 he was arrested by Japanese police as a member of an illegal communist youth organization and spent 6 months in jail.

Soon after his discharge from prison, Kim, a young man who was inspired by both patriotic ideas of national independence and communist dreams of social justice, joined the communist guerrillas fighting the Japanese in Manchuria. Around 1932 he entered the Chinese Communist party. Throughout the 1930s Kim made a distinguished career in the Northeast China Anti-Japanese Allied Army (Tongbuk Hang-II Yŏnhapkun). In 1936 he become a commander of the 6th division of the 2 d Army. In 1937 Kim led the famous attack on Poch'onbo, a small Korean town near the Chinese border. This raid had a good publicity since it was a rare large-scale operation of the guerillas inside Korea.

In the late 30s the Japanese launched a large-scale offensive against Manchurian guerrillas. It proved to be successful. The guerrillas suffered great losses and in the winter of 1940/41 Kim with a few of his guerillas had to cross the Soviet border to find an asylum there. After some military training, in 1942 he was promoted to a captain of the Soviet Army and assigned as a battalion commander to the 88th Brigade, a specific unit, consisted entirely of former Manchurian guerrillas, both Chinese and Korean. It was stationed near Khabarovsk where Kim lived until 1945 with his wife Kim Chongsuk (1917-1949), whom he married in the late 1930s when she also fought with Anti-Japanese guerillas. There his 2 sons were born. Both sons were initially given Russian names: Yura (the elder, Kim Jong Il, b.1942) and Shura. It indicates that perspectives of return to Korea at that time were not considered to be very likely by Kim himself.

In 1945, after the Japanese surrender, the 88th Brigade was disbanded and Kim, who was the most senior Korean officer, was sent to Pyongyang where the Headquarters of occupational forces was stationed. Initially Kim was to become a deputy of a local Soviet military commander (komendant), but soon after his return to Korea (September, 1945) he was trapped into politics. By that time the Soviets had been disappointed by behavior of Cho Manshik and other nationalists and began to search for another possible leader of the future North Korean authorities. They were interested in Kim whose Korean background, guerrilla experience and, first of all, close association with the Soviet military made him a better candidate than a local communist (like Pak Hŏnyŏng) or a Soviet.-Korean. Kim himself seemed not very enthusiastic about a political career, but on 13 October he took a part in a meeting of local communists when the North Korean Bureau of the Korean Communist Party was established. On 14 October Kim addressed a mass rally in Pyŏngyang where he was introduced by the Soviet military as a "Korean national hero". As of 17 December Kim became the Secretary of the North Korean Bureau of the Communist Party and during the few next months gradually transformed this body into an...
independent party which was free from control of Pak Hŏnyŏng's group in Seoul.

By the spring of 1946 Kim had been openly favored by the Soviet authorities as a future North Korean leader. On 8 February 1946 he became a Chairman of the Provisional People's committee of North Korea, an embryonic government of the Soviet occupational zone. After the merging of the Communist Party of the North Korea and the New People's Party into the North Korean Workers' Party (Puk-Chosŏn Nodongdang, NKWP), Kim became Deputy Chairman of NKWP. He exercised the supreme power in the Party, however, due to the passivity of its formal leader Kim Tu-bong. On 9 September 1948, when the Democratic People's Republic of Korea (Chosŏn Minjujuŭi Inmin Konghwaguk), a separate communist state, came into being in North Korea, he was appointed a Premier of the D.P.R.K.'s government. In 1949 the Workers' Parties of the North and South merged and Kim became a Chairman of the united Korean Workers Party. Thus, by the beginning of the Korean War Kim hold key posts both in the Party and executive government.

Shortly before the Korean war personal life of Kim was struck by 2 tragedies. In 1949 his wife died. Not shortly before his younger son drowned in a pool near his house. Kim was greatly shocked by both incidents. Not until the late 50s did he marry again (his second wife was Kim Songae, b.1924).

As a leader of North Korea Kim took an active part in preparations for invasion to the South on 25 June 1950. Though this invasion failed to achieve the main goal - to unify the country under the tutelage of the communists - the political positions of Kim considerably strengthened due to the inevitable war time concentration of power.

The 50s were a period of gradual consolidation of Kim's power. After the Korean war, the D.P.R.K. leadership consisted of 4 rival groupings of which Kim's "Guerrilla" faction then was the weakest one. The existence of these groups checked the supreme power of Kim. The greatest challenge for him was also the USSR's de-Stalinization which could undermine his own Stalin-type system. However, Kim managed to survive attacks of his opponents. During the 50s Kim, who had been transformed to a ruthless and calculating politician, skillfully used frictions between his rivalries to eliminate all kinds of opposition inside the KWP and establish his own ultimate power. By 1960 rivaling factions had ceased to exist, their leaders exiled, imprisoned or executed. Simultaneously, Kim also succeeded at solving even the more formidable task - checking foreign (Soviet and Chinese) influence (for further detail see History of North Korea).

In search for more independence, Kim needed a kind of national ideology which would not be in open conflict with Marxism-Leninism, but, nevertheless, would be nationalist enough to justify the North Korean independent policy. Kim's own ambitions, probably, also played a certain role in the formation of such an ideology which was called chuch'e (developed after 1955). It was an eclectic mixture of Marxism-Leninism (with strong Stalinist overtones) and Korean nationalism, ornamented with ideas about "the absolute role of the leader" and praising "independent spirit". Since the 60s chuch'e ideas were considered the state ideology of the D.P.R.K. and became the foundation of Kim's personality cult which, probably, had few parallels in world's history. He was usually referred to as "Great Leader, the Sun of Our Nation, Ever-Victorious General" and so on. His portraits became objects of worship and every Korean was to bow before his statues at least a few times a year and during national holidays, the biggest of which was Kim's own birthday.

Since the late 50s and until his death in 1994, Kim had been an unchallenged ruler of the D.P.R.K. In 1994 he held the posts of KWP General Secretary, President of the D.P.R.K. and Chairman of Military Affairs Committee of the KWP. Kim's power was ultimate and uncontrolled. Even Party Congresses, which are supposed to
convene every 5 years, were rare events (in 1956-1995 the Congresses took place only in 1961, 1970 and 1980). To ensure the political control, Kim moved a number of his relatives as well as former Manchurian guerrillas up to high party and government offices. His eldest son, Kim Jong-il, had been groomed to succeed his father since the early 70s and in 1980 the 6th Congress of the KWP acknowledged him as Kim's heir apparent. For winning loyalty of the officials, Kim granted them numerous privileges and they could enjoy a range of material benefits which contrasted greatly with both the very moderate living standards of common people and the egalitarianism of official ideology.

In practical politics Kim was a skillful manipulator who often broke previous promises, and could incite his enemies to attack one another. He lacked systematic education, but had a certain amount of practical good sense. In the early 60s, Kim and his entourage became enthusiastic about Maoist China, but he had enough pragmatism to stop the Chinese-style experiments as soon as they proved to be devastatingly ineffective. In his foreign and domestic policy Kim pursued not only the establishment of his own unrestricted power, but also the emergence of his D.P.R. K. as an absolutely independent state, even often at the expence of people's living standards. He wasted huge sum of money in overseas activity, sometimes contradictory, like support of left-wing or nationalist guerrilla movements or extensive propaganda of his own chuch'e ideas in developing countries. These actions usually were fruitless or even ruinous economically, but were considered necessary to increase the international influence of the D.P.R.K. as well as of Kim himself.

After 1985 the economic situation of North Korea began to deteriorate, but Kim did not attempt any serious changes (like Soviet perestroika or Chinese openness), probably, because he was well aware that such changes could destroy carefully arranged systems of political control inside North Korean society and undermine his personal power and his goal of dynastic transition. The fall of socialism in Eastern Europe and the USSR proved him to be correct. Kim could manage to politically survive in an unfriendly environment again, but did not find any alternative solutions to difficult economic problems and by 1994 the D.P.R.K.'s economy was on the verge of collapse. Only strong political surveillance and the absolute isolation of people from unauthorised information saved the country from turmoil.

On 8 July 1994, Kim II Sung, who by that time had been the world's longest ruling Communist leader, suddenly died of heart attack in his luxurious palace near Pyongyang.

A Lankov

**Kim Inhu** (1510-1560)

Kim Inhu was a middle Chosön period neo-Confucian scholar and civil official. His family's ancestral home is in Ulsan, his courtesy name was Huji, and his pen names Hasö and Tamjae. His father, Kim Yong, was an assistant curator (ch'ambong, 9B rank) and his mother was of the Okch'ön Cho family. When Kim was ten, he studied the Sohak (Small Learning) from Kim An'guk and in 1531 after passing the entrance examination he entered Sŏnggyun'gwan (National Confucian Academy). It was at this time that he became a close friend of Yi Hwang (1501-1570) among others. In 1540 after passing the military portion of the Special Examination (pyŏlshti), he was appointed as Supernumerary Third Copyist (kwŏnjí pujŏngja). In the next year he entered the Hodang, an institute for the further studies of young scholars of merit and then took a position as Seventh Counsellor (paksa)
at the Office of Special Counsellors (Hongmun'gwan). In 1543, along with his duties at the Office of Special Counsellors, he assumed the positions of Fifth Tutor (sŏlsŏ) in the Crown Prince's Tutorial Office (Seja shigangwŏn) and also Junior Sixth Counsellor (pusach'an) at the Office of Special Counsellors. It was at this time that he became a close associate of the Crown Prince Podo. Particularly after the Purge of 1519 (Kimyo sahwa) and witnessing the deaths and suffering of many men, Kim endeavoured to cultivate his scholarly abilities. In the same year in order to be closer to his aged parents, Kim took a position as County Magistrate (hyŏn'gam) of Okkwa. With the death of King Chungjong (r. 1506-1544) he returned to Seoul and assumed a position in the Office of Diplomatic Correspondence (Sŏngmunwŏn), but within a year King Injo (r. 1544-1545) died and the Purge of 1545 (Ulsa sahwa) occurred. Under the pretence of illness, Kim returned to his hometown. From 1554 onwards Kim was appointed to positions as the Fifth Counsellor (kyon) at the Office of Special Counsellors, as a Lecturer (chikkang) and Librarian (ch6nj6k) at the Songgyun'gwan and as Section Chief (chŏngnang) at the Board of Works (Kongjo).

Kim's extant literary works come to a total of about ten volumes and chiefly deal with neo-Confucian ideology. Despite their small number, these works are considered important in the study of neo-Confucian ideology of the Chosŏn period. Kim's writings differed somewhat from those of his friend Yi Hwang in the view the two scholars as to the interaction of ying and yang upon matters of the universe. Writings of Kim that have been passed on to this age include Hasŏ chip (Collected Works of Hasŏ) among other works.

Kim Inshik (1885-1963)

Kim Inshik was a musical educator and is acclaimed as the first Korean to teach Western music in Korea. Kim was born in P'yŏngyang and in 1896 entered the Methodist Sungdŏk School in P'yŏngyang. After this he entered Sungshil Middle School where under the wife of the missionary. Hunt, and Snook, an instructor from Chŏngŭi Women's School, he studied singing, the organ and musical techniques. After this Kim also learned the violin and cornet. Kim revealed particular skill in playing the organ and by his third year at Sungshil, he was given charge of teaching first year students this instrument. At this time Kim planned to go to the United States to study and he went to Seoul to prepare for the trip. However, while in Seoul many private music schools asked him to teach and eventually he gave up his plans to study abroad and began to teach music on a full-time basis. He began at the Sangdong Youth Academy as the head of the Western music instruction and subsequently taught Western music at various other private schools such as Chinmyŏng, Osŏng, Kyŏngshin and Paejae among others. In 1910 when the first music institution in Korea, Choyanggu Akpu, was underway, Kim was appointed as music instructor. Two of his more famous students at this time included Hong Nan'pa (1897-1941), who learned violin from Kim, and Yi Sangjun. After this Kim directed the YMCA choir and formed the first independent choir in Korea, the Kyŏngsŏng Choir. In addition, he later formed the Honsŏng Choir. Kim also translated many Western hymns into Korean such as Schubert's Ava María and Handel's Hallelujah. Moreover, he contributed to the recording of musical scores of traditional Korean music in Western notation.

Kim is largely remembered for his activities in propagating Western music through education and performances. He also wrote many notable works including Hakt'o ka (Student's Song), P'yomo ka (Wash Woman) and Kukki ka (Song of the National Flag).

Kim Jong Il (Kim Chŏngil)

Kim Jong Il was an early Chosŏn period scholar and civil official. His family's
ancestral home is in Sŏhung, his courtesy name was Taeyu, and his pen names Saong and Hanhwŏndang. His father Kim Yu was a sayong (military official of 9A rank) in the Ch'ungwjawi (one of the five military commands) and his mother was of the Ch'ongju Han family. Kim began his studies in earnest under the neo-Confucian literatus Kim Chongik (1431-1492) from whom he learned the Sohak (Small Learning). In 1480 Kim passed the Classics Licentiate Examination (saengwŏnshī) and entered the Sŏnggyun'gwan for further study. He began his official life in 1494 with an appointment as Assistant Curator (ch'ambong) and held various other official position up until the time of the Purge of 1498 (muo sahwa). This purge was sparked by the inclusion of Kim Chongik's essay Chotichemun (Lament for the Righteous Emperor) in the official records of the reign of King Sŏngjong (r. 1469-1494) which Kim's disciple Kim Ilson (1464-1498) had compiled. In this work Kim used the metaphor of mourning the death of a young Chinese emperor as a way to criticise the usurpation of the throne by King Sejo (r. 1455-1468) and his subsequent execution of his nephew, the boy King Tanjong (r. 1452-1455). When the meritorious elite discovered this inclusion, they induced Prince Yŏnsan (r. 1494-1506) to have Kim Ilson and the other disciples of Kim Chongik to be either executed or imprisoned. Accordingly, since Kim Koengp'il was a disciple of Kim Chongik also, he was exiled to P'yŏngan Province for two years. During his exile Kim concentrated on his studies and passed on his teachings to his disciple Cho Kwangjo (1482-1519) who would continue the lineage of neo-Confucian scholarship in Chosŏn from the late Koryŏ period literati Chŏng Mongju (1337-1392) and Kil Chae (1353-1419). After returning to official life from his exile, Kim was again caught up in the factional politics of his day. The Purge of 1504 (kapcha sahwa) was aimed at those literati who had survived the 1498 purge, and this time Kim was among those who were executed on the orders of Prince Yŏnsan.

Kim is remembered for his neo-Confucian scholarship and as being a link in the transmission of the neo-Confucian teachings from the late Koryŏ period. His extant literary works include Kyŏnghyŏn rok, Hanhwŏndang chip (Collected Works of Hanhwŏndang) and Kabŏm (Domestic Rule).

Kim Koo (see Kim Ku)

Kim Ku (1876-1949)

Kim Ku was a freedom fighter and politician. His family's ancestral home is in Andong, his childhood name was Ch'angam and his given name Ch'angsu. He was renamed as Ku, his Buddhist name was Wŏnjong, his courtesy names included Yŏnsang and Ch'oho among others, and his pen name was Paekpŏm. He was born in Heju of Hwanghae Province to a middle class family. At the age of four he had a serious bout of smallpox and barely survived. By nine he began formal schooling and learned both Chinese characters and han'gul. From the age of fifteen Kim devoted himself to his studies ardently and at the age of seventeen he sat for the last government service examination held in the Chosŏn period. However, he failed the examination and could not take a government position; this he blamed on the corrupt system that allowed wealthy students to bribe their way to official positions. Spurred on by his frustration with the corrupt Chosŏn government, Kim joined the Tonghak army at the age of eighteen and was quite active in this organisation. He assumed a position at the vanguard of the Tonghak military and led an assault on Haeju Fortress at the age of nineteen. After the Japanese crushed the Tonghak Rebellion, Kim spent his time with others that shared his feelings of disdain for the Japanese. Eventually when he could bear his hostility towards the Japanese no longer, he crossed the Yalu River and joined the Righteous Army (ŭibyŏng) under the command of Kim Iŏn.

After the assassination of Queen Min by the Japanese in October of 1895, Kim's anger seethed and he exacted his revenge by killing a Japanese Army lieutenant in Ch'ihap'o in February of the following year. For this he was arrested and sent to a prison in In'chŏn where he remained until his escape in 1897. Kim continued to participate in many anti-
Japanese activities in Korea after his escape, and also contributed to the nationalistic movements that had sprung up throughout the country to educate and enlighten Koreans. In 1909 when An Chunggun (1879-1910) assassinated the Japanese Prime Minister Ito Hirobumi, Kim was arrested as a part of the conspiracy and again sent to prison. This time Kim remained incarcerated until July of 1914 when he was released two years before the end of his sentence.

Directly after the March First Independence Movement in 1919, Kim travelled to Shanghai to take part in the formation of the Korean Provisional Government (Taehan Min'guk Imshi Ch'ongbu) and was appointed as the first head of the Bureau of Police (Kyŏngmuguk). Subsequently he was appointed as secretary of the Home Ministry (Naemu) in 1923, as Assistant Prime Minister of State (Kungmu ch'ongni taeri) in 1924, and in 1927 he was appointed as the leader of this government. In 1928 Kim, along with Yi Tongnyong and Yi Shiyŏng, formed the Korean Independence Party (Han'guk Tongnip Tang). He also formed the guerrilla organisation, the Aeguktan, that carried out many terrorist activities against the Japanese. Most notable were the 1932 attempt to kill the Japanese emperor by Yi Pongch'ang (1900-1932) and the bomb that was set off in a Shanghai park by Yun Ponggil (1908-1932) in 1932 that killed a number of high-ranking Japanese military and civil officials. In 1933 Kim met with the Chinese leader Chiang Kai-shek and this discussion is believed to have led to the Cairo Declaration of 1943 that was adopted by the United States, China and Britain that in effect stated that Korea would in due course become an independent state.

After Korea was liberated from Japan on August 15, 1945 there were many political parties vying for power in the South. Kim strongly opposed the partition of Korea and sought to reach a compromise with the North Korean Government. Accordingly, in 1948 Kim, along with Kim Kyushik (1881-1950) travelled to North Korea for a summit with Kim Il-sung (Kim Ilsŏng) and Kim Tubong. However, no agreement was reached and the talks were branded a failure by Kim’s ultra-right opponent Syngman Rhee (Yi Sungman). Kim nonetheless returned to Seoul with the intent of boycotting the United Nations-sponsored elections that were to be held later in the same year. Kim Ku continued his battle for control of South Korea with Rhee, but was assassinated by army lieutenant An Tuhtü on June 26, 1948. The assassination of Kim is widely believed to have been carried out by the Syngman Rhee government as a way to consolidate its power.

Kim Ku is praised not only for his zealous guerrilla activities against the Japanese imperialists, but also for the foundations that he helped establish for democracy in post-liberation Korea. He was also an adept statesman as his relations with Chiang Kai-shek and his willingness to reach a conciliatory agreement with the communists in North Korea after liberation reveal. Kim left behind his literary collection, Paekpŏm ilji.

**Kim Kyushik (1881-1950)**

Kim Kyushik was a freedom fighter and politician. His family’s ancestral home is in Ch'ŏngp’ung, his school name was Johann and his pen name Usa. Kim was born in Tongnae and was the second son of Kim Chisŏng. At about this time, the Qing government sent Yuan Shikai to Korea in order to regulate and assist in the managing of domestic affairs and to counter the Japanese presence in Korea. Kim’s father had the unfortunate task of presenting a memorial to the throne at this time for the establishment of better relations with the Japanese. As a result of this, he was exiled, and at about the same time Kim’s mother died and Kim thus became an orphan. He was sent to Seoul where he was taken care of by the American Methodist missionary Horace Underwood and received his English name Johann. In 1906 he married the daughter of Cho Sunhwan, Ŭnsu who bore him two sons. In 1917 his wife died and in 1919 Kim remarried to Kim Suae who had one daughter by him.
From 1897 to 1903 Kim studied at Roanoke University in Virginia, USA, and in 1904 entered Princeton Academy where he received his Master's Degree before returning to Korea. From 1904 to 1913 he performed duties as Underwood's private secretary and at the same time as an instructor at the YMCA and the Kyŏngshin School. In addition, Kim also served as an instructor at Yŏnhŭi College from 1910 to 1912. In 1910 he joined the Presbyterian Church and served on the staff of the church in the Kyŏnggi and Ch'ungch'ŏng provinces. However, in 1911 the Japanese oppression of religious freedoms began in Korea and as a result Kim fled to Huabei in Mongolia. In 1916 he joined the Anderson & Meyer Company as an office manager in their Ulan Bator branch.

Kim's political activities began in 1918 at a conference for oppressed nations in Moscow and then in the following year he was nominated by the New Korea Youth Association (Shin-Han Ch'ŏngnyŏndang) to serve as the Korean representative to the Paris peace conference where he made an appeal for Korean independence. While in Paris Kim established the Chosŏn Public Information Bureau (Chosŏn Kongboguk) and among its other activities it published manifestos such as Han'guk minjok ŭi chujang (The Doctrine of the Korean Nation) and Han'guk ŭi tongnip kwa p'yŏnghw'a (Independence and Peace of Korea). Kim also served as chairman of the Korean Provisional Government's (Taehan Min'guk Imsil Chongbu) board of the Western Nation Committee and in 1935 was elected president of the newly formed Korean National Revolutionary Party (Minjok Hyŏngmyŏng Tan). Moreover, in 1942 he was appointed as a committee member of the Korean Provisional Government’s State Department.

After liberation in August 1945, Kim returned to Korea and was selected to represent Korea at the Moscow Conference in December 1945, in which the United States, Soviet Union and Britain put forth a plan of a trusteeship to rectify the Korean problem. This began the Anti-Trusteeship Movement in Korea. At the time directly after Korea's liberation, the politics in the South were largely divided between the Korean Democratic Party (KDP), headed by Syngman Rhee (Yi Sungman) and the Korean Independence Party (KIP) headed by Kim Ku. The KDP opposed any reconciliation with the communist forces and sought the immediate establishment of an independent transitional government for Korea, while the KIP was also opposed to the trusteeship, but sought to bring about some type of accord between the North and South and thereby unify the peninsula. In this political mix, Kim represented the moderate right and he worked with the moderate left headed by Yŏ Unhyŏng to promote unity of action between the right and left. It was these forces which won the initial backing of the US Military Government and compromised the membership of the South Korean Interim Legislative Assembly established by the US in 1947. Even after the United Nations declared elections to be held in South Korea in the spring of 1948, Kim continued his efforts to unify the right and left, and thereby the Korean peninsula. In April of 1948, Kim along with Kim Ku travelled to North Korea and met with Kim Il-sung (Kim Ilsŏng) and Kim Tubong in an attempt to reach a compromise. This attempt, however, failed and Korea was divided at the conclusion of independent elections in both the South and North later the same year.

Kim Kyushik is not only remembered for his political activities and opposition to the Japanese colonial occupation of Korea, but also as an educator who helped in the enlightenment of the Korean people. He served as an educator in various capacities in both Korea and China during the colonial period. In 1950 after the outbreak of the Korean War, Kim was kidnapped by the North Koreans and it is known that he died on December 10 of the same year in the Manp'oën area of North P'yŏngan Province.

Kim Manjung (1637-1692)

Although Kim Manjung (Sŏp'o) was an accomplished poet, a scholar of varied interests, and an astute social critic, his commanding position as a man of letters in Korean history is largely due to a single novel, the Kuunmong (A Nine Cloud Dream), and it is fitting that
this novel has been translated into English twice: in 1922 by James S. Gale under the title *The Cloud Dream of the Nine* and again in 1974 by Richard Rutt under the title "A Nine Cloud Dream" in *Virtuous Women: Three Masterpieces of Traditional Korean Fiction*. Although each translation reflects the different styles of the translators, and no less the English of the time of translation, both are in themselves superb pieces of English literature.

From our modern viewpoint Kim's fame seems a little ironic insofar as the *Kuunmong* was never intended for a public audience. Rather, according to the traditional account of its authorship, it was written as a private gift to give solace to his grief-stricken mother. This irony is further compounded by the fact that most men of Kim Manjung's *yangban* (ruling class) status would have considered the writing of a novel to be a disreputable undertaking on a par with the creation and performance of oral stories by the lower classes. The sober minds of the male *yangban* engaged in philosophy and manifested their literary talents through the rigorous and complex art of composing Chinese poetry, both of which were requisite talents for the scholar-official. Conversely, the exercise of imagination needed to create a convincing fictional world was not valued, and the *Kuunmong* would have been considered even more unseemly for its varied romantic interludes, focus on distinct female personalities, and liberal references to Taoist magic all set within an overarching Buddhist conceptual structure. The very fact that this novel still proves compelling suggests the care with which it was written, and Kim Manjung's choice to write a story for his mother in which female personalities sparkle with individuality is apposite the crucial features of his life.

Between 1592 and 1636 Korea underwent a series of military attacks by the Japanese and the Manchus, and in 1636, the year of the final Manchu invasion, Kim's father escaped to Kanghwa Island with other members of the royal court. Upon the fall of the island to the Manchus he committed suicide, and Kim was born not long thereafter. His mother, Lady Yun, came from an esteemed aristocratic family, and following the death of her husband she raised Kim and his older brother at her parent's home. She was an extremely well-educated woman, noted for her calligraphy and fond of Chinese poetry, and it was she who educated her sons. One of the many consequences of the destructive military invasions was that books were scarce, but despite this hardship Lady Yun managed to obtain texts for her sons' education.

Her efforts were successful, and at the age of 28, in 1665, Kim passed the civil service examination with honours. Like his brother, who had successfully sat for the exam in 1663, Kim's career began with few problems since he was associated with the dominant political faction. Nevertheless, by 1676 the balance of political power had shifted, and he was removed from office. He spent the next few years in scholarly pursuits and by 1680 found himself once again in a high official post. During the next several years he managed to hold several respected positions with few problems apart from the recurring factional struggles at the court. In 1687, however, he so infuriated King Sukchong that he was sent into exile in Sŏnch'ŏn. In the following year he was allowed to return to the capital, but no sooner had he returned than he became involved in a dispute regarding the queen and one of the king's concubines. Contrary to the king's wishes, Kim's faction supported the priority of the queen, and Kim was subsequently exiled to the island of Namhae in 1689. His mother died not long after this, and it seems that her death was a crushing blow. His health deteriorated, and he died in exile at the age of fifty-five.

The importance of Kim's relationship with his mother cannot be overestimated. She was a woman of strong character, and he seemed to regard her as an embodiment of ideal Confucian virtues of femininity: self-sacrifice to her children and faithfulness to her dead husband. However, what is most intriguing is that she had the skills to educate two boys so well that they could enter government service. That his education, albeit a Confucian one, was directed by a woman largely explains why his writings dwelt on women and their world. He was raised in a woman's world and thus was able to develop a perspective...
different than most men of his class. This is not to say, however, that he was a radical reformist; he wrote of the upper class, and his criticisms of the upper class came from his position as a member of the ruling class. His other novel, *Sassi Namjonggi (The Story of Lady Hsieh's Dismissal)*, was a pointed attack on the inequities of polygyny, and despite its literary inferiority in comparison to the *Kuunmong*, it clearly showed that he was sensitive to the difficulties which had to be endured by *yangban* women. His *Sop'ojip (Collected Writings of Sop'o)*, published a decade after his death, contained a variety of poems celebrating women and provides support for the suggestion that he was something of a womanizer. Whether his reputation as a ladies' man was deserved is impossible to answer, but we can be quite certain that his apparent admiration of women was related to the fact that he was brought up by a talented, strong woman. His somewhat non-conformist attitudes also come into view in the posthumously circulated *Sop'omanp'il (The Random Jottings of Sop'o)*. While this book contains his thoughts on a variety of themes from the sciences to aesthetics, it also includes his sympathetic views towards Buddhism and Taoism: two religions which were generally condemned by the male *yangban* of his era and whose popularity was largely confined to women. Although it is likely that his renowned impeccable manners and filial piety can be traced to his strict Confucian upbringing under his mother, we can only wonder whether his sympathies for Buddhism and Taoism also might have been derived through her.

The *Kuunmong* appears, then, to be a culmination of the essential attributes of his life: his filial piety towards his mother, his interest in religion, his poetic skill, his love of women, and his intimate knowledge of the joys and dangers of court life. It was most likely written during his first exile to Sŏnch'ŏn (1687-8), and it is assumed to have been a gift meant to comfort and entertain his mother during his absence. Despite the discovery of various editions written in the Korean vernacular script (*han'gul*), Dr. Chŏng Kyubok has concluded that the *Kuunmong* was originally composed in Chinese and subsequently translated into the vernacular. As Richard Rutt has noted, it would have been odd for Kim to write such a book in the vernacular, especially in light of the fact that his mother had refined literary tastes. The setting of the story is T'ang China, and the novel is filled poems, letters, and official documents which, in Korea as well, would only have been written in Chinese. Furthermore, the names of the different characters are in themselves brief, yet significant, allusions to Chinese literature or Buddhist philosophy, and the brevity and clarity of these references rely on Chinese.

As its name implies, the *Kuunmong* is structured as a dream, and nine refers to the male protagonist and the eight women whom he marries. The story begins with Sŏngjin (Chinese, Hsing-chen), the ablest disciple of a great Buddhist master, despatched to pay a visit to the Dragon King on his master's behalf. While there, the Dragon King convinces Sŏngjin to have a glass of wine, and after leaving the Dragon King's Palace he crosses a bridge where he meets eight beautiful fairies. Upon returning to his room in the monastery he is unable to quiet his passions stirred by the wine and the image of the fairies. He begins to question the worth of his Buddhist vows to transcend worldly pleasures when suddenly he is summoned to an audience with his master. Rebuked for breaking the vows of a monk, Sŏngjin and the complicitous fairies are arrested and sent to hell where the king, Yamana, sentences them to be re-born. This punishment is, in fact, exactly what Buddhists intend to avoid, and Sŏngjin is extremely ashamed because he had been his master's finest student. He is re-born as Yang Shao-yu, and while still a child, his father, a hermit, departs this world on the back of a white crane. The youngster, endowed with a magnificent intellect and superior martial skills, is devoted to his mother and decides at the age of thirteen to take the civil service examination in the hopes of saving his mother from their difficult economic circumstances. No sooner does he begin his journey to the capital than he meets a beautiful girl whom he promises to wed eventually, and this sets the pattern for much of the story.

He resumes his journey and meets a variety of women in different locations. He is intelligent and handsome, and these two qualities make him irresistible to the ladies. In the
various episodes Yang and any given woman in question engage in conversations or exchange poems which are filled with romantic overtones. He is a confident fellow and much the womanizer, and yet he maintains a certain degree of propriety: he does not seduce the women, but rather promises to marry each of them. He eventually reaches the capital where he gets the highest score on the examination, and the emperor is so impressed by his services that he decides that Yang should marry his daughter, the princess. Despite certain minor complications related to the priority of the wives, Yang marries the princess as well as the other seven beauties to whom he has pledged his affections. Furthermore, with his fortunes secured, he is able to send for his mother and express his filial devotion. Yang has several beautiful children, all destined for success, and the family lives together in complete harmony. He lives to an old-age, full of health, having enjoyed an ideal Confucian life: a loving family, wealth, and the respect of those around him.

Despite this prosperity and untroubled life, Yang grows sad. Following his splendid birthday banquet he plays a sad song on the flute, and his wives all know immediately that something is amiss. He looks out into the distance and explains that even the greatest kings of antiquity are but memories and that he and his wives too will perish forever: "just think of it-man's life is no more than a moment of time." (throughout all translations from Rutt) He then gives a speech comparing Confucianism, Buddhism, and Taoism and decides that Buddhism is the superior of the three for only it provides relief against the endless cycle of birth and re-birth in this veil of tears: "I must put off the trammels of worldly life and obtain the way that has no birth or death. But because this means I must now say farewell to all of you, with whom I have spent such long and happy years, I feel sad. My sadness showed in my flute-playing." The eight women all comply with his decision, and they then decide to celebrate with some wine when suddenly an old monk pays a visit. Yang admits that he has some vague memory of having seen the monk's face before, and the monk replies, "so you still have not woken from your dream." He strikes his staff against the balustrade and a thick mist arises. Yang, somewhat perplexed, begins to ask a question, but the mists disappear, and he finds himself alone, seated on a prayer mat in a small room with a shaven head: he is Sŏngjin, a youthful monk and disciple of a great Buddhist master. He is summoned to the assembly hall where the master asks, "did you enjoy the pleasures of the world?" Sŏngjin is confused whether "the dream was not true, or the truth was not a dream." The Buddhist master promises profound instruction but says that he must wait for the arrival of some new students. The eight fairies suddenly arrive, repentant of their sins and begging to be enlightened. After shaving their heads and removing their make-up, they sit with Sŏngjin and listen to the Buddhist master's teaching of the Diamond Sutra: "All is dharma, illusion/ A dream, a phantasm, bubble, shadow/ Evanescent as dew, transient as lightning/ And must be seen as such." This profound teaching awakens Sŏngjin and the eight nuns to the truth through which one may escape transmigration. The Buddhist master leaves the care of the monastery to Sŏngjin whose teaching impresses the world of men and ethereal beings, and eventually he and the eight nuns enter Paradise together.

Although the Kuunmong contains elements of Confucianism and Taoism, the underlying philosophical attitude is Buddhist as ultimately made explicit by the Buddhist master's recitation from the Diamond Sutra. Confucianism provides the structure for the development of the novel's Buddhist point of view, and Taoism offers the narrative a certain liveliness with its references to fairies, phoenixes, and old hermits ascending to the heavens astride white cranes. Simply put, it would be difficult to create a compelling narrative without reference to something besides "all is illusion," and this variety of religious references is significant not merely for literary reasons. In a very substantial way, the essential Buddhist idea would be weakened if Yang did not have a splendid life and still find it wanting.

Like Yang Shao-yu, Kim lost his father, went on to make top marks on the civil service examination, and rose in the ranks of officialdom; but unlike Yang, Kim's life was anything but idyllic. That someone as blessed as Yang would turn to the path that has no
birth or death crystallizes the story's claim that even the luckiest must suffer; that Sŏngjin's religious awakening required the illusion of life's pleasures affirms the worth of illusion itself.

Through placing both strife and joy within this Buddhist perspective, Kim managed to weave a story at once exciting and philosophical, and without a trace of self-pity, it showed that he was in empathy with himself. Doubtless, this is something which his mother's refined literary and moral tastes would have appreciated.

Kim Maria (1891-1944)

Kim Maria was a freedom fighter and educator of the colonial period. Her family’s ancestral home is Kwangsan and she was born in Changyŏn of Hwanghae Province. Her father was a devout Christian and established a church and school in their village. In 1895 Kim entered Sorae Elementary School, which her father had founded, and after four years graduated. After this she returned home where while weaving she zealously studied Chinese characters. Her father died in 1895 and her mother in 1904. As her mother’s last wish was that her daughter complete college, Kim left for Seoul where she lived at an uncle’s house. During this time she became associated with such patriots as No Paengnin (1875-1926), Kim Kyushik (1881-1950) and Yu Tongyŏl among others. In 1906 she entered Ehwa School but due to connections with others of her faith, she transferred to Yŏndong Woman’s School shortly afterwards and subsequently graduated in 1910. After this she spent three years as an instructor at Sup’i Women’s School in Kwangju and then in 1913 transferred to her alma mater, now named Chŏngshin Women’s School. In the next year Kim travelled to Japan to continue her studies. She entered Kinjō Women’s School in Hiroshima and studied English and then in the following year entered Tokyo Women’s Academy in the College Preparatory Department.

In 1918 she became involved in the Tokyo Foreign Students’ Independence Party (Tonggŏng Yuhaksang Tongnip Tan) and at this time became immersed in the national salvation movement along with others such as Hwang Esut’ŏ. Kim was involved in the February Eighth 1919 Independence Movement and as a result was detained and investigated by the Japanese police. Giving up her own dreams of graduating, Kim then devoted herself wholeheartedly to the restoration of her country’s sovereignty and with ten or so hand-written copies of the Tongnip Sonŏnsŏ (Independence Manifesto) which she concealed in her clothes, she returned to Korea on February 15, 1919. Back in Korea, Kim travelled about the country and made preparations for the upcoming March First 1919 Independence Movement. In particular, she tried to involve women in the activities. On March 5 she was arrested by the Japanese police and as the result of being subjected to repeated tortures she suffered for the remainder of her life from empyema of her upper jawbone. Kim was imprisoned for five months for her activities and after her release returned to teaching at Chŏngshin Women’s School where she covertly directed the
women's anti-Japanese movement. In this same year Kim helped establish patriotic women's groups such as the Korean Patriotic Wives Association (Taehan Min'guk Aeguk Puin Hoe) of which she was president. However, as a result of these activities she was again arrested by the Japanese and received a three-year prison sentence. In the midst of her sentence, Kim was released to receive treatment for an illness and she then took this chance to disguise herself and flee from Korea.

In June of 1923 she entered the United States and in the following year entered the Park College literature department where she studied for two years. In 1928 she entered the Sociology Department at the University of Chicago and subsequently received her Master's Degree. While in America Kim met with her comrades from the independence movement in Korea and Japan and helped organise the Kûnhwa Hoe (The Korean-American Patriotic Wives Association) and was elected as president of this organisation.

Kim continued her educational and patriotic efforts for her homeland throughout her life. She died in 1944 as a result of the horrendous torture that she had suffered at the hands of the Japanese that had ruined her health. In 1962 she was posthumously awarded the Order of Merit for National Foundation by the government of the Republic of Korea.

Kim Okkyun (1851-1894)

Kim Okkyun was a politician and a member of the Enlightenment Movement of the late Chosôn period. His family's ancestral home is Andong and he was born in Kongju. Kim's courtesy name was Paegon, and his pen names were Kogyun and Kou. At age seven he was adopted by his father's second cousin, Kim Pyŏnggi who raised him in Seoul. When Kim was eleven, his adoptive father was appointed as Magistrate (pusa) of Kangnŏng and Kim then studied at the Sodang (village school) where the memorial tablet of Yulgok is kept. Where he quickly learned composition, poetry, music, painting and many other skills.

At this time the ideology of modernisation as espoused by modern thinkers such as O Kyŏngsŏk (1837-1879) and Yu Honggi was sweeping through Chosôn. In 1870 Kim, along with other youths, was introduced to this ideology of enlightenment in the sarang pang (man's quarters) of Pak Kyusu (1807-1876). In 1872 Kim passed the Royal Visitation Civil Service Examination (alsŏng mungwa) with the highest score and was subsequently appointed as Fifth Counsellor (kyori) in the Office of Special Counsellors (Hongmun 'gwan) in 1874. From this time forward Kim strove to create an association of like-minded scholars, and the Progressive Party (Kaehwa Tang) began to take shape with Kim at its head. In 1879 Yi Tongin, who also advocated enlightened policies, was dispatched to Japan and witnessed first hand Japan's modernisation and actual conditions. Through his good offices, the so-called gentlemen's sightseeing group (shinsa yuramdan) was organised and went to Japan in 1882.

During Kim's trip to Japan in 1882 he was greatly influenced by the progress and modernisation that he witnessed. Kim and those who shared his views of the necessity for drastic reforms to Chosôn sought to implement life reforms in Korea. However, they were blocked from positions of true power within the government by the faction of Queen Min (1851-1895) and the Min clan, which controlled the government. Accordingly, the few reforms these individuals could bring about were minor and left the group of reformers looking for other ways to effect change. In 1883 Kim approached the Japanese for a three-million yen loan to finance a new government in Korea, but the Japanesethe key to Kim's plan, he was forced to wait for his chance to overthrow the Chosôn government.

In 1884 when hostilities between the French and Chinese occurred, Kim and his fellow Progressive Party members saw this as the chance to carry out a coup. At this time they also succeeded in enlisting the help of the Japanese who had a change of mind on the
prospects of the coup. The Japanese minister, Takezoe Shinhiro, committed the 140 or so Japanese legation guards in Seoul to assist in the coup, and this completed the plans of the progressives. The coup, known as the Coup d’Etat of 1884 (Kapshin chôngbyôn), took place on the seventeenth day of the tenth lunar month. The conspirators took advantage of a banquet held for diplomats and high-ranking officials to carry out their plans. Kim and his cohorts did succeed in seizing King Kojong (r. 1863-1907) and establishing a new government. However, before the lengthy list of reforms that the progressives proposed was made public, the Chinese troops in the capital took action and crushed the coup. Many of the progressives were killed, but Kim along with nine of the conspirators managed to escape with the retreating Japanese and fled to Japan.

After coming to Japan Kim was not well-treated by the Japanese and was exiled by the Meiji Government. Eventually he travelled to Shanghai where he was assassinated in March 1894. The coup that Kim and others plotted hastened the fall of the Chosôn government and in the end resulted in the colonial occupation of Korea by Japan.

**Kim Pushik** (1075-1151)

Kim Pushik was a politician, historian, Confucianist and literary man of the Koryô period. His courtesy name was Ipchi and his pen name Noech’on. Kim was a descendant of the royal family of Shilla and his great-grandfather, for his meritorious service to the founder of the Koryô dynasty, T’aejo (r. 918-943), was appointed as chujang (Chief Magistrate of the Region) in the Kyŏngju area. Kim’s father died when he was about thirteen years of age, and from this time his mother alone raised him. Kim and his four brothers all sat for and passed the government service examination and had entered the central government’s ruling bureaucracy. Since this reflected the excellence of their mother, she was sent an allowance of grain every year by the king.

Kim himself passed the civil service examination in 1096 and was appointed as an official of the Anso grand prefecture (taedohobu). Subsequently he was selected for a position at the Hallimwôn (Academy of Letters). Over the next twenty or so years, Kim devoted himself to his literary work and helped to develop scholarship to a higher level. Moreover, he was charged with lecturing King Yejong (r. 1105-1122) and King Injong (r. 1122-1146) on the Confucian classics. Kim not only expounded the teachings by Confucius and Mencius, but endeavoured to practise the tenets of Confucianism and was devoted to Confucian ideology. Kim’s dedication to Confucianism can be witnessed in not only the earnest lectures that he delivered to the Koryô kings, but also in the structure and ideological views presented in his most famous work, the Samguk sagi (History of the Three Kingdoms).

Kim’s political career spanned many years and saw him hold various positions. Directly after the treason of Yi Chagyŏm (?-1126), Kim travelled to Song China as an ambassador on a mission to congratulate the Emperor Gaozung on his ascension to the throne, and at the same time to ascertain the true situation between Song and the rising Jin nation. After the Yi Chagyŏm faction was expelled from the political scene, Kim was promoted to several high positions in the government. When the Myoč’ŏng faction emerged in the aftermath of the Yi Chagyŏm treason Kim stood at the head of the opposition. Myoč’ŏng schemed to convince King Injong to move the capital of Koryô to P’yŏngyang on the premise that it possessed better geomantic qualities than the present capital Kaesŏng. However, once the seat of Koryô power was transferred, Myoč’ŏng and his followers sought to seize power for themselves. Kim Pushik represented the Confucianist, China-centred faction that was based in Kaesŏng and strongly resisted the manoeuvres of Myoč’ŏng. In the end, Injong allowed the capital to remain in Kaesŏng and Myoč’ŏng rose up in rebellion declaring his own state in P’yŏngyang. However, in early 1136 forces led by Kim Pushik sacked P’yŏngyang and crushed the rebellion of Myoč’ŏng.
Although Kim had various successes and failures in the political world, these pale in comparison to his literary accomplishments. His representative work is the *Samguk sagi*, which was compiled by a team headed by Kim upon order from King Injong. Directly before the death of Injong, Kim presented the King with this fifty-volume work. Kim was heavily influenced by both Chinese historiography and his Confucian ideology in the compilation of this work. Other works that Kim compiled include *Yejong shillok* (Veritable Records of King Yejong) and *Injong shillok* (Veritable Records of King Injong). He is remembered as an eminent scholar and also as an adept statesman.

**Kim Shisup** (1435-1493)

Kim Shisup (styled Maewoltamg), was a renowned philosopher and writer. He was a founder of the Korean dualist school and a philosopher antagonist to neo-Confucian orthodoxy. He was well known also as a Buddhist and a Daoist and the mixture of his beliefs and experience is well preserved in his writings. Principally, he was an eminent writer and one of four outstanding scholars of Sŏn (Ch. Hsien) Daoism. Legend has it that Kim eventually found immortality after learning and teaching alchemy and Daoist yoga. He is also counted among the *saeng yukshin* (the six loyal subjects).

Kim’s family ancestral home is in Kangnŭng, his courtesy name was Yŏlgyŏng, and his many pen names include Maewoltang and Ch’onghanja. Through various records such as Kim’s own literary collection *Maewoltang chip* (Collected Works of Maewoltang) and writings by his contemporaries, such as Yi I (1536-1584), it is revealed that Kim was a descendent of the royal family of Shilla. Kim’s great-grandfather was the Magistrate (moksa) of Anju and his grandfather a battalion commander (pujang) of the Five Military Commands (Ōwī). Kim’s father Ilsŏng was appointed to an official position in the Ch’ungmuwi (one of the Five Military Commands) through the ŭmbo system that conferred appointments on the descendants of meritorious retainers. His mother was of the Sŏnsa Chang family.

Kim was born in Seoul and there he studied the Four Books and Three Classics under Kim Pan, Yi Kyejon and other scholars. When Kim was fifteen his mother died and Kim is said to have stayed by her graveside in mourning for three years. However, before the three-year mourning period was completed, Kim’s maternal aunt who had been caring for him also died. At this time his father remarried and Kim continued his studies. At the age of twenty-one, Kim heard the rumour that Grand Prince Suyang (King Sejo) was plotting to usurp the throne, so he burnt all of his books, cut his hair and began to roam about the country visiting temples. From then Kim did not sit for the national examination or enter government service as he realised the futility of public service.

While Kim led a life of wandering, he also wrote. At the age of twenty-four (1458) he wrote *T’anyu kwansŏ rok* in which he included among his reasons for fleeing the world of officialdom, as the usurpation of the throne by King Sejo (r. 1455-1468) - an action which caused him to grasp the lack of virtue in the world. Kim continued his wandering and writing, and by 1465 had found his way to Mount Kŭmo where he stayed for six years. It was there that he acquired his pen name Maewoltang and also where he wrote his acclaimed *Kŭmo shinhwa* (New Tales from Mount Kŭmo). Though the work is a rather straightforward adaption of its Chinese model, *Jiandeng xinhua* by Zhu You, with some changes in settings, person and place names, it is of undeniable value to Korean literary history, for the important reason that it was the first recognized attempt by a Korean at writing a novel.

Kim continued to wander about the countryside throughout his life, eventually winding up at Muryang Temple in Ch’ungch’ŏng Province where he died from an unspecified illness at age fifty-nine. Kim’s body was cremated, his remains were then gathered and a stupa erected over them. Kim is praised for his writings which contain many Buddhist and
Daoist influences. His best known work, *Kumo shinhwa* is a thinly-veiled criticism of Sejo's usurpation of the throne. In addition to this work, others transmitted to the present time include *Maewoltang chip* and *Tongbongjahwa chinsang*.

**Kim Sŏngsu** (1891-1955)

Kim Sŏngsu was an educator, entrepreneur and politician. His family's ancestral home is in Ulsan and his pen name was Inch'on. He was born in North Cholla Province to a wealthy family and when he was three years old his father's elder brother adopted him. When Kim reached thirteen years of age he was married to Ko Kwangsŏk. In 1906 he began studying English and in 1908 he attended Kŭmho School in Kumsan. In October of the same year Kim travelled to Japan for study, beginning at an English Academy and eventually entering Waseda University in 1910. He then graduated in 1914 from the Political Economics Department. Believing that before Korea could achieve independence her people needed educational enlightenment, Kim began work as a teacher upon returning to Korea. He also participated in the March First Independence Movement (1919) and saw the seeds of Korean independence planted at this time.

Kim was also a major industrialist in colonial Korea. In 1919 he founded the Kyŏngsŏng Textile Company (Kyŏngsŏng Pangjik Chushik Hoesa) which is notable in that it was formed with Korean capital and only hired Korean employees, which was in stark contrast with those companies operated by the Japanese industrialists. In the following year, Kim founded the *Dong-A ilbo* Newspaper and in 1922 through this organ promoted the 'Korean Products Promotion Campaign' (*mul san changnyŏ undong*) that aimed at supporting Korean enterprises through the nationalistic sentiments of the Korean people. Kim was also involved in the drive to establish the private Korean universities (*minnip taehak sŏllip undong*) that blossomed in 1924. In 1929 Kim provided the endowment that allowed the establishment of Chungang School and in 1932 after it had suffered a series of financial difficulties he was entrusted with the management of Posŏng College. Kim made numerous contributions to the independence movements of Korea both directly and indirectly through his economic activities and the opinions expressed in the *Dong-A ilbo* before its forced closure by the Japanese.

After liberation in 1945, Kim was appointed as chairman of the Korean Advisory Board to the American Military Government, and in January of the following year again assumed his duties as president of the *Dong-A ilbo* which had resumed publication after having been closed by the Japanese. Also in 1946, Kim helped finance and found the Korea Democratic Party (Han'guk Minju Tang; KDP) and served as its leader. In addition, in August of the same year, Kim, using Posŏng College as the foundation, established Korea University (Koryŏ Taehakkyo) in Seoul. Kim also participated in the many political activities and movements that opposed the trusteeship that had been forced upon Korea by the United Nations. In 1949, Kim merged his KDP with the Korean People's Party (Taehan Kungmin Tang) to form the Democratic Nationalist Party (Minju Kungmin Tang; DNP) and served as a member of this Party's supreme council. In May 1951 he was appointed as vice-president of the Republic of Korea, but resigned in the next year in protest over the arrest of opposition party legislators by the Syngman Rhee (Yi Sungman) government.

After Kim's departure from the political world, his health began to deteriorate and he subsequently died in 1955. He is remembered not only for his nationalistic economic activities, but also for his attempts to enlighten the Korean people through education. Korea University, which is at the forefront of Korean institutions for higher education, remains as a lasting legacy to the work of Kim. In 1962 he was posthumously awarded the Order of Merit for National Foundation by the government of the Republic of Korea.
Kim Sowol (1902-1934)

Kim Sowol was a poet. His family's ancestral home is in Kongju, his given name was Chongshik and he was born in Kusong of North P'yongan Province. When Kim was just two years of age his father became mentally ill and the infant was raised by his grandfather. Kim attended various schools before graduating from Paejae High Normal School in Seoul in 1923. He then entered college in Japan, but quit after a short while and returned to his homeland. Upon his return, he began a serious study of poetry, in which he had a special aptitude, and in this he was encouraged through his association with Kim Ok. It was through Kim Ok that the poetry of Kim was introduced to the literary sphere in 1920. Other events of this time greatly influenced Kim, such as the failure of his grandfather's mining company, which incident had a major bearing on Kim's living standard! Kim then moved to Kusong County where he found a position as manager of the local Tonga ilbo newspaper office. His poetry was published in the Tonga ilbo, but the quality of his work had deteriorated considerably. It is thought that he had become a heavy drinker by this stage of his life, and was despondent in regard to his limited future prospects. In 1934, he returned to Kusong, where he took a lethal dose of opium.

Kim's literary debut was in the magazine Ch'angjo in 1920, with the publication of poems such as Nangin üi pom (Spring of the Drifter) and Ya üi ujök (Night Rains). His reputation grew with the publication of his poems in the literary magazine Kyebyok in 1922 including Kûm chandi (Golden Grass), Chindallae kkot (Azalea) and Kangch'on (Riverside Village). In 1923, also in Kyebyok, Kim published further poems, such as Kanun kil (The Travelling Road) and this marked the high-point of his career. Kim is perhaps best known, however, for his collection Chindallae kkot, which was published in 1925 by Maemunsa. This work is divided into sixteen parts and is composed of one-hundred and twenty-seven poems. While most of these poems had already been published elsewhere, Kim had reworked and embellished a number of them. Chindallae kkot is said to be the most widely-read poetry collection in modern Korea. It contains Kim's representative works such as Chindallae kkot, Kûm chandi and Ch'ohon (First Marriage).

The poetry of Kim is romantic and reveals his love of his lost family and childhood. His poetry is permeated with a sense of helplessness and despair, thus adding to the feeling of loneliness in his works. Kim's work is often identified with the emotion of han, or a sense of resentment and bitterness at some loss. Hence, reading his poetry leaves the reader conscious of the author's despondency concerning his life and the state of the world.

Kim Sujang (1690-?)

Kim Sujang was a late Choson period songwriter. He was born in Wansan, present day Chonju, his courtesy name was Chap'yong, and his pen names included Shipchu and Nagajae. During the reign of King Sukchong (r. 1674-1720) he served as a petty clerk (sŏri) at a military post station, and aside from this fact little is known for certain of his background. Kim is acclaimed, along with Kim Ch'ont'ae (1725-?), as a representative songwriter of the late Choson period. It is not known when Kim Sujang died, but there is a record of his still being alive at the age of eighty in 1769.

Kim's literary activities can largely be divided into three areas. The first is his work in compiling the Haedong kayo (Songs of Korea) in 1755. This work is widely acclaimed as one of the three great shijo collections of the Choson period. The first compilation of this work is the Pak family-edition, which Kim also used as the basis for the subsequent 1763 Chu family-edition. Kim continued to revise this work into his eighties, and it reveals the time and care that he devoted to it. Secondly, Kim is known for his leading activities in forming musical organisations in the capital. In 1760 he is said to have formed one such group in Hwagae-dong. Third, Kim is known for his prolific production of shijo, which helped bring this literary form to its maturity. In the Pak family edition of the Haedong
there are sixteen shijo by Kim, in the Chu family-edition there are 117, and in another shijo collection, Ch’onggu kayo (Enduring Songs of Green Hills) there are an additional three shijo by Kim. In addition, there are works by him in other collections and also those in the preface and epilogue of Haedong kayo that have been either removed or lost over time. Therefore, all of the shijo by Kim have not been transmitted to the present time.

Kim’s shijo can be characterised in three main categories. The first group is those works which reflect the ideology and worldview of the dominant yangban culture of Choson. Therefore, themes that revolve around loyalty and sincerity are common. Second, there are many works that reflect the lives and emotions of the common people. In particular, Kim helped bring love songs to a new stage in their development through his works with this theme. Third, there are many works that reveal a relationship between singers and those who write songs.

Kim’s many contributions to the development and preservation of shijo has made him one of the representative songwriters of his day. His works are presently extant in Haedong kayo among other works.

**Kim Sùngok** (1941-)

Kim Sùngok is a novelist of the contemporary period. He was born in Osaka, Japan and graduated from the College of Liberal Arts, Department of French Literature, at Seoul National University. Kim is generally regarded as being at the van of the so-called ‘April 19 Generation’ that is used to refer to those writers who were in college during the April 19 Revolution that brought down the corrupt Syngman Rhee (Yi Sùngman) government. These writers are characterised by their acute social awareness brought about by the experiences of the Korean War and the authoritarian regime of Rhee. Moreover, since their education was given primarily in han’gŭl, as opposed to their fathers who were educated in Japanese and their grandfathers who received formal education in Chinese characters, these writers have complete mastery and confidence in vernacular Korean, and this is an earmark of their works.

Kim appeared on the literary scene in 1962 with the publication of his first work Saengmyŏng yŏnsup (Life Practice) which won the Shinch’un Literary Contest sponsored by the Hangook ilbo Newspaper. Subsequently, in 1965 Kim’s talent was again recognised as he was awarded the Tongin Literary Award for his short story Sŏul, 1964 nyŏn kyŏl (Seoul, Winter 1964) which captured the passions of a changing Korea and the disenfranchised with its bleak and poignant descriptions.

Kim was a very prolific writer throughout the 1960s and early 1970s, but after this time his output began to wane. Nonetheless, his 1977 work Sŏul ŭi tal pit 0 chang (Moonlight of Seoul, Chapter 0) did receive the first Yi Sang Literary Prize. Kim is still remembered as a voice of his generation and his most notable works focus upon the turmoil and changes that mark the April 19 Generation.

**Kim Suyŏng** (1921-1968)

Kim Suyŏng was a poet. His family’s ancestral home is in Kimhae and he was born in Seoul. In 1941 he graduated from Sŏllin Vocational School and travelled to Japan where he entered Tokyo Commercial College. In 1941 in order to flee from conscription into the army Kim returned to Korea, and in 1944, he and his family moved to Manchuria. In Manchuria Kim began activities as an educator and also in dramatic movements. After liberation, he returned to Korea and entered the English Department at Yŏnhŭi College, but dropped out before completing his degree. When the Korean War broke out in 1950, Kim did not flee south and consequently was conscripted by the North Korean army and was eventually captured and detained as a prisoner of war at a camp on Kŏche Island off the
coast of South Kyŏngsang Province. After he was released, Kim took a position as a translator with the American Army and at the same time managed the duties as a deputy editor of the cultural section of the P'yŏngwa shinmun Newspaper. It was at this time that he devoted his undivided attention to translations and writing poetry that would continue until his death as the result of a traffic accident in 1968.

Kim’s debut work was published in Yesul purak (Art Community) entitled ‘Myojong ui norae’ (Song of the Altar). However, it was not until the publication of a joint poetry collection with Kim Kyŏngnin, Pak Inhwon and others, entitled Saeroun toshi wa shimindul ui hapch’ang (The New City and the Chorus of Citizens), that Kim became well-known. He is considered to be a pioneering modernist and this is revealed in the unpoetic elements and solecisms in his poetry, which made him the foremost poet after the introduction of modernism to Korean poetry. Kim’s poetry is said to be born of the deep-seated emotions resulting from his experiences during the Korean War, and this was the hallmark of his poems before the 1960s.

After the April 19 Revolution of 1960, Kim’s works entered into a new phase. He was disillusioned with the political process in Korea and this was reflected in his works. The subjects of his poems were often everyday implements, but Kim imbued these with symbolic meaning in order to convey his message to the reader. His work is fairly representative of the poetry of the 1960s, an age of intellectual awakening in Korea.

Kim’s works still are well read by Koreans of the present day and his best known works are his poetry collections that were published after his death. Kodaehan ppuri (The Enormous Root, 1974), Chumoni sok ui shi (The Poem in my Pocket, 1977) and Kim Suyŏng chŏnjip (Collected Works of Kim Suyŏng) are all collections that contain his most representative works.

**Kim Taegŏn** (1822-1846)

Kim Taegŏn was Korea’s first Roman Catholic priest and is one of the 103 saints of the Korean Catholic Church. His family’s ancestral home was in Kimhae, his given name was Chaebok and he was born in Tangjin. When his great-grandfather, Chinhu, who was a Catholic, was martyred after ten years of imprisonment, his grandfather, T’aekhyŏn, moved to Namgok Village of Kyŏnggi Province, and Taegŏn grew up there. His father was also a dedicated Catholic and was martyred outside Sŏsomon Gate in Seoul in 1839.

After the Korean diocese was established in 1831, Kim was selected by Father P. Maubant and attended a Catholic seminary in Macao at the age of fifteen along with Ch’oe Pangje and Ch’oe Yangŏp. After finishing a middle school level of education in Macao, he further studied philosophy and theology. When the Opium War started in China, he went on a French warship to Manchuria where he continued his theological studies and became an associate priest in 1844. After crossing the northwestern border, he arrived in Korea in January 1845, ten years after he had left to study in Macao. Settling in Seoul, he restored the Catholic Church, which had been persecuted by the Chosŏn government. Then, he went to Shanghai and received holy relics and was ordained as the first Korean priest at the church in the Wantang Seminary. In August of the same year, he returned to Seoul by sea with Bishop Ferreol and Father Daveluy, and began active evangelistic works. In May 1846 Kim was arrested at Sunwi Island, after he had traveled to the West Coast on the instructions of the Bishop to find a new way to bring in Western clergy to Korea. The government executed him after applying the law of ideological corruption and the anti-government act. He was martyred on September 16 at Saenam’tŏ.
Nonetheless he revealed admirable qualities such as unwavering faith. Today, Kim is regarded as a great saint in the Korean Catholic Church. In 1925 he was made a blessed one and in 1984 a saint.

Kim Taegung (see Kim Dae Jung)

Kim Tongin (1900-1951)

Kim Tongin, born in Pyongyang, is regarded as the founder of the Korean short story. He was the second son of five children and came from a well-to-do family. His father, a church elder, was very strict and outside the family circle Kim had a rather lonely childhood, with few close friends. In 1914, at only fourteen years of age, he withdrew from the Sungshil Middle School, a Christian establishment, and went to Japan. There, he studied first at the Tokyo Gakuin and then at the Meiji Gakuin, where he met Chu Yohan (later to become a distinguished poet). Out of friendly rivalry, as much as anything else, the two young men set their hearts on literary careers. In 1918, Kim enrolled at the Kawabata Art School and also visited Korea to marry Kim Hyein. In 1919, relying on family funds, he began to publish Ch'angjo (Creation), the first Korean literary journal. The same year he returned to Korea in the wake of the March First Independence Movement and was sent to gaol for three months, resulting from his authorship of a declaration on Korean independence. Ch'angjo ceased in 1921 for financial reasons and Kim, disregarding his marriage, embarked on a life of irresponsible pleasure-seeking. He made some further attempts to write and publish and even dabbled in film production, but by 1928 with a broken marriage, he faced financial ruin. However, in 1930, he re-married to Kim Kyongae, and his life-style changed. He began to write prolifically, with historical novels predominating. But in 1942 he spent a further three months in prison, charged with disrespect for the Japanese emperor. He died in Seoul on 5 January 1951.

Kim Tongin was undoubtedly the first master of the modern short story in Korea. Korean critics spend much time trying to label him, but as different stories are said to be realistic, naturalistic, aestheticist, or romantic, he seems to defy categorization. However, his general attitude towards literature was that of art for art's sake, an attitude which developed in direct reaction against his contemporary, Yi Kwangsu, and his didactic novels. For this, Kim has often been an object for criticism, particularly from those scholars who see such an attitude as an insufficient response to the oppressive reality of Japanese colonial rule in Korea.

Kim Tongin is also accredited with playing a major role in the completion of the merging of the spoken and written style of language as begun by early modern writer Yi Injik. From his first story, Yak han cha (<ui s<ulp'ulleu>m (Sorrow of the Wea'), published in the first and second issues of Ch'angjo in 1919, we can see his innovative use of the third person singular pronoun k<u, and the past narrative tense, where previously stories had been told without conscious use of tense.

Possibly, Kim Tongin's most famous story is Kamja ('Potatoes'; 1925), about a young Korean woman who, faced with extreme poverty and a husband who refuses to work, starts to sell her favours and discovers a hidden bestiality in her own sexuality. Other stories of particular note are the early Paettaragi; (The Seaman's Chant, 1921); the fin-de-siècle-style, Kwangyom Sonata (Sonata Appassionata, 1930); Kwanghwasa (The Mad Artist, 1935); and Palgaragi t'almatta (His Toes Look The Same, 1932). Pulğun san (Bare Hills, 1932) is an example of a story which has a more political content. His historical novels are known for their infusion of individual character into historical figures, for example, Ch'ol'un k'ud<ul (The Young Ones', 1929). Kim Tongin also published two significant pieces of literary criticism; Chos<on k<undaesos<ol ko (A Study of early modern Korean
Kim Tongni (1913-1995)

Kim Tongni was a writer, born in Kyŏngju. He attended Kyŏngshin High School and later served as Professor of Creative Writing at Chungang University in Seoul. He was president of the Korea Literature Association and the Korea Art Academy. Kim’s literary debut was in 1934 when his poem Paengno (White Heron) was published in the Chosŏn ilbo newspaper.

Kim’s work written during the colonial period reveals his discontent with the transformation of Korea under the subjugation of Japan, and this is revealed by his use of rural settings which depict lives plagued with hardship, poverty and superstition. Kim had a deep understanding of rural culture and thus his works such as Pawi (The Rock, 1936), Munyŏ to (Portrait of a Shaman, 1936) and Hwangt'ogi (Tale of the Yellow Earth, 1939) provide a valuable insight into the superstition and beliefs that dominated the lives of the impoverished rural people in this era. Pawi, in particular, focuses on a protagonist who seeks to reverse her illness and misfortune by summoning assistance from a rock renowned for its supernatural qualities. The desperateness and cruelty that Kim invests his characters with has given his readers a lasting impression of conditions in the period of which he writes.

After liberation, Kim’s works changed to reflect the ideological conflicts that abounded between the Right and the Left in the political turmoil that characterises that time. Some of his representative works include Yŏngma (Post Horse, 1948), Hŭngnam ch'ŏlsu (Retreat from Hŭngnam, 1955) and Saban ŭi shipchaga (The Cross of Shaphan, 1955). While Kim’s writing reveals the influence of the Korean War and the commotion experienced by the Korean people, they also manifest an attempt by Kim to endow a universality to the Korean people, their folklore and way of life. Kim was heavily influenced by his comprehension of traditional Korean folk culture and this is exhibited in the many facets of his works.

Kim Tubong (1889- ?)

Kim Tubong was a scholar, educator, nationalist, communist leader and North Korean statesman.

Kim Tubong was born in South Kyŏngsang Province, on 17 March 1890 and received both a traditional and contemporary education. From 1910, while teaching at schools in Seoul, he began to study Korean linguistics and eventually became a leading exponent of Han’gul, the Korean language. Following the First of March Movement activities, Kim, who took part in these events, had to flee to Shanghai, where he continued both teaching and studies. During the 1920/30s Kim published several books on the Korean language, was active in
emigration politics and served as principal of a school for Korean children in Shanghai.

In 1929, Kim was a founding member and secretary of the nationalist Korean Independence Party. His political views during the 1930s were changing gradually towards left-wing and Marxist ideas, though this evolution was slow and he still kept close to conservative nationalists who respected his scholarship and academic achievement. At this time he was more of a left-wing nationalist than a communist. He was an active supporter of the United Front of leftists and rightists against the Japanese occupation. In 1937 he was one of the founding members of the Korean National Revolutionary Party, which unified many groups of left-wing nationalists. However, his shift to communism was boosted from the beginning of Japanese aggression in China. In 1942, Kim moved to Yanan, then the principal base of the Chinese Communist Party. There he founded and led the Korean Independence League, which was to become the leading organisation of Korean communists in China.

In December 1945, Kim and some other leading members of the Korean Independence League returned to Korea. They preferred not to join the Korean Communist Party, but instead stabilised the New People's Party. A year later, though, they merged with the communists to form the Korean Workers' Party. Kim was elected its Chairman, his election probably reflecting his wide popularity among the nationalists and intellectuals. In 1948, he was appointed Chairman of the Supreme People's Assembly, and to all intents and purposes he was the supreme leader of both party (between 1946-49) and state (1948-56). However, he was not motivated by practical politics and remained more as a symbolic figure.

The purges of other factions, launched by Kim Il Sung's group in the early 1950s, set the course for the ousting of Kim Tubong. His influence gradually waned and in August 1956, he was associated with the abortive attempt by some prominent Yanan faction leaders to replace Kim Il Sung - although he played no direct part in it. Nevertheless, he was accused of anti-Party activity and dismissed from office. Later, this accusation was embellished by the usual charges of spying and subversive actions. In 1958, he was expelled from the Korean Workers' Party, exiled and, according to certain data, later assassinated, but the exact circumstances of his death are uncertain.

A Lankov

Kim Tükshin (1604-1684)

Kim Tükshin was a poet of the middle Chosŏn period. His family's ancestral home is in Andong, his courtesy name was Chagong and his pen name was Paekkok. His father was the Governor (kwanch'alsa) of Kyŏngsang Province, and it was his father's patient teaching that enabled Kim to overcome the slowness that resulted from his childhood bout with smallpox and eventually become a stellar poet. Kim read the works of the ancient sages and literary men and from this gained his perception of poetry and his worldview.

Due to the devastation that accompanied the 1636 Manchu Invasion, much of Kim's work has been destroyed. However, there are many of his works transmitted to the present in the literary collection Paekkop chip (Collected Works of Paekkop) which reveal his skill in writing poetry, particularly the oŏn chŏlng (five-syllable quatrains) and ch'ilŏn chŏlng (seven-syllable quatrains) forms. In his works 'Yongho' (Dragon Lake), 'Kujong' (Turtle Arbour) and 'Chŏn'ga' (Family Plot), Kim paints a gripping picture of life in a fishing or mountain village.

Kim was not only a talented poet himself, but he also had an appreciative eye for the poetry of others and provided critical commentary in Chongnam ch'ongji. Some of the poets that he appraised in this work include Yi Haeng, Chŏng Saryong, Chŏng Ch'ŏl and Kwŏn P'il among other famous poets.
Kim Wŏnyŏng (1869-1936)

Kim Wŏnyŏn was a Roman Catholic priest. His baptismal name was Augustino and he was born in Kongju of Ch'ungch'ŏng Province. In 1882 in order to begin his religious studies, Kim travelled to the Malay Peninsula where he entered the Penang Seminary and remained as a student through 1891. In the next year Kim returned to Korea and entered the Yongsan Sacred Heart Seminary (Yongsan Yesu Sŏngshim Shinhakkyo) where he completed his studies. In 1899 at the Chonghyŏn Cathedral (present day Myŏngdong Cathedral) he was ordained by G. Mutel. In the same year he travelled to Cheju Island with the priest Peynet and established the first Catholic Church on the island in Sŏgwip'o. After this time, Kim also established churches in Pongsan of Hwanghae Province and in Anbyŏn of Hamgyŏng Province. In 1904 he was invited by the parish priest to the Haengju Catholic Church in Kyŏnggi Province. In 1914 Kim was made responsible for the church in Suwŏn and there he organised and managed the Samdŏk School to provide religious education. In 1917 he was in full charge of the operation of the Suwŏn parish, and in 1927 he invited nuns to his parish to take charge of the educational responsibilities at the parish school. In 1933 he moved to Shin'g'ye in Hwanghae Province and devoted his full energies to propagating his faith. In 1936 he travelled to Seoul on church business but became quite ill and could not return to his post in Shin'g'ye. In October of the same year while receiving medical treatment at the Bishop’s Office in Seoul he died.

Kim’s activities helped propagate the Catholic faith to wide areas of Korea. He is remembered for both his religious and educational activities during the colonial period when Catholics were subject to harsh persecution by the Japanese.

Kim Yaksu (1892-?)

Kim Yaksu was a politician and labour activist in colonial and post-liberation Korea. His given names were Tujŏn and Tuhŭi and he was born in Kijang Township of South Kyŏngsang Province. Kim attended both Hwimun School and Kyŏngsŏng Vocational School in Seoul, and after graduating in 1918 in order to be better prepared for his domestic activities he traveled to Nanjing where he entered college. However, after hearing of the March First Movement (1919) in Korea, Kim and his friend Yi Yŏsŏng returned to Korea. In September of 1920 Kim, Pak Chunghwa and Pak Igyu formed the first labour movement organisation in Korea, Chosŏn Labour Mutual Aid Association (Chosŏn Nodong Kongje Hoe). After this Kim traveled to Japan where he entered the Sociology Department at Nihon University and there he formed the Hŭktŏhoe (Black Wave Association) with anarchists such as Pak Yŏl and Chang Sangjung. However, Kim had ideological conflicts with this group and soon formed Pukšŏngthoe (North Star Association) which became one of the leading factions in the socialist movement in Korea. In 1922 Kim returned to Korea where he joined with Yi Hŏn, Kim Chongbŏm and Ma Myŏng to form the Puk’unghoe (North Wind Association) which became one of the leading factions in the socialist movement in Korea. In 1924 Kim along with Kim Saguk, Shin Paegu, Yi Yŏng and Chŏng Paek formed the Korean Workers Alliance (Chosŏn Nodong Yŏnmaenghoe), and with Cho Tongu, Chŏng Unhae, Kim Chongbŏm and Shin Ch’ŏl, founded the Chosŏn Communist Party (Chosŏn Kongsan Tang) after receiving approval from the Comintern. However, for this Kim was arrested and remained incarcerated from 1926 until 1931. After the Manchurian Incident in 1937, Kim published a magazine Taegung (The Masses) but after being imprisoned and otherwise harassed by the authorities he ceased publication of the magazine shortly thereafter. Kim steadfastly refused to comply with the demands of the pro-Japanese organizations, and for this he was imprisoned many times during the Japanese occupation.

After Liberation Kim was involved in the political turmoil that was rampant in South Korea. While his ideology was to the left, he worked in cooperation with those on both the right
Kim Young Sam (Kim Yongsam) was the seventh president of the Republic of Korea (1992-96). He was born on an island off the Pusan coast, the son of a fisherman, and grew up during the colonial period, graduating from Kyongsam High School in 1947. He then entered Seoul National University and received his Bachelor's degree in Politics in 1952, during the Korean War. On graduation, he married Son Myongsun. His interest in national politics saw him elected to the National Assembly in 1954, at the age of twenty-seven. During the administration of President Syngman Rhee (Yi Sungman), Kim worked to develop a strong power base in the Kyongsang region, and this would prove to serve him well. After the fall of Rhee's government and the subsequent rise to power of Major-General Park Chung Hee (Pak Chonghui), Kim became a stalwart member of the parliamentary opposition, which occasioned him considerable problems throughout the Park regime.

Kim served as president of the New Democratic Party (NDP) throughout the 1970s and led his Party in trying to overturn the Yusin Constitution of Park. Eventually, his persistent opposition to Park led to his expulsion from the National Assembly in October 1979. Shortly afterwards, Park was assassinated and another military junta, led by Major-General Chun Doo Hwan (Chon Tuhwan), seized power. After the Kwangju Uprising in May 1980, Kim was detained, along with other opposition leaders, and banned from all political activities. By 1983, however, his political rights had been restored and in the National Assembly he ran counter to the ruling party of Chun. As the ROK became increasingly democratized, towards the end of the 1980s, Kim emerged as a strong presidential candidate, along with his fellow opposition leader Kim Dae Jung (Kim Taejung), in 1987. The opposition parties, however, could not compromise and field a single candidate, and this clearly led to the 1987 election as president of another general, Roh Tae Woo (Ro T'aeu), of the ruling party. Roh carried the election with only 37 per cent of the vote; the divided opposition candidates, Kim Young Sam and Kim Dae Jung gaining 28 and 27 per cent respectively. Thus, the inability of the opposition to put forward a single candidate led directly to the ruling party retaining its grip on the nation's highest office.

Kim continued to serve as a National Assemblyman and as head of his party. In January 1990, however, he merged his party with the ruling party of Roh to form the Democratic Liberal Party (DLP), in a move designed to enhance his bid for the presidency. But he was widely criticized in many opposition circles for selling out to the ruling party and the entrenched powers of the government. The move, however, placed him in a prime position for the presidency in the forthcoming 1992 elections. This time the election came down to Kim and his long time rival, Kim Dae Jung, and was decided largely by regional preferences, with Kim Young Sam easily carrying the populous Kyongsang regions. It was his much earlier investment in the Kyongsang electorate that enabled him to win the
presidency with a vote of 42 per cent, compared to Kim Dae Jung’s 34 per cent.

Kim began his administration with campaigns to eliminate government, financial and business-sector corruption and he implemented sweeping reforms such as the ‘real-name financial transaction law’, which sought to do away with illicitly-acquired and untraceable wealth. Kim also lashed out at the so-called ‘Korean disease’, which he interpreted as, ‘greed, conspicuous consumption and lack of concern for one’s fellow man’. In his attempts to be seen as a dynamic and just leader, Kim first pressed for the prosecution of former president Chun and then Roh on grounds of bribery and corruption and for their involvement in the coup d’état that brought Chun to power in 1980. The two ex-presidents were eventually convicted and gaol ed, as were a large number of their cohorts from former governments. On the international stage, Kim tirelessly promoted South Korea and greatly expanded the nation’s prestige both economically and politically. He also strengthened ties with the republics of the former USSR and also with the People’s Republic of China. The economy prospered and by 1996 the ROK had become the world’s eleventh largest economy with a per capita GNP which had climbed above $US10 000. The country appeared to be entering a stage of great prosperity and national affluence under Kim’s leadership.

As the end of Kim’s term approached in 1996, a series of events occurred that greatly undermined the accomplishments of the president. Kim’s ruling party came under siege from the opposition parties concerning financial irregularities and illicit connections with business groups. By the end of the year, Kim’s son had been indicted on charges of influence peddling with a major business group and members of the ruling party were also indicted for other violations. As the allegations escalated, Kim’s popularity plummeted and the ruling New Korea Party (NKP) suffered major losses in the local elections, further reducing Kim’s status. 1997 was a catastrophic year for Kim and his country fared no better. By year’s end, the ROK was suffering from its worst economic crisis since the Korean War and the nation teetered on the brink of insolvency. Kim handled this crisis badly, and merely observed the events taking place, without providing his nation with the strong leadership it required. The December 1997 presidential elections saw Kim’s rival, Kim Dae Jung, elected and the nation turned to its new president for guidance even before his term of office commenced.

Kim Young Sam had taken the highest office, declaring himself the first ‘opposition’ leader to lead South Korea and his intention of bringing the nation to a new level of international prestige. In reality, Kim, who in the early days of his term was so positive in his intentions for the ROK and enjoyed unprecedented popularity, left office in disgrace and was blamed by many for his country’s economic woes. He had proved to be no better than his predecessors in enforcing anti-corruption measures, and it was under his watch that the economic underpinnings of Korea unravelled due to lack of governmental regulation and corrupt financial practices. Thus, Kim’s presidential rule diminished considerably the international prestige of the ROK, and the rebuilding of this and the nation’s economy had to be left to his political rival, Kim Dae Jung.

Kim Yun’gyŏng (1894-1969)

Kim Yun’gyŏng was a Korean linguist and educator. His family’s ancestral home is in Kyŏngju, his pen name was Hangyŏl and he was born in Kwangju of Kyŏnggi Province. When Kim was fourteen he left his hometown and entered Usan School in Seoul, then transferred to Ŭbŏp School and eventually finished his studies at Ch’ŏngnyŏn School in 1913. While at Ch’ŏngnyŏn School he received instruction in Korean linguistics from Chu Shigyŏng which was to have a major influence on his future. From 1913 Kim began teaching subjects such as Korean, history and mathematics at Ch’angshin School in Masan, and in 1917 he enrolled in the Literature Department at Yŏnhwŏ College. At this time Yŏnhwŏ College was at the forefront of the student movement in Korea, which was united in
the Choson Haksaeng Taehoe (General Meeting of Choson Students) of which Kim was president. Kim was also a founding member of the Choson Yon'guhoe (Society for Research in the Korean Language) in 1921 and of the Suyang Tongmaeng Hoe (Moral Cultivation League) in 1922. From 1922 Kim was an instructor in Korean and history at Paehwa Women's School. At this time, Kim received funds from Paehwa Women's School to study abroad and entered the Literature and Asian History Department at the Rikkyo College in Tokyo where he graduated in 1929. Upon graduation, Kim returned to his teaching duties at Paehwa.

From January 1931 Kim began the publication of Tonggwang which published graduation theses, but this publication was suspended after eighteen instalments. After this for a period of about four years, Kim completed his manuscript on many facets of his research in Korean linguistics entitled Choson muntcha kup ohaksa. He had problems with the Japanese authorities and was arrested for a violation of the Public Security Maintenance Law (Ch'ian Yuji pǒp). He then resigned from his teaching duties and was subsequently imprisoned in June 1937. In January of 1938 after his release from prison, Kim published his work Choson muntcha kup ohaksa. However, due to his activities with anti-Japanese groups, Kim was unemployed for five years until 1942 when he received a teaching position at another girl's school. In the following year he was again arrested and imprisoned for his activities in the Korean language movement.

After liberation Kim took a position as head of the literature department at Yŏnhŭi College, and later served as president of the college. In 1948 he published Nara malbon (Korean Grammar) and Chungdûng malbon (Secondary School Grammar). He continued to be active in many academic organisations after liberation and received honours for his previous publications and activities. He further published Kodûng nara malbon (High School Korean Grammar) and Chungdûng nara malbon (Secondary School Korean Grammar) in 1957 and in 1962 retired from Yŏnse (Yonsei) University after reaching the mandatory retirement age. Even after retirement, Kim continued to be active in academic circles publishing Saero chiŏn kugŏhaksa (New Writings on Korean Linguistic History) in 1963, and Hang'yŏl kugŏhak nonjip (Collected Papers on Korean Linguistics by Han'gyŏl). In December 1977 he was posthumously honoured with the Medal of Merit for Nation Founding by the government of the Republic of Korea.

**Kim Yushin** (595-673)

Kim Yushin is known as the greatest general of the Shilla Kingdom and is also remembered for his statesmanship. His great-grandfather was the King Kuhae of Kŭngwan Kaya who had surrendered to Shilla in 532. In order to distinguish the descendants of the royal family of Kŭngwan Kaya from the royal family of Shilla that both had the surname of Kim, the descendants of the former Kaya State were designated as 'new' Kims. Kim Yushin's mother was also of royal blood being the great-granddaughter of King Chijiŏng (r. 500-514). Kim's family was of the chingol (true bone) status in Shilla which was the second highest rank of the Kingdom, and in actuality became the highest rank after the death of Queen Chindŏk (r. 547-654) who was the last of the sŏnggol (sacred bone) line. The union of the ruling family from the former Kaya State and the Shilla Kingdom continued to be solidified and with the marriage of the future King T'aejong Muyŏl (r. 654-661) to the sister of Kim Yushin, we can see the formation of the ruling class in the middle Shilla period. Kim's eldest son was to become King Munmu (r. 661-681) who unified the Three Kingdoms with his father's help.

Kim was born in present day Chinch'on of North Ch'ungch'ong Province and at the age of fifteen he entered the hwarang (youth corps) for the sons of the aristocratic class of Shilla. It is while Kim was in the hwarang that he learned the leadership skills and essential military training that would enable him to become a great military leader in the future. Kim's first military appointment came in 629 when he was thirty-four. At this time Kim
participated in the Shilla attack on Nangbi Fortress of Koguryō and he performed with valour and distinction in this important victory for the Shilla forces. Kim rose through the Shilla military ranks and became not only an important field leader for the Kingdom, but also a great tactician whose skill enabled Shilla to defeat their more powerful northern neighbour, Koguryō. Kim’s early activities are not known for certain, except that he was an important figure in the military activities of Shilla.

In 642 Kim was appointed as Sop’an (the third of the seventeen official ranks of Shilla) and began the first of many military excursions against the Paekche Kingdom. Despite his repeated success against Shilla’s western neighbours, the tide of the struggle among the Three Kingdoms did not turn until Tang China joined the struggle on the side of Shilla. In 660 Shilla forces led by Kim in unison with Tang naval forces attacked the Paekche capital of Puyō which was being defended by the great general Kyebaek (?-660). The Paekche general was badly outmanned and after a heroic struggle fell to the forces of Kim. This marked the end of the Paekche Kingdom. After the fall of Paekche, Shilla and Tang turned to Koguryō, which fell to the united forces in 668, thereby unifying the Three Kingdoms under Shilla.

Kim is remembered as not only one of the greatest generals in Korean history, but also for his tomb which contains some of the finest examples of Shilla stonework extant today. The tomb is located in Kyongju of North Kyongsang Province and has been designated as historic site no. 21. Moreover, there are many legends associated with Kim Yushin and his spirit has even been incorporated into the pantheon of shamanistic deities.

Kimch’aek

Kimch’aek, previously known as Songjin, is situated on the east coast in North Hamgyōng Province. Ssangpp’o Stream runs through the northern part of the city into Songjin Bay. As an important east coast port, during the Japanese occupation the city served as a vital transport link between northeast China and Japan. At that time, the city was also developed as a centre for the chemical industry.

Rice, barley and beans are the area’s main agricultural crops. Fishing boats operating out of local ports bring in catches of walleye pollack, cod, sardine, mackerel, yellowtail, flatfish and octopus. Based on the local fishing industry, the city also contains canneries and fish-oil plants. There are mines and quarries in the region, excavating graphite, magnesite, clay and coal. Taking advantage of the area’s mineral resources and an ample power supply, foundries, refineries and brick-making plants have been set up in the city.

Until modern times, Kimch’aek was a quiet fishing village; and consequently, there are few historical sites in the area. There is a 666 metre-long earthen fortification known as Kosong Fortress on the grounds of Shimsang High School and part of a stone fortress that was built in 1614 near the old Songjin Ferry terminal. The city’s first modern schools were the coeducational Poshin School and Hyopshin Junior High School set up by R. Grierson, a Canadian missionary.

Kimch’i

Kimch’ón

Situated in the southwestern part of North Kyongsang Province, Kimch’ón is comprised of the town of Ap’o and the townships of Kammun, Kamch’on, Kaeryong, Kusông, Nam, Nongso, Taedök, Taehang, Pongsan, Puhang, Amo, Chirye, Chungsan and Choma. The present city was formed when Kimch’ón City recently expanded to include Kümnung County. Mt. Sudo (1 317m), Mt. Wólmae (1 023m), Mt. Taedök (1 290m), and other
peaks of the Sobaek Mountain Range rise in the south, and in the north there is a basin.

Large quantities of rice are grown in the Kūmnūng and Kaeryŏng plains while dry field crops are cultivated in the more mountainous areas. The area’s specialty crops include sesame, mushrooms and yellow-leaf tobacco. Grape vineyards as well as apple and pear orchards are also a common sight in the area. In the downtown area of Kim'ch’ŏn, factories produce a number of items including farming machinery, raw silk, wigs and ko-hemp wallpaper.

The city’s tourism is centred around the area’s high mountains, scenic rivers and Buddhist temples. Kusŏng Resort is located in Kusŏng Township where the Hawŏn and Kamho Streams meet. The resort is famous for its clear stream water, white sand beaches and lovely pine forests. Restaurants in the area specialise in making stews of minnows, Prussian carp and mandarin fish. West of the resort, one finds Tŏkch’ae Fortress.

Paekhwadong, located in Choma Township, is another famous tourist destination. Located in a picturesque area, this small village is best known as the place where Yi Segan lived. Since Yi was famous for his filial piety, the village was previously known as Hyojadong (Filial Son Village). Its present name of Paekhwadong (Hundred Flower Village) comes from the numerous flowers and trees that Yi’s descendants have planted in the area in honour of their esteemed forefather. In the village, one also finds Sangch’’in-sa, a shrine commemorating fourteen outstanding members of the Nongsŏ Yi clan.

The area has a number of historical sites associated with Buddhism and Confucianism. Ancient monasteries in the area include Mt. Kammun’s Kyerim Temple (founded by Ado), Mt. Paengma’s Kobang Temple, Mt. Hwangak’s Chikchi Temple (See Chikchi Temple), Mt. Pibong’s Ponggok Temple founded by Tŏson, Mt. Sudo’s Sudo Hermitage and Ch’ongam Temple in Chungsan Township. Sudo Hermitage and Chikchi Temple in particular house a large number of ancient artefacts.

In addition to Buddhist temples, there are a number of Confucian sites in the area. In Kusŏng Township’s Hawŏn Village, one finds Mosŏngjŏng, a small pavilion overlooking rice fields. This site is famous as the place where Yi Changwŏn studied. In 1697, his great-grandson Chinyŏng inscribed the characters ‘Mosŏng Rock’ on a nearby granite boulder and his descendants later built the pavilion that now stands at the site. There are also a number of old Confucian schools in the area, such as Chirye Hyanggyo, Kaeryŏng Hyanggyo, Wŏn’gye Sŏwŏn, Chadong Sŏwŏn, Ch’unch’ŏn Sŏwŏn, Kūmsan Hyanggyo (in central Kim’ch’ŏn), Kyŏngyang Sŏwŏn (in Kusŏng Township), Todong Sŏwŏn (in Kusŏng Township), Sŏmye Sŏwŏn (in Taedŏk Township) and Tŏngnim Sŏwŏn (in Ap’o). Modern institutions of higher education include Kim’ch’ŏn Nursing College and Kim’ch’ŏn Junior College.

Kimhae

Adjoining Pusan in South Kyŏngsang Province, Kimhae comprises the town of Chinyŏng and the townships of Taedong, Sangdong, Saengnim, Changyu, Ch’uch’ŏn, Chinnye and Hallim. In recent years, the city has expanded to include the areas previously known as Kimhae County. Mt. Much’ak (700m) rises in the north, Mt. Shinŏ (630m) in the east, while Yongji Peak (750m) and Mt. Pulmo (802m) are to the city’s southwest. The Naktong River winds around Kimhae’s northern border before splitting into two branches.

On the lower reaches of the Naktong River lies the extensive Kimhae Plain. Along with the Honam Plain, this is one of the largest plain regions in Korea. Of the city’s total arable land, over three quarters is used for rice production. In addition to rice, many farms produce vegetable and fruit crops for the Pusan metropolitan markets. Farmers are now diversifying their produce, cultivating persimmons and chestnuts and raising chickens and
pigs. Along the coast, clam and seaweed and harvested, while factories in the region produce food-stuffs, textiles, chemical products and machinery.

Most tourists visiting Kimhae and its environs come from nearby Pusan to see the area's natural and historical sites. Mt. Shinö, with its interesting rock formations, is an impressive location, and at its foot stands Unha Temple. In Changyu Township, between Yongji Peak and Mt. Pulmo, is Changyu Valley. The area is famous for its thick forests and clear waters. Here, is Changyu Hermitage, a small temple built by the monk Changyu. Next to the hermitage is a stone stupa housing Changyu's sarira. In addition to their scenic beauty, the area's marshes and waterways serve as an important habitat for wildlife. In particular, the lower reaches of the western branch of the Naktong River are visited each year by migrating birds. Snipe, swans and cormorants are commonly found here.

The city has a rich historical heritage. During the Three Han period, the area was known as Kuya, and it honoured Suro (legendary reign 42-199) as its first king, developing into the Pon (original) Kaya Kingdom.

Archaeological excavations in the area have provided important insights into the culture of Kaya. In Chuch'ön Township's Yangdong Village, excavations have revealed an ancient cemetery. Artefacts from the site date from the late second century B.C.E. to the fifth century C.E. A total of 562 burial sites, including wooden coffin tombs, outer coffin tombs, vertical stone chamber tombs and jar coffins have been recovered, along with 1,925 pieces of pottery, 2,889 metal objects, 45 bronze objects, 69 ornaments and 24 other miscellaneous objects.

Buddhist and Confucian sites are to be found in the city. Buddhist artefacts here include a Koryö-era stone lantern and tortoise-shape stele holder at the Kamno Temple site in Kamno Village, a stupa in Toyo Village, three-storey pagodas in Pömbang Village and An'gok Village (South Kyöngsang Province Tangible Cultural Assets No. 23 and 24) and a Buddha carving in relief on Chin'yöng Peak. Confucian schools in the area include Kimhae Hyanggyo just west of Kumsöng Temple in the city centre; Shinan Village's Songdam Söwön founded in 1703; Shinyong Village's Miyang Söwôn built in 1832 and Chudong Village's Shinsan Söwön. However, all that remain of Songdam Söwôn and Miyang Söwôn are steles. Modern educational institutions here include Inje University in Òbangdong.

Kimje

Situated in the centre of North Cholla Province, Kimje is comprised of the town of Man'gyöng and the townships of Kongdök, Kwanghwal, Kümgu, Kumsan, Pongnam, Puryang, Paekku, Söngdök, Yongji, Isö, Chuksan, Chinbong, Ch'öngha and Hwangsan. The city covers a total area of 553 square kilometres and as of 1986, had a population of 169,565. Kimje is surrounded by Ch'ônju and Wanju County to the east, Puan County and Chöngap to the south and Iksan and Kunsan to the north. Situated between the industrial centres of Iksan, Ch'ônju and Kwangju, the area's roads bear a heavy load of traffic. In addition to the local road network, the Honam Railroad Line and Honam Expressway pass north-south through the eastern part of the city. The Man'gyöng River flows west along the city's northern border while the Tongjin River marks the border with Puan County. Mt. Moak (793m), Kuksa Peak (543m) and Mt. Sangdu (575m) rise in the southeast. Apart from these mountains, the city's topography is characterised by flat areas mostly under fifty metres in elevation. Along the lower reaches of the Tongjin and Man'gyöng Rivers and Wönp'yöng Stream, is the extensive Honam Plain.

With fertile plains, good sources of irrigation water and an annual rainfall between 1,200 and 1,250mm, Kimje is the nation's leading grain producing region. Fifty-nine per cent or thereabouts of the city is arable. Of this, seventy-six per cent grows rice and twenty-four...
percent dry-field crops. In the Hwangsan and Yongji townships, sweet potatoes and ginseng are grown and in the Paeksan, Yongji, and Paekku townships, there are numerous sericulture operations. There are many beef and dairy farms here too, particularly in the Kûmsan, Yongji and Paeksan townships. Fishing and fish-farming in the Yellow Sea are another source of income and there are also several small-scale salt flats. Local industry is limited to silk manufacture and the processing of yangsongi mushrooms.

The area contains a number of important historical sites and relics. In Kimje’s Kodong Village one can still see remains of Sŏng Fortress. After the Paekche Kingdom fell, Shilla troops, on a punitive expedition against guerillas attempting to re-establish the Paekche Kingdom, are said to have been stationed here. Buddhist temples in the area include Sambul Hermitage, Hûngbok Temple, Manghae Temple, Munsu Temple, Kwishin Temple and Kûmsan Temple. Founded by Chînp’yo during the Shilla period, Kûmsan Temple was the central monastery of the Pôpsang (Dharma Characteristics) sect. Within this monastic complex, one finds a stone pillar, a statue platform, a stele commemorating Royal Preceptor Hyedok, a five-storey pagoda, a bell-shaped stupa, a hexagonal multi-storey pagoda, banner-pole supports and the Shimwŏn Hermitage Pagoda (Treasures No. 22-29 respectively).

Confucian schools in the area include Yongam Sŏwŏn (1488), Namsan Sŏwŏn (1574), Chŏsan Sŏwŏn (1577), Hoedong Sŏwŏn (1602), Chiûm Sŏwŏn (1634), Paeksŏk Sŏwŏn and Haktang Sŏwŏn, (both founded during the reign of King Hyojong (r. 1649-1659), Kûmgu Hyanggyo (first built in 1407 and moved to its present site in 1676), Man’gyŏng Hyanggyo (founded in 1407 and moved to its present locations in 1637) and Kimje Hyanggyo (founded in 1404 and reconstructed in 1635).

In order to promote the area’s unique traditions, the Pyŏkkol Cultural Festival is held here every October. The festival commemorates Pyŏkkolje, Korea’s oldest man-made irrigation facility, which is located in Puryang Township’s Wôlsŏng Village. During the festival, local residents play tug-of-war and stage ssangyong nori, a dramatic enactment of a battle between a white and green dragon at Pyŏkkolje.

Kimp’o County

Situated in northwest Kyŏnggi Province, Kimp’o County is comprised of the town of Kimp’o and the townships of Koch’on, Taegot, Yangch’on, Wŏlgot, Hasŏng and T’ŏngjin. Except for the southeastern area, the county is surrounded by water. To the east lies Kanghwa Island, separated from the mainland by a narrow strait. As a result of a long process of erosion combined with silt deposits from the Han River, the county’s terrain is characterised by low, flat plains.

Kimp’o County’s agriculture is primarily devoted to rice cultivation. Irrigation water for the area’s farms previously came from the Han River, which flows through Seoul, and Kulp’o Stream, which flows through Puch’ŏn. As a result of Seoul’s and Puch’ŏn’s industrial development, this water is now polluted and its use in agriculture has been restricted, forcing the county to look for alternative irrigation sources. Rice, potatoes, beans, leafy vegetables and ginseng are grown in the area. Dairy farming is another important source of income for local residents. Although the county’s tourist industry is not large, many visitors pass through on their way to Kanghwa Island.

There are a number of historical sites in the area. In Wŏlgot Township, one finds Munsu Fortress. First built in 1694 and repaired in 1812, this 2 400-metre fortification guarded the strait between Kanghwa Island and the mainland. It is famous as the site of a pitched battle during the French invasion of Kanghwa in 1866. As for Confucian sites, there is the Ujŏ Sŏwŏn (Kyŏnggi Province Tangible Cultural Asset No. 10) and Kunha Village’s T’ŏngjin Hyanggyo (county public school). In Kimp’o’s Pukpyŏn Village, one can see Kimp’o
Hyanggyo, which was founded in 1122. The county’s Buddhist sites include the Munsu, Kâmjông, Yonghwa, Kwangûn, Yakh’ôn and Kyehyang temples. At Munsu Temple, one finds a stupa and stele (Kyônggi Province Tangible Cultural Asset No. 91) commemorating Úishim (1592-1665), who was styled Grand Master P’un’gdam.

King Sejong Memorial Hall

King Sejong Memorial Hall (Sejong Taewang Kinyôngwan) is situated in Ch’ôngnyangni-dong in Seoul. Founded in October 1968, the hall houses texts and historical materials related to King Sejong (r. 1418-1450). The non-profit foundation Sejong Taewang Kîn’yôm Sàôphoe is responsible for management of the hall. In addition to collecting and exhibiting historical items, the foundation publishes numerous annals and treatises related to Sejong and other Chosôn-era kings.

Kiryô sup’îl (Essays of Kiryô)

Kiryô sup’îl is a collection of records concerning the activities and deeds of Korean patriots from the end of the Chosôn period until liberation in 1945. This work was compiled and edited by Song Sangdo and includes a preface by Kwôn Sangik. Song collected records such as newspaper clippings that recorded events in the lives of Korean patriots. He arranged these materials into a five-volume and five-fascicle collection, but this work was not published until 1955 after Song’s death, when the National History Compilation Committee (Kuksa P’yônch’an Wiwônhoe) included it in the second volume of Han’guk saryo ch’ôngsŏ.

The patriots covered in this work begin with Yi Shiwôn who died while trying to protect his country from the 1866 invasion by the French and include a total of 239 patriots. It chiefly focuses on the activities of patriots at the end of the Chosôn period. Some of the major events of this period that are covered by Song include the June 10 Independence Demonstration in 1926 (6-10 Manse Undong), the Kwangju Student Demonstrations in 1929 and other events in the struggle for national sovereignty. Kiryô sup’îl also includes the activities of the Shanghai Korean Provisional Government, the Koryô Communist Party (Koryô Kongsan-dang) and the Korea Revolutionary Corps (Koryô Hyôngmyông Tan) in addition to the deeds of individual patriots such as An Chunggûn (1879-1910) and Min Yônghwon (1861-1905). Special attention in this book is given to the guerrilla warfare waged by the Righteous Armies (Úibyông) against the Japanese colonial occupation.

This work provides valuable data for research into the independence activities of Korean patriots during the tumultuous period in which Korea lost her national sovereignty. Therefore, Kiryô sup’îl provides the present day reader with a window to view the activities of those Koreans who bitterly resisted the Japanese colonial designs for Korea.

Kisaeng

In traditional Korean society the kisaeng female entertainers were known by various appellations, including kînyô and hwaryugye yôja (pleasure women). While it is rather vague as to when the class and institution of kisaeng became formalised in Korean history, there are many records of women serving men from ancient times. Originally, there was no distinction between a girl or women working as a maid (pi) and a kisaeng, although the former are known to have existed at an earlier time. It is thought that the entertainment functions of the kisaeng may have originated in the songs and dances of the female shamans (mudang) of the southern Korean provinces. Thus, one possible origin of the kisaeng could be the degraded mudang who became female entertainers in order to earn a living. In addition to hereditary kisaeng such as these, there were also those kisaeng who had been reduced on the official census registers from female maids to kisaeng.
The social class of kisaeng was the same as that of a male or female slave, and once a person was designated as a member of the ch'ŏnin (low-born) class, there was no release from this classification. Since, in Choson, a child's status was determined by that of its mother, the offspring, say, of the union of a yangban and a kisaeng would be of the low-born class. Thus, kisaeng were included in the lowest strata of Choson society, and for a woman to enter this calling would result in a degradation of her social status. The occupation of kisaeng, while being one of the very few available to women of Choson, was considered to fit the so-called 'eight low-born' (p'alch'ŏn) occupations.

Upper class kisaeng were, however, more than prostitutes and were required to be multi-skilled, in shijo poetry composition, dance, the art of conservation and music, among other talents. Accordingly, there are many famous kisaeng from traditional Korean society, such as Hwang Chini, of the early sixteenth c., whose skill in poetry composition was highly acclaimed. The contribution of kisaeng to such literary genres as the Koryŏ poem-songs (Koryŏ kayo) is substantial, and a sizeable body of material has been preserved. Perhaps the best known kisaeng was Non'gye (? -1593), a kisaeng in Chinju during the 1592 Japanese Invasion. She sacrificed her own life in order to assassinate a Japanese general, and is regarded highly for her patriotism.

By the end of Choson there were three classes of kisaeng -- the first class kisaeng, most of whom were married; the second class kisaeng who were basically prostitutes, but who did not work openly; and the third class kisaeng, who were simply prostitutes. The first class kisaeng were well-trained and for the women of Choson, well educated. Many were the daughters of yang'in (freeborn commoners) families, and after receiving intensive training in matters of etiquette, music and literature, they primarily entertained the high-ranking members of Choson officialdom and were thus often called kwan'gi (government-official kisaeng). Since they were highly-skilled in the arts and music, they were often called upon to perform at royal banquets. Like the government officials they served, these women received a stipend from the government. Second class kisaeng, however, while little more than prostitutes, were required to show greater discretion than their third class counterparts. The three classes of kisaeng could be further differentiated by their hairstyles and mode of dress. Also, by the commencement of the colonial period, the colour of their parasols indicated their class, with first class kisaeng carrying a red parasol. This distinction was not, however, uniform, with many third-class kisaeng carrying red parasols during the later colonial period.

Girls often entered their profession as early as the age of ten, and served as Kisaeng apprentices for a number of years before establishing their own clientele. Many mature kisaeng retired to positions superintending the younger kisaeng or left the profession. A further option was to work as a female doctor (ǔnyŏ) and provide medical services to palace ladies, servants and kisaeng, or else in the Bureau of Royal Attire (Sanggwiwŏn) as a seamstress. But when there was a banquet, these retired kisaeng would again don their costumes and perform for the assembly.

While the profession of kisaeng does not exist today as it once did in modern Korea, there are still those women who pursue careers very much like the traditional kisaeng. These women, unlike their predecessors, are not bound to their calling, and are chiefly highly-skilled entertainers who perform traditional Korean songs and dances. Thus, while prostitution certainly exists in modern Korea, those women who perform as kisaeng are merely traditional entertainers.

Bibliography

Kisan (see Kim Chun'gun)
Ko Shiŏn (1671-1734)

Ko Shiŏn was a poet of the late Chosŏn period. His family’s ancestral home is in Kaesŏng, his courtesy name was Kungmi and his pen name was Sŏngjae. In 1687 he passed the yokkwa (government service examination for foreign languages) and after that time he travelled to Qing China on various occasions as a member of official Korean embassies. Ko was attached to the Bureau of Foreign Relations (Woegyo Kwan) as an official of the second rank. In 1734 on another trip to China, Ko became ill and died.

After Ko’s death those who worked under him gathered his materials into a collection. In particular Ko was known for his skill in composing Tang-style poetry and along with Im Wonjun, Hong So'tae and Ch'ŏng Naegyo was considered one of the four masters of this style. Ko also compiled the poetry collection Sodae p'ung'yo (Poems of a Peaceful People) which was a collection written by commoners from the time of King Sejo (r. 1455-1468) until King Yongjo (r. 1724-1776). This work is considered important in the history of Korean literature since it displays the works of those outside the upper classes. In addition, Ko’s own work Sŏngjae chip (Collected Works of Sŏngjae) is extant.

Ko Ŭn (1933-)

Ko Ŭn is a poet who was born in Kunsan of North Cholla Province. His given name is Unt’ae and his Buddhist name is Ilch’o. Ko made his debut in November 1958 with his poem ‘Pombam ūi malssŭm woe’ that was published in Hyŏndae munhak (Modern Literature). He is a prolific poet and has published numerous poetry collections, novels, essays and other critical writings.

Ko’s writing style has undergone frequent changes with his maturation as a poet. He began with writings that expressed his nihilistic views of life, which he saw as plagued with illness, mental anguish and death. This initial nihilism was gradually replaced with his tragic sense of history that had roots in the trials of the Korean people throughout the twentieth century. From this historic framework, Ko broached issues such as the political oppression of the Korean people and the social turmoil that has surrounded modern Korean history. In his latest poems, Ko is heavily influenced by his own brushes with the military dictatorships of Korea that resulted in prison terms for him. It is these experiences, however, that permit the poet to see the precious nature of life expressed in simple objects such as a ray of sunshine or patch of clear sky. Ko is primarily an activist, but his poems are lively and engaging. In order to convey his ideas and emotions, he uses techniques such as exclamation, imperative and question to engross the reader.

Among Ko’s many writings are poetry collections such as P’ian kamsŏng (Sensitivity in Another World, 1960), Paektu san (Mt. Paektu, 1987) and Ajik kajiam1n kil (The Road Not Yet Taken, 1993). His novels include Hwangp’o ilgi (Record of Hwangp’o, 1976) and Naega mandŭn samak (The Desert I Made), and In’ganŭn sulp’ŭryŏgo t’aenatt’a (Men are Born to be Sad, 1968) and Sarangŭl wihayŏ (For Love, 1978) are among his essay collections.
Koguryo (see History of Korea)

*Kobong munjip* (Collected Works of Kobong)

*Kobong munjip* is the literary collection of the mid-Chosŏn scholar-official, Ki Taesŭng (1527-1572). It is composed of fourteen fascicles in eleven volumes and is a woodblock-printed work. The original collection consists of three fascicles in a like number of volumes, and this has been augmented by various supplemental works. The collection was first published in 1614 by the author's son, and was subsequently supplemented in 1629. It contains a variety of pieces including essays, funeral dirges, and official documents. However, it is the author's writings on philosophy and neo-Confucian ideology that are best known. The work is highly valued by scholars of traditional Korean philosophy and the debates that surrounded this theme in the mid-Chosŏn era.

**Kŏch’ang County**

Located in the northwest corner of South Kyŏngsang Province, Kŏch’ang County consists of the town of Kŏch’ang and the Kabuk, Kajo, Koje, Namgang, Namha, Mari, Puksang, Shinwŏn, Ungyang, Wich’ŏn and Chusang Townships. There are a number of high mountains in the area, including Mt. Tŏgyu (1 614 metres), Mt. Wolbong (1 279 metres), Mt. Sambong (1 254 metres), Mt. Sudo (1 316 metres) and Tanji Peak (1 327 metres) in the north, Mt. Kibaek (1 370 metres) and Mt. Kŭmŭn (1 354 metres) in the west, and Turi Peak (1 313 metres), Úisang Peak (1 046 metres), Mt. Pige (1 126 metres) Mt. Odo (1 134 metres) and Mt. Susŏng (899 metres) in the east. The south consists of a relatively flat basin surrounded by Mt. Porok (767 metres), Mt. Ch’ŏlma (705 metres) and Mt. Kalchŏn (763 metres). Runoff from these mountains forms the upper tributaries of the Nakdong River.

The county has a high agricultural output. Besides grains and beans, farmers in the region produce cotton, castor beans, sesame and hemp. Since the 1930s, Kŏch’ang Town has been a major apple growing region. In addition to agriculture, there are several mining operations in the area, which extract kaolin clay and gold. Most of the area’s industry is devoted to either textiles or machinery production. Tourism is another source of income for the area. Mt. Tŏgyu National Park draws a continuous stream of visitors throughout the year. This mountainous area, serving as a buffer between Shilla, Paekche and Kaya during the early Three Kingdoms period, contains a number of ancient artefacts.

Kŏch’ang County has some Confucian relics, including the Kŏch’ang Hyangggyo (County public school) which was built in 1415, Tosan Sŏwŏn (private academy), Namjŏn Sŏwŏn, Wan’gye Sŏwŏn (built in 1664), Sŏngch’ŏn Sŏwŏn (built in 1637) and Kuyŏn Sŏwŏn (built in 1694). There are also a number of pavilions including Soshim-nu in Namha Township, Yosu-jŏng in Wich’ŏn Township, Inp’ung-jŏng in Shinwŏn Township and Chaha-ru in Ungyang Township. The area’s Buddhist artefacts include a gilt figurine of a standing Bodhisattva (Treasure No. 285) which was excavated in Kŏch’ang, a standing stone Buddha figure (Treasure No. 377) in Kŏch’ang’s Yangp’yŏng-dong, and another such figure (South Kyŏngsang Province Tangible Cultural Asset No. 36) in Nongsan Village.

**Koch’ang County**

Located in the southwestern corner of North Cholla Province, Koch’ang County consists of Koch’ang Town and the townships of Kosu; Kongum; Taesan; Mujang; Puan; Sangha; Sŏngnae; Sŏngsong; Shilli; Shimwŏn; Asan; Hŭngdŏk; and Haeri The county’s eastern border is demarcated by the Noryŏng Mountain Range.
Although the county has some mountainous terrain, much of it is level land and eminently suitable for rice cultivation. Barley; sweet potato; varieties of bean; Chinese cabbage; and tobacco are also grown here. Although the county has over 80 kms. of coastline, there is not a great deal of commercial fishing. In Haeri salt flats extract sea-salt. Since Koryô, the area has been famous for its porcelain and earthenware pottery. Local kilns still produce high quality porcelain as one of the region’s leading speciality products.

Kôch’ang, an ancient town, has a great number of historical artefacts and relics. The Hyogamch’ôn (Filial Piety that Moved Heaven) Well in Shillim is associated with the legend of a model filial son of early Chosôn, who brought water everyday from far away, for the memorial offerings to his parent’s grave. Heaven, moved by his filial devotion, sent a lightning bolt that instantly created a well next to the grave site. There is now a stone marker in front of the well, commemorating the son’s devotion. The Ch’a’ňgyo Shrine was built behind the well during the reign of King Yŏngjo (r. 1724-1776).

Chidong Village has a large Bronze Age dolmen. This is the southernmost northern-style dolmen on the Korean peninsula. It is known as Mangbuktae (Looking North Platform) because Song Kisang (1612-1667), a local scholar, rallied his compatriots here, urging them to pledge loyalty to the country after the Manchu Invasion of 1636. The local people bring offerings of clean water to the dolmen on the first and fifteenth day of each lunar month.

Moyang Fortress is another pointer to the town’s past. Along with Pôpsongjin Fortress to the south and Ibam Fortress to the north, this 5-metre high, 1 680-metre long stone wall formed a vital line of defence protecting the fertile plains of the region. The fort originally contained the offices of the town magistrate, the government guest house and auxiliary buildings including storehouses, a gaol and a pavilion. Every year during the Wall-walking Festival, the local people march along this ancient wall, carrying a stone on their heads. Legend has it that anyone who walks the wall three times in this fashion will have all of his or her wishes fulfilled and will be reborn in the ‘pure land’ in the next life. Some days before this celebration, gongs and drums are struck and the streets are festooned with colourful lanterns.

A thatch-roofed house stands near the gateway to the Moyang Fortress. This is the birthplace of Shin Chaehyo (1812-1884) who made a significant contribution to the development of p’ansori (one-man opera) in his patronage and training of kwangdae; consolidation and editing extant textual materials; exposition of theory; and composition of p’ansori itself. Shin is famous for creating a p’ansori version of the popular Ch’unch’ang chôn (Tale of Ch’unhyang).

There are some Buddhist temples of note in the area, including Munsu; Hŭngdŏk; Soyo; Sangwŏn; Mongbul; and Yonghwa temples as well as Naewŏn Hermitage. Sŏnun Temple is said to have been built in 577. This ancient temple contains some important historical relics, including a gilt-bronze seated Bodhisattva (Treasure No. 279); a seated image of Ksitigarbha Bodhisattva (Treasure No. 280); a six-storey pagoda (South Cholla Tangible Cultural Asset No. 29); a large bronze bell (South Cholla Tangible Cultural Asset No. 31); and the main Buddha Hall (Treasure No. 290). There is also a Buddha in relief (South Cholla Tangible Cultural Asset No. 30) at the temple’s Tongbul Hermitage. In Asan Township, there is Chinhung Cave where Shilla’s King Chinhŭng (r. 540-576) is said to have undergone spiritual cultivation in his final years.

Koesan County

Situated in North Ch’ungch’ŏng Province, Koesan County comprises the towns of Koesan and Chŏngp’yŏng, and the townships of Kammul, Toan, Mun’gwang, Pulchŏng, Sari, Sosu, Yŏnp’ung, Changyŏn, Chŏngan, Ch’ŏngch’ŏn and Ch’ilsŏng. The county covers
710

an area of 936.98 square kilometres and as of 1986, had a population of 106,867. The Noryŏng Mountain Range runs through the county’s western area while the Sobaeck Mountain Range runs along its border with Mun’gyŏng in North Kyŏngsang Province. In order to preserve its scenic beauty, the latter area has been designated Mt. Songni National Park (See Songni Mountain). As an inland mountainous region, the county receives 1500mm of rainfall annually and experiences sharp variations between summer and winter temperatures.

Roughly 70 per cent of the population is engaged in farming an area of the county that is about twenty per cent arable. Of this land, 40 per cent is used for rice cultivation and 60 per cent for dry-field crops such as barley, wheat, sorghum, garlic, bean and potato. The area’s speciality crops are ginseng and tobacco. Well-known for yellow leaf tobacco, the county produces about 4,000 tons annually. A gradual decline of the ginseng crop has occurred as a result of cheaper imports from China. Mineral resources include iron in Pulchong; tungsten and coal in Ch’ongch’ŏn; coal in Kammul; and limestone in Ch’ŏngan and Ch’ilson. The limestone found here is used in local potteries in porcelain production, as is the iron oxide, for designs in black on the porcelain’s white background. In order to provide power to the region, a hydro-electric plant was built in Ch’ilson’s Saŭn Village in 1952.

Due to its lack of heavy industry, the region is relatively free of pollution, making it an important plant and wildlife habitat. Koesan County is home to the unique white forsythia and white herons, estimated at some 300 in number, to be seen in the area. In addition to its flora and fauna, Koesan County offers numerous scenic attractions, such as the Sŏnyu Valley in Ch’ŏngch’ŏn’s Songmyŏn Village and the 15-metre-high Suok Waterfall in Yŏngp’ung’s Wŏnp’ung Village. In Chungs’ yo’ng Village one finds Chungs’ yo’ng mineral spring. Containing calcium carbonate and iron, the spring water is said to alleviate both skin disease and gastrointestinal afflictions.

The county contains a number of important historical sites. On its eastern border, to the north of Mt. Choryŏng (1017m), stands an old fortress gate. Built during the Three Kingdoms period, the gate was part of a fortress that stood on Mun’gyŏng Saejae and North Ch’ungh’ŏng Province. Important Buddhist sites in the area include Kagyŏn Temple in Changyŏn’s T’aesŏng Village and the old site of Ponghwa Temple in Sari’s Sadam Village. At the latter site, there is a 4.97-metre-high, five-storey pagoda which was built during early Koryŏ. Confucian schools found in the area include Koesan Hyanggyo (established in the early Chosŏn period) in Koesan’s Sŏbu Village, Yŏnp’ung Hyanggyo (established in 1515) in Yŏnp’ung’s Haengch’ŏn Village, Ch’ongan Hyanggyo in Ch’ongan’s Umnae Village and Kunbang Sŏwŏn (originally established as a shrine in 1688) in Ch’ongan. As a good example of Chosŏn architecture, there is the Kim Kiung residence in Ch’ilson. In most respects, the house is a typical residence of a southern aristocrat during late Chosŏn.

Kogum Island

Kogum Island is part of Kumsan Township in South Cholla Province’s Kohŭng County. The island covers a total area of 62.08 sq. kms. and has a 54 km. long coastline. Kogum is a mountainous island, the highest points being Chŏktae Peak (592m) and Yongdu Peak (419m). Most of the villages are situated in the less elevated areas to the island’s west and northwest. There has been extensive land reclamation on the northern and western coasts.

Roughly one quarter per cent of the island area can be farmed, with about 5 sq. kms. used for rice and 12.0 sq. kms. or thereabouts for dry-field crops such as garlic, onion, barley, bean and turnip. Local marine products include eel, frog flounder, gizzard shad, seaweed and oyster. The island’s transportation needs are met by a regular ferry service to and from the town of Toyang just 2.3 kms. away on the Kohŭng Peninsula. There are eight primary
schools, one primary school branch, two junior high schools and one high school on Kōgūm Island.

During Chosŏn, the island, then known as Chŏlli Island, was used for horse breeding. Some mid-Chosŏn records, however, refer to it as Kŏokkŭm Island. Cultural relics include ancient shell mounds in Taehŭng Village, dolmens, Songgwang Hermitage and the Kŭmsan Village Fortress remains.

Kogur’yŏ (see History of Korea)

Kohŏng County

Situated in South Chŏlla Province, Kohŏng County is comprised of the towns of Kohŏng and Toyang, and the townships of Kwayŏk, Kŭmsan, Namyang, Todŏk, Tohwa, Tonggang, Tongil, Tuwŏn, Taesŏ, Pongnae, Yongnam, Chŏmam, P’odu and P’ungyang. Kohŏng is a peninsula jutting into the southern sea between Posŏng Bay and Sun’chŏn Bay, along with 23 inhabited and 147 uninhabited islands. The county covers a total area of 699.50 square kilometres and as of 1986, had a population of 159,510. The region’s topography is characterised by low mountains about 500 metres in elevation. Reclamation projects have recovered extensive stretches of land along the coast.

Approximately 29 per cent of the county area is arable. Of this, about 88 square kilometres grows rice and 124 square kilometres dry-field crops. Garlic is grown in the southwest (Toyang, P’ungyang and Kŭmsan) and barley for brewing in Kŭmsan and Tuwŏn. Both laver and brown seaweed are gathered offshore. Kŏgūm Island in particular, is well-known for its laver production, which ranks second after that of Wan Island. Clams and other shellfish are also found in abundance here. In addition, Toyang’s Oma Village has the largest shrimp-farming operation in east Asia. Much of this produce is exported to Japan.

With numerous picturesque islands and beaches, the county attracts large numbers of tourists, particularly during the summer months. Famous beaches in the area include Narodo Beach on the northern coast of Naro Island, P’ungnyu and Taejon Beach in Tuwŏn and Surokto Beach on the eastern coast of Surok Island. Surok Island is home to a leper colony. In earlier days, the island was isolated, but as medical knowledge of the cause and treatment of leprosy has advanced, so the area has been opened up to tourism.

As well as its scenic attractions, the county has a number of important historical sites. At the base of Mt. P’aryŏng in Chŏmam stands Nŏngga Temple. This ancient monastery is said to have been built by the foreign monk Ado during the Three Kingdoms period, but this has not been confirmed by extant record. The temple was burned down in 1592 during the first Hideyoshi Invasion and was restored during the reign of King Injo (r. 1623-1649). Near the temple one finds a 900-kilogram bronze bell made in 1698. Kŭmt’ap Temple, located at the base of Mt. Ch’ŏndŏng (550m), is another famous temple. Established by Grand Master Wŏnhyo in 637, the temple suffered extensive damage during the various invasions that swept through the area. However, the Kungnakchŏn (Paradise Hall) has remained relatively intact. The dense nutmeg forest around the temple has been designated Natural Monument No. 239.

There are also Confucian sites in the area such as Kohŏng Hyanggyo (established in 1441 and moved to its present location in Tuwŏn in 1587) and Pongamsa (a shrine in Kwayŏk commemorating Kim Chun and other famous members of the Kimyŏng Kim clan).

Local customs are still preserved in Kohŏng County. From lunar New Year to the 15th day of the first lunar month (i.e., the first full moon), residents of the county hold the Maegu
Kohyŏn Mountain

Mt. Kohyŏn (1,033 metres) is situated in northeastern Ulsan in South Kyŏngsang Province. Along with Mt. Kaji (1,240 metres), Mt. Unmun (1,107 metres), Mt. Ch'ŏnhwang (1,189 metres), Mt. Nŭngdong (918 metres), Mt. Kanwŏl (1,083 metres), Mt. Shinbul (1,209 metres) and Mt. Ch'wisŏ (1,059 metres), it is part of the mountainous area located in the north-eastern section of South Kyŏngsang Province. Run-off from the mountain’s southern and western slopes flows into the T'ae'hw'a River while Samŏng Stream flows down from the eastern slope. At the lower reaches of the Samŏng Stream lies Sayŏn Lake, and at the lake’s edge, there is a rock engraving dating from the Bronze Age (10th - 4th C., B.C.E.)

Kŏje

Situated just off Korea’s southern coast, the city of Kŏje comprises the town of Shinhŭyon and the townships of Kŏje, Namu, Tongbu, Tundŏk, Sadŭng, Yŏnch’o, Irun, Changŏk and Hach’ŏng. Totalling 397 sq. kms, the city consists of the large Kŏje Island and several small islets. Geologically, the island is part of a submerged chain of mountains; as a result of which the city’s terrain is mountainous with Mt. Taegŭm (438m) rising in the north, Mt. Kyeryong (555m) and Ongnyŏ Peak (555m) in the centre and Mt. Kara (585m) in the south. Highway 14 crosses a narrow strait to connect the island with T’ongyŏng on the mainland.

Approximately 19.2 per cent of the city is arable land. Of this, 65 per cent is used for rice cultivation and 35 per cent for dry field crops such as barley and sweet potatoes. Most of the city’s rice paddies are located on reclaimed land along the coast. Taking advantage of the forests that cover much of the island, local farmers also grow large quantities of shiitake mushroom. The area has a mild climate with an average mean temperature of 13.6c and a high annual rainfall of 1 662mm. With this relatively warm climate, farmers are able to grow citrus fruits and pineapple.

The city is located on the southern coast, which accounts for twenty per cent of the nation’s total fish catch. Boats operating from the city’s port bring in catches of cod, Spanish mackerel, black porgy (f. Sparidae), frog flounder, mackerel pike and perch. As fish stocks off the southern coast become depleted, many local fishermen are switching to fish and shellfish farming. In particular, a number of oyster farms have been established in Kŏje Bay and Tundŏk Bay, and on Ch’ilch’ŏn Island. Kŏje’s industrial sector is centred around its shipbuilding yards, which are the second largest in the nation. In 1973, the Okp’o Shipyard was opened in Shinhŭyon, with a capacity to build 24 000 -tonne ships, and a year later, the Chuko Shipyard was established at Okp’o Bay.

As Korea’s second largest island, Kŏje boasts great scenic beauty. Along the island’s rocky coastline, large granite cliffs rise from the clear waters of the southern sea. The spectacular pinnacles of rock on the east side of Nambu Township, known as Kŏje Haegŭmgang, are often compared to similar formations east of Mt. Kŭmgang. Kuch’ŏn Valley, in the middle of Kŏje Island, is another popular tourist destination. Large granite formations rise above this valley’s dense forest. Here are T’anggŏn Rock, Shinsŏn Rock and Yongju Temple. Other popular sights include Kujora Beach in Irun Township and Mundong Waterfall near Yongsu Temple in Shinhŭyon.

As well as its natural beauty, the city has a number of important historical sites. Since the island was often attacked by Japanese pirates, many stone fortifications can be seen throughout the area. Buddhist artefacts include a three-storey pagoda in Shinhŭyon’s Ayang
Village and a seated stone Buddha figure (South Kyongsang Province Tangible Cultural Asset No. 48) in Sadōng Township's Oryang Village. Confucian schools in the city include Köje Hyanggyo, which was built during early Chosŏn, and Pan'gok Sowŏn.. Sites from the modern era include the remains of a prisoner of war camp in Shinhyŏn. During the Korean War, the camp held up to 170,000 prisoners of war, some of whom had been press-ganged into the North Korean army. In 1951 and 1952, numerous murders occurred in the camp as a result of hostilities between pro-Communist and declared anti-Communist prisoners. On a single occasion, pro-Communist prisoners brutally slaughtered one-hundred and five anti-communist inmates.

Kojong, King (r.1864-1907)

King Kojong (1852-1919) was the twenty-sixth king of the Chosŏn period and reigned from 1864 to 1907. His childhood name was M'yŏngbok, later changed to Hŭi, his courtesy name was Sŏngim and his pen name was Sŏnghŏn. He was the second son of Yi Haŭng (Hŭngsŏn Taewŏn'gun) and his mother was of the Min family. Upon the death of King Ch'ŏlchong (r. 1849-1863), Kojong succeeded to the throne at the age of twelve. The accession of Kojong was based upon an understanding between his father and the Queen Dowager Cho (the mother of King Hŏnjong) that the two would in actuality govern the nation. With the Taewŏn'gun acting in his son's stead, Chosŏn was set upon a course for reform. In 1866 Kojong was married to the daughter of Min Ch'irok in an attempt by the Taewŏn'gun to break the so-called in-law government (sedo chŏngch'i) by the Andong Kim and the P'ungyang Cho families. The Min family, which did not have the powerful political connections that the previous royal in-laws had possessed, nonetheless developed into a staunch rival for the royal family. In particular, Kojong's queen, Myŏngsŏng (Queen Min 1851-1895) proved to be a worthy opponent for the royal family.

As Kojong grew older he gradually began to assert his own ruling authority and grew to oppose many of the reforms of his father in small increments. In 1873 the Taewŏn'gun was driven from power by the combination of Confucian literati who had been the target of many of his reforms and the newly emerging power of the Yŏhŭng Min family that was now the royal in-laws. The young King Kojong was now under the control of his Queen. With the staunchly isolationist Taewŏn'gun out of the way, Chosŏn now embarked upon a course of reforms and modernisation. In 1876 Chosŏn signed the Treaty of Kanghwa Island (Kanghwa-do Choyak) with Japan that proclaimed Chosŏn as a sovereign nation and opened the port of Pusan along with two subsequent ports to foreign trade. Moreover, the treaty granted Japan extra-territorial rights that permitted Japan to establish settlements within Chosŏn. Another of Kojong's early focuses was on military reform. In 1881 he invited Horimoto Reizō, a lieutenant in the Japanese army, to instruct a newly organised unit in modern warfare techniques.

Kojong's attempts at reforms were not met with approval by the Confucian literati who vehemently opposed the Treaty of Kanghwa from the outset as they expressed concern with opening the country to Western nations and Japan. In addition, the Taewŏn'gun schemed to bring himself back to power by deposing Kojong and installing his eldest son, Yi ChAESŏn, on the throne. However, this plan was uncovered and Yi along with thirty others were executed. The Taewŏn'gun, by virtue of being father of the King, was not implicated in this matter. Also affecting the management of the Chosŏn government was the ongoing struggle between the Taewŏn'gun and Queen Min for power. This was fuelled by the hostility of the people towards the expansion of Japanese influence in Korea. The consequence of these factors was the Military Mutiny of 1882 (imo kullan).

The Military Mutiny erupted as a repercussion of the soldiers of the elite corps (Pyŏlgigun) not being paid. When they were finally paid in rice, it was adulterated with chaff, which caused the soldiers to fight with the ration clerks. For this, the instigators were sentenced to death by Min Kyŏmho, the official in charge of Sonhyech'ŏng (the office charged with
the administration of the Uniform Tax Law), who was also of the royal in-law family. At this the soldiers erupted in a full-scale riot and burned the Japanese legation building, killed the military advisor Horimoto, killed Min Kyŏmjho and also sought out Queen Min for the same purpose. The Queen, however, narrowly escaped. The consequence of the mutiny was for Kojong to bring the Taewŏn'gun back to power and he at once issued an edict declaring that all governmental matters must be submitted to him for approval in the future.

The Taewŏn'gun was not long in power as both Chinese and Japanese troops descended on Seoul after the mutiny. It was the Chinese that asserted their power at this time and reinstated Kojong on the throne and took the Taewŏn'gun to China. Kojong thus set out on a trail of reforms, which were ushered in by the advocates of ‘enlightenment’ thought such as Kim Hongjip and Kim Yunshik. These reforms, however, put the King in conflict with Queen Min and thereby created more turmoil in the Chosŏn government. It was in this atmosphere that the Coup d'État of 1884 (kapshin chŏngbyŏn) broke out as the progressive forces sought to overturn the Chosŏn government. The coup was initially successful as the progressives, led by Kim Okkyun, abducted the King and drew up a list of reforms. However, the intervention of Chinese forces spelled an end to the coup and resulted in Queen Min seizing an even greater share of power in the government.

The reaction of Kojong to the events of the mid-1880s was to seek a foreign benefactor to preserve his crumbling power. To this end foreign powers such as Russia and the United States were brought into the political mix in Chosŏn. It was Japan, however, that had the greatest degree of power in Korea. In 1894 Japan was the force behind the Reforms of 1894 (Kabo kyŏngjang) that again resulted in Kojong being stripped of his power and the Taewŏn'gun being reinstated. In effect, the Reforms of 1894 established a new government outside the jurisdiction of the King and Queen, but this did not last long. The Reforms failed as the Taewŏn'gun bitterly opposed them and even sought again to bring China into Korea. This was discovered and he was removed from power by the Japanese who then forced Kojong to give approval for a new government led by a cabinet headed by Kim Hongjip. Queen Min who saw her power waning sought to bring the Russians into the Korean government as a balance to the growing Japanese power. For this the Japanese assassinated the Queen, causing Kojong to seek refuge in the Russian legation in February 1896.

Kojong remained in the Russian legation for a year before he finally emerged and announced the Great Han Empire, and proclaimed Korea to be an independent power. Despite the bold announcement of a new ‘empire’, the situation of Korea had not changed as the foreign powers vying for control continued to wring concession after concession from Korea. Moreover, the fact that Kojong decided to take up residence at Tōksu Palace rather that Kyongbok Palace reveals that the King wanted to be close to the refuge offered by the embassies of Britain, Russia and America which were close to the former. Kojong feared Japan and was no longer in control of his country.

Japan continued to gain privileges from Korea and after defeating Russia in the Russo-Japanese War of 1904-1905 was unchecked in her designs on Korea. The 1905 Protectorate Treaty essentially stripped Kojong of his power. Kojong attempted to fight this and sent a royal letter to the Taehan maeil shinbo newspaper stating that he had not consented to the treaty. In addition a secret mission was sent to The Hague where Korea protested the treaty. This provided Japan with grounds to force Kojong to abdicate the throne in favour of his son Sunjong (r. 1907-1910) and paved the way for the annexation of Korea by Japan three years later. Kojong’s death in 1919 served to fan the flames of the March First Independence Movement in that many people had flocked to Seoul for his funeral rites that were scheduled for March 3.

Kojong is remembered as the last true king of the Chosŏn period yet his reign was marked with political schemes that revealed him as not having firm control of his own and the
nation's destiny. Both his father and his queen proved to be far superior politicians than Kojong and perhaps his legacy is to epitomise the ineffectual rule of the monarchs during the last century of the Choson dynasty.

Koksŏng County

Situated in the northeast part of South Cholla Province, Koksŏng County is comprised of the town of Koksŏng and the townships of Kyŏm, Kodal, Moksadong, Samgi, Sŏkkok, Ogok, Okkwa, Osan, Ip and Chukkok. Ridges branching off of the Sobaek Mountain Range run through the county, creating the area's rugged terrain. Mt. Ch'oak (717m), Mt. T'ongmyŏng (765m) and Mt. Chubu (768m) are in the centre of the county, while Mt. Hŭia (764m) is to the south. Mt. Ch'ŏnma (659m) is in the northeast and Mt. Yŏn (505m) in the west. The area's weather is generally mild, but is relatively cold in winter. The county has an average yearly temperature of 13.1°C and an average annual rainfall of 1204 mm.

About 19 per cent of the county is arable. Rice is cultivated in the flood plains of the Sŏmjin River and Okkwa Stream, while dry-field crops such as barley, beans, sweet potatoes, cotton and tobacco, are grown elsewhere in the county. In the mountainous areas, medicinal herbs, chestnuts, mushrooms, honey are produced and timber is extracted for processing. In addition, large apple orchards exist in the area around Okkwa Township's Soryong village. Except for a number of refineries, breweries and cotton-weaving operations, the area's industrial sector has been slow to develop.

With its numerous mountains and picturesque rivers and streams, the county offers many scenic attractions. Near its eastern border, where the Posŏng and Sŏmjin rivers converge, there is a long sandy beach known as the Amnok Resort. The area is easily accessible by car via Highway 17 or by train via the Cholla line. In the summer, the area fills up with sports fishermen and tourists, many of whom come to escape the heat.

Visitors also come to see the area's temples and historical sites. Torim Temple, situated to the east of Hyŏngje Peak (657m), is one of the area's most popular Buddhist monasteries. Founded by Grand Master Wŏnhyo in 660, the temple is located in a valley of lush forest and spectacular waterfalls. T'aean Temple in Chukkok Township's Wŏndal Village is another ancient temple. Here one finds a pagoda (Treasure No. 273) and stele commemorating Sŏn Master Ch'ŏgin, a pagoda and stele (Treasures No. 274 and 275) commemorating Grand Master Kwangja, a large bronze bell and a three-storey stone pagoda.

In addition to Buddhist temples, there are a number of Confucian sites in the area. Ancient schools found here include Koksŏng Hyanggyo in Koksŏng's Kyoch'on Village, Okkwa Hyanggyo in Okkwa Township, Togyang Sŏwŏn in Ogok Township's Tŏksan Village, Yŏnggwi Sŏwŏn just south of the Honam Expressway in Kyŏm Township and Chukhyang Sŏwŏn next to Highway 17 in Ogok Township. Koksong Hyanggyo was constructed in 1570 and refurbished in 1649. Confucian rituals are still held here in the 2nd and 8th lunar months in honour of five Confucian sages and twenty-two Confucian scholars.

Throughout Koksŏng County, handed-down ceremonies are performed. During the first lunar month, most villages hold a Tangsan Ceremony (a ritual worshipping the mountain spirit). On the eve of the ceremony, the area around a sacred tree is covered with yellow soil and the tree is roped off against people entering the site. From this time on, the local villagers must not eat fish nor any other food with a fishy smell. Around midnight, music played by a folk band signals the commencement of the ritual during which food is offered to the local mountain spirit (sanshin).
**Kŏmdŏk Mountain**

Situated in South Hamgyŏng Province, Mt. Kŏmdŏk forms part of the barrier between South Hamgyŏng Province’s inland and littoral regions. ‘Kŏmdŏk’ literally means ‘sword virtue.’ The word ‘sword’ refers to the mountain’s steep and rugged terrain. Kŏmdŏk Mine, located on the same range, is the largest lead and zinc mine in Korea. Developed several hundred years ago, this facility mines large quantities of high-quality metals, which represent an important North Korean export.

**Kŏmun Island**

Located forty kms. south of the Kohŭng Peninsula, Kŏmun Island is part of Yŏch’ŏn County in South Chŏlla Province. The island is actually three islands: Sŏ (West), Tong (East) and the smallest of the three -- Ko (Old). Together, these islands have a total area of twelve sq. kms.

Camellia trees completely cover Sŏ Island, the largest of the three, and on its northern tip stands the giant Noksan Lighthouse. Ko Island is home to a fishing fleet. Vessels fishing out of the islands bring in catches of mackerel, yellowtail and other fish. Laver is gathered along the coast.

Since the islands occupy a strategic location and the surrounding seas are deep enough for the draught of larger vessels, the islands were coveted by the colonial powers of the late nineteenth c. In May 1885, under the pretext of establishing a balance of power in the area and preventing Russian intrusion, Great Britain seized Kŏmun Island, calling it Port Hamilton. During the two years of occupation, the British garrisoned from 200 to 800 men on the island and 5 to 10 ships were docked at the port. Relationships between the islanders and the British were placid, with the residents supplying labour and the British offering compensation and medical care. After unsuccessful attempts to purchase the island from the Korean government, Britain finally withdrew its military and naval force on 5 February 1887.

**Kon-Kuk University**

Kon-Kuk University (Kŏn’guk Taehakkyo) is a private educational institution and is located in Mojin-dong, Seoul. The school from which the university developed was founded as Chosŏn Chŏngch’i Hakkwan in May 1946 by Yu Sŏkch’ang, who had been an independence activist during the Japanese occupation. In 1949, the school became a college and in 1959, achieved university status with the title, Kon Kuk University. Yu Sŏkch’ang was its first president. In 1961, the university commenced a doctoral program. In the years that followed it continued to expand with the creation of a second campus (Ch’ungju College) in North Ch’ungch’ŏng Province.

At the university’s Seoul Campus there are six graduate schools (the Graduate School together with the Graduate Schools of Agriculture & Animal Science; Business Administration; Education; Engineering; and Public Administration; and eleven colleges: the Colleges of Agriculture; Animal Husbandry; Arts & Home Economics; Business Administration; Commerce and Economics; Education; Engineering; Law; Liberal Arts; Political Science; and Science. The Ch’ungju campus has the Graduate School of Social Science and the Colleges of Arts; and Social Science. The Minjung Hospital in Hwayang-dong in Seoul is also affiliated with the university.

University publications include the Kŏndae shinmun (Kon-Kuk University Newspaper) in Korean and The Kon-Kuk Tribune in English.
Kongju

Situated in South Ch'ungch'ŏng Province, Kongju consists of the town of Yugu, and the townships of Kyeryong, Panp'o, Sagok, Shin'ŭng, Usŏng, Ûidang, In, Changgi and Chŏngan. Now expanded to include the areas formerly known as Kongju County, the city covers a total area of 939.68 square kilometres. The Ch'aryong Mountain Range runs across the northern part of the city and Mt. Kyeryong (See Kyeryong Mountain) rises in the southeast. The Kŭm River, which flows between these mountains, provides water to the region.

The city’s agriculture is centred around the low-lying land adjacent to the Kŭm River. Rice is the main crop, but barley, bean, sweet potato, potato and tobacco are also grown here. Sericulture is an active industry in Kongju. From 1896 to 1931, the area was a key administrative, commercial and transportation hub for the region, but its importance has waned since 1932 when the provincial capital was transferred to Taegŏn. There is relatively little industry in Kongju, although the talc mines in Yugu are one example.

The city’s tourism is based on its ancient history. Kongju was established in 475 C.E. as the second capital of the Paekche Kingdom after the first capital south of the Han River was abandoned. Although little remains of the first capital, there are numerous relics in Kongju providing testimony to the days of Paekche splendour. Most of the Paekche royal tombs found here have been looted. The Japanese made archaeological excavations in 1907 and 1933 but it was not until 1971, when some of the known tombs were being repaired, that the undisturbed tomb of King Muryŏng (501-523) was discovered. Situated south of the Kŭm River near Kongju Junior High School, parts of King Muryŏng’s tomb are now open for viewing. In order to provide atmospheric control and thus prevent damage to the interior, the chambers have been hermetically sealed, with generous glass viewing windows provided.

The trove of artefacts discovered at King Muryŏng’s tomb became the prized possession of the National Museum in Kongju. Opened in 1972, the museum houses the best collection of Paekche artefacts in the county. This includes two gold crowns, gold, jade and silver ornaments, bronze mirrors, Bronze Age daggers, arrowheads, axes, an Iron Age bell and numerous Buddhist images. In the museum grounds there is a collection of stone images. North of the museum on the southern bank of the Kŭm River lies Kongsan Fortress. Originally built during Paekche times, the fortress was reconstructed in the 17th c. Once the site of the Paekche royal palace, the area contains Yŏngŭn Temple (established in 1457), Ssangsujŏng (Twin Pines Pavilion) and several other pavilions and steles.

Because of its past eminence as the capital of the Paekche Kingdom, the city is home to a large number of ancient Buddhist temples. Located in Sagok Township, Magok Temple was, according to one account, built by Chajang in 640 (See Magok Temple). In Kyeryong National Park at the city’s southeastern extremity, is the famous Kap Temple. This ancient monastery was one of the ten principal temples of Korea’s Hwaŏm Sect. On the temple grounds, are some ancient artefacts including an iron banner-pole and stone banner-pole supports (Treasure No. 256); a stupa (Treasure No. 257); an ancient copy of the Lotus Sutra (Treasures No. 269 and 270); a bronze bell (Treasure No. 478); old wooden printing blocks; a standing Bhaisajyaguru figure; a standing Bodhisattva figure, and a stele commemorating events at the temple. To the east of Kap Temple, is Tonghak Temple and to the south Shinwŏn Temple. Founded in 651 by Podŏk, the latter houses Chungaktan, a large hall used to worship the mountain spirit (sanshin) -- South Ch'ungch'ŏng Province Tangible Cultural Asset No. 7.

Confucian schools found in the area include Kongju Hyanggyo located between city hall and the Kŭm River, and Ch'unghyŏn Sŏwŏn situated next to Highway 32 in Panp’o. The
former was established in early Chosŏn and was moved to its present location in 1623 while the latter was founded in 1581 by Sŏ Ki. In modern times, Kongju has become an important educational centre for the region. Colleges and universities here include, Kongju National University in Shin’gwan-dong; Kongju National University of Education in Puk District; Kongju College of Education next to city hall and Kongju Junior College just east of Kongju National Museum.

Kongju National Museum

Situated in Kongju in South Ch’ungch’ŏng Province, Kongju National Museum (Kungnip Kongju Pangmulgwan) was established in 1940 when the Society for the Exaltation of the History of Kongju moved into a Chosŏn-period office building at the site of the present museum, in order to display Paekche artefacts recovered from the Kongju area. In 1946, the museum received Paekche relics from the National Museum of Korea. With the excavation of the tomb of Paekche’s King Muryŏng (r. 501-523) in 1971, the museum’s collection expanded, requiring the construction of a larger building. Today, the museum is home to over 7 000 artefacts, including eighteen National Treasures and two designated Treasures. Except for the stone sculptures, only about one-third of the collection is on display at any one time.

Kongjung nugak (Pavilion in the Air) [Literature]

Kongmin, King (r.1351-1374)

King Kongmin (1330-1374) was the thirty-first king of Koryŏ and reigned from 1351 to 1374. Kongmin’s given name was Chŏn, his childhood name Ki, and his pen names were Ijae and Iktang. He was the second son of King Ch’ungsuk (r. 1313-1330, 1332-1339) and Queen Myŏngdŏk. Kongmin had several queens including the daughter of the Yuan emperor and four Korean queens. Early in his life Kongmin was enfeoffed as Grand Prince (taegun) of Kangnŏng and in 1341 he travelled to Yuan for his stay in their court. After returning to Koryŏ for a brief period, he again travelled to Yuan where he was married to the daughter of the Yuan emperor and two years later after the dethronement of King Ch’ungjong (r. 1348-1351) he returned to Koryŏ with his queen and assumed the throne.

The time when Kongmin acceded to the throne was marked by a decline in the power of the Yuan and the rise of the Ming State in China. Therefore, Kongmin took advantage of this situation to enact reforms with two major facets: first, an external policy directed against the Yuan, and second, an internal policy that attempted to suppress the powerful families of Koryŏ. One of Kongmin’s first moves was to abolish the Yuan’s liaison organ in Koryŏ, the Eastern Expedition Field Headquarters (Chŏngdonghaeng chungsŏ sŏng). He then purged the pro-Yuan faction from the Koryŏ government and sent an army to attack the Yuan commandery headquarters at Ssangsŏng in Hamgyŏng Province in order to regain lost Koryŏ territory. The actions by Kongmin were opposed by not only the Yuan, but also by the pro-Yuan elements in Korea. An attempt to assassinate Kongmin was made by Kim Yong and the Yuan proclaimed that Kongmin had been deposed. Nonetheless, Kongmin held on to power and proceeded with his reform policies. In 1368 with the foundation of the Ming Dynasty, Kongmin immediately adopted a pro-Ming stance and sent an official envoy to the Chinese State.

As to Kongmin’s internal reforms, in 1352 he abolished the Personnel Authority (Chŏngbang) which had been formed during the rule of the Ch’oe house and still remained as an impingement on royal authority. In later moves, Kongmin appointed the monk Shin Ton as National Preceptor and charged him with the implementation of extensive governmental reforms. The appointment of an outsider such as Shin for the execution of
reforms reveals how deep-seated the influence of the powerful families of Koryŏ was at this time. The King carried out extensive land and property reform but in doing so both he and Shin were eventually killed by powerful families.

King Kongmin is remembered as the monarch who liberated Koryŏ from the humiliating grip of Yuan and in doing so regained both lost national territory and pride. However, his actions were not well received by the powerful families of Koryŏ and in the end this resulted in his death. Kongmin sought to restore the honour of Koryŏ but his efforts were quickly brushed aside by the self-interests of the powerful families, which hastened the fall of the Koryŏ Kingdom some twenty-five years later.

Kongpŏp (Tribute Tax Law, 1444) [Taxation]

Kookmin University

Kookmin University (Kungmin Taeakhkyo) is a private university situated in Chŏngnŭng-dong in Seoul. Dr. Syngman Rhee (Yi Sungman), Kim Koo (Kim Ku) and Haikong Shinicky (Shin Ikhui) formed the steering committee for the establishment of the school. Founded as the night-school Kungmin (Kookmin Institute) in December 1946, the school was transferred to Ch'angšŏng-dong in Seoul in February 1948, and shortly thereafter became Kookmin College. Financial difficulties in 1959 led to a reorganisation of the school's foundation principles under the guidance of Kim Sungkon (Kim Sŏnggon). In 1971, the school moved to its present location, when fifteen departments were established. After five years a master's program was launched, followed by a Ph.D program in 1979. In 1981, the school attained university status, with Chŏng Pŏmsŏk as president.

As of 1996, the school had about two-hundred and fifty full-time academic staff and a student enrolment of approximately eleven thousand. Kookmin now consists of nine colleges: Architecture & Design; Economics & Business Administration; Education; Engineering; Forest Science; Humanities; Law; Natural Science; and Social Science. There are seven graduate schools: the Graduate School, and the Graduate Schools of Business Administration; Design; Education; Industrial Technology; Information Science; and Public Administration. Other facilities include the Sungkŏk Memorial Library; Language Institute; Computing and Information Centre; Cooperative Experimental Equipment Centre; Sports Centre; Bugak Broadcasting Service; and Kookmin University Press. University publications include the weekly Kungmindae hakpo in Korean and The Kookmin Tribune in English.

On the fifth floor of the library, is the university museum. Established in 1973, the museum is home to a collection of archaeological artefacts such as earthenware; crafts and folk craft pieces; various ancient documents; and fine-arts pieces. The Folk House, formerly the residence of the Chosŏn minister Han Kyusŏl (1856-1930) can be viewed within the university grounds. Built in the 1890's, this fine example of traditional Korean architecture was later moved to the campus, where it is now in regular use for the performance of traditional tea ceremonies.

Kookmin University is now supported by the Ssangyong Group.

Kor-Am Bank [Banks]

Korea

Korea written by Angus Hamilton and published by Charles Scribner's Sons in 1904 is a 313-page survey of the prevailing conditions in Korea at the beginning of the twentieth c. The book is particularly revealing insofar as the military situation which was unfolding in
the days before the outbreak of the Russo-Japanese War of 1904-05 is concerned; the author going to great lengths to describe the military status of the two future combatants and of Korea.

Hamilton provides vivid descriptions of the mode of life of the Korean people that he encountered, and also supplies commentary on Korean social institutions as he understands them. His criticism of various aspects of Korean culture is unbridled, but at the same time he counters inaccurate stories of Korea and her people spread by other traveller-writers. His book, therefore, provides a seemingly honest appraisal of the situation in Korea during the writer's travels.

The author's assessment of the future prospects for the Korean state are hauntingly accurate, as he details the inadequacy of the Korean army in the face of the Japanese and Russian forces. The introduction of the book provides extensive data concerning the vessels of the Japanese and Russian navies, the type of weaponry used by their troops, command staff organisation and even the provisions in a typical field-pack. Thus, aside from the extensive information on Korea and its people, Hamilton's work is also of considerable value for gaining an understanding of the participants of the Russo-Japanese War.

Korea

Agriculture (see also under Agriculture)

Agriculture formed the mainstay of the Korean economy until the 1960s, and in 1960, over half of the workforce was engaged in agricultural activities, while agriculture accounted for approximately 40% of the country's GNP. However, these ratios began to decline rapidly following the adoption of a series of Five Year Economic Plans commencing in 1962, and stood at 19.5% and 10.3% respectively in 1989. Significant changes have also taken place within the agricultural sector itself, due to land rationalization, species improvement and general diversification of activities. Rice cultivation continues to represent the main pillar of the Korean agricultural economy, as it has done since the Three Kingdoms Period. Practiced throughout the peninsula, it is particularly common in the central and southern plains. The introduction of high-yield varieties and improvements in agricultural methods since 1972 has led to a marked increase in rice production, and rice accounted for 83.1% of total Korean grain production of 7.28 million tonnes in 1989. Barley, wheat and oats made up 7.7% of the total. Wheat is a particularly common crop in North Korea, as it is more resistant to cold, drought and disease than barley. Double-cropping is predominant in southwestern and southeastern regions.

A rapid increase in the urban population during the postwar period has also led to significant growth in agricultural activities in districts adjoining urban centers. These activities include flower, vegetable and fruit growing, in addition to beef cattle and poultry farming. Furthermore, the use of plastic sheeting has allowed growers to provide a regular supply of high-grade vegetables and flowers to urban consumers, regardless of seasonal climate variations. Although there has been a gradual trend away from self-sufficient agriculture, with its emphasis on the cultivation of staple food-grains, towards diversified commercial agriculture, the majority of the rural population has been unable to free itself from small-scale farming on family plots of approximately one hectare.

Climate

Temperature

The Korean peninsula lies between the latitudes 33 and 43 degrees north of the Equator, and most of the country enjoys a temperate climate. The east coast generally experiences greater extremities of temperature than the west coast, and winter temperatures throughout the peninsula are extremely low. Although Seoul lies on the same degree of latitude as Athens, its January average temperature (-4.6°C) is 13 degrees lower than that of the Greek capital (8.8°C).

Korea's climate includes aspects of that of both arctic and tropical regions. Under the influence of continental high pressure systems located over Siberia, northwesterly winds send winter temperatures plunging to -10°C, and minimums of -15°C to -20°C are not uncommon during cold spells. In contrast, high pressure systems located over the Pacific Ocean bring humid tropical conditions during the summer months, and daily maximum temperatures typically exceed 30°C.

Continental climate patterns become more pronounced as one moves northward on the peninsula, and the difference in average temperatures for the coldest and hottest months of the year ranges from 23°C in the south to 40°C in the north. The lowest temperature ever recorded in Korea is -43.6°C at the northern frontier town of Chunggangjin, while the hottest temperature was 40°C, recorded at Taegu in the southeast. The extreme range of temperatures experienced in Korea can be attributed to the fact that the north of the peninsula directly adjoins the main part of the Asian continent and is characterized by high elevations, while the south is surrounded on three sides by the ocean and mainly comprises low-lying land. Sogwip'o on Cheju Island has the highest average annual temperature (14.7°C), while the coldest annual average is found at Chunggangjin (3.8°C). It is important to note, however, that the difference between average temperatures in these two locations is far more pronounced in winter than in summer. While Sogwip'o's August average (25.8°C) is a mere three degrees above that of Chunggangjin (22.7°C), the difference in average monthly temperature between the former (5.1°C) and the latter (-20.8°C) widens to 26 degrees in January. As can be seen from these figures, the entire peninsula enjoys warm summers, however extreme winter cold is restricted to northern and eastern regions. In general, Korea experiences long winters and relatively short summers, while spring and fall are very short. Winters in the north last from four to five months, while those in the south last for only two to two-and-a-half months. In contrast, summers on the Kaema Plateau in the far north last only a few weeks, while they may last for three-and-a-half months in the far south. Despite sharing the same latitudes, there is a clear difference in temperatures between eastern and western regions, and the east coast enjoys temperatures approximately 3°C higher than the west coast during the winter months. This phenomenon is caused by the Taebaek Range acting as a barrier against the bitterly cold northwesterly winds, and these winds become warmer after dropping snow over western districts.

Rainfall

Precipitation throughout almost the entire peninsula is concentrated in the summer period. July is the wettest month in Seoul and central regions, while August is wettest in regions to
the north. This difference is due to the gradual northerly movement of the seasonal rain front which forms at the point of convergence between the cold Okhotsk airmass and the warm, humid North Pacific airmass. The summer months of June, July and August account for approximately 60% of Seoul's annual precipitation, and July alone accounts for 30% of the annual total. The rainy season generally commences in late June, ending in late July in central and southern regions, but continuing into August in northern regions. High humidity persists after the end of the rainy season, and typhoons occasionally bring additional rain. There is a wide variation in annual precipitation throughout the peninsula, however there is a general trend towards lesser precipitation as one moves northward. There is also a close relationship between topography and precipitation. Heavy rainfall occurs in the middle and upper catchment areas of major rivers in summer as migratory low pressure systems originating in China's Yangtze River basin move into Korea and "collide" with mountainous terrain. Surrounded by mountains and under the strong influence of the seasonal rain front, the lower reaches of the Sömjin River experience the highest annual precipitation (1 400 - 1 500mm), while the middle and upper reaches of the Han, Imjin and Ch'ôngch'on Rivers receive between 1 200 and 1 300mm of rain annually.

The Kaema Plateau is the driest region in Korea, as the Hamgyông Range blocks the prevailing summer winds and limits the influence of rain-bearing low pressure systems. Other areas of low precipitation (under 800 - 900mm per annum) include the lower reaches of the Taedong River and the middle and upper reaches of the Nakdong River, the latter area being encircled by mountains of the Taebaek and Sobaek Ranges.

Although Korea experiences a humid climate, there are extreme variations in annual precipitation levels from year to year, mainly due to fluctuations in summer rainfall. Such fluctuations vary according to region, however an example can be found when comparing annual rainfall in Seoul for the years 1940 (2 135mm) and 1949 (633mm), a difference of 1 500mm for the same location. Further, there is an average variation of 20% in annual precipitation for central and southern agricultural regions.

Seasonal Patterns

Seasonal changes in Korea's climate are largely determined by the shifting location and relative strength of airmasses and air-pressure systems located over the Asian continent and the Pacific Ocean. In winter, the peninsula's weather is mainly influenced by the cold, dry Siberian airmass, which advances and recedes in a cyclical pattern. Temperatures fall as the airmass strengthens, rising again as it weakens and high or low pressure systems move into Korea from China, causing the phenomenon known as samhian sa'on ("three cold days followed by four warm"). With the arrival of spring, the Siberian high pressure system weakens and migratory high and low pressure systems alternately move through the peninsula at two or three day intervals, bringing sunny but changeable weather conditions. Flowers in southern regions begin to blossom as temperatures rise, a pattern which gradually extends northwards throughout the country as spring progresses. There is a difference of one month between the azalea season in northern and southern regions. Dry spring weather occasionally leads to the outbreak of forest fires, and the appearance of the hwangsa hyŏnsang ("sandy dust phenomenon"), whereby yellow-brown dust particles are carried to Korea from China by prevailing winds.

During early summer, the dominant influence on climatic conditions is the cold Okhotsk high pressure system, which brings sunny weather, and cool breezes are common in western districts. As this high pressure system weakens and remains stationary at lower latitudes, the hot, humid Pacific high-pressure system begins to strengthen, moving towards the Korean peninsula in a northwesterly direction. The seasonal rain front forms at the point of convergence between the two pressure systems, and the rainy season sets in. The Pacific high-pressure system comes to dominate weather conditions on the peninsula as
the rain front moves north into Manchuria, and the full heat of midsummer begins to be felt. Southeasterly and southwesterly prevailing winds are relatively predominant at this time. Fine conditions prevail as autumn begins, under the influence of the migratory high-pressure system which breaks off from the developing Siberian high-pressure system. The passage of migratory low pressure systems brings changeable conditions, although their influence is weaker than in springtime, and accompanying rainfall is beneficial to crops.

Flora (see also Plants)

Due to the wide variation in climatic conditions and undulating topography of the peninsula, Korea contains a relatively rich variety of flora, and it is possible to find subtropical, temperate and alpine forest as one moves northward. Subtropical forest is found in southern coastal regions, and largely consists of broadleaf evergreen trees, of which camellia and thorny species are particularly widespread. Broadleaf deciduous trees predominate in the temperate forest found in hilly parts of North Korea and most of South Korea, and oak varieties, including Mongolian oak, are common. As one moves southward, these varieties generally become interspersed with zelkova, Chinese nettle, common bamboo, and other species suited to warm temperate environments. Coniferous evergreen forest is predominant in the northeast, being well-suited to climatic regions which experience long winters and short summers. Common species include spruce and Korean fir.

There are wide variations in flora according to elevation throughout the mountainous Korean peninsula, and this differentiation is perhaps most clearly visible in the mountainous regions of North Korea and on Mt Halla on Cheju Island in the far south. At higher elevations, broadleaf deciduous species are replaced by alpine conifers, however the alpine conifer zone varies according to latitude, beginning at an elevation of 1500m on Mt Halla and at 900m on Mt Paekdu in the far north. The treeline on Mt Paekdu lies at 2000m, while Mt Halla has no treeline. The lower slopes of Mt Halla are characterized by broad grassland, developed as grazing pasture for livestock since the Koryo Dynasty. Similar areas can be found on Taekwallyong in the Taebaek Range and in other parts of the peninsula.

Fauna (see also Animals)

Korea belongs to the Palaearctic zoogeographic zone, and many of the fauna in the highland regions adjoining the Korea-China border are closely related to those found in Siberia, mainland China, Sakhalin and Hokkaido. Mammals commonly found in highland regions include deer, roe deer, the water shew, the muskrat, the amur goral, the Manchurian weasel, the tiger, the lynx, the brown bear and the northern pika, while bird species include the three-toed woodpecker, the pine grosbeak, the Manchurian ring-necked pheasant and the hawk owl. Fauna in the southern lowlands are related to species found in southern Manchuria, central China and Japan, and include the mandarin vole, the black bear, the river deer, the white-bellied black woodpecker, the fairy pitta and the ring-necked pheasant. Other wildlife species recorded in South Korea include 25 reptiles, 14 amphibians and 130 varieties of freshwater fish.

23 species have been designated as natural monuments by the Korean government, including the musk deer and the hooded crane. In addition, 20 birds, two species of mammal and several insect species have been designated as endangered species. Other rare and valued species include the California grey whale and the purebred Chindo dog.

Formation of the country

Despite its location as a buffer zone between China and Japan, Korea has been able to maintain a distinct identity during a history which spans more than 5000 years.
Archeological evidence shows that the peninsula has been inhabited for at least 20,000 years, and that the earliest inhabitants were probably the Mongolid ancestors of modern-day Koreans. However, it was not until the fourth century AD that formal state structures were established, with the development of the Paekche and Shilla kingdoms in the south and Koguryo in the north during the Three Kingdoms Period. Shilla succeeded in uniting the country in 668 AD, and leadership later passed to the rulers of the Koryo Dynasty (918-1392). A neo-Confucian government hierarchy was established during this period, and this government structure was consolidated during the Choson (Yi) Dynasty (1392-1910). Major attacks from Japan (1592, 1597) and China (1627) led the Choson rulers to adopt a 'closed door' foreign policy and Korea became known as the "Hermit Kingdom" during the two centuries of self-imposed isolation which followed. During this period, the government showed nominal fealty to China, although Japanese influence became predominant towards the end of the 19th century. Japan's military successes in the Sino-Japanese War (1894-5) and the Russo-Japanese War (1904-5) encouraged Japanese expansionist ambitions, and Korea was annexed in 1910. During the following 35 years of colonial rule, the Japanese government suppressed use of the Korean language and attempted to eradicate Korean culture, and this process continued until the country's liberation from Japanese rule in 1945. Following World War II, the northern half of the peninsula was occupied by Soviet forces and the southern half by US forces. Korean political forces also became polarized with the formation of a pro-Communist government in the north under Kim Ilsong and a pro-Western government in the south under Syngman Rhee. The US withdrew its forces from the southern zone in 1949, however northern forces launched an unprovoked attack on the south on June 25, 1950, marking the beginning of the three-year Korean War. At the conclusion of an armistice agreement on July 27, 1953, the entire peninsula lay in a state of devastation, and an armistice line dividing the peninsula was to remain as the boundary between two independent nations which are still technically at war.

Population

The population of Korea during the middle Choson Dynasty is estimated to have been approximately 10 million, and remained relatively unchanged for the following two centuries, rising to approximately 13 million by the end of the Chosun Dynasty. At the time of the first modern census in 1925, Korea had a population of 19 million, and between 1920 and 1944 the population doubled in 34 years to reach 25.12 million. At the time of Liberation from Japanese colonial rule in 1945, there were approximately 2.1 million Koreans in Japan, of which 1.5 million subsequently returned to Korea. However the majority of the 1.6 million Koreans in Manchuria and 200,000 in the Soviet Union remained in those areas following Liberation. During the Korean War, the population of the southern part of the peninsula was swollen by the mass influx of refugees from the north, and the first census in South Korea in 1955 registered a population of 21.5 million. Steady economic growth commencing during the 1960s saw the population grow at an annual rate of approximately 2%, slowing during the following decade. In 1995 the population of South Korea was estimated at 44.85 million, and the population density was 451.24 persons per square kilometer. In 1993, North Korea's population was estimated to be 23.05 million, and the population density was 188.36 persons per square kilometer.

Modern administrative system

From the early part of the Choson Dynasty, Korea was divided into eight provinces, and these were subdivided into 13 provinces in 1896, of which eight now lie in South Korea. (The northern parts of Kangwon and Kyonggi Provinces lie in North Korea and a group of islands off the south coast of Hwanghae-do now lie in South Korea). The island of Cheju became a province in 1945. Today, South Korea comprises nine provinces (do), one special city (t'ukbyŏlshi) and five metropolitan cities (kwangyŏkshi). The provinces, special city and metropolitan areas all operate at the same level of local administration.
directly under the central government. The provinces are further divided into 55 cities (shi) and 138 counties (kun).

North Korean administrative divisions have been reorganized, creating a total of nine provinces (North and South Hwanghae, North and South P'yongan, North and South Hamgyong, Kangwŏn, Ryanggang and Jagang) and three municipalities (P'yŏngyang, Nanp'o and Kaesŏng). At the lower end of the administrative hierarchy are villages and laborer camps, the latter having been established in the vicinity of mines, forestry and fisheries project sites, factories and enterprises.

Settlement

Korea's rural population declined rapidly during the 1970s and 1980s, falling from 70% of the total population in 1960 to only 42.7% in 1980, however the proportion remains relatively high in comparison to other developed nations. Apart from those dwelling on the outskirts of urban centers, most of the rural population is engaged in agricultural activities, and the distribution of settlement largely corresponds to that of arable land throughout the country. Villages are usually constituted of dense groupings of houses (chipch'on), however spacing of dwellings is more scattered in the case of newer settlements and those found in mountainous areas (sanch'on). The layout of the former type of village is closely
associated with the natural and social environment of traditional Korea, reflecting both its aesthetic taste and family system, in addition to a rational approach to land use. Settlements are commonly found backing onto the south side of low hills, as such a location ensures protection from cold northwesterly winds during winter and optimum exposure to sunlight, and allows for maximum cultivation of flat land.

Korean villages underwent a radical transformation as a result of the *Saemaul Undong* (New Village Movement), launched during the 1970s while the country was simultaneous undergoing rapid industrial development. The positioning of homes within villages was rationalized, building materials and structures were standardized and traditional thatched-roof houses almost disappeared from the landscape. However, it is still possible to find examples of these older-style dwellings today, and there have been no visible changes in the basic location of villages nor in the structure of farmhouses. Urbanization is a relatively recent phenomenon in Korea, and this process has closely followed the transformation of the industrial sector resulting from the Five-Year Economic Plans and the Land Development Plan. The urban population rose from 7 million in 1960 to 36.4 million in 1985, while the rural population decreased from 19.4 million in 1966 to 14 million in 1985. (see Figure ) Between 1960 and 1966, development of light and heavy industry in urban centers led to an increase in the urban population, however there was no corresponding fall in the rural population. During the period of the Second Five-Year Economic Plan (1966-70), there was significant population growth in the Seoul metropolitan region and in the Taebaek Range district, and the rural population commenced an absolute decline from 1968. Population growth in the Seoul metropolitan region was due to the development of satellite towns on the outskirts of the capital. Most urban centers and the Taebaek Range district showed further population growth between 1970 and 1975, with particularly significant growth in centers adjoining the Kyŏngbu Expressway and in rapidly-developing industrial zones in the southeast of the country, including Pohang, Ulsan, Pusan and Masan. The period from 1975 to 1980 saw the urban population rising by 4.6 million, while the rural population fell by a further 1.8 million. The only region which did not experience a decline in its rural population during this period was Cheju Island in the far south. This period was marked by a significant expansion in Korea's export volume, and the expansion of related industries. The decline in the rural population began to ease during the period from 1980 to 1985, with the exception of North Kyŏngsang Province. 39.1% of Korea's population was concentrated in the Seoul metropolitan region by 1985, a phenomenon which can be attributed to the expansion of the rail network, opening of new expressways and construction of satellite towns in this area since the beginning of the 1970s. In contrast to trends in the remainder of the country, the development of fruit-growing and tourism industries during the past decades has prevented a significant decline in the rural population in the case of Cheju Island.

*Industry* (see also under *Industry*)
Government-managed commercial operations were abolished, and family-based enterprises began to develop in the aftermath of the Japanese invasions of the late 16th century. However, the introduction of Western technology and Japanese annexation of the country during the early 20th century led to the decline of many of these companies, and only a small fraction remain today, including a producer of folding fans and a traditional papermaking factory in Chŏnju, and a brassware factory in Ansong. Modern industrialization began during the Japanese colonial period (1910-45), however development was uneven as a result of the subordination of the nation's resources to the needs of the colonial rulers. The division of the peninsula following Liberation in 1945 left the majority of industrial facilities in the northern half of the country, and the few remaining factories in the south were unable to be developed due to social disorder and a shortage of capital and technology. Although an Industry Promotion Plan was established in 1950, the existing industrial facilities were destroyed during the Korean War (1950-53). Following the cessation of hostilities, emphasis was placed on the reconstruction of key industries, including oil, food, cement and electricity, however development was severely limited.

Full-scale industrial development was achieved through the implementation of a series of Five-Year Economic Plans from 1962. During the 1970s, Korea was transformed from a nation dependent on primary industry to one in which the secondary and tertiary industrial sectors played a central role. The proportion of the population engaged in secondary industry rose from 17.6% in 1971 to 30.5% in 1980, falling slightly to 28.2% in 1989. These changes were brought about by a rapid expansion in export-based industries during the 1970s. Total exports exceeded $1 billion in 1971, further rising to $10 billion in 1977 and $62.3 billion in 1989, representing a 62-fold increase during a 19-year period. Employment patterns also changed significantly during this period (see Figure ), and there were radical changes in the makeup of the nation's exports. While 80% of exports in 1960 were accounted for by foodstuffs and raw materials, industrial products represented over half of exports in 1966, and this ratio further grew to reach 95% by 1989.

The Korean industrial sector is largely export-led, and is characterized by a high level of dependence on imported raw materials, including oil, iron ore, timber, cotton, wool and rubber. These materials are imported and used in the production of manufactured goods, a large proportion of which are exported, and processing industries therefore play a major role in the economy. Heavy industry is concentrated in coastal regions with convenient access to ports, and includes automobile, steel, machinery and chemical production, in addition to shipbuilding. A shift away from light towards heavy industry during the 1970s has led to the achievement of a balance between these two sectors of the economy.

Rapid industrial development in Korea can be attributed to the availability of a large, highly-educated workforce and the introduction of overseas technology and capital as a result of international economic cooperation.

Formation of the country

Despite its location as a buffer zone between China and Japan, Korea has been able to maintain a distinct identity during a history which spans more than 5,000 years. Archeological evidence shows that the peninsula has been inhabited for at least 20,000 years, and that the earliest inhabitants were probably the Mongoloid ancestors of modern-day Koreans. However, it was not until the fourth century AD that formal state structures were established, with the development of the Paekche and Shilla kingdoms in the south and Koguryo in the north during the Three Kingdoms Period. Shilla succeeded in uniting the country in 668AD, and leadership later passed to the rulers of the Koryo Dynasty (918-1392). A neo-Confucian government hierarchy was established during this period, and this government structure was consolidated during the Choson (Yi) Dynasty (1392-1910). Major attacks from Japan (1592, 1597) and China (1627) led the Choson rulers to adopt a 'closed door' foreign policy and Korea became known as the "Hermit Kingdom" during the two centuries of self-imposed isolation which followed. During this period, the government showed nominal fealty to China, although Japanese influence became predominant towards the end of the 19th century. Japan's military successes in the Sino-Japanese War (1894-5) and the Russo-Japanese War (1904-5) encouraged Japanese expansionist ambitions, and Korea was annexed in 1910. During the following 35 years of colonial rule, the Japanese government suppressed use of the Korean language and attempted to eradicate Korean culture, and this process continued until the country's liberation from Japanese rule in 1945. Following World War II, the northern half of the peninsula was occupied by Soviet forces and the southern half by US forces. Korean political forces also became polarized with the formation of a pro-Communist government in the north under Kim II Sung and a pro-Western government in the south under Syngman Rhee. The US withdrew its forces from the southern zone in 1949, however northern forces launched an unprovoked attack on the south on June 25, 1950, marking the beginning of the three-year Korean War. At the conclusion of an armistice agreement on July 27, 1953, the entire peninsula lay in a state of devastation, and an armistice line dividing the peninsula was to remain as the boundary between two independent nations which are still technically at war.
Population

The population of Korea during the middle Chosŏn Dynasty is estimated to have been approximately 10 million, and remained relatively unchanged for the following two centuries, rising to approximately 13 million by the end of the Chosŏn Dynasty. At the time of the first modern census in 1925, Korea had a population of 19 million, and between 1920 and 1944 the population doubled in 34 years to reach 25.12 million. At the time of Liberation from Japanese colonial rule in 1945, there were approximately 2.1 million Koreans in Japan, of which 1.5 million subsequently returned to Korea. However the majority of the 1.6 million Koreans in Manchuria and 200 000 in the Soviet Union remained in those areas following Liberation. During the Korean War, the population of the southern part of the peninsula was swollen by the mass influx of refugees from the north, and the first census in South Korea in 1955 registered a population of 21.5 million. Steady economic growth commencing during the 1960s saw the population grow at an annual rate of approximately 2%, slowing during the following decade. In 1995 the population of South Korea was estimated at 44.85 million, and the population density was 451.24 persons per square kilometer. In 1993, North Korea's population was estimated to be 23.05 million, and the population density was 188.36 persons per square kilometer.

Modern Administrative System

From the early part of the Chosŏn Dynasty, Korea was divided into eight provinces, and these were subdivided into 13 provinces in 1896, of which eight now lie in South Korea. (The northern parts of Kangwŏn and Kyŏnggi Provinces lie in North Korea and a group of islands off the south coast of Hwanghae-do now lie in South Korea). The island of Cheju became a province in 1945. Today, South Korea comprises nine provinces (do), one special city (t'ŭkbyŏl-shi) and five metropolitan areas (kwangyŏk-shi). The provinces, special city and metropolitan areas all operate at the same level of local administration directly under the central government. The provinces are further divided into 55 cities (shi) and 138 counties (kun).

North Korean administrative divisions have been reorganized, creating a total of nine provinces (North and South Hwanghae, North and South P'yŏngan, North and South Hamgyŏng, Kangwŏn, Ryanggang and Jagang) and three municipalities (P'yŏngyang, Nampo and Kaesŏng). At the lower end of the administrative hierarchy are villages and laborer camps, the latter having been established in the vicinity of mines, forestry and fisheries project sites, factories and enterprises.

Settlement

Korea's rural population declined rapidly during the 1970s and 1980s, falling from 70% of the total population in 1960 to only 42.7% in 1980, however the proportion remains relatively high in comparison to other developed nations. Apart from those dwelling on the outskirts of urban centers, most of the rural population is engaged in agricultural activities, and the distribution of settlement largely corresponds to that of arable land throughout the country. Villages are usually constituted of dense groupings of houses (chipch'ŏn), however spacing of dwellings is more scattered in the case of newer settlements and those found in mountainous areas (sanch'ŏn). The layout of the former type of village is closely associated with the natural and social environment of traditional Korea, reflecting both its aesthetic taste and family system, in addition to a rational approach to land use. Settlements are commonly found backing onto the south side of low hills, as such a location ensures protection from cold northwesterly winds during winter and optimum exposure to sunlight, and allows for maximum cultivation of flat land.

Korean villages underwent a radical transformation as a result of the Saemaul Undong (New Village Movement), launched during the 1970s while the country was simultaneous undergoing rapid industrial development. The positioning of homes within villages was rationalized, building materials and structures were standardized and traditional thatched-roof houses almost disappeared from the landscape. However, it is still possible to find examples of these older-style dwellings today, and there have been no visible changes in the basic location of villages nor in the structure of farmhouses. Urbanization is a relatively recent phenomenon in Korea, and this process has closely followed the transformation of the industrial sector resulting from the Five-Year Economic Plans and the Land Development Plan. The urban population rose from 7 million in 1960 to 36.4 million in 1985, while the rural population decreased from 19.4 million in 1966 to 14 million in 1985. (see Figure ) Between 1960 and 1966, development of light and heavy industry in urban centers led to an increase in the urban population, however there was no corresponding fall in the rural population. During the period of the Second Five-Year Economic Plan (1966-70), there was significant population growth in the Seoul metropolitan region and in the Taebaek Range district, and the rural population commenced an absolute decline from 1968. Population growth in the Seoul metropolitan region was due to the development of satellite towns on the outskirts of the capital. Most urban centers and the Taebaek Range district showed further population growth between 1970 and 1975, with particularly significant growth in centers adjoining the Kyŏngbu Expressway and in rapidly-developing industrial zones in the southeast of the country, including P'ohang, Ulsan, Pusan and Masan. The period from 1975 to 1980 saw the urban population rising by 4.6 million, while the rural population fell by a further 1.8 million. The only region which did not experience a decline in its rural population during this period was Cheju Island in the far south. This period was
marked by a significant expansion in Korea's export volume, and the expansion of related industries. The decline in the rural population began to ease during the period from 1980 to 1985, with the exception of North Kyōngsang Province. 39.1% of Korea's population was concentrated in the Seoul metropolitan region by 1985, a phenomenon which can be attributed to the expansion of the rail network, opening of new expressways and construction of satellite towns in this area since the beginning of the 1970s. In contrast to trends in the remainder of the country, the development of fruit-growing and tourism industries during the past decades has prevented a significant decline in the rural population in the case of Cheju Island.

Territory

The Korean Peninsula thrusts southwards from the north-east Asian mainland, bounded to the north by the Chinese region of Manchuria and Russian Siberia, to the west by the Yellow Sea, to the east by the East Sea (Sea of Japan) and to the south by the Tsushima Straits which separate Korea from the Japanese island of Kyūshū. At its nearest point, China's Shantung Peninsula lies 190 kms. from the west coast of Korea, and the shortest distance from the southern port city of Pusan to the main Japanese island of Honshū is 180 kms. Korea's land boundaries are largely defined by the Amnok (Yalu) and Tuman (Tumen) Rivers, and the boundary with China accounts for all but the last 16 kms. The latitudes and longitudes of the four extremities of Korean territory are as follows:

North Northern extremity of Yup'ŏjin, Onsong-gun, North Hamgyŏng Province
43 00'39" N

East Eastern extremity of Tok-do, Ullung-gun, North Kyŏngsang Province
131 52'42" E

South Southern extremity of Mara-do, Namjeju-gun, Cheju Province
33 06'40" N

West Western extremity of Ma'an-do, Yongch'ŏn-gun, North Pyŏng'ang Province
124 11'00" E

The total area of Korea is 221 764 square kilometers. Korean territory includes the Korean Peninsula itself in addition to over 3 300 offshore islands, of which approximately 300 are inhabited. The total coastline has been estimated to measure 17 300 kilometers, however the peninsula itself accounts for only a little more than half of this total (8 700 kilometers).

Today, the Korean Peninsula is divided into two nations, the Republic of Korea (South Korea), with a total land area of 99 394 square kilometers, and the Democratic People's Republic of Korea (North Korea), with a total land area of 122 370 sq kms. South Korea is slightly larger than Portugal or the US state of Indiana and a little smaller than Iceland. North Korea is slightly smaller than the US state of Mississippi. The boundary between North and South Korea follows the armistice line demarcated after the Korean War (1950-53), and lies at approximately 38 N. South Korea became a signatory to the International Law of the Sea Treaty in 1985, establishing a twelve-nautical mile boundary for its territorial waters.

Natural Features

Topography and Geology

Although hills and mountains account for approximately seventy per cent of Korea's total land area, only ten per cent of land lies above the elevation of 1000 metres, with the main ranges lying in the east of the peninsula. Landforms in the western and eastern parts of the peninsula are highly differentiated. The west coast is characterized by a highly indented coastline with numerous islands, especially in the southwest. Much of the nation's arable land lies in the west, where fertile plains are punctuated by low hills and watered by numerous rivers. In contrast, the major topographic features of the eastern part of the peninsula are the Taebaeks and Nangnims mountain ranges, which run north-south and form the geological backbone of the peninsula. Several smaller ranges, all lying in North Korea, originate from these two larger ranges, and run in a northeast-southwest direction. The Hamgyŏng Range in North Korea and the Sobaek Range in South Korea also have their origins in the main north-south ranges. The east coast is generally unindented, and has few
rivers due to the close proximity of the mountain ranges to the coast.

The Korean landmass is relatively stable, containing no active volcanoes and experiencing few earthquakes. The peninsula is thought to have been an erosional lowland until a period of uplift began during the Mesozoic Era, with this process being most pronounced in the east. Periglaciation and an arid climate contributed to increased erosion during the Pleistocene Era, resulting in the creation of relatively mature landforms with higher relief in the east and lower relief in the west. The highest peak on the peninsula is Mt. Paktu (2 744m) located in the far north at the northwest extremity of the Kaema Plateau. The highest peak in South Korea is Mt. Halla (1 950), a volcanic cone located on the island of Cheju, 100 kms south of the mainland. Mt. Paktu is famous for its large crater lake, while Mt. Sŏrak (1 708m) and Mt. Kŭmgang (1 638m), both in the Taebaek Range, are also renowned for their scenic beauty.

The peninsula contains many examples of Paleozoic sedimentary and pre-Cambrian metamorphic rock, but very few examples from the Cenozoic Era. In common with Manchuria, Siberia and other parts of northeast Asia, Korea's landforms are extremely old. The oldest rock is crystallized gneiss from the Archeozoic Era, followed by granite gneiss from the later part of that era. Granite dating from the Mesozoic Era is widely found in the vicinity of the above two rock types, and these three rock types account for seventy per cent of the total land area of Korea.

The Korean Peninsula contains a relatively large number of rivers in relation to its size, with most rivers flowing into the Yellow Sea. Korea has six rivers with lengths exceeding 400 kms., the Amnok (Yalu in Chinese) (790kms.), Naktong (525kms.), Tuman (Tumen) (521kms.), Han (514kms.) and Kŭmgang (401kms.). All except the Tuman flow into the Yellow Sea, with the Naktong meeting the ocean near the port of Pusan and the point of confluence between the Yellow Sea and the East Sea (Sea of Japan). The Tuman forms part of the border with China and all of the border with Russia, flowing into the East Sea near the North Korean town of Najin. River levels in Korea are low during the drier winter months, when many channels freeze over or become dry. However, heavy rainfall during the summer monsoons of July and August leads to swollen rivers and occasional flooding. Rivers are extremely important for irrigation in Korea, and improved technology has led to seventy-two per cent of rice fields being dependent on river water for irrigation. The construction of dams on all of the main rivers in South Korea has led to a range of benefits, including improved flood control and generation of hydroelectric power.

**Transportation** (see also under **Transport**)

**Road Transportation**

A system of arterial roads connecting the capital, Hansŏng, to provincial centers was developed during the Chosŏn Dynasty. Built for pedestrian and cattle- or horse-driven vehicles, their routes roughly corresponded to those of present-day expressways and major railroad lines. Roads for automobiles were newly constructed during the period of Japanese occupation, and traffic volume increased rapidly during the nation's industrialization in the postwar period, leading to a road construction boom.

At the end of 1993, there were 61 296 kilometers of roads in South Korea. This total included 11 expressways with a combined length of 1 602 kilometers, metropolitan roads (12 057km), city roads (9 792km), provincial roads (13 337km) and county roads (13 852km). 84.7% of roads were paved.

Domestic passenger transportation volume has increased rapidly during the past three decades, rising from 1.65 billion persons in 1966 to 13.44 billion persons in 1989, and further to 31.90 billion persons in 1994. Road passenger volume first exceeded rail passenger volume in 1965, and the former accounted for 89% of the total in 1989. The
number of vehicles also showed a marked increase during this period, jumping from 30,000 in 1960 to 2.26 million in 1989, and further increasing dramatically to 7.4 million by the end of 1994. Vehicles are concentrated in the large urban centers (Seoul 26.1%; Pusan 7.2%), and it is these centers which also contain the densest road networks. Among inter-city routes, the sector between Seoul and Taegôn has the heaviest traffic flow.

Rail Transportation

Railroad development began with the opening of the Kyong’in Line connecting Noryangjin (in southwestern Seoul) with the port city of Inch’on in 1899. Seoul and Pusan were linked by the Kyongbu Line in 1905, and an 'X'-shaped national network was formed with the opening of the Honam and Chung’ang Lines in 1914 and 1942 respectively. There was a total of 2,642 kilometers of railroad in the southern half of Korea at the time of Liberation in 1945, however total length of operational lines had increased to 3,101.2 kilometers by the end of 1994, due to the construction of freight lines, opening of subway networks, and electrification and broadening of trunk lines to double or quadruple tracks. The phenomenal growth of road transport during the postwar period has led to the closure of certain lines, including the Suryô Line, however railroads (including subways) still handle 6.6% of passenger transport (1994) and approximately one-fifth of freight transport. The Kyongbu, Kyong’in and Honam Lines constitute the core of the passenger rail network, while the Chungang, Yondong and Taebaek Lines mainly handle freight transport.

Attempts have been made during the past two decades to alleviate traffic congestion in metropolitan areas through the construction of subway networks. Subway development began with the opening of Seoul's No.1 Line in 1974, and the system had grown to include four lines with a total length of 131.6 kilometers by 1994. The 54 kilometer No.5 Line opened in 1994, and three additional lines are due to be in operation by the end of the decade. Pusan's No.1 subway line opened in 1985, and No.2 Line is due to commence operation in 1997. A new subway system is currently under construction in the southeastern city of Taegu.

Marine Transportation

Inland waterways and coastal shipping routes played an important role in both passenger and freight transportation in Korea until the end of the 19th century. The Han River was particularly heavily used for the transportation of marine products and agricultural produce to Seoul, however use of this waterway became severely restricted after the Korean War due to the proximity of its estuary to the demilitarized zone (DMZ). The growth of road transportation has led to a decline in marine transportation during the postwar years, however routes linking the country's numerous islands to each other and the mainland remain important, particularly in the case of Chejudo in the far south, ulungdo in the East Sea (Sea of Japan) and the archipelagoes in the south and southwest of the nation.

At the end of 1994, South Korea had a total of 49 ports with a combined annual loading and unloading capacity of 275.59 million tonnes. Port facilities at Pusan, Inch’ôn, Pohang and other centers have been expanded to handle increased import and export volumes, and are home to 4,965 vessels with a combined weight of 6.5 million tonnes.

Air Transportation

Full-scale development of air transportation began with the establishment of Korean National Airlines, later renamed Korea Air Lines (KAL), in 1962. The national carrier recorded an average of 12% growth in passenger volume in the two decades to 1989, carrying 8.9 million domestic passengers and 8.2 million international passengers during that year. KAL has been joined on both domestic and international routes by Asiana
Airlines, and both operate networks based in Seoul. By the end of 1994, South Korea had concluded aviation agreements with 63 nations, and had air links with 63 cities in 26 countries. There are regular scheduled flights from Seoul's Kimp'o Airport to major cities in South East Asia, the Middle East, the united States, Europe and Australia, and international flights also leave from the nation's two other international airports at Pusan and Cheju. Domestic flights also depart from these three airports, and Kimp'o operates as the hub of the domestic air network. Other domestic airports include those at Kwangju, Taegu, Ulsan, P'ohang, Sach'on, Yech'on, Mokp'o, Yosu, Kangnung and Sokch'o. Domestic air passenger volume in 1994 reached 18.2 million persons, or 5.7% of the total annual domestic passenger volume. 3.15 million South Koreans traveled overseas during 1994, an increase of 30.3% from the previous year, while the nation was visited by 3.58 million foreigners, a 7.5% increase on the previous year's figure.

**Korea Academy Of Industrial Technology**

Located in Seoul's Kuro Ward, KAITECH (Saengsan Kisul Yŏng'guwŏn) is a hardware-oriented research and development organisation established in 1989 to promote the competitiveness of Korean manufacturers. It is operated under the auspices of Korea's Ministry of Trade, Industry and Energy (MOTIE). Unlike KIST, which focuses more on basic science and high-risk research, KAITECH undertakes research on the practical development of products and production technologies. In recent years, a number of organisations have merged with KAITECH, including the Industrial Test and Inspection Centre and the Industrial Technology Training Centre. KAITECH employs about one-thousand personnel and has a budget approaching US$250 million, of which about one-third is spent internally with the remainder distributed to industrial organisations and universities. The academy supports between four and five-hundred new projects each year and about seventy per cent of these involve small to medium-sized companies.

In addition to technology management, testing and inspections and industrial technology training, KAITECH has six primary research and development centres: the Mechanical and Material Development Centre; Production and System Development Centre; Electronics and Information System Centre; Textile Technology Application Centre; Chemical Technology Application Centre; and the Production Technology Application Centre.

**Korea Advanced Institute of Science and Technology (KAIST)**

KAIST (Han'guk Kwahak Kisurwŏn) was founded as the Korea Advanced Institute of Science (KAIS) by a special enactment on 16 February 1971. On 18 May 1981, the Institute amalgamated with the Korean Institute of Science and Technology (KIST), and changed its name to the present KAIST. In July 1989, it merged with the Korean Institute of Technology (KIT), an undergraduate college established in 1985 for the purpose of educating scientifically-gifted students. In March 1996, the KAIST Graduate School of Techno-Management was established in Seoul, and this was followed by the founding of KIAS (Korea Institute for Advanced Study), also in Seoul. At present, KAIST is under the control of the Ministry of Science and Technology.

The KAIST campus is located inside Taedok Science Town in Taejŏn. The Institute recruits countrywide, talented high-school graduates. The main focus of the Institute's programs is on graduate studies and research. Unlike some other Korean universities and colleges, the Institute does not require undergraduate students to define their specific majors until they have completed third or fourth semesters. In order to give students some practical experience in a chosen field, they are encouraged to participate in R and D projects with Institute staff. Bachelor, Master and Ph.D degrees are awarded by the Institute.

Within the Institute's College of Natural Sciences are the departments of Biological Science;
Chemistry; Mathematics; and Physics. The College of Engineering has the departments of Aerospace Engineering; Chemical Engineering; Civil Engineering; Computer Science; Electrical Engineering; Industrial Design; Industrial Engineering; Materials Science and Engineering; Mechanical Engineering; and Nuclear Engineering. The Graduate School of Management has the department of Industrial Management and Management Engineering.

Korea Aerospace Research Institute (KARI)

The Korea Aerospace Research Institute (Han’guk Hanggong Uju Yŏn’guso) was established in September 1989. The Institute’s primary role is to research and develop aerospace technologies, provide technical support to related industries and assist the government in forming aerospace policies. In particular, the institute conducts research on core technologies for aircraft, scientific sounding-rockets, satellites and related systems. It also performs tests and evaluations and provides technical training to industrial engineers. Since 1992, KARI has been part of the International Astronautical Federation.

Korea & Her Neighbours

*Korea & Her Neighbours* is a two-volume travel account of late Chosŏn written by Isabella L. Bird, and published by John Murray in 1898. The work is largely based upon the personal observations of the author made during her four visits to Korea from January 1894 to March 1897. The first volume contains eighteen chapters that record the author’s impressions of Korea; the city of Seoul; the natural landscape; various social institutions such as marriage; and the lives of the Korean people. The second volume contains nineteen chapters and provides a detailed account of the author’s audiences with King Kojong (r. 1863-1907) and Queen Min (1851-1895); the tragic death of Queen Min; and various other commentaries on the situation of Korean women; burial customs; education; and Korean shamanism.

Bird’s work is a valuable source of data for the study of late Chosŏn, especially as the author’s commentaries on various aspects of life in Korea are not overly biased by the sense of Western superiority inherent in such works. Moreover, the author had a rather close relationship with the royal family, particularly Queen Min, which provides an interesting insight into the situation surrounding the royal family at the close of Chosŏn. A further point of interest is the author’s understanding of the perilous international situation which then gripped Korea, and her analysis of the future for Chosŏn.

Korea Artista Proleta Federatio

Korea Atomic Energy research Institution (KAERI)

Located in Tŏkchín-dong in Taegu, KAERI (Han’guk Wŏnjaryŏk Yŏn’guso) is engaged in research on nuclear fuel cycle technology, radioactive waste management, nuclear safety, nuclear chemicals and nuclear engineering. In addition, the institute undertakes research and development of radiation applications. It also offers training programs, most of which are of one to two months duration, dealing with non-conventional energy resources, nuclear power plants and nuclear safeguards. KAERI has a Radioactive Waste Management Division and a Spent Fuel Management Division. It employs about 180 researchers, 30 administrative personnel and over 80 support personnel. It is affiliated with the International Cancer Union, International Atomic Energy Organisation and M.D Anderson Cancer Center Hospital of Texas University, in the United States.

Korea Basic Science Institute (KBSI)
KBSI (Kich’o Kwahak Chiwŏn Yŏn’guso) promotes basic science research at universities and in industry. The Institute was founded in August 1988 with Dr. Hyun-Nam Kim as its first president. A year later, its temporary office opened in Seoul and in December 1990 construction of its headquarter in Taejŏn began. In October 1991, the Institute was reorganised under the auspices of the Korea Research Institute of Standards and Science. In 1992, four regional offices were established in Seoul, Pusan, Taegu and Kwangju and its Taejŏn headquarter was completed. In May 1993, KBSI became an affiliate of Korea Research Institute of Standards and Science.

Korea Development Bank

Korea Development Institute (KDI)

Located in Ch’ŏngnyangni-dong in Seoul, KDI (Han’guk Kaebal Yŏn’guwŏn) is an autonomous, policy-oriented research organisation founded in 1971 by the ROK government as a think-tank to provide a rigorous academic perspective on the various economic policy issues arising from South Korea’s rapid growth. Maintaining close ties with government bodies and universities, the Institute provides comprehensive analyses and advice on government policy matters, in areas ranging from domestic economic planning to international economic cooperation. Its international activities include policy forums; joint seminars; management training courses; country-specific programs; consulting services; seminar series in host countries; and visiting scholars’ programs.

KDI undertakes research in macro-economic management; financial systems; law and economics; industry; trade and labour; public finance and social development; regional development and the environment; as well as the DPRK economy. The Institute also operates the Information and Computer Centre, which has a large collection of specialised literature, statistical data and other relevant information; while providing library and computer services specific to the needs of its research staff. KDI has about two-hundred and sixty research staff.

The Centre for Economic Education (CEE), established by the Institute in December 1989 as an autonomous non-profit institution, was incorporated into KDI on 27 December 1991. The CEE offers instruction in economics to the general public as well as public servants, entrepreneurs, managers and teachers. Its activities are primarily aimed at promoting economic understanding and eliciting broad-based public participation in the government policy-making processes. CEE also disseminates economic information and conducts public-opinion surveys.

Korea Educational Development Institute

KEDI (Han’guk Kyoyuk Kaebarwŏn) is situated in Sŏch’o Ward in Seoul. Founded in August 1972, the institute is an independent, government-funded research and development organisation engaged in the following activities: (1) formulation of policy alternatives and the development of long and mid-term educational development plans; (2) production of television and radio programs and improvement of teaching through enhanced utilisation of the broadcast media; and (3) dissemination of research findings and information. In addition, the institute conducts research on educational curriculums, text books, education policy, education methodology and the use of computers in teaching.

Korea Electric Power Company

Korea Electrotechnology Research Institute (KERI)

KERI (Han’guk Chŏn’gi Yŏn’guso) was established in December 1976 as the Korea Electric
Research and Testing Institute. In January 1981, it amalgamated with the Korea Telecommunications Research Institute to become the Korea Electrotechnology and Telecommunications Research Institute. It has been known by its present name since June 1985. Located in Sŏngju-dong in Ch’angwŏn, the Institute develops and disseminates new knowledge and technologies concerned with the electric industry and electric power.

Korea Employers’ Federation

Korea Food Research Institute (KFRI)

KFRI (Han’guk Shikp’um Kaebal Yŏn’guwŏn) is a non-profit making research institute established in 1988 in order to develop food technologies and improve agricultural income by adding value to farm products. Due to the increasing liberalisation of Korea’s agricultural sector, food technology innovation has become an important method of increasing the international competitiveness of the nation’s agriculture and food industry. KFRI performs basic research into transforming agricultural products into high value-added products; improving the efficiency of agricultural products and processed food marketing; and in providing technical information to farmers. The Institute also supports efforts to commercialise traditional Korean foods.

Korea Foundation

The Korea Foundation (Han’guk Kukche Kyoryu Chedan) is located in Chung Ward in Seoul. Created in January 1992 from the International Cultural Society of Korea, the Foundation promotes international exchanges and understanding between Korea and other nations. It does this by organising and sponsoring various cultural exchange programs, international conferences, seminars and research activities. It also conducts an exchange program under which prominent scholars, professional people and artists from around the world are invited to participate in seminars and conferences, or to conduct research or collaborative projects with their Korean colleagues. Likewise, Korean academics, professionals and artists also receive support for such overseas research activities. The Foundation runs Korean Studies Abroad Program in order to facilitate overseas academic research on Korea. As part of this program, financial help is given to overseas centres of learning and research. The Korea Foundation participates in cultural and artistic exchanges and publishes and distributes a number of works, including the periodicals, Koreana and Korea Focus.

Korea Foundation For Advanced Studies

KFAS (Han’guk Kodŏng Kyoyuk Chaedan) was founded in November 1974, and since 1986 the foundation’s office has been located in Yŏksam-dong in Seoul. The organisation’s main aim is to develop leading scholars in the fields of pure social, liberal and natural sciences. As well as support for academic research, KFAS also runs scholarship programs for undergraduate students; for students studying abroad; undergraduate students majoring in Asian studies; and students undertaking doctoral programs in Asian studies. Foundation employees number about twenty. In 1995, the KFAS had a budget of about 2.5 billion Won.

Korea Ginseng and Tobacco Research Institute (KGTRI)

Located in Shinsŏng-dong in Taejŏn, KGTRI (Han’guk Insam Yŏn’guwŏn) was established in 1937 to carry out government policy concerning ginseng, and tobacco. Today, with its many research interests, and the practical application of research findings, the Institute is mainly concerned with the quantity and quality of ginseng and with the
production of tobacco. KGTRI offers a one-month training program in management and its library emphasises works related to ginseng and tobacco.

**The Korea Herald**

The Korea Herald is an English language newspaper published in Seoul. It commenced publication on 15 August 1953 under the name of The Korean Republic, with the mission of allowing a better understanding of Korea by those who could not read the language. The name was changed on 15 August 1965, since it (The Korean Republic) was quite similar to the name of the country -- ‘The Republic of Korea.’ At the time of the name-change, the president was Kim Ponggi, and the managing editor and editor-in-chief Kye Kwanggil. Initially, the newspaper was a four-page tabloid, and its size was expanded gradually over the years until it reached twelve-pages in 1986, a size it has maintained. The Korea Herald publishes twice-weekly four-page supplements for business and weekend activities.

The Korea Herald carries special opinion and news articles from major American newspapers, such as the New York Times, Los Angeles Times and the Washington Post, and it also has new exchange agreements with the Japan Times and the China Daily. It has continued to expand its international contacts and seeks to act as the ‘window of Korea and the world’. The Korea Herald strives to create an appreciation of Korean culture among foreigners through various contests such as the Korean Folk Arts Contest for Foreigners and the Korean Language Speech Contest for Foreigners. Moreover, the The Korea Herald is available on the Internet, allowing for quick access to information on Korea.

Korea Housing Bank

Korea Information Society Development Institute (KISDI)

KISDI (Chóngbo T‘ongshin Chôngch’aek Yŏn’guso) was established in November 1987, with the enactment of the Korea Information Society Development Institute Law which called for the expansion and reorganisation of ICR (Institute for Communications Research) to form the KISDI. Dr. Kim Cae-One served as the institute’s first president. As a government-sponsored research institute operating under the auspices of the Ministry of Information and Communications, KISDI conducts specialised research on a broad range of information and communications issues. It collects and analyses domestic and international data on policies, systems and industries related to the information and communications field. In carrying out these functions, KISDI aims to provide stratagems and policy guidelines for the setting up of a modern information society in Korea.

Korea Institute for Economics and Technology (KIET)

KIET (Sanŏp Yŏn’guwŏn) is an autonomous, non-profit making institute of economic research, established by the Korean government in 1976. Originally founded as the Korea Foundation for Middle-East Studies to accommodate Korean firms reaching out to the Middle East, the name changed to KIET in 1982. Since then, the Institute has been the barometer for research into economic trends and it advises the government on industrial, trade, and commercial policies. In particular, KIET specialises in trade studies, industrial studies and forecasts concerning both domestic and international markets. The Institute disseminates industrial and technological information to the private sector through its affiliated organisation, CITI.

Korea Institute for Health and Social Affairs (KIHASA)

KIHASA (Han’guk Pogŏn Sahoe Yŏn’guwŏn) was established in July 1971 by presidential decree as the Korea Institute for Family Planning. The Institute’s present name
dates from 1989. Since its founding it has been directly involved with population policy, the health and welfare system and social insurance. The Institute provides the government with information and guidelines with which to formulate policy in these areas. Goals of the organisation include globalisation of the public health and social welfare system, strengthening competitiveness of the health care industry under the WTO system, helping Korea’s health and welfare system utilise modern information networks, construction of a welfare model which is oriented towards the family and community, establishing local and central government roles relating to health and welfare and conducting national surveys on households; health; the disabled; the elderly; low-income earners; and related topics. The Institute is located in Pungwang-dong in Seoul.

**Korea Institute for International Economic Policy (KIEP)**

Located in Yŏmgok-dong in Seoul, KIEP (Taeoe Kyŏngje Chŏngch'ak Yŏn’guwŏn) was established in January 1990 and given the task of advising the government on major international economic policy issues. It is also charged with keeping officials and businessmen informed of significant economic and policy developments abroad. The Institute has about eighty academic staff engaged in research, of whom some thirty-five hold doctorate degrees in economics.

KIEP provides detailed research and analysis of international macro-economic issues as well as international trade and investment rules, while systematically investigating challenges and opportunities faced by the Korean economy in all regions of the world. The Institute also studies those international issues which will flow from the unification of the Korean peninsula.

The Institute maintains a pool of international economists (KOPIE, Korea’s Official Pool of International Economists) who cooperate with in-house researchers through regular study groups. KIEP also maintains a pool of regional experts (KOPRE, KIEP’s Official Pool of Regional Experts) who meet to discuss international developments. It places particular emphasis on establishing networks of Korean experts on northeast Asia. In addition, KIEP serves as Korea’s National APEC Study Centre and sponsors a nation-wide consortium of APEC study centres based in universities. At the same time, it serves as the secretariat for KOPEC and the Korea National Committee for the Pacific Economic Cooperation Council (PECC).

**Korea Institute of Applied Science**

[Science and Technology]

**Korea Institute of Construction Technology (KICT)**

Founded in 1983, KICT (Han’guk Kŏnsŏl Kisul Yŏn’guwŏn) gained government support in 1988 with the passage of Article 7 of the Construction Technology Management Law. The Institute’s main purpose is to research and develop new construction technologies. It also supplies information on new construction methods, equipment and materials. KICT consists of the Construction Technology Management Centre; Construction Information Centre; Structural Engineering Division; Highway Engineering Division; Geo-technical Engineering Division; Water Resource Engineering Division; Environmental Engineering Division; Architecture Engineering Division; Mechanical and Electrical Engineering Division; and the Construction Engineering and Management Division. As of January 1996, eighty per cent of the Institute’s income came from government contributions, with the remainder from its own sources. In 1996, KICT employed 163 research and 51 administrative personnel.

**Korea Institute of Criminology**
The KIC (Han’guk Hyŏngsa Chŏngch’aek Yŏn’guwŏn) is a public organisation established under The Korean Institute of Criminology Act (1988) and financed by government appropriations and private research contracts. The institute was set up to assist in policy formulation by analysing the current state of crime in conjunction with changes in crime rates. KIC also conducts research for the development of criminal justice policies. In particular, the institute’s research is concerned with criminal trends, underlying causes and countermeasures as well as criminal law and policy. It also studies crime, criminal law, and criminal policies of North Korea in preparation for the reunification of the peninsula. In addition, KIC conducts seminars and provides research grants to experts and organisations working in the field of criminology.

Korea Institute of Geology, Mining and Minerals (KIGAM)

Located within Taedŏk Science Town in Taejŏn, KIGAM (Han’guk Chawŏn Yŏn’guso) is a research institution devoted to the study of geoscience, geology and material development. About eighty per cent of the Institution’s 460 personnel are researchers attached to one of KIGAM’s eight research divisions. The other twenty per cent are employed in one of the three support divisions. Of late, KIGAM has been researching environmental concerns, such as underground water management, prevention of natural disasters, air pollution reduction and waste utilisation.

Korea Institute of Industry and Technology Information (KINITI)

KINITI provides a nation-wide information system to support industrial and technological development in Korea. The Institute facilitates access and utilisation of information resources, develops on-line information systems and information search tools, promotes public awareness of information services, trains information technology specialists and establishes cooperative networks with both domestic and international information agencies.

Korea Institute of Machinery and Materials (KIMM)

KIMM (Han’guk Kige Yŏn’guwŏn) conducts R and D on machinery, materials, ships and maritime engineering technology. As an integrated government-funded Institute, KIMM provides assistance to small and medium-sized firms. The Institute also provides technical help to Korea’s machine manufacturing industry.

Korea Institute of Nuclear Safety (KINS)

Situated in Taejŏn, KINS (Han’guk Wŏnjaryŏk Anjŏn Kisurwŏn) works to ensure the safety of nuclear facilities in the ROK under the regulatory and licensing provisions of the Atomic Energy Act. In accordance with this legislation, KINS has been entrusted by the Ministry of Science and Technology to perform safety revues and inspections. KINS develops safety standards as well as regulations for the control of nuclear radiation and is responsible for environmental radiation monitoring and regulatory research. It is also equipped to provide technical support in the event of a radiogenic emergency.

Korea Institute of Public Administration (KIPA)

KIPA (Han’guk Haengjong Yŏn’guwŏn) was established in 1991, with Kang Yŏnghun as chairman. The institute offers ‘think-tank responsibility’ in preparing public administration policies for Korea’s future. KIPA conducts research and seminars on a wide range of issues, including public administration’s changing role amidst social and political change in northeast Asia, responses to internationalisation, and the reunification of the Korean peninsula. The institute also supports seminars and studies on new trends in public administration in other countries.
Korea Institute of Registered Architects (KIRA)

Located in Sŏch’o-dong in Seoul, KIRA (Taehan Kŏnch’uksa Hyŏphoe) was founded in 1965 and obtained government sanction in the same year. In addition to its registration and accreditation activities, the Institute holds annual exhibitions of architectural works and publishes the monthly magazine Registered Architects. As of July 1995, the institute had fifteen regional branches and over five-thousand members.

Korea Institute of Science and Technology (KIST)

Located in Pohang in North Kyŏngsang Province, KIST is a private-sector institute established in 1987, in order to support Korea’s industrial and technological development by conducting both basic and applied research. In order to disseminate information to people working in the field, the institute also conducts training programs in industrial management and administration. KIST consists of the Divisions of Applied Science; Ceramics; Chemical Engineering; Electronics and Information Technology; Environment and CFC Technology; Mechanical Engineering; Metals and Polymer Research; and Research Planning and Coordination. KIST facilities also include the Biomedic Science Centre; Structural Biology Centre; the Commision for the KIST-2000 Research Program; Korea Research Institute of Bioscience and Biotechnology; and the Science and Technology Policy Institute.

Korean Insurance Development Institute (KIDI)

KIDI was established in November 1989 after a 1988 amendment to Korea’s Insurance Business Law. The revised law included a provision stipulating the establishment, purpose and authority of KIDI. In 1990, the Institute commenced a review of life insurance products and constructed actuarial tables and mortality statistics. KIDI’s principal aim is to promote consumer confidence in the insurance industry. In order to accomplish its purpose, the Institute maintains an extensive research program on various facets of insurance, including the publication of suggested premium rates based on its findings, as well as undertaking other insurance-related research.

Korea Long Term Credit Bank [Financial institutions]

Korea National University of Education

Korea National University of Education (Han’guk Kyowŏn Taehakkyo) is located in Ch’ŏngwŏn County in North Ch’ungch’ŏng Province. Founded in March 1984, it opened its doors one year later, with Yi Kyuho as first president. In March 1986, a master’s degree program was commenced, followed by a Ph.D program in March 1988. Today, the university consists of four colleges, the Graduate School and the Graduate School of Education.

Korea Old and New: A History

Korea Old and New: A History is a general history of Korea, written by Carter J. Eckert, Ki-Baik Lee, Young Ick Lew, Michael Robinson and Edward W. Wagner. This work was published by Ithchokak Publishers, Seoul, in 1990, and consists of 454 pages, divided into twenty chapters.

The authors sought to improve on what they viewed as the deficiencies of the earlier A New History of Korea, written by Ki-Baik Lee and published in 1984. Lee’s seminal work concludes with the April 1960 Students Revolution and provides scant coverage of the
events from the colonial period forward, while in some respects it is far too detailed for many English language readers. The subsequent work condenses A New History of Korea into less than half of its original form and dedicates considerable space to those events of the nineteenth -- twentieth centuries which have had a major influence on Korea and East Asia in general. The three chapters in the work allotted to late Choson (from 1864 to 1910) were written by Young Ick Lew; Michael Robinson wrote the section on the Japanese colonial period, and Carter J. Eckert the post-liberation chapters. Thus, this work provides a comprehensive coverage of the events occurring from late Choson to 1990.

Korea Old and New: A History does not replace Ki-Baik Lee’s A New History of Korea, but is a good companion volume to it. The later-published work is highly readable and of great value for students in any field of Korean studies, providing as it does the historical framework for understanding the situation of modern Korea.

Korea Railway Research Institute (KRRI)

The government established KRRI in March 1996 to help implement its policies, as well as research core technologies for use in the development of Korea’s railways, and to strengthen Korea's international competitiveness. The Institute participates in a number of important projects including the High Speed Rail, the Seoul Metropolitan Subway (Phase III) and the Twelve-route Light Rail. The KRRI is also researching the practicability of the Maglev system for urban rail networks. The Institute works to maintain maximum safety conditions and quality of service of the nation’s railway system.

Korea Research Foundation

The Korea Research Foundation (Han’guk Haksul Chinhŭng Chaedan) was established in 1980 to support and coordinate various types of academic research. To facilitate research related to Korea, it runs an academic information network linking major research institutes and university libraries. The Foundation provides also for the international exchange of scholars, and promotes joint research projects under bilateral agreements with foreign institutes. The major component of international exchange activities is the development of Korean studies at foreign institutes of higher learning. The Foundation also participates in youth exchange programs and cultural events designed to develop better understanding and cooperation between Korea and other countries.

The Korea Research Foundation (Han’guk Haksul Chinhŭng Chaedan) was established in 1980. Pursuant to the Science Promotion Act of December 1979, it had the role of supporting and promoting science research activities and international exchange. On 1 April 1984 the Foundation merged with the Korea Institute for Educational Exchange. Its headquarters are in Jong Ro Ku in Seoul.

Today, the Foundation’s activities are still concerned with support for science research activities.

Korea Research Institute for Human Settlements (KRIHS)

KRIHS (Kukto Kaebal Yŏn’guwŏn) is located in the city of Anyang in Kyŏnggi Province. Established in 1978, KRIHS is a non-profit making, independent research organisation established to improve knowledge of the nation's resources in terms of human impact; assisting the government in formulating long-range development plans; cooperating with academic circles in solving theoretical and practical problems concerning human settlement issues and planning; developing and maintaining a data-bank containing current information and statistics on national land resources; and collecting and disseminating significant findings of research on
land management and planning. The KRIHS has a research staff of about one-hundred and twenty and sixty or so administrative personnel. It is funded by the government, but also receives revenue from research contracts (25-50 per cent).

**Korea Research Institute of Bioscience and Biotechnology (KRIBB)**

The Genetic Engineering Centre (GEC) was established as an affiliation of the Korea Institute of Science and Technology (KIST) in February 1985. GEC changed its name to the Genetic Engineering Research Institute (GERI, Saengmyŏng Konghak Yŏn'guso) in December 1990 and then became the Korea Research Institute of Bioscience and Biotechnology in March 1995. The institute works towards a national research and development structure for Korean bioscience and biotechnology, and promotes close links among industry, academic institutions and national research institutions.

**Korea Research Institute of Standards and Science (KRISS)**

KRISS (Han'guk P'yŏjun Kwahak Y'onguwŏn) was founded as the Korea Standards Research Institute in 1976, in the Taedŏk Science Town in Taejŏn. In 1982, the Precision Instrumentation Centre was established at the Institute. A 1991 reorganisation incorporated the Korea Basic Science Centre (KBSC) and the Institute of Space Science and Astronomy (ISSA), with a name-change to KRISS. In May 1993, the Korea Astronomy Observatory (KAO) and Korea Basic Science Centre (KBSC) became self-governing affiliates of KRISS.

**Korea Rural Economic Institute (KREI)**

The KREI (Han'guk Nongch'on Kyŏngje Yŏnguwo) is a non-profit making research institute founded in April 1978 with financial support from the Korean government. The Institute's predecessor was the National Agricultural Economics Research Institute (NAERI) established in 1967, but which foundered because of funding problems. Under the guidance of a fourteen-member board of directors with members drawn from government, universities, and voluntary organisations, KREI performs research and policy studies on specific issues related to agricultural and rural development. These studies are designed to help farmers, agricultural firms and the government to reach better informed decisions. The Institute publishes several publications in Korean, as well as the *Journal of Rural Development* which is published biannually in both English and Korean.

**Korea Science and Engineering Foundation**

Located in the Yusŏng district of Taejŏn, KOSEF (Han'guk Kwahak Chaedan) is a governmental institution founded in 1997. The foundation provides support for scientific research and education, conducts training programs and promotes international cooperation in scientific research. KOSEF is associated with a number of foreign institutions including the Alexander von Humboldt Foundation and Deutsche Forschungsgemeinschaft.

**Korea Silk Research Institute (KSRI)**

The KSRI is located in Chinju in South Kyŏngsang Province, and was established in 1988. The Institute undertakes research into the technological advancement of the silk industry; gives guidance on the practical application of new technologies, the training of technicians, management of model enterprises, testing and analysis. Research areas include dyeing, chemical finishing, weaving and design.
Korea Times, The

The Korea Times is an English language newspaper published in Seoul. Its first printing was on 1 November 1950, under Kim Hwallan. The newspaper's first president was Kim Sangyong, the managing editor Cho Yongman, and the editor-in-chief Yi Sökkon. It was originally launched to provide the United Nations forces in Korea access to news in the English language. The Korea Times started out as a two-page newspaper, but expanded to four pages from 4 December 1952. In the aftermath of the political upheaval of May 1952, and due also to ideological differences among staff, an offshoot paper, The Korean Republic, was published, which would later change its name to The Korea Herald on 15 August 1965. The Korea Times developed over the years to reach a total of eight pages on a daily basis in 1978, with two four-page weekly supplements.

The Korea Times is distributed in about one-hundred and sixty countries and seeks to provide comprehensive coverage of both past and current events to its (English language) readers. Its content includes national and international news; economic and business news; sports; editorial opinion; culture and lifestyle content. The editorial staff has sought to produce a newspaper that meets the diverse needs of an English language audience in Korea and thus features many different topics. Other newspapers published by its parent company, the Hankook Ilbosa, include the daily Hankook ilbo (Han'guk ilbo) a daily general newspaper, and the Seoul Kyungje Shinmoon (Soul kyŏngje shinmun), which is a daily business and economic newspaper.

Korea Toy Industry Cooperative

Korea University

Korea University (Koryŏ Tachakkyo) is a private university situated in Anam-dong in Seoul. The university was initially founded in 1905 as Posung College (Posŏng Chŏnmun Hakkyo) by Lee Young Ik (Yi Yongik). Lee, who once served as Treasurer to the Royal Household, had been impressed by the schools of higher education he had seen while residing in Japan. After his return to Korea, he wanted to create a modern educational institution that was both founded and managed by Koreans. Initially, the college was a two-year night school offering training in legal studies. In 1907, a law department and economics department were established and the curriculum was extended to three years.

In 1909, there was a severe financial crisis which in the following year led to the school's financial management being transferred to Son Pyŏnghŭi (1861-1922), a leader of the Ch'ondogyo church. In 1915, the school's name was changed to Posŏng Pŏmnyul Sangŏp Hakkyo, and three-year courses of study in law and business were offered. With the arrest of Son Pyŏnghŭi during the March First Movement of 1919, the school again faced insolvency. After some critical changes, the school reverted to its previous name of Posung College, in 1921.

In 1932, the college underwent another financial crisis, prompting another change in management. At this time, Kim Sung Soo took charge of the school, building a new campus in the Sŏngbuk District of Seoul at the university's present location. Under Sung's direction, the school's campus was expanded, as was the library, and student enrolment was increased. In 1946, the complex became Korea University, with Hyun Sang Yoon (Hyŏn Sangyŏn) as its first president.

Korea University now has a total of twelve colleges, eighty-five departments and ten graduate schools. At the Seoul Campus are the Colleges of Business Administration, Education, Engineering, Law, Liberal Arts, Medicine, Natural Resources, Political Science & Economics and Science along with the Graduate School and the Graduate Schools of
Business Administration, Education, Industrial Science, International Studies, Journalism & Mass Communication, Labor, Legal Studies and Natural Resources. At the Choch’iwon campus in South Ch’ungch’ông’s Yŏn’gi County, are the Colleges of Economics & Commerce, Humanities and Science & Technology, as well as the Graduate School of Business Administration. In 1995, the Institute of Foreign Language Studies was established at the Seoul campus, where students receive intensive instruction in English, Spanish, French, German, Russian, Chinese and Japanese. Classes are taught by native speakers and students are encouraged to continue their language education for the full four years of undergraduate study, with the emphasis on oral communication skills.

The university employs around 2,000 faculty members including full-time and part-time lecturers and visiting academics. The Korea University Library, which has an extensive network of branch libraries, contains over one-million volumes, including many rare books. The library plans to increase its total holdings to two million volumes by the year 2005.

In addition to its medical college, Korea University incorporates the Junior School of Allied Health and Medical Technology and four university hospitals which offer teaching programs and medical training for students, while providing medical services to the public. The university also runs thirty-nine research institutes including the Asiatic Research Centre and the Korean Cultural Research Centre. Korea University’s campuses cover a total area of about 110 hectares (272 acres). The University also owns about 49 hectares (120 acres) of agricultural land for research as well as about 1338 hectares (3,304 acres) of forests.

Korea’s Fight for Freedom

Korea’s Fight for Freedom is a history of the loss of national sovereignty and the struggle for independence waged by Koreans during the last days of Chosŏn to the aftermath of the First of March 1919 Independence Movement. The author is Frederick Arthur McKenzie (1869-1931), a correspondent for the London Daily Mail, and his work was published by the Fleming H. Revell Company in 1920. It was subsequently reprinted by Yonsei University Press in 1969.

In the preface, McKenzie condemns the brutal reaction of the Japanese to the peaceful uprising of the Korean people in March 1919. He cries out for the international community to redress the crimes of the Japanese in plundering the national sovereignty of Korea and the barbarous suppression of the independence movement conducted by Korean patriots. Moreover, the author denounces the actions of the Japanese to stem the work of missionaries in Korea.

McKenzie’s work begins with a description of the situation that surrounded the colonisation of Korea by Japan, including the assassination of Queen Min (1851-1895) by a Japanese named Takahashi Genji, concurrently with the killing of several members of the court by Japanese policemen and their Korean collaborators. His work is poignantly informative, however, about the situation which existed in Korea during the First of March 1919 Independence Movement, and the vicious punishments and tortures that the soldiers and police inflicted on Koreans, regardless of gender, age and class. He includes many first-hand accounts of the brutality of the Japanese police. Hence, this work is of value for gaining an insight of the savagery of the Japanese oppression of the Korean people during this tragic time.

McKenzie had previously written The Tragedy of Korea (1908), which had dealt principally with the colonisation of Korea. The stated aim of his works was to draw international support for the plight of Korean nationalism, and accordingly they provided English-speaking readers with first-hand information on the situation in Korea.

KIDI's principal aim is to promote consumer confidence in the insurance industry. In order to accomplish its purpose, the Institute maintains an extensive research program on various facets of insurance, including the publication of suggested premium rates based on its findings, as well as undertaking other insurance-related research.

Korean Language Society (Chosŏnŏ or Han'gŭl Hakhoe)  [Language, Korean]

Korean Music: Its History and Performance

Korean Music: Its History and Performance is a 279-page work, written by Keith Pratt and published by Jung Eum Sa in 1987, which describes the basic components of traditional Korean music. The work is divided into three major sections, with illustrations, plates and diagrams that explain the intricacies of Korean music.

The work begins with an introduction that first places Korean music in the larger context of Asian music. It then examines the basics of Korean music and the instruments used in its performance. The second section is devoted to plates, 142 in total, which show Korean musical performances being conducted, both presently or in historic paintings and prints, and the instruments used. The third section comments on the plates and is divided into the categories of contemporary music performance, musical instruments, ceremonial music,
religious music and music for entertainment. There is an extensive bibliography, a glossary of musical names and terms, and a list of Korean temple names.

Keith Pratt's work is very helpful in understanding the nuances of Korean music and the many illustrations and plates help the visualisation of aspects of Korean music with which a non-specialist may not be familiar. Overall, the work is valuable for students of Korean music and traditional ritual and ceremonial events.

**Korean Musical Instruments: A Practical Guide**

*Korean Musical Instruments: A Practical Guide* is a 288-page work, which explains various traditional Korean musical instruments, written by Keith Howard and published by Se-Kwang Music Publishing Company in 1988. The work is composed of eight chapters, three appendices, and a bibliography.

Howard's work begins with an explanation of the system for classification of Korean musical instruments, which are divided into chordophones, aerophones, idiophones, and membranophones. Next, he introduces the main Korean musical instruments beginning with the *p'iri*, which is followed by the *tanso*, *taegum*, *changgo*, *kayagum*, *kömung'o* and the *haegum*. In each chapter the author describes the instrument in question and provides an extensive historical examination of it; discusses similar instruments; details the construction of the instrument; method of playing; and the specific musical notations for it. Moreover, as the text is supplemented with illustrations, charts, diagrams and photographs, comprehension of the form and use of the various musical instruments is readily achieved by non-specialists. The work is augmented by the useful glossary of Korean terms included in the third appendix.

[Korean Socialist Party (see Chosôn Sahoe Tang)]

[Korean Women's Development Institute]

**Koreans to Remember**

*Koreans to Remember*, subtitled *50 Famous People who Helped to Shape Korea*, is a 242-page work written by Richard Saccone and published by Hollym International Corporation in 1993. The work is composed of nine chapters that divide the personages covered by the author into the categories of politicians; kings and queens; military figures; philosophers; religious figures; businessmen; scholars; artists; writers; publishers and composers; and patriots. The subjects chosen by Saccone range from historic figures such as Queen Sŏndŏk (r. 632-647) of Shilla to contemporary politicians such as Roh Tae Woo (No T'aeu) and
Kim Young Sam (Kim Yŏngsam).

While this work was largely compiled from English language sources, the author has utilised some Korean language references and interviews in his compilation. The biographies in the work are highly readable and informative, but the author’s positive appraisal of many of the personages he includes ignores a deal of established fact. For example, in dismissing the authoritarian legacies of the regimes of Park Chung Hee (Pak Chŏnghŭi) and Chun Doo Hwan (Chŏn Tuhwan) with single lines, the author instead focuses almost entirely on the positive aspects of their governments. Hence, the value of this work, even to a general audience, is diminished by its one-sided approach. Moreover, since it was undoubtedly written for the general reader, the biographies are rather simple and shallow.

Koryŏ (see History of Korea)

Koryŏ chŏngch’i chedo sa yŏn’gu (A Study of the History of Koryŏ Political Systems)

Koryŏ chŏngch’i chedo sa yŏn’gu is a 500-page work that examines the political systems and ideology on both the national and local level in the Koryŏ period. This work also covers the emergence of the military powers in the mid-to late Koryŏ period that resulted in a change to the class system. This work was written by Pyŏn T’aesŏp and published by Ilchogak Publishers in 1971.

Koryŏ Communist Party (Koryŏ Kongsan Tang) [History of Korea]

Koryŏ kwangjong yŏn’gu (Studies of King Kwangjong of Koryŏ)

Koryŏ kwangjong yŏn’gu is a collection of seven studies by different writers that are all either directly or indirectly related to King Kwangjong (r. 949-975) of the Koryŏ Kingdom. Yi Kibaek was the editor of this 155-page work that was published by Ilchogak Publishers in 1981.

Koryŏ Kyohyang Aktan [Music]

Koryŏ pyŏngje sa yŏn’gu (A Study of the Koryŏ Military System)

Koryŏ pyŏngje sa yŏn’gu is a 328-page work on the military systems of the Koryŏ period written by Yi Kibaek and published by Ilchogak Publishers in 1983. The author has divided it into the five main chapters of a preliminary investigation, the capital army of Koryŏ, regional armies, provincial garrison forces and a conclusion.

Koryŏ sa

The Koryŏ sa (History of Koryŏ, 1451), the official history of the Koryŏ dynasty (918-1392), consists in total of one hundred and thirty-nine volumes. As with the succeeding Chosŏn dynasty, the Koryŏ dynasty had its own annals and a number of histories written by different scholars. But the only existing history is the Koryŏsa, which was actually written in the Chosŏn dynasty using the previous histories as its sources. It now constitutes the standard account of the history of the Koryŏ.

The Koryŏ sa opens with Chŏng Inji’s dedication, dated 1451, and Chŏng’s name appears on the top of the list of compilers. However, the work had been commenced much earlier and had undergone several revisions. The first to undertake the compilation was actually
Chŏng Tojŏn while the scholar who contributed most to the compilation was Kim Chongsŏ.

In 1392 King T'aejo, the founder of the Chosŏn dynasty ordered Cho Chun, Chŏng Tojŏn and Chŏng Ch'ŏng to undertake the task of compiling the history of the previous dynasty. They completed the history entitled Koryŏ kuksa in 137 volumes in 1395. Since the completion of the Koryŏ kuksa, it underwent several revisions. With the 5th and final revision being completed in 1451 during the reign of King Munjong (r.1450-1452), it was retitled as Koryŏ sa and the total number of volumes were increased from 137 to 139.

The Koryŏ sa consists of forty-six volumes of Sega, thirty-nine volumes of Chi, two volumes of YŏnP'yo, fifty volumes of Yŏlchŏn and two volumes of Index, totalling one hundred and thirty-nine volumes in all.

The volumes of the Sega give in chronological form important facts relating to the Kings of the Koryo dynasty from T'aejo to Kongyang.

The Chi, is a kind of encyclopaedic history and is divided into sections on solar eclipses and other astronomical events; natural calamities; products of the provinces; marriages and other rites of passage; music; clothing; officials and official examinations; land, taxes and the economic system; the military and finally, criminal law.

The two volumes of YŏnP'yo give chronological tables of the kings of the dynasty in the sexagenary cycle along with the contrasting table of the dynasties of China.

The Yŏlchŏn in fifty volumes is a biographical dictionary of the Koryo dynasty, and includes records on queens, members of the royal family, princesses, commoners, loyal and disloyal officials, filial sons, artisans, eunuchs, rebels and others.

The Annals of King Munjong lists the compilers of each section. The list does not contain, however, the names of Kim Chongsŏ, Hŏ Hŏ, Pak P'aengnyŏn and Yu Sŏngwŏn. The reason for this is that two years after the compilation, they opposed the dethroning of the young King Tanjong by his uncle Sejo, who ascended the throne himself. King Sejo arrested and executed all four of them. Thus, their names were excluded from the list of compilers. For this reason the work carries the name of Chŏng Inji instead of Kim Chongsŏ as the director and as a consequence, the Koryŏ sais commonly known as Chŏng Inji's History.

The dating system of the Koryŏ sais important. In the Koryŏ era, the first year of a reign began with the year of the coronation. However, the Chosŏn compilers considered the year after the coronation as the first year. This originally caused considerable confusion when dating the years of the Koryŏ kings.

Koryŏ sa chŏryo

The Koryŏ sa chŏryo is a chronological history of Koryŏ compiled by Kim Chongsŏ and others in 1452.

It is based on earlier chronological histories which are no longer extant, the Koryŏ kuksa and the Sugyo Koryŏsa. Under King Sejong, the Koryŏ sa, a history of Koryŏ arranged by subject rather than chronology, was published in 1451.

In the year following the completion of the Koryŏ sa, the compilers, with the permission of the King, undertook the compilation of the Koryŏ sa chŏryo, which again reverted to a chronological arrangement. Thus, the Koryŏ sa chŏryois, in the final analysis, simply a revised and supplemented edition of the Sugyo Koryŏ sa. The first edition was published in
type about one year after its completion, that is, in 1453.

The work is in thirty-five volumes and contains the historical records arranged in chronological order. It covers the period from 918 to 1392. The work first lists the names of kings, their dates of birth, their parentage and their reign names. Following this is a description in detail of major events which occurred during each reign. Overall, the records are not as descriptive as those in the Koryŏ sa, though they do cover events which are not in the latter work. The Koryŏ sachŏryo provides basic historical material and supplements the Koryŏ sa.

The first edition of the Koryŏ sachŏryo published in 1453 is to be found only in the Hōsa Bunko collection in Japan. It was republished in 1932 as Korean Historical Material Series No.1. The edition presumed to have been published in the reign of King Sŏngjong (r. 1469-1494) is to be found in the Library of Seoul National University as part of the Royal Kyujanggak Collection. There are several missing volumes from this set, but a microfilm edition was issued in 1961 with the missing volumes supplemented from the first edition held in Japan.

Koryŏ sahoesa yŏn'gu (A Study of the History of Koryŏ Society)

Koryŏ sahoesa yŏn'gu is a 500-page work written by Hŏ Hŭngshik and published by Asea Munhwa Sa. In this work the author bases his analysis on the examination of a census register from the end of the Koryŏ period, and through this document investigates the structure of the family of this period.

Koryŏ shidae sa (History of the Koryŏ Period)

Koryŏ shidae sa is a 1096-page work written by Kim Sanggi and first published by Tongguk Munhwa Sa in 1961. It was republished in 1985 by Seoul National University Press as a 939-page work. It is largely divided into two sections: the first being the period of prosperity in Koryŏ from King T'aejo (r. 918-943) until King Yejong (r. 1105-1122), and the second being the period of social unrest that befell the Kingdom from the reign of King Injong (1122-1146) until its fall in 1391. The author has used a thorough analysis of the Koryŏ sa (History of Koryŏ) to arrive at his conclusions in the work. Koryŏ shidae sa is richly supplemented with photos and appendices including a lineage of the kingdom, tables of invasions, official posts and other information.

Koryŏ shidae sa (History of the Koryŏ Period)

Koryŏ shidae sa is a 1096-page work written by Kim Sanggi and first published by Tongguk Munhwa Sa in 1961. It was republished in 1985 by Seoul National University Press as a 939-page work. It is largely divided into two sections: the first being the period of prosperity in Koryŏ from King T'aejo (r. 918-943) until King Yejong (r. 1105-1122), and the second being the period of social unrest that befell the Kingdom from the reign of King Injong (1122-1146) until its fall in 1391. The author has used a thorough analysis of the Koryŏ sa (History of Koryŏ) to arrive at his conclusions in the work. Koryŏ shidae sa is richly supplemented with photos and appendices including a lineage of the kingdom, tables of invasions, official posts and other information.

Koryŏ shidae ui yŏn'gu (Studies of the Koryŏ Period)

Koryŏ shidae ui yŏn'gu is a 430-page work written by Yi Pyŏngdo and published by Asea Munhwa Sa in 1980. In this work the author examines the history of Koryŏ in connection with the prophecies in the Toch'amsŏl.
Koryŏ sogyo (Koryŏ songs) [Literature]

Koryŏ taejanggyŏng (see Buddhist canon, Korean)

Koryŏ t’ojichedo sa yŏn’gu is a study of the various land systems during the Koryŏ period. This work is the result of the author, Kang Chinch’ŏl’s life-long research into this matter. Various aspects of land usage such as soldier’s land (kuninjon), private land (sajŏn) and public land (kongjon) are discussed along with governmental land reform efforts such as the Stipend Land Law (chŏnshikwa). Ichogak Publishers published a revised version of this 465-page book in 1991. Korea University Press published the original edition in 1980.

Koryŏ Tripitaka (see Buddhist canon, Korean)

Koryŏng County

Situated in the southwest part of North Kyŏngsang Province, Koryŏng County has the town of Koryŏng and the townships of Kaejin, Tasan, Tŏkkok, Ssangnim, Sŏngsan and Ugok. Mt. Misung (734m) and Mt. Pannyong (733m) rise in the west, while the Naktong River flows along the county’s eastern border. The county consists of hilly terrain with fertile plains along the banks of the Naktong River.

About 21 per cent of the county is arable, most of which is used to grow rice, but dry-field crops such as beans, peanuts, watermelon and cucumbers are also cultivated. The Annim strawberries, which are organically grown in the region, are known throughout the country for their sweet flavour. In the Tasan Township area, a variety of medicinal herbs are grown. The area is a longstanding producer of pottery, roofing tiles, ink-stones and Ishibil (Twenty Day) liquor.

There are a number of important historical sites in the area. Prehistoric relics, include a rock carving and dolmens in Kaejin Township’s Yangjŏn-dong. Shards of plain pottery along with stone tools have also been excavated from this site. During the early historical period, the Koryŏng county area, then known as Tae Kaya, was part of the Kaya federation that formed during the Three Kingdoms period. As a result, artefacts from this area are important for the light they shed on Kaya culture. Kaya-era stone fortresses found here include remains of the Tae Kaya Fortress in Koryŏng, Unna Fortress in Unsu Township, Mandae and Ŭibong Fortresses. In Koryŏng’s Ko’a-dong, there are ten or more old tombs. In the early 1960s, the excavation of one of these revealed evidence of wall paintings. While most of the paintings had deteriorated and were unrecognizable, one of them seems to have been a lotus flower decoration.

Buddhist artefacts include an interesting multi-storey pagoda (North Kyŏngsang Province Tangible Cultural Asset No. 118) at Panyong Temple and a pair of banner-pole supports that appear to be from the Shilla period in Chisan-dong. Confucian schools in the area include Toam Sŏwŏn north of the Koryŏng interchange, Nogang Sŏwŏn, and Koryŏng Hyanggyo south of Chunghwa reservoir. A number of modern educational institutions are in the area, including Kaya University in Koryŏng’s Chisan Village.

Kosa ch’waryo

Kosa ch’waryo is a work that chiefly deals with the diplomatic intercourse between Korea
and Ming China and was compiled by the scholar Sukkwon in 1554. The original version of this work is no longer extant, but from the later editions the content and structure of the original can be surmised. There are now several different versions extant and the oldest of these is the Urhae cha type edition that was published in 1568.

The content of this work is centred on the diplomatic relations between Korea and the Ming, which were governed by the principle of sadae, or Korean subservience to the Ming. It covers the history of diplomatic relations between the two countries for a period of over two centuries dating from the Koryo period. In examining this work the structure of diplomatic relations between Korea and China can be understood along with the various items concerning diplomatic protocol and life in Ming China. The work broaches topics concerning various aspects of Ming life such as customs, government organisations and celebrated Confucian scholars. This work is quite valuable for the study of foreign relations of the early Choson period.

Kosan yugo (Posthumous Collection of Kosan)

Kosan yugo is the literary collection of the middle Choson period scholar-official Yun Sondo (1587-1671). This collection consists of six volumes and six fascicles and is a woodblock-printed work titled after the pen name of Yun, Kosan. It was first published by the governor of Cholla Province, So Yurin, at the request of the king in 1791. The work was again published in 1798 to correct errors in the first edition and this edition has been transmitted to the present.

The first five volumes contain various official writings of Yun including memorials to the king, essays, treaties and various other writings. The sixth volume is of particular value for the study of Korean literature as it contains the author’s shijo collection. Among the works that are recorded in this section are ‘Sanjung shin’gok’ (New Songs in the Mountain), ‘Sanjung sokshin gok’ (More New Songs in the Mountain) and ‘obu sashisa’ (Fishermen’s Song of the Four Seasons) from a total of seventy-five works.

The historical value of Kosan yugo is great for several different reasons. First, the documents that trace the official life of the author reveal much of the intrigue and political machinations that dominated Choson politics during Yun’s lifetime. Yun was exiled repeatedly when his political faction fell out of favor in the government. Second, this work reveals the political turmoil that surmounted Choson with the collapse of the Chinese Ming State and the subsequent rise of the Qing. Yun was strongly opposed to maintaining a subservient relationship with the Qing as he considered them little more than barbarians, and instead advocated maintaining loyalty to the Ming. Third, this work contains some of the most outstanding examples of Korean shijo. In particular ‘obu sashisa’, a shijo cycle of forty songs, is praised as one of the finest examples of shijo poetry in the Choson period. Therefore, the literary value of Kosan yugo is great also since it records many fine shijo works. It was recently included in Yiyo myonghon chip published in 1973 by Songgyungwan University.

Kosong County (Kangwon Province)

Stretching north of Sokch’o along the east coast of Kangwon Province, Kosong County is comprised of the towns of Kansong and Kojin, and the townships of Chugwang, T’osong and Hyonnae. The county’s western border runs from Mt. K’umgang in the north to Mt. S’orak in the south. Since the Korean War, the county has been divided between North and South Korea. Numerous military installations guard the area around the demilitarised zone.

In the level area near the coast, many of the residents are employed in agriculture. Rice, barley, beans, corn and millet are the region’s main crops. Fishing is another important part of the local economy. Small fishing boats catch walleye pollack, cuttle fish and mackerel
pike. The area's industry is limited to several small ventures such as the boat repair operation in Kojin. Forest products are another important part of the local economy. However, the area's timber industry suffered a setback in the spring of 1997 when a forest fire swept through the area, devastating much of the native growth.

Tourism also makes a significant contribution to the local economy. In the summer, visitors flock to Samp'o and Hwajinp'o Beach. In the winter, numerous ski enthusiasts visit the Chinburyŏng Ski Resort. Although most tourists prefer to go to the famous Mt. Sŏbak to the south, there are several scenic mountains in the county which are frequented by local residents and hiking clubs. Shinsŏn Peak (1204 metres), accessible from the top of Mishi Pass, offers a panoramic view of the area. To the east of the peak lies the scenic Hwaam Temple.

There are several educational institutions in the area. The Kansŏng Hyanggyo (Kangwŏn Province Tangible Cultural Asset No. 104), was founded in 1420 as a Confucian school for local youth. It was burnt down during the Hideyoshi Invasion of 1592. Reconstructed in 1640 and 1850, the school was destroyed again during the Korean War. In the following decades it was slowly rebuilt to become the complex seen today in Kansŏng's Kyodong Village. As for modern institutions, Kyungdong University, located in T'osŏng Township, was opened in 1997. Focusing on architecture, design and tourism, the university plays an important role as the only four year university in the area.

**Kosŏng County** (South. Kyŏngsang Province)

Situated in the southern part of South Kyŏngsang Province, Kosŏng County comprises the town of Kosŏng and the townships of Koryu, Kuman, Kaech’ŏn, Tonghae, Taega, Maam, Samsan, Sangni, Yŏngsŏng, Yŏnghyŏn, Hai, Hail and Hoehwa. The county covers a total area of 513.1 square kilometres and as of 1986 had a population of 80 621. The region is rugged with numerous mountains over 500 metres in elevation.

The county’s agriculture is centred around the Kosŏng Plain, which lies between the western mountains and the Kosŏng Peninsula. Rice, the county’s main crop, is grown here. Farmers also grow dry-field crops such as barley, beans, sweet potatoes and green vegetables. The area’s speciality crops include cotton, sesame, persimmons, ginseng and yangsongi mushrooms (*Agaricus compestris*). Fishing is another important source of income. Boats in the calm waters off the coast bring in catches of anchovy, hairtail, sea bream and ray. In Kuma Township, there is a clay quarry and in Samsan Township, there are gold, silver and copper mines. The mines here supply thirty per cent of South Korea’s copper ore. The county’s industry is limited to a small number of marine product processing plants.

With numerous mountain peaks and a long coastline, the county boasts an abundance of scenic attractions. On Mt. Kujol in Tonghae Township, one finds Kujol Waterfall. Left of the waterfall lies Podŏk Cave and a famous mineral spring, and to the right of the fall lies Paekho Cave. On the cliff above the waterfall is a large boulder, so precariously balanced that it rocks to and fro when pushed. Sadu (Lion Head) Temple used to be perched on this cliff, but the building fell into disrepair and was replaced by P’okp’o Hermitage, which now stands on the site.

In Maam Township’s Changsan Village lies Changsan Forest. During the reign of King Sŏngjong (r. 1469-1494), Hö Ch’ŏnsu, a disciple of Yi Hwang (T’oege), built a pond and pavilion here and planted trees throughout the area. He also constructed a small fishing platform within the pond. Hö would invite fellow scholars to come to the pond where they would fish, recite poetry and engage in the pastimes of the refined scholarly class. After Hö’s death, the site was gradually neglected until some of his descendants reconstructed the pond and fishing platform.
In addition to scenic attractions, there are a number of historical sites in the area. Ancient Buddhist temples found here include the Munsu Hermitage site south of Highway 33 in Sangni Township, Okch'ŏn Temple in Kaech'ŏn Township and Sangjok Hermitage on the coast in Hai Township. Kosŏng Hyanggyo was founded in 1398 as the area's first public educational institution. Razed during the Hideyoshi Invasions (1592-1598), the school was rebuilt by Ch'ŏng Yŏrin in 1607 in Kyosa Village. After several more moves, the building was again set up in Kyosa Village in what is now the town of Kosŏng in 1726. Other Confucian schools in the area include Surim Sŏwŏn, Toyŏn Sŏwŏn (founded in 1854) and Wigye Sŏwŏn (founded in 1844) near Changsan Forest, Tosan Sŏwŏn founded in Kuma Township in 1633, Kalch'ŏn Sŏwŏn founded northwest of Mt. Hangnam (549m) in Taega Township in 1712, Konŭi Sŏwŏn founded in Maam Township's Samnak Village in 1738 and Yuch'on Sŏwŏn founded in Kosŏng's Taep'yŏng Village in 1709.

Famous folk customs from this area include the Kosŏng Ogwangdae (Mask-dance Theatre) and Kosŏng nongyo (Farmers' work songs). The Kosŏng Ogwangdae consists of seven scenes which portray the obang shinjang (protective deities of the five directions), a Buddhist monk, a yangban, a yŏngno (human with a beast's head), a leper, halmi yŏnggam (old woman and old man), and a lion. The Tangsanje (Shaman ritual to worship the guardian spirit of mountains) is the most popular village ceremony observed in this region. Another interesting local ritual is the T'apshinje (Shaman ritual to worship the guardian spirits of pagodas) which is held in Hail Township's Obang Village.

Kōul (Mirror) [Literature]

Koun Temple

Koun Temple is situated on Mt. T'ungun in North Kyŏngsang Province. Originally called 'High Clouds Temple' (Koun-sa) when founded by Ŭisang in 681, the name was later changed to 'Lonely Clouds Temple' (Koun-sa) when Ch'oe Ch'iwŏn and the monks Yŏji and Yŏsa constructed Kaun and Uhwa Pavilion at the site.

The temple complex currently contains about twenty-five buildings. In addition, as one of the main temples of the Chogye Order, it administers over fifty branch temples. The temple also houses several ancient artefacts, including an exquisitely-carved seated statue of the Buddha (Treasure No. 246). This 79cm-high stone statue dates from Greater Shilla.

Koyang

Koyang is situated to the northwest of Seoul. Mt. Pukhan (837 metres) rises up to the east and the Han River flows along the city's border from south to west. Farms in the area primarily cultivate rice, sweet potatoes, potatoes and barley. Dairy farming and stock breeding also contribute to the local economy. Due to city zoning restrictions, the area's industrial development is limited to a number of small factories. The area's central tourist attraction is Mt. Pukhan National Park (See Pukhan Mountain), parts of which fall within the city limits.

There are a number of important historical sites in the area. In addition to several Chosŏn period tombs, including the tomb of Ch'olchong (r. 1849-1863) and Queen Ch'orin located in Wŏndang Village, there is the Haengju Fortress in Haengju-dong. There are also several Buddhist artefacts here. At T'aego Temple, there is a stupa (Treasure No. 749) commemorating National Master Wŏnjŏng, and in Chich'uk Village, there is the ancient Hŭngguk Temple which was originally founded by Wŏnhyo in 661.

Kubi munhak kaesŏl (An Introduction to Oral Literature)
Kubi munhak kaesŏl is an introductory work on the oral literature of Korea. This 310-page work was compiled and edited by a team of scholars headed by Chang Tŏksun and published by Ilchogak Publishers in 1982. The contents of the work include folk songs, shaman songs, p’ansori dramas, proverbs and riddles. It also includes discussions on the transition of oral literature to written and various field studies on oral literature.

Kudŭl [Housing]

Kugŏ munpŏp (Korean Grammar)

Kugŏ munpŏp is a 1910 grammar of Korean written by Chu Shigyŏng (1876-1914) and published by Pangmun Sŏgwăn. This work was again published in 1911 and 1913 under the title of Chosŏn munpŏp (Chosŏn Language Grammar). There was one substantial difference between these two editions in that the particle ‘ki’ used in the former work was changed to ‘ssi’ in the latter, and this represents the first time that this was used.

Chu covers many aspects of the Korean language in his work, including pronunciation, differences in the written and spoken language, the use of special nominalisers, and sound alterations among many other facets of Korean. Kugŏ munpŏp is notable in the history of the development of the Korean language, not only for being one of the first Korean grammar books published, but also for establishing a basis for future scholarship in this field. Accordingly, it has been included in much later publications such as Yoktæ han’guk munpŏp taegye (Outline of the History of Korean Grammar) published in 1977.

Kugŏ ŭmun sa yŏn’gu (A Study of the History of Korean Phonology)

Kugŏ ŭmun sa yŏn’gu is a work on the phonemic systems of fifteenth c. Korean. This study was conducted by Yi Kimun, and the resultant work has been published twice, first by the Research Institute of Korean Culture at Seoul National University (Seoul Taehakkyo Han’guk Munhwa Yŏnguso) in 1972 and then by T’ap Ch’ulp’ansa in 1982. It comprises 167 pages.

This work deals with the phonemic systems of both pre-fifteenth c. and post-fifteenth c. phonemes. Some of the topics the author addresses include the system of initial sounds in the Hunmin chŏng’ŭm (Correct Sounds to Teach the People), guttural sounds, tensed sounds, initial consonant clusters, palatalization, the system of final sounds in the Hunmin chŏng’ŭm and the system of vowel harmony among many other topics.

Kugŏhak charyo nonmun chip (Theses on Korean Linguistics)

Kugŏhak charyo nonmun chip is a five-volume collection of over fifty papers written by professors of linguistics from various universities throughout Korea. This work covers a wide range of Korean linguistic topics ranging from grammar to language development. It was issued by Taejegak Publishing Company over a ten-year span from 1970-1981.

Kugŏhak charyo sŏnjip (Collection of Selected Materials for the Study of the Korean Language)

Kugŏhak charyo sŏnjip is a five-volume compilation of materials for the historical study of the Korean language. Ilchogak Publishers published this 1,400-page work in 1972.

Kugŏhak kaeron (An Introduction to Korean Linguistics)
Kugŏhak kaeron, written by Kim Hyŏnggu and published in 1949, represents the first modern survey of Korean linguistics. This work was published by Ilsŏngdang Sŏjŏm. A revised edition was published in 1954, and a thoroughly revised work was published in 1962 under the title of Kaejong kugŏhak kaeron (An Introduction to Korean Linguistics, Revised Edition). In 1974 a revised and supplemented edition of this work entitled Chŏngbop'an kugŏhak kaeron (An Introduction to Korean Linguistics, Enlarged Edition) was published, attesting to both the lasting value and appeal of this work. It is divided into eight chapters that cover topics in Korean linguistics such as phonetics, standard and regional dialects, accidence and archaic language. This work remains a valuable resource in the study of Korean linguistics.

Kukchagam

Kukcho pogam (Precious Mirror for Succeeding Reigns)

Kukcho pogam is a compilation of the chronicles of the kings of Chosŏn that was completed in 1908. It was printed with movable type and consists of ninety volumes in twenty-eight fascicles.

This work was compiled in stages over many years, and began with the efforts of Kwŏn Che and Chŏng Inji who attempted to compile the records from the reigns of kings T'aejo (r. 1392-1398) and T'aejong (r. 1400-1418) by order of King Sejong (r. 1418-1450) but never completed the task. The work of compilation was resumed later in the fifteenth century by Shin Sukchu and Kwŏn Nam who put together the chronicles of Kings T'aejo, T'aejong, Sejong and Munjong (r. 1450-1452) in 1457. This represented the first completed portion of the work. It was added to in 1684 by Yi Tanha who completed ten volumes of the work. Again in 1730 under another royal decree, Yi Tŏksu added another fifteen volumes. By 1782 the work included chronologies of all of the kings of Chosŏn with the exceptions of Chongjong (r. 1398-1400), Tanjong (r. 1452-1455), Sejo (r. 1455-1468), Yejong (r. 1468-1469), Songjong (r. 1469-1494), Chungjong (r. 1506-1544), Injong (r. 1544-1545), Myŏngjong (r. 1545-1567), Injo (r. 1623-1649), Hyojong (r. 1649-1659), Hyŏnjong (r. 1659-1674), Kyŏngjong (r. 1720-1724) and Yongjo (r. 1724-1776). However, under a decree during the reign of Yongjo, all of these excluded kings were added to the work, and this was completed during the reign of Chŏngjo (r. 1776-1800). The work at this time was comprised of sixty-eight volumes in nineteen fascicles. In 1847, Cho Inyŏng added the chronicles from the reigns of kings Chŏngjo and Sunjo (r. 1800-1834), and in 1908 Yi Yong'wŏn added the records of Hŏnjong (r. 1834-1849) and Ch'oľchong (r. 1849-1863). Finally in 1908, the last two kings of Chosŏn, Kojong (r. 1863-1907) and Sunjong (1907-1910) were added.

This work contains the records of over five hundred years of the kings of Chosŏn and is valuable for study of this period. It is, however, to be contrasted with the Shillok (Veritable Records) of the Chosŏn Kingdom which were compiled without input from the kings or royal family. The Kukcho pogam should be considered as more of a record of the good deeds of the kings and therefore contains facts that are somewhat inconsistent with other historical records. Nonetheless, this work is highly valued for the study of the various kings of this period.
Kukhwa yŏp'esŏ (Beside a Chrysanthemum)

Kuksa P'yŏnch'n Wiwŏnhoe (see National History Compilation Committee)

Kuksa taesajŏn (Encyclopaedia of Korean History)

Kuksa taesajŏn is a two-volume history of Korea compiled by Yi Hongjik and published by Chimun'gak Publishers in 1963. This work represents one of the first comprehensive compilations of Korean history after liberation in 1945. Yi covers many aspects including political, economic, military and legal affairs in this expansive work that covers nearly 3,000 topics. In addition, at the conclusion of each entry the author includes bibliographical references, which greatly enhance the research value of this work. Other notable features are the large number of tables, lists of National Treasures and historical sites, family names in Korea and many other features that further add to the substance of this work.

Kuksa taeyo (Compendium of Korean History)

Kuksa taeyo is an introduction to Korean history written by Son Chint'ae and published by Eul Yoo Munhwasa in 1948. This work reflects Son's beliefs in the unity of the Korean people who had for the past five thousand years lived in the same area of Northeast Asia and shared a common history and culture. This work reveals a very nationalistic interpretation of Korean history and exposes a desire on the author's part to establish a new nationalistic consciousness among the Korean people.

Son traces the development of Korean history from the legendary founder of the first Korean state, Tan'gun Chosŏn, through the transformation of the social systems to the kingdoms of Koryŏ and Chosŏn. In addition, the author also explores the traditional divisions of Korean history from the Three Kingdoms periods to the Chosŏn period. This work is a valuable resource for the study of nationalistic sentiments among Koreans directly after liberation, and provides interesting observations and insights into Korean history. Moreover, Kuksa taeyo is also notable for the new nationalistic consciousness that it gave rise to among Koreans.

Kuksa yoron (Discourse on Korean History)

Kuksa yoron is an introductory work on Korean history that was written by Yi Inyŏng and published by Min'gyosa in 1954. Originally Yi had prepared this work for publication in 1949, but due to the outbreak of the Korean War it was not published. During the War, Yi was kidnapped and taken to North Korea, but this work was nonetheless published in 1954.

Yi's outlook on Korean history stresses a 'new' nationalism among Koreans in much the same manner that his contemporary Son Chint'ae did in his work Kuksa taeyo (Compendium of Korean History) that was published in 1948. The author stressed the need to discard the pretentious isolationist, exclusive and self-righteous forms of pseudo-nationalistic ideology and instead advocated the need for openness and internationalism. He insisted that the study of Korean history should be done from the perspective of an unbiased, new nationalism. Yi's study in Korean history is notable in that it uses new approaches in its interpretation of Korean history and stresses the need to view the history of the Korean people in a new light.

Kŭm River

The Kŭm River flows from Changsu County in North Chŏlla Province to the Yellow Sea. About 401 kms. in length, it is the third longest river in South Korea after the Han and
Naktong. The tributaries of the river’s upper section include Chǒngja Stream, Ponghwang Stream and Namdae Stream from southwest of Yǒngdong, along with Poch’ǒng Stream and the Kang River. Close to Taegu, the river enters Taech’ǒng Lake, a large reservoir created with the construction of the Taech’ǒng Dam. Tributaries of the river’s middle section include Miho Stream, Pyǒng Stream and Mushim Stream from the Miho Plain to the north, and Kap Stream from the south. After passing through Kongju, the stream is joined by Yugu Stream, Sǒksǒng Stream and Nonsan Stream before entering the ocean at Kunsan Bay.

Like many other Korean rivers, the Kûm River has sharp rises and falls in volume. Its normal effluence of 1.6 billion cubic metres rises to around 5.2 billion cubic metres when the river is in flood. In particular, when a large increase in volume coincides with high tides a backwash occurs, creating heavy flooding along the river’s lower and middle sections and in the contiguous plains. In 1980, Taech’ǒng Dam was constructed in order to prevent flooding and to provide irrigation water. Until the early twentieth c., boats operated on the river as far as Pugang, but with the advent of modern overland transport networks the river’s transportation role has disappeared.
Kumdang Island

Kumdang Island is part of the town of Kümil in South Cholla Province’s Wando County. The island’s low mountains contrast with plains and reclaimed land in the south. With its southern location, the winter temperature is relatively mild, with January averaging 0°C, but with August temperatures more in keeping with other regions, at an average of 25.3°C. Kumdang’s rainfall averages 699mm annually. The island has an area of 15.5 sq. kms. and a coastline of 28.2 kms. Statistics for 1985 show a population of 3,671. Only about 1.0 sq. km of island land is available for rice growing, while about 2.0 sq. kms is used for dry-field crops such as barley, bean, sweet potato, garlic and red pepper. Local marine products include anchovy, sea bream, shrimp and laver.

There are three primary schools and one junior high school on the island. There is a regular ferry service between Kumdang and the town of Toyang in Kohung County.

Kumgang Kyong onhae

The Kumgang kyong onhae is a one-volume Korean translation of the Diamond Sutra (Kor. Kumgang gyong). Undertaken during the reign of King Sejo (r. 1455-1468), the translation project was inspired by Sejo’s dream in which King Sejong (r. 1418-1450) asked him about the Diamond Sutra, and the queen’s dream in which she had a vision of a Buddha statue erected by King Sejong.

The work consists of a Chinese translation of the Diamond Sutra annotated with Korean grammatical particles (t’o) by King Sejo himself, along with Han Kyehui’s vernacular translation. A group of monks including Haech’o were responsible for proof-reading and revisions. As one of the early Korean texts written in the han’gul script, the text is important for the study of the Korean language during this period.

Kumgang Mountain

Situated in northern Kangwön Province next to Kosong, Mt. Kumgang, (the Diamond Mountains) is world-famous for its spectacular rock formations and sublime beauty. The mountain gets its name from a line in the Avatamsaka Sutra that states, “A bodhisattva resides in the Diamond Mountains to the east of the sea.” Since Korea was the land to the east of China across the Yellow Sea, Korean monks felt that the passage referred to the most otherworldly of Korean landscapes -- the Diamond Mountains.

Located on Korea’s east coast, the Mt. Kumgang area is relatively moist and warm. Forming a transitional zone between the Korean peninsula’s cold northern climate and moderate southern climate, the mountain is home to a wide assortment of animal and plant life. The area contains vast stretches of virgin forests and approximately 700 species of flowering plants. In addition to conifers such as firs, stone pines and Korean white pines, the mountain has numerous broadleaved trees such as Mongolian oaks, evergreen oaks, maples and cherry trees. The Mt. Kumgang forests teem with wildlife, including 200 bird species and 30 fish species.

Mt. Kumgang is known as the mountain of ‘twelve-thousand peaks.’ Standing 1,638 metres, Piro Peak is the mountain’s highest point. To the north of the peak lie Yongnang Peak (1,601 metres), Ongnyö Peak (1,424 metres), Sangdüng Peak (1,227 metres) and Mt. Obong (1,264 metres), and to the south, Wölch’ul Peak (1,552 metres), Ch’ail Peak (1,529 metres), Mirük Peak (1,538 metres), Paengma Peak (1,510 metres) Horyong Peak (1,403 metres) and Kuksa Peak (1,385 metres). The areas west and east of these peaks are known as Inner and Outer Mt. Kumgang respectively. Kumgang and East Kumgang Stream flow through Inner Mt. Kumgang, becoming the headwaters of the Northern Han River.
Nam River flows down through Outer Mt. Kumgang into the East Sea.

With its awe-inspiring natural setting, Mt. Kumgang’s importance has been recognised from ancient times. The *Samguk yusa* (Memorabilia of the Three Kingdoms) states that the mountain, during the reign Queen Chindok (647-654), was one of four sacred sites where ministers held councils on vital matters of national importance. The mountain is also connected with the story of Shilla’s fall. According to the *Samguk yusa* and *Samguk sagi* (History of the Three Kingdoms), when King Kyōngsún (r. 927-935) decided to seek refuge in the emerging Koryō Kingdom, Prince Maǔi urged him to maintain the struggle for Shilla’s survival. When the king ignored his request, Prince Maǔi is said to have retreated to the Diamond Mountains where he built a simple hut and wore hemp clothing (maǔi), mourning the loss of the kingdom. A later, more detailed record states that Prince Maǔi lived out his days in Mt. Kumgang’s Yongwŏn Hermitage.

Numerous Buddhist temples dot the Mt. Kumgang landscape. In addition to Yujom, Shin’gye, Changan and P’yohun Temple -- the so-called ‘four great temples of Mt. Kumgang,’ there are Chŏngyang, Tosol, Changgyŏng, Chijang and Kwanŭm Temple as well as Anyang Hermitage, Mahayŏn (Temple), and Podŏk Cave. Although some of these temples and monasteries were founded during the Koryō Period, most date from the earlier Shilla Period.

From the late Koryō Period on, there are frequent references to Mt. Kumgang in Korean literature. Writers such as Yi Kok (1298-1351), Sŏng Hyŏn (1439-1504) and Nam Hyoon (1444-1492) wrote early travelogues describing the area. During the Chosŏn Period, the mountain was often mentioned in shijo poetry or in popular ballads. Mt. Kumgang’s countless granite pinnacles were also a favourite subject for landscape painters of this period.

*HMMTS*, vol. 4.

**Kumgang panya p’aramil kyŏng ŏnhae** (*Kumgang kyŏng ŏnhae,*

The *Kumgang panya p’aramil kyŏng ŏnhae* is a Korean version of the *Kumgang sutra* annotated by Jui-mo-lo (343-414). It is also known as *Kumgang kyong yukchohae ŏnhae* or *Kumgang kyŏng ŏnhae*, and for many years was used for the government examination for the Buddhist priesthood during Chosŏn.

The work was translated into Korean by Han Kyehŭi, Grand Prince Hyonyŏng and the priest Haech’o by royal order of King Sejo, and published by Hwang Sushin in 1463. This edition is no longer extant. The edition reproduced from it in 1575 has survived and includes postscripts by Han Kyehŭi, Grand Prince Hyonyŏng, Kim Suŏn and No Sashin.

There have been several other reproduced editions, including one published in 1495 in sixty volumes which is referred to by the priest Hakcho in a postscript to the *Simgyŏng ŏnhae*, but this edition has not survived. In 1932, a further reproduction of the 1575 edition held by the Anshim Temple in Cholla Province was made by Han Yongun through the Chosŏn Pulgyosa. This edition included a preface by Yukcho (the priest Hyenŭng), the memorial presenting the work to the throne, and the postscripts from the 1575 edition.

Two other editions differ somewhat from those above. One was published in 1667 by
Puram Temple in Kyŏnggi Province. It is written in classical Chinese with sound rendering in the Korean alphabet. The other is the latest edition translated by Kim Hŭngsu and published in 1911. All these editions are of considerable interest in the study of the history of the Korean language.

Kumi

Situated in North Kyŏngsang Province to the northwest of Taegu, Kumi is comprised of the town of Sŏnsan, and the townships of Koa, Togae, Muul, Sandong, Oksŏng, Changch’ŏn and Haep’yŏng. The Mt. Kŭmo (977) area, located in the southwestern part of the city, has the distinction of being the nation’s first provincial park. With the Naktong River flowing through the heart of the city and numerous reservoirs in the west and east, the city has an abundant supply of water.

Although rice and other grains are cultivated in the plains around the Naktong River, most of the city’s residents are employed in industry. The area’s industrial development began early. The Kumi Industrial Park had already been established here by 1969. With the Kyŏngbu Expressway and Kyŏngbu Railway Line running through the city, Kumi’s factories have good transportation links to other major cities in the nation. In addition, the city’s excellent infrastructure, legal services and financial services, have helped make Kumi the largest inland industrial area in the nation.

Most of the area’s tourism is centred around Mt. Kŭmo (See Kŭmo Mountain) and the Naktong River. There are also a number of historical sites in the area. Besides the Buddhist sites on Mt. Kŭmo, there are several old Confucian schools, including Tongnak Sŏwŏn and the Indong Hyanggyo to the east of Kumi Bridge. As for modern educational institutions, there is Kumoh National University of Technology Shinp’yŏng-dong.

Kŭmjin River

The Kŭmjin River flows for about 91.0 kms. from South Hamgyŏng Province’s Chŏngp’yŏng County to Hamhung Bay on the east coast. From its source around Hwang Peak (1 736m) and Kŏmsan Ridge (1 127m), the river flows southward through Kosan Township and then turns eastward in Changwŏn Township. The Kŭmjin widens and the current lessens as it passes through the fertile Chŏngp’yŏng Plain. In ancient times, the river was known as Saeng Stream or Kŭmi River.

Kŭmo Mountain

Situated west of Kumi in North Kyŏngsang Province, Mt. Kŭmo (977 metres) was originally called Mt. Taebon. Its present name, ‘Kŭmo’ (Golden Crow), is said to come from the monk Ado (fl. 263 C.E.), who, when passing through the area, saw a golden crow flying out of the sunset. Ùisang (625-702), a leading Hwaŏm thinker of the Greater Shilla Period, is also associated with this mountain. He is said to have engaged in spiritual cultivation in Mt. Kŭmo’s Tosŏn Cave. In addition to its links with famous Buddhist monks, the mountain is also associated with Kil Chae (1353-1419) -- a famous neo-Confucian thinker of the late Koryŏ Period. In 1768, the Ch’aemi Pavilion was built on the mountain in his honor. The mountain is popular with tourists who come to see the Myŏnggŭm Waterfall, Haeun Temple and the standing bodhisattva figure that is thought to have been carved during the Shilla Period. In 1970, the area became Korea’s first provincial park.

Kŭmo shinhwa (New Tales from Mount Kŭmo)

Kŭmo shinhwa is a collection of short novels written in Chinese by Kim Shisŭp (1435-
Generally, this collection of stories is recognised as the first novel in Korean literary history. The original edition of this work has not been transmitted to the present time, but other editions are presently extant. Kim wrote it while he was in his thirties and on a retreat at Mt. Kŭmo. He is remembered by historians as being one of the six loyal subjects (saeng yuksin) who opposed the usurpation of the throne by King Sejo (r. 1455-1468). There are five works that are still extant in Kŭmo shinhwa, and these are ‘Manbok-sa chŏp’ogi’, ‘Yisaeng kyujang chŏn’, ‘Ch’wiyu pubyŏk-chong ki’, Namyŏm-puju chi’ and ‘Yonggung puyŏn rok’.

The contents of Kŭmo shinhwa are noted for their reflection of the author’s Daoist and non-conformist ideologies. The author appears to have been strongly influenced by works in the Sangguk yusa (Memorabilia of the Three Kingdoms), particularly ‘Choshin’, and also by stories in Sui chōn (Tales of the Bizarre) such as that of ‘Ch’oe Ch’iwŏn’. Moreover, the stories in Kŭmo shinhwa are characterized by their close connections with legends and the inclusion of excerpts from mythical biographical pieces. For example, a common element of many of the stories in Kŭmo shinhwa is the intervention of divine beings such as Buddhist or Taoist deities. In addition, the works in this collection are also seen as reflections of either the author’s life or his desires for a better life. In particular, ‘Manbok-sa chŏp’ogi’ and ‘Yisaeng kyujang chŏn’ are seen as reflections of Kim’s desires for a romantic interest in his own life. ‘Manbok-sa chŏp’ogi’ features a protagonist who wins a wager with Buddha and is rewarded with a beautiful wife. However, this woman later turns out to be the ghost of a dead woman and returns to the sacred world after a short term as the protagonist’s wife. In ‘Yisaeng kyujang chŏn’ the subject is freedom of choice in love between a young man and woman. After the young couple is granted their wish to marry, they are tragically separated by the death of the young bride. Yet this couple is also reunited as the ghost of the woman returns to her husband and they are able to share their lives again for a term. ‘Yisaeng kyujang chŏn’ reflects not only the desire for freedom of choice in matters of the heart, but also reveals elements of unrealistic and supernatural intervention in the affairs of the secular world and, in the conclusion of this work, an ideology of Buddhistic fatalism requires the departure of the spirit of the wife.

In ‘Ch’wiyu pubyŏk-chong ki’ the influences of the author’s Daoist beliefs are evident as the protagonist of this story meets and falls in love with a heavenly fairy. After the fairy returns to heaven, the forlorn protagonist is summoned by her to come and live in the stars with her. This work also concludes with an unrealistic ending that is influenced by supernatural beings. Moreover, this story contains undertones of Kim’s dissatisfaction with the political affairs of his day in that some view it as reflecting the author’s repugnance towards King Sejo who had usurped the throne from Tanjong (r. 1452-1455), since the father of the love interest in this work also lost his throne under similar circumstances. The final two works in this collection both feature mythical kingdoms where the protagonists of these stories find the solutions to their worldly problems.

Kŭmo shinhwa is an extremely important work in Korean literary history in light of the fact that it is not only the predecessor of the novels of the middle and late Chosŏn period, but also in that it broached problems such as freedom of choice in love and righteousness in political behavior long before these issues came to the forefront of popular consciousness. Moreover, this work allows the modern reader to gain some insight into the complex workings of the author’s mind and the political turmoil that surrounded his lifetime.

Bibliography

Kŭmsan County
Situated in South Ch'ungch'ŏng Province just south of Taejon, Kūmsan County is comprised of the town of Kūmsan and the townships of Kunbuk, Kūmsŏng, Nami, Namil, Poksu, Puri, Chinsan, Chewŏn and Ch'ubu. With the Noryŏng Mountain Range running through the northern part of the county and the Sobaek Range in the southeast, the county is characterised by mountains and high altitude basins. Mt. Taesŏng (705m), Mt. Sŏdae (904m), Kuksa Peak (668m), Mt. Ch'ont'ae (715m), Wŏrang (529m), Mt. Sŏngju (624m), Mt. Yanggak (516m), Pet'ŭl Peak (539m) and Suro Peak (506m) rise in the eastern part of the county, while Mt. Taedun (877m), Mt. Chinak (732m) and Mt. Mai (627m) are situated in the west. Streams flowing out of these mountains converge in the southeast to form the winding Kŭm River.

Due to the relatively rugged terrain, much of the area’s agriculture is devoted to dry field crops such as potatoes and tobacco. In particular, the county is famous for its ginseng. In the townships of Chinsan and Puri, there are numerous orchards and sericulture operations, and bee-keeping is an important source of revenue for Nami Township. Small mining operations in the area extract lime, coal and fluorite. The area’s industrial sector is limited to a few small saw mills, manufacturing industries, breweries and processing plants for ginseng.

In close proximity to Taejon, the county offers a number of attractions for tourists. Traditionally known as ‘the eight wonders of Kūmsan,’ there are four scenic mountains (Mt. Taedun, Mt. Sŏdae, Mt. Chinak, Kuksa Peak) and four scenic river areas (Puri Township’s Chŏkpyŏk River, Nami Township’s Twelve Waterfalls, Puri Township’s Shinch’on Forest and Chewŏn Township’s Kwangsŏk River).

Located east of Úmnnae Village, Mt. Taedun is famous for its spectacular rock formations. The mountain scenery is particularly impressive in the autumn when the leaves change colour, and during sunrise or sunset. T’aego Temple, founded by Wŏnhyo during the Shilla period, is also found here. Mt. Sŏdae, at 904 metres, is the highest mountain in South Ch’ungch’ŏng Province. From the peak, one has a panoramic view of Taejon to the northwest and Okch’ŏn to the north.

On Mt. Chinak, there are several famous temples, including Posŏk Temple, Yongch’ŏn Hermitage, Sŏn’gong Hermitage and Wŏnhyo Hermitage. According to legend, Kūmsan County’s ginseng grew wild on this mountain about 250 years ago. A local man with the surname of Kang, after seeing the wild ginseng in a dream, took the ginseng and developed a cultivated variety. On the mountain, a stele (enshrined in the Kaesamgak) commemorates the site. In the autumn, the county holds the Kūmsan Ginseng Festival during which ceremonies are performed at the site. The mountain is also significant as the place where rain ceremonies were traditionally performed in times of drought.

The area contains a number of important historical relics and sites. The county’s Buddhist sites include Taegwang Hall at Shinan Temple (South Ch’ungch’ŏng Province Tangible Cultural Asset No. 3) and the Main Buddha Hall at T’aego Temple. Ancient stone pagodas can be seen in the villages of Chungdo, Ain and Kyejin. There are a large number of sites associated with Confucianism, including the Kūmsan hyanggyo (county public school), Chinsan hyanggyo, Sŏnggok sowŏn (private school), Choryo sowŏn and Yonggang sowŏn. There are also numerous shrines in the area, such as Kūmgok-sa, Ch’ŏngp’ung-sa (founded in 1757), Ch’ungnyŏl-sa (founded in 1831), P’yoch’ung-sa (commemorating Cho Hŏn who died fighting against the Japanese during the Hideyoshi Invasions), Sungjōlsa, Kuamsa (founded in 1883) and Chŏngch’ungsa (commemorating Kim Shimin and Yang Che, who both fought bravely during the Hideyoshi Invasions).

Kūmsan Temple
Situated on Mt. Muak in South Cholla Province, Kūmsan Temple is one of the main temples of the Chogye Order. According to one record, the temple was founded in 600 C.E. There is also an interesting legend that the temple was built on the site of an ancient temple from the time of Kasyapa, the buddha who appeared prior to Sakyamuni. In the eighth c., the famous monk Chinp’yo became a monk at Kūmsan Temple at the age of twelve. After undergoing training at other temples, he returned to lead a major restoration (762-766) that transformed the small temple into a large monastery. At this time, a Maitreya statue was set up as the main figure of worship. During this period, the temple belonged to the Pōpsang (Dharma Characteristics) sect. During the Later Three Kingdoms Period, the temple was repaired with support from Kyōnhwŏn (r. 892-935). In 1079, when Hyedŏk, the famous Pōpsang sect master, became abbot of the temple, a major reconstruction project was undertaken. Some of the temple’s stone structures are thought to date from this time. In 1598, at the end of the Hideyoshi Invasion, Japanese invaders completely burnt down the monastery along with over forty nearby hermitages. From 1601 to 1635, the temple was slowly reconstructed. During the late nineteenth c., Yongmyŏng repaired the temple, and further repairs were made in 1934 by Sŏngnyŏl.

In addition to Chinp’yo and Hyedŏk, a number of famous monks have resided at the temple, including Tosaeng Sung’t’ong and Haewŏn (1262-1340). Tosaeng was the sixth son of King Munjong. Caught up in the political upheavals of 1112, he and others were banished to Kŏje Island. Haewŏn, a scholar specialising in the Mind-only (Vijnaptimatra) teachings, was highly respected by the Yuan royalty. He spent the last years of his life living in Yuan China.

The temple houses many important artefacts, including a five-storey stone pagoda (Treasure no. 25), a stone lotus stand (Treasure no. 23), a stele honouring Royal Preceptor Hyedŏk (Treasure no. 24), and a three-storey pagoda in the courtyard of the Shimwŏn Hermitage (Treasure no. 29). In addition, outside of the Taejŏkkwang Hall, there is the Kūmsan Temple nojǔ (Treasure no. 22), which dates from the Koryŏ Period. The original function of this 2.3-metre high, stone structure is no longer known. There is also a pair of banner-pole supports (Treasure no. 28) from the Greater Shilla Period. Unlike many such supports, the structure is in excellent condition with its base still intact. Perhaps the most impressive structure in the temple is the three-storey Mirūk Hall (National Treasure No. 62). Inside the hall, there is a massive figure of Maitreya (the Buddha of the future).

Kūmsŏng (see Gold Star)

Kunanhaeng (Visiting an Exorcism) [Literature]

Kūnch’ogo, King

King Kūnch’ogo (?-375) was the thirteenth king of the Paekche Kingdom. Kūnch’ogo was the son of King Piryu (r. 304-344) and ruled Paekche from 346 to 375. Kūnch’ogo has also been referred to in Japanese historical documents as King Chogo in the Nihon shoki (Kor. Ilbon sŏgi) and as King Ch’ogo in the Kojiki (Kor. Kosagi). Kūnch’ogo is acclaimed for strengthening the power of the monarchy in Paekche and consolidating the authoritarian rule over Paekche. Moreover, it is thought that the father to son succession to the throne began with Kūnch’ogo and also that the age of the ‘Chin family queens’ began
with his reign as subsequent Paekche kings continued to select their queens from the aristocratic Chin family.

Kunch’ogo was a formidable warrior and his military prowess helped strengthen the central government of Paekche and also greatly increased the size of the Kingdom. He conquered a sizable portion of the present Korean peninsula during his battles. In 369 he crushed Mahan and took possession of its whole territory, and then in 371 Paekche struck into the heart of Koguryō, advancing as far as modern day P’yŏngyang. In the battle for P’yŏngyang, the Koguryō king, Kogugwŏn (r. 331-371), was killed. Paekche thus came to control all of the modern-day provinces of Kyŏnggi, Ch’ungch’ŏng and Cholla as well as parts of Hwanghae and Kangwŏn. In addition, Kunch’ogo furthered Paekche’s international standing by initiating contact with the Eastern Jin of China and the Wa of Japan.

During Kunch’ogo’s reign, the contact with Eastern Jin and Japan resulted in the flourishing of trade for Paekche. This trade along with the accompanying cultural transmission resulted in Paekche’s being able to adopt some of the higher Chinese culture. Moreover, the contacts with Japan led to the export of higher Korean culture to Japan such as agricultural techniques and also books such as Ch’ŏnjamun (One Thousand Characters) and Nono (The Analects). It was also during the reign of Kunch’ogo that the Sŏgi (Documentary Records), a history of Paekche, was compiled, which reveals the desire of the King to revel in his expanded royal authority and the strengthened state that he built. The culture of Paekche greatly expanded in this period to a level where records of accomplishments for future generations had taken on a position of importance.

King Kunch’ogo is credited with bringing the Paekche Kingdom to its zenith in territory and in creating a strong central governmental power that strengthened both the monarchy and the control over its subjects. Moreover, Kunch’ogo paved the way for the acceptance of higher Chinese culture through his contacts with Eastern Jin. Kunch’ogo was succeeded on the throne by his son, King Kungusu (r. 375-384).

Kundae minjok ūishik ūi maengnak (The Pulse of National Consciousness in Pre-Modern Times)

Kundae minjok ūishik ūi maengnak is a 410-page work written by Yi Hyŏnjong and published by Asea Munhwa Sa in 1979. This book is a study of the national consciousness of Koreans during the turbulent period of 1896 to 1945. The contents of this work are divided into two main sections with the first of these covering various historical events related to the Righteous Army (ŭibyŏng), and the other dedicated to matters relating to the declaration of independence proclaimed by Koreans during the colonial period.

Kungmun chŏngni (Truths of the National Language)

Kungmun chŏngni is a brief grammar written in han’gul script by Yi Pongun in 1897. This work is quite succinct, composed of just fourteen pages, and is a woodblock-printed work. It is notable for several items including Yi’s definition of the sound for an old Korean vowel, his new classification for tones, his insistence that double consonants should be written by doubling the initial letter and advocating his concept of grammar in the Korean language. This last item is referred to by the author as ‘Ôt’o myŏngmok’ and serves to separate Korean into twenty-one grammatical parts of speech.

This work is significant as not only a historical analysis of Korean, but also for bringing the Korean language and the han’gul script to the forefront of the national consciousness of Korea during a period of great change. Since it is written in han’gul only it emphasizes the functional nature of this writing system.

Kungnip Kyohyang Aktan

Kungnip kyoyuk hŏnjang

Kūngsŏn Paekp’a

Kūngsŏn (1767–1852; usually called by his pen name, Paekp’a; known also as Kusan; family name, Yi; born in Chŏnju) was a Sŏn (Zen) Buddhist master, a yulsa (vinaya master; master of monastic rules), and a theoretician of Sŏn. A prolific writer, he helped spark a revival of Sŏn literature during the closing years of Chosŏn. In 1894, the Korean priest Kakan Pŏmhae (1820–1896) compiled the Tongsa yŏljŏn which recorded the biographies of one hundred and ninety-eight eminent priests in Korean history. Although Kakan had been a student of Paekp’a’s opponent, the Sŏn master Ch’oui ūisun (1786–1866), he granted Paekp’a more space than Ch’oui in the Tongsa yŏljŏn.

It is said that his family was distinguished for its filial piety, and although he seems to have become attracted to Buddhism at eleven, he probably decided to become a priest at eighteen while studying Mencius at Sŏnum temple. He heard the saying that one’s entire family benefits when one becomes a priest, but still had lingering fears over disobedience to his parents who expected him to fulfill his filial duties as required by Confucian morality. He eventually overcame his worries after reading the letter the Tang Chinese Zen master Dongshan Liangjie (807–869) had given his parents before leaving home.

By 1790 he met the priest Sangŏn Sŏlp’a (1707–1791) who was considered to be one of the foremost experts in Hwaŏm (Ch., Huayan; Jap., Kegon) Buddhist philosophy. Sangŏn was also a Sŏn and a vinaya master, and this brief period was pivotal in Paekp’a’s intellectual development. Sangŏn recognized Paekp’a’s talents and immediately introduced him to the essentials of Hwaŏm philosophy and the principles underlying Chosa sŏn (Patriarchical Sŏn) thought. Paekp’a subsequently addressed the issue of Patriarchical Sŏn in Sŏnmun sugyŏng (Hand Mirror of Sŏn Literature) and thereby instigated a controversy which lasted over a century.

Sangŏn seems to have endorsed Paekp’a’s succession as a vinaya master sometime during the year prior to his death and may have endorsed directly Paekp’a’s mastery of Sŏn and Hwaŏm thought. Although some sources say that this happened in 1797 under the direction of one of Sangŏn’s other disciples, Paekp’a nevertheless was in Sangŏn’s direct line of transmission. Thus, he stood in a line of distinguished masters leading back to Hyujŏng Ch’ŏnghŏ (1520–1604).

At the age of twenty-six, Paekp’a journeyed to Unmun hermitage at Paengyang temple where he began delivering lectures on Sŏn. These attracted many students, and by 1796 he was invited to become a disciple of the famous priest Yŏndam Yuil (1720–1799). Instead, he went to Kuam temple where he studied with a priest who had succeeded one of Sangŏn’s students. He remained here for the next fifteen years acting as an instructor on monastic regulations as well as expounding on the relationship between scriptural studies of Buddhism and Sŏn.

In 1812, however, he came to the realization that Buddhist truth could not be grasped through verbal explanations and retreated to Yongmun hermitage where he rigorously practiced Sŏn meditation for the next five years. During this period he also formed a society for the practice of Sŏn and began emphasizing the importance of Patriarchical Sŏn. By 1818 he returned to Unmun hermitage where he remained for the next thirteen years devoting himself to research on the principles of Patriarchical Sŏn and attracting scores of students.
eager to hear his views. It is likely that it was in this period he systematized his views on Patriarchal Sŏn in his Sŏnmun sugyŏng.

Between the ages of sixty-four and seventy-four, he stayed at Kuam temple where his lectures are said to have drawn priests from around Korea. He also helped with rebuilding temple buildings and engaged in a variety of projects aimed at raising the level of education among priests. During this time he seems to have written many of his important texts which likely were products of his teaching or meant to be used as aids for his many students. In 1840, he finally decided to devote himself wholly to Sŏn meditation and retired to Hwaŏm temple where he built a small hermitage. It was here that he died twelve years later at the age of eighty-six.

Among his many works are the Yukcho taes pŏppo tan'gyŏng yohae (The Essentials of the Platform Sutra of the Sixth Patriarch), Susŏn kyŏlsamun (On the Association for the Practice of Sŏn), Sŏn yogi (Record of Sŏn Essentials), and the Ojong kangyo sagi (Personal Observations on the Basics of the Five Schools of Buddhism).

Paekp'a wrote the Chakpŏb kwigam (The Paragon of Regulations) in 1826, which was a culmination of his efforts in compiling and editing a variety of sources on Buddhist ceremonial practices. It was composed of two sections, to which he appended a short commentary dealing with the kandang (a ceremony used as an aid for concentration during Sŏn meditation). The first two sections covered thirty-seven topics including prayers to the Bodhisattvas, vows for priests and the laity, ceremonies and regulations regarding food and clothing, and rules governing cremation. Although Korean is not a tonal language, this text was intended for recitation, and to ensure accuracy, he devised a scheme for noting the proper tone of each Chinese character which was meant to be read aloud. In addition, the Korean phonetic script (han'gul) was placed beside the transliterations in Chinese of Sanskrit phrases. Paekp'a thus wrote what is considered the most detailed text on Buddhist regulations and ceremonies within the corpus of such literature in Korean Buddhism.

Nonetheless, it is the lengthy Sŏnmun sugyŏng for which he is most famous. The purpose of this text was to provide a taxonomy for Sŏn, and while the Tang Chinese master Guifeng Zongmi (786-841) had proposed five levels, Paekp'a instead proposed three on the basis of the three phrases of Linji Yixuan (?-866/7) contained in the Linji Ju (Record of Linji). Although Linji’s statements were terse and cryptic, they provided Paekp'a with a scriptural basis upon which to establish his own views. He called these three levels, Chosa sŏn (Patriarchal Zen), Yŏrae sŏn (Zen of the Tathāgata or Buddha), and Uiri sŏn (Zen of principle and reasoning). He also used the concept of kyŏgŏe sŏn which refers to those truths which can be realized through intense meditation but conveyed neither through speech nor writing.

Patriarchal Zen represented the highest attainment and was suitable for those of the highest skill. This is the state of the mind to the transmission of Buddhist truth and is likened to stamping emptiness because all discriminative thoughts are transcendened. Zen of Principle and Reasoning was needed by those of the lowest capability, and this he likened to stamping mud because there remain clear traces of discriminative thought. Zen of the Tathāgata was attainable by those between the two extremes, and he compared this to stamping water because discriminative thought quickly dissipates, like ripples on the surface of water. He classified both Patriarchal Zen and Zen of the Tathāgata within kyŏgŏe sŏn but stressed the superiority of the former because only it is free of all thinking. This is the state of the Buddha. Whereas Zen of the Tathāgata partly requires the words of the Buddha, Zen of Principle and Reasoning is entirely dependent upon thinking about the Buddha’s teachings. Consequently, those of the lowest ability are incapable of discovering their innate enlightenment.
Paekp’a also applied this division to the schools of Zen Buddhism and many of the central teachings of the Zen tradition. Ch’o‘ui disagreed with his dogmatic approach and proposed another system in which he systematically countered the Sŏnmun sugyŏng. Their views were reviewed over the next century, and it was the distinguished Pak Hanyŏng (1870-1948), a successor in Paekp’as line of transmission, who ultimately gave the strongest support to Paekp’a’s position.

Kim Chŏnghŭi (1786-1856), the noted calligrapher and exponent of shirhak (practical learning), also joined the debate. He sent Paekp’a a scathing response in which he criticized, among other things, the similarities Paekp’a drew between Buddhist and Neo-Confucian thought. Interestingly, Kim also wrote Paekp’a’s memorial and once even compared him to Bodhidharma, the First Patriarch of Zen in China.

Bibliography

Ko Hyŏnggŏn, Ch’usa’i ‘Paekp’a mangjang shipojo’e taehayŏ’, in Sŏnŭi chjonjae jŏk kumyŏng, Seoul, Ch’ŏlhak Yŏn’guhoe, 1969.

Kungye

[History of Korea]

Kunsan

Situated in the northwest corner of North Cholla Province, Kunsan is comprised of the town of Okku and the townships of Kaejong, Nap’o, Taeya, Sŏsu, Sŏngsan, Okto, Oksan, Oksŏ, Imp’i and Hoehyon. The city was recently expanded to include the area formerly known as Okku County. Located on the coast of the Yellow Sea between the Kūm River and Man’gyŏng River, the city is mostly made up of plains and low hills. On the lower reaches of the Kūm River stands the Kūm River Dyke. This important dyke, with its 1841-metre long bulwark and 1 127-metre long drainage gate, protects the area from droughts and floods.

The city’s main agricultural crop is rice, which flourishes in the surrounding fertile plains. In addition to rivers, the Kunsan, Okku and Mije Reservoirs are here, providing the area with an ample supply of irrigation water. Sedge is cultivated here for use in Sutkol mats, one of the local handicrafts. Sericulture and stock breeding also make a significant contribution to the local economy. Fishing boats, operating off the coast or nearby islands, bring in catches of yellow corbina, Spanish mackerel, thornbacks and shrimp.

Kunsan’s tourism is centred around its beaches and islands. The city is home to the Kogunsan Archipelago, a group of about twenty islands. Sŏnyu Island (See Sŏnyu Island), with its famous beach, is the archipelago’s most popular tourist destination. Nearby lies Changja Island, one of the main fishing grounds of the archipelago. At night, the sea in front of the island is illuminated by fishing boats going in and out of the port. known as the Changja yahwa (night flowers of Changja), the scene is considered one of the eight scenic wonders of the area. The island is linked to nearby Taejang Island by a 113-metre-long suspension bridge. East of Sŏnyu Island lies the larger Shinshi Island, famous as a place where the prominent Shilla scholar Ch’oe Ch’iwŏn once lived. Of the
archipelago’s islands, Yami Island is the closest to the peninsula. Due to its abundant chestnut yield, this picturesque island was originally known as Pam Sŏn (Chestnut Island). As for tourist sites on the mainland, there is ûn'p'a Resort at Mije Reservoir. Here one can rent floating bungalows, row boats and motor-boats, take a cruise in a ferry or fish for carp, snakehead and eel.

In addition to natural sites, the city contains a number of important historical sites and relics. Buddhist temples in the area include Pulchi Temple, Poch’ŏn Temple and Sangju Temple. In Kaejŏng Township’s Palsan Village, there stands a five-storey pagoda (Treasure No. 276) that is in relatively good condition. Between the Okku and Kunsan reservoirs, there are three old Confucian schools: Yŏmūi Sŏwŏn, Okshin Sŏwŏn and Okku Hyanggyo. The latter was first established at Igok Village in 1403, but was eventually relocated to its present site in Sangp’yŏng Village. This unique Hyanggyo has a shrine in its court dedicated to Tan’gun, the legendary founder of the Korean people.

Kunsan is home to a number of fascinating customs. On the 14th day of the first lunar month, people engage in tōwi p’algi (selling the heat of the coming summer). At this time, people rise early in the morning, make a wreath with peach tree branches that stretch toward the east, and then hang the wreaths on the necks of dogs and cows. They then approach those to whom they want to sell their heat and call out their name. If the person called answers, the seller exclaims, ‘The heat is yours!’ and the person who sold the heat will not suffer from the heat of the coming summer. But if on the contrary, his friend utters this phrase first, then he is supposed to have bought his friend’s heatstroke that year, instead of selling his!

**Kŏnse Chosŏn sa yŏn’gu** (A Study of the History of the Chosŏn Dynasty)

*Kŏnse Chosŏnsa yŏn’gu* is a 420-page work edited by Ch’ŏn Kwanu that was published by Ilchogak Publishers in 1979. This work is a collection of all of the theses and publications that were concerned with research into the Chosŏn period that Ch’ŏn gathered from 1952 through 1969. It is divided into three broad divisions, with the first covering research on military institutions of the early Chosŏn period, the second on the early Chosŏn land systems and the third addressing issues concerning the *shirhak* (practical learning) ideology of the late Chosŏn period.

Kunwi County

Kunwi County located in the centre of North Kyŏngsang Province, covers an area of 613 square kilometres. Poor in natural resources, this county’s problems are exacerbated by a poor infrastructure. Situated along the T’aebaek Mountain Range, the area has only a limited amount of arable land. Even the flatland areas, which are covered with gneiss and aqueous rocks, are not very fertile.

Approximately 80 per cent of the county’s households are employed in the agricultural sector, and about half of the county’s farmland consists of apple orchards. Producing 32 000 tons of apples annually, the county has the highest rate of apple cultivation per arable land in the nation. In Uihung Township, an apple processing factory produces over 20 000 tons of fresh juice annually. In addition, Kunwi has the nation’s only institute dedicated to apple research. In flatland areas, rice, barley, wheat, beans, red peppers and garlic are also cultivated.

Kunwi literally means ‘military power.’ According to tradition, the area was named after the troops of Wang Kŏn, the founder of the Koryŏ kingdom, who marched past here on their
way to conquer Later Paekche. The area contains several other monuments associated with the military. Kim Yushin, a famous Shilla general, is said to have used the area as a stopover for his troops. Changgun-dang (Hall of the General) was built in Hyoryong Township in his memory. Located in Koro Township, Mt. Hwa Fortress, constructed in 1709 by Yun Suk, is another relic reflecting the area’s military past.

The county also has a number of important Buddhist artefacts. On Mt. P’algong, there is an Amitabha Buddha figure along with two attendant Bodhisattvas (National Treasure No. 109) enshrined in a natural cave half-way up a rock cliff. The stone statues date from the Greater Shilla period. In’gak Temple, in Kong Township, is important as the place where the monk Iryŏn wrote his famous work Samguk yusa (Memorabilia of the Three Kingdoms). Other tourist sites include Kunwi hyanggyo (Confucian school), founded in 1407, Chibo Temple’s three-storey stone pagoda (Treasure No. 682) and Uihŭng Township’s Kwangp’ung Pavilion.

Mt. Ami (417.5 metres), situated in Koro Township, is a popular destination for hikers who come to enjoy the mountain’s bare cliffs and odd rock formations. In addition, Mt. P’algong Provincial Park, located at the southern tip of the county, is a popular destination for tourists from neighbouring Taegu.

Kuri

Kuri is situated in the centre of Kyŏnggi Province to the east of Seoul. Wangsuk Stream runs along the eastern border, joining the Han River which flows along the southern border. The city’s topography is flat with most of the land under 50 metres in elevation. An efficient network of roads links the city with Seoul and cities to the east and south. Kuri’s good infrastructure has attracted industrial development. Small factories in the area produce textiles, machinery and chemical products. Only a small portion of the population still farms, growing crops such as rice, apples, pears and grapes.

Dolmens and other prehistoric relics have been found throughout the area, but many artefacts have been lost or destroyed during the city’s rapid urbanisation. In the northern part of the city, there are a number of old tombs including the grave of King Munjong (r. 1450-1452).

Kūriun nammchok (Beloved South) [Literature]

Kurye County

Situated in the northeast corner of South Cholla Province, Kurye County is comprised of the town of Kurye and the townships of Kanjŏn, Kwangŭi, Masan, Munch’ok, Sandong, Yongbang and T’oji. The county occupies an area of 440 sq. kms. and as of 1986, had a population of 49 300. The high peaks of Mt. Chiri rise up in the north and east of the county while the west and south are relatively flat. With an average yearly rainfall of 1 315mm, the area has one of the highest rates of precipitation in Korea.

Due to the area’s rugged terrain, only 16 per cent of the county area is arable. Of this, about two-thirds grows rice and the remainder dry-field crops. In the higher terrain, chestnut, mushroom, edible fern, a variety of medicinal herbs are grown and some timber is cut commercially. In addition, there are rice mills, breweries and saw mills in the town of Kurye.

The county’s tourism is centred around Mt. Chiri National Park (See Chiri Mountain), one of the country’s most popular tourist destinations. Kurye County is also home to Hwaom Temple, one of three famous temples in the park. This ancient monastery was
Yŏngok Temple, near the county’s eastern border, also has a number of important relics, including three stone stupas (Treasures No. 53, 54 and 154); a three-storey pagoda (Treasure No. 151) and a stele commemorating Sŏn Master Hyŏn’gak (Treasure No. 152). West of Hwaŏm Temple lies the ancient Ch’ŏnūn Temple and in Munch’ŏk Township, one finds Sasŏng Hermitage, famous as a place where many of Korea’s greatest monks, including Wŏnhyo, Tosŏn, Chin’gak and Uisang, engaged in religious practices.

In addition to the Buddhist sites, a number of buildings here are associated with Confucianism. Kurye Hyanggyo, situated just west of Highway 18 in Kurye, is believed to have been established in 1398. The school was rebuilt at a different site in 1518 and was moved to its present location in 1704. In Hwangū Township’s Suwŏl Village, one finds Maech’ŏnsa, a shrine built during late Chosŏn in honour of the Confucian scholar Hwang Hyŏn.

In order to emphasise the area’s unique cultural heritage, festivals and rituals are performed here on an annual basis. In particular, the Yaksu (Medicinal Water) Festival, held on Mt. Chiri, is one of the oldest and most well-known festivals of its kind. Every Kogu Day (Kogu is the 6th of the 24 seasonal divisions and falls in the spring), a shamanistic rite is performed on Nogodan (1,507m), one of Mt. Chiri’s more accessible peaks. The rite, performed to the mountain spirit (sanshin), is thought to ensure the peace of the nation and an abundant harvest. The origin of the ritual dates back to Shilla when it was customary to hold a Kogu Festival on Mt. Chiri, one of Korea’s five principal mountains. In Shilla times, in addition to local residents, youth from the elite military corps known as the hwarang came here from all over the country. A feast was held, accompanied by archery and Ssirum (Korean wrestling) competitions. The event became known as the Yaksu Festival because it was the custom for participants to drink the sap of the white birch trees growing on the mountain, as a health tonic.

Kusu (Suryŏn) [Buddhism]

Kusu, King (r. 214–234)

King Kusu was the sixth king of Paekche and ruled from 214 to 234. He is also known as King Kwisu. During the reign of Kusu, Paekche had yet to consolidate its rule and form alliances with its neighbouring states. The lineage and succession to the throne in early Paekche is somewhat problematic, but records reveal that Kusu was the eldest son of the fifth Paekche king, Ch’ogo (r. 166–214), his son was the seventh king, Saban (r. 234), and the eleventh king was Saban’s second son Piryu (r. 304–344). From the thirteenth king, Kunch’ogo (r. 346–375), who was the son of Piryu, the lineage of Paekche is clear. However, it is difficult to place full confidence in the early lineage of the Kingdom.

Kusu was a very large man with a height of nearly seven feet (seven ch’ok) and had a presence that was quite unusual and stately. Kusu was of the same lineage as the founding king of Paekche, Onjo (r. 18 BC–28 AD), but it is thought that the royal family had undergone a major change through his reign. According to the Samguk sagi (History of the Three Kingdoms) after the death of Kusu his son Saban ascended to the throne but since ruling the kingdom was difficult he abdicated the throne in favour of the younger brother of Ch’ogo, King Koi (r. 234–286). However, Koi and Ch’ogo are thought to be of different
branches of the royal family. After Kusu died Koi ascended to the throne after deposing Saban, which points to the collapse of the family branch of Ch’ogo after the death of Kusu. The *Sanguk sagi* relates that Kusu’s reign was interspersed by battles with the neighbouring Shilla and Malgal states. At the end of his reign the majority of the battles with these states resulted in crushing defeats for Paekche, and moreover, drought and other calamities marked the same period. Therefore the alliances of the various small states that sprang from this period must have been the result of the collapse of the ruling power of the lineage that passed from Ch’ogo to Kusu. Furthermore, with the accession of Koi to the Paekche throne, the state structure of Paekche began to develop and change. At the end of Kusu’s reign both the succession to the kingship and the political and social systems in Paekche underwent changes. The resurgence of the lineage of Ch’ogo can be seen in the descendants of Piryu, the first two whose names included the suffix ‘kün’, namely Kün’ch’ogo and Kün Kusu (r. 375-384), indicating that they were of Ch’ogo’s lineage.

**Kut** (see Shamanism)

**Kuunmong** (A Dream of Nine Clouds)

*Kuunmong* is a classical novel written by the scholar-official Kim Manjung (1637-1692). It is thought that Kim wrote this work during the period of his second exile in 1688. Moreover, it was written for Kim’s mother who was tormented by illness at this time. *Kuunmong* is a work that intricately blends Daoist, Buddhist and Confucian ideals in a story that takes place mostly in the span of a dream. Given that the author of the work was well-versed in Chinese thought and literature, it is only natural to see close links between this and certain Chinese work. Some Chinese novels that are believed to have influenced this work include *Shiyouji* and *Sanguozhi yanyi*.

The content of the story is as follows: In China during the Tang dynasty a Daoist adept by the name of Lady Wei lived with her eight disciple-fairies in the eastern mountains, while in the west an old monk by the name of Liuguan lived with his disciples. One day, to repay a visit by the Dragon King, Liuguan sent his first disciple, Ŝôngjin, to the Dragon King’s palace. During his return home he encountered the eight fairies of Lady Wei and they became acquainted and formed a strong bond. After Ŝôngjin returned to the temple, he could not cleanse his mind of thoughts of the fairies. He reflected that the Buddhist life was one of seclusion and nihilility, while the life of a Confucian scholar was one of glory and prosperity in which one could leave a name for his descendants. Due to this development, both Ŝôngjin and the eight fairies were banished to the underworld where they were brought before the Ksitigarbha Bodhisattva, the magistrate of the underworld, for judgment. However, he took pity on the group and allowed them to be reborn into the human world. Ŝôngjin was reborn as the son of a hermit named Yang in the township of Xiuzhou and named Shaoyou. He was a very gifted young man and easily passed the civil service examination and served the emperor well in subjugating rebellions and governing the outlying districts with distinction. In time he again met each of the eight fairies and took them all as either his wives or concubines. Due to his meritorious service, the emperor appointed Shaoyou as Prime Minister where he prospered in service to the country and his mother. The fairies lived happily with Shaoyou and bore him six sons and two daughters. However, one day Shaoyou felt the vacuity of life while discussing the philosophies of Daoism, Confucianism and Buddhism with the eight fairies. At this time a monk appeared and debated the meaning of life and existence in this world with Shaoyou, whereupon suddenly Shaoyou awoke from a dream and again was Ŝôngjin. The eight fairies also returned to their previous existence as Buddhist nuns. Subsequently Liuguan, the head monk, ascended to the Western Paradise and bestowed the temple to Ŝôngjin. Ŝôngjin and the eight fairies then devoted themselves to Buddha until they returned to paradise at the end of their time on this world.
The thematic concerns of this work are manifold, and there are features of a fantasy, romance, adventure and religious novel present in this work. However, in the end the main thrust of the work comes down to a novel that revolves around the union of the themes of the heroic-life pattern and dream novel. Specifically, the structure of this novel moves from reality to a dream and then back to reality. However, despite this change of frame for the events of the work, the characters remain united. The dream novel is a very common theme in the history of the Korean novel and is first seen in ‘Choshin’ of the Samguk yusa (Memorabilia of the Three Kingdoms), and later in works such as Kūmo shinbwa (New Stories of Mount Golden Turtle) and Unyŏng chŏn (The Tale of Unyŏng). The heroic life-pattern that is embodied in the protagonist of this work can also be seen in many other classic novels of the Chosŏn period such as Hong kiltong chŏn (The Tale of Hong Kiltong) and Im kyŏngŏp chŏn (The Story of Im Kyŏngŏp). The use of the heroic-life pattern in conjunction with a dream novel, reveals the desire of Kim Manjung to allow his protagonist to enjoy the secular pleasures of the world, love affairs with beautiful women, a luxurious lifestyle, valour in warfare and high social rank, while not violating the Buddhist precepts in actuality. Therefore the inclusion of these two themes can also be said to be a reflection of the desire of the author, to escape from the world of corrupt politics and factional infighting of the Chosŏn court to a world of dreams.

In a religious context, Kuunmong can be viewed as a novel that is based upon the philosophies of the Diamond Sutra, which regards human achievement, glory and material gains as merely an empty dream. The protagonist of the work ultimately realizes this fact as he gains a symbolic enlightenment and awakes from his dream. In a Daoist light, the novel reveals a blending of the realms of the profane and sacred and the inclusion of the heavenly fairies also reveals influences from this belief system.

Kuunmong is highly valued for its literary qualities and is generally viewed, along with Ch’unhyang chŏn (The Story of Ch’unhyang), as one of the two most representative classical novels of Korea. The story presented to the reader is one that is written in a lyrical and well-harmonised manner. There are several versions of this work extant and it is written in Chinese characters, han’gul and mixed script of Chinese and han’gul. Moreover, this work is thought to have been the inspiration for many later novels, such as Ongnumong (Dream of the Jade Chamber), which also displayed similar thematic qualities such as the dream-heroic one displayed in this work.

Bibliography

kut nori

Kuwŏl Mountain

Mt. Kuwŏl (945 metres) is situated in Hwanghae Province between Sariwŏn and the Yellow Sea. Numerous streams cut through the mountain’s granitite bedrock, creating cliffs and gullies of spectacular beauty. The name Kuwŏl (Ninth Month) is thought to ultimately derive from a phonetically similar Koguryŏ place name. According to folk etymology, on the other hand, it comes from the date (the ninth day of the ninth lunar month) when Tan’gun (Korea’s legendary founder) ascended to heaven and thus gained divinity. According to tradition, Tan’gun moved the nation’s capital from P’yŏngyang to Mt. Kuwŏl. Various holy sites associated with Tan’gun can be found throughout the area. There is an altar area for worship of the three sages connected with the Tan’gun myth:
Hwanin, Hwanung and Tan’gun himself. Tan’gun is also said to have ascended the lookout point called Tan’gun-dae in order to examine the early nation’s terrain. In the *Songs of Emperors and Kings* (*Chewang Un’gi*) by Yi Sünghyu (1224-1300), Yi claims that Tan’gun, after his long reign, eventually retired to Mt. Kuwol where he became a mountain god.

Since the Koryo Period, numerous temples have been built on Mt. Kuwol. On the east side of the mountain, there is P’aeyp Temple -- one of thirty-one main temple complexes (*ponsa*) in Korea. On the mountain’s west side lies Chönggok Temple, thought to have been built during the reign of Koguryo’s King Changsu (r. 413-491). In addition, there are Woljong and Myogak Temple and Naksan Hermitage.

**Kwach’ón**

Kwach’ón is situated south of Seoul in Kyōnggi Province. The city is surrounded by mountains, with Mt. Kwanak (631 metres) rising to the west and Ongnyō Peak and Mt. Ch’ōnggye to the east. Near the centre of the city lies the Kwach’ón Reservoir. Until the mid-1970s, Kwach’ón was a rural area at the edge of Seoul. Situated only 15 kilometres from central Seoul, the area was chosen as an ideal site for a satellite city to accommodate Seoul’s rapidly expanding population. After careful planning, massive construction projects were begun in 1979. Measuring 2.4 kilometres from north to south and 1.2 kilometres from east to west, as of 1993 the city had a population of over 80 000.

Due to the area's extensive urban development, few of the residents are employed in the agricultural sector and many commute to jobs in Seoul. Kwach’ón residents tend to have a high educational level. About 91 per cent of the population finished secondary school and 64 per cent hold university degrees. As a result, many work in professions or in government positions.

The city has a number of popular tourist sites, including the National Museum of Contemporary Art, Seoul Grand Park, Seoul Land and the Seoul Racing Course. Seoul Land, a theme park equipped with amusement facilities for children, also has a zoo and a botanical garden. The Seoul Racing Course, opened in 1988 for the Olympic Games, includes Korea’s largest race track, a racing museum, riding courses for the public, a golf range and a children’s playground. In addition to these sites, Mt. Ch’ōnggye and Mt. Kwanak are popular with local hikers. Every morning, residents frequent these mountains to exercise and draw water from the natural springs found here.

**Kwagō (Government Service Examinations)**

The kwagō, or government service examination had its origins in China in 587, but was not established in Korea until the Koryo era, nearly four hundred years later. It remained as the standard for taking an official position with the government in Korea, for over nine hundred years.

The rise of the kwagō in the Sui and Tang dynasties of China is attributable to the elevation of Confucian ideology as the state philosophy, and the generation of a class of bureaucrats to man the governing apparatus of the state. The situation in Koryo during the reign of King Kwangjong (r. 949-975), when the government service examination was adopted, was quite similar. Since Koryo represented a break from the aristocratic and hereditary-based bureaucracy of Shilla, the Chinese model of a government service examination, allowing men of merit to enter government service, was adopted. Therefore, in 958, Kwangjong adopted the proposal of the Chinese scholar Shuang Ji to establish a government service examination system. Key to the adoption of this system was the desire to replace military officials who had participated in the foundation of Koryo, with men of letters. So, from then on, the bureaucracy was to be selected on the basis of the government service
examination, and it was intended that this system should serve as the one for establishing a new bureaucratic structure, in order to enhance the power of the monarch.

**Shilla**

In actuality, however, an earlier model of an examination system for government service had been instituted during Shilla. Shortly after the establishment of the Kukhak (National Academy) in 682, which provided a Confucian-based education, a rudimentary examination system was implemented. The tokso samp'unkwa (examination in the reading of texts in three gradations) implemented in 788, was primarily based on the texts on which the curriculum of the Kukhak was established. Thus, mastery of the Lunyu (Analects of Confucius); Xiaojing (Book of Filial Piety); Lizhi (Book of Rites); Zhuyi (Book of Changes); Zuozhuan (Tradition of Tao); Shijing (Book of Songs); Wenxuan (Literary Selections); and Shujing (Book of Documents); was essential to passing the examination. However, special consideration was given in appointments to the bureaucracy for those who demonstrated even broader knowledge of the texts of the Five Confucian Canons (Shijing, Shujing, Zhuzhi, Lizhi, and Chunqiu [Spring and Autumn Annals]); and the Three Histories (Hanshu [History of the Former Han], Hou Hanshu [History of the Latter Han] and Shizhi [Records of the Historian])

Despite the implementation of the tokso samp'unkwa, appointment to official positions in Shilla was primarily determined by a person’s hereditary birthright. Therefore, the chin'gol (true-bone) aristocrats monopolised the upper echelons of Shilla officialdom and had little interest in allowing those below them to share power. Accordingly, many of the yuktup'un (head-rank six) below the chin'gol aristocrats instead went to Tang China, where they sat for the government examination and entered the Tang bureaucracy. The lack of opportunity for members of the yuktup'un class became all the more pronounced as the end of Shilla drew closer, and so the collective consciousness of the scholar-class of Shilla on the merits of a government examination system had a major impact during early Koryo. Moreover, the introduction of a merit-based government bureaucracy was a means of weakening the power of the aristocracy and correspondingly increase that of the monarchy. From this, the government service examination system came to the fore in early Koryo society.

**Koryo**

The government examination system in Koryo can largely be divided into the Composition Examination (chesul kwa), Classics Examination (myôngyông kwa) and the Miscellaneous Examinations (chapkwa). The Composition Examination and the Classics Examination were combined during Choson to form the mun'gwa, or the Higher Civil Service Examination (HCSE), which was the most important of all the government examinations. Initially, however, the Composition Examination tested applicants on their ability to compose poetry, rhyme prose, sacrifical odes and problem essays, but in 1004 this was changed into a three-level examination with the first portion concentrating on the candidate’s knowledge of the Confucian Classics, the second based on the composition of poetry and rhyme prose, and the final step involving problem essays. The Classics Examination was based on a demonstration of knowledge of the contents of Confucian Classics, such as Shujing, Zhuyi, Chunqiu, and Lizhi among others. The Miscellaneous Examinations were held in order to staff the government with various specialists in the fields of law, accounting, medicine and geomancy.

Of the three major examinations held in Koryo, the Composition Examination was esteemed as the highest, followed by the Classics Examination. The emphasis placed on the Composition Examination is evident during Koryo, when some 6 700 candidates passed as against 449 in the Classics Examination. From this, it is clear that the Koryo scholars considered it far more important to have superior literary skills than to be highly
knowledgeable in the Confucian Classics. Because of the technical nature of the Miscellaneous Examination, it was considered significantly lower in status than either of the literary examinations.

The qualifications for attempting the government service examinations were simple, stipulating that candidates were to be at least of the yangin (freeborn) class level. Those of the ch'onin (lowborn) class or the children of apostate monks were ineligible to sit for the examinations. In practice, however, the yangin were unable to attempt the examinations and so they became the domain of the upper classes. Other restrictions were imposed regulating those who could apply to take the government examinations. These prohibited persons who had violated the Five Buddhist Injunctions (oyok); were unfilial; were disloyal; and those who were from one of the special administrative districts such as so (the concentrations of labourers for mining or other manufacturing tasks); hyang or pugok (special farming areas of the lowborn classes; in addition to other prohibitions. While the upper classes of Koryo were not as firmly established as were the Shilla aristocrats, they still held a virtual monopoly on government service positions. Moreover, since the military examination for the selection of military officials was not implemented until Koryo’s waning years, this avenue for social advancement was denied to members of the lower classes.

In 1084, it was established that the examinations would be held once every three years, and so they were called the triennial examinations (shingnyǒn shi). This schedule was, however, not inflexible and the examinations were often held at shorter intervals. Initially, they were held in the spring, with the results announced in either autumn or winter. From 1004, the Classics Examination and the Miscellaneous Examinations were held in the eleventh month with the results announced in the third month of the following year, and the Composition Examination was held in the third month with the results announced later in the same month. The system was, however, subject to alteration and was often varied to a considerable degree, depending on the particular circumstances.

Chosŏn

During Chosŏn the government examinations were divided into the four categories of Licentiate Examination (sogwa); HCSE (mun'gwa); Military Examination (mukwa); and the Miscellaneous Examination (chapkwa). The examinations can also be categorised by when they were held, with fixed examinations (ch'onggi shi) and special examinations (pujŏnggi shi). The fixed examinations were represented by the Triennial Examination held once every three years, and the special examinations such as the Augmented Examination (ch'unggwan shi); Special Examination (pyŏl shi); Royal Visitation Examination (alsŏng shi); Garden Examination (chŏng shi); and the Ch'undang Pavilion Examination (ch'undang tae shi; taken at Ch'anggyŏng Palace) were held on other occasions.

The examinations which gave entry to public office were divided into two basic levels, with the Licentiate Examination, or lower level examination, and the upper or HCSE. The former was subdivided into the Classics Licentiate Examination (saengwŏn kwa), which tested candidates on their knowledge of the Four Books and Five Classics, and the Literary Licentiate Examination (chinsa kwa), which tested composition skills in various Chinese literary forms, such as poetry; rhyme prose; documentary prose; and problem essays. The candidates had first to pass a preliminary examination (held in the provinces), and then travel to the capital to sit a further examination. On passing both examinations, the candidate would be awarded the title of either Literary Licentiate (chinsa) or Classics Licentiate (saengwŏn). He could then enter the Sŏnggyun'gwan (National Confucian Academy) to study and, at a later date, apply to sit for the HCSE. The HCSE was also divided into primary and secondary stages, and generally there were thirty-three successful candidates. Those who passed the HCSE were ranked, with the one having the highest score being accorded special treatment in being posted to his official post.
The Military Examinations tested such skills as horsemanship, archery and lance skills in addition to knowledge of the Classics and military texts. These examinations began at the end of Koryŏ and while they were continued in Chosŏn, they were given lower status than the civil examinations. The Military Examinations were generally divided into three stages and there were twenty-eight successful candidates at the end of the third stage. The Military Examinations helped to further solidify the yangban-dominated culture of Chosŏn since it incorporated the military into the yangban bureaucratic structure. It is notable, however, that as the yangban culture of Chosŏn began to dissipate in the late eighteenth and nineteenth centuries, the Military Examination became a means of social mobility for those in the lower classes, including the ch’ŏnin.

The Miscellaneous Examinations were for the selection of professionals such as translators; medical doctors; law clerks; astronomers; and meteorologists. Since the yangban literati regarded these professions as beneath them, members of the chungin (middle people) class primarily sat for the Miscellaneous Examinations and filled these posts in the Chosŏn officialdom. The various Miscellaneous Examinations included the Interpreting Examination (yŏkkwa); Medical Examination (ŭigwa); Cosmic Forces Examination (ŭmyanggwa; this included astronomy, geomancy and meteorology) and the Law Examination (yulgwa). The Miscellaneous Examinations were held every three years and the successful candidate could assume a government post in the lower echelons of the Chosŏn government.

The only class legally excluded from sitting the government service examinations during Chosŏn was the ch’ŏnin. But in practice, the examinations were attempted only by the yangban and chungin classes. Only the yangban and chungin had the opportunity to study the vast amount of material necessary for success in the examination process. The passing of the government service examinations, particularly the HCSE, or the Literary Examination, was the focus of yangban culture, and was viewed as an essential component to leading a filial life, since success in the government equated to filial piety for one’s ancestors. Therefore, a large number of educational facilities of varying levels were created, such as the Sŏnggyun’gwan (National Confucian Academy); the Sahak (Four Schools); hyanggyo (county public schools); and sŏwon (private academies) to meet the demands for education by the yangban.

The government service examination system remained a fundamental aspect of Chosŏn society until the final days of the dynasty, when it was abolished shortly following the Reforms of 1894 (Kabo Kyŏngjang). For more than nine-hundred years, the examination system functioned to allow men of talent to enter the bureaucracy. Moreover, it existed throughout as the focus of the country’s educational system. The government examination system was, in principle, relatively fair, even though it can be seen as discriminating against those in the lower orders. In practice, however, it was inherently biased towards the literati, and with the arrival of Chosŏn, was the exclusive province of the yangban and chungin classes. Further, the Higher Civil Service Examination, which acted as the springboard to positions of power within the government, was monopolised by the yangban, and hence served to restrict access to power to only the most privileged class. Thus, while the government examination system represented an improvement from the domination of the government by hereditary rights, it still did not result in the most qualified individuals staffing the bureaucracy of the Korean states.

Kwagŏ (The Government Service Examination)
Kwagó is a 223-page work written by Yi Sŏngmu and others that concerns the civil service examination system. This work not only examines the civil service examination system in Korea, but also looks at characteristics of the Chinese system. Ilchogak Publishers published this work in 1981.

Kwanak Mountain

Rising 629 metres, Mt. Kwanak’s rugged, granite cliffs and crags make up part of Seoul’s southern border. With fewer springs and sources of water than other mountains in the area, Mt. Kwanak is, according to geomantic theory, a “fire-mountain” (hwasan). With this in mind, King T’aejo (r. 1392-1398), in order to counter the mountain’s fiery influence when he moved the Korean capital to Seoul, had a haet’ae (a mythological lion-unicorn believed to guard against fire) erected in front of the palace, and then had a water-jar buried half-way up the mountain. Every morning, the mountain is covered with hikers from southern Seoul, Kwach’ŏn or nearby Seoul National University. In addition to the numerous hiking trails, there are a number of small Buddhist temples in the area, such as Yongma, Yŏnju, Chaun, Mangwŏl, and Yŏmbul Hermitage and Pusŏng Temple.

Kwangdae

Kwanggaet’o, King (r. 391-413)

King Kwanggaet’o (374-413) was the nineteenth king of the Koguryŏ Kingdom and reigned from 391 to 413. During his reign he was known as the Great King Yŏngnak, his reign era was entitled Yŏngnak (eternal rejoicing) and posthumously he was honoured with a lengthy eulogistic title that proclaimed his monumental kingly achievements. In addition in Chinese records he is known as An. Kwanggaet’o was the son of King Kogugyang (r. 384-391) and from a young age he was said to have a large and a noble stature. In 386 he was designated as Crown Prince and when his father died he ascended to the throne.

Although there are some differences in the records of Kwanggaet’o’s life recorded in the Sanguk sagi (History of the Three Kingdoms) and on the Kwanggaet’o Stele, judging from his posthumous title it is clear that he made major additions to the territory of Koguryŏ and to the consolidations of the ruling power of the Kingdom. Kwanggaet’o, whose name literally means the ‘broad expander of territory’, in the course of his twenty-two year reign conquered a total of sixty-four fortresses and 1400 villages. Leading his mounted troops across the territory of Koguryŏ he had a succession of stunning victories. In the west he occupied Liaodong, which had long been an area of contention for many peoples. In the northeast he subdued the Sushen people, a Tungusic tribe, which made Koguryŏ the master of all of Manchuria. In the south he attacked Paekche, which had long been an area of contention for many peoples. In the northeast he subdued the Sushen people, a Tungusic tribe, which made Koguryŏ the master of all of Manchuria. In the south he attacked Paekche and extended the frontier of Koguryŏ to the region between the Imjin and Han rivers, and to the southeast he annihilated the Japanese Wa, who had been attacking Shilla. In the end, Kwanggaet’o created a kingdom that covered two-thirds of the Korean peninsula in addition to most of Manchuria.

Kwanggaet’o was also a skilled statesman, as he sought to improve Koguryŏ’s position
through diplomatic relations with distant Chinese states while still engaging in confrontations with the neighbouring Northern dynasties. In addition Koguryo established ties with the nomadic peoples on the Chinese northern frontier as a further way to hold the Chinese at bay. To the south, Kwanggaet’o brought his army to the rescue of Shilla which was under attack from the Japanese Wa who had formed an alliance with Paekche. However, eventually Shilla formed an alliance with Paekche to counter the great power of Koguryo.

Kwanggaet’o brought Koguryo to a position of military equality with China during his reign and this was continued during the lengthy reign of his son, King Changsu (r. 413-491), which is considered as the zenith of the Koguryo Kingdom. Kwanggaet’o’s tomb is located at the former capital of Koguryo, Kungnae Fortress, which is on the Manchurian side of the Yalu River in modern day Tonggou. The deeds of his reign are recorded on the Kwanggaet’o Stele, which is 6.39 metres high and is engraved with nearly 1 800 characters that expound the life of the great king.

Kwanggaet’o stele [History of Korea; Archaeology]

**Kwanghae, Prince (r.1608-1623)**

Kwanghae (1575-1641), was the fifteenth king of Chosŏn. His reign is characterised by the successful reconstruction of the economy, which was in tatters from the 1592 Japanese Invasion, and intricate diplomatic manoeuvring between the ailing Ming dynasty and the rising Manchurian state.

Born Yi Hon, Kwanghae was the second son of Sŏnjo (r. 1567-1608) and his concubine. He was designated crown prince in 1592 and, in spite of his very young age, successfully carried out many important missions during the Japanese Invasion, thus gaining his father’s confidence. After Sŏnjo's death in 1608 Kwanghae ascended the throne, though by then Sŏnjo had fathered a son by his second wife.

Since Kwanghae's legitimacy was dubious because of his mother's status as a royal concubine, his entire reign was marked by endless feuds between members of the royal family. This family strife was further convoluted by the partisan conflict between rival court factions, with the young king himself being supported by the 'Big Northern' faction. During his reign, Kwanghae had some of his royal relatives exiled or killed, but eventually lost his power after a successful coup d'état led by another prince, who then took the throne as King Injo (r. 1623-1649), supported by discontented officials from rival, out of power factions. In 1621 a sudden, well-executed attack on the king's palace resulted in a transfer of power to King Injo and his supporters who were comprised largely of members of the Westerner (Sŏin) faction. Since he had lost in the power struggle, Kwanghae was abhorred by official Confucian historiography and thus did not receive an official posthumous name. Hence, he is referred to as Prince Kwanghae, instead of 'king' -- a title used for nearly all other monarchs of Chosŏn.

However, Kwanghae was an able, pragmatic and generally successful (though somewhat of a machiavellian) leader. He played a decisive role in negotiating peace with Japan after the invasions of 1592-1598. His domestic policies contributed in no small way to the eventual recovery of Korean agriculture and trade, both of which were devastated by the prolonged war. In a wider perspective, however, Kwanghae's biggest successes were on the international stage as he sought to keep Chosŏn clear of yet another devastating conflict, this time with the rising Manchu state to the north. With the decaying Chinese Ming dynasty under pressure from the Manchu, many in the Chosŏn court, particularly those in the Westerner faction, advocated sending troops to assist the Chinese state. But Kwanghae realised the strength of the Manchu and was of the opinion that Chosŏn would not be able to resist their superior forces. Chosŏn could ill-afford yet another devastating invasion.
Thus, when Ming demanded that Chosŏn send troops to her aid, Kwanghae instructed his general, Kang Hongnip (1560-1627) to carefully assess the tide of battle before joining the Ming. Accordingly, when Hong realised that the Manchu were the superior forces on the battlefield, he surrendered his army to the manchu general, firstly gaining an assurance that there would be no punitive action taken against Chosŏn.

Other accomplishments during the reign of Kwanghae include the reinstition of the hop'ae identification tag system, which ensured that the common people were not able to abandon their land and wander, and a renewed vigour in literary endeavours. The hop'ae system was quite important in that it enforced stability among the peasantry and thus allowed for a quicker recovery from the havoc wrought by the Japanese Invasion. On the literary front, a return to better times heralded such works as Hong Kiltong chŏn (The Tale of Hong Kiltong) and Tongūi pogam (Exemplar of Korean Medicine) to be written. Hence, the reign of Kwanghae represented a brief renaissance for Chosŏn society, which would soon again be plunged into hardship by the Manchu Invasion under the rule of King Injo.

Kwanghae failed to satisfy the charges of serious misrule brought against him in 1623 and was deposed, the Westerners supporting the accession of Injo. After the usurpation, his life was spared, although his son and heir was later put to death. Kwanghae lived out the last twenty years of his life in comfortable exile.

Kwangjang (Square, The) [Literature]

Kwangjong, King (r. 949-975)

King Kwangjong (925-975) was the fourth king of Koryŏ and ruled from 949 until his death in 975. Kwangjong was the son of the founder of Koryŏ, King T'aejo (r. 918-943), and a brother to the second and third kings, Hyejong (r. 943-945) and Chongjong (r. 945-949). Chongjong was his full elder brother and Kwangjong assumed the throne after him. When compared to Hyejong and Chongjong, Kwangjong reveals several different features. The most notable feature is the length of rule with Kwangjong ruling for twenty-six years as opposed to two years for Hyejong and four for Chongjong. In addition, Hyejong and Chongjong both had their power supported by powerful retainers, Pak Sulhui for Hyejong and Wang Shignyŏm in the case of Chongjong. Kwangjong, on the other hand, used his personal power and struggled continually to strengthen the power of the monarchy in Koryŏ and to free it from the powerful gentry families of the day. Kwangjong's reign is characterised by his ongoing struggle to strengthen the monarchy and can largely be divided into three stages: the first covering the beginning of his reign to the seventh year, the second from the seventh to the eleventh year, and the third from the eleventh year until his death in 975.

Upon assuming power in 949 Kwangjong did not immediately execute any policies to strengthen the power of the kingship. This indicates that Kwangjong did not wish to upset the relatively calm political situation that was at that time prevalent in the country and also that he desired to strengthen his own position. The monarchy of Koryŏ had been under siege since the death of King T'aejo, with a plot to overthrow Hyejong by a royal in-law Wang Kyu. Moreover, the Kingdom and foreign relations with China were closely related and through both domestic and foreign policy it is thought that the new king hoped to consolidate his position through strengthening his political base.

The second period of Kwangjong's reign is marked by his policies to eliminate the political power of the gentry and at the same time increase the hegemony of the monarchy. His first action was the enactment of the Slave Review Act (An'gŏm p'o'y) in 956, which was designed to reduce the number of slaves in the gentry households by determining which slaves had originally been commoners and return their freedom. This law was necessitated by the large number of commoners who had been forced into slavery at the end of the later
Three Kingdoms Period, and now were essential to their master's economic and military strength. In 958 Kwangjong adopted the civil service examination system of China on the proposal of the Chinese scholar Shuangji. The purpose of this reform was to employ men of merit in the bureaucracy of Koryŏ in the place of the old military officials who had gained positions in the government by virtue of their participation in the founding of Koryŏ. In addition, in 960 Kwangjong instituted a hierarchical system of official dress for the court that strengthened the order in the bureaucratic ranks.

The third period of Kwangjong's reign is characterised by a backlash from the gentry families to the attempts to strengthen the monarchy at their expense, and then the decisive actions carried out by Kwangjong to purge any who were resistant to his policies. The opposition began in earnest in 960 with a group of officials, including Kwŏn Shin, Yi Taesang and Chun Hong, who plotted against Kwangjong and were as a result exiled by the king. After this time Kwangjong was ruthless in his purges of any officials who challenged his policies. The consequence of his thorough eradication of the ruling ranks was that he was able to staff the government with those who were loyal to him, and was also able to assert royal authority over the gentry in the capital of Kaesŏng.

Kwangjong pursued a policy of expanding the territory of Koryŏ and actively pushed towards the Yalu River. While this policy did result in Koryŏ expanding her domain, it did in the end bring about a conflict with the Khitan at whose expense this territory was gained. Kwangjong also conducted diplomatic intercourse with various Chinese states during his reign and also strengthened the position of Buddhism within Koryŏ.

Kwangjong's main achievement was the strengthening of the monarchy during the early Koryŏ period. To do this he relied upon both adopting new systems that allow the gentry to be systematically weakened and through the enforcement of his reforms through authoritarian coercion. However, with his death in 979 many of his reforms were rendered ineffectual and the thorough transformation of the Koryŏ government would be forced to wait until the reign of King Songjong (r. 981-997).

Kwangju

Kwangju, located in South Cholla Province, has been designated Kwangju City since 1949, and has been a directly administered municipality since 1986. The city covers an area of 501.32 square kilometres. Mt. Mudung (1,187 metres) is situated on the eastern edge of the city (See Mt. Mudung). With its location on the southern end of the Korean peninsula, the area is characterised by mild weather. Even so, the area receives a considerable winter snowfall.

In the late nineteenth and early twentieth c., the city was often the scene of protests. In 1894, a large number of residents participated in the ill-fated Tonghak Rebellion. During the Japanese occupation, residents rose up against the occupying forces in the March First Movement. Ten years later, on the third of November, students led another large demonstration against the Japanese. The city's students were also involved in frequent protests after Chun Doo Hwan seized power. In May 1980, Chŏnnam National University students held a demonstration calling for greater democratisation. When a contingent of paratroopers was sent to break up the protest, the situation got out of hand, resulting in a full-scale insurrection. On 27 May, regular troops from the ROK Twentieth Division invaded the city and imposed martial law. In less than two weeks, an unaccountable number (reports range from hundreds to thousands) of Kwangju citizens had been killed. A monument has been erected in Mangwŏl-dong to commemorate their deaths.

During Chosŏn, workshops in the area produced a number of traditional items such as paper, furniture, brushes, ink, arrows, quivers and drums. Some of these items are still made in traditional shops for tourists. The city, situated in the remote southwestern corner
of Korea, has until recently been hemmed in by poor transportation networks. As a result, in the twentieth c., its industrial development has lagged behind other regions in the south.

The city serves as the transportation hub of southwestern Korea, and as a result, most of its residents are employed in the commercial or service sectors. The commercial centre of Kwangju is Kumnam Street. Numerous financial institutions, newspaper offices, tourist agencies, etc. line this popular thoroughfare. Below the street, there is an underground market. In addition, there are large outdoor markets in Yang-dong and Ku-dong.

During Choson, Kwangju Hyanggyo (County public school) served as one of the area’s leading education institutions. The academy was originally founded in 1398 on Mt. Sosok, but was later moved outside of the city’s East Gate before being moved to its present location in Ku-dong in 1488. There were a number of other academies in the area, including Unam Sowon (Private academy), Muyang Sowon, Kyongnyol-sa, Changnyol-sa, Hwadam-sa, Sogang-sa and Chisan-sa. Western-style educational institutions were first founded in the area in 1904 by Protestant missionaries. At present, there are a number of institutions of higher learning in the city, including Chonnam National University, Chosun University, Kwangju National University of Education, Honam Theological University and Seminary, Honam University, Kwangju Catholic University, Kwang Ju Women’s University, Kwangshin University and Kwangju Institute of Science and Technology.

Kum-dong Street is the arts and culture centre of the city. The area has numerous galleries, antique shops and traditional tea houses. The Kwangju Cultural Center, Kwangju Public Museum and Kwangju Municipal Folk Museum are also located along this street. In addition, the city holds a traditional art competition called the Namdo Cultural Festival in autumn every year. All forms of art, including folk plays, farmers’ music and even modern art, can be seen at the festival.

**Kwangju County**

Situated in Kyonggi Province to the southeast of Seoul, Kwangju County is comprised of the town of Kwangju and the townships of Namjong, Toch’ok, Shilch’on, Op’o, Chungbu, Ch’owol and T’oech’on. The Kwangju Mountain Range runs along the county’s southwestern sector. In the north, the southern and northern branches of the Han River meet to form P’aldang Lake. With the Chungbu Expressway running lengthwise through the county, the area is easily accessible from Seoul and points further south.

Due to the county’s rugged topography and thick forests, agriculture primarily consists of dry field crops such as Chinese cabbage, red peppers, garlic and potatoes. Stock breeding and small mining operation also contribute to the local economy. Recently, numerous manufacturing firms have been established here in order to take advantage of the city’s proximity to Seoul with its large labour force. Companies which have located here include Doosan Glass, Sammi Enterprises and Shindonga Construction. However, approximately a third of the city falls within the green belt surrounding Seoul, and is therefore not available for industrial development.

The county boasts a number of scenic areas. P’aldang Resort is popular with sports fishermen who come to catch carp, mandarin fish, eels and other freshwater fish. Throughout the year, tourists visit the Namhan Fortress, which has a history stretching back to the Greater Shilla period (See Namhan Mountain). Here in 1637, King Injo (r. 1623-1649) and about 14,000 of his troops surrendered to a Manchurian Invasion. In addition, there are several old Confucian schools in the area, including Kwangju Hyanggyo, which was founded during the late Choson period, Sansong Hyanggyo which sits atop Namhan Fortress, Sugok Sowon and Sach’ung Sowon. Buddhist sites include a stone stupa outside of Paengnyon Hermitage, five-storey and three-storey pagodas (Treasure No. 12 and 13 respectively) in Kwanju’s Ch’un’gung Village, a Buddha statue in
Toch’ŏk Township (Kyŏnggi Province Tangible Cultural Asset No. 88) and a lovely rock-carving in relief depicting Yaksa Yŏrae (the Medicine Buddha) in Tongbu.

Historically, the area is famous as one of the major producers of pottery during the Chosŏn period. Around 1467 and 1468, official kilns established here were exclusively charged with the production of white porcelain for the royalty. Kwangju was an ideal site for pottery manufacture for several reasons. First of all, it was near the capital (present Seoul) and thus in close proximity to the royal palaces. In addition, the site had an ample supply of fuel woods as well as high quality clay. Remains of the Kwangju kilns can still be seen in Chungbu Township, between Sach’ung Sŏwŏn and Yonghak Temple.

Kwangju National Museum

Located in Kwangju’s Puk Ward, Kwangju National Museum (Kungnip Kwangju Pangmulgwan) was established in 1978 in order to preserve and exhibit artefacts excavated from the local area, along with ceramic pieces recovered from sunken ships off the coast of South Ch'olla Province. From that time, the museum’s collection has grown to include Prehistoric relics, artefacts from the tombs in the Yŏngsan River area, relics from the Paekche kingdom, handicrafts and Buddhist art from Greater Shilla and Koryŏ, Chosŏn paintings, celadon, white porcelain and other pottery. As well as managing its exhibits, the museum conducts research, holds academic seminars and gives lectures for the general public.

Kwangju Student Uprising

Kwangmyŏng

Situated southwest of Seoul in Kyŏnggi Province, Kwangmyŏng was designated as city in 1981. As a satellite city of Seoul, the city underwent rapid development in the 1980s. Except for Mt. Kurūm (237m) which rises in the middle of Kwangmyŏng, the city area primarily consists of low elevations.

As a result of the area’s swift urbanisation, there has been a continuous decline in the amount of land under cultivation. Over half of the city’s residents work in Seoul. Other residents are employed in the service sector or in local factories that produce textiles, chemicals, machinery, electronics and other projects.

The city does not have any major tourist attractions, and has only a few sites of historical interest. In Kahak-dong, there is a stone grave that dates from the prehistoric period. In Ch'unghyon-dong, one finds the old site of the Ch'unghyon Sŏwŏn (private academy) which was founded during the reign of Chŏngjo (r. 1776-1800).

Kwangyang

Situated in South Ch'olla Province, Kwangyang City embraces the town of and the townships of Taap, Ponggang, Okkok, Ongnyong, Chinsang and Chinwŏl. The city covers a total area of 380.7 sq. kms. and, as 1986 statistics indicate, a population of 74 423. With Mt. Paegun (1 218m), Ttoari Peak (1 120m) and Mae Peak (865m) rising in the north, some 73 per cent of the city consists of mountainous terrain. The Sŏmjin River runs along the city’s eastern border, and from Mt. Paegun, the Tong and Sŏ streams discharge into Kwangyang Bay. Most of the city’s agricultural land and its residential districts are located in the plains area contiguous with these streams. As part of the southern coastal region, the area has a great deal of clement weather, with an average yearly temperature of 13.7c and an annual rainfall of 1 295mm.
Due to the area’s rugged topography, only about 18 per cent of the city area is arable land. Of this, more than two-thirds grows rice and the remainder dry field crops. Greenhouses produce Chinese cabbage, cucumber and radish on a commercial scale. Since 1968, large chestnut plantations have been established in the area, making Kwangyang Korea’s leading producer of chestnuts. Marine products include shellfish and laver which are harvested in Kwangyang Bay, and there are eel farms along the lower reaches of the Sŏmjin River. Mining operations include Kwangyang Mine in Kwangyang’s Sagok and Ch’ŏnam villages and Kwangyang Steelworks on the shores of Kwangyang Bay.

The first stage of Kwangyang Steel was completed in May 1987. This has greatly expanded and has averaged an annual output of 11.4 million tons of steel. It is the largest single steelworks in Korea, even exceeding in size POSCO’s first steel mill in Pohang. The steelworks directly employs about 8 500 people, and if one takes into account the employees of the 70 companies affiliated with the steelworks as well as those of their 22 suppliers, the total number doubles to nearly 17 000.

Although the city does not attract large numbers of tourists, it offers a diverse range of scenic attractions including high mountains, rivers and coastline. In addition, there are a number of historical sites in the area. Near Mt. Paegun lies Ongnyong Temple, where Tosŏn (827-898) is said to have written Osŏn piki (Esoteric Record of Tosŏn). In this prophetic work, Tosŏn predicted with a high degree of accuracy, the establishment of the Koryŏ kingdom. Other important temples in the area include Paegun Temple south of Mt. Paegun; Sŏngbul Temple southeast of Mt. Hyŏngje (861m); Changhŭng Temple in Ongnyong Township; Tŏksŏn Temple south of Mt. Mangdŏk (197m); Mudŏng Hermitage north-east of Mt. Puram (431m); and Sŏsan Temple and Pongyang Temple in Kwangyang. Confucian sites in the area include Kwangyang Hyanggyo (County public school originally established in 1443), and Pongyang-sa (a shrine commemorating Ch’oe Sandu and other illustrious scholars).

**Kwanmae Island**

Located seven kilometres southeast of Hajo Island, Kwanmae Island belongs to the Tokkŏ Archipelago. The island’s name is said to come from the abundant plum blossoms that the banished scholar Cho saw when he paused here c. 1700 C.E. on his way to Cheju Island. Administratively, the island is part of Chodo Township in South Cholla Province’s Chindo County. The island covers an area of 4.08 sq. kms. and has a coastline of 17-km. During low tide, a land bridge forms between the island and the islets of Kakhtul and Hang.

Kwanmae Village and Kwanho Village are the island’s two main population centres. Most residents are both farmers and fishers. Slightly less than 1.0 sq.km. is available for rice cultivation, with only a further 0.7 sq. kms. for dry-field crops. Local marine products include yellow corbina, anchovy, and laver. A passenger ferry calls at the island every other day.

**Kwanŭm Temple**

[Architecture]

**Kwimôgŏri sae** (Deaf Bird)

[Literature]

**Kwŏn Kŭn** (1352-1409)

Kwŏn Kŭn was a civil official and scholar of the late Koryŏ and early Chosŏn periods. His family’s ancestral home is in Andong, his given name was Chin, courtesy name Kawŏn and his pen name was Yangch’ŏn. In 1368 he passed the higher civil service examination and held a number of educational offices including Diarist (kŏmyŏh) at the Office for Annals
Compilation (Ch’unch’ugwan), Lecturer (chikkang) at the National Confucian Academy (Sönggyun’gwan) and Drafter (ünggyo) at the Office of Royal Decrees (Yemun’gwan). After the death of King Kongmin (r. 1351-1374), Kwôn along with Ch’ông Mongju (1337-1392) and Ch’ông Tojon (1342-1398) risked death by continuing to advocate a pro-Ming, anti-Yuan policy for Koryô. Nonetheless, Kwôn continued to serve in important positions within the government as both Director (chishinsa) and Chancellor (taesasŏng) of the National Confucian Academy, and in 1388 he served as assistant examiner of the government service examination (tong jiggins). In the next year Kwôn served on an official mission to Ming China along with Yun Sungsun in which Koryô tried to create friendly relations with the newly established Ming. While in Ming, Kwôn received a letter from the Ming Board of Rites which caused him a great deal of trouble when he returned to Koryô for he was accused of being associated with the faction of Yi Pin and sentenced to death. However, the Koryô dynasty shortly fell and the founder of the new Chosôn dynasty, Yi Sŏnggye (King T’aejo, r. 1392-1398) pardoned Kwôn. With the founding of Chosôn, Kwôn served in various official capacities before being dispatched to Ming in 1396 on an official mission to correct a misunderstanding between King T’aejo and the Chinese court. Not only did Kwôn solve the problem between Chosôn and Ming, but he also used this opportunity to meet with Chinese scholars such as Liu Sanwu and Xu Guan and conduct scholarly discourse on classical writings. At this same time he received recognition from the Ming Emperor for his literary skills and became widely known in China for his talents. Upon his return to Korea he was honoured as a meritorious subject and served as Assistant Secretary (ch’amch’ an) along with other official positions.

Kwon is also renowned for his studies and propagation of neo-Confucian ideology. He represents part of the link between the neo-Confucianists of the Koryô period and those of the Chosôn period. Kwôn, along with scholars such as Yi Sungin (1349-1392), Yi Saek (1328-1396), Ch’ông Mongju and Kil Chae (1353-1419), helped form a bridge for the neo-Confucian ideology that was to become the dominant force in Chosôn. Kwôn’s works such as Ogyong ch’ŏn’gyŏn nok and Iphak tosol (Illustrated Treatises for the Beginner) are widely acclaimed for their clear elucidation of neo-Confucian principles. In addition Kwôn’s collected works, Yangch’ on chip (Collected Works of Yangch’ on), are extant.

Kyebaek

Kyebaek (? - 660) is probably the most well-known military leader from the Paekche Kingdom during the Three Kingdoms period and also one of the leading historical military characters of Korea. Although his military success was notable it was small in comparison to other great Korean leaders. Kyebaek is most famous for his personal characteristics and virtue. He personified many of the personal qualities Koreans, and indeed people all over the world, regard highly. So even in military defeat he is remembered for his loyalty, dedication, self sacrifice for his nation, leadership and forgiveness of his enemies.

In the context of northeast Asia of the seventh century, the Korean peninsula as well as activities on the mainland of China were relatively unstable. Korea was in the last stages of its Three Kingdoms period with the powerful Koguryo Kingdom occupying the northern part of the peninsula, Paekche to the southwest, and the Shilla to the southeast. The Paekche was the weaker of the three during the seventh century, with the once powerful Koguryo slowly losing its stature and the rising Shilla Kingdom gaining momentum that would ultimately allow it to unite the peninsula under its rule in the later part of that century. The mighty neighbour to the west, China, had itself only relatively recently been united in the late sixth century under the Sui Dynasty. That dynasty had its own problems including those
with the then powerful Koguryo Kingdom of northern Korea, and after some disastrous defeats at the hands of Koguryo forces under the leadership of General Ulchi Mundok (see chapter 19) the Sui Dynasty was replaced by the Tang Dynasty in 618. The Tang Dynasty would assist in shaping the power balance on the Korean peninsula by allying with Paekche’s rival, Shilla Kingdom, in a war that would propel Kyebaek into fame and honour.

Relatively little is written about Kyebaek’s early life and very little detail, including his birthrate and birthplace, is known about him. We do know when he died however, and from that we can safely assume that he grew up in the Paekche Kingdom during these political changes both on the peninsula and in China. We also know that Kyebaek was fiercely loyal to the kingdom and its king even though the last years of Paekche had seen a disastrous decay in its strength largely due to a king who ignored his kingdom in favour or pursuing his personal pleasures.

The Paekche of Kyebaek’s adulthood was ruled by King Uija (641-660) who initially appeared as a strong and able ruler. In 642 he launched some military expeditions against Shilla taking some key fortifications on its northern border. Again in 655, he initiated another offensive that engulfed some thirty Shilla fortresses. After these successes however, he lapsed into disinterest and ignored the counteroffensive that was building against him. In March 660, Shilla aligned with Tang Dynasty China to attack the Paekche Kingdom with the hope of conquering it then closing the grip on the Koguryo Kingdom to the north. The Tang Emperor, Kao-tsung sent approximately 130,000 troops in 1,900 ships to attack Paekche from the west. Simultaneously, 50,000 Shilla forces under the leadership of the famous general Kim Yu-shin (see chapter 17), set out to attack Paekche from the east. Kyebaek took 5,000 of his best troops and marched out to meet the Shilla forces. He knew his efforts were futile before he set out, and he reportedly stated "I would rather die than be a slave of the enemy." Kyebaek then killed his wife and family rather than allow them to fall into the hands of opposing forces, or allow the thought of them to influence his actions, or cause him to falter in battle. Initially, Kyebaek had some success against Shilla winning four small battles. In one of the battles, Shilla General P'amok sent his sixteen year old son, Kwanch'an, to fight at the front. Kyebaek captured Kwanch'an but was moved because of his great courage. Kyebaek released the young warrior only to meet and capture him again in another battle.

Kyebaek later moved his forces to block the advance of General Kim Yu-shin. They met on the plains of Hwangsan Field, in present day Hamyang, near Chiri Mountain. Kyebaek's forces fought bravely but they were outnumbered ten to one. In the end, Kyebaek and his men were completely defeated. The Shilla forces went on to overcome all of Paekche and then, with the help of Tang forces defeated Koguryo forces and united the entire peninsula in 668.

Kyebaek suffered a great defeat without humility. He set out to defend his country with merger forces, badly outnumbered, confident he would surely die. This did not cause him to hesitate, in fact, he sacrificed his whole family in addition to himself for the sake of his country. He did this even though his king and country had decayed to a point where many did not believe either deserved such devotion. In the midst of battle and in such despair, he still possessed the compassion to recognise courage in the enemy and spare the young boy Kwanch'an. All these honourable attributes Kyebaek exemplified to the very end. He is remembered as a man of honour and national hero of Korea.

R Saccone

Kyebang Mountain

Situated just west of Odae-san National Park, Mt. Kaebang, at 1,577 metres, is one of the higher peaks in the area. As the high point of the Ch'öngnyöng Range, the mountain is surrounded by the peaks of Mt. Odae (1,563 metres), Mt. Paekchök (1,141 ), Mt. T'aegi
(1,261) and Mt. Pangdae (1,436). Unlike most of the mountains in Kangwon Province, Mt. Kyebang has gentle slopes and few of the spectacular rock outcroppings characteristic of Mt. Sörak to the north. As a result, it has not been a popular destination for hikers and tourists.

**Kyech’uk ilgi** (Diary of the Year Kyech’uk)

*Kyech’uk ilgi* is an anonymous mid-Chosŏn novel which concerns the events that surround the deposition of Queen Inmok by Prince Kwanghae (r. 1608-1623). The work consists of one volume and is handwritten. There are, however, two editions of *Kyech’uk ilgi*, the Naksonjae and the Honggiwon, the latter having the title *Sŏgung ilgi* (Diary of the Western Palace). From an examination of the two editions it is clear that neither is original since there are differences in the story sufficient to point to another source. Nevertheless, the work is valued for both its account of the intrigue surrounding the reign of Kwanghae and the various political factions vying for supremacy. Also, for its linguistic elements, since it provides a clear record of palace language. The author is thought to have been a court lady, but aside from this there is nothing which might reveal the diarist’s identity.

The narrative line of *Kyech’uk ilgi* begins with rumours that Queen Inmok is finally pregnant in the thirty-sixth year of King Sŏnjo’s reign (1603), and this is perceived as a threat to Prince Kwanghae, who although the issue of the king and a concubine, had been named as Crown prince. Even though the Queen gives birth to a son, Prince Yongch’ang; when Sŏnjo dies in 1608, Kwanghae ascends the throne. Kwanghae moves quickly to consolidate his power and has his elder brother, Prince Imhae, executed. He then confines Queen Inmok to Sŏgung Palace. Eventually, Kwanghae exiles the young prince Yongch’ang to Kanghwa Island where he too, is executed. During the political manoeuvring of Kwanghae and Inmok, the literati become divided, with Yi Ich’ŏn leading the group supporting Kwanghae, and Kim Chenam, the father of Queen Inmok, leading the other, which is behind the queen. In 1623, Kwanghae is dethroned and King Injo (r. 1623-1649) accedes, with Queen Inmok being reinstated.

Information contained in *Kyech’uk ilgi* suggests that the author may have been a palace lady who was perhaps a votary of Queen Inmok. Moreover, the Diary is written in effeminate terms -- a pointer to a well-educated woman author. The Diary is one of three major works of Chosŏn that recount the events of the royal palace, taking its place alongside *Hanjung mannok* (A Record of Sorrow) and *Inhyŏn wanghu chŏn* (The Tale of Queen Inhyŏn). All three works are highly valued for the insight they provide into life at the Chosŏn royal palace.

**Kyehoedo**

[Painting]

**Kyemongsa**

**Kyeryong Mountain**

Situated between Taegŏn and Kongju in South Ch’ungch’ŏng Province, Mt. Kyeryong incorporates Ch’ŏnhwang (845 metres), Yŏnch’ŏn (740 metres) and Sambul (750 metres) Peak. The name Kyeryong (chicken-dragon) comes from the ridge connecting these three peaks, which resembles a dragon with a cockscomb. According to Korean geomancy, the
area’s natural elements (water, earth, etc.) and the geographical features are in a particularly harmonious balance. As a result, followers of many diverse religious cults have been attracted to the area. Numerous tourists also flock to Kyeryongsan National Park to enjoy the clear streams, rocky peaks and sights such as the famous Unson Waterfall.

Since the Three Kingdoms Period, temples have been built in the area, and a number of old monasteries of historical interest can still be found. In particular, Tonghak, Kap and Shinwŏn Temple house a great number of Buddhist artifacts, including stone carvings, large bells and stupas. Since the Greater Shilla Period, Mt. Kyeryong, considered to be one of Korea’s five important peaks, was a site for national religious ceremonies. During the Chosŏn Period, three mountains were selected as sites for the important mountain spirit ceremony held in the autumn and spring: Mt. Myohyang in the north, Mt. Chiri in the south and Mt. Kyeryong in the centre.

The mountain is part of the sixty-square kilomere Kyeryong-san National Park. Due to its central location, the area is easily accessible to people living throughout South Korea, who come to appreciate the mountain’s scenic beauty and rich historical heritage.

**Kyewŏn Pilgyong chip** (Ploughing the Cassia Grove with a Writing Brush)

This is an anthology of prose and poems by Ch’oe Ch’iwŏn (styled Koun, 857-?), a famous scholar of the Shilla period, who is sometimes called the Father of Chinese Literature in Korea. It is the oldest literary anthology now extant in Korea and consists of twenty volumes in four fascicles. It comprises prose and poems of great beauty which Ch’oe wrote while in China and on his way back to Korea, after studying and serving in the Tang court from the age of twelve until he was twenty-eight. Ch’oe compiled the book on his return in 886 and presented it to King Hŏn’gang.

The essays and poems in the collection cover a wide variety of aspects of the social, political and cultural life of Tang China, but it is valued more for its literary style than its content. Ch’oe was held in high esteem among the Chinese literati of the period, especially by the poets Luo Yin and Gu Guang, and the *Kyewŏn Pilgyong chip* was recorded in the Tang work *Yiwen zhi*. Some Chosŏn dynasty scholars such as Sŏng Hyŏn, Sŏ Kŏjong and Hŏ Kyun later criticised his scholarship, but Yi Chibong gave high praise to his poems, particularly the ‘Ch’uya ujung’ (In the Rain of Autumn Night) which he regarded as superior to any Tang poem.

**Kyeyul sect** [Buddhism]

**Kyobo Publishers Incorporated**

Located in Seoul’s Chongo Ward, Kyobo Publishers Incorporated (Kyobo Mun’go Ch’ulp’anbu) is a publishing firm established on 12 November 1981. With Yu Kŏn as editor, the company chiefly publishes works related to technology and foreign languages.

**Kyodong Island**

Located northwest of Kanghwa Island, Kyodong Island is part of Kanghwa County in the Inch’ŏn Metropolitan Area. The island has a total area of 46.24 sq. kms. During the Korean War many refugees fled to the island swelling disproportionately the island’s population. By 1965, the population stood at 12 443, but then declined to 7 853 by 1985. As a partly submerged mountain of the Mashingnyong Mountain Range, about two-thirds of the island consists of extremely low elevations of ten metres or less. The highest point is Mt. Hwagae (259m), and the other peaks are all less than one hundred metres in height. The island lies
two kms. off the coast of Hwanghae Province; so that on a clear day Kaesŏng’s Mt. Songak can be seen. The shallow, turbid waters that surround the island are not good for fishing, and the tidal level fluctuations make it difficult for larger vessels to navigate the area. Although the local climate has relatively mild seasonal variations compared to the mainland, the island experiences unstable weather patterns characterised by strong winds, occasional gales and hailstorms. The average yearly temperature is 10.9 deg. c. and the average annual rainfall 998.6mm.

With large plots of level land, 73.0 per cent is rice paddy, about 10.0 per cent grows dry-field crops and about 10 per cent is wooded. As on nearby Kanghwa Island, ginseng is grown and sedge is cut for basket-making and other handicrafts. From mid-Koryŏ to late-Chosŏn the island served as a place of exile. In addition, Kyodong was subject to invasion because of its strategic location. As a result, there are a large number of historical sites associated with military defence. On Mt. Hwagae, are remains of a fortress thought to have been built in 1173, and those of a fortress built in 1629 can also be seen close to the populated area. On the southern slopes of Mt. Hwagae, are Hwagae Hermitage and Kyodong Hyanggyo (county public school). The latter was founded in 1127 on the northern side of the mountain and was moved to its present location by Cho Hoshin during mid-Chosŏn. Repaired in 1966, the school has been designated Kyŏnggi Province Tangible Cultural Asset No. 58.

**Kyŏmik** (fl. 526)

In 526, Kyŏmik, regarded as the founder of the Vinaya School of Paekche, went to China, from where he travelled on to India. The journey was related to efforts by King Sŏng (r. 523-554) to elevate the international status of the Paekche Kingdom. In India, Kyŏmik spent five years studying Sanskrit and Vinaya texts at the Mahavinaya Vihara (Temple of Grand Discipline) in Sankisa. After completing his studies, Kyŏmik returned home with the Indian Tripiṭaka Master Vedatta, carrying copies of the Abhidharma-pitaka and five versions of the Vinaya in Sanskrit. King Sŏng gave them an official welcoming ceremony after which he had them reside at Hŭngnyun Temple. The king then put Kyŏmik in charge of a sutra translation committee consisting of twenty-eight learned monks. Through Kyŏmik’s influence, the Vinaya (Discipline) School flourished in Paekche, and even went on to exert an influence on early Japanese Buddhism.

**Kyŏnggi Province**

**Overview**

Kyŏnggi Province occupies the west-central part of the Korean Peninsula, encircling Sŏul
Special Metropolitan District and adjoining Inch'on Special City. The province is bounded to the north by Hwanghae Province, to the east by Kangwŏn Province, to the south by North and South Ch'ungch'ŏng Provinces and to the west by the Yellow Sea. Due to its close proximity to the national capital, the province has played a central role in Korean affairs since the Chosŏn Period. However the division of the Korean Peninsula in the aftermath of the Korean War led to the northern part of the province (including the ancient capital of Kaesŏng) coming under the administration of the North Korean government.

**Geography and Climate**

The western section of the province slopes gradually down to the shores of the Yellow Sea, and is characterised by plains and rounded hills, while the eastern part of the province contains the Mashingnyŏng Range (in the north) and the Kwangju and Ch'aryŏng Ranges (in the south). Almost the entire province falls within the catchment area of the Han River, and the two major tributaries of this waterway merge at Yangsu, approximately twenty kilometers east of Sŏul. Fertile alluvial plains formed by the Han, Imjin and Ansŏng Rivers dominate the west of the province, and the heavily indented Yellow Sea coastline (including approximately 250 islands) measures 1,416 kilometers. The province is relatively strongly influenced by continental climate patterns, and coastal districts enjoy cold winters and warm summers, while mountainous inland districts experience extremely cold winters and hot summers. Annual precipitation averages 1,100mm, making Kyŏnggi Province one of the wetter regions of the peninsula.

**Agriculture and Industry**

High population density and convenient transportation links are two factors which have contributed to Kyŏnggi Province's status as the principal industrial region of South Korea, and the province contains a particularly heavy concentration of enterprises engaged in secondary industries. Light industry centered on the production of consumer goods during the 1950s was supplemented in the following decades by medium and heavy industries, including the manufacturing of machinery, electrical and electronic goods, paper, paint, rubber, textiles, metals, chemicals, leather and ceramics. Rice accounts for 90% of agricultural production, however the existence of large markets in nearby Sŏul and Inch'on has led to the development of a flourishing horticulture industry in adjoining agricultural districts. Other agricultural activities include ginseng cultivation, dairy farming and livestock raising. Although its once-prosperous fishing industry is now in decline, the waters around Kyŏnggi Province remain home to numerous varieties of fish and shellfish, and the province also includes the nation's largest saltworks.

**Tourism**

Its proximity to the national capital has left Kyŏnggi Province with a rich legacy of historical relics and national cultural treasures, and the province also contains numerous areas of scenic beauty. Among its most popular tourist destinations are the city wall and gates of Suwŏn, Pukhansansŏng and Namhansansŏng National Parks, Tobong, Soyo and Kwan'ak Mountains, Shillŭk, Yongju and Yongmun Temples, the armistice village of P'anmunjŏm, the Korean Folk Village at Yong'in and Kangwha Island.

**General Information**

Area: 10,161 square kilometers; population: 7,607,000 (1995 est.); provincial headquarters: Suwŏn. Other major cities include Sŏngnam, Anyang, Puchŏn, Kwangmyŏng and Úijŏngbu.

Kyŏnggi style songs (see Kyŏnggi-ch'ŏ ka) [Literature]

**Kyonggi University**

Kyonggi University (Kyŏnggi Taehakkyo) is a private educational institution and is located in Iŭi-dong in Suwŏn. It is the successor of Choyang Poyuk Sabŏm Hakkyo (Choyang
Kindergarten Teacher’s School) which was founded in 1947. This school became a junior college in 1954 and then Kyŏnggi Women’s Junior College in the following year. In 1957, the school became coeducational and the name was changed to Kyŏnggi Junior College (Kyŏnggi Ch’ŏngpyŏn Taehak). It became Kyŏnggi College in 1964. In 1979, a Master’s program was initiated followed by a Ph.D. program in 1981. Three years later, the college became Kyonggi University.

Today, Kyonggi University is comprised of eleven colleges and sixty-four departments with two campuses in Suwon and Seoul. At the former, there are seven colleges: the Colleges of Administration, Economics and Business, Engineering, Fine Arts and Physical Education, Humanities, Law and Tourism Science. At the latter are the Colleges of Economics and Business Administration, Engineering, Humanities, Law and Tourism Science. In addition, the university has nine post-graduate schools: the Graduate Schools of Architecture, Arts and Design, Business Administration, Education, Industrial Technology and Information, International Relations, Public Administration, Reunification and Security, and Tourism and Hospitality Industry. A number of institutions are affiliated, including the Central Library, the Kumhwa Library, the Agricultural Museum, the Computer Centre and the Tourism Development and Research Institute. Publications include the Kyŏngdae hakpo (Kyonggi University Gazette) in Korean. Kyonggi University’s motto is ‘Truth, Sincerity and Love.’

Kyŏnggi-ch’e ka

Kyŏngguk taejŏn (National Code)

Kyŏngguk taejŏn is a collection of statute laws and regulations that was first promulgated in 1471. Before the drawing up of this code there had been other efforts by the Chosŏn government to design a legal code to guide the nation. At the beginning of the Chosŏn period the Kyŏngje yuakhŏn (Six Codes of Governance) was drafted and enacted in 1398, but this code was not comprehensive enough to cover all aspects of government. There were several attempts to modify this work, but it was not until 1460 that work began in earnest for the creation of an all-encompassing code to govern the nation.

The Kyŏngguk taejŏn was essentially based upon the six codes (yuakhŏn) that had originated in Tang China. The six codes are: ijŏn, which defined the bureaucratic structure of the government and the system of civil service; the hojŏn, which covered national finance, the economy, land surveying, family registration and taxation; yejŏn, which included regulations concerning the national examination, education, rituals, ceremonies and foreign relations; pyŏngjŏn detailed various military regulations; hyŏngjŏn covered various tribunals, punishments and penal administration; and kongjŏn, which regulated public works and craft industries. For items not specified in this code, this document specifies that Ming China law is to be applied as common law.

The last revision of this code was in 1485 and is the so-called Ulse taejŏn (ulsa being the name of the year 1485) and this is the set of laws and regulations that would remain in place until the Reforms of 1894. The Ulse taejŏn is also the only remaining version of the code that survives to the present day. The Kyŏngguk taejŏn is an extremely valuable document for the study of Chosŏn society.

Kyŏnghŏ (1849-1912)

Kyŏnghŏ (born in Chŏnju; given name, Song Tonguk; Buddhist name, Sŏngu) was a Sŏn (Zen) master who rose to some renown at the end of the Chosŏn dynasty. He led a Sŏn revitalization movement among the clergy and also encouraged the laity to practice Sŏn. During the Japanese colonial period, two of his students, Song Man’gong (1871-1946) and
Pang Hanam (1876-1951), represented the conservative element in Korean Buddhism.

The year that he was born his father fell ill and died in a bout of depression after being forced to pay high taxes. Left alone, his mother decided to send Kyŏnghŏ to Chŏnggye temple in the hope that he might have an opportunity to learn to read and write. At the age of eight he was received by a master, took his vows, and was allowed to conduct Buddhist ceremonies. In 1862, he had his first opportunity to study when a classical scholar came to stay at the temple, and shortly thereafter his Buddhist master decided to leave the priesthood. He recognized, however, the young Kyŏnghŏ’s academic attainments and kindly gave him a formal introduction for study at Tonghak temple.

Over the next nine years Kyŏnghŏ studied Buddhist sutras as well as the full range of classical Chinese scholarship, and at the age of twenty-two, in 1871, he was selected to take his teacher’s position. In 1879, however, his life came to an impasse when he decided to find his original master. During his journey he came to a village which was experiencing a cholera epidemic, and he spent the night beneath a tree, seized by thoughts of death. As a Buddhist priest who had studied philosophical arguments on non-duality, he was disconcerted by his own fear. Thinking that only intense Son meditation could resolve this problem, he returned to Tonghak temple.

Later that year he overheard a comical exchange in which one novice jokingly said to another, "Even if (master Kyŏnghŏ) turns into an ox, there is no spot on his nose to put in a ring and a tether.” The implication was that Kyŏnghŏ was useless, doing nothing but meditating. Upon hearing these words he attained enlightenment.

Now thirty-two, he joined his mother at Ch'ŏnjangam hermitage, where his brother was the abbot. Over the next twenty-four years he spent most of his time travelling and giving lectures on the importance of combining scriptural study and meditative practice. In this way he reasserted a trend in the Korean Sŏn tradition that had begun with Chinul (1158-1210), and in 1899 he journeyed to Haein temple to print sutras and establish a Society for the Cultivation of Sŏn (sulhansa). This name was the same as a community which Chinul had founded, and it seems to have been then that Kyŏnghŏ compiled the Sŏnmun ch’waryo (The Essentials of Sŏn). This text contained four selections of Chinul’s writings and is still widely used by Korean monks.

During these years Kyŏnghŏ also continued to engage in rigorous meditative practice and he was an inspiration to commoners and priests alike. Song Man’gong and Pang Hanam met him in this period, and while they became respectful students, they also became harsh critics.

In essence, Kyŏnghŏ’s enlightenment was a release from his earlier fear of death. Through his spiritual awakening he realized that the dissimilitude of life and death was merely an appearance, and to this extent he was much the same as any enlightened Sŏn master. However, Kyŏnghŏ made clear his realization of non-duality. He slept with women, ate meat, and drank liquor. In short, he broke his vows: an iconoclasm which stretched back to the very beginnings of Chinese Ch’an (Sŏn) itself.

In 1904, he quit his life as a priest and travelled around Korea visiting with rustic scholars. Walking through a small hamlet in 1912, he encountered a group of children at play. He told them he was tired and was taken to the home of one of the children, where he was offered a place to rest. The next morning he awoke, requested a brush and paper, and wrote a short description of Sŏn to which he appended a poem:

the heart, a moon circular and alone
its light swallows all phenomena
light and boundaries forgotten alike
what, again, is there?

Underneath he drew a circle symbolizing the Buddhist idea of the inexhaustible source and his imminent return to it. He then gave the paper to the boy and died.

Hearing of his death, Song Man’gong wrote:

with goodness greater than Buddha, more evil than a tiger
such was Sŏn Master Kyŏnghŏ
wherever death takes him
intoxicated, reclining upon flower’s faces.

In these few lines, he summarized his deep respect and reproach for his former teacher. In 1942, an association of Korean monks printed the Kyŏnghŏchip (Collected Works of Kyŏnghŏ). The original manuscript was written by Pang Hanam and dated 1931, and although both he and Song Man’gong were members of the committee which prepared the 1942 publication, it was the controversial priest Han Yongun who was asked by Man’gong to write the preface, a short biographical section, and a brief introduction to his poems. Pang had originally written a section of warning to Buddhist priests which furiously condemned Kyŏnghŏ’s breaking of the Buddhist vows. On publication, this was omitted.

Instead, Han’s sections were tasteful, concise, and accurate. Man’gong’s selection of Han was no doubt based as much on Han’s literary skill as his reputation for being rebellious. Man’gong recognized that it was beyond the ken of a priest of impeccable fame to write about Kyŏnghŏ without either ignoring his controversial reputation or becoming mired in pedantry. His astute choice of Han was handsomely rewarded.

In subtly alluding to Kyŏnghŏ’s licentious behaviour, Han praised the Sŏn master’s ability to manifest Buddhist understanding in both word and deed. In this way, he demonstrated an appreciation of Kyŏnghŏ’s true importance within the Korean Buddhist tradition. While Kyŏnghŏ’s metaphysical understanding of Sŏn Buddhism was indebted to the tradition of the ancient Chinese masters and the Korean masters Chinul and Hyujong (Sŏsan Taesa, 1520-1604), his enigmatic actions were deeply rooted in the iconoclastic origins of Sŏn itself. Ironically, what was most traditional about Kyŏnghŏ’s Sŏn was precisely what most troubled the conservative guardians of tradition.

Bibliography

Man’gong pŏbŏ, Seoul, Myogwang, 1983.

Kyŏnghŭi Palace [Architecture]
Kyunghyang shinmun [Newspapers]
Kyongin Gallery
Situated in Insa-dong in Seoul, the Kyongin Gallery (Kyŏngin Misulgwan) occupies the former residence of Pak Yonghyo (1861-1939), a famous pro-Japanese official and an exponent for the implementation of reforms for the modernisation of Korea. The guest-house section of Pak’s residence is now the exhibition area for oriental paintings, while the courtyard is used for sculptures. On the site of the house’s main wing (which was destroyed by fire), a two-storey structure has been built to exhibit Western-style artworks. There is also a small annex which serves green tea and other Korean beverages.

Kyŏngje yukchŏn

Kyŏngju

Geography

Situated in North Kyŏngsang Province, Kyŏngju is comprised of the towns of Kamp’o, Kŏnch’ŏn, An’gang and Oedong, and the townships of Kangdong, Naenam, Sannae, Sŏ, Yangnam, Yangbuk, Ch’ŏnbuk and Hyŏng'ok. About five kilometres east of the central area lies Pomun Lake, a popular resort replete with restaurants, hotels and recreational facilities. Kyŏngju National Park, which surrounds the city, is separated into districts which include Mt. T’oham, Mt. Nam and the Sogŭm River.

Economy

About 22.9 per cent of the city’s land is arable. Rice, barley and fruit crops such as pears and apples are common here. There are some medium-sized factories devoted to foodstuffs, textiles, wood products and machine parts, but the mainstay of the economy is the service industry and tourism. With a relatively efficient transportation network, the city is easily accessible from other areas of the nation. Train lines link the city with Taegu, Pusan and the port of P’ohang to the northeast, and the Kyŏngbu Expressway connects the city with Pusan and Taegu. Recently, plans were drawn up for a high-speed railway which would give access to the area, but due to strong opposition by groups concerned about damage to the area’s cultural artefacts, it was decided that the line would not go through the central area.

History

Having served as the capital of the Shilla Kingdom (57 B.C.-935) for nearly a millennium and the capital of the whole peninsula for about 300 years, Kyŏngju is historically the most interesting city in Korea. During the Greater Shilla (668-935) period, the city, with around one million inhabitants, served as the nation’s economic, religious and cultural centre. Originally known as Sŏrabol or Sŏbŏl, the city received its present name in 935. With the advent of the Koryŏ period, the city fell into a long period of decline which was further hastened by Mongolian and Japanese invasions. In the 1970s, archaeologist embarked on an ambitious project to discover and restore the ancient city’s past glory. With 249 Cultural Properties, 23 National Treasures, 676 ancient tombs, the city has often been referred to as an open-air museum.

Ancient Tombs

In the centre of the city one finds Tumuli Park. Within this huge walled area lie 20 tombs of Shilla monarchs and royalty. Some of the artefacts found in these tombs can now be seen in the National Museum. The Ch’ŏnmac’h’ong (Heavenly Horse Tomb) has been opened up so that visitors can see its interior. Built around the fifth century, this 13m high, 47m in diameter tomb is the only one excavated so far that contains a wooden burial chamber. Copies of jewellery, weapons and pottery found here are now displayed in the
In the western part of the city, one finds King Muyol’s (r.654-661) tomb. Outside of the tomb compound, there is a stone tortoise which once held a stele. On Mt. Songhwa is the tomb of General Kim Yushin. Kim was one of the nation’s greatest military heroes who led many military campaigns which resulted in the unification of the three kingdoms. The tomb is surrounded by exquisite carvings of the twelve zodiacal animals.

To the southeast of the city lies Kwae (suspended) Tomb. Believed to have been originally suspended over a pond, this tomb is thought to belong to King Wonsong (r. 785-798). Along the approaches, there are carved figures of civil officials, military guards, monkeys and lions. The military figures, with their wavy hair, large noses and heavy beards, are said to represent Persian mercenaries who served in the Shilla court.

Situated to the north of the Kyongbu Expressway and east of Taman Temple, there are five tombs that are believed to contain the remains of the first, second, third and fifth Shilla king as well as the kingdom’s first queen (Hyøkkøse, Namhae, Yuri, P’asa and Söndök, respectively). There are countless other tombs found throughout the area, including the tomb of King Mich’u in Hwangnam-dong and the tomb of King T’arhae in Tongch’ön-dong. About half-way between Oksan Söwôn and Kyongju lies the tomb of King Hünstok (r. 826-836).

Other Shilla Sites

Chômsöngdae (Treasure No. 31), an ancient stone observatory, stands a few hundred metres from Tumuli Park. Constructed during the reign of Queen Söndök (r. 632-647), there is still a great deal of debate over the original function and significance of this cylindrical stone structure. The twelve stones of the base are believed to represent the months of the year, whereas the twenty-seven layers of the tower and the stone square on top are thought to signify the twenty-eight constellations recognised in East Asia. It has also been pointed out that the twenty-seven layers correspond to Queen Söndök as the 27th ruler of Shilla. The approximately 362 (depending on from where one counts) stones used for the tower’s construction are likewise believed to represent each day of the year. It is also believed that the tower’s square base and round body have symbolic significance, since heaven is traditionally said to be round while the earth is square. There is a window on the southern side, and marks on the stone indicated that a ladder was once used here.

Near Chômsöngdae is Panwölsöng (Half Moon Fortress), Shilla’s ancient royal palace. Shaped like a half moon, the fortress had a circumference of about 800 metres. Eight fortress gates and twenty-one buildings once stood here, but all that now remains at the site is an ice storage house (Treasure No. 66).

Anapchi (Duck and Goose Pond) was originally built by King Munmu in 674 as part of the palace complex. The giant Imhaejon (Beside the Sea Hall) which was also erected here could accommodate up to a thousand people. This beautifully landscaped area was used by the royalty as a place to hold talks and entertain foreign emissaries. Little remains at the site, but more than 14,000 relics were discovered here when the site was excavated in 1975.

Posök-jông (Abalone Stone Pavilion), another Shilla pleasure garden, once stood to the west of Mt. Nam. Although the date of construction is unclear, records indicate that it was in existence by the middle of the ninth century. All that remains of this ancient pleasure palace is a curving stone channel. In Shilla times, the channel was filled with water and wine glasses were set afloat in it. The site is historically linked with the last days of the Shilla kingdom. King Kyöngae (r. 924-927), having ignored warnings of invasion when he was recreating at the garden, was murdered here by Kyönhwôn’s invading forces.
Built in 634, Punhwang Temple was one of Shilla’s most important monasteries during the pre-unification period. The temple is no longer extant, but the pagoda at the site is believed to be the oldest pagoda in Korea. Made of stones cut to resemble brick, the pagoda once had seven to nine storeys of which only three remain.

Due to urbanisation and the construction of dams, many of the local relics have been moved from their original sites. These can now be found in the Kyōngju Museum, which houses one of the best collections of historical artefacts in all of Korea. Outside of the museum hangs the Emille Bell. Legend has it that a child was tossed into the molten bronze when the bell was made; hence, the sound of the bell being struck sounds like a child crying for its mother (emī).

Tourists flock to the area every year in October for the three-day Shilla Festival. At this time, traditional games and entertainment can be seen, and there is a parade with floats portraying Shilla legends. Other popular tourist destinations include the Shilla Folk Village just east of Tōktong Lake and the Kyōngju Folk Art Village on Pobul Road. At the Folk Art Village, there are workshops for 18 traditional handicrafts, including pottery, woodcarving and embroidery.

Other Important Sites in the Area

There are a number of famous temples in the area. In addition to the famous Pulguk Temple and Sōkkuram Grotto, the area’s main Buddhist attractions, there is the picturesque Kirim Temple which was founded in 643. West of the temple at Kolgul Hermitage, there is a rock-cut image of the Buddha.

In Yangnam Township near the coast, one finds remnants of Kamūn Temple. King Munmu (r. 661-681) had this important monastery built as a spiritual bulwark against Japanese marauders who were constantly raiding the east coast. Although the king died before the project was finished, his son, King Shinmun, saw the construction through to completion. The temple was built in the flat-land layout typical of the Three Kingdoms period with its middle gate, pagodas, main sanctum and lecture hall lined up on a south to north axis. The stone steps that once stood here are believed to have inspired those now seen at Pulguk Temple. There are two three-storey pagodas at the site, which are representative of the stone pagoda style perfected in the early Greater Shilla period. The huge bronze bell which once hung here was stolen by the Japanese in 1592, but was lost at sea near Taebon on the Korean coast.

On a small islet about 200m off the coast of Taebon, there is the famous underwater tomb of Shilla’s King Munmu (661-681). At low tide, the tomb can be seen in a pool in the centre of the islet.

On Kōnch’ŏn’s Mt. Obong stands Poku Hermitage. Here, one finds a large rock face out of which 19 niches have been recently carved. The three central niches contain carvings of the Buddha flanked by two Bodhisattvas while the other niches hold carvings of the Sixteen Arhats. Across from Poku Hermitage lies Chusa Temple, which was founded by Úisang (625-702). East of the hermitage on the foot of Mt. Tansŏk (827m), there is Shinsŏn Temple, famous as a place frequented by General Kim Yushin in the 7th century. Nearby, there is a small grotto with some rock carvings. This is believed to be one of the oldest cave temples in Korea.

In Hyŏn’gok Township at the foot of Mt. Kumi (594m), one finds Yongdamjŏng. This is the main temple of the Ch’ŏndogyo religion, which was founded by Choe Cheu in 1860 as an amalgamation of Confucianism, Buddhism and Taoism. The temple buildings were burnt down after Choe was martyred in 1864. They were rebuilt only to be burnt down
again. The present buildings date from 1960.

East of An’gang next to the An’gye Reservoir lies Yangdong Folk Village. This tranquil Choson period village contains about 150 traditional houses typical of the yangbang (ruling class). Fifteen of these houses are over 200 years old. This was the birthplace of Son So (1433-1484, styled Yangmin), an official who helped quell the revolt against King Sejo in 1467. Song Chungdon (1463-1529) and Yi Önjk (1491-1533) were also born here.

There are several old Confucian schools in the area. To the north of Highway 28 in An’gang, one finds Oksan Sŏwŏn (private school). Along with Tosan Sŏwŏn in Andong, this was once one of the leading Confucian institutes in the nation. It was established in 1574 by Kyŏngju magistrate Yi Chemin and other Confucian scholars in the region in honour of the neo-Confucian scholar Yi Önjk, and was enlarged in 1772. This was one of the 47 sowŏn that survived the nationwide abolition of sowŏn by Taewŏn’gun at the end of the Choson period. The nearby Tongnaktang, built in 1516, was the male quarters of Yi Önjk’s residence after he left government service.

In addition to these ancient schools, several modern colleges and universities have been recently established in the area. East of the Hyŏngsan River near Kyŏngnam Bridge, one finds a branch campus of Seoul’s Dongguk University. To the south of the university, there is Kyŏngju Junior College and Kyŏngju Business College, in the central area, one finds the Korean Broadcasting College, in Hyohyŏng-dong is Kyŏngju University and in Kangdong is Uiduk University.

HMNTS, vol. 2.

Kyŏngju National Museum

The Kyŏngju National Museum (Kungnip Kyŏngju Pangmulgwan) is located in Inwang-dong in Kyŏngju. Its collection dates from 1913 when the local historical association, Kyŏngju Kojŏk Pojonhoe was formed. In 1915, the association’s collection of about one-hundred ancient artefacts was moved into a renovated, Chosŏn-era guest house. In 1954, Yun Kyŏngnyŏl and Chin Hūngsŏp established an educational centre for children at the museum in order to promote awareness of Kyŏngju’s ancient heritage. The museum acquired its present name with the construction of a new site and building in Inwang-dong in July 1975. In 1986, Yi Yangsŏn donated his collection of over seven-hundred pieces to the museum.

The museum’s current collection primarily consists of items from the Prehistoric and Three Kingdoms periods. Artefacts excavated from Ch’ŏnmach’ong (Heavenly Horse Tomb), Tumulus No. 98 and Anapji (Duck and Goose Pond) are some of the most prized items in the collection. Korea’s largest bell, best-known as the Emille Bell (National Treasure No. 29), hangs in the pavilion and in the grounds are numerous Buddhist art objects collected from the Kyŏngju area, including stupas, statues and parts of stone sculptures.

Kyŏngminp’yŏn (Book of Warning)

Written in the fourteenth year of King Chungjong (1519) by Kim Chŏngguk, the classical Chinese original was translated into Korean and published well over a century later in
1658. Yi Hu-wŏn, a senior adviser to King Hyŏjong recommended in 1656 that the king should approve the translation and have the work published.

Kyŏngmun, King

Kyŏngsan

Situated southeast of Taegu in North Kyŏngsang Province, Kyŏngsan is comprised of the town of Hayang and the townships of Namsan, Namch'ŏn, Amnyang, Wach'ŏn, Yongsŏng, Chinnyang and Chain. Mt. Muhak (593m) rises in the north of the city and Mt. Tonghak (603m) and Mt. Kuryŏng (675m) stands in the south. The city’s central area consists of numerous small lakes and reservoirs scattered over flat terrain, while Kumho River flows through the northern section of the city.

With extensive plains and good sources of irrigation water, the area is well-suited for rice cultivation. With numerous apple and peach plantations, the city also has the highest percentage of fruit orchards per land area in the nation. Taking advantage of the city’s close proximity to Taegu, there are also a number of factories which produce textiles and processed foods.

The city’s tourist industry is primarily centred around hiking, sports fishing and the natural mineral baths found in the region. In Namsan Township’s Sangdae Village, there is the Sangdae Hot Spring. Containing large amounts of sulphur ions, sodium bicarbonate and calcium, this 40 deg c. spring is said to have a curative effect on a number of illnesses, including stomach, liver, nerve, urinary ailments, hardening of the arteries and rheumatism. In Namch’ŏn’s Shinsŏk-dong, there is another mineral bath. This natural spring, discovered by miners digging for gold in 1910, is supposed to cure stomach ailments.

Tourists also visit the city to look at historical relics and sites. Most of the city’s Buddhist artefacts are housed in Kyŏnghŭng Temple (founded by Hyegong in 659), Pulgul Temple (founded in 690), Sŏnbo Temple (founded by Kŭktal in 491), Hwansŏng Temple and Wŏnhyo Hermitage. In Wach’ŏn Township near Sŏnbo Hermitage, one finds the Kwanbok seated Buddha (Treasure No. 431). Carved out of a rock face, the upper part of the figure is fully three-dimensional, while the lower part gradually blends in with the rock.

There are also a number of old Confucian schools scattered throughout the city, including Kŭmho Sŏwŏn, Kwallan Sŏwŏn, Chogok Sŏwŏn, Hain Hyanggyo, Chain Hyanggyo and Kyŏngsan Hyanggyo (founded in 1390). To the southeast of Hayang Hyanggyo perched over Kŭmho Lake, stands Kuyŏnjŏng, a pavilion built in 1849 as a scholarly retreat for Kim Iktong.

Modern schools in the area include Taegu University in Chinyang’s Nae Village, Kyungil University in Hayang, Yuengnam University in Tae-dong, Youngnam Theological College and Seminary in Chinnyang, Kyungsan University and Taeshin Christian University.

Kyŏngsang Province, North

Overview

Province located in the southwestern part of the Korean Peninsula, bounded to the north by Kangwŏn and North Ch’ungch’ŏng Provinces, to the east by the East Sea (Sea of Japan), to the south by South Kyŏngsang Province and to the west by North Ch’ungch’ŏng and North Cholla Provinces. The province also completely surrounds Taegu Special City, which contains the provincial headquarters, and includes the remote islands of Ullŭng-do and Tok-do in the East Sea. The Taebaek and Sobaek Ranges and their branches clearly separate this province from adjoining regions, a factor which has contributed to the
historical development of a unique and distinctive local Kyŏngsang identity. The largest province in South Korea, North Kyŏngsang has the second-lowest population density after Kangwŏn. The province formed the heartland of the ancient Kingdom of Shilla (668-935) in the Three Kingdoms Period, and its capital of Kyŏngju retains numerous relics from this period.

**Geography and Climate**

Much of the province lies within a wide basin delineated by the T’aebaek Range which follows the East Sea coastline, the Sobaeek Range to the north and west, and smaller ranges to the south, this basin constituting the upper catchment area of the Naktong River which flows in a southerly direction to empty into the Yellow Sea in the vicinity of the port city of Pusan. A narrow coastal plain hugs the coast between the T’aebaek Range and the East Sea. Most of the province experiences a mild continental climate, however marked seasonal variations are found in mountainous inland districts. The central basin has the lowest annual precipitation found in South Korea, while the coastal plain enjoys a mild climate with comparatively small seasonal temperature variations due to the influence of warm ocean currents and the shielding effect of the Taebaek Range.

**Agriculture and Industry**

Agriculture has traditionally formed the foundation of the provincial economy, and despite difficulties presented by the mountainous terrain, the province ranks second in terms of total cultivated land area, and first in production of rice, barley, beans, apples, leaf tobacco and red peppers, and in beef livestock raising and sericulture. Bountiful fishing grounds are found around Ullung and Tok Islands, however the steep East Sea coast contains few natural ports. Principal marine products include squid, seaweed and leatherfish. Mineral resources are concentrated in the T’aebaek and Sobaeek Ranges in the north of the province, and anthracite coal and limestone respectively account for approximately half and one-third of provincial output. Other minerals found include copper, lead, zinc and tungsten. Industrial development in North Kyŏngsang Province is largely concentrated in three districts, P’ohang, Kumi industrial zone, and Kyŏngsan on the outskirts of Taegu, and principal industries include steelmaking, textiles, electronics, beverage and tobacco production.

**Tourism**

North Kyŏngsang Province contains approximately one-quarter of South Korea's national treasures, of which almost half are found in the ancient Shilla capital of Kyŏngju, an extremely popular tourist destination. Other attractions include Mount Chuwang, Kyŏngju, Kaya and Songni National Parks, Andong Folk Village, Paegam and Tŏkku Hot Springs, and numerous temples.

**General Information**

Area: 19 021 square kilometers; population: 2 729 000 (1995 est.); provincial headquarters: Taegu. Other major centres include P'ohang, Kyŏngju and Kumi.

**Kyŏngsang Province, South**

**Overview**

Province located in the southeastern corner of the Korean Peninsula, bounded to the north by North Kyŏngsang Province, to the west by North and South Chŏlla Provinces, to the east by the East Sea (Sea of Japan) and to the south by Pusan Special City and the Yellow Sea. The province is separated from the Japanese island of Tsushima by the Straits of Tsushima to the south-west, and has long served as the southern gateway to Korea. Ready access to maritime transportation links has been a major factor in the development of part of the southern coastal region as the nation's principal heavy industrial zone.

**Geography and Climate**
The western part of the province is dominated by the Sobaek Range and its branch ranges, while the southern extremities of the Taebaek Ranges extend into the east of the province. The central part of the province is relatively low-lying and is largely occupied by the catchment areas of the Nakdong River and its tributaries. The steep, rocky eastern coastline contrasts sharply with the highly indented submerged coastline to the south, and the province includes 467 islands of varying sizes which are scattered throughout the Tadohae ('Sea of Many Islands'), a popular tourist attraction.

South Kyongsang Province enjoys the mildest climate in the Korean Peninsula and the least seasonal variation in temperature due to its location in the southeast of the peninsula adjacent to the East and Yellow Seas. However, there are notable regional differences in winter conditions, and average temperatures generally decrease as one moves inland. Although the province shares the record for highest annual precipitation (1200mm - 1600mm) with Jeju, coastal districts generally experience much greater rainfall than inland districts in the northwest. In addition, the province is occasionally battered by typhoons moving northward past the Japanese island of Kyushu into the East Sea.

Agriculture and Industry
Both agricultural and industrial sectors in Kyongsang Province have experienced major transformations during the past three decades. Cultivation of traditional crops such as rice and grains has been supplemented by high-yield commercial activities, including livestock raising, fruit and vegetable growing and horticulture, while rapid growth in manufacturing has radically altered the nature of the local economy and workforce. The province adjoins rich fishing grounds, however industrial growth has accompanied a decline in the fishing population, despite increased yields due to improved technology. Shallow waters along the southern coastline provide an ideal environment for seaweed and shellfish farming, however such activities are threatened by pollution from neighboring industrial complexes and occasional oil spills. Industrial development from the 1960s at Ulsan and from the mid-1970s at Masan and surrounding districts has centered on petrochemicals, shipbuilding and machinery production, and the province also contains important textile and marine product processing industries.

Tourism
South Kyongsang Province is renowned for its beautiful mountains and scenic coastlines, and the existence of numerous historic sites (notably from the ancient Kaya Kingdom) further contribute to its popularity as a tourist destination. Mount Chiri (1915m) is the highest peak in mainland South Korea, and the national park which it contains is a favorite hiking area. Haein Temple, located in Kaya National Park in the far north of the province, is home to the collection of Buddhist scriptures inscribed on woodblocks known as the Tripitaka Koreana, while the Hallyo Waterway in the south of the province contains numerous summer beach resorts. Other attractions include Togyusan National Park, the cherry orchard at Chinhae, historical sites at Miryang, the Puril and Hwanggye Falls located respectively at Hadong and Hapcheon, and the shipbuilding yards at Ulsan.

General Information
Area: 11 559 square kilometers; population: 3 249 000 (1995 est.); provincial headquarters: Ch'angwön. Other major cities include Ulsan and Masan.

Kyongsang-do Chiriji (Geographical Description of the Kyongsang Province)

The Kyongsangdo chiriji (1425) is a single-volume work and the first work of its kind compiled in the Chosön dynasty.

It is known from the Veritable Record that King Sejong ordered the collection of data necessary to compile a comprehensive work on the topography of Korea and the histories of various local administrative organs. Accordingly, the Ch'unch'ugwan (Office for
Annals Compilation) began the collection of a wide variety of material.

After eight years' labour, the *Shinch'an p'alto chiriji* (Newly Compiled Geographical Descriptions of the Eight Provinces) was finally completed and presented to the throne. This is believed to be the basis of the national topography included in the Annals of King Sejong which was compiled twenty-two years later. However, the original topographies collected by the central government were all destroyed by fire, together with other Veritable Records of previous kings, during the Japanese Invasion of 1592. The still extant *Kyōngsangdo chiriji* is regarded as one of the main sources of the *Shinch'an p'alto chiriji*. It is a copy of the original text submitted to the central government and was preserved in the Kyŏngju Provincial Office.

The book begins with the introduction to Kyŏngsang Province in accordance with the twelve provisions which the *Yejo* (Board of Rites) issued to each province. These twelve provisions were: 1.) Changes in the name of the province, 2.) The history of relations between the subordinate administrative units, 3.) The number of local administrative organizations within the province, 4.) Descriptions, names and measurements of mountains and rivers, together with the sites of fortifications, 5.) The articles of tribute produced in the province, 6.) The inland fortresses or military installations, 7.) The naval garrisons and number of ships, 8.) The royal tombs and Confucian institutes, 9.) The nature of the soil, natural features and the customs, 10.) The islands coming under the jurisdiction of the province, 11.) Taxes of the province and the land and water transportation routes, 12.) The number of houses.

The administrative structure of the province as revealed in the book was four basic jurisdictional districts which in turn were divided into various subordinate administrative units such as *pu*, *mok*, *chu* and *hyŏn*. The book is more of a human geography than a simple topography. It serves as an excellent source for the study of the economic, social and financial conditions of Kyŏngsang Province during Chosŏn.

By any gauge, the *Kyŏngsangdo Chiriji* is a large book, measuring 85.6 cm in length and 43.6 cm in width, with a thickness of 7.8 cm. It is made of heavy, durable Korean paper of high quality. It has ninety-nine leaves (198 pages) and there are twelve missing leaves (24 pages).

A sister work of the *Kyŏngsangdo Chiriji* is another huge book, *Kyŏngsangdo sokch'an chiriji*, which also concerns provincial conditions. It was compiled in the first year of King Yejong (1469), that is, forty-four years after the compilation of *Kyŏngsangdo chiriji*. It is the fourth oldest work of its kind of the Chosŏn dynasty.

The *Kyŏngsangdo chiriji* and the *Kyŏngsangdo sokch'an chiriji* were revised by the Council of the Government-General of Korea and editions of both works were printed in 1938. In 1981 Asea Munhwasa published the photo-reproduction of *Kyŏngsangdo chiriji* as a part of volume one of *Chŏnguk chiri ch'ongsŏ* (National Geography Series).

**Kyŏngsun, King (r. 927-935)**

King Kyŏngsun (?-979) was the fifty-sixth king of Shilla and reigned from 927-935. His family name was Kim and his given name Pu. Kyŏngsun is notable in that he was the last king of the Shilla Kingdom and that his pledge of loyalty to the subsequent Koryŏ Kingdom served to legitimatise the new Kingdom. Kyŏngsun assumed the throne of Shilla in 927 after his predecessor, King Kyŏng'ae (r. 924-927), was killed by Kyŏnhwŏn (?-936) the ruler of Later Paekche. Kyŏngsun took the Shilla throne with the backing of Kyŏnhwŏn and in actuality ruled in name only. However, in the end the policies of Kyŏngsun tended more towards the direction of Wang Kŏn (King T'aejo, r. 918-943) rather than the reckless Paekche king.
In 935 Kyongsun offered his formal surrender to Koryo and in this way guaranteed his own destiny. King T'aejo took a wife from the Shilla royal family and therefore assumed the mantle of the Shilla Kingdom. Kyongsun, on the other hand, was treated with extreme generosity by King T'aejo. He remained in Kyongju and was granted the title of Duke of Changsung (Changsung kong) and a shigup (tax village).

Kyongui, Queen (see Lady Hong)

Kyongumak

Kyongun Palace (see Tōksu Palace)

Kyônhwôn (?-935)

Kyônhwôn was the founder of the Later Paekche Kingdom and ruled it from 892 to 935. Originally his surname was Yi and he was born to a poor farming family in the Sangju area. He began as a foot soldier in the Shilla army and advanced through the ranks as reward for the valour he displayed in various battles along the southwestern coast of Shilla. At the time, the central government of Shilla was greatly weakened and as a result various insurgencies flared throughout the country. This situation became particularly magnified after the accession to the throne by Queen Chinsóng (r. 887-897) when the feudal lords became quite open in their disdain for the throne. Moreover, the plight of the exploited commoners became markedly worse and bands of thieves and bandits became commonplace. It was in this situation that in 892 Kyônhwôn led a band of followers to seize Kwangju and to proclaim the founding of the Later Paekche Kingdom with the declaration that he intended to avenge the last Paekche king, Üija (r. 641-660).

Kyônhwôn proved to be a despoti c ruler and set out on a trail of military conquests, seizing large tracts of land from the seemingly helpless Shilla Kingdom. In 927 he sacked Kyongju and killed King Kyong’ae (r. 924-927) while abducting many high Shilla officials and taking large quantities of treasures, arms and the highly skilled craftsmen of the Shilla capital. If it had not been for the opposition of the ruler of Koryo, Wang Kön (King T’aejo, r. 918-943), Kyônhwôn would have easily taken all of Shilla. However, Wang Kön led his forces and battled Kyônhwôn and eventually drove him from Kyongju.

The battles between Koryo and Later Paekche continued to rage as the two states struggled for the legacy of Shilla. With the local gentry in the former areas controlled by Shilla pledging their support to either Wang Kön or Kyônhwôn in an effort to protect their own well being, the battles between the two states ground to a stalemate. However, in 929 the Koryo forces defeated Kyônhwôn at Koch’ang which turned the tide of the conflict in favour of Koryo. Kyônhwôn was now forced to retreat to the southwest coast where Koryo could concentrate the brunt of their attack. At this same time, Kyônhwôn became a victim of the inner turmoil in his own family. He had named his fourth son Kûmgang as his successor, but his eldest son Shin’gôm rejected this and imprisoned his father in Kûmsan Temple and took the throne for himself. Kyônhwôn managed to flee from the temple and sought refuge in Koryo where he plotted with Wang Kön to crush his son. In 935 Koryo troops, with Kyônhwôn in the lead, smashed the remains of the Later Paekche Kingdom.

Kyônhwôn’s rise to power and later fall were both reflections of the turbulent times that surrounded the collapse of the Shilla Kingdom. Numerous rebellions and problems plagued the people and thus made it easier for warlords such as Kyônhwôn to appear and take power. However, it is noteworthy that at the end of his life, Kyônhwôn joined forces with Wang Kön who succeeded in bringing a new era to Korea.
Kyung Hee University

Kyung Hee University (Kyŏnghŭi Taehakkyo) is located in Hoegi-dong in Seoul. Its foundation was in 1949 when Paeyŏng Taehakkwan (established in 1946) and Shinhŭng Chŏnmun Hakkwan (established in 1947) were combined to form the two-year Shinhŭng Ch’ogŭp Taehak (Shinhŭng Junior College). Development of the new college was delayed by the Korean War, but in February 1952 in Pusan, official permission was finally granted for its re-establishment. From this decision, in December 1952, the school became the four-year institution, Shinhŭng College.

A Seoul campus was built at the school’s present site and in February 1954, a graduate school was established. In 1955, the college attained university status and then consisted of four colleges: Liberal Arts and Science; Law; Physical Education; and Politics and Economics. In February 1960, the college changed its title to Kyung Hee University. In response to the growth of the university in the 1960s and 1970s, the Suwŏn campus was established in Kyŏnggŏ Province in 1979.

Kyung Hee University has continued to expand, with additions to both its undergraduate and post-graduate programs. Today, the university consists of seventeen colleges and nine graduate schools. At the Seoul Campus are the Colleges of Dentistry; Education; Home Economics; Law; Liberal Arts and Sciences; Medicine; Oriental Medicine; Music; Pharmacology; Political Science and Economics; and Physical Education. Also on the Seoul campus are the Graduate School and the Graduate Schools of Business Administration; Education; International Legal Affairs; Journalism and Mass Communication; Pan-Pacific International Studies; Physical Education and Public Administration. At the Suwŏn Campus are located the Colleges of Engineering; Foreign Languages and Literature; Industry; Natural Science; Physical Education and Sports; and Social Sciences; as well as the Graduate School of Industry and Information. In addition, the university contains a number of important research institutions including the Han’guk Chŏnt’ong Munhwa Yŏn’guso (Korea Traditional Culture Research Institute) and the Han’guk Choryu Yŏn’guso (Korea Ornithology Research Institute).

Kyung Nam University

A private university, Kyung Nam (Kyŏngnam Taehakkyo) began its life in a modest way in December 1946. It is located in Masan, South Kyŏngsang Province, but had a number of different locations on its way to becoming a university.

In August 1947, it became Kungmin College in Seoul, and in 1952, under the patronage of Haein Temple, it underwent a further name-change to Haein College. The college was soon moved to Chinju, and later, in 1956, to Wanwŏl-dong in Masan. A further name-change, to Masan College, took place in 1961. For a while during the Korean War, the college found a safe haven in Pusan.

Expansion of the college commenced in 1968 and continued into the 1970s. Another title change, to Kyung Nam College occurred in December 1971, and in 1973 the college moved to its present location. After initiating its own doctorate program in 1979, Kyung Nam was granted university status in 1982.

Today, Kyung Nam University consists of six colleges : (Economics and Commerce; Education; Engineering; Law and Political Science; Liberal Arts; Natural Sciences); an Evening School; the Graduate School and the Graduate Schools of Business Administration; Education; Industry; and Public Administration.

Periodical publications of the university include, the Kyŏngnamdae hakpo (KNU Gazette)
Kyunghyang shinmun

The Kyunghyang shinmun (Kyŏnghyang shinmun) is a general daily newspaper published in Seoul. It was first published on 6 October 1946 by the Kyŏngsŏng Catholic Church Foundation, its name being taken from a Catholic newspaper of 1906. Strongly committed to an honest reporting strategy, centred on ethics, the Kyunghyang shinmun reached a circulation of 62,000 one year after publication, which is a testament to its integrity. During the Korean War, the Kyunghyang shinmun followed the troops in their push northward. It published special 'battlefront' editions, and from this came the first Korean war correspondent, Pak Sŏnghwon. A special edition of the newspaper was even issued amidst the chaos of the South Korean army's major retreat to Taegu. After the armistice, the newspaper returned to its Seoul offices and resumed activities there. In November 1954, it was published in tabloid form, the first in Korea. From July 1957, it became a two-page morning edition and a four-page evening edition, the total pages per diem being increased to eight by mid-December 1958.

From its inception, the Kyunghyang shinmun was staunchly conservative and anti-Communist, but in 1959 its orientation changed to reflect an anti-dictatorship, opposition party-like stance, and this was further strengthened after an incident in which the vice-president, Chang Myŏn, was attacked. With its newly-acquired political leanings, the newspaper was threatened by the Syngman Rhee (Yi Sŏngman) government, but at the same time established a new high in its circulation, which had then reached about 200,000. Its frequent attacks on the Rhee government resulted in Chu Yŏhan, a writer for the Kyunghyang shinmun and a member of the National Assembly, and Han Ch'ang-su, the president of the newspaper, being formally charged by the police for actions detrimental to national security, on 28 February 1959. On 30 April, its offices were forcibly closed under Order No. 88 of the government's military law, and production ceased. The closure sparked criticism from every level of Korean society, and the Kyunghyang shinmun began a lengthy legal struggle to regain its right to publish. Finally, on 27 April 1960 the wheels of its presses began to turn again. Its struggles with authoritarian governments did not cease, however, with the demise of the Rhee regime, and its constant criticism of Park Chung Hee's government, also resulted in the imprisonment of some of its staff.

More recently, the Kyunghyang shinmun has undergone various changes, including its format, and its enlargement to twelve pages. It includes a wide range of news items, ranging from national and international news to sports and lifestyle coverage. The newspaper has permanent correspondents in Tokyo, Washington D.C., and Paris, as well as in other international locations. Its distribution is about fifty-two per cent metropolitan and forty-eight per cent regional.

Kyungpook National University

Kyungpook National University (Kyŏngbuk Taehakkyo) is located in San’gyŏk-dong in Taegu. The university was founded in May 1952 as an amalgamation of three Taegu colleges devoted to medicine, education and agriculture. Along with the creation of Kyungpook National University, an affiliated hospital; School of nursing; high school; junior high school and elementary school were created and in the following year, a graduate school was established.

Today the University consists of thirteen colleges: the Colleges of Agriculture; Dentistry; Economics and Commerce; Engineering; Human Ecology; Humanities; Law; Medicine; Music and Visual Arts; Natural Science; Social Sciences; and Veterinary Medicine; and the Teachers' College. For graduates studies, there is the Graduate School as well as the Graduate Schools of Agriculture Development; Business Administration; Education;
Industry; International Studies; Public Administration; and Public Health. University publications include the weekly Kyōngdae shinmun (KNU Newspaper) in Korean and The Kyungpook University Times which is issued eight times each year in English.

Kyunyō (923-973)

Kyunyō was a famous monk and poet who revived the Hwaom (Flower Garland) school of Buddhism in the tenth century. Born in Hwangju of the Pyon clan, Kyunyō’s father died when he was young. Around the age of 14, he went with an older cousin to Puhung Temple in Hwanghae Province where he was ordained under the monk Shikhyon. He then went to study with Üisun at Yongt’ong Temple in Kaesong.

During the early 10th century, Korea’s Hwaom sect was divided between the followers of Kwanhye (Kyonhwon’s teacher) and Huirang (Wang Kôn’s teacher). These two factions were known as the southern and northern schools respectively. As a member of the northern lineage, Kyunyō attempted to unify the two factions. In order to secure support from other members of the clergy, he went with the monk Inyu on a tour of major monasteries around the nation.

Kyunyō also attempted to establish a theoretical basis for the unity of the school. After reexamining the early works of the school written by Zhiyan, Fazang and Shenxiu, Kyunyō developed his own unique interpretation of Hwaom doctrine. In his writings, he stressed the interpenetration (yunghoe) of the mind’s nature (song) and characteristics (sang). According to Kyunyō, nature (song) was equivalent with emptiness (kong), while characteristics (sang) were equivalent with form (saek). Kyunyō thus incorporated the Pópsang (Dharma Characteristic) Sect’s doctrines into Hwaom thought, and in this way, helped to heal the schisms between the various doctrinal (kyo) schools in Korea.

During his life time, Kyunyō’s ideas gained wide acceptance. When a monk examination was instituted at Wangnyun Monastery in 958, Kyunyō’s reinterpretation of Hwaom teachings was designated as the orthodox view and others were considered collateral. However, his ideas came under criticism a century later by Üich’on who favoured the approach of the Tiantai school.

As an erudite commentator and populariser of Buddhism, Kyunyō composed poems in the vernacular and had his followers chant and memorise them. In particular, he composed a series of eleven poems, modelled on the ten great vows of the Bodhisattva Pohyon (Samantabhadra). Although the original vernacular version of these poems is no longer extant, the Chinese translation is contained in Haein Temple’s woodcut edition of the Tripitika.

In addition to his scholarly and missionary activities, Kyunyō was active in political circles. As Kyunyō’s popularity grew, he became an adviser to King Kwangjong (r. 949-975). Kyunyō’s ideology was adopted by Kwangjong in an attempt to consolidate his authority and justify his political reforms.

Kyunyō chŏn (Life of Master Kyunyō) [Literature]

Kyunyō hwaom sasang yŏn’gu (A Study of the Huayan Thought of Kyunyō)
Kyunyŏ hwaöm sasang yŏn’gu is a 373-page study on the life and thought of Kyunyŏ written by Kim Tujin and published by Ilchogak Publishers in 1983. The author examines the ideology of Kyunyŏ, particularly his characteristic Huayan thought and view of the dharma-dhatu (realm of truth), in addition to his significant role in the history of Koryŏ Buddhism.

Labour, Ministry of [Government and Legislature]

Lacquerware

From ancient times, lacquerware has been popular throughout Korea. Even in modern times, the average Korean household is filled with many pieces of lacquerware, from small jewellery boxes to large wardrobes. The dark glossy lacquer finish used on the outside of lacquer boxes contrasts well with the boxes’ silver or gold-coloured handles and hinges. Although some pieces of lacquerware are plain, a great number of pieces are decorated with designs. Much of the modern lacquerware is decorated with mother-of-pearl - shiny, multicoloured pieces of shell.

Lacquerware’s Early History

Lacquerware is made by applying a varnish, derived from a lacquar tree (Rhus vernicifera), to wood articles. Uniquely Asian in its origins, lacquerware boasts a long history. In fact, lacquerware pieces dating back to the ancient Yin (?-1122) and Zhou (1122-255 B.C.E.) Dynasties of China have been excavated. In China, the craft went through a great deal of development during the Warring States Period. In Korea, lacquerware from the late Bronze Age or early Stone Age has been recovered. The early Korean pieces include round and rectangular stemmed cups, cylindrical boxes, brush containers, fan handles, handles for axes, hoes and knives, scabbards and bows. These pieces were usually covered with a black lacquer containing ferrous oxide. In some rare cases, a ferrous oxide pigment was combined with crystallized cinnabar to create a green lacquer.

Three Kingdoms Period

Archaeological evidence indicates that lacquerware was produced throughout the Korean peninsula during the iron age. Although little Koguryŏ lacquerware has been found, excavated fragments indicate that technical advances were still being made in the art. Paekche lacquerware has been excavated from sites in the Seoul area and from the Mirûk Temple site. As for Shilla sites, many lacquered cups and paintings have been found in the Shilla tombs and at Anap Pond in Kyŏngju. Lacquerware was evidently produced in large amounts during Shilla. According to written records, the government set up special crafts areas to meet the high demand. In addition to plain lacquerware, these shops also produced lacquerware inlaid with mother-of-pearl.

Koryŏ Period

In Koryŏ, craftsmen continued to produce lacquerware in great quantities, but most of the work of the period was decorated with mother-of-pearl inlay. Koryŏ lacquerware, much like the celadon from the same period, was often decorated with arabesque or chrysanthemum designs. During the tumultuous period following the Hideyoshi invasions (1592-1598), the art of lacquerware went into decline. Mother-of-pearl inlay, in particular, became much cruder.

Chosŏn Period

In early Chosŏn, a greater number of household and kitchen furnishings were decorated
with lacquer. There were some changes in the lacquer craft at this time. Tin and bronze wire were used less; in addition, powdered cattle-bone or shell was mixed into the black lacquer. The symmetrical designs of Koryó gave way to simple floral designs, depictions of birds, bamboo and plums. During the fifteenth and sixteenth centuries, Buddhist floral imagery was used, but arabesques and similar designs appeared larger in size. The design motifs also underwent change in Chosön. During the seventeenth and eighteenth centuries, the two phoenix or two dragons motifs went out of fashion, while there was an increase in the depictions of birds and flowers. In the nineteenth c., on the other hand, depictions of natural scenes gained in popularity. As in Koryó, mother-of-pearl inlay was still the most popular form of lacquerware. Even so, the earlier tradition of plain lacquerware was maintained throughout Chosön.

Language, Korean

Korean is spoken by about 70 million people living on the Korean peninsula and adjacent islands such as Cheju Island. Additionally, a sizeable number of people speak Korean outside of Korea: 2.5 million in China; 700 000 in Japan; 1.5 million in North America; and 400 000 in the former USSR. Thus, the Korean language is the eleventh largest in the world.

The Korean language is generally classified as a member of the Altaic family of languages, although some scholars disagree with this view. Scholars also differ in how they classify the various periods in the history of the Korean language. A general outline developed by Lee Ki-Moon in 1961, however, is the most widely accepted and has established the following divisions:

Old Korean - pre-history to the tenth c.
Middle Korean - eleventh c. to the sixteenth c.
Modern Korean - seventeenth c. to the present day

Through these periods, there were many changes in the Korean language as revealed in the following chart which diagrams the changes that vowels underwent during these periods:

<table>

The invention of the *hunmin chongum* (the proper sounds to instruct the people), or *han'gul*, under the royal decree of King Sejong (r. 1418-1450) in the mid-fifteenth c. is the single most important event in the history of the Korean language. Up until this point, various writing systems such as *hyangch'al* and *idu*, were used to write Korean phonetically in Chinese characters.

These writing systems were used in addition to classical Chinese, which was written according to the grammatical rules of classical Chinese. Since Korean and Chinese belong to two separate language families and are quite different both syntactically and phonetically, the *hyangch'al* and *idu* systems were awkward at best. Very few original sources of information on the *hyangch'al* and *idu* writing systems are extant, thus resulting in many differing and ambiguous interpretations of these ancient writing systems.

The earliest period for which there are materials available in relative abundance is the latter half of the fifteenth c. Materials that describe the spoken Korean language before the introduction of *han'gul* are scant, and such prominent features of Middle Korean, as vowel
harmony and tones, cannot be traced directly to Old Korean. Hence, it is difficult to
determine many features of the Korean language in these periods.

Classification of Korean as an Altaic Language

Altaic languages are traditionally listed as Chuvash-Turkic, Mongolian, Manchu-Tungus,
and, according to some scholars, Korean. Korean has, however, only recently been
counted among the Altaic languages by scholars, and by other scholars with certain
reservations and degrees of reluctance. Thus, there has been a great deal of controversy and
scholarly debate concerning the inclusion of Korean in the Altaic family of languages.

Gustav Ramstedt was the first scholar to point out the weakness in the Altaic theory by the
absence of numerals common to all the languages concerned. Later however, he considered
the numerous sound correspondences based on comparative methodology to be more
important than the lack of common numerals in the various languages under discussion.
Ramstedt thus emphasised commonalties among the languages concerned rather than the
lack of a particular correspondence that existed among languages in the Indo-European
language family. Ramstedt was the first scholar to assert that the common elements
between Korean and other Altaic languages were large enough to justify classifying Korean
as an Altaic language.

Old and Middle Korean are quite useful as data for Altaic linguists. Materials for the study
of Old Korean are fragmentary, being confined to names and titles mentioned in Chinese
documents. A much larger body of materials exists for the study of Middle Korean:
materials compiled in 1103-04 during Koryo, which contain about 350 pure Korean words,
and materials written in hangul in the fifteenth and sixteenth centuries during Choson. Lee
Ki-moon (1968) suggested that Old Korean had many similarities with Old Japanese as
well. The presence of these linguistic commonalties seems to bridge the now seemingly
impassable gulf presented by the considerable deviations between the modern Korean and
Japanese languages and furthermore, helps explain their relationship in greater detail.

Old Korean

The three kingdoms of Koguryo, Shilla, and Paekche dominated the Korean peninsula from
the first c. BCE to the ninth c. CE. Little is known, however, about the languages spoken
in each of these kingdoms. Insofar as the Shilla Kingdom is concerned, there are twenty-
four hyangga (native songs) that were written in hyangch'al, a phonetic transcription
system using Chinese characters to represent specific phonemes, personal names, place
names, and official titles, which can be used by modern scholars to gain some insight into
the phonology, morphology, syntax, and lexicon of the language. No materials, except for
a very few proper nouns, that describe the languages of Koguryo and Paekche are extant,
thus forcing scholars to make educated guesses about these languages. The sources that do
exist represent the language of the time because they are written in the cryptic
hyangch'al and idu systems which borrowed classical Chinese, thus making it difficult for scholars to
accurately reconstruct the spoken languages of the Three Kingdoms period.

In general, the language of Shilla has much in common with Middle Korean in both its
vocabulary and grammar. An example of similarities in vocabulary is seen in the Shilla
word 'pat'r (sea) and its Middle Korean equivalent 'par'r. A further example is found in
the Shilla word 'i<C' (to dislike, to loathe), which is 'to tire' in Middle Korean. These
examples show that there had been changes in sound and meaning. Furthermore, many
words in the language of Shilla cannot be found in Middle Korean; for example, 'ir' (well,
spring), and 'sir' (valley). The word 'ir' can also be found in the language of Koguryo as
'dr' (well, spring). A derivation of 'sir' can be found in Middle Korean as 'sinayh'
(brook); 'sinayh' is most likely a compound word of 'sir' (valley) and 'nayh' (stream).
Because all of the remaining documents from Shilla are written in classical Chinese, it is difficult to analyse the phonological system of the languages at the time. Of the three types of stops and affricates -- lenis, fortis, aspirated -- in modern Korean, it is clear that the fortis sound did not exist and that the aspirated sound was extremely rare in the Shilla language. Even less is known about the pronunciation of vowels, but some scholars contend that a system of vowel harmony existed.

The morpho-syntax of the Shilla language, as it appears in the hyangga, shows a strong correspondence with that of Middle Korean in sentence structure and grammatical forms among other areas. The following case suffixes after nouns in the Shilla language have been verified: nominative -i, -iy; genitive -s, -iy / iy; accusative -r, and instrumental -ru. The conjugational system of the Shilla language is similar to that of Middle Korean. Verbal noun endings '-r', '-n', conversival endings '-ko', 'a', '-ra,' 'may', '-myo', and '-taka' among others have been discovered in the hyangga.

One of the most distinctive features of Korean grammar, the system of honorifics, has also been documented in the Shilla language. The honorific form '-si-' and the humble form '-saep-' both existed in the Shilla language. Although their exact forms are unknown, it is also known that there were polite suffixes. This appears to be quite similar to the system of polite markers used in Middle Korean.

The lexical items from the languages of Paekche and Koguryo that have been discovered are few in number, but through these items it has been possible to link these languages with the language of Shilla. The language of Paekche appears to be relatively close to the language of Shilla, whereas the language of Koguryo is thought to be somewhat more distant from that of Shilla. This distinction is due to languages diverging at different times. An example of a difference in vocabulary among the three languages is the word for 'song' ('castle', 'wall of defence'), which is 'cas' in the Shilla language; 'kly' in the Paekche language; and 'Xor' in the Koguryo language. Two words ('sasi' and 'ki') that mean 'castle' in Old Japanese originated from the 'sasi' in the language of Shilla and 'ki' in the language of Paekche. The words for 'king' are similar in all three languages: 'xan' and 'kim' in the Shilla language; 'ki<C' in the Paekche language; and 'kay' in the Koguryo language. The words 'cas' (castle) and 'nimgum' ('king', 'nim' derived from 'master') inherited from the Shilla language are also found in Middle Korean.

**Middle Korean**

Middle Korean (MK) refers to the language used from the tenth c. through the end of the sixteenth c. and can be further divided into two sub-categories: Early Middle Korean (EMK), used from the tenth to the fourteenth c., and Late Middle Korean (LMK) used from the fifteenth c. through the end of the sixteenth c. The use of MK covers a five-hundred-year period that includes the Koryo dynasty (918-1392) and the first half of the Choson dynasty (1392-1910). The founders of the Choson dynasty moved the capital of Korea from Kaesong to Seoul, forty kilometres to the south. Because both Kaesong and Seoul are in the centre of the Korean peninsula, the central regional dialect of Korean continued to be the most influential dialect, and thus eventually became the basis for the modern standard in the Korean language.

References to EMK are written exclusively in classical Chinese. The most important source of information on EMK is the Song Chinese record *Jilin leishi* (Memorabilia of Kyerim), published at the beginning of the twelfth c. This work contains a Chinese-Korean glossary of about 350 words, which has been an invaluable source of data on early Korean. Another source of data is the *Hyangyak kugoppang* (Emergency Remedies of Folk Medicine), which is written in classical Chinese, that describes the sound and meaning of some 180 names of plants, animals, and metals used in traditional Korean folk medicine.
Documents concerning LMK are numerous because of the scholarship involved in the creation of han'gul, the Korean alphabet, in 1443. In addition to representing the sounds (vowels, consonants, and even tones) of the Korean language faithfully, han'gul depicted the phonetic composition of each sound graphically. Many books were published in han'gul, and several kings encouraged the translation of important books written in classical Chinese into han'gul in the years immediately following its development. Fortunately, these references are still extant. Some examples of the important references to LMK are as follows: (1) Hunmin ch'ông'um (Correct Sounds for the Instruction of the People; also the first official name for han'gul), the first public explanation of the rationale for and the use of han'gul, published in 1446; (2) Yongbi 6ch'on ka (Songs of Flying Dragons), an eulogy cycle on the foundation of the Choson dynasty, published in 1447; (3) Wŏrin sŏkpo (The Buddha’s Genealogy), published in 1459, a compilation of the Sŏkpo sangjŏl (Episodes from the Life of Buddha), an epic concerning the life of Buddha (1447); (4) Nŭngŏm kyŏngŏnhae, one of many han’gul translations of Buddhist sutras, published in 1461; (5) the han’gul translation of the Tǎng Chinese poet Tu Fu’s work in 1481; (6) the han’gul translation of basic Confucian texts in the sixteenth c.; (7) margin notes on the sounds and meaning of each Chinese character written in han’gul that accompanied classical Chinese texts such as the Hunmong chahoe and the Sinjŏng yuhap.

Middle Korean Phonology

The han’gul writing system that was introduced in the Hunmin ch’ông’um reflects the phonological system of LMK very closely. There were seven (pure) vowel sounds in LMK (\(\hat{a}, a, o / \hat{d}, i, u / i\)). The semi-vowel ‘y’ appeared in four on-glide diphthongs (ya, yŏ, yo, yu; with y’ and y’ also extant in EMK) and in six off-glide diphthongs that combined ‘y’ after vowels (\(\hat{a}y, ay, dy, oy, uy, iy\)). Further, there was ‘w’ that appeared in three on-glide diphthongs (wa, wŏ, wi).

The rules governing vowel harmony were clear in Middle Korean. These rules dictated that yang (male or light) vowels (\(\hat{a}, a, o\)) and yin (female or dark) vowels (\(i, \hat{d}, u\)) should not co-occur in a morpheme, but ‘i’ as a neutral vowel may co-occur with all others. Suffixes that began with a vowel in MK were subject to vowel harmony when they were attached to a stem, but suffixes that began with a consonant were not subject to any of the phonological processes of harmonisation when they were attached to a stem.

Consonants in LMK are classified into the following groups: (1) lenis -- voiceless, slightly aspirated obstruents; (2) voiceless, strongly aspirated obstruents; (3) fortis -- voiceless, unaspirated obstruents. From the available documents, there is no doubt that ‘s’ and ‘h’ had fortis equivalents in LMK, but there is no proof that ‘p’, ‘t’, and ‘k’ had fortis equivalents. There are examples of ‘p’, ‘t’ and ‘k’ being written as seemingly fortis sounds with the addition of ‘s’, but how the addition of ‘s’ influenced pronunciation at this time is difficult to determine; (4) non-initial voiced fricative consonants that only appear in an intervocalic environment such as two vowels. ‘B’ changed to ‘w’ in the middle of the fifteenth c., ‘h’ fell out of use around the end of the fifteenth and beginning of the sixteenth centuries, and ‘z’ fell out of use in the middle of the sixteenth c. LMK also had word-initial consonant clusters such as ‘pt’, ‘ps’, ‘pc’, ‘pth,’ in words such as ‘ptit’ (intention), ‘psi’ (seed), ‘pc’ (to weave), and ‘pt’ (to fill up). These compound consonants were resultant from the weakening of a vowel sound that originally fell between the two consonants. All of these consonants have since changed to fortis sounds in modern Korean.

With the data that has been transmitted to the present age, we are also able to understand the tonal qualities of LMK, and analyse the changes that have occurred in the Korean language since that time. The Hunmin ch’ông’um used a system of dots in the left margin (the text
being written vertically) next to each syllable to indicate the appropriate tone. Two tones existed in LMK: low and high, and the latter was indicated by a dot in the margin. There were also those syllables (most likely consisting of two morae) that began with a low tone and ended with a high one. These rising tones were indicated as in the following examples ‘son’ (guest) and ‘son’ (hand); ‘mal’ (a unit of volume) and ‘mal’ (speech/language); ‘kaji’ (kind/variety), ‘kaji’ (branch) and ‘kaji’ (wooden shoes). The nominative forms of such words as ‘put’yo’ (Buddha) and ‘tAri’ (bridge) changed to ‘put’ye’ and ‘tAri’ respectively since the nominative suffix ‘i’ was a high tone.

Writing System/Phonology

The writing system of Middle-Korean shows a highly advanced level of phonology which no doubt contributed to the development of an excellent phonetic alphabet, han’gul, at that time. This is also an important source of material for Altaic linguists because of its phonetic reliability. The Korean people had already developed the hyangch’al and idu systems of transcription by simplifying the written form of various Chinese characters. This process of simplification of Chinese characters was also the precursor of the Japanese katagana system of writing. While its initiators in Korea discarded this system in order to transcribe the various sounds more freely, a Japanese monk adopted and developed it into an indigenous Japanese writing system.

Scientific linguistic studies were established in Korea during the Choson dynasty in the early fifteenth c. In 1443, King Sejong, after brushing aside opposition by certain elements of the Confucian literati in his court, enlisted scholars such as Sŏng Sammun (1418-1456), Chŏng Inji (1396-1478) and Shin Sukchu (1417-1475) of the Hall of Worthies (Chiphyŏnjŏn), and created the first original writing system that described the Korean language phonetically. The basic elements of han’gul remain in their original form, except for four letters that have fallen out of use. Most writing systems are the result of a long period of evolution; han’gul is the only writing system that was not devised on the basis of an imitation of foreign script but developed as a symbolic representation of the actions of the speech organs. The basic consonants - (k) - (n) - (m) - (s) and - (ng) are based on the appearance of the respective organs of speech involved in their articulations. Although 'symbolisation' is attributed as an original idea of the creators of this fascinating alphabet, it is most likely the product of extensive phonological study.

One of the most notable differences between Chinese phonology and the Korean writing system is the fact that in Korean the syllables are divided into three parts -- initial, medial and final -- whereas Chinese uses a bipartite division of syllable-initial and syllable-final. The tripartite division coincides with the modern analysis of the syllable into peak and margins (onset, peak, and coda). Frustrated by the unreliability of the bipartite division in Chinese phonology and the lack of a phonetic alphabet, King Sejong and his court scholars appear to have conducted an independent study of the Korean vowel system and the structure of syllable peaks which left them with no choice but to create a new script based on this study. Their phonemic analysis accomplished over and above Chinese phonology is successful even from the modern point of view, and might very well constitute a unique example in the pre-modern world of the scientific reduction of a contemporary language to writing in terms of a phonemic analysis that closely resembles modern methodology.

Korean Grammar and Lexicon

Some of the characteristic features of Korean in the order of lexicon, syntax, and semantics are as follows.

In the Korean lexicon, one is immediately struck by the high proportion of loan words. The majority of these loan words consist of borrowings from Chinese, often referred to as Sino-Korean words. In the Kun sajôn (Great Dictionary) published by Han’gül Hakhoe
(Korean Language Society), nearly fifty-four per cent of the more than 150,000 words are of Chinese origin. Non-Chinese loan words account for a further 2.5 per cent of the Korean lexicon, thus leaving pure Korean words to represent but 43.5 per cent of the entire lexicon.

It is difficult to say whether Korean developed closed syllables on its own, because of a latent internal force, or whether such a phonetic development was externally prompted by loan words from Chinese. It is almost certain, however, that Chinese borrowing contributed to an increase in the amount of closed syllables and to the breathiness of Korean sounds by introducing the heavy use of aspiration. The net effect of this is that Korean has become more harsh and strident than it would have but for the Chinese contribution.

In regards to syntax, the Korean language is characterised by a very richly developed set of derivative and conjugational affixes. These affixes agglutinate one after another and indicate different styles of speech, express every conceivable mood and aspect, and function as honorific markers, case markers, connectives, post-positions, and sentence-type markers among other functions. Nouns, both subject and object nouns, are frequently deleted in Korean even in non-imperative sentences. The subject and object of these sentences remains clear because honorific and sentence-type markers used after nouns and in the verb at the end of the sentence indicate the relationship between the speaker and the addressee.

A semantic characteristic of Korean is the ability to express minute difference in nuances with a richly developed system of phonetic symbolism. A highly developed system of kinship words and titles all reflect the strong influence of Confucianism on traditional Korean culture and the importance of the system of honorifics in the Korean language. The various levels of speech found in Korean are used by the speaker to establish the relationship between himself and the addressee. Along with the different levels of speech is a large lexicon of honorific and humble words that express one’s deference to his social superiors.

The net effect of the features discussed so far—a dual lexicon, an intricate honorific system, different levels of speech, an indefinite concatenation of clauses, a rich set of tense, mood, and aspect markers—is to make Korean a difficult language to learn as a second language, particularly for learners from an Indo-European language background. Nonetheless, since grammatical rules in Korean are quite straightforward and relatively consistent, acquiring fundamental linguistic skills for the non-native speaker is often simply a matter of practice and time.

In phonology, there has been a tendency to simplify final consonants. Korean is the only language that has three types of stops, which are all voiceless, two of which are distinguished by different degrees of aspiration. The initial occurrence of 'r', however, is a different story. The initial 'r' becomes a Korean phoneme, e.g., rak'et'ü (라켓) 'racket', radio (라디오) 'radio', reink'ot'u (레인코트) 'raincoat', and so on.

Concerning the Korean lexicon, the outlook is slightly more complicated with the new wave of loan words that has been entering Korea from the West. The dual system of pure Korean and Sino-Korean lexical items will continue to function as it has, but the semantic distinctions associated with the dual system will gradually disappear amidst the revival of pure Korean words and an even greater interaction with the outside world. Aside from a sizeable number of items belonging to the dual lexicon, there is actually little competition between Sino-Korean words and pure Korean words since pure Korean words are largely confined to concrete and emotive words, whereas Sino-Korean words are largely abstract and technical words. Thus, Korean and Sino-Korean words continue their parallel existence. Chinese characters and Chinese loan words became Koreanized in usage and pronunciation when they entered the Korean language and have been used by Koreans over almost two thousand years, and as a result, they are now an integral part of the Korean
language.

There has also been a tendency toward greater simplification in syntax. A complex agglutination of affixes to denote many different styles and levels of speech will gradually be simplified. Today, a student in junior high school can distinguish the precise difference in the level of speech to be used when he is talking to his father about his grandfather from when he is talking about his (the student's) father to his grandfather. Indefinite concatenation of sentences is rapidly disappearing from usage, perhaps because of the strong influence of the heavy use of punctuation marks.

The Korean language will continue to evolve and transform as do all living languages, and this will be most easily seen in changes to the lexicon. The influx of foreign words from Western countries is presently quite notable in the speech of young and well-educated Koreans, and this is expected to increase in the future. Additionally, as Korean society moves towards becoming more egalitarian insofar as relations between the sexes and social classes, the rigid system of honorifics and hierarchical levels of speech will become increasingly less important. This phenomenon has already been manifested in that the honorific level of speech used with the royalty of the Choson period has largely disappeared from use in modern Korea. Moreover, with the reunification of the Korean peninsula being a distinct possibility in the foreseeable future, the combination of the two forms of Korean spoken in the North and South, which have evolved quite separately over the past fifty years, will likely evoke linguistic changes.

Early Writing Systems

Before the invention of the han’gul script in the mid-fifteenth c., Korean scholars grappled with the problem of writing the Korean language without having a script specifically designed for the purpose. While classical Chinese was commonly used for writing official and other documents, it could not accurately convey the Korean language. The sound and grammatical systems of Chinese are quite different to those of Korean, and this created many difficulties in communicating unique aspects of Korean. Accordingly, in order to overcome the disadvantages of using a foreign writing system for the Korean language, scholars devised several systems that used Chinese characters for either their meaning or their sound. These had fixed sets of rules and one such system eventually became the origin of the Japanese writing system man’yō-gana. The extant sources on these early writing systems are, however, quite fragmentary and hence difficult to interpret and analyse. Nevertheless, as many of the oldest documents of the early Korean states are written in either hyangch’al, idu or kugyol, an understanding of these writing systems is quite important to present-day Korean studies scholars.
Idu

Idu was a writing system created during Shilla which used Chinese characters whose syntax was changed somewhat to reflect the Korean grammatical structure. This writing system was known by various names including ido and isò, but was designated as idu in the preface of the Sejong shillok (Veritable Records of King Sejong) in the fifteenth c., and this name has persisted. Idu has been incorrectly used as a generic term for all writing systems that used Chinese characters in the past, but it does have differing characteristics from either hyangch'al or kugyol, and so must be treated as a separate writing system.

Unlike hyangch'al, idu continued to be used through the nineteenth c. as a writing system by low-level government clerks in certain specialised areas. Two of the later documents that record various grammatical aspects of the idu writing system are the Kogum sōngnim (Past and Present Glossaries) compiled by Yi Ùibong in 1789, and Oju yōnmun changjòn san'go (Random Expatiations of Oju) written by Yi Kuyong in the early nineteenth c. Therefore, modern scholars have been able to analyse many of the qualities of the idu writing system and determine its various grammatical functions and characteristics.

There are many historical documents recorded in idu, going back to the Three Kingdoms. Two examples of these are the Imshin sōsōkki (Oath of Inscription) carved on a stone tablet in 612, and the Tan'yang chōksōng pi, which is a stele, thought to have been carved in 551. Many extant materials written in idu have come down from both Koryo and Choson, and so provide modern scholars with a wealth of valuable data for analysis.

Kugyol

Kugyol was a writing system largely used in the interpretation or translation of Buddhist and Confucian Chinese texts. In this system, grammatical particles were inserted into Chinese texts using either special, fixed patterns of Chinese characters for certain grammatical functions, or after the invention of han'gul, using han'gul grammatical particles. Thus, Chinese characters could be used as nouns or verbs within a text, but with all the supporting grammatical elements written in special characters to allow the text to be read according to Korean grammar.

The use of kugyol was quite widespread in Korea, most likely from the time of the introduction of Chinese characters during the Three Kingdoms. The reason for this is that although the meaning of the Chinese characters posed little problem for Korean readers, there were substantial differences in the grammar of the Chinese and the Korean languages, and so in order to better understand the texts. Koreans devised a way to insert Korean grammar. When we read the record stating that the Shilla scholar Söl Ch'ong (660-730) read nine Chinese classics in the native Shilla language, it is understood that he used kugyol as a means to explicate the text.

Since the use of kugyol greatly assisted the reading of difficult Chinese texts, it is not surprising that many of the Confucian Classics and the Buddhist cannon were published throughout Koryo and Choson using kugyol. There were about one-hundred and ten characters used in kugyol, including those for phonetic value and grammatical functions. By the end of the fifteenth c., han'gul characters were common in many texts, since their use was even more straightforward than those of earlier times. Kugyol remained an important writing system until the end of Choson.

Hyangch'al

Hyangch'al is a writing system that used Chinese characters for both their meaning and sound to record the Korean language, before the invention of han'gul. Hyangch'al is considered to be a more sophisticated writing system than its predecessor, the idu, and in
general expressed Korean nouns with Chinese characters that carried the same meaning, while verb stems, inflections and other grammatical parts were written by the arbitrary use of Chinese characters that had the desired pronunciation. Perhaps the most notable examples of literature in hyangch’al are the hyangga song-poems recorded in the Samguk yusa (Memorabilia of the Three Kingdoms). This writing system was largely used for recording lyrical items in Shilla and Koryó, but fell out of use by the fifteenth c.

Extant records in hyangch’al script are quite limited, with the largest being the twenty-six hyangga recorded in the Samguk yusa and the Samguk sagi (History of the Three Kingdoms). Other works recorded in this system include the thirteenth c. Hyangyak kugüppang (Emergency Remedies of Folk Medicine), which details information concerning the plants, animals and other materials of traditional Korean folk medicine and which used hyangch’al to accurately record the pronunciation of the ingredients.

Legal System

Historical Development

The legal history can be divided into five periods.

A. Three kingdoms and the Shilla dynasty

According to Samguk sagi [History of the Three Kingdoms], written in 1145, the first promulgation of yul (code) by a Koguryó dynasty (? 37 BCE - 668 CE) king could be dated in 373 and yullyong (code and decrees) were enacted by a Shilla dynasty king in 520. An epigraph written in 924 during the Shilla dynasty commemorates the promulgation of a code.

Despite the existence of these historical records and the chronology of political events between the Shilla and Tang China (618 -907) dynasties, little is known about the contents of codes and decrees that had been promulgated and enforced during the unified Shilla period. In 1933, however, a partial answer to the enigma was offered by the discovery of the so-called Civil Governance Document of Shilla villages (presumably dated 755), which indicates the influence of Tang administrative decrees on Shilla's management of households and tilled land.

B. The Koryó dynasty

Information regarding legal codes and their functions during the Koryó dynasty (918 -1392) is also sketchy. The Hyongpóp chi [Treatise on Penal Law] of the Koryósa [History of Koryó], written in 1453, simply lists the headings of seventy-one articles of the code whose texts cannot be found elsewhere. However, a perusal of the list reveals that the organization of the code and the classes of penalties with a grading scale were influenced by Tang and Song China (960 -1279) dynasty codes.

C. The Choson Dynasty

T’aejo (r.1392-1398), the founder of the Chosón dynasty established an office to collect,
compile and publish all laws and decrees from the time of the last king of the Koryŏ dynasty down to his own time. The *Kyŏngje yukch'on* (Six Codes of Governance) which was the culmination of his efforts, is not extant today. During T'aejo's reign, the *Tae Myŏngnyul chikhae* (Directly Interpreted Great Ming Lü) was promulgated in 1395. The Code written in Idu Korean is one of the oldest extant legal documents. In the process of translating *Ming Lü*, indigenous Korean elements were incorporated into the Korean text and used as common law to the legal codes throughout the Chosŏn Dynasty.

Kings succeeding T'aejo inherited the codification endeavour. In the annals of the law codification throughout the Chosŏn dynasty, the enactment of the *Kyŏngguk taejŏn* (Great Code of State Governance), completed in its final format of six sub-codes in 1485, is an important work, as it became the basic code of state administration. The six sub-codes corresponded to the six ministerial divisions of the government: personnel (*i*), revenue (*ho*), rites (*ye*), military (*pyŏng*), punishment (*hyŏng*), and public works (*kong*). One of six sub-codes on punishment dealt specifically with procedures involving trials, prison administration and status record on slaves and their ownership.

Enactment of the *Kyŏngguk taejŏn* was followed by a series of newly supplemented codes honoring the will of the founding father of the dynasty. The last of these, the *Taejŏn hoet'ong* [The Great Code Comprehensively Supplemented], was completed in 1866.

As a result of the 1894 Kabo Reforms, official gazettes appeared announcing newly promulgated laws. Another significant legal development was the enactment of the 1905 *Hyŏngpō taejŏn* [Complete Criminal Code], which was based on the traditional law and the 1880 Japanese Penal Code.

During this period, justice was administered by primarily local magistrates, confucian scholar officials, whose duties also included the collection of taxes and administration of corvée labor. According to extant documents, there was litigation among Yangbans over the interpretation of wills, ownership of private slaves and transactions over land and houses.

D. Japanese Colonial Control

The Government-General of Korea functioned through the Japanese Governor-General as a result of the Japanese annexation of Korea in 1910. All decrees of the Governor-General had to receive the approval of the Japanese Emperor and jurisdiction over finances and legislation on broad policies concerning Korea were in the hands of the Imperial Diet in Tokyo. The colonial government in Korea consisted of the secretariat and seven bureaus (kyoku), one of which supervised the administration of justice. During this colonial period, at least four discernible bodies of law were in force: first, special statutes particularly directed to Korean affairs adopted by the Japanese Imperial Diet; second, applied Japanese codes and statutes *mutatis mutandis* by virtue of the Governor-General's action; third, Korean customary law on family relations and inheritance based on the 1912 Korean Civil Decree; and fourth, other legal measures issued by the Government-General.

The judiciary was built under a three-instance system: the district and the branch courts; the courts of review; and the Supreme Court. The Supreme Court, located in Seoul, consisted of a chief judge and nine judges. Attached to the courts of each instance were the prosecutor's offices. Prosecutors exercised wide authority by enjochosong the same status as the judges in importance and rank. In 1907, the first bar association was formed in Seoul. Subsequently, bar association activities were subject to strict supervision of the Governor-General.

E. The Two Koreas

The peninsula's partition in 1945 led to the creation of the Republic of Korea in the South
and the Democratic People's Republic of Korea in the North. In terms of legal systems, the former adheres to the Civil Law tradition, while the latter follows the Socialist legal system.

Sources and Branches of the Law

A. South Korea

The emphasis on codified laws is one of the principal features of the South Korean legal system. A set of five legal codes (Civil Code, Criminal Code, Commercial Code, Code of Civil Procedure, and Code of Criminal Procedure), plus the Constitution, are collectively known as the Yukpōp, literally the six codes. These codes are the main body of laws. Laws enacted and promulgated by state authorities pursuant to the Constitution are recognized as the primary source of law and are permeated by the concept that the mission of law is fulfilled best by reliance upon enacted law. Thus a variety of terms are used to designate South Korean laws, usually denoting the issuing authorities. Laws may be divided into four main categories: statutes passed by the legislature; decrees issued by the President of the Republic, Cabinet and various ministries; rules and regulations by other state agencies and local governments; and international agreements. As to the effects of customary law, the Civil Code prescribes that in the absence of a statute, customary law is to be relied upon and if the latter is lacking, sound reasoning is to serve as the basis for deciding civil cases. The Commercial Code also stipulates that in commercial cases, commercial custom applies in the absence of provisions in the code, and in the absence of commercial custom, the provisions of the Civil Code are to apply. This legal formula cannot be applied to criminal cases, however, due to the constitutional requirement of nulla poena sine lege. Judicial precedents are not granted official status as law. Thus every court is theoretically free not to follow the judicial decisions of courts even when they are superior. In practice, however, a judge, in deciding a case, will closely examine relevant previous decisions. Furthermore, the lower courts can be expected to pay a great deal of attention and respect to judgments of superior courts, especially the higher court in their own district.

There are at least ten pedagogically identifiable branches of law.

1. Constitutional and Administrative Law

The first Constitution was adopted in 1948 and has been amended nine times. The present Constitution of 1987 stipulates the directly elected President, the unicameral legislature, and creates the Constitutional Court. Administrative law is a branch of law that controls or is intended to control the administrative agencies and their operations and remedies. The main body of this branch of law is the Government Organization Law, Local Autonomy Law, National Public Servants Law, Administrative Litigation Law, and laws related to land reform. Another important legislative measure of recent origin in the field of Administrative Law is the Foreign Capital Inducement Law, which is designed to induce and administer foreign equity investments, foreign loans, and foreign technology for the development of the economy. This statute and the tax laws are closely interrelated.

2. Criminal Law

Criminal law is a body of legal rules which prescribes crimes and their punishments. The main source of criminal law is the Criminal Code. There are a number of ancillary laws which include the National Security Law and Juvenile Law.

3. The Law of Criminal Procedure

The law of criminal procedure stipulates procedural rules connected with the prosecution of a person charged or to be charged with the commission of a crime. The primary source of
this field of law is the Code of Criminal Procedure, which sets out general rules, trial procedure at first instance, appeals, special trial proceedings, and execution of judgments.

4. Labour Law

Labour law consists of those constitutional provisions on labour's fundamental rights, statutes, executive decrees, and administrative regulations that prescribe labour relations. The basic statutes are the Labour Union Law, Labour Dispute Adjustment Law, Labour Standard Law, and Labour Committee Law.

5. Public International Law

Public international law is the law of the world community which relates to states, international organizations, and private individuals. The sources of public international law are international customary law and international agreements. The present Constitution sanctions that treaties and the generally recognized rules of international law have the same force as domestic law.

6. Civil Law

Civil law is known as a general private law which consists of the Civil Code together with several ancillary laws. In its form, the Civil Code follows the so-called pandect system by dividing into five books. The first three books deal with general provisions, property rights, and obligations in general, while the fourth and fifth books cover family and successions, which base primarily on customs.

7. Commercial Law

Commercial law is the body of special rules of private law applicable only to those legal relations which arise from commercial transactions. The most important source of commercial law is the Commercial Code, which consists of five books: General Part, Commercial Transactions, Commercial Companies, Insurances, and Maritime Commerce. The important ancillary laws are the Enforcement Law of the Commercial Code, the Law on Bills of Exchange and Promissory Notes, the Cheques Law, and the Corporate Reorganization Law.

8. The Law of Civil Procedure

The Law of Civil Procedure is a branch of law which is concerned with civil litigation to settle compulsorily disputes among private individuals. The main source of law regulating civil actions is the Code of Civil Procedure, which consists of seven chapters: General Rules, Proceedings in the First Instance, Appeal, Retrial, Summary Procedure, Public Notice Procedure, and Compulsory Execution. Main ancillary laws are the Arbitration Law and the Law of Procedure on Non-contentious Matters.

Both laws are designed to encourage the settlement of disputes by means of arbitration or mediation.

9. Private International Law

The main source of private international law is Private Law Involving Foreign Elements, which is designed to "determine the applicable law to the matters involving foreign elements wherein aliens within the Republic of Korea, or the nationals of the Republic of Korea abroad, become parties." This law sets out the choice-of-law rules and is organized into three parts: General Rules, Rules Concerning Civil Matters and Rules Concerning Commercial Matters. The important ancillary laws are Nationality Law, Alien Land
Acquisition Law, Special Law Concerning Adoption of Orphans and the Code of Civil Procedure, which contains rules on international jurisdiction; and recognition and enforcement of foreign judgments.

10. Laws Governing Industrial and Intellectual Property Rights

The law protects the following industrial and intellectual property rights: patent, utility model, trademark, copyrights and design. These rights are recognized and protected only when they are registered upon application. South Korea is a signatory to the Paris Convention for the Protection of Industrial Properties, to the Patent Cooperation Treaty and to the Universal Copyright Convention.

B. North Korea

North Korea uses the Chuch'e idea of the worker's party as its national ideology, being a creative application of Marxism - Leninism to North Korean reality, and adopts command economies under the leadership of the Communist Party. The state is to play a strong role in assuring its citizens the good life. The law in North Korea like any Socialist legal system is highly ideological and is deployed as a political instrument to enhance the proletarian and Communist revolution.

Laws, as used in the generic term, adopted and issued by various state organs pursuant to the 1972 Constitution as amended on April 9, 1992, include laws, ordinances and decisions of the Supreme People's Assembly (S.P.A.), the decisions and directives of the S.P.A.'s Standing Committee; the orders of the President of the People's Republic; the decrees, decisions and directives of the Central People's Committee (C.P.C.); decisions of the Administrative Council; directives of the Central Administrative agencies; decisions of the local people's assemblies; decisions and directives of local people's committees; decisions and directives of local administrative and economic committees; and directives of the Central Court and the Procurator-General.

As for structural and divisional branches of North Korean law, they appear on the surface similar to those of South Korea. However, contents of laws are permeated with Socialist ideology without identifiable public and private law demarcation. The following nine major branches of law are noteworthy.

1. Constitutional Law

The first Constitution of 1948 was patterned after the 1936 Stalin Constitution. It was amended in 1972 and extensively amended in 1992. It stipulates the unicameral S.P.A. which is the highest organ of state power and is the exclusive legislative body. Its standing committee is provided to exercise supreme power in the S.P.A.'s absence and is to interpret currently effective laws and ordinances.

The 1992 amended Constitution still invests considerable power in the President of the People's Republic; and maintains the C.P.C., which carries out an institutional check on the central state bureaucracy by relieving the bureaucracy of policy-making functions and leads judicial and procuratorial activities. One of the unique features of the 1972 Constitution was the abolishment of the tax system as being "a hangover of the old society." However, the 1992 Constitution eliminates this phrase by substituting "non-existence of tax system in our country."

2. Criminal Law

In 1987, North Korea undertook a major revision of its Criminal Law Code. The primary task of the Criminal Law is to protect national sovereignty and Socialist institutions. It is to
guarantee people's self reliance and creative life through the struggle with crimes. The Code maintains the analogy clause and introduces education through labor at the workplace, as a new category of penalty.

3. Criminal Procedure

In 1992, North Korea adopted a newly revised Code of Criminal Procedure without providing clear division of power between the judge and procurator. Its main features are to guarantee human rights in criminal proceedings and to deny the evidence obtained through the third degree confession.

4. Labour Law

The primary source of Labour Law is the 1978 Labour Code which is designed to fully mobilize and utilize human resources, who are armed with the Chuch'e ideology and oriented with the cause of Socialist construction. For this purpose, administration and operation of labour management are subject to strict legal regulations and state control. Special features of the Code include a fourteen-day regular annual vacation for all workers, a seventy-seven-day maternity leave, Sunday as a day of rest, age sixteen to be the minimum work age, and retirement age limit at fifty-five for women and sixty for men. A daily schedule for workers is composed of eight hours of labour, eight hours of indoctrination, and eight hours of rest.

5. Land Law

Land law constitutes a separate branch of law which regulates legal relations involving land use. This uniqueness derives from the fundamental principle that the state is the exclusive owner of all land as one of the basic means of production. As the state is the sole proprietor of land, only the state, through its agencies, is entitled to allocate or withdraw land tenure to natural or judicial persons for the actual use of land. Based on these premises, the 1977 Land Law prohibits selling of land belonging to the state or cooperative organizations. It also prescribes land development and conservation and limits the size of family plot.

6. Civil Code

The S.P.A. adopted the Civil Code in 1991. The Code regulates property relationship entered into between three entities: state agencies, cooperative organizations and citizens. The Code lists extensive categories of state ownership (or monopoly) of property. Property rights exercised by citizens are limited to strictly private use and the consumption needs.

7. Family Law

Following the structural pattern of the Socialist legal system, the Family Law Code was adopted in 1990. The code bases on four principles: sexual equality; monogamy; special protection provided for mother and children; and organic combination of private and state interests and interests of family and society.

8. Civil Procedure

The 1976 Code of Civil Procedure enunciates its raison d'être as a revolutionary ideological weapon for the masses. Following statutory constriction used by other Socialist states, a relatively smaller number of articles (177 articles) is utilized in the Code. In disposing civil cases, judges are expected to follow the President's teachings and directives from the party. Another feature is that only six articles are allocated to deal with the execution of court judgments. Non-recognition of private ownership of real property and
grave consequences of non-compliance of court decisions may be the reasons. The Code has taken a liberal approach to *res judicata* effects of the final judgment by opening the avenue of extraordinary appeal.

9. Foreign Investment Law

The 1984 Joint Venture Law covers such subjects as guiding principles of joint venture; organization of a joint venture company; board of directors and business operations; audit and income distribution; and dissolution of a joint venture company and settlement of disputes. Implementation of the 1984 Joint Venture Law with accompanying supplementary statutes did not bring the expected foreign investment; thus necessitating the adoption of the new Foreign Investment Law in 1992. It stipulates the establishment of a special economic zone where 100% foreign owned investment is allowed; an extended period of lease on land; and more elaborate tax incentives.

10. International Law

The present Constitution is silent as to the status of international treaties to which North Korea is a party although there are numerous instances of North Korea signing bilateral and multilateral treaties. The present Constitution grants a power to the S.P.A. and C.P.C. who ratify or abrogate treaties concluded with foreign states and the President of the People's Republic promulgates actions taken by these two organs.

**Judicial Administration**

A. South Korea

1. Organization of Courts

Courts are organized on the three-tier system, pursuant to the 1987 Court Organization Law. District courts, their branch courts, and family courts are courts of first instance. Appellate courts are intermediate, and the Supreme Court is the highest court of appeal. Ten district courts have civil law and criminal law divisions, except in Seoul, where separate Civil District and Criminal District Courts have been created. The Seoul Family Court hears cases related to domestic relations. Four appellate courts are organized respectively into civil, criminal, and special divisions which try administrative cases. The Supreme Court exercises general jurisdiction over military courts. The Supreme Court is composed of a chief justice and thirteen associate justices and exercises rule-making power to supervise judicial administration.

2. The Constitutional Court

The Constitutional Court is composed of nine adjudicators, of whom three are designated by the President, three are chosen from among persons selected by the National Assembly and three from persons nominated by the Chief Justice. The Court adjudicates the following matters: constitutionality of a law when requested by the ordinary courts; impeachment against enumerated high officials; dissolution of a political party; disputes between state agencies, or between state agencies and local governments; and petitions by any person relating to the Constitution.

3. Judicial Proceedings

The South Korean judge is not simply an arbiter between two sides but a seeker of justice who guides the trial, questions the witnesses, and finds facts in the interest of truth. Oral hearings are quite brief since the intermittent system known as the system of piecemeal trials of conducting trials is used. On request, the judge may allow the parties to the action to ask
supplementary questions. The Code of Civil Procedure sets out a number of general principles related to civil and administrative litigation. Among these principles are representation of both parties, oral presentation, bilateral hearing, immediacy, and free admissibility of evidence. In a South Korean court, it is not the universal rule for witnesses to give evidence under oath. The evidence given by the party, whether as witness or by questioning in the court, is considered a secondary means of evidence. An appellate court exercises exclusive jurisdiction with authority over the place of residence where the defendant is situated. As a prerequisite to initiation of administrative litigation before an appellate court, a person deprived of his/her rights by an illegal or unjust action on the part of an administrative agency has to exhaust administrative remedies in accordance with the 1984 Administrative Litigation Law.

In a criminal action, the judge has no function until a charge has been brought by the prosecutor, who has not only the right but the legal obligation to initiate and conduct an investigation into any complaint with a view to bringing a charge. The onus of proving the guilt of an accused person rests on the prosecutor who may request that a case be referred for summary judgment when a minor offence is involved. The accused may request a formal trial within seven days from the receipt of notification of summary judgment, but if he/she fails to do so, or withdraws his/her request, the summary judgment becomes final. Cross-examination has never been prevalent before South Korean criminal courts. Questioning by the court is preferred, and although the judge may permit supplemental questions to be addressed directly by the prosecutor or defense counsel, questioning does not reach the intensity of the Anglo-American style trials. The accused's testimony is not sworn. Relatives of the accused do not give testimony under oath. The evidence of a party in a civil action is generally deemed unacceptable. In resolving legal disputes, judges are willing to dispose themselves to use means of alternative dispute resolution including the traditional approach of mediation.

4. Legal Education

The graduates of the law faculty enter diverse occupations. Only a minor portion of them pursue professional legal careers. To become a member of the legal profession, one must pass a highly competitive annual judicial examination and then complete two years of practical training at the Institute of Judicial Training and Research, an organ of the Supreme Court. Upon completion of a two years' apprenticeship, one may be invited to become a judge or a Prosecutor, or may join a bar association.

5. Judges

In South Korea, becoming a judge is not a reward for long and successful practice as a member of the bar. It is only the beginning of a career in the civil service. Under the 1987 Constitution, the tenure of the Chief Justice of the Supreme Court is six years without renewal, whereas Associate justices whose tenure is also six years, are allowed reappointment. Their appointments are subject to the approval of the National Assembly. All other judges have a limited tenure of ten years subject to reappointment.

6. Prosecutors

To become a prosecuting public attorney is also considered entering a civil service career. The 1986 Law of Prosecution Offices prescribes that prosecutors engage in investigation and prosecution of crimes, bring actions in the name of the public, supervise the execution of penalties, and also represent the public interest in civil cases. The highest-ranking prosecutor is the Prosecutor-General, whose official ranking is next to the Minister of Justice. The Prosecutor-General supervises all prosecutors throughout the country under the principle of so-called unity and indivisibility of the prosecution. Prosecutors are assigned to each court on all levels and perform their function independently of the court.
7. Lawyers

The practice of law requires admission to a local bar association in accordance with the 1982 Lawyers Law. The local bar associations are represented by the national bar association. The activity of the bar association generally tends to be limited to protecting the interest of its members and still it is not completely free from the control of the Minister of Justice. A typical Korean law office is managed by a single lawyer or by two or three persons who share offices and practice. However, there is a recent trend to deviate from the traditional solo-practice arrangement and to form law firms, especially by lawyers specializing in the area of international practices.

8. Military Legal Officers

Military legal officers are recruited through a special examination, and successful candidates go through training at the Institute of Judicial Training and Research. Upon completion of ten years of service as a military legal officer, a license is granted to practice law.

9. Auxiliary Legal Personnel

Any member of the bar can be appointed as a notary public by the Minister of Justice, who supervises and assigns notaries public to the district prosecutor's office. Notaries public prepare notarial deeds, which include the issuance of certificates of self-executing obligation and articles of incorporation. Any non-lawyer who meets special qualifications under the existing statutes can become a patent specialist, a tax accountant, a customs agent or an admiralty counsellor. Patent specialists, for instance, represent their clients in the administrative agency and the court in any matter related to Patent. Such paralegal professionals as judicial and administrative scriveners play an important role in judicial administration. Judicial scriveners, for instance, draft legal documents including court papers. Their training ranges from self-education to a post-graduate university degree.

B. North Korea

The administration of justice is the responsibility of two state organs, the courts and the procuracy. People's assessors and lawyers are also participants.

1. Organization of Courts

Courts based on the 1976 Court Organization Law are organized on the three-tier system: people's courts, the provincial court (or municipality directly under the central government) and the Central Court which is the highest court. Two special courts, military courts and the railroad courts are established and their organization and role are stipulated by the Court Organization Law, the Criminal Procedure Code and Code of Civil Procedure. Arbitration chambers of the provincial and the highest courts engage in settling disputes between state enterprises and/or other Socialist organizations.

2. Procuracy

The procuracy is often characterized as the fourth branch of the government and is a watchdog of Socialist legality. It supervises precise and honest compliance with the laws by all central and local state agencies, enterprises, social cooperative organizations and citizens. The Central Procuracy, headed by the Procurator-General whom the S.P.A. appoints for a term of five years, is responsible for the work of all lower-level procurators' offices through a centralized organization. The Central procuracy is responsible for its work only to the S.P.A., the President of the People's Republic, and the C.P.C.
The procuracy is expected to represent citizens in complaints against government agencies and to look after the public interest in civil cases which might have a significant social impact. It supervises or conducts pre-trial investigation in addition to prosecuting criminal cases and makes sure that trials are properly conducted.

3. Judicial Proceedings

Courts render formal legal support for the protection of state and cooperative property and guard citizens' constitutional rights. They also perform an educational role for the organizations and citizens and execute such bureaucratic acts as notarial work.

In the ordinary court proceedings, a collegiate panel composed of one professional judge and two people's assessors conducts hearings in strict accordance with procedural codes. In principle, cases are to be heard in public, and defendants are guaranteed the right to a defence.

Although the courts are organized on the basis of a three-tiered system, parties are only allowed two trials. An exception to this rule is an extraordinary appeal to the Central Court that could be utilized at any stage of the judicial proceedings. However, the use of this appeal requires the approval of the President of the Central Court and the Procurator General. The essential import of the extraordinary appeal concept is that it provides one way for the Central Court to check at least the most obvious deviations of lower courts. The Central Court fulfills its responsibility of supervising the lower courts by issuing guiding directives and by publishing selected cases, decisions and memoranda.

4. The Socialist Guidance Committee for a Law-Abiding Life

According to available sources, the Socialist Guidance Committees for Law-Abiding Life have been established at all national, provincial, municipal and county levels since 1977. The Committee consists of members representing the procuracy, police and people's committee. Based on the Chuch'e ideology, the task of the committees is to create a revolutionary atmosphere of observing the law. The Committees are empowered to supervise the observance of the law by all the government agencies, organizations and citizens. To promote understanding of law for the citizens, there are designated persons in each unit who entertain questions and provide answers on the subject of law.

5. Legal Education

It has been reported that the Faculty of Law, Kim Il Sung University, engages in training of legal professionals. The faculty consists of three departments: legal studies, state management and international legal studies. The study period is four years and six months. Six months are allocated for the practical training. Further graduate legal study is available for the graduates of the law faculty.

6. Judges and People's Assessors

Judges and people's assessors of the Central Court are elected for a five year term or recalled by the S.P.A., but it is responsible to the President of the People's Republic and the Central People's Committee. Judges and people's assessors of the provincial courts and people's courts are elected or recalled by the people's assemblies at the corresponding levels. The term of office for members of provincial courts and the People's Courts is four years. People's assessors enjoy the same rights as judges and participate in deciding questions of fact and law. It has been reported that professionalism, even among judges, is not fostered under the North Korean system, since the court's political judgment is of primary importance. While judges serve full-time during their tenure, people's assessors are supposed to serve only fourteen days per year. If the trial requires additional time, the
people's assessors are to serve continuously and wage earners are paid their regular earnings during their service. Qualifications to be judges and people's assessors require a worker who is eligible to vote; a firm believer of the Chuch'e ideology; and a candidate who is ready to carry out policies of the Korean Labour Party.

7. Procurators

Appointment or removal of procurators is made by the Central Procuracy. Selection of a procurator is based on a candidate's allegiance to the party and on possession of a politically sound mind indoctrinated with the training of revolutionary activities.

8. Lawyers

The 1948 Regulations Concerning Lawyers prescribes the creation of bar associations in P'yŏngyang and each province. They are subject to supervision of the provincial court and of the Central Court. There is the National Central Committee which represents local bar associations. Association activities, salary of association members, and fee payment arrangements are administered by the standing committee of each local association, whose members are elected for a two-year term at the general meeting of the association. Lawyers are expected to know how to protect party policies and also to protect the state interest in lieu of their client's concerns.

Leisure Activities

Recreation is a fundamental need of all people and for this reason recreation and play are normal expressions inherent in the development of the body, intellect and emotions of humans. Forms of recreation also reveal much about the people of a society and their lifestyles. The development of recreation and forms of play also serve as barometers of a society’s advancement, values and spirit. It is not an exaggeration to state that the leisure activities and games of a society reflect its national consciousness and way of living.

Historical Leisure Activities

In the earliest Korean states the lives of the people revolved around agriculture. Accordingly, the most important elements of their lives can be seen in matters that were concerned with the outcome of the harvest. Therefore, a great deal of agrarian rituals were performed with an aim to ensure a bountiful harvest. The periods when the people had the greatest amount of leisure-time were in the spring before planting their crops, and in the fall after the harvest. During these seasons the people would perform sacrificial rituals to the deities they believed governed the success of their crops. However, these rituals were also times when the people gathered and celebrated with one another. Chinese documents record these events, such as the Sanguo zhi (History of the Three Kingdoms) which describes the Yonggo Festival in the ancient state of Puyó. This festival, which was held in the first month of the lunar year, was not only a time when sacrificial rites were performed to the gods that governed agriculture, but it was also when the people of Puyó gathered to feast, while enjoying song and dance. The magnitude of this festival can be seen in the fact that all of the people of the state joined in the celebrations, and even those who had been incarcerated were released from their punishment to take part. Other like ceremonies were held in early Korean states including the much’ôn of Eastern Ye and tongmaeng of Koguryó, both of which were held after the harvest. The common features of these ceremonies are that they served both religious and secular functions. From the religious aspect, these ceremonies entreated the gods of agriculture for either an abundant harvest or thanked them for the one they had just reaped. As a secular function, the ceremonies enabled the people of the ancient Korean states to gather and celebrate together. The feasts that accompanied these ceremonies were times for the people to relax as a community and participate in group games that encouraged communal harmony.

By the time of the Three Kingdoms, the leisure activities of the people had become rather more formalised than in earlier times. Activities such as dramatic plays and masked dances became part of the recreation of the people, and these performances were incorporated into the entertainment at the royal palaces. Seasonal customs were still the major force in leisure activities, and recreational activities still had the character of supplication to the spirits that governed agriculture, for abundant harvests. One game that displays the duel character of entertainment for the people and as an incantatory ritual for agrarian purposes, is tug-of-war. Generally speaking, tug-of-war competition took place during major holidays such as Tano, New Year and Ch ‘usok, since it required group participation. In playing tug-of-war, two villages would form East and West teams and join together large straw-plaited ropes, with each team endeavouring to pull the other over a demarcation line. The entertainment value of this folk game is seen in the group effort required to make the ropes and to win the contest, and is a method by which the village could maintain social harmony. The incantatory effect of the game is seen in it being an extension of a fertility rite. The West team would commonly be viewed as the female team, and if the West team was victorious, it portended an abundant harvest. The tug-of-war ritual symbolises the sexual union between a male and a female through the coupling of two ropes and the tugging back and forth. This game was most often performed during the New Year’s festivities, and on a dormant field.
The adoption of Buddhism during the Three Kingdoms created other holidays and as a consequence, occasions for the people to gather and enjoy leisure activities. On Buddha’s birthday during the fourth lunar month, lanterns were put up in every house and temple and yŏndŭng nori (festival of lantern-lighting) was celebrated. This was also an occasion in which the people could gather and enjoy merriment together. However, the inclusion of Buddhist holidays did not supplant the performance of traditional, shamanistic holidays. Holidays such as Tano and Ch’usŏk continued to be observed and, along with New Year, were the major holidays. These leisure days and festivals continued to be chiefly centred around farming rituals.

In Koryŏ, the biggest holiday was the national festival known as the p’algwanhoe, which incorporated many of the traditions of the former Koguryŏ tongmaeng festival. Although this festival underwent many changes during the half millennium in which it was held, it still served as an occasion for the people of the kingdom to gather and participate in many large-scale games. Many of the games in this era were much the same as in former times. There were large-scale group games played by men, such as stone fighting, tug-of-war, and torch fighting, among others. Games played among the womenfolk consisted mostly of group singing and dancing activities that embodied incantatory rites for the village. An example of a women’s’ game is kanggang sullae in which the women of a village would form a large circle and sing songs while dancing.

With the advent of Chosŏn came a clear demarcation between the games enjoyed by the common people and those that the ruling classes took pleasure in. The games of the commoners continued to reflect their beliefs founded in shamanism and their desires for bountiful harvests. Games such as tug-of-war, ssirŭm (a type of wrestling), mask dance dramas, and other large-scale village games continued to be enjoyed by the commoners. However, the upper echelon did not participate in the group games and instead enjoyed kyŏkkŭ (a type of polo); pitching arrows; ssangnyuk (a type of backgammon); changgi (Chinese chess); and paduk (Korean checkers); all of which came to be games reserved for those in the upper classes. A primary characteristic of Chosŏn was the development of a social hierarchy, and this distinction between the classes was evidenced, even in the types of games they played.

Many traditional leisure activities continued to enjoy popularity until recent times. Games like yut (four-stick game) and hwat’u (flower cards), were played by all people, regardless of age or sex, and they had many different ways of being enjoyed. Children’s games such as chegi ch’agi (shuttlecock kicking); p’aengi ch’igi (top-spinning); and konggi nori (jackstones); have retained their popularity because of the enjoyment they offer and their simplicity.

**Characteristics of Traditional Leisure Activities**

The games enjoyed in traditional Korea closely reflected the lives of the people. The folk-games were linked closely with people’s work and were passed on to following generations in connection with seasonal customs, ceremonies of passage and sacrificial rituals. These games were not individually created, but were collaborative efforts that evolved over many generations. The discussion of folk games must be linked with seasonal customs, as the two entities cannot be separated. This point can be validated from the fact that the leisure activities associated with a particular seasonal custom disappeared when that custom became extinct.

The leisure activities of traditional Korea can be divided into those enjoyed by children, women and men. Children’s games can be sub-divided between the sexes. Games that boys enjoyed included the militaristic ones such as stone tossing, stick tossing, shuttlecock kicking and others with a military flavour. These games do not require special implements and are acknowledged as games which are performed through the motions of hitting,
kicking and running, which thereby enabled young boys to develop the skills that led them to manhood. The activities that young girls took pleasure in focused more-or-less on those that involved the development of hand-eye co-ordination, or jumping. Therefore, games such as jacks, jump rope and swinging were common activities among young girls, and these nurtured the girls for womanhood.

The games of adults in traditional times generally carried the dual characteristic of entertainment and of incantatory rites. Women participated in non-competitive activities such as swinging, seesawing, and group games like kanggang sullae. Women's games served to create harmony among the village group and also carried the function of praying for abundant harvests. Adult male games, on the other hand, stressed large-scale violent competitive activities such as stone fighting, torch fighting, wood-metal fighting and team fighting. These required a larger number of participants and also demanded time for preparation. As a consequence, they were only held in conjunction with major seasonal holidays such as Tano or Ch'usok.

Another strong characteristic of traditional leisure activities is the close relationship they share with work. Fundamentally, the concept of leisure activities and work are diametrically opposed. However, folk games served to transfer the functions of play into work, thereby allowing these two concepts to co-exist. An example of the symbiotic relation between work and play can be seen in the performing of nong'ak (farmer’s music) while working in the fields. Traditionally, when farmers were to perform a communal task, they would form a ture (a collective labour group) and then proceed to the fields to work. Accompanying the ture would be a contingent that would perform nong'ak while both in the fields and in transit to and from them. The purpose of the nong'ak was to create a festive environment that would encourage hard work, while at the same time lessening the hardship of field labour. Moreover, the motions of dancing along with the nong'ak emulated the movements involved in working in the fields, and in this manner the work was made easier.

Leisure Activities of the Modern Period

The advent of the Japanese colonial period in Korea marked a major change in the activities of the people in many aspects including their leisure-time pursuits. The Japanese Governor-General regulated many types of folk games in Korea, and in particular banned the large-scale fighting and group games since they feared the harmony and nationalistic consciousness of the Koreans that could be aroused through these games. As a result of this Japanese oppression of leisure, by the end of the colonial period many of the traditional games of Koreans approached extinction.

After liberation in 1945, the traditional games and pastimes of Koreans were no longer suppressed, but faced a new threat in the onslaught of Western culture which swept into Korea. The national movement in South Korea towards modernisation led to the games of the past being pushed rudely aside. New activities began to sprout in Korea and in the common mindset of this period, any activity that was Western in origin was automatically given higher status than those with Korean roots. Along with western leisure-time activities came the concept of commercialisation of games and leisure-time activities. There no longer was a connection between leisure activities and the daily rhythm of life such as there had been in former days. Also, there was no deep-seated relationship between many of the new activities and Korean culture. These were fundamental changes in the way leisure-time activities were thought of in Korea.

Some of the popular leisure activities in Korea today include Western sports such as soccer, basketball, baseball, skiing, cycling, and many other modern sports. Other activities, such as mountain climbing, swimming, and fishing are more akin to traditional pastimes of the past age. There are both amateur and professional sports teams in Korea today and sports such as baseball, soccer and basketball draw large followings, both in person and via the
mass media outlets of television and radio.

Aside from physical activities, Koreans participate in a wide range of hobbies and interests that form a major part of their leisure-time. Hobbies in South Korea are as diverse as in any country in the world and reflect the characteristics of the Korean people. Music, videos, television and cinema form a major part of the interests of many people, while others enjoy reading novels and magazines. New technologies, such as computers and the Internet have also found a great number of devotees in Korea. Other activities include travel in both Korea and abroad, spending time with classmates or co-workers and taking self-improvement courses at private academies to learn skills such as pottery or a foreign language, or in playing *paduk* (checkers played by two persons with black and white stones).

**The Present State of Sports**

Korea has been making steady progress to join the elite sporting nations of the world, competing under the Korea flag for the first time at the London Olympiad in 1948. A mark of significance of South Korea’s approach to becoming an international name in sport was the hosting of the 1988 summer Olympics in Seoul. In this showcase of the world’s premier athletes, the ROK not only hosted the first boycott-free Olympics in twelve years, but also was placed fourth in the overall medal tally. Since the Seoul Olympic Games, South Korea has consistently performed at high levels in international sporting events.

Professional sports in Korea are major attractions for millions of fans feverishly following their favourite teams. In the summer, the most active spectator sport is baseball, as teams from around the country vie for the pennant. In autumn, professional soccer and basketball draw large crowds. Large contingents of fans follow boxing, field and ice hockey, gymnastics, golf and many other sports. In addition to these Western-type sports, traditional sports such as *ssirin* continue to draw huge spectator support throughout the nation. Another Korean sport that has gained worldwide following is *taekwondo*, which now has its place in the Olympics program. Moreover, amateur sports are also thriving and have large followings at all levels.

Today, a great number of sports and pastimes are offered countrywide. Skiing, hang gliding and scuba diving require special places, conditions and equipment in order to be performed. Ice skating, yachting and power boating, are a few of the seasonal activities which are enjoyed in Korea. However, regardless of the season, many Koreans find some outdoors activity in which to participate during their leisure-time. In the more temperate months, the mountains host multitudes of hikers and climbers in the areas accessible from the major urban centres, and likewise, the beaches with sunbathers and swimmers. For those who do not enjoy physical activities, there are cultural events to attend, such as art galleries, antique shops and many historical locales to visit.

HMMTS. Vol. 8.

**Libraries** (see also under individual library)

Libraries have existed in Korea since ancient times. In the Koguryø kingdom, *taehak* (National Academy primarily attended by aristocrats) and *kyøngdang* (schools for the common people) served both as educational institutions and textual repositories. With the unification of the Three Kingdoms, an increased interest in Chinese thought led to a greater need for libraries. Consequently, the Greater Shilla kingdom established Chin'gaksõng as a
royal archive in 855.

During early Koryŏ, marked advancement in printing technology made written material more accessible. Books and texts continued to be collected in royal archives such as Pisosŏng during King Sŏngjong’s reign (981-997), and then Mundŏkkhŏn, Chunggwangŏn, Changnyŏngŏn and Yŏnyŏngŏn during King Sukchong’s reign (1095-1105). Ch’ŏngyŏnggak, Saru, Ch’ŏnjanggak Imch’ŏnggak and Munch’opso were established during Yejong’s reign (1105-1122) and Sŏjŏkso during Injong’s reign (1122-1146). Sukchong’s appears to have taken particular interest in his kingdom’s book repositories. In 1101, he personally inspected the Chunggwangŏn and affixed a special seal on works from the collection. Texts were also kept in Buddhist monasteries. For example, copies of the Ch’ojo taejanggyŏng, the first Koryŏ carving of the Buddhist canon, were stored at forty-four monasteries throughout the kingdom, including the An’guk, Kaeguk and Kukch’ong temples. When the woodblocks for the first edition were lost by fire, a second edition was prepared between 1236 and 1251. Here again, copies were distributed to the principal monasteries. These wooden printing blocks have survived and today are in safe-keeping at Haein Temple.

In early Chosŏn, the royal textual archive, Changsogak, was located in the hall known as Chiphyŏnjŏn. Later, a new repository, Tungyŏnggak, was created inside the hall known as Hongmun’gwan. During the reign of Chŏngjo (1776-1800), the book repository Kyujanggak was created as part of the king’s encouragement of education.

As Korea opened to the West following the 1876 Treaty of Friendship, the nation’s library system was gradually redesigned along Western lines. Unlike the traditional royal collections or temple repositories which primarily served as archives for specialist study, the modern libraries aimed to make books available to the general public. Early libraries founded at this time include P’yŏngyang’s Taedong Sŏgwan as well as Seoul’s Tongji Munye gw an and Sŏjk Chongnamso. At this time, high schools and colleges were also active in creating modern libraries. With the Japanese occupation of Korea, the royal book collection was redistributed according to colonial policy. Some of the books were moved to libraries, and in 1930, 136 141 volumes were transferred to Keijō Imperial University in Seoul. Today, these works are kept at Seoul National University.

After liberation from Japanese colonial rule in 1945, the steady increase in literacy rates necessitated further expansion of the nation’s library system.

Although there has been rather rapid expansion of libraries, Korean libraries lag behind their Western counterparts in terms of collection size and general availability of books. Primarily, they serve as large study halls for young students. Yet much is being done to give Korean libraries a more active role in promoting education for the general public. In addition to shelf collections of books and magazines, many libraries are setting up special collections for children and library facilities for the handicapped, as well as running book clubs and arranging public lectures.

Central national library 1

Middle school libraries 1875
Elementary school libraries 2980
Special libraries 250 (I assume that this figure includes much that Blackwell wants broken down).
Life in Corea

Life in Corea is a work which examines the prevailing conditions in Korea at the close of the nineteenth century. Its author is W. R. Carles, a British vice-consul. This 317-page book was published in 1888 by Macmillan and Company. Its content is based on the author's eighteen-month stay in Korea, and its scope is limited to his experiences while living and travelling there. Aside from a chapter recounting the coup d'etat of 1884 (Kapshin Chǒngbyŏn), the book does not elaborate on the way in which the Korean government was structured and operated at that time, and Korean social systems are also excluded. It does, however, give a valuable insight into the customs of the common people.
Introduction

Korean literature begins with old stories, songs, myths, legends, and history - a great variety of material that has survived from roughly the sixth c., in the Three Kingdoms period. Though the written records commence much later, in the twelfth and thirteenth c. with the History of the Three Kingdoms (Samguk sagi) and the Memorabilia of the Three Kingdoms (Samguk yusa) these later records include materials from earlier times that have been lost or destroyed in the centuries since, or materials that were transmitted through performance traditions.

Songs and other materials from the Koryô period, roughly the tenth to the fourteenth centuries, include rather earthy or bawdy examples; but again because the Korean vernacular materials were actually written down considerably later, after the promulgation of the Korean alphabet in the mid-fifteenth c., and most of them even later than that, in the various eighteenth-c. music anthologies, problems of ascription and dating abound. And matters are further complicated by the suspicion that it was precisely the more earthy Koryô songs that were selected by later generations of government officers to demonstrate the depravity of the earlier era. The Koryô period also witnessed more emphatically in terms of an actual written record a rapid increase in the composition of literary works in Classical Chinese, the language for authoritative, formal discourse - like Latin in the comparable period in Europe.

Soon after the founding of the new Chosŏn dynasty in the late fourteenth c., the Korean phonemic alphabet in use today was invented and promulgated by King Sejong. Although the king's ambitious goal of broad and general use of the alphabet was not realized until the early twentieth c. - in large part because of the solid resistance to the idea put up by the scholar-bureaucrat classes who recognized a threat to their Chinese-learning-based ascendancy - the Korean alphabet nevertheless did have broad and deep impact on the history of Korean literature. Korean prose, including journals and diaries, as well as the two principal vernacular verse forms, the shijo and the kasa, came to represent an alternative to Chinese-language written forms; and, especially for women and others barred customarily from access to Chinese literary training, the vernacular literary forms came to have a political as well as literary dimension.

Officials who, for factional reasons, had been banished from the government, composed shijo and kasa which voiced their complaints; members of the middle level of the official class who, for one reason or another found their careers blocked, might express their frustrations in a bit of allegorical verse, or at more length in a political protest tale such as The Tale of Hong Kiltong, a story about an accomplished male whose status as the son of a concubine made advancement impossible. Women, too, in Korean-language journals as well as such established literary verse forms as the kasa and shijo, expressed the difficulties of their lives in traditional society. The marginalized elements of traditional society employed the Korean language in effect to recover the narrative control of their histories.

Twentieth c. Korean literature has been and continues to be extremely politicized, as it was written on one side or the other of four major political issues: the late nineteenth c. modernization movement, and its questions of collaboration with foreign powers or complete self reliance; the Japanese colonial occupation of Korea from 1910 to 1945, which raised and raises the issue of collaboration; the post-1945 division of Korea into northern and southern ideological regimes; and since the end of the Korean War in 1953, in South Korea the series of dictatorships, both civilian under Syngman Rhee, and military or quasi-military under Generals - later, Presidents - Park Chung Hee, Chun Doo Hwan, and Roh Tae-woo. In North Korea until his death in the summer of 1994, Kim Il Sung had
continued to hold sway over a highly centralized, authoritarian Communist state which permitted the publication only of works dealing in prescribed ways with officially sanctioned subjects.

This politicization of its literature has created in Korea a shifting cast of heroic and villainous characters, not just on the page, but in the ranks of the authors who wrote on one perceived side or the other of such political positions. The novelist Yi Kwangsu, to cite just one prominent example, was arrested, put on trial, and threatened with jail after liberation for his pro-Japanese writings during the period of the occupation. The government which did this to him was headed by Syngman Rhee, who had spent the entire thirty-five years of the occupation in Hawaii, and had been brought back to Korea and installed as the head of the (southern) Republic by the American Army.

Characteristics of Korean Literature

Much as one might describe a new terrain as rocky and hilly, or flat and grass-covered, there are several characteristics of Korean literature that can be described for the reader. While the reader may then experience the satisfaction of recognizing the predicted features of the literary terrain, the process inherently is suspect in that one may see what one looks for, and what one looks for may be to a lesser or greater degree determined by various other considerations. For example, if it is averred that Korean literature displays a relish for the present, for the here and now, an enjoyment of the senses, and an appreciation of humour in many of its manifestations, one has stated something which is demonstrably true and also seems characteristic of Korean culture more generally. While such a formulation suggests at least an indirect relationship between culture and literary expression, at the same time it may provoke the suspicion that 'lively' or 'earthy' are readings of Korean culture constructed from an outside, economically privileged position as between Korea and the West. The colonialist rhetoric of nineteenth c. British discourse on India finds its counterpart in the late nineteenth and twentieth century Japanese discourse specifically intended to denigrate Korean culture vis-à-vis the Japanese modernization project.

Seizing more directly upon the issue of Korea as occupying a subaltern position, it can be noted that Korean literature through the end of the nineteenth c. was engaged in a process of negotiation with Chinese systems of legitimacy and authority. If written in Chinese, Korean literature negotiated its legitimacy in a number of ways: by invoking Chinese reign years, for example, or Chinese place names; or in a form of literary tribute journey, when Korean scholars travelled to China to study, circulate their works, and hope for Chinese recognition and legitimation. When written in the Korean language, Korean literature negotiated either implicitly or explicitly its removal from the Chinese linguistic and cultural system. Such works as the p'ansori narrative 'Tale of Ch'unhyang' make the relationship between the Chinese and Korean vernacular strands in Korean culture the main engine of the plot, as the heroine's fate is to be caught between the two worlds, owing to her situation as the daughter of a kisaeng woman - the ferociously egalitarian, Mother Korea side of her nature - and a member of the yangban official class which would subject her to its hierarchical domination in the form of the unwanted sexual advances by the provincial governor.

The performance mode of transmission of Korean literature, especially up until the twentieth c. when Korean literature underwent a shift from its oral roots to a consumer-oriented, printed literary mode of production, is an intrinsic feature that is beginning to draw more scholarly attention. The performance mode of transmission shaped certain genres of Korean literature quite directly. The shiyo verse form was sung to a standard melody; the kasa was recited; the p'ansori was both sung and spoken; traditional tales were retold; and Chinese texts were memorized and recited to mnemonic patterns that even today can be heard when members of the older generations read the newspapers. A characteristic element in the history of twentieth c. literature has been the exploration of
ways in which to become free of the patterns of performance, as for example in the verse
innovations of Sowol Kim Chongshik in the 1920s, or the prose narrative experiments of
Yi Kwangsu starting with his 'Heartless' published in 1917. At the same time, Korean
writers have sought to recover the oral tradition in their work, on their own terms. The
short story and novel writer Ch'ae Manshik made brilliant use of the *p'ansori* narrative
style and voice in his works from the 1930s and 1940s, just as the poet Kim Chiha has
done more recently in his political satires from the 1970s.

Currently the concept of han has drawn the attention of many of those who are studying
Korean literature. The term is variously described as a sad or bitter resentment, a grudge,
or regret, and the recurrent tone and subject of sadness and regret that runs through Korean
literature from early times to the present is han. This sad, regretful, or resentful tone is said
to embody and express the feelings of the Korean people toward the harried conditions in
which they have lived - subject to foreign invasions and war, ancient and modern; to
oppressive foreign influence and pressure, ancient and modern; and to recurrently
oppressive government, historical and modern.

Korean literature has been and continues to be a contested zone. The Chinese side of it was
monolithically male, the Korean vernacular side slightly less so. With women's issues
currently attracting more attention, with the great changes that are occurring throughout
Korean society at the present time, suddenly hundreds of examples of women's writings -
personal diaries and court journals, and *kasa*, most notably - are being discovered, or
rediscovered, and studied. The concept of popular culture, or more exactly, of the culture
of the non-elites, became a matter of great interest in the 1970s. The study of Korea's past
history began to look for more material about the life of the common people, rather than just
the governing class. *Minjung*, the people, became a prefix to many of the movements of
the 1970s: *minjung* religion, literature, history all fed into the stream of broadening
democratization, which in turn was propelled at least in part by the growth in the later
1970s - when the per capita income level of South Korea overtook and passed that of the
North - and increasingly, in the 1980s, of a consumer economy. Poems and stories about
the world of work in the late 1970s were replaced by poems and stories from the world of
work in the 1980s - notably the book of poems *Dawn of Labour* by Pak Nohae.

Tremendous energy, challenging diversity of positions and views, and seriously contested
struggles are characteristic of Korean literature through all of its span, and in the South,
since 1945. The spectrum seems much narrower under the state ideology of North Korea,
but much less is known at the present time.

The six articles that follow are intended to provide an introduction to Korean literature: oral
literature, classical poetry and prose, modern poetry and prose, and Korean literature
written in Chinese. The essays on classical and modern poetry have sought to describe the
various genres through relatively brief descriptions of the forms, and then provide in
selected translations and interpretive notes a sense of how the genres were used, who the
representative authors were, and what are some of the interpretive issues in the study of
these genres. The essays in classical and modern prose, oral literature, and literature in
Chinese, in contrast, have sought to present a more narrative introduction to their subjects,
with names, dates, selected titles and brief illustrative passages providing an overall map of
the subject. In part this difference of approach is a reflection of the different materials:
specific verse forms are more readily presented through description and representative
texts, while prose invites a more discursive presentation. Such, at any rate, is the rationale
which the authors have come to for their individual approaches to the task of presenting
Korean literature in a few pages that still do some justice to its range and diversity.

(Nota bene: all translations, unless otherwise noted, are the work of the authors.)

David R. McCann
Composition in Classical Chinese

Koreans have written Chinese longer than there has been a Korea and Chinese was the written standard in Korea until the end of the nineteenth c. For close to two thousand years almost every aristocratic Korean male, as part of his normal schooling, studied and memorized exemplary specimens of Chinese prose and poetry and was later judged by his fellows on his ability to compose in such forms, himself. As the modern poet and translator of Chinese poetry by Koreans, Kim Jonggil has said, "Most scholars were poets and most poets were scholars." For these reasons the literary output of Koreans in Chinese until the end of the nineteenth c. far outweighed the volume of their work written in Korean.

We may easily surmise that some portion of the Korean peoples on the peninsula had acquired the use of Chinese during the time of the Four Han Commanderies (108 BCE - 313). In Yonggang-gun, North P'yŏngan Province, there remains a very old stone monument that honours the mountain spirit and offers sacrifice. It goes on to ask for gentle weather, successful farming, and freedom from thieves. A few initial characters of the inscription give the history of the monument and the words of prayer are grouped into four-character phrases. It is a fair semblance of established form for composition in Chinese. This monument is generally thought to have been erected in the year 85 CE. After Koguryŏ (37 BCE-668) drove the Han colonies out of the north, users of Chinese were able to penetrate well into the interior of the country and later, as a secondary effect, their influence reached across national borders to the southern states of Paekche (18 BCE-660) and Shilla (57BCE-935).

The ruling class that built the Three Kingdoms was a warrior aristocracy. They rode horses, shot arrows, and demonstrated superior power as they waged wars of conquest using iron weapons. But they became aware of the need for writing as they consolidated their control and developed a ruling system. Early writing in Chinese emerged as men knowledgeable in Chinese were selected and assigned to non-military tasks but their functions were new yet limited in many respects. Chinese writing was used in technical and practical applications, rather than the expression of ideology or the creation of literature.

As the ancient period of Korean literature came to an end, works of literature written in classical Chinese became the most important means of ideological expression and replaced nation-founding oral narrative poetry. The acts of accepting both a world religion - Buddhism - and the common literary language of an entire civilization - classical Chinese - moved Korea out of the ancient and into the medieval period, making of her - along with other peoples - a civilized country.

Greater Shilla Period (668-935)

Soon after the Three Kingdoms were unified by 668, having arrived at the stage where they had to foster the growth of scholar-officials who could apply Confucian learning to practical administration, Shilla's leaders set up a National Confucian College, which promoted the development of literature in classical Chinese. With the leadership of scholar-officials like the great Sŏl Ch'ong (ca. 660-730), the National Confucian College gave instruction in the Confucian classics, with a course of instruction designed to develop an understanding of the underlying principles of the Confucian canon and Chinese composition.

At the same time, other Korean students were going to the source, China, for a classical education. Ch'oe Ch'iwŏn (857-951?) is representative of those who went to Tang China, passed the government service examination for foreigners, and earned literary fame in China before returning to their Shilla homeland. Ch'oe Ch'iwŏn, from childhood, was
quick and sagacious and had a love of learning. His father, upon sending him to China at the age of twelve, told him, "If you cannot pass the government examinations there after ten years study, you are not my son." Ch'oe Ch'iwôn passed the examinations in the allotted time and embarked on an official career in China and made a name for himself through his compositions. It is said that his skill at embellishment in the parallel prose compositional style would move the reader to awe. The precedent set by Ch'oe Ch'iwôn's accomplishments inspired emulation by later generations.

For a while, Ch'oe Ch'iwôn did realize his most cherished desire of making a name for himself through writing. Though one might have expected him to find a secure position as a man of letters in Tang China, that was not to be. In works he left to posterity, Ch'oe Ch'iwôn, himself, revealed clearly that an impediment faced even the most talented, in that they could never become as Chinese as the Chinese, in spite of their best efforts. Only one who had lived in Chinese society could actually appreciate their stubborn exclusivity. We find that point expressed in Ch'oe Ch'iwôn's 'An Expression of My Feelings to the Minister of War'.

Who, in his homeland,  
has pity for the foreigner?  
Where is the crossing, I ask,  
the crossing for me to take?  
From the start I sought a livelihood  
and never thought of profit;  
It was only to honour my father  
and not to benefit myself.  

The grief of separation on the traveller's road  
is the sound of rain upon a river;  
The dream of returning to his homeland  
is a spring too far away.  
I crossed the waters and chanced to meet  
with waves of benevolence and yet  
If only I could wash ten years of dust  
from the worldly chinstrap of my hat.  

State of Parhae (698-926)

Shilla's unification of the Three Kingdoms actually left much of the northern territory in the hands of another power, a state called Parhae that extended as far north as the Songhua (Sungari) River in Manchuria. Eleven works by Parhae poets have been preserved in Japan and, with most being poems composed when their authors were visiting Japan, they are the fragmental products of happenstance. But they are, nevertheless, of uncontested value.

Among Parhae poets whose works and names are known to us one is Yang T'aesa. Though a military man, Yang T'aesa was skilled at writing poetry. There remain two poems by him, composed in 759 while assigned to Japan with the rank of vice-envoy. One of them is called 'Sound of Fulling Clothes Heard at Night', a reference to the custom of smoothing out - fulling - starched clothing by beating it with rounded mallets on a block of stone. In all, the poem consists of twenty-four seven-character lines, of which the first eight lines follow.

The moon shines in frosty heavens  
and the Milky Way is bright;  
In the traveller's homeward thoughts  
lives a special kind of heart.
Weary sitting long at night,
when anxiety begins to fade;
Suddenly I hear the sound of
a neighbour woman fulling clothes.

The sound arrives in fits and starts
as it follows on the wind;
The night grows deep and stars incline
while it never stops for rest.
Ever since I left my homeland
I haven't heard it once;
And now I hear in a foreign land
a sound so much like home.

It would appear that this was written one night not long before Yang T'aesa was to complete his assignment and return home. Perhaps not anticipating the presence of others nearby, he is lost in lonesome heartache as he gazes at the sky beyond his window. Suddenly, the sound of fulling reaches his ears. But fulling is not a Japanese custom. "The sound (of fulling) arrives in fits and starts as it follows on the wind," the poet sings, as he employs both rhythm and imagination. In the section following the one quoted above, the poet lets his imagination conjure up the appearance of the woman, her tender body glowing with sweet perspiration as she does her heavy work.

Koryo Period (918-1392)

Chinese learning came into its own during the Koryo period when the Korean bearers of Chinese culture participated at the highest levels of government, after having been denied such access by the warrior-royalty of Shilla. Now the civil service examination system - the only route to an official career - was fully utilized to staff all levels of administration and was theoretically open to all freeborn men. Since the examinations stressed the classics of Chinese literature and Confucianism, aspirants were motivated to study such subjects; Chinese learning, hence, flourished.

Large works of fiction in Chinese did not appear in Korea until well into the Choson period, following, of course, their late appearance in China, itself. Therefore, the major genres of Chinese composition in Koryo times included history, poetry, criticism, essays, anecdotes, and biography. In addition to two histories of the Three Kingdoms period and private collections of miscellanea and belles-lettres, a major source of Chinese composition during the Koryo is the Anthology_of_Korean_Writing (Tongmun_son; 1478), a collection in 133 volumes in 45 books (and later twice enlarged) of work from Shilla, Koryo, and early Choson.

Let us look at two writers of the early twelfth c., a poet and a historian, whose world views represent a fundamental tension of the Koryo period: a confrontation between the nativist 'P'yöngyang faction' who aligned themselves with the legacy of Koguryo, and the China-oriented 'Kaesong faction', who were associated with the tradition of Shilla. In the poet Chông Chisang (?-1135) and historian Kim Pushik (1074-1151), we have figures who represent the two sides.

More than anything else, the theme of separation is most heavily emphasized in the songs of Chông Chisang that give voice to the sensibilities of the P'yöngyang people, for whom separation was a salient factor of P'yöngyang life. His 'Parting from Another' (Songin), a memorable quatrain of seven-character lines, sings of such separation.

The rain has passed and grass is lush along the river bank;
I sent you off at Namp'o, choking on a joyless song.
When could Taedong's waters ever be exhausted?
Tears of separation year by year are adding to its azure flow.

While Ch'ong Chisang, on the one hand, demonstrated his fluency in poignant and beautiful poetic language, Kim Pushik, on the other hand, expressed his aristocratic outlook in the structure and content of his History of the Three Kingdoms (Samguk sagi, 1145). While giving greater weight to the Confucian studies and classical Chinese writing that had been established in Shilla than to the independent spirit of the Koguryo nation, Kim Pushik boasted of the cultural level of the hereditary aristocracy of which he, himself, was an exponent.

The most notable section of the History of the Three Kingdoms, from the literary point of view, is its collection of biographies. It had been customary for histories to include biographies ever since the prototypical Historical Records (Shi ji) of China's Former Han dynasty. Kim Pushik chose to follow the Chinese model, which had already established the precedent of presenting a wide variety of human types in the biographies.

Another writer with a critical point of view was Yi Kyubo (1168-1241), whose many works help to define the literature of Koryo. Thought by some to have been Koryo's greatest man of learning, he is equally well known for both his poetry and his prose. His anthology, Collected Works of Korean Minister Yi (Tongguk Yi Sangguk chip), totals fifty-three volumes in fourteen books and is not only a treasure of literature but also valuable for the study of Korean history.

As an essayist, he wrote numerous brief but thought-provoking pieces that commented on both the world of men and the world of thought. A typical example, 'Of Boats and Bribes' (Churoe sŏl), combines humour and pithy comment on human affairs.

I was crossing over a certain river toward the south and there happened to be some people crossing in a boat beside ours. The size of the two boats was the same, the number of boatmen was the same, and even the number of people and horses on board was very similar. Then, when I looked again after a while, the other boat - speeding as though in flight - had already reached the other bank. But, contrarily, the boat on which I rode hung back and did not make headway.

When I asked the reason for this, someone in the boat answered me, saying, "That's because, in the other boat, they plied the boatmen with wine and so the boatmen rowed with all their might", he said.

I could not help but feel chagrined and sighed to myself,

"Ah, if speed and placement of this little boat depend upon the presence or absence of a bribe, then what of the competition for official appointment? When I think how little money I have to my name, it seems understandable why I have thus far been unable to land even a single low-level post!" I said.

I record this with a mind to future reference.

Yi Kyubo is also well known for his lengthy work of narrative poetry, the Epic of King Tongmyong. (Tongmyong-wang p'yŏn), which retells the myth of Chumong, who had become King Tongmyong, founder of Koguryo. Particularly noteworthy are his opening comments, which assert the independent dignity of the Korean tradition.

The mysterious tales of King Tongmyong are so well known that even ignorant men and simple women can tell them. When I first heard them I laughingly remarked that the sage Confucius did not speak of prodigies, feats of strength, disorders, or spirits, and since the
stories of King Tongmyōng were obviously exaggerated fantasies, they ought not to be repeated... Later on, in the fourth moon of 1193 I obtained a copy of the old Samguk-sa and saw that the account of King Tongmyōng given there included more marvels even than the oral tradition. I still could not believe what I thought were false and illusory legends; but after mulling them over several times, I came round to thinking that they were not illusory, but holy; not false, but spiritual; and that if our national history was to be written properly, they could not be ignored. (Translation by Richard Rutt)

Two notable Buddhist monks of the thirteenth c. made lasting contributions to the development of Korean literature. Iryōn (1206-1289) compiled Memorabilia of the Three Kingdoms (Samguk yusa; ca. 1285) and Ch'ungji (1226-1292) was a major contributor of poetry in Chinese on a wide range for topics from Sǒn (Zen) Buddhism to the sufferings of the peasantry.

While Kim Pushik’s History of the Three Kingdoms represents the official view of the Koryǒ court on the history of Shilla, Koguryǒ, and Paekche, Iryōn’s Memorabilia of the Three Kingdoms is an unofficial compilation that takes a freer view. Iryōn covers a longer stretch of history than did Kim Pushik - sometimes extending even into the the Koryǒ period - and incorporates many diverse materials, including legends, folk tales, nation-founding myths, foundation tales of Buddhist temples, and the miracles of noted monks.

Memorabilia of the Three Kingdoms, even from its opening, subtly criticizes the History of the Three Kingdoms. Iryōn questions Confucian rationalism by asking how one can think it reasonable for ancient nation-founding culture heroes of China to receive mysterious tokens and regalia and accomplish great undertakings but, at the same time, reject as tales of ‘mysteries, prodigies, perversities, and demons’ the colourful founding mythology of the Korean people, as did Kim Pushik.

The elimination of historical references to Buddhism in the History of the Three Kingdoms was another a great dissatisfaction for him. Whereas the cultural stream in which the Koryǒ people took pride began in ancient myth and extended through Buddhism, Iryōn undertook his own compilation with the attitude that little that is Korean can be left when these two are discarded.

The Buddhist monk Ch'ungji stands apart for his social awareness and is unlike other Buddhist Sǒn poets of the Koryǒ period, who left no significant social commentary. This is expressed in his stinging indictments of the Koryǒ and Mongol (Yuan) governments for their horrific misuse of the Koryǒ peasantry in their frantic campaigns to prepare men and matériel for the two abortive invasions of Japan, attempted in 1274 and 1281, while Koryǒ was under Mongol domination.

Witnessing the impact of these events on the lives of the peasantry, Ch'ungji stepped forward to give voice to his conscience, while other men of letters kept their agony to themselves. The result was a long poem in which he described the wretched scene in 1280 of dragooned corvée labour -worse than 1274 by 'one hundred fold' - as Yfiuan officials came parading down to the south to supervise war preparations. As this heavy labour stretched on for three long years, even farmers were pressed into service as boatmen and life was made unliveable for those whose homes were by the coast. And, while survivors were being rounded up as soldiers to be sent off in the expedition, Ch'ungji described the dreadful sight he saw. Nonetheless, political exigencies obliged him to append a final stanza in praise in the Yuan Emperor.

'The Wretched Sight of Yǒngnam in Twenty-four Verses - Written in 1280 During the Construction of Warships for the Subjugation of the East'

At the wretched sight of Yǒngnam,
I try to speak but tears precede my words.
In southern provinces they make matériel,
And at three mountain sites, the ships of war.
Corvées of war increase one hundred fold,
And heavy labour stretches three long years.

Levies and demands press on them like comets,
And thunderous commands are sent to them.
Mongol envoys continue visits without pause,
And generals are streaming from the capital.
With all the able-bodied ganged and tied,
Does any back escape the whip?

While visitors are being welcomed as usual,
Movement of matériel continues day and night.
Neither ox nor horse with sound back left;
And the people, when will their shoulders ever rest?
At icy dawn they go to pick the mountain arrowroot
And, treading the moon, return with reeds they’ve cut.

Deckhands are levied from the furrows they once tilled,
And helmsmen are enlisted in the coastal towns.
They pick up conscripts and put them into armour,
Take young braves as porters for their spears.
They only press them harder all the time;
How could they forgive a momentary delay?

Their wives fall to the ground in tears
And parents lift their wails to Heaven.
Having seen the bounds of this world and the next,
How can they hope to keep life and breath intact?
Left behind are just the elders and the children,
Who struggle on but still are vexed and worried.

In every county, half the houses are abandoned;
In every village, all the fields lie still.
Whose house is there that isn't desolate?
What place is there that isn't cursed?
The taxes of the yamens are not easy to avoid
And how can the military draft be lessened?

Sickness and injury only worsen by the day,
How will they recover from exhaustion and disease?
Every task they touch can only be endured with wailing
And as for life itself - how truly pitiful it is!
Even if they know the harshness of survival,
How can they appeal? There is no place to remonstrate.

The emperor’s virtue o'erspreads them like blue heaven
And imperial radiance o'erhangs them like white sun.
If the untaught people can only wait a little while,
The imperial benevolence will surely be proclaimed.
Then go look within the provinces of the south:
In every house they sleep on pillows of peaceful rule.
Yi Chehyŏn (1287-1367) is representative of a comparatively productive generation that emerged in Koryŏ’s last century. Yi Chehyŏn’s writings are too voluminous to be described in simple terms but, taken as a whole, they show two orientations - either toward his experiences in Yuan China or toward his home country of Koryŏ. When King Ch’ungson went to Yuan to build a library called the ‘Hall of Ten Thousand Volumes’ in the capital city of Yanjing, Yi Chehyŏn accompanied him and associated on an equal footing with leading Yuan scholars. He took pride in his ability to write polished and metrically correct poems in Chinese styles that were thought impossible for non-Chinese to master. Nevertheless, his heart was always with Koryŏ and he was greatly concerned with the changing political situation in his homeland. From time to time in his travels he would reveal in his poetry his keen yearning to get back to Koryŏ.

Floating around in this tiny boat, I ask
what am I to do about my heart?
Who said that those within the Four Seas
could all be brothers?
Once I hear the cry of wild geese,
I yearn for news from afar;
Whenever I see the homing birds,
I lament my toilsome life.

A distressing autumn rain envelopes
the trees at Qingshen, and
In the falling sun clouds cut across
the Baidi Fortress.
I have learned too well that water-shield soup
is far better than goat’s milk gruel;
There is no need for me to ask Jun Ping
whether I shall stay or go!

In this poem called 'Thoughts of Returning' (Sagwi), Yi Chehyŏn reveals his desire to return to Koryŏ. He travels up the Yangtze River on a boat that passes the village of Qingshen and arrives in the vicinity of Baidi Fortress, where the last emperor of Shu Han died, a broken man, unable to realize his dream of unifying China. Tormented by thoughts of the ordeals of his own king back home in Koryŏ Yi Chehyŏn cannot pass off this scene lightly. The ‘distressing autumn rain’ and ‘falling sun’ serve basically to reflect the poet’s sad heart. He far prefers the humble soup made back home from a pond weed called ‘water-shield’ to the goat’s milk gruel then popular in Mongolized Yuan and he knows that he has no need to ask a fortune-teller like the famous Jun Ping whether he would remain longer in Yuan or go home to Koryŏ.

Next came the generation that included Yi Saek (1328-1396). Yi Saek furthered the line of thought adopted by his teacher, Yi Chehyŏn, and emerged as the teacher to another generation. Not only did his own scholastic and creative writing represent a considerable level of achievement, but he trained many disciples, who were able to establish a new spirit in thought and literature and thus exert a profound influence on later Koreans.

He passed the government examination, became a Literary Licentiate at the age of fourteen, and was then accepted at Sŏnggyungwan, the national Confucian Academy. Later, he went to China, where he passed the Chinese government examination and received official appointment. In his forties, he returned to Korea and participated in the government of Koryŏ, at the same time promoting the Neo-Confucian philosophy which he had studied while in China. Later critics believed that Neo-Confucianism became strongly established in Koryŏ on the strength of Yi Saek’s teaching.

Among Yi Saek’s poems are many that sing of popular customs, such as ‘Visiting an
Exorcism' (Kunahaeng) and 'A Rockfight on Tano Day' (Tano sŏkchŏn); and still others make use of popular adages for their materials. In a number of single-stanza poems - like 'Silk-raising Woman' (Chambu), 'Woodcutters' (Ch'odong), 'Farmer' (Nongbu), and 'Fisherman' (sObu) - Yi Saek depicts in concrete terms the hard life of the labouring masses.

Chosŏn Period Literature

The shift in government policy away from support of Buddhism and toward Neo-Confucianism was deeply related to the development of Korean literature written in Chinese. The examination system became the only route to official appointment and aristocrats were encouraged to devote themselves to study in preparation for the examinations. The content of the examinations obliged Confucian students to master the Four Books and Five Classics for the Classics Licentiate Examination and such Chinese literary forms as shi poetry, rhyme prose (fu), documentary prose (biao), and the problem essay (ce) for the Literary Licentiate Examination. These requirements generated a nation-wide infrastructure of preparatory schools ranked in several levels. Following upon this beginning, literature in Chinese in all genres flourished in Korea for the five hundred years of the Chosŏn period and can be organized into the three periods of early (1392-1506), middle (1506-1720), and late (1720-1910).

1. Early Period (1392-1506)

Even though this was a transitional period in the institutional life of the country, literature in Chinese continued to develop unabated with the protection and encouragement of the government. Most representative of literary people during the early period of Chosŏn were Chŏng Tojŏn (1337?-1398), Kwŏn Kŭn (1352-1409), and Sŏ Kŏjong (1420-1488). The fervently anti-Buddhist Chŏng Tojŏn was a disciple of the great Neo-Confucian Koryŏ scholar, Yi Saek. Although he passed the civil service examinations under the Koryŏ government, he became a close supporter of Yi Sŏnggye, the founder of Chosŏn, for which he was favoured and well rewarded as a 'Dynastic Foundation Merit Subject'. Nevertheless, he was later executed in the course of a power struggle that brought Taejong, the third king, to the throne. Not only was he talented at letters and a leader in the promotion of Neo-Confucian thought, but he also compiled the Administrative Code of Chosŏn (Chosŏn kyŏngguk chŏn) and contributed to the compilation of the Six Codes of Governance (Kyŏngje yukchŏn). Thus, in addition to being a man of literature, this multi-talented person was also a scholar, statesman, and philosopher.

Kwŏn Kŭn was a disciple of the politically powerful late Koryŏ statesman, Chŏng Mongju. He passed the examinations at the age of eighteen in the last years of Koryŏ and accepted official appointment but, on the eve of Koryŏ's collapse, forsook his post and retired to the countryside. Later, at the invitation of Chosŏn founder Yi Sŏnggye, he emerged to serve in a number of posts ending up with the senior rank of Academician. Looking back from his late sixteenth-c. vantage-point, the noted scholar and writer Hŏ Kyun (1569-1618) remarked that the literary accomplishments of Chŏng Tojŏn and Kwŏn Kŭn were so high that they set long-term standards of value.

Sŏ Kŏjong, who held the tenured rank of Academician for twenty-six years, was not only a man of great erudition but was also an exemplar in Chinese composition - so much that men of letters continued to regard him as a model even until the waning years of the dynasty. Among his many works two shining monuments are Remarks on Poetry by Koreans (Tongin shihwa, 1474) and the massive Anthology of Korean Literature (Tongmun sŏn).

The field of literary criticism in this early period was defined by Sŏ Kŏjong's Remarks on Poetry by Koreans. In addition to the anecdotes surrounding the composition of notable poetry, Sŏ Kŏjong's work also contains commentaries on specific works of past poets that
constitute full-blown literary criticism. And his *Anthology of Korean Literature*, as a collection of the best writing from Shilla to early Chosŏn, is esteemed as a critical consolidation of Chinese literature by Koreans through early Chosŏn.

Prose of this period showed much development over that of previous times. Many works appeared with a considerable range of content including remarks on poetry (*shihwa*), amusing anecdotes (*sohwa*), fiction (*sosol*), and authentic precedents (*chŏn'go*). However, of all the works composed in this era, the most noteworthy would be *New Tales from Mount Kūmo* (*Kūmo shinhwa*) by Kim Shisūp (1435-1493). The appearance of Kim Shisūp's *New Tales* is considered an epochal event because the work broke away from the limitations of legend and tale and encroached upon the territory of fiction.

2. Middle Period (1506-1720)

Many regard the middle of the Chosŏn period as the golden age of Chinese literature in Korea. In particular, the reign of King Sŏnjo (r. 1567-1608) was noted for the number of literary people who poured forth, even in the face of the devastating invasions of 1592 and 1597 by the Japanese warlord Hideyoshi. With a series of monarchs who supported literature as part of an official policy that favoured Confucianism, Chinese learning and literature continued to develop in spite of the unfortunate series of purges that marred the political and cultural scene.

Literary activity during the middle period differed from the early period in several respects. The literary composition of verse and prose became separated from Confucian studies, people began to specialize in either prose or poetry, and the favoured Chinese influence shifted from Song dynasty poetry to that of the Tang dynasty. That this was a period when writers began to specialize in prose or poetry is not to say that earlier men of letters were uniformly proficient at both. But, since most did not emphasize one over the other, the better writers were more likely to be equally skilled at both prose and poetry. Nevertheless, among the most prominent writers of the day, Ch'a Ch'ŏll'o (1556-1615) and Kwŏn P'il (1569-1612), were famous for their poetry and Ch'oe Ip (1539-1612) was better known for his prose than his poetry.

Ch'oe Ip was a leading man of letters in his day. He passed first in the examinations at the age of twenty. Because he would never release a composition until he had rewritten the manuscript many times, people would rush to memorize his words when they did appear. Although Ch'oe Ip was also skilled at poetry, the verdict of later critics is that he was, first and foremost, a master of prose.

Ch'a Ch'ŏll'o had a formidable talent that earned him critical praise. He once boasted that, if he papered the Great Wall of China and started to write a poem, he would run out of wall before he did poetry. He also claimed that once, on a visit to Japan, he wrote four or five thousand poems in the space of a single day.

Kwŏn P'il never gained rank. By nature unrestrained, he did not fawn before the powerful but satirized the political scene of his day. For this behaviour he was sent into exile, where he died. For him, poetry was not a means of advancement, nor was it a way to enjoy leisure hours: it was a demanding search for the truth in life. He said, "Beauty is not the only thing of value in poetry; in order to create poetry one must understand both basic philosophical principles and the nature of humankind."

Chinese literature in Korea was under the influence of Chinese literature, itself. During late Koryŏ and early Chosŏn the dominant influence came from Song dynasty poetry but this middle period of Chosŏn saw changes in preferences. After two hundred years of modeling their poetry on Su Shi (1063-1101) and his disciple Huang Tianjian (1045-1105) of the Song, a swing toward the Tang dynasty was led by the efforts of poets like Paek
Kwanghun (1537-1582), Ch‘oe Kyŏngch‘ang (1539-1583), and Yi Tal (1539-1612), who became known as the Three Tang Poets of Korea (samdang p‘a sha’n). The most famous of the Three Tang Poets was Yi Tal. He was a superior poet but, because of his illegitimate birth, he could not rise in the world and, therefore, spent his life a wanderer. Nevertheless, his poetry earned wide praise.

In addition to men of letters known for their prose and poetry, there were also many talented writers among those men who devoted their lives to the worlds of government and scholarship. Four very prominent representatives, known collectively as the Four Great Masters (sadaega), are Yi Chŏnggu (1564-1635), Shin Hŭm (1566-1628), Yi Shik (1584-1647), and Chang Yu (1587-1638).

Yi Chŏnggu (1564-1635) was active throughout and after the period of the Hideyoshi invasions of the 1590s and, taking it upon himself to demonstrate the worth of the pure and correct Chinese composition of the ruling elite, was revered as the eldest of a group known as the Four Masters of Chinese Prose. During the Hideyoshi invasions, when it was mistakenly thought in Ming China that the Koreans had brought the invasions on themselves, Yi Chŏnggu composed a memorial to the Chinese emperor clarifying the facts and arguing that the view was baseless. As a result he earned considerable fame in both China and Korea. Although out of favour for a while during the reign of King Kwanghae-gun (r. 1608-1623), he was brought back because of his diplomatic ability and effective Chinese composition. Yi Chŏnggu was recognized for demonstrating the utility and persuasiveness of prose but critics found him short in native ability and elegant brevity and felt his compositions lacking in organization.

Shin Hŭm was a man who had what Yi Chŏnggu lacked. Shin Hŭm also served in diplomacy during the years of the Hideyoshi invasions, spent a long time in exile during the reign of Kwanghae-gun, and received important appointments under Injo, rising to Academician and then Chief State Councilor. He was highly praised for his exemplary composition in the natural 'ancient style', as opposed to the artificial 'parallel prose' style.

Yi Shik passed the examinations during the reign of Kwanghae-gun but opted for self-rustication until Injo ascended the throne. Like the other Four Great Masters, he also served in major posts including Academician and Minister. Yi Shik specialized in prose composition that was artfully shaped and was praised as the pinnacle of the classic 'ancient style'.

Although Chang Yu could not devote himself wholly to the pursuit of literature, he went further than Yi Shik in his support of the independence and purity of literature. In fact, he believed most firmly of the Four Great Masters that their prose style should be widely accepted as a model of composition.

3. Late Period (1720-1910)

Qualitative improvement of Korean literature in Chinese during the late period was comparatively slow compared to the middle period. Early in the period, the newly-emerged, reality-based school of Practical Learning (Shirhak) attacked Neo-Confucianism as doctrinaire and Chinese poetry as unproductive; and, by the end of this period, new cultural influences from Western Europe were undermining the cultural development of Asia as a whole. Not that Chinese literature in Korea was stagnant at the time, for Chinese learning became more widely disseminated than at any time before and the ability to compose Chinese poetry became a cultural requirement even among the country gentry. Moreover, in a phenomenon difficult to perceive in earlier periods, many talented poets were emerging from the commoner class.

In a social development that had its origins in the middle of the seventeenth c., people of
common origins - technical officials, petty clerks, descendants of secondary wives, merchants, and other commoners - emerged as a distinct social class. These townsmen were called yohangin or wihangin, terms that refer to people who live 'within the gates' and the people 'of the lanes'. Although the Chinese hanzhi poetry they wrote was not all that different from the hanzhi that literati wrote, they called their hanzhi 'folk songs' (p'ungyo) in the proud belief that they had created a 'townsman literature' that was distinct from literati literature.

Although the townsmen earlier had no choice but to suffer lives of suppression, their circumstances changed in the late Choson period. When the literati who were not from politically powerful lineages slipped into ruin and the class system began to come apart as commerce developed, townsmen went into commerce and amassed wealth. They were gaining a position that made the fallen literati seem unimportant to them; indeed, some townsmen thought themselves scholars and even established direct connections with the ruling lineage elite. These circumstances altered the scope of literature in no small way.

Townsmen not only emulated the literati by publishing collections of poetry but, moreover, they also pioneered new writing based on life's realities. They limited themselves by restricting their interests to literature in Chinese and by making no effort toward a commercial literature that could attract a broad range of readers. However, it is certainly notable that they did justify an expansion in the bearers of literature by arguing that everybody was equipped with the ability to produce literature. They fixed upon a literature that sought meaning in life through personal reflection rather than self-advancement through the examinations.

The movement on the part of townsmen to collect and publish their poetry dates from the palace slave Choe Kinam (1586-1665), who edited Miscellaneous Songs of Six Poets (Yukka chabyŏng ; 1668). It enjoyed much expansion in the next century with the publication of Folksongs of a Peaceful Reign (Sodae p'ungyo), edited principally by Ko Shion (1671-1734) and Ch'ae P'aengyun (1669-1731) and published in 1737 with introductory remarks contributed by the literatus and poet O Kwangun (1689-1745) among several others. This book marked the starting point for a series of three such anthologies, published at sixty-year intervals (also in 1797 and 1857), ultimately containing the works of one hundred sixty-two townsman poets.

In his introduction, O Kwangun remarks, 'There are those who say that literati go after fame and townsmen go after fortune but the world has changed and now townsmen endeavour with poetry, forsaking fortune and valuing fame.' Ko Shion, as a translator who specialized in Chinese, was a leader of townsman literature in his day. In his collection he remarks that poems by people of low status are in touch with the songs of the masses and that it is therefore proper to refer to them as 'folksongs'.

The most active men of letters during this period - all exponents of the Practical Learning school-- include Pak Chiwŏn (1737-1805) and his followers Yi Tŏngmu (1741-1793), Yu Tŭkkong (1749-1807), Pak Chega (1750-1805), and Yi Sŏgu (1754-1825). Especially noteworthy for his poetry is Shin Wi (1769-1847).

Pak Chiwŏn was born into an illustrious family but did not sit for the government examinations nor receive any useful education in his youth. What made a difference for him was the opportunity to visit Qing dynasty China with an elder relative and see first hand the changes in China resulting from the influence of Western science and technology. He wrote an account of his travels and experiences, called Jehol Diary (Yŏrha ilgi). 'Jehol' is the old name for an area of China lying between Korea and the Chinese capital, now called Chengde.

Pak Chiwŏn's journal is unlike any other travel journal in both structure and expression.
While maintaining a balance between fact and fiction, his eclectic writing style has long been regarded quite singular for its startling technique that employs a variety of narrative viewpoints. This complex and many-sided work defies literary classification. His travel experiences and the many anecdotes related to his journey include matters of his own direct observation, stories heard from others, and incidents fabricated for needs of the moment. Some of the anecdotes like 'The Story of Master Hŏ (Hŏ-saeng chŏn) and 'A Tiger’s Rebuke' (Hojil) could stand alone. Introduced as a story Pak Chiwŏn heard from another, 'The Story of Master Hŏ' is about the attempt by an impecunious scholar to shake up the economy of the entire country; and 'A Tiger’s Rebuke', copied from a manuscript he found on his journey, exposes the hypocrisy of a respected Confucian scholar.

Although he did not devote much energy to the writing of verse, his poetry, like his prose, was stamped with his own peculiar style and expression, earning him recognition for its considerable quality.

An old man, who would shoo the birds,  
was sitting on the southern ridge;  
From ears of millet that drooped like dog tails  
dangled yellow sparrows.  
Farm hands, both old and young  
were all out in the fields;  
From dawn to dusk the farmers’ houses  
were latched tight even in the day.

A kite swoops down upon a chick  
and makes a grab but misses, then  
The flock of chickens fuss and cackle  
by the fence where pumpkins bloom.  
The young wife, basket on her head,  
pauses, about to cross the stream;  
And a little child, with his yellow dog,  
hurries after her.

This Chinese poem composed in seven-character lines is called 'Farmhouse' (Chŏn’ga). With its life-like description of farm life - as if seen with the eye - his poem brings to mind the paintings of everyday life that were so popular in Korea at the time. However, in his poetry, Pak Chiwŏn does not engage in the same bold experiments that characterize his prose but, rather, takes an approach with just the right degree of eclecticism.

Yi Tŏngmu (1741-1793), Yu Tŭkkong (1749-1807), Pak Chega (1750-1805), and Yi Sŏgu (1754-1825) followed the lead of Pak Chiwŏn and all became equally famous, particularly for their poetry. When Yu Tŭkkong’s uncle, Yu Yŏn, went to Qing China in 1776, he compiled a collection of poetry by the still-young four poets and published it there with his introduction recounting praise for the verse of the young Koreans by Qing men of letters. The collection was originally published as Collected_Poetry_from_Korean_Visitors (Han’gaek kŏnyŏn chip) but later became customarily known as Poetry_of_the_Four_Masters (Saga shi), on the basis of a reference in the introduction to the four poets as the 'four masters'.

Since Yi Tŏngmu’s poems bring one close to the heart of Korean land and life and let one see into the hearts of Korean men and women, Pak Chiwŏn dubbed them 'folksongs of Korea'. Yi Tŏngmu's poetry maintains the original rhythm and tone of Hanshi and, since it is rich in picturesque expression, it also gets close to the mores of his times. As one example, we have the following 'On a Farmhouse' (Che chŏnsa).

Beside a pile of cast-off bean shucks
the lonely path divides;
A red sun rises and slowly spreads,
scattering the herded cows.
So blue and green they seem as dyed-
the distant peaks that bring us fall;
So fresh that I would drink from them-
the clouds that follow after rain.
Shadows of the dancing reeds
give the watching goose a start;
To sounds of cold wind in the rice,
the spotted bass kick up a fuss.
I'd like to move to the mountain's south
but as for thatch to cut
I'll have to ask the old man farming there
to let me share a half.

Although Yu Tükkong was not so productive as Yi Tönmu, he was more significant
because of the breadth of his concerns and the range of materials he incorporated in his
poetry. He devoted himself to an understanding of the history of the Korean people and, in
this spirit, toured the sites of many Korean capitals of the past. The upshot was a forty-
three-stanza narrative poem, 'A Poetic Reminiscence of Twenty-one Capitals' (Ishibil to
hoego shi ). Identifying some twenty-one capital sites from Tan'gun's Old Chosón to the
state of Koryó, he demonstrates his intention to explore every forgotten byway as he covers
even minor states of the Three Han and Three Kingdoms periods like Kammun (North
Kyŏngsang), Usan (today's Uulu<ng Island off the east coast), and T'amna (Cheju
Island).His history is not just the history of the victors. He deliberately breaks away from
a point of view that favours only the orthodox and adopts a relativistic appraisal of culture.

Even though the nineteenth c. was a time of social and political disquiet, Korean literature
in classical Chinese produced one man whom some critics regard as the best Korean poet in
Chinese of all time. The man was Shin Wi (1769-1847). Kim T'aegyóng (1850-1927) -
one of the last great scholar-officials in the orthodox tradition - summed up Shin Wi's
accomplishments, saying, "With divine exhilaration, Shin Wi's poetry races like proud
steeds that piaffe and curvet ; a poet endowed with the stuff of all creation, he was the
foremost master of Chosón's five hundred years."

Shin Wi composed some four thousand poems, a large corpus of work, and his topics and
themes are quite varied. He shows his concern for the hardships of the common people in
poetry like his fifty-poem collection, Miscellany (Chapsŏ ), and the twelve stanzas of his
'Quatrains Upon Seeing a Drama' (Kwan'gŭk chŏlgu ), written after seeing a performance
of p'ansori oral narrative, provide valuable materials for understanding the new arts of his
day. His forty poems collected under the title, 'Short Popular Lyrics' (So_akpu ), being
Chinese translations of Korean shijo verse, constitute a representative work of its sort. In
'Critical Quatrains on Korean Poets' (Tongin_nonshi_chŏlgu ) he presents thirty-five critical
quatrainst about Chinese poetry by generations of Koreans. This gives evidence that he
raised the edifice of his works on a foundation inherited from the full range of the Korean
literature that had preceded him.

Shin Wi centred the world of his works on a core of poetry that reached the very pinnacle
of sensual elegance. He equipped himself with all the essentials of the aristocratic arts and
was lauded as a triple threat - skilled not only in poetry and calligraphy, but in painting as
well. He invests his compositions with a sense of scenery such as that found in great
painting. He makes maximum use of antithesis and keeps an eye on the delicate harmonies
and contrasts that one sees and feels through the sense of colour. But neither his materials
nor his expression is gaudy. An example would be the following 'Watching the Moon at a
Fishing Place':

...
Rolling waters, moon above the waves;
Mottled cover, frost between the leaves:
Frost dazzles like another moon and
Sinks together into endless seas of mist.
In the fishing place, a single boulder,
Rests within the middle of the waters:
Not knowing whether night is deep or shallow,
We slowly watch our shadows lengthen.

But there was more to life in Korea in the middle of the eighteenth c. than simply indulging oneself in poetry that reaches for the utmost in sensual beauty. Those aware of the changes of the times had to be on their guard. The louder the outcry of criticism against the ruling system, the more crucially important it became to secure the norms of classical writing.

Composition in classical Chinese, although based upon a foreign writing system, was used to express the thoughts and feelings of Koreans for more than one thousand years and reached its high-water mark during the reign of King Sŏnjo in the late sixteenth c. But, following upon the introduction of Western European culture, the awakening of the masses, and the growing popularity of Korea’s own alphabetic script, the fortunes of Chinese began to ebb. Over the course of the twentieth c. with industrialization and urbanization, new generations of Koreans have found Chinese increasingly irrelevant in their lives. Korean literature has become a literature in Korean.

Marshall R. Pihl

Classical Poetry

Earliest Native Song, the Hyangga

The earliest examples of Korean vernacular song, poetry, or verse, the hyangga ('native song') were gathered in two major collections from the Three Kingdoms, Greater Shilla, and early Koryŏ periods. There are eleven hyangga collected in the Life of Master Kyunyŏ (Kyunyŏ chŏn) a biography of a Buddhist monk which includes eleven of his devotional hymns. The Memorabilia of the Three Kingdoms (Samguk yusa), the thirteenth-c. compilation by the Buddhist monk Iryŏn, contains fourteen examples. All other sources referred to in these two collections and in the twelfth-c. History of the Three Kingdoms, or Samguk sagi, by Kim Pusik, have evidently been lost or destroyed in the intervening centuries. Most notably missing in the Samdaemok, a ninth-c. anthology of songs and poems mentioned in Samguk yusa, and thought to have contained approximately one thousand hyangga texts.

Historical attention to the hyangga was further attenuated by the circumstance of their being Korean rather than Chinese-language compositions. All of the hyangga texts are to be found embedded in Chinese-language narratives, and because the preferred language for formal compositions until the very end of the nineteenth c. was, indeed, Chinese, the hyangga and scholarly study of them remained buried in the Chinese. Not until Ch’oe Namso’n’s 1928 edition of the Samguk yusa did that particular, folk-oriented compilation reach much of an audience. It should be noted, though, that Ch’oe’s interest was strongly nationalistic, part of the program of cultural nationalism pursued by Korean scholars to recover elements of the Korean cultural past with which to refute Japanese colonialist claims that there was none.

Yet even granted the seemingly pre-eminent esteem given to Chinese culture in pre-twentieth-c. Korea, the very survival of the hyangga may serve to underscore certain
aspects of Korean literary and cultural history. First, despite the privileging of Chinese language and culture, 'Korea' has always exhibited a deliberate selectivity regarding things Chinese which has on repeated occasions made clear the distinction between Chinese and Korean culture, and the consequent, practical need to assess the applicability of Chinese models for Korean adaptive use. At the same time, like any other culture and people, 'Korea' has also displayed a commitment to the view that its own, indigenous qualities as a culture were worthy of attention and preservation.

From such a complex and nuanced attitude came, among other creations, the script known as hyangch'al. Using Chinese written characters, Korean scholars in the ninth c. devised a complex method to write down the Korean language. Some characters were used for their meanings, but spoken as Korean words just, for example, Arabic numerals are used in modern languages. Other characters were used to indicate grammatical meanings, such as the past tense, or the possessive case. Still others were used for their phonetic values only, to represent Korean language syllables having no necessary connection to the Chinese character meaning. This last also happens to be the basis for the Japanese hiragana syllabary, derived from simplified Chinese written characters.

The hyangch'al system made it possible to record Korean-language texts, and it is in this system that we now find Korean-language songs recorded with Chinese characters in the very middle of Chinese language texts, the Samguk yusa. and Life of Master Kyuny6. The twenty-five songs so recorded are the hyangga. Among the twenty-five there are hyangga of four, eight, and ten lines in length. The themes of the hyangga range from Buddhist (18 of 25) to the relationship between ruler and subject (2), between man and woman (2), between friends (2), and 'other' (1). The putative composers of these songs include Buddhist monks or believers (18), hwarang knights (3), and others (4).

While the total of only twenty five songs may seem a pitifully small residuum to be called Korea's 'ancient songs', given the exigencies already noted in recording and transmission of the songs, and furthermore, Korea's own precarious history, including the devastating series of major invasions by the Mongols, Japanese, and Manchu peoples (during which the destruction or theft of cultural objects became epidemic practice), the hyangga, few in number yet registering a distinctly Korean voice, and an attitude in several instances of almost saucy savoir faire toward the awesome manifestations of religious, spirit, or ritual power they engage, seem a particularly apt precursor to Korea's literary and cultural history in the ensuing millennium.

A Hyangga Sampler

'Södong's Song'

Princess Sönhwa

Has found a secret love.

At night she is in the arms

Of Master Mattung.

This four-line love song is recorded in the fifty-sixth chapter, Book Two of Samguk yusa. The chapter describes how King Mu of Paekche sought to marry Princess Sönhwa of Shilla by going to the Shilla capital, teaching the children of the city to sing this song, and then waiting for the royal family to expel the dishonoured princess. According to the story, the trick worked; Master Mattung, also known as Södong in the story, the childhood name of King Mu, met Sönhwa on the outskirts of town and took her back to the Paekche capital as his bride.

Like much of the rest of the Samguk yusa, the story of Sönhwa and Södong is a
fascinating, compressed treasure-trove of cultural and historical information. King Mu ruled Paekche during the seventh c.; Princess Sŏnhwa was the fourth daughter of King Chinp’yŏng of Shilla. A quite different Paekche King, Tongsŏng (479-501) did in fact marry a Shilla princess in 493. Despite what seem to be concatenations of various reigns and events, through all of its curious additional details about sweet potatoes, mountains of gold nuggets, and Sŏdong’s trick with the song, the story may well reflect a Paekche effort to shore up its defences against Shilla by establishing a marriage alliance. The story also reflects a more general pattern of marriage practice in which the groom travels to the bride’s house for the first night, then brings her home to his house where she will live for the rest of her life.

The song works as a clever piece of trickery in the story, but in another context with different names, it might well be any group’s teasing song about someone else who might-or might not-have a secret, sweet affection for someone.

'Distant Air'
We come we come we come
We come, O woe!
Woeful, all of us,
We come to cultivate piety.

Also from Samguk yusa, this song is said to have been sung by men and women labourers separating the clay during the construction of a statue of the Buddha during the reign of Queen Sŏndok. The chapter 'Tangji Wields His Staff' of Samguk yusa Book Four observes that the song is still performed when men and women in rural villages pound rice. The chapter speculates that the song may have been a mortar pounding song, originally, and that the onomatopoeia of the original song’s k’ungdŏk k’ungdŏk for the sound of the pounding was replaced with oda oda, or “We have come, we have come.” All of this speculation in Samguk yusa suggests the compiler Iryŏn’s honest uncertainty about the song’s origins, and his curiosity about etymologies and other historical questions. This in turn reflects Iryŏn’s personal interest in preserving the vernacular folk materials which the Record of the Three Kingdoms as a formal, official historical record, had for the most part ignored.

'Flower Presentation Song'
By the purple cliff’s edge
If you will tell me to let my ox go,
And if you will not be shamed by me,
I will pluck the flowers and give them to you.

A third example of the four-line hyangga, the 'Flower Presentation Song' also conforms to the interpretative premise that the hyangga may well include examples of love songs or songs sung by men and women during village rituals. The Samguk yusa chapter in which this song is recorded tells the story of a Lady Suro who was so beautiful, dragons, spirits and other beings would carry her away whenever she approached their domains of lakes, streams, or the ocean. At one point as she was travelling in a procession with her husband, she noticed flowers growing on a cliff by the sea, and asked her attendants to pluck them. They replied that no human could climb the cliff, whereupon an old man appeared leading an ox, who offered to fetch her the flowers.

The late Chŏng Pyŏnguk of Seoul National University suggested that this and other songs and stories from Samguk yusa might reflect village wedding or fertility rituals much like those described by Marcel Granet (Festivals and Songs of Ancient China) in his inferential recreation of prehistoric Chinese village ritual based upon his reading of songs from the
The Song of Ch'ŏyong

Under the bright moon of the capital
I stayed out late, enjoying it,
but when I returned and looked in my room
I saw four legs.
Two are mine, but whose
are these others?
Once mine, what shall be done
now these others are taken?

The 'Song of Ch'ŏyong' is the most well known and intriguing of all the hyangga. Indeed, Professor Cho Dongil of Seoul National University wrote of the song and story associated with it that it seems to have acted like a mirror, for the many scholars who have written about it seem to have discovered their own faces peering back at them from the text. The story in Samguk yusa tells that Ch'ŏyong was one of the sons of the dragon king of the Eastern Sea who returned to the Shilla capital, Kyŏngju, with King Hon'gang on one of his processions. Ch'ŏyong was given a beautiful woman as his wife, and an office in the government. The plague demon, however, was so attracted by Ch'ŏyong's wife that it changed into human form, and went and slept with her while Ch'ŏyong was away. One night he returned unexpectedly, and discovered what the song describes. Instead of showing anger, however, Ch'ŏyong went out into the courtyard of the house, where he sang the song and danced. The plague spirit, impressed by Ch'ŏyong's restraint, bowed down to him promising never to enter a house that had even a simple likeness of Ch'ŏyong outside. The promise is then said to explain why it was the people of the time put up gate plaques with Ch'ŏyong’s likeness on them.

Considerable scholarly energy has been spent upon explaining why it was that Ch'ŏyong did behave in so restrained a way. Why, in other words, did he not show anger, and attack more directly the plague spirit intruder? The answer seems an urgent matter in Korea's cultural history because the Ch'ŏyong dance became a significant ritual in Koryŏ times, and has been revived in the twentieth c. around an identification of Ch'ŏyong as a kind of culture hero. Some explanations have it that Ch'ŏyong displayed traditional Korean restraint in the face of adversity. Others suggest that Ch'ŏyong was actually a shaman healer, who saw that the woman was ill, that her illness was caused by the plague demon, and knew that a ceremony of song and dance was needed to placate the spirit and cure the woman. Cho Dongil sees in the story a kind of program note for a mask dance performance.

Koryŏ Songs, Kyŏnggi Songs, and Yi Royal Odes

In the early Chosŏn period, during the reign of King Sejong (r. 1418-1450) two odes were composed that have considerable historic significance, if not literary merit. These are the 'Song of the Flying Dragons' (Yongbi óch'ŏn ka) and 'Song of the Moon Reflected in the Waters' (Wŏrin ch'ŏn'gang chi kŏk). The first was composed by a group of court officials at Sejong's order, both to celebrate and make first official use of the new Korean alphabet in a paean to the founding of the Chosŏn dynasty. The second, an ode expressing Buddhist themes and images, was composed by Sejong himself upon the death of his wife. (For more on these two odes, see below.)

Partly because of their formal significance as precursors of the royal odes, and in part because of their historic significance as representatives of Korean vernacular expressions from Koryŏ times, two further types of verse are described here: the twelve anonymous Koryŏ songs recorded in several fifteenth-c. and later music collections; and the six kyŏnggi-style songs, so named because of the recurring expression, kyŏnggi ('that sight').
Koryó Songs

Twelve songs dated to Koryó’s early to middle period but recorded only in the fifteenth c. or later music collections are known as Koryó folk songs (Koryó sogyo). The subjects of the songs include love, the natural world, and separation from a loved one or, in the common trope, from the ruler. One, 'The Turkish Bakery', follows a rather promiscuous individual on her amatory encounters with a shop owner, a monk, and other occupants of the capital. 'The Song of the Green Hills' is said to express feelings of despair at the unhappy or precarious living conditions of the time; or perhaps simply a personal sense of unhappiness:

Let us live, let us live;
up the green hills let us live.
Eating wildgrape and silvervine,
up in the green hills let us live.

Yalli yalli yallansŏng yallari yalla

Cry, and cry, O bird;
sleep, then awake to cry, O bird!
I who am sadder than you,
I sleep and awake just to cry.

(Refrain)

The song 'Would You Go' (Kashiri) is another example of a Koryó song which shows many of the features characteristic of folk song: the repeated phrase patterns within the lines and the repeated lines all assembled into a stanzaic structure that is further marked as a unit by a repeated refrain.

Would you go, would you go, would you;
Leaving me, would you go, would you?

Wi chungjulga t’aepyŏng sŏngdae

How then am I to go on living?
Leaving me, would you go, would you?

(Refrain)

There is an often-noted thematic and structural resemblance between 'Would You Go' and the well known poem 'Azaleas' by the twentieth-c. 'folk song poet', Sowŏl Kim Chŏngshik.

The three principal music collections in which the Koryó songs were recorded are the Texts of Music Compositions (Akchang kasa) said to have been assembled by the Royal Music Board under kings Chungjong and Myŏngjong (r. 1506-1544 and 1545-1567), the Guide to the Study of Music (Akhak kwebŏm) assembled in 1493, and the Collection of Current Native Music (Siyong hyangakpo) the dates and auspices of which are uncertain, but traditionally ascribed to the same period as the Texts of Music Compositions. Because of the precise system of musical notation used in the collections, and the other supplementary information about musical instruments, performance positions, and other matters, the melodies, rhythmic patterns, and a sense of the performance of these works is recoverable.

Kyŏnggi Songs
The first example of kyŏnggi songs of the Koryŏ period, 'Song of the Scholars' (Hallim pyŏgok) is one of the popular lyrics transmitted in the Music Section of the History of Koryŏ (Koryŏ sa; 1454). Its complete text can also be found in Texts of Music Compositions. The distinguishing features of the kyŏnggi song are so well exemplified in this example that it always appears as the centrepiece of discussions of the form. Because the expression, "...kyŏnggi ītō haniikkọ?" ('How about a sight like that?') occurs repeatedly in these songs, they became widely known as 'kyŏnggi' songs.

Texts of Music Compositions states that 'Song of the Scholars' was composed by 'various scholars' serving at court. In view of the fact that the term 'hallim' refers to scholars assigned to the court, such as members of the Academy of Letters, attribution to them would have been fitting. There is a persuasive argument that the work was composed in the year 1216. It is thought that it was composed by academicians in the employ of the government of Ch'oe Ch'unghŏn - the military strongman who controlled the Korean government from 1196 to 1219 - perhaps improvised by them, taking turns, while amusing themselves. The heavily Chinese text given in Texts of Music Compositions is accompanied by a transcription in Korean letters.

The first and last of the eight stanzas that make up 'Song of the Scholars' are:

Yu Wŏnsun's prose, Yi Illo's verse, Yi Kongno's parallel style;
Yi Kyu-bo the chŏngŏn and Chin Hwa of Hallim: Rhyming rivals race the brush!
Yu Ch'ung-gi's policies, Min Kwang-gyun's exegesis,
Kim Yang-gyŏng's shih and yüeh-fu.
Oh! The sight of their examination hall! How would that one be?
Scholar Kŭm ēUi's jade sprouts and disciples,
Scholar Kŭm ēUi's jade sprouts and disciples.
Oh! Starting with me, how many are they?

Oh! Oh! Over the walnut and the honey locust trees;
Red swing hanging, tied up on a red rope;
Pull it then push it, young master Chŏng!
Oh! Lest the others go so high!
On the path of two slender hands as fair as jade,
On the path of two slender hands as fair as jade.
Oh! The sight of strolling together hand in hand!
How would that one be?

The first stanza lists the names of famous scholars and their literary strengths. The first line celebrates Yu Wŏnsun, Yi Illo, and Yi Kongno, each outstanding in a specialty - be it prose, verse, or parallel prose. Yi Kyu-bo, who had the rank of chŏngŏn, and Chin Hwa, of the Academy of Letters, were of such talent that they could match rhymes and compose poems almost faster than a brush could take them down. Yu Ch'unggi was as famous for his ability to write policy papers - a staple task at government service examinations - as Min Kwang-gyun was for his exegetical studies of the Confucian classics. Kim Yang-gyŏng was noted for his mastery of the several styles of Chinese poetry. What a scene they would have, the singers of this song inquire, if they could bring all these masters together at a single state examination! The accomplished Kŭm ēUi, frequently Chief Examiner at state examinations, cared for his disciples like sprouts as precious as jade.

While stanza one deals with literary composition, stanza two deals with books, and stanza three takes calligraphy as its subject. To this point, the subjects introduced are things that are necessary aspects of a scholar's life and are treated as sources of satisfaction. Succeeding stanzas embellish their elegant and pleasant way of life, singing of wine in
stanza four, flowers in stanza five, music in stanza six, and scenery in stanza seven. Finally, stanza eight depicts the sight of a man and woman holding hands and riding a swing. It is thought that they did, actually, enjoy such a pastime, much as the artists and consumers of the eighteenth-c. genre paintings did, with their scenes of ordinary life, of shop owners, wrestling matches, and men and women on excursions together. The eighth stanza intimates that the rigid separation of men and women which became a characteristic feature of upper-class, Chosŏn-era Korea was not necessarily the 'style' of Koryŏ.

Yi Royal Odes

A number of congratulatory odes composed at the time of the establishment of the new dynasty celebrated the occasion, but even the high school literature textbooks in Korea agree that the literary merit of these works is absent; instead the reader finds an overtly promotional literature. These otherwise unremarkable texts, however, in part because their purposes were directed otherwise than toward literary accomplishment, utilized and for a time fixed the form known as akchang, a term which encompasses meanings ranging from music composition to hymn. The sixteenth-c. *Texts of Music Compositions* is a gathering of the texts of such pieces.

While the congratulatory effusions of several members of the new government order have not drawn much interest, two major works composed in the akchang form some fifty years after the founding of the dynasty are worth noting. These are the 'Song of the Flying Dragons', a paean to the founding of the dynasty commissioned at the order of King Sejong, and 'Song of the Moon Reflected in the Waters', a long, elegiac composition composed, or at least revised, by King Sejong himself upon the death of his wife. The two make an interesting pair of contrasts. The 'Song of the Flying Dragons' was composed at King Sejong's order, while the other was composed by the king himself upon the death of his wife. The first is a public poem, intended to celebrate the founding of the dynasty, the creation of the new alphabet, and the pre-eminent significance of Confucianism as the state religion and philosophy; the second, based on a research project carried out by Sejong's son into the life and background of the Buddha, is a private poem, expressive of the king's personal grief at his wife's passing, all framed within a Buddhist view of life and its meaning. Both poems, it should be noted, incorporate their Chinese reference-points into the Korean cultural narrative; that is, both the Confucian and the Buddhist references are coopted by their articulation within the Korean vernacular text.

'Song of the Flying Dragons'

The royal odes borrowed their technique and form from several sources. The kyŏnggi-style songs suggest one source for their form of composition and argument, as the assemblage technique in which the stanzas each present a scene or proposition which the reader then compares with a Korean counterpart, and is at last asked to affirm, either directly or indirectly, is reminiscent of the ottō haniikkko phrase of the kyŏnggi song. The song is composed in 125 stanzas, of which a few representative examples follow.

(1)
Korea's six dragons fly in the sky
Their every deed was blessed by heaven,
Their deeds tallied with those of sage kings.

(2)
The tree that strikes deep root
Is firm amidst the winds.
Its flowers are good,
Its fruit abundant.
The stream whose source is deep
Gushes forth even in a drought.
It forms a river
And gains the sea.

(6)
The majesty of Shang lost vigour:
He was about to take charge of the country.
At the time the shores of the West River
Were as crowded as on a market day.

Fortune deserted the Koryŏ House:
He was about to take charge of the country.
At the time the shores of the Eastern Sea
Were as crowded as on a market day.

(82)
Upon facing a small scholar
He stood up from his seat.
What do you say about
His reverence for the learned man?

Upon receiving an old scholar
He knelt down with due politeness.
What do you say about
His respect for scholarship?

(Translated by Peter H. Lee)

Stanza one represents the auspicious signs of the six dragons, the founder of the Chosŏn Dynasty, his son, and his four ancestors, in a pictorial form that mirrors the first divination hexagram from the Chinese Book of Changes, the Yi ching. That first hexagram comprises six solid lines, the fifth of which, corresponding to Yi Songgye, the founder of the dynasty and the fifth generation of the Yi family presented in the 'Song of the Flying Dragons', predicts the ascension of a great man to authority. That auspicious sign is associated in the Chinese commentaries with dragons flying in the heavens. The sage kings are the kings of ancient China, rulers of Chou, and referred to in the Confucian and later writings by this phrase, or as the former kings.

The second stanza's first phrase, the tree that strikes deep root, is now a widely recognized, widely taught, phrase symbol for Korea. The phrase was one of President Park Chung Hee's special favourites for his calligraphy. While the tree and the stream may both symbolize the hoped-for longevity and vitality of the new dynasty, it might also be noted that all of the succeeding stanzas of the 'Song' pair an initial Chinese exemplum with its Korean counterpart, so the tree might be read as China, and the stream, as Korea.

Stanza six gives an example of the paired China-Korea structure of the song stanzas. In this instance, the crowds of people who gathered around the soon-to-be new rulers of Shang China and post-Koryŏ Korea were a kind of portent -cum- opinion poll supporting the legitimacy of the dynastic change.

Stanza eighty-two is interesting because the Chinese event referred to in the first half was a visit in 1290 by two Korean officials to the Mongol court of Kublai Khan (1215-1294), founder of the Yüan dynasty, and ruler at the time of Marco Polo's visits. (Because Polo visited Asia during the Koryŏ period, his later account of his travels gave the West the name for Korea by which it is known today.) The Mongol ruler received the scholar-
officials with proper respect, as did Yi Songgye in the second half of the stanza, one
century later, in receiving Yi Saek upon his return from exile. The stanza also illustrates the
kyŏnggi-style song use of the refrain, "What do you say about that?"

'Song of the Moon Reflected in the Waters'

'Song of the Moon Reflected in the Waters' was composed by King Sejong upon the death
of his wife, Queen Sohon, who died in 1446. The King based the poem upon a life of
Sakyamuni prepared at his command by his son, Prince Suyang; both works were
completed in 1447. The examples that follow are the two opening stanzas of the work, and
two stanzas from the scene in which Sakyamuni, after twelve years' meditation, attains
enlightenment, and returns to visit his father the king. Only 194 stanzas, comprising Book
One of three, are extant.

(1)
Lofty and great, the Buddha Sakyamuni;
How can such boundless virtue ever be fully told?

(2)
In telling of his deeds in life, though they happened
Far away, let them appear as if before our eyes.
In telling of his teachings, though he spoke them
One thousand years ago, let them be heard again in our ears.

(115)
That after endless days passed in arduous practice
His son had attained enlightenment, this Ut'aya (Sakyamuni's disciple)
reports to the king.
Of missing his son for twelve years and then today
hearing of his attainment, this the father relates.

(116)
As the father tells about his son's youth,
Ut'aya listens, and the son listens also.
When he asks about his sons works this day,
Ut'aya speaks, and the son speaks also.

The 'Song of the Moon Reflected in the Waters' follows a structural pattern much like that
of the 'Song of the Flying Dragons': it begins with a couplet, and then proceeds in
quatrain to tell the events in the complex series of rebirths and incarnations that led to the
birth of the historic Buddha, Sakyamuni. The narrative includes exchanges among the
characters in the story, and uses the apostrophe to the reader or hearer, in the form of direct
or indirect questions, that is also characteristic of Korean verse literature, of the p'ansori,
and then re-emerges in twentieth c. fiction.

The Shijo

The shijo is a short, three-line verse form, one of two Korean vernacular forms practised
during the Chosŏn period and continuing to the present.

The chronological point of origin for the shijo form is obscure, for several reasons. The
Korean alphabet, han'gul, was invented and promulgated only in the mid-fifteenth c., so
shijo attributions to earlier dates than that are uncertain. Second, the three major
collections of shijo from which the traditional canon is assembled are all eighteenth c. and
later compilations, which also means that lineages, attributions, and other important matters
are traditional or speculative rather than documented. Third, because of the normally higher
status assigned to works composed in the Chinese language during the Chosŏn period, only relatively limited attention was given to the shijo up until Ch'oe Namsŏn's pioneering study and anthology, *Classes of the Shijo* (Shijo ū yuch'wi; 1928). Some accounts trace the earliest appearances of the form to the middle and late Koryŏ period, but most scholars agree that the form was established by the sixteenth c.

While new collections of shijo and other materials continue to be discovered in this century (the Pyŏngwa Kagok Collection containing 1,109 shijo texts was discovered in 1956), the three major collections are dated to the eighteenth and nineteenth centuries: *Eternal Words of the Green Hills* (Ch'ŏnggu yŏngŏn; 998 shijo texts) was compiled by Kim Ch'ŏnt'ae in 1728; *Songs East of the Sea* (Haeðong kayo; 983 shijo texts) by Kim Sujang, 1763; and the *Headwaters of Kagok* (Kagok Wollyu; 839 shijo), by Pak Hyogwan and An Minyŏng, 1876. Two of the modern, standard editions of the shijo are Chŏng Pyŏnguk's 1966 *Dictionary of Shijo Literature* (Shijo munhak sajŏn; 2,376 shijo), and Shim Chewan's 1972 *Collected Shijo from All Generations* (Yŏktae shijo chŏnjip; 3,335 shijo).

The standard, or p'yonɡ shijo has four rhythmic groups (u<embo> ) in each of its three lines, usually with a grammatical division at the middle of the line dividing it into two pairs of rhythmic groups. The rhythmic groups, which generally correspond to the major syntactic divisions of the line, have three or four syllables, with some variation beyond. The third line of the shijo combines an unusual syllable count of 3,5,4,3 syllables for the rhythmic groups with a rhetorical 'turn' at the first group, and resolution in the remainder of the line. Two variant forms, the ossijo and the sasol shijo, add more syllables or rhythmic groups, respectively, to turn the shijo into a somewhat more discursive form.

All shijo were originally composed to be sung to a standard melody, and considerable appreciation is given to a performance that shows the rich, throaty voicing, extended control of the breath, and expression. Professional singers give a startlingly powerful voice to the modest form, but amateurs also enjoy singing the shijo when a traditional piece is required for a social occasion. The traditional subjects for the shijo are Confucian virtues; nature, though not as a directly experienced world but as an ideal state, often contrasted with the turmoil and anxiety of officialdom; and love, said to be the domain of shijo composed by kisaeng, professional women entertainers. There are also a large number of often anonymous, humorous shijo on a variety of themes.

A Shijo Sampler

The most widely known and admired shijo text has for decades been a song that, like others in the canon, is accompanied by a story - in this case, a story of political virtue and dedication, of steadfast refusal to compromise. The author of the shijo was Chŏng Mongju, one of the most highly regarded statesman-officials of the late Koryŏ, whose endorsement was sought by the rising Yi family faction, which eventually ended the Koryŏ dynasty and founded the Chosŏn. One of the Yi family members, Yi Pangwŏn (1367-1422), a son of dynastic founder General Yi Sŏnggye, offered a shijo to Chŏng Mongju (1337-1392) at a banquet. (In the translations, the second half of each line is separated and indented.)

What would you do with things this way,
and what could you do with things that way;
and what's to be done with the tangle
of the arrowroot plants on Mansu Mountain?
If we could tangle together just like them,
why, we could enjoy things for a hundred years!

Chŏng Mongju rejected the invitation to relax his opposition. Instead, he replied with a thoroughly unambiguous song that presumably cost him his life, as he was assassinated
soon after. Ch'ong Mongju:
Though this body dying die,
and dying, die over again;
white bones turn to dust and dirt,
whether the soul exist or not;
there can never be a way to change
this heart devoted to my lord.

It is clear that the admiration for the shijo is very much a measure of admiration for Ch'ong's political stand; in other words, the story which accompanies a shijo song is an important part of its meaning. The story and the song would tend to reassert the values of their time, and in the case of works which made their way into the school curriculum in South Korea in the twentieth c., traditional shijo would reaffirm the patriotic, nationalistic values which the curriculum was intended to instill.

Ch'ong Ch'ol (1536-1593) composed over seventy shijo, and is even more highly regarded for his kasa compositions. Because his political fortunes took so many disastrous turns in the factional conflicts of the later sixteenth c., Ch'ong Ch'ol seems to have been a regular traveller on the road to exile, and wrote a number of shijo about his situation. In the conventions of the age, direct reference to one's situation, and any complaint about the ruler's decision, were eschewed. Instead, a shijo would take its shape around the theme of lovers who had been separated, a literary conceit made possible by the double meaning of the Korean word nim, both lord, as in Ch'ong Mongju's shijo above, and love, in this shijo by Ch'ong Ch'ol:

Snow has fallen in the pine woods,
and every branch has blossomed.
I shall pluck one branch and send it
to the place where my love stays.
As long as he shall have seen it,
what matter, if the flowers melt?

Naturally enough, the situation of exile and the shijo composed in that unhappy state became - or perhaps already was - a literary convention, precisely as lyric poems in any tradition are built upon the premise of separation. In a mirror image of the official's situation, most of the shijo ascribed to kisaeng women are also about the pains of being separated from their loves, who usually turn out to be officials who had been sent into exile. One shijo ascribed to the most well known of the kisaeng, a woman named Hwang Chini who lived in the early sixteenth c., reverses the whole convention by taking the position of the one who had sent the man away. Interestingly, her shijo is also ascribed in one of the anthologies to a king, an authorial switch that, if nothing else, emphasizes the conventionalized nature of the roles occupied by the characters in these literary works.

Alas, what have I done?
Didn't I know how I would yearn?
If I had told him Stay,
how could he have gone? Stubborn,
I sent him away, and now
such longing I do learn!

Hwang Chini's shijo verse is also unusual in the enjambment of the second line. In almost all shijo, the ends of the lines coincide with a full sentence or clause ending grammatical form, but in a deft linguistic analogue to the impetuous act of the poem, the second line runs on through the adverbial form stubborn into the unhappy realization of the consequences of the act in line three.
Yun Sŏndo (1587-1671) was an extraordinarily gifted composer of *shijo*. Like Chŏng Ch’ŏl an official who experienced a full share of political setbacks, Yun is known for *shijo* that express the timeless, stable tranquility of nature and of scholarly pursuits. Yun’s themes were, in this sense, quite thoroughly conventional; but beyond the elegant phrasing of his songs on conventional themes, Yun Sŏndo also carried the *shijo* form itself to a level of broadly acknowledged perfection. The language of his *shijo* is measurably ‘more Korean’ than most other *shijo* composers, having a far lower percentage of words derived from the Chinese language. Yun also changed the formal structures of his *shijo*, relaxing the syllable count of the final lines, for example, or adding onomatopoetic refrains to sequences of songs, as in his Fisherman’s Calendar. Here follows a selection from the ‘Spring’ section of the ‘Calender’.

**Tread the flowering grasses,**
pluck the orchids and iris.
**Launch the boat. Launch the boat.**
What was loaded into
the leaf-flat boat?
**Chigukch’ong, chigukch’ong, ḍsawa.**
On the way out, nothing but mist;
coming back, the moon.

The final *shijo* in the ‘Fisherman’s Calendar’ sequence provides an example of the ḍssijo, the slightly expanded form that adds a few syllables to the lines, but acknowledges the distinctive syllabic pattern of the final line, in this case 3, 6 (rather than 5), 3,4 (rather than 4,3):

**Now that day is ending,**
time for rest after the feast.
**Make the boat fast. Make the boat fast.**
In ecstasy walk the path
where red flowers lie scattered on the wind-blown snow.
**Chigukch’ong, chigukch’ong, <ōsawa.**
As the frosty moon crosses over the western ridge,
lean against the pine sill.

The *sasol* *shijo*, the substantially expanded form that came into popular use in the eighteenth c., is represented by huge quantities of anonymous compositions on a very broad range of topics, many of them humorous, and not a few, risqué. One of the most amusing is a hilariously straight-faced send-up of the notoriously tense relationship between mother-in-law and daughter-in-law, who usually lived in the paternal home.

*Chong Ch‘ol*, in addition to the many standard *shijo* and *kasa* for which he is known, also composed a drinking song in the *sasol* form. The song echoes Chinese songs on the same subject, but is noted particularly for its use of the Korean language. It also seems to echo, in a peculiarly haunting way, Chŏng Mongju’s bravely defiant song from two centuries before.
Drink a cup, then drink another cup,  
and counting flowers to keep the count, drink and endlessly drink.  
After this body dies, covered with a straw mat and roped to a pack frame,  
or borne on a splendid bier as thousands weep,  
it will pass among the reeds and rushes, or willows and oaks;  
and when the sun shines golden, and the moon, white,  
while the rain drizzles down, or chill winds whirl the heavy snows,  
who will there be to say, Drink a cup?  
And when some monkey is sadly whistling on your grave,  
what good will regrets be then?

Modern practitioners of the shijo form have experimented with it in a number of ways,  
sometimes reducing the numbers of syllables, or the number of rhythmic groups in the lines, deploying the lines and words on the page in various ways, or creating sequences of several shijo. Many modern composers of shijo treat the form in a more conservative way. Hwang Chini, Ch'ong Ch'ol, and Yun Sondo might find their innovations and practises recapitulated in the modern uses of the form, but one might venture to assume that they would be pleased at the vitality of the tradition. To close with one example, Yi Hou (1912-1970) was a poet who combined a more traditional, formal approach with an unmistakably modern subjectivity.

'Flowering'

The flower blooms, one petal, one petal.  
The whole sky is opening.  
Finally, with the one remaining petal,  
the fern stands trembling at last.  
The sun and the wind hold their breath.  
I too just close my eyes.

The Kasa

The kasa as a Korean vernacular verse form is commonly paired, and contrasted, with the shijo. Both were developed as verse forms during the Choson period, and both continued to be practised in the twentieth c.; but where the shijo is a short form, the kasa is long; where the shijo form lends itself to short, pithy, lyric statements, the kasa, being of indeterminate length, is sometimes viewed as a form of rhythmic prose taking its shape as a literary work from the events of narrative, the sequence of details of description, or the logical steps in a philosophical argument rather than from the form itself.

While various antecedents of the kasa have been adduced, it is generally agreed that the first true kasa was the 'Song to Spring' (Sangch'un kok) by Ch'ong Kuyin (1401-1481), an idealized evocation of the natural world in the established tradition of implicit commentary on the difficulties of public life.

Because the kasa as a verse form lends itself so unobtrusively to balanced prose composition, the number of kasa texts is difficult to assess. Any person who could write with the Korean alphabet could compose a kasa on whatever subject was desired, and many did. The used book stores in the 1970s and 1980s in Seoul and other cities kept cartons of kasa, some in scrolls, and some in books sewn together, which families cleaning out a study or home library had discovered and sold for next to nothing. Kasa were written as travel diaries; they were composed by women who found in the form a way to express their resentment at the confinement of their lives; or by men and women in the form or guise of such complaints. Numbers of such kasa remain hidden in the prose of such notebooks, journals, diaries, and other scraps.
In the late nineteenth c. Enlightenment period, the kasa was used to articulate modern ideas in the newspapers, journals, and other publications of the day. The kasa's rhythmic form, the characteristic 4-4 syllabic patterning of paired syntactic phrases, underlies such early examples of modern fiction as Yi Injik's (1862-1916) *Tears of Blood* (*Hyŏl ŭi nu*). With greater variation in the syllable pattern, the kasa also appears in more recent narrative poems in South Korea, while in the North, the form has been used for poems composed on public, state themes such as farm machinery, collectivization, and other officially assigned topics.

Because the kasa was recited rather than sung in public performance like the shijo, kasa texts were not assembled in performance anthologies like the eighteenth and nineteenth c. shijo collections. Kasa instead tended to have been gathered among individual collections of writings, a few of which, such as Songgang Chŏng Ch'ŏl's (1536-1593) *Pine River Anthology*, became widely known.

As with the shijo, the kasa verse line comprises four rhythmic groups corresponding to its major syntactic divisions. Syllabic distribution within the groups very generally follows a three-four or four-four pattern. In the kasa of earlier Chosŏn, roughly up until the eighteenth c., the final line of a kasa text was marked structurally by the 3,5,4,3 syllable pattern, and rhetorically by the shijo-like 'twist' or verbal aside in the first group of the line. Later kasa do not have this distinctive pattern.

The history of the kasa form has been divided into three broad periods. Kasa in early Chosŏn were written by members of the ruling class, the yangban, and tended to be comparatively short; kasa of later Chosŏn are associated with the lives of non-elite members of the society, and were comparatively long. Enlightenment period kasa of the decades surrounding the close of the nineteenth c. are characterized by their attention to modern ideas. The more recent kasa from North Korea on public themes can be viewed as a continuation of the didactic impulses of the Enlightenment period.

**A Kasa Sampler**

For a number of reasons, Chŏng Kügin's 'Song to Spring' serves an exemplary purpose as the first example of the kasa form. It was written after the promulgation of the Korean alphabet, *han'gul*, and is included in its author's collected writings so the problems of somewhat murky ascription which attend literary works written prior to the alphabet's invention are avoided. Although the precise date of its composition is not known, it was evidently written some time during Chŏng's years of exile, following his resignation from government in 1455 upon Sejo's usurpation. 'Song to Spring' celebrates the life of rural retirement, a frequent theme in the kasa that followed in the next century of bitter factional strife. Chŏng Ch'ŏl's kasa, to cite the most famous example from the next century, engage the theme of exile, treating it either in terms of the travel into the place of exile, or through the metaphor of the abandoned lover, as in the many shijo on the same theme.

'Song to Spring' is relatively short - just thirty-eight lines. The following excerpts will provide a sense of its treatment of its theme, the voice, and the somewhat abstract nature of the descriptions, which in the end sound more like an appreciative commentary on a hanging scroll landscape painting than an account of actual life events.

'Song to Spring'

You who are buried in the dust of this world,
what do you think of my life?
Do I match, or do I not,
the refinement of men of the past?
Though quite alone, the only man
between the earth and sky
Would I still not know joy
buried in these woods?

I build a small, thatched cottage (5)
close by the jade green stream,
and amidst groves of pine and bamboo
play host to the wind and moon.

Winter was gone a few days ago;
as spring returns anew
blossoms of peach and apricot
bloom in the evening light,
while thick grasses and willows glow
green in the misting rains.

Listen to me neighbours! Let us go (17)
view the hills and streams.
Let us walk through the fields today
and bathe in the stream tomorrow;
in the morning gather greens on the mountain,
then fish in the stream at evening.
Let us take the fresh-brewed wine, (20)
strain it through a hat,
and drink, plucking flowers
from a branch to keep count.

The old man grasps his stick; (25)
the boy lifts the wine to his shoulder.
Quietly reciting, I settle down
alone by the side of the stream.
In the clear, bright sand I scour
the cup, fill, and raise it.
Looking down on the clear waters
I see peach blossoms.
Fabled Murung must be near.
These domains must be the place.

Through pines on a narrow path (30)
clapsing azaleas in my arms
I reach the very topmost heights
and gaze down from the clouds.
Thousands of hamlets, myriad villages
spread out below, everywhere.
Fog and mist and the sun's brightness
seem to weave a brocade
as fields that lay dark a few days ago
are flooded with colours of spring.

Renown escapes me, (35)
wealth and rank spurn me,
but the clear moon and bright sun -
What other friends would I have?
With gourd, basket, and wretched shelter,
my thoughts are free of confusion.
Tell me then, for a hundred years’ pleasure
what could surpass just this?

The two acknowledged masters of the *kasa* form, Pak Illo (1561-1642) and Chŏng Ch’ŏl (1536-1593), approached the form in quite different ways, illustrating at least two of the potential directions in Chŏng Kūgin’s ‘Song to Spring’. One is the capacity of the *kasa* form to absorb or encompass brief lyric sequences, much like the *shijo*, as in the stretches (lines 3-6) ‘Though quite alone, the only man... host to the wind and moon’, or (lines 33-35) ‘Fog and mist and the sun’s brightness... flooded with colours of spring’. Chŏng’s ‘Song to Spring’ nicely balances such lyric segments with equally brief narrative stretches, such as (lines 25-27) ‘The old man grasp his stick... the cup, fill, and raise it’, or with moments of direct spoken address, as it were, directed toward Chŏng’s rustic ‘neighbours’ (line 17), or the imagined audience for oral performance, the ‘You’ of the very first line of the poem. One might imagine, then, a *shijo* strung together like a necklace from a long sequence of highly polished, lyric moments; one would have Chŏng Ch’ŏl. Conversely, one might imagine a *kasa* that settles in more squarely to a narrative mode of development, even one that incorporates dialogue within the narrative rather than using it as an aside to the reader or listener; one would then have Pak Illo.

Let us look at the ‘Song of Longing’ (*Sa miin kok*) by Chŏng Ch’ŏl.

‘Song of Longing’

At the time I was born
I had been born to follow my lord.
Our lives were destined to be joined,
as even the heavens must have known.
When I was young
my lord loved me.
There was nothing to compare
with this heart and love.

... Now that I am older, (6)
for what reason have I been put aside?
A few days ago, serving my lord
I entered the Moon Palace.
How does it happen that since then
I have descended to this lower world?
Three years it has been
since my hair, once combed, became tangled.
I have powders and rouge (10)
but for whom should I make myself lovely?
The cares that are knotted within my heart
pile up, layer upon layer.
It is sighs that build up,
tears that tumble down...

Briefly the east wind blows (17)
and melts away the fallen snow.
Two or three branches have bloomed
on the plum tree outside the window:
a bold brightness,
a fragrance deep and mysterious.
At dusk the moon (25)
  shines by the bedside.
As if sensing him, rejoicing
  - is it my lord, or not? -
I wonder, if I broke off that blossom
  and sent it to the place where my lord stays,
what would he think
  as he looked at you?

Blossoms fall, new leaves appear,
  and shade covers.
Silk curtains are lonely; (25)
  embroidered curtains are opened.
I close the lotus screen
  and open the peacock screen...
How can a day be so tedious,
  so full of cares?

... 
Heaven and earth are blockaded
  under white monochrome.
Humans, even birds on the wing
  have disappeared.
With the cold so intense (45)
  here, far to the south,
in the lofty Jade Tower
  how much colder it must be!

... 
I tuck my red skirt up,
  and roll my blue sleeves halfway,
and as the day declines, by high, thin bamboos (50)
  I lean on a staff, lost in thought.
The brief sun sinks swiftly;
  the long night settles aloft.
I set the inlaid flute
  by the side of the blue lamp
and rest, hoping
  to see my lord, even in a dream.
Cold, cold is the quilt!
  O, when will night become day?

... 
I would rather die and become (60)
  a swallow-tail butterfly.
I would light upon each flowering branch
  one after another, as I went,
till I settled, with perfumed wings
  upon the garments of my lord.
O, my lord, though you forget my existence,
  I shall attend you.

Chông Ch'ôl's 'Song of Longing' seems assembled as a series of lyrical fragments, held together by the theme of longing for the lord, nim -the ruler -who has dismissed the loved one, or the official, Chông Ch'ôl. While there is a certain modulation in tone, from the more vigorous complaint of lines 6-9, 'Now that I am older, for what reason have I been put aside? ' to the enervated, listless tone of lines 24-27, especially, 'I close the lotus screen and open the peacock screen ...', the overall voice is restrained, indirect, gentle, and the poem uses the details of the physical environment as effective counterpoints to the
speaker's feelings. In other words, the *kasa* is an extended lyric.

Pak Illo used quite different means to achieve a very different effect in his 'Song of a Humble Life' (*Nuhang sa*), also composed on the subject of a life in rusticated exile. In the sequence below, the speaker travels to his neighbour's home to borrow an ox to plough the field. Most of the scene is developed and carried by the dialogue between the borrower and potential lender, as if Ch'ong Kūgin had extended the dialogue started by "Listen to me neighbours!" to include what the neighbours might have said in reply. In Pak's *kasa*, the speakers' thought processes are suggested rather than explained by their dialogue, and in an amusing and deft conclusion, the dejected appearance of the speaker is reflected in his dog's noisy reaction upon his return.

'Song of a Humble Life' (excerpt)

... 

On a moonless night I push my steps
to the house where I had a kind of promise
for the loan of an ox.
I stand alone
outside the tight-shut gate,
cough loudly,
and after a while hear
"Well, who is out there?"

"Shameless I."

"What brings you out
at this hour of the night?"

"I am in need like this
every year, I know, but there is no ox at my poor house,
only many debts, so I have come."

"I know I said I would loan it
for nothing, or for a little,
but last night the fellow
from the house across the way
cooked up a red-throated pheasant
all dripping with juices,
and had me drinking fresh spring wine
till I was tipsy.
Thinking I simply had to repay
such generosity
I made him a promise
for the loan of my ox tomorrow.
I would be ashamed to break a promise.
What can I say?"

"Well if that is so
there is nothing to be done."

With shabby hat drooping, in worn-down sandals,
dispiritedly I trace my way home.
At my crestfallen appearance
the dog starts barking.

The dialogue in this remarkable passage seems quite thoroughly normal, colloquial, while
the line divisions and their balanced structure seem characteristics of that natural speech rather than requirements of the verse form. In short, the passage demonstrates that Korean writers who were striving to develop a modern idiom for fiction as well as poetry in the early twentieth c. had an accomplished if largely unacknowledged forbear in Pak Illo.

David R. McCann

Classical Prose in Korean

Extended prose written in the Korean language was not possible until there was a writing system capable of the task. While the orthodox written language of Korea was classical Chinese until the end of the nineteenth c. a pure Korean writing system was devised in 1443 under the aegis of the renowned King Sejong (r.1418-1450) and promulgated in 1446. This innovation - then called 'Correct Sounds for Instructing the People' (Hunmin ch'ŏngŭm) but now known as han'gál - made it possible for Koreans to break away from the constraints of earlier, awkward systems - like the idu method favoured by clerks - that were based upon the use of Chinese characters to record Korean and eke out its grammar.

The scholars charged with this historically unparalleled undertaking chose not to improve upon other writing systems then already in use but, rather, carried out the first pre-modern phonemic analysis of any language, according to sophisticated linguistic principles which had their origins in Indian Sanskrit scholarship. Then they created a completely new set of consonant and vowel letters, all systematically related to each other and based upon the shapes of the human organs of articulation as used to utter each sound.

With the creation of hunmin ch'ŏngŭm, many potentialities were created all at once for a transition toward literature in the Korean script, but the new alphabet had to struggle through several stages of history to get to the point where, in competition with Chinese and borrowed character transcription, it could expand the scope of its use and finally force Chinese and idu out of favour, as finally occurred in the twentieth c.

The immediate intent behind the creation of the hunmin ch'ŏngŭm script is still not definitively established. It was not a system to serve the needs of the ruling aristocracy at that time, for they were engaged in sophisticated writing in Chinese; and, even if they might have felt some occasional difficulty with Chinese, it was hardly enough to necessitate the creation of a new script. Since the ability to read and write classical Chinese distinguished them from the common people, many aristocrats were unenthusiastic about a writing system that could be used by high and low alike.

The words of our language, being different from those of China, do not coincide well with Chinese writing. Therefore, there are many ignorant common people who, although they have matters they wish to express, in the end, cannot easily communicate them. Thinking unfortunate, We have newly made twenty-eight letters, only that they be easy for everyone to learn and that they be convenient to use in daily life.

This statement from King Sejong's own Preface to the vernacular promulgation, expresses the intent behind the creation of hunmin ch'ŏngŭm. It clearly reveals the script as meant for ignorant commoners who did not know Chinese. But Sejong's motivation obviously went further than providing commoners with a script they could use by themselves. When answering an argument opposing the creation of the alphabet, Sejong responded that, although clerks in local government offices were already using the idu transcription system among themselves, there were many cases of unjust judgments against commoners who could not effectively petition for themselves but that a new script would rectify the situation. The goal of getting government clerks to use the new system instead of idu was never realized as conceived. These hereditary clerks protected their exclusive status by continuing to use their peculiar idu writing system that used Chinese to record Korean.
However, an even more important function of *hunmin ch'ongium* lay in conveying the court's intent to the common people, who were ignorant of Chinese. A script that commoners could read was needed in order to instruct the lower classes in what was expected of them according to Confucian ethical norms and, in addition to ideological enlightenment, to instruct them in such things as farming techniques and the treatment of disease.

In view of the fact that composition of lengthy poetic works in the new script like 'Song of the Flying Dragons' (*Yongbi 6ch'on ka*; 1447) and 'Song of the Moon in the Waters' (*Wörin ch'ón'gang chi kok*; 1449) followed immediately after promulgation of the writing system in 1446, we can surmise that such compositions had been contemplated from the very outset. What is more, they also embarked on a massive program of translation into Korean of major portions of the Confucian and Buddhist Chinese canon soon after the new script had been promulgated.

While aristocrats continued to use Chinese and regard literature in Chinese as their own special province, they also enjoyed writing poetry in Korean and thus promoted the development of the vernacular *shijo* and *kasa* verse forms. This co-existence of Korean with Chinese in aristocratic literature was due to the fact that the poetry in Korean was meant to be sung and it was, therefore, necessary to record the exact wording for later performance.

Whereas aristocratic womenfolk were not given opportunities to become skilled in Chinese, they used the Korean script extensively in their daily lives, thus contributing to conditions that enabled the development of fiction in Korean. When the bourgeoisie and other commoners during the later Chosön period came to use Korean writing in their daily lives and sought a literature that was both entertaining and socially realistic, literature in Korean grew rapidly and became a challenge to literature in Chinese. Thereupon, by the early twentieth c., Korea had arrived at the point where the national script was exclusively used and the literature of Korea was a literature in Korean.

The first prose composition of significant length composed in the new vernacular script was a biography of Sakyumuni, the historical Buddha: *Details from the Life of Sakyamuni*. When King Sejong's queen died in 1446, he asked his son, Prince Suyang, to prepare this work as an appeal for Buddhist blessing for the dead queen. The resulting, 24-volume undertaking moved the king to compose a lengthy narrative poem summarizing its main points, called 'Songs of the Moon Shining on One Thousand Rivers.'

Prince Suyang's prose work remains faithful to his Buddhist sources but, at the same time, it is a pioneering example of a dignified and elegant prose style. While the sentences are frequently cast in great length there is no confusion; and, although he works with great volumes of information -both primary and collateral - the digressions are well knit into the main plot line. Of particular note are the natural dialogue and detailed description that make the text an interesting one to read.

In one passage, Sakyamuni is the sage Sonhye, who is negotiating to buy flowers from the woman Kui. She is unwilling to sell but finally sets the condition that she become his wife for life after life. When he refuses to be 'tied to destined relationships', she responds, "If you do not follow my wishes, you will not get the flowers." Knowing that he has been bested, Sonhye accedes to Kui's wishes.

In addition to stories from the lives of Sakyamuni, there are many collateral tales as well. Particularly notable among them are such stories as those of Prince Inyok, who sacrificed to his father the pupils of his eyes and the marrow of his bones; Lady Nongmo, who was born the daughter of a deer and became queen; Prince Allakkuk, whose mother suffered the
infliction of murder; and Prince Sŏnu, who became blind because of his younger brother. The last two were later adapted as vernacular novels. But all of these stories demonstrate Buddhist mysteries through events that are not acceptable in the empirical world and thus it was difficult for this kind of writing to merge with a narrative tradition that did not deal in such mystery.

The introduction of a vernacular script made possible the translation of Confucian and Buddhist canon into Korean, something that had been tried without success using cumbersome methods based on the use of Chinese characters. These translations into Korean were called ǒnhae, 'vernacular explanation'. King Sejong's death in 1450, and two unproductively short reigns that followed, delayed a long-anticipated ǒnhae translation project until the reign of King Sejo (r. 1455-1468), who had been the former Prince Suyang. Primarily interested in Buddhist scripture, Sejo set up a supervisory office in 1461 and, in the following year, began an effort that produced thirty-four works of prose in Korean translation. This body of work was distinguished by its attempt to use a pure Korean locution and avoid the use of undigested Chinese terms and phrases. However, because of the increasingly anti-Buddhist orientation of government officials and the consequently declining fortunes of Buddhism, the translations never realized their potential in helping to shape Korean vernacular prose style.

The translation of Confucian canon did not get under way until well into the next century and was not completed until 1585. The resulting fifty-four books, comprising the corpus known collectively as the 'Four Books and Three Classics' (1612), were printed in great numbers and distributed widely throughout the country. This initial printing and subsequent reprints over succeeding generations served as the basic medium of instruction for every aristocratic male for more than three hundred years. The style of these ǒnhae texts, meant only to explicate, was awkwardly faithful to the Chinese originals and a dominant influence on the style of Korean composition until the supple rhythms of oral literature surfaced in the written realm in the early twentieth c.

The work of Korean fiction most commonly offered as the earliest example of classical prose in the mainstream tradition is The Tale of Hong Kiltong by Hŏ Kyun (1569-1618). Though replete with its own magic and implausibilities, this tale fits comfortably within a tradition of stories that involve Taoist magic. The tale is strongly tied to the real world by its political theme which advocates the civil rights of illegitimate sons, who were then legally disinherited by dint of their birth. While episodically constructed, the tale has plenty of humour and action, recalling Robin Hood of the Western tradition. Stylistically, however, The Tale of Hong Kiltong is wooden, lacking the undulant flow of natural language. It reads as though heavily influenced by the stiff ǒnhae style which had been introduced with the translation of Confucian classics in Korean.

The Tale of Hong Kiltong heralded the popular fiction which made up the lion's share of written prose until the twentieth c. More than five hundred, some say six hundred, titles of these popular works are known today but only two-thirds them are represented by the books themselves, the others having disappeared with only a passing reference elsewhere to speak for their transient existence. In addition, we can assume that countless others have come and gone without leaving a trace, for none of the existing works can be dated prior to the middle of the nineteenth c.

Except for about thirty, most of the works are anonymous. Two reasons are commonly advanced for this: either the aristocratic authors were avoiding an embarrassing association with vulgar literature or names were dropped in the process of making manuscript copies, then the usual means of reproduction. This phenomenon is paralleled by the situation in shijo poetry, where nearly one-half of the extant poems are of unknown authorship. Whereas we can suspect that many anonymous shijo were the work of professional singers, it is also possible that some of the anonymous popular fiction was produced by
members of a 'middle class' that was emerging in the eighteenth and nineteenth centuries, made up of technical bureaucrats, petty officials, merchants, and monied commoners.

The breadth and variety of popular fiction in Korean is best suggested by looking at the range of its content. Among the many classification systems put forward over the years that by Kim Kidong is the most highly developed. Based upon his work, there are ten fundamental categories: adventure, romantic love, parable, Taoist, historical, heroic, family, ethical, and satirical. To this some scholars add written works drawn from the oral narrative tradition but we shall treat them separately because they are distinct in form, content, and style. Although written in Korean, many of these works of popular written fiction drew upon Chinese precedents for their inspiration. The student of Chinese literature will immediately recognize titling conventions that identify the type of fiction by the last word of the title: -mong ('dream', Ch.meng), -chon ('chronical', Ch.-chuan), -rok ('record', Ch.Ju), and -ki ('record', Ch. -ji). Finally, it is notable not only that each work normally has a Chinese version written by a Korean but also that more than two-thirds of them are set in China.

Popular fiction is basically didactic and reflects the Confucian values of the traditional Korean aristocracy. Since the main characters are frequently paragons of virtue presented as exemplars of ideal behaviour, their individual characters are not developed; furthermore, the story as a whole is also usually in the service of ideals, to reprove vice and promote virtue. As we shall see, the wooden style and didactic intent of classical Korean fiction by men contrasts vividly with the personal style of women's court memoirs.

The woman's court memoir is represented by only three major examples, primarily because of the practice of rinsing and re-using the valuable paper on which they were written but also because of traditional restrictions on the dissemination of news of court politics. The inside stories of the court contained in these memoirs contribute to a larger body of writing, mostly in Chinese, that is known as unofficial histories (yasa). But, at the same time, the memoirs frequently receive separate consideration as an independent form of prose literature because they are written in Korean and present both a personal of a point and an expression of emotional experience.

The royal palace of the Choson period consisted of an extended family, centred on the king, and it lived as an independent household unto itself. It was the residence of such family members as the Queen Mother, Crown Prince, princes and princesses, and court ladies. Within each of these establishments a public journal was kept by the eunuchs assigned there. But, at the same time, the ladies of the court, for their part, kept their own, independent records of internal events. Among the attendants of the queen and queen mother were women well versed in the classics. Having excellent calligraphy, they transcribed for the royal wives the daily letters of greeting they would send to their original families still living outside the palace.

Letter-writing was a skill expected of well-trained women of literate families. Though a woman was denied the lessons in Chinese and the classics given the men of the family, she was expected to express herself effectively in epistolary form, using pure Korean. This was a skill made necessary by the fact that, when a woman went in marriage to her husband's family, she rarely had an opportunity to return home. Ironically then, because of the discriminatory treatment received by women during the Choson period, they contributed a unique style of composition to Korean writing.

The foremost example of the woman's court memoir is A_Record_of_Sorrow (Hanjungnok) by Lady Hong of Hyegeyŏng Palace (1735-1815). Daughter of the prime minister, Lady Hong was selected as the wife of Crown Prince Sado when she was only ten and, from that time on, had no contact with her own family or friends. In spite of what might seem a redeeming and fortunate situation, her life was made a torment by the rage of her father-in-
law, King Yongjo, who starved her husband to death in a rice chest when Sado was twenty-eight. Her son Chongjo succeeded his grandfather as king in 1776, reigning until 1800.

Lady Hong's single work - variously titled *A Record of Crying Blood, A Record of Sorrow, and Reminiscences in Retirement* - was started in 1795 and completed in 1805 and was written to vindicate her husband's tragic death and give a true account of the deaths of her relatives. Her work is distinguished from the other two extant court memoirs in Korean because Lady Hong speaks in the first person.

In the waning years of the Choson period, a new genre joined classical written prose in Korea as libretti of *p'ansori*, the oral narrative, began to appear in woodblock editions. Unlike other classical fiction, these were not created originally as written literature but, rather, were adapted from a thriving and popular oral tradition. Whereas the texts of the earliest woodblock imprints were drawn more or less directly from the performed tradition, type-set editions of the early twentieth c. were frequently embellished with new openings and other interpolations provided by the editor. Nevertheless, since these works were not closely rewritten, they still retain the rhythmic quality that is the earmark of performed literature. These woodblock and type-set versions of the traditional *p'ansori* oral narrative are frequently called *'p'ansori novels'* to distinguish them from the written literature that makes up the lion's share of classical prose in Korea.

Marshall R. Pihl

**Oral Literature**

Korean oral literature comprises four types: saying (adage, riddle), story (myth, legend, folktale), song (folksong, *kut* song, *p'ansori* song), and *nori* (shaman *kut* *nori*, puppet play, mask drama). A *kut* is the ritual in which a shaman dances and sings in worship of a spirit. The word *nori* means 'play' in its broadest sense, including not only drama but also revelling, merrymaking, and other festivity.

1. Saying : Adage and Riddle

The saying includes both adage and riddle. These are the simplest forms of oral tradition and can be used by anyone in everyday life. While the inner meaning of an adage is characteristically didactic, that of the riddle is not usually so. If the former is a lesson the latter is a game. The riddle is further distinguished from the adage by its essential test of wit ('Do you know why...?') and the necessity of two parties to carry out its unique question and answer format.

The adage attracted scholastic attention early on, about a century after the first English collection, *John Heywood's Proverbs* (1546). Korean scholars like Hong Manjong (1643-1725), Yi Tongmu (1741-1793), and Chong Yagyong (1762-1836) collected, analyzed, and translated them into Chinese. In his miscellany, *A Fortnight's Record* (*Sunoji*; 1678), Hong Manjong advised that the adage was not to be shunned but, rather, that it could serve to supplement even the knowledge of wise men. The collection and analyses of adages continues to the present day. A standard Korean reference for more than thirty years has been the 7 000-entry *Dictionary of Adages* (*Soktam sajön*; 1962) edited by Lee Kimoon. A 1993 collection edited by Kim Tohwan (*Hanguk_soktam_hwaryong_sajön*) runs to 665 pages.

Samples of Korean Adages (with English equivalents)

A monk can't shave his own head. (No man is an island.)
To begin is half done. (Well begun is half done.)
Repair the gate after the robbery. (Lock the barn door after the horse is stolen.)
Mention a tiger and he appears. (Speak of the devil.)
He who bows is not slapped. (No one spits on a smiling face.)
Does smoke come from a fireless chimney? (Where there's smoke there's fire.)
Lie back and spit in the air. ( Bite off your nose to spite your face.)
A poor calligrapher is choosy about brushes. (A poor workman blames his tools.)

A riddle is a word game involving two people, the questioner and the answerer. The question embodies only the outer meaning and it is up to the answering person to discover the inner meaning. Divining the inner meaning is both easy and not easy. But not all riddles yield up their inner meanings with equal ease. Hence, the riddle creates a battle of wits between the questioner and answerer. Not only does a lack of imagination make it difficult to answer the riddle but the question can also be intentionally designed to confuse the answerer and send him off on an inappropriate direction. A good example would be, 'Who is the person who has three bells (sejong)?' The answer is 'King Sejong.'

Although riddles are as old as language, the earliest documented evidence in Korea dates back to the reign of King Soji (r. 479-500). According to the Memorabilia_of_the_Three_Kingdoms, an old man emerged from the midst of a pond and presented a sealed letter that was brought to the king. On the envelope was written, 'If opened, two people will die; if not opened one person will die.' The court astrologer solved the riddle, saying, 'The two people are commoners but the one person is Your Majesty.' When the king opened the envelope, he found a message reading, 'Shoot an arrow into the harp-case.' He did so and, inside, found the dead bodies of his queen and a monk, who had been fornicating.

A major contributor over the years to the study of Korean riddles has been Ch'oe Sangsu, who has edited Korean_Riddle_Dictionary (Choson susukkekki sajon; 1948) with more than 4 000 entries and Korean_Riddles (Han'guk ū susukkekki; 1973) with some 1 400 entries. Another major source - bearing the same title - is Korean_Riddles (Han'guk ū susukkekki; 1973) by Yi Chongch'ul with about 2 000 riddles listed. A North Korean source is the 1 335-entry Collected_Riddles (susukkekki chip; 1986), edited by Pak Yongsun.

A Sampler of Korean Riddles

What lives without a body and talks without a mouth? (The wind)
What do ten people pull but five people enter? (Five pairs of stockings)
What is sweeter than honey and more powerful than a lion? (Sleep)
What talks without a mouth and hears without ears? (A telephone)
What waits when empty and walks when full? (Shoes)
What has no tongue but always tells the truth? (A mirror)
What has four legs but can't walk? (A table)

2. Story : Myth, Legend, Folktale

Myth is the legacy of deepest antiquity. At a time when the earliest political entities were just beginning to emerge on the Korean peninsula but they had not yet acquired the structure of states, the age of myth was in its last phase. Such nation-founding myths as the stories of Tan'gun, Chumong, Hyŏkkŏse, Suro, and the three founders of Cheju Island are not the first myths. Before nation-founding myths took shape, there were originally myths associated with each social entity. Then, as tribes and clans federated into states and states into nations, there was a need to contend with outside powers and inspire a national spirit; therefore, at this point certain of the original myths were expanded to serve as a nation-founding mythology of an entire people, like the Tan'gun myth.

Tan'gun, the Founder of Old Chosŏn
In ancient times God, whose name was Hwanin, had a young son whose name was Hwanung. The boy wished to descend from heaven and live in the human world. His father, after examining three great mountains, chose T'aeback Mountain as a suitable place for his heavenly son to bring happiness to human beings. He gave Hwanung three heavenly treasures, and commanded him to rule over his people.

With three thousand of his loyal subjects Hwanung descended from heaven and appeared under a sandalwood tree on T'aeback Mountain. He named the place City of God and assumed the title of Heavenly King Hwanung. He led his ministers of wind, rain and clouds in teaching the people more than 360 useful arts, including agriculture and medicine, inculcated moral principles and imposed a code of law.

In those days there lived a bear and a tiger in the same cave. They prayed to Hwanung to be blessed with incarnation as human beings. The king took pity on them and gave them each a bunch of mugwort and twenty pieces of garlic, saying, "If you eat this holy food and do not see the sunlight for one hundred days, you will become human beings."

The bear and the tiger took the food and ate it, and retired into the cave. In twenty-one days the bear, who had faithfully observed the king's instructions, became a woman. But the tiger, who had disobeyed, remained in its original form.

But the bear-turned-woman could find no husband, so she prayed under the sandalwood tree to be blessed with a child. Hwanung heard her prayers and married her. She conceived and bore a son called Tan'gun, who later went to P'yŏngyang, set up his royal residence, and bestowed the name Chosŏn upon his kingdom.

There are also shaman myths, village myths, and family myths. The shaman myth is a long story orally transmitted as a narrative shaman song or as a 'spirit’s history' (pon_p'uri ). The style of its transmission suggests the maintenance of a very old form and the content has various features in common with ancient nation-founding myths. A village myth is the history of a spirit worshiped in that village. Except for the fact that the protagonist is a village spirit, these stories are made nearly the same as legends. As a example of a family myth there is the story of the family progenitor whose mysterious activities are described in the introduction to a family’s genealogy.

Legends, generally speaking, can be divided into legends about people and legends about material objects. The legend, whether human legend or material legend, usually has a historical nature to some extent. The characters are frequently historical personages, kings, ministers or some famous person of a given locality. A legend is also something that is frequently thought to be history, whether by the teller or listener.

The folktale is a story that is meant to be heard with amusement and a characteristic is the fact that the protagonist is easily victorious in his confrontation with the world. Although the legend has a historical nature to it, this is not so of the folktale. The folktale begins, 'Long, long ago there lived a certain man...'. Not only are the characters not specific persons but the time and place are vague.

The folktale is largely divided into three types: animal tales; ordinary tales, and jest or anecdote. The first and last are short stories with simple structures and the middle type is a long story with a complicated structure.

In the ordinary tale the protagonist is a common human being who encounters what at first looks like an utterly insurmountable obstacle but, due to unexpected good fortune, he is able to prevail. Although this type does not necessarily always lead to a happy ending, it does not end in a tragic defeat like we can see in the legend. One might claim that a story
like the tale of Pyōlsuni and Talsuni is sad, but they do prevail in the end. A tiger grabs and devours the mother and then it sets about devouring her children as well. But the children are not caught and devoured. A heavy rope descends from the sky and they are rescued.

3. Song : Folksong, Kut Song, P'ansori Song

While the shaman kut (ritual) song is sung by a shaman and p'ansori by a kwangdae, the folksong is sung by ordinary people. Not only is it sung by ordinary people but it is deeply connected with the tasks and events of daily life. The folksong takes a general song form while the other two use specialized forms. While one can hear the folksong everywhere, the other two are restricted as to time and place. Both kut song and p'ansori have incorporated much from the folksong.

Folksongs can be classified according to their functions: There are labour songs sung while working and ritual songs sung while performing ceremonies. In the sense that these songs carry out a fixed function they could be called 'functional songs'.

Among functional songs the most fundamental is the labour song. If one sings a song while working, the task can be more pleasant. The labour song uses words needed for the task at hand and, while expressing the feelings of the workers, can weave a story in song to relieve the tedium of repetitive work. The folksongs that men sing while performing heavy labour are comparatively simple and the folksongs that women sing while performing chores like weaving are comparatively wordy and complicated.

Labour songs can be classified according to the type of labour. Agricultural labour songs are sung while pulling up seedling rice, transplanting rice seedlings, weeding a rice paddy, threshing barley, tilling a dry field, or weeding a dry field. Fishing labour songs are associated with such activities as pulling an oar, drawing in nets, and the work of diving women. Songs for sundry tasks include songs for carrying shared loads, cutting grass, cutting fodder or kindling, working a grain mill, and lullabies. Weaving songs are sung while twining thread, spinning, or working a loom.

Types of the ritual song are not plentiful. Though there may have been more in the past, present-day field research has turned up only a few clear types like the exorcistic 'Stamping Down the Earth Demons', bier-carrying dirges, and gravesite earth-tamping songs. The first is a type that belongs to songs sung at periodic observances and the other two are associated with rites of passage.

Folksongs can also be classified according to the singer: men's songs, women's songs, and children's songs. The distinction between men's and women's songs is particularly clear in the case of their functional songs. But there are some regions where the rice seedling transplanting song is sung by both men and women, taking turns. Women's songs are not only more abundant than men's songs but they also have greater variety in content. Narrative folksongs that tell a story are sung mostly by women. Children's songs are rare in that they are orally transmitted only by children. It is common for these songs to be associated with some game or play, instead of standing alone. The content is typically very simple.

There are a great many songs and variants among folksongs and the full picture of the form is difficult to ascertain. The largest collection of folksongs to date is Im Tonggwŏn's seven-volume Collected Korean Folksongs (Hanguk minyo chip; 1961-92) but much more awaits collection and sorting than has been gathered so far.

The kut song - that is, a shaman song - is an essential of the shaman ritual or kut. There are several kinds of shaman but only the hereditary shaman really knows the shaman songs.
well. Regions where shaman songs are particularly abundant include Hamgyŏng, P'yŏngan, Kyŏnggi (including Seoul), the eastern coastal region from Kangnŭng to Pusan, and the island of Cheju.

Shaman songs must be seen in terms of how they fit into shaman kut ritual. In general, shaman kut are divided into a sequence of four events: invoking the spirit, questioning and answering the spirit, entertaining the spirit, and telling the spirit's history. For each event there are songs and dances. And there is also speech that is not sung. Among these events, the one that is most important for its songs is the one in which the shaman conveys the spirit's life story. This song about the spirit's history, presented as a long narrative, is called pon p'uri, after the term used on Cheju Island.

We have already mentioned the pon p'uri in connection with myth since much of its content is mythic. But the spirit who is the subject of the pon p'uri, rather than being so mythically sublime and noble that it is difficult for humans to draw close, exudes an aura of intimacy toward common human beings. Like them, the spirit is poor, humble, and despised. Hence he suffers and overcomes hardship in a process that is reminiscent of what was seen in ancient myth. There is no lack of such songs that use this heroic life pattern, such as the two representative pon p'uri - 'The Maiden Tanggûm' (Tanggûm aegi) and 'Princess Pari' (Pari_kongju).

The Maiden Tanggûm: Sung as part of a kut for the Chesŏk Deity or for domestic exorcism. Distributed nationwide. The story of a woman who is impregnated by a monk and suffers persecution from her parents. This woman and her three children all become shaman deities.

Princess Pari: Sung as part of an ogu kut, which is performed when a person dies. Distributed in such locales as Seoul and provinces of Hamgyŏng, Kyŏngsang, and Chŏlla. In this story, the heroine, cast out because she was born the seventh princess, later goes to the Other World and brings back medicinal water to revive her father the king. The heroine, Princess Pari, is a shaman deity who resurrects dead people and guides dead people to a comfortable place of repose.

Since the kut song is performed in the course of a kut ritual, the form is represented by limited materials. We can catch a glimpse of the general shape of the kut song by reference to Kim T'aegon's four-volume Collected Korean Shaman Songs (Hanguk_muga_chip, 1979-80).

It is thought that p'ansori was derived from pon p'uri. While it is a characteristic of p'ansori that the singer weaves his song around changes in rhythmic cycles, such cycles and patterns of change are also found in pon p'uri of the Chŏlla Province area. Whereas pon p'uri takes a shaman deity as its protagonist and tells us a story of travel to and from transcendental worlds, p'ansori deals with ordeals encountered in reality by common mortals. It is believed that p'ansori was first introduced at the end of the seventeenth c. or beginning of the eighteenth by singers from the shaman milieu in Chŏlla Province, including the husbands of shamans.

P'ansori was sung by a professional singer who is called a kwangdae. The p'ansori kwangdae would travel about and launch into a performance wherever he found a paying audience, whether in the cities or the countryside. He sang not only for aristocratic audiences but also for lower class people gathered in the marketplace. Since p'ansori had to satisfy the demands of such a variety of audiences, its content differed from earlier oral traditions in which the singer sang simply for his own individual amusement. While p'ansori stressed Confucian ethics and morals to please the tastes of aristocratic audiences, it also criticised the ruling order and called for human freedoms as demanded by low class audiences.
It is said that p'ansori originally had a repertoire of twelve works but only five of them have survived. The three songs most performed today are the songs of Ch'unhyang, Shim Ch'ong, and Hŭngbu. The 'Song of Ch'unhyang' on the surface presents a Confucian virtuous woman but within is hidden the expression of the desire to break free of constraints based upon social status; the 'Song of Shim Ch'ong' praises the behaviour of a filial daughter but, at the same time, criticizes Confucian ethics; and, while the 'Song of Hŭngbu' emphasizes brotherly love, it also shows that social changes were shaking the moral order from its foundation.

4. Nori : Shaman Kut Nori, Puppet Play, Mask Drama

Shaman kut_nori_ is a play performed by a shaman when carrying out a kut. When the shaman sings the songs of a kut, she also performs dances and makes gestures. But simply singing, dancing, and gesturing alone are not called kut_nori_. Kut_nori is drama, for the shaman becomes one of the characters in the drama and, establishing other characters to play opposite, she advances the plot through the give and take of dialogue. A shaman kut_nori can be performed by a single shaman, working alone. The one shaman not only alternates among the roles of the various characters but also will select a member of the audience to play an opposite role from where he sits.

The puppet play (kkoktu kakshi nori) was performed by members of sadang troupes of itinerant entertainers. These sadang troupes - lowest of all the low class entertainers - made a living by selling their talents, among which was the performance of puppet plays. The word kkoktu kakshi is the name of one of the characters in the play and is also used to designate the puppets in general. Only one puppet play, 'Kkoktu kakshi', has survived.

Kkoktu kakshi is the shabby-looking old female protagonist and her husband is Pak Ch'ŏmji, who also keeps appearing on the stage to explain the action of the play. In order to present his explanation, Pak Ch'ŏmji trades dialogue with the musicians who are playing accompaniment for the puppet play. In effect, the musicians are participating in action of the play from the point of view of the audience. Involvement of the audience can be seen throughout shaman kut_nori, puppet play, and mask dance and, among these, it has a particularly important role in the puppet play.

Mask drama was performed at first by farmers' bands in rural villages. Originally, when villagers performed an annual kut to ensure good farming, one part of the farmers' band that was responsible for the kut would put on masks and satirize the aristocracy. While mask drama, therefore, was at first one part of the village kut, it gradually became an independent drama and, as commercial centres developed in the late Choson period, a distinct urban mask drama emerged that was unlike village mask drama.

Mask dramas, wherever found, share common themes to a certain extent. An old monk called Nojang is brought on stage and used to criticize ways of thinking based on concepts that are out of touch with reality; the aristocracy is satirized; and, as the old man and old woman fight, we are shown an example of male tyranny. In widely scattered regions, mask drama shares such typical examples of the Korean population as the apostate old monk and the servant Ch'wibari, and the feckless aristocrat and the servant Malttugi.

Marshall R. Pihl

Twentieth Century Korean Poetry *

Modern Korean literature has been deeply influenced by two related constellations of events. The first was the Japanese occupation of Korea in 1910, a colonial regime lasting until Korea's Liberation in 1945 at the end of World War Two. Immediately following
Liberation, Korea was partitioned at its 38th parallel between the United States and the Soviet Union, an action originally intended to establish temporary zones for the two sides to accept the regional surrender of Japanese forces. In his two-volume study on the origins of the Korean War, historian Bruce Cumings has argued that the social and cultural dislocations caused by the Japanese occupation linked with the political division between the regimes in the north and south to create the explosively unstable situation of 1945-1950, when more than 100,000 Korean people died in clashes between Left and Right. In 1950, a civil war broke out between the northern and southern regimes, eventually drawing the two major powers as well as a host of other participants - notably including the People’s Republic of China - into its wake. Though the war was suspended in 1953, the temporary division became long-term as Cold War rivalries prolonged the confrontation in Korea between the Western powers.

The continued structural division of Korea became one of the major concerns of an influential group of writers in the 1980s. Coupled with the repeated invocation of the North Korean threat, the division also provided the handiest rationale during the Park Chung Hee (1961-1979) and Chun Doo Hwan (1980-1988) regimes for severe repression of political dissent and of literature that in any way articulated it. Only in the relatively recent past, the first years of the decade of the 1990s, has reunification lost its taboo status as a subject, and come to be seen less as the (hidden) object of writing than an accepted premise.

The Japanese occupation of Korea has also exerted its influence on the post-1950 writing scene in a number of ways, both direct and indirect. First and most obviously, the Japanese repressed and then imposed an outright ban on literary or other expression in the Korean language. Nationalists who removed themselves from Korea, or who stayed and wrote in Korea until it was no longer possible and then still kept on, are heroes in the cultural histories of the period. Many other writers accommodated, some completely, others to a few lesser degree. The former - writers like the pioneers Yi Kwangsu and Ch’oe Namsŏn - were vilified during the post-Liberation period, but recently have been offered some degree of literary and ideological rehabilitation.

* This section on modern poetry is a revised version of the author’s ‘Fault Lines : Modern Korean Poetry’, Chicago Review, vol.39, nos. 3-4.

The latter, writers who cooperated with the Japanese in less obvious ways, continue to occupy a supremely tendentious zone in Korea’s history. A scandal broke out in 1986, for example, with the publication of the first two volumes of Selections of Pro-Japanese Literary Works, among which are essays, poems, and other materials by a number of prominent writers in the South Korean literary world.

As an instance of foreign economic and political power exercised in Korea, the Japanese occupation evokes bitter memories, but also raises questions about the so-called Western democratic powers for their evident neglect, even collusion, at Korea’s status as an occupied territory. The United States did not discourage Japan’s moves leading toward the 1910 occupation, and failed to respond in any significant way in 1919 to the March First Korean Independence Movement, even though the events of 1919 clearly were intended as a Korean response to President Woodrow Wilson’s Fourteen Points. The United States did respond to South Korea’s perilous situation in 1950, and for decades after the Korean War, the sense of appreciation for the American intervention was palpable nearly everywhere in the south. More recently, though, it has been noticed in the south that the United States was the initial instigator of the 1945 division; that the U.S. commitment of troops in 1950 was at least as much motivated by anxiety about the supposed Red menace as by concern for the people of (South) Korea; and that lingering American implication in the Cold War was a factor in the continuing division. In 1980, when the citizens of Kwangju, a city in the southwestern part of Korea, were brutally assaulted by Korean government troops, the United States not only failed to intervene, but seemed to have given at least tacit approval to the detailing of the troops to Kwangju.
Such political issues have formed a significant strand in Korean literature throughout this century, one that shapes a reading of even the most 'aesthetic' or purely literary works, and gives a pejorative sense to the term *sunsup'a*, the pure literary school as contrasted with the *ch'amyŏp'a* or commitment group, writers who have engaged in their works the social issues of the decades of the 1970s and 1980s. The political implications of the division of Korea spill over into the assumption that when one speaks of Korean literature, one normally means either literature written in Korea prior to the 1945 division, or literary works written in South Korea in the years since. Until just a few years ago, South Korea had banned the publication not only of works by North Korean writers - that is, citizens of the Democratic People's Republic of Korea - but even those who wrote and published prior to 1945 but then, for whatever reason, whether freely or not, 'went north.' North Korean literature is almost universally excluded in discussions of 'Korean literature' in South Korea, and in the West. At the same time, it must be noted that in the twentieth c. Korean literature has also shown a full range of engagements with other matters entirely, as well as a cosmopolitan awareness and appreciation of other writers in other countries, including Japan. This is to suggest that there is both far more and less to Korean literature than its conflicted politics.

Korean Poetry to 1945

From the first decade of the century, Ch'oe Namsŏn's (1879-1961) poem 'From the Sea to Children' (*Hae egesŏ sonyŏn ege*) stands out in the literary histories as the first modern poem. Ch'oe published the poem in 1908 in the premier issue of the journal he had just started publishing, *Youth* (*Sonyŏn*). With rather heavy didactic force, the poem articulated its author's hope to inspire the younger generations of Korea to take up the challenges of the modern age. The first and last stanzas will give a sense of the poem's structure and tone, in several respects reminiscent of the 'Song of the Flying Dragons'.

I

*Ch'ŏlsŏk, ch'ŏlsŏk, ch'ŏk, sswa-a.*
Rolling, smash, demolish.
Mountains high as T'aesan, rocks huge as houses,
What are they to me, what are they?
Know you my strength? Or do you not? Roaring out,
Rolling, smash, demolish.
*Ch'ŏlsŏk, ch'ŏlsŏk, ch'ŏk, t'yūrŭrung, kwak.*

VI

*Ch'ŏlsŏk, ch'ŏlsŏk, ch'ŏk, sswa-a.*
There on earth, the people;
I despise them all. The only ones I love,
Full of courage, the pure-hearted children.
Come then, sweetly to my arms and be embraced.
Come and let me kiss you.
*Ch'ŏlsŏk, ch'ŏlsŏk, ch'ŏk, t'yūrŭrung, kwak.*

Following the Japanese annexation of Korea in 1910, the literary as well as the political and social modernization movements were engulfed by the Japanese efforts to assimilate, or erase, Korean culture. Still, writers such as the pioneering novelist Yi Kwangsu, whose 1917 'new novel', *The Heartless* (*Mujŏng*), articulated a vision of modern enlightenment thought leading to the rebirth of Korean national energies, continued to grapple with the doubled challenges of creating a modern, Korean literature even as Japan's policies seemed to block the very idea of a Korean nation and culture. Chu Yohan's 'Fire Play', published in 1918, is cited as the first free-verse poem, while Kim Ŭŏk's experiments with traditional
rhythmic and thematic elements, as well as his translations of a broad range of European
poetry, excited great interest in the Korean literary world.

In 1919, in direct response to Woodrow Wilson's Fourteen Points, especially the principle
of national self determination, Ch'oe Namsôn, in consultation with Yi Kwangsu and other
leaders, drafted a Declaration of Korean Independence, which was read at Pagoda Park in
Seoul on March First. The independence movement spread rapidly throughout the country,
despite the concerted and violent efforts of the Japanese government-general to suppress it.
But the international community failed to respond, in part because of the difficult
negotiations then underway at Versailles to settle the end of World War I, and in part
because of American interests in having Japan as a balance to Russian ambitions in Asia.

The Japanese government did alter its policies for a time, however, easing an array of the
publishing restrictions, among others. As a result, the decade of the 1920s became a true
Renaissance of Korean literature. Poets such as Sowôl (his sobriquet), Kim Chôngshik
(1902-1934) and Manhae, Han Yongun (1879-1944) exploited both Korean and other
resources in recreating a Korean literature. Sowôl's famous poem 'Azaleas', published in
his only book of poems in 1925, expresses a wistful melancholy to those who read it as a
love poem. It echoes a poem by William Butler Yeats, 'He Wishes for the Cloths of
Heaven', for those who have read the Irish poet's work. Like Yeats, Sowôl deploys in his
poem a traditional diction and rhythm that evoke the Korean cultural past, like the Irish
Romantic past of Yeats's early work.

'Azaleas'

When you go away,
weary of me,
without a word, gently I shall let you go.

I shall gather
the beautiful azaleas of Yongbyôn and Yaksan
and scatter them on your path.

Step by step
on the flowers placed before you
tread softly, just lightly, and go.

When you go away,
weary of me,
though I die I shall not shed a tear.

Sowôl's melancholic tone was read in the 1960s and 1970s in South Korea as an
expression of the Korean national sense of sadness at the Japanese occupation. In the
1980s, a time of intense political concern about literature as a result of the Kwangju
uprising and massacre of 1980, Sowôl was criticized for having a decadent, sentimentally
escapist outlook. Sowôl's poems can now be read with a less politically mediated sense of
appreciation for the language and imagery of the works, but also in the case of 'Azaleas',
with an ironic awareness of the convergence of the site of those azaleas with the location of
one of the major North Korean nuclear reactors.

Manhae, Han Yongun directly and actively took part in a number of areas in the Korean
nationalist movement. Among other things, he briefly joined the so-called 'Righteous
Armies' in the 1890s in their guerilla campaign against the Japanese intruders. He became
a leader of the Korean Buddhist community during the 'teens, publishing a widely read
essay on the revitalization of Korean Buddhism. In 1919 he was chosen to represent the

Buddhists in signing the Declaration of Independence, and wrote three codicils on non-violent protest. Following his arrest and brief imprisonment for participating in the movement, he published his one collection of poems in Korean (he wrote another collection of Chinese poems during his imprisonment) called The Silence of Love (Nim ëi ch'immuk) in 1926. Written in a densely allusive style influenced by his reading of Rabindranath Tagore’s poems, on the one hand, and by the Buddhist scriptures on the other, the sequence of sixty-eight poems circles round and provokes the memory of the absent loved one, the nim of the book’s title. From one poem to the next, the voice of the poems may be a woman’s or a man’s, and for a number of the poems the subject may be read as a person, as the Korean nation or people, or the Buddha, or the contradictory, rhetorical centre of a self-reflexive, recursive style of prose-poem. Manhae’s 'Ferryboat and Traveller' evokes the image of the traveller, one that later poets used frequently, in the landscape of what might be colonial Korea; the ferryboat may be read as 'Korea'. The term for the traveller, haengin, also refers to a person entering Buddhist practice, while the ferryboat is a symbol for the scriptures. Finally, the poem can also be read as simply being constructed around the subject of itself.

'Ferryboat and Traveller'

I am the ferryboat
You are the traveller.

You step on me with muddy feet.
Holding you, I cross over the waters.
Holding you, I cross over the depths, the shallows, the steepest rapids.

If by chance you do not come I wait for you, night until day,
exposed to the winds, the snow and the rain.
When you cross the water you do not look back on me but just go on.
But I know that you are always about to come.
Waiting for you, day after day I go on wearing older.

I am the ferryboat
you are the traveller.

Despite the increasingly severe restrictions placed upon Korea during the decades of the 1930s and 1940s, Korean writers continued to pursue their craft. The poet, short story writer, essayist Bohemian Dadaist architect tea-house owner Yi Sang (1910-1937), in being the most unusual of Korea’s writers then and, in the estimation of many readers, since, can be viewed as the most representative. His novella 'Wings' (Nalgae) published less than one year before his death, combines the literary device of the naive narrator - a man who refuses to realize that his wife is a prostitute - with a remarkably avant garde literary style, filled with numerous references to the cultural products of the west, and constantly doubling and redoubling back upon itself in an infinitely regressive process of introspection. The narrator, as the story progresses, comes to resemble Ch’ŏyong, or a modern, urban version of him, even to the moment when he stumbles into his wife’s room as she is entertaining a client:

No sooner had I got home than I discovered my wife had a guest. I was cold and wet and, in the confusion, forgot to knock. I witnessed a scene that my wife would have liked me not to. With drenched feet I strode across her room and reached mine. Casting off my dripping garments, I covered myself with a quilt. I kept on shivering; the cold became intense. I felt as if the floor under me were sinking. I lost consciousness.

Translated by Peter H. Lee
The narrator becomes sick, and in a reversal of Ch’öyong’s story, his wife nurses him -
with sleeping pills, rather than cold medicine. Commentators on the story have suggested a
reversal, which is an almost architectural use of language to create and shape space on the
ground of the page, and in those poems which do have some comprehensible story, a
double-reflected sense of the absence of the poet’s self. Two examples are ‘Diagnosis’
from Yi Sang’s ‘Crow’s Eye View’, a long, proto-post-modernist poem which caused a
sensation in the Korean literary world as it was published in serial form in the Chosôn
Central News in 1934, and ‘Mirror’, published in that same year in Catholic Youth. The
first is given in the original, since to translate it would invade the architecture of the poem
for no gain.

‘Diagnosis’ (from ‘Crow’s Eye View’)

October 26, 1931

Yi Sang (Doctor on Duty)

‘Mirror’

There is no sound in the mirror;
no other world is so still.

In the mirror I do have ears,
two pitiful ears that cannot hear what I say.

The I of the mirror is a lefty,
awkward left-hander who doesn’t know how to shake my hand.

Because of the mirror I cannot touch the I of the mirror,
but without the mirror how could we ever have met?

I don’t have a mirror with me now but in the mirror there is always the I of the mirror,
busy, I suppose, somewhere with his lonely work.

The I of the mirror is just the opposite of me and still is just the same.
I worry about the I of the mirror and feel sad that I cannot conduct a proper examination.

The frustrated diagnostic impulse of the poem sounds an eerily close echo of the ritual core of Ch'ŏyong's song.

Post-Division, Post-War Korean Literature

For an interval during and immediately after the Korean War, a number of writers grappled either wishfully or realistically with the challenge to national identity, and the vast devastation, caused by a war that quite literally decimated the population of thirty million Korean people. Several prominent writers who 'went north' were dropped from the South Korean literary realm, officially ignored, or worse. The case of Lee In-Soo is a representative, if horrific, example. Educated in Korea, Japan, and England, a truly masterful translator of modern Korean poetry, Lee was 're-captured' by South Korean troops after the cease-fire in 1953, put through a hasty trial on charges of treason, and despite extensive and vigorous protests from the international community, summarily executed by the South Korean government.

The 1950s also saw a return to the modernist experiments of the 1930s most notably started by Yi Sang. The poet Kim Suyŏng (1921-1968) was one of the most influential of the neo-modernists, a group known as the 'Latter Half'. Other writers pursued a more lyrical, traditional poetic practice - notably the poet Sŏ Chŏngju, whose passionate, intense poems continue to inspire and exasperate other writers. Sŏ's 'Beside a Chrysanthemum' (Kukhwa yŏp'eso), has been learned by several generations of school children in Korea.

'Beside a Chrysanthemum'

To bring one chrysanthemum
to flower, the cuckoo has cried
since spring.

To bring one chrysanthemum to bloom,
thunder has rolled
through the black clouds.

Flower, like my sister returning
from distant, youthful byways
of throat-tight longing

to stand by this mirror:

for your yellow petals to open,
last night such a frost fell,
and I did not sleep.

The 1960s and 1970s were defined by the increasingly heavy-handed measures of the repressive Park Chung Hee regime, and the concomitantly serious focus in Korean literary works upon social and political issues. Kim Suyŏng came to be even more widely recognized as one of Korea's leading modern poets, and his death in 1968, run down by a bus in the before-curfew rush, was a tragic and ironic urban waste. He was at the time one of Korea's most accomplished and paradoxically most promising writers.

Among those who count themselves as descendants of Kim Suyŏng are the political satirist Kim Chiha, and the rural-urban genre-scene poet Shin Kyŏngnim. Shin and other writers and critics were associated at the time with the influential journal, Creation and Criticism.
The 1970s and 1980s, with rapid industrial and economic growth locked in the close embrace of a series of repressive political regimes, seemed to call forth a large number of outright protest poets, such as the former Buddhist monk Ko Un, Kim Chiha, and such metaphorical dissenters as Hwang Tonggyu and Chong Hyŏnjŏng.

The National Literature Movement was organized in the 1980s to refocus effort and attention on the issue that many writers and others believed was the single, defining aspect of Korea's national political life - the continuing division of the country. Many of the writers and critics associated with the movement had come together before in the offices and pages of Creation and Criticism. There have been such bizarre moments in the group's history as the expulsion of Kim Chiha for his urging students not to kill themselves in their anti-government protests, and the even more bizarre twist when the poet protested in turn that he had not known he was a member of the organization in the first place. Nevertheless, the organization has had a profound influence in Korea's literary history, as it marked a point when writers took action as a polity rather than isolated individuals or groups of individuals.

As it drew away from the Kwangju Uprising of 1980, the decade marked a period when writers took unambiguous stands on politics and human rights issues, many against the then current government of Chun Doo Hwan, and a few in support. The latter, or those who simply refused to speak out, were subjected to severe criticism and threats.

Many new voices and subjects began to appear, in the latter years of the 1980s, in writing about the world of the labouring class, then works by the labouring class, especially the poet Pak Nohae, whose Dawn of Labour reached a very wide audience in the late 1980s; in works by and about women; and in works from and about Kwangju. With the substantial changes in the domestic political climate in South Korea giving freer reign to the forces of a voracious reading market, poetry, stories, essays, confessional literature, and novels have flooded from the publishing houses. It can be argued that the variety in all its myriad facets had been a constant presence during this century, though confined by the tectonics of the Japanese occupation and the political division. The tremendous release that has happened in South Korea, and may also, at some time, in the north, is perfectly captured in one of Ko Un's most gloriously political poems, 'Great Springtime':

```
Warm east winds blow,  
the earth is melting.  
It's a sight to open  
the eyes of the blind.  
Kids are clustering  
close like chicks,  
underground insects  
are wriggling restless too.  
Just look! The fish rising  
from deeper water  
are using their backs  
to break the ice!  
How on earth  
can heaven keep silent?  
The wild goose fathers  
are leading their broods  
away towards the Sungari River.  
Now in this land  
wonders are happening.  
One great springtime is coming!  
```

Tr. by YM Kim and Brother Anthony of Taizé
Barely one century has passed since the first serialized fiction began to appear in late nineteenth-c. Korean newspapers, heralding the emergence of a literature sufficiently unlike what had preceded it and also new enough in content to be called 'modern' in the Western European sense. The unfolding of Korean literature over this reach of time is commonly divided into three main stages, each linked to certain distinct changes in social conditions. The literature of the period from the end of the nineteenth c. through the early years of the twentieth c., frequently called 'enlightenment literature', constitutes the first of these stages. The second stage is the literature of the Japanese colonial period, running from the early to the middle twentieth c. Post-Liberation literature, divided into that of the North and of the South and coinciding with the second half of this century, makes up the third stage.

The most dramatic changes in Modern Korean literature took place over a comparatively short period - the quarter century between the Kabo Reforms of 1894-96 and the independence demonstrations of 1919. These changes were undertaken mostly by a small, elite, and homogeneous class of early modern intellectuals and, for that very reason, could proceed apace.

In the early years of the twentieth c., much material was translated from Chinese, Japanese and other foreign languages into Korean and published in Korea. But, at the same time, modernized expression was also evolving in original Korean composition, as seen in early newspapers, magazines, and books.

Enlightenment literature gave way to colonial literature in the early 1920s after the tumultuous, anti-Japanese March First Movement of 1919 had altered the consciousness of the Korean people and Japan's new Cultural Policy had permitted the opening of several private Korean-language newspapers and magazines for the first time in more than a decade.

In addition to the realism introduced in 1919 by the coterie magazine Creation (Ch'angjo) edited by the pioneer Kim Tongin and his friends, there emerged the socialistic writing of a generation of young students who had been educated in Japan, where they encountered a wave of European thought that was not well known back home. In 1925 they formed the Korea Artista Proleta Federatio (KAPF), and until May 1935, when KAPF was closed down by the authorities, socialist writers added a fresh intellectual edge to Korean writing, although they ultimately failed to contribute many works of lasting importance to literary history.

The 1930s introduced a growing Japanese suppression that drove many writers away from the here-and-now as a subject. This decade witnessed a maturation in modern Korean literature within which the giants of the post-Liberation literary establishment, such as Ch'ae Manshik, Kim Tongni, and Hwang Sunwon, serve their apprenticeships.

The most ironic yet formative experience of the twentieth c. for Korean literature began with Liberation on 15 August 1945. Koreans regained a country that had been lost to Japanese imperialism only to lose it again to Russian and American imperialism. What has remained since then are two distortions of Korea - a 'North' and a 'South' - which have been further deformed by war and industrialization. In Korean, the 1945 Liberation is called Kwangbok, 'Glorious Recovery', but it was neither glorious nor a recovery and, worse, it was capped by an internecine war of horrifically compressed violence that spared no corner of the country. Of the Koreans who survived, ten million today remain separated from members of their families by the impassable truce-line. These events have so informed contemporary Korean literature in one way or another that some critics define literature since 1945 as the 'Literature of an Age of Division'.
The immediate post-Liberation period - the literary void of 1945-50 - was an ordeal for Korean writers. Pro-Japanese collaborators were being singled out and ostracized, while the decades-old division between left and right - quiescent during the latter days of colonial suppression - asserted itself again as literary groups formed, split, and merged. The rightist administrations of the U.S. Army Military Government in Korea and, later, Syngman Rhee, contributed to an increasingly hostile environment for the left. Ideological strife tore the literary world apart, and its ranks were significantly thinned as about one-third of Korea's writers - more than one hundred - migrated to the North by the early 1950s. At the same time some writers also moved to the South, but it appears that, for each writer who went South, three southerners went North. We have managed to learn something of the fate of literature in the North through fiction carried in official publications issued in P'yongyang and available outside the Korean peninsula. A discussion of the North Korean short story appears below.

Although no literature worthy of note was produced in the South during the hectic five years of political confrontation between left and right that followed Liberation, the terrible experience of the 1950-53 war demanded, and got, a response from the literary establishment. While many writers, retreating from ugly reality, resurrected the pastoral idylls of the 1930s, some postwar writers tried to deal more directly, though distantly, with the awful world around them.

Mature craftsmen, schooled in the 1930s and tested in war, towered over the literary establishment at about this time, relinquishing their position only when displaced in the 1970s by a new generation that knew nothing of the colonial experience and were only toddlers during the Korean War.

Halfway through the second stage of South Korean literature since Liberation, while the old masters still dominated the scene, thousands of Korean students - elementary, middle, high school, and college - managed something their elders had long been unable to accomplish. Enraged by blatant political malfeasance and fired by the news that police had killed a boy in Masan with a tear gas canister fired at close range, students converged on major cities and downtown Seoul in massive street demonstrations that finally pulled down the deeply corrupt, authoritarian regime of the Liberal Party under President Syngman Rhee. This was a seminal event for modern Korean culture, society, economy, and politics, for it unleashed a new generation upon the scene, one that now leads in every walk of Korean life.

Though a decade older than this new generation, writer Ch'oe Inhun (b.1936) was the first to break the taboo on discussion of the war in creative literature with his novel *The Square*, published in November 1960. His work takes the then popular victim's view of the war as having been caused by external forces, which contrasts with treatments of two decades later that began to suggest the war was the inevitable result of internal historical factors.

Ch'oe Inhun's taboo-breaking novel notwithstanding, a more significant breakthrough occurred in modern South Korean fiction when one of the April 19th Generation, Kim Sŏngok (b.1941), published his landmark short story *Seoul, 1964: Winter*, marking the beginning of the third stage of Literature in the age of division.

'Seoul, 1964: Winter' is a bellwether of Kim Sŏngok's generation. His youthful, modern vocabulary of high-frequency words is notable for its distinct and explicit quality and concomitant rare use of the sensory vocabulary that had been an essential attribute of creative writing since the colonial period.

Although Kim Sŏngok faded after publishing comparatively few works, the crack he made in conventional literary perceptions was torn wide open in the 1970s as other members of his generation followed his lead. Notable among them is Ch'oe Inho (b. 1945). An ironic and witty writer, Ch'oe made his debut in the 1960s and has since become a huge
The decade of the 1970s, unique in Korean social and cultural history, was characterized by a rapid economic development that spawned social and regional discord, together with a political self-righteousness that invited ideological confrontation. Rural poverty increased as uprooted workers concentrated in the major cities, which were dominated by a burgeoning, materialistic bourgeoisie that sought to amuse itself in the context of commercial culture. At the same time, a national self-awareness began to take shape as part of an effort to surmount the discord and recover a sense of national wholeness. In response, Korean literature began to orient itself toward the new realities and, thus, take part in the cognitive task that faced the nation.

Cho Sehūi (b.1942) emerged as an important figure in South Korean fiction at this time. His Small_Ball_Launched_by_a_Dwarf_ (Nanjangi ka ssoaollin chagūn kong; 1978) is the most notable product of what is now called the 'literature of the 1970s'. It went through thirty-one printings in its first six years and continued to sell 20,000 copies yearly throughout the 1980s.

Cho's best-seller is a series of loosely-connected but realistically-interrelated stories. A fixed set of characters appears freely in the stories, revealing themselves in bits and snatches as Cho builds up the reality of their lives from the discontinuous fragments scattered throughout the work. These characters' lives run parallel, intersect, and collide, summoning up life in the rapidly industrializing Korea of the 1970s.

The many social changes spawned by rapid industrialization in the 1970s created new social forces that informed the literature of the 1980s. At this time, two events hit the country particularly hard, spurring literary responses. The assassination of President Park Chung Hee in October 1979 blew the lid off a pent-up social scene, leading to labour disputes, strikes, and massive demonstrations. These events culminated in the May 1980 civil uprising in the city of Kwangju which involved two hundred thousand people and was put down by military force at the cost of hundreds dead and thousands wounded. The trauma of the Kwangju Massacre had sufficient impact to colour the literature of a generation of young writers who were then in their twenties.

Early in the 1980s the repressive dictatorship of President Chun Doo Hwan clamped controls on writers by forcing the closure of their literary magazines. But, while the older writers, numbed by past events, were no longer as sensitive as they once had been, only a few younger writers were able to grasp the impact of the Kwangju Massacre on the general populace and the resulting changes in popular consciousness.

However, as new writers did appear, they produced work that fell into two major groupings, commonly referred to as 'literature of division' and 'literature of the people'. These dealt, respectively, with problems of the division of national territory and with social issues stemming from the dictatorship of a political elite. In contrast to Ch'oe Inhun's 1961 The_Square, which treated the Korean War as a clash of superpowers, the literature of division of the 1980s began to consider the war as the inevitable result of internal historical forces, such as the class struggle of landlord and tenant. Cho Chōngnae essayed this approach in his 1981 novella, 'Land of Exile', and again, more forcefully, in his massive saga, The_Taebaek_Mountains_(1983-89).

The new young mainstream novelists who emerged during the 1980s include Yi Insŏng, Yang Kwija, Im Ch'ŏru, and Ch'oe Such'ŏl - all born in the 1950s. In spite of their shared experiences of the 1980s and tendency to address larger societal issues (labourers, middle class, and social reform; political violence, national division, and the Kwangju Massacre) they nevertheless show considerable individual genius.
Yi Insŏng, well known for his 1983 short story collection, *Into a Unfamiliar Time*, is a writer who writes to change society. He enriches his work with careful research but also draws upon his own personal experience - which he heightens for artistic effect. Yang Kwija, on the other hand, writes in a simple but polished, classical style as she examines the alienation of a weary middle-class. A representative collection of her work is the 1985 *Deaf Bird*.

The work of Im Ch'ŏru, who was born in Kwangju, reveals spiritual scars of the 1980 massacre. The representative 'A Shared Journey', from his 1985 anthology *Beloved South*, exemplifies his uneasy but lyrical style, which projects a gloomy view of the world.

The most thematically wide-ranging of these four representative young writers of the 1980s is Ch'oe Such'ŏl, whose constantly shifting insights examine the failures in human relations, isolation of individuals, and psychological aspects of violence in society. A representative collection of his work, *Pavilion in the Air*, explores inner consciousness and psychology in an imaginary world of unreality.

Literature in the northern Democratic People's Republic of Korea (DPRK) developed very differently from that of South Korea. When leftist literary leaders from the southern half of Korea and intellectuals who spent the war years in exile in Yenan, China, flocked to the new regime in the North after Liberation, they discovered a situation quite unlike what they had anticipated. Major literary and intellectual leaders associated with the earlier proletarian school disappeared from sight in the course of a struggle for political control of the North between Kim Il Sung's Soviet-oriented Korean Workers Party and the New People's party, whose leaders had spent the last years before Liberation with Mao Tsetung in Yenan.

The leader of the Yenan faction, Kim Tubong, an established literary scholar, was purged during the Korean War. Having eliminated not only non-communist nationalists and domestic communists soon after Liberation but also the Yenan faction by the end of the Korean War, Kim Il Sung had a free hand to dictate cultural policy in line with his own anti-intellectual, party-first bias. Clearly impatient with possible criticism by intellectuals from within party ranks, as Mao had been in Yenan, Kim repeatedly expressed a distaste for literary workers as a professional group separate from the party and the people.

In terms which recall the Stalin-Zhdanov cultural policy in Soviet Russia of the 1930s, he characterized writers and artists as 'engineers of the human soul' and stressed that their works should serve the people as a 'powerful weapon and as a great inspiration'. He chided writers and artists for having 'lost touch with life' and 'lagging behind our rapidly advancing reality'. His basic theme was that the writers must serve the people and the party, acting as inspirational conveyors of information who help the readers learn from the 'lofty spirit of ordinary people'.

In November 1960 Kim Il Sung announced the formation of a General Federation of Literature and Art, in which writers and other creative artists were to work collectively under the leadership and direct guidance of the party. By the 1970s, Kim appeared satisfied that his writers were under party control and successfully incorporated into the work of the state. Addressing the Fifth Congress of the Korean Workers Party, he reported, "Our literature and art have become the literature and art of the Party, of the revolution, and of the people in the truest sense of the term and are becoming a powerful means in educating our working people along communist lines."

North Korean fiction as it has evolved under party control is less a reflection of social reality than it is a statement of social ideals. There are no villains in North Korean fiction when the story is set in the present-day DPRK. The only inveterate villains are found among landlords and Japanese in stories set before Liberation or American and Korean officials in modern tales that take place in South Korea. In stories set in the DPRK, we find
no interpersonal conflicts involving true enmity but, rather, solvable misunderstandings, such as those between faithful believers and back-sliders. The stance is optimistic, evincing a belief in human perfectibility. Since all people are seen essentially as potential believers susceptible to conversion or correction, there is no character development beyond the individual’s recognition of party truth. Therefore, without productive interaction between characters, the only motive force rests with the author, who manipulates his puppet-like characters in obvious and predictable ways.

The typical story consists of five parts: description of physical setting, identification of major characters, introduction of problem to be solved, crisis scene, and resolution. The setting is always identified as a real one, mostly agricultural, taking place in the present-day DPRK. The next most popular type of setting after agricultural is industrial, but typically a rural locale. Most of the agricultural activity is related to change (that is, mechanization, improved fertilizers, more efficient methods, land reclamation, highway and railroad construction), which means that virtually no attention is given to traditional farming and the natural cycle—nature cannot dominate the land, for nature is to be overcome by man’s revolutionary struggle. The natural environment is typically beautiful to observe but harsh to encounter: mountains abound, and characters frequently struggle against the cold and snow (often a blizzard).

The major characters, identified at the outset by name and social function, are all local workers. Although the speech of characters reflects their differences in status, as is normal in the Korean language, the authors tend to equalize the characters throughout the narration by referring to them by their first names. The family structure is downplayed and made ancillary to such mainstream, task-oriented groups as work brigades, rural cooperatives, military outfits, factory-worker groups, student circles, and cultural clubs. Interaction of individuals without reference to these groups does not occur, hence ruling out any but the most tangential recognition of family and romantic love.

The problem introduced in the third part of the typical story is commonly a misunderstanding to be resolved, a back-slider to be encouraged, a quota to be met, a new technique to be perfected, or a struggle to overcome an adversary of the group (natural phenomena, Japanese, Americans). There is never any question about ultimate victory, and what doubters there are become converted in the course of the solution of the problem. The crucial meeting of forces in the fourth part gives way to a concluding resolution in which the problems are restated and a suggestion of future happiness and success is unveiled.

The didactic content, manipulative plot, and unconvincing characterization of the contemporary North Korean short story are functions of the same kind of social purpose that motivated the writers of the ‘new novel’ early in the twentieth c., the two are invested with a serious intent that is a function of the times. Both are valid and useful in terms of their social purposes: the ‘new novel’ helped to spread literacy and inculcate progressive ideas in early modern Korea and North Korean socialist realism has served to educate citizens of the DPRK along party lines.

Instead of relegating North Korean socialist realism to a marginal category of political propaganda, however, we would benefit by considering its affinities with the nineteenth-c. classical novel, which promoted virtue and reproved vice, the enlightenment’s ‘new novel’, which advocated modern social ideas, and the idealistic realism of passionate left-wing writers of the colonial era. As observed in the section on kasa poetry, above, that form also exhibited continuity in its didacticism both during the Enlightenment period and in modern North Korea. Seen in this light, we can appreciate writing in the DPRK today as the expression of an impulse that runs deep in Korean literature.

Lunar New Year

The lunar New Year, known as Sŏl, Wŏndan, Wŏnil or Chŏngch’o, is one of the most important holidays in Korea. During this holiday, there are traffic jams throughout the country as people rush to see their family and relatives. On the morning of Lunar New Year, people don traditional dress (hanbok). Various foods and wine are prepared, and then set in front of an ancestral tablet. The table is meticulously arranged according to Confucian tradition; however, many families also have their own traditions governing details of the arrangement. In general, fish is put on the east, meat on the west, fruit in front, rice and soup behind and liquor on the front table. A ceremony is then held during which the male family members pay respect to their deceased ancestors up to the fourth generation by making three full bows.

Family members also visit the graves of their deceased ancestors. On this holiday, after cutting the grass from around the grave, they make a simple offering and then bow three times. In addition to paying respect to the deceased, each family member is expected to make two formal bows to his or her elders. According to custom, the elders then give the person a gift of money, particularly if the person is a child.

Special foods are prepared for this holiday. In particular, rice-cake soup is typically served instead of rice. For this reason, the question ‘How many bowls of rice-cake soup have you eaten?’ is sometimes used to ask one’s age. In North Korea and China, mandu (dumpling) soup is often eaten instead. Certain games are also associated with the holiday. A stick-tossing game called yut is commonly played. Kite flying is also popular.

The lunar New Year is believed to have been celebrated as early as the Shilla period. It was also an important holiday during the Koryŏ and Chosŏn periods. However, during the Japanese occupation (1910-1945), the holiday fell victim to the colonial attempt to suppress Korean culture. Even after the occupation, Koreans were encouraged to observe the solar New Year. As the government increased vacation time for the solar New Year and decreased it for the lunar New Year, the former holiday became the only time suitable for visiting relatives who lived far away. Then, in 1989 the government altered its previous policy, making the lunar New Year an official three-day holiday. Nowadays, nearly all Koreans celebrate the New Year according to the lunar calendar.

Lyuh Woon Hyung (see Yŏ Unhyŏng)

MacArthur, General Douglas (1880-1964)

Douglas MacArthur was the U.S. general who commanded the Southwest Pacific Theatre in World War II, administered post-war Japan during the Allied occupation that followed, and led United Nations (UN) forces during the first nine months of the Korean War. MacArthur was born in Little Rock Arkansas, the son of Arthur MacArthur a frontier army officer. He graduated from the United States Military Academy (USMA) in 1903, finishing first in his class. His natural leadership qualities came to the fore during his time at West Point and are witnessed in the fact that he was named First Captain, considered the highest honour at the military academy. Upon graduation, MacArthur served in various positions and came into prominence during World War I. He had risen to the rank of Brigadier
General by the conclusion of the war. After the War, he served as Superintendent of the USMA and as Army Chief of Staff in 1930. MacArthur then retired to the reserve list of officers in 1937, but was recalled to active duty and commanded the US forces against the Japanese in World War II in the Far East, eventually being placed in command of all Allied Forces in the Southwest Pacific region. On 2 September 1945 he accepted the unconditional surrender of the Japanese on-board the USS Missouri, and then was appointed Supreme Commander of the Allied Forces in Japan. MacArthur was serving in this capacity at the time of the outbreak of the Korean War in June 1950.

While MacArthur was in Japan he had no direct responsibilities for Korea after the withdrawal of American troops in June 1949, but was responsible for logistical support of the United States Embassy and the Korean Military Advisory Group both in Seoul. Of course, the US military intelligence and the Central Intelligence Agency were aware of a possible North Korean attack, and in February 1950 General MacArthur warned that an offensive was likely in the Spring. However, Washington gave scant regard to his and the other advice it received from the troubled region.

With North Korea's invasion of South Korea on early Sunday morning, 25 June 1950, the United Nations (UN) called for all member countries to aid the South in repelling the attack and in restoring peace to the area. MacArthur received a directive from the Joint Chiefs of Staff placing him in charge of all American military operations in Korea, and he then despatched staff to set up a command post in Korea, ready for his arrival. The general arrived in Suwŏn, south of Seoul, on 29 June and met with the President of the Republic of Korea (ROK) Syngman Rhee (Yi Sungman) and American ambassador to Korea, John J. Muccio. Following his appraisal of the battle then raging in Seoul, MacArthur came to the rapid conclusion that the only hope for the South Korean army was American intervention, and that South Korea would soon face total capitulation unless strong support could be given immediately. This report was despatched to Washington D.C., and President Harry S. Truman convened a meeting of the National Security Council, which authorised General MacArthur to, (a) deploy American troops to provide logistical support to the ROK, (b) establish a secure area around Pusan, and (c) carry out air strikes against North Korea to destroy its military installations. Hence, by nightfall on 1 July, a small advance force of American troops landed in Pusan and prepared to meet the onslaught of North Korean forces, which were now south of the 38th parallel.

By the end of the first week in July, the UN Security Council had issued a directive charging the United States with the unified command of UN forces in Korea, and on 8 July, President Truman appointed MacArthur as commander of all armed forces in Korea. Initially, MacArthur assigned the American ground forces in Korea, the Eighth Army, to Lieutenant General Walton H. Walker, and by 17 July, President Rhee had placed all South Korean forces under Walker. In this early phase of the war, MacArthur concentrated on slowing the North Korean thrust southwards, while trying to assemble a sufficiently strong force to turn the tide. The number of ground troops available to MacArthur was severely restricted, while the South Korean army was poorly equipped and low in spirit after a chain of defeats. Thus, the UN actions in the early days of the war were mostly carried out by its air and naval forces. Air strikes on North Korea from American aircraft carriers had begun by 4 July, and these were soon supplemented by other UN air force sorties. A naval blockade, south of the 41st parallel on the east coast and south of 39 degrees 30 minutes on the west coast, was thrown around North Korea to prevent the easy transport of supplies to its ground forces in the South and the import of supplies from the Soviet Union and the People’s Republic of China (PRC).

MacArthur quickly realised that the best way to drive out the North Korean troops from the South was by way of an amphibious assault deep behind their lines, since a frontal ground assault would result in too-heavy casualties for his relatively small ground force. His plan was to land at the port of Inch’ŏn and divide the North’s army, thereby forcing it to engage
in a war on two fronts, MacArthur was made aware that the tides at Inch'on are among the highest in the world, and that the landing would be extremely difficult. Of the dates considered--15 September, 11 October, and 2 or 3 November seemed appropriate. MacArthur decided that 15 September would be best since it would provide earlier relief for the armies in the south. Also, by then the farmers would have harvested their rice crop. He met opposition, however, from the Joint Chiefs of Staff, since the tides at Inch'on on 15 September would be particularly worrying for the landing craft, at a high of 9.2 metres (30 feet), and also with a rapid ebb within the space of two hours or so, which could leave the small ships and their cargoes marooned on the harbour's mud flats, making them easy targets for the North Korean shore batteries. MacArthur continued to press for a 15 September assault for the reason that as the enemy's high command would not expect an attack under such unfavourable conditions the landing would be successful. He eventually received approval for his plan, and on 15 September the UN forces landed at Inch'on, taking the North Koreans by surprise and capturing the second largest port in Korea without major opposition. The UN forces forged ahead and liberated Seoul just a week later, and in the process cutting the enemy's major lines of supply to the south. The forces in Pusan then broke out of their perimeter and by 30 September had pushed the North Korean army north of the 38th parallel, liberating the south within just fifteen days. The North Korean army caught between Seoul and Pusan suffered extremely heavy casualties and many of its fighting units were annihilated. The execution of MacArthur's plan had been flawless and military strategists count it among the most brilliantly executed operations in the history of modern warfare.

The impressive victory of MacArthur at Inch'on and his prowess in purging the south of North Korean troops created an air of confidence in Washington and among the UN coalition of the possibility of eliminating the North Korean threat permanently and of unifying the Korean peninsula at the same time. The US then suspended its containment policy and the UN forces were given the go-ahead to cross the 38th parallel into North Korea as a means of eliminating the Communists and reuniting the peninsula under the South Korean government. Thus, some three weeks after securing the southern regions, the UN forces began their northward thrust. MacArthur was not in complete understanding with President Truman over the scope of the UN mission, and this developed as a 'battle of the wills' between the soldier and the politician. A main concern was that either Soviet or Chinese forces would enter the war, which would then expand beyond a regional conflict. Initially, the directive was that the UN forces were to advance no further than forty miles (sixty-four kms.) south of the Yalu River (the Korea-China border), but by 24 October, General MacArthur had instructed his battle-commanders to ignore this order and proceed northwards. MacArthur was convinced that the Chinese would not enter the war, and it seemed likely that after the fall of Pyongyang and the attainment of the Yalu river region objective, with almost two-thirds of North Korea in UN hands, victory over the communist forces would be complete. But he was proven wrong, when in mid-October, about 200,000 Chinese 'volunteer' soldiers joined forces with the North Korean army, thus placing a whole new face on the war, and swinging the pendulum in favour of the North Korean forces.

MacArthur's violation of his directive created much controversy in the United States, particularly as the Chinese-backed North Korean Army pushed southward. MacArthur believed that he needed to take action against Chinese positions in Manchuria to cut the enemy supply lines; the American government, however, did not want to risk the chance of the conflict in Korea spreading to other areas or developing into a full-blown war. Hence, a war of words and positions continued between the Democratic Party administration of President Truman and General MacArthur, who was supported by many Republican Party politicians. At the same time, the North Korean-Chinese troops had pushed well below the 38th parallel and again had the UN coalition cornered around Pusan. MacArthur slowly regained control of most of the south and again announced his plans for advancing beyond
the 38th parallel. Washington, on the other hand, was attempting to reach a peace-accord with China and North Korea, and did not intend to enter into the scale of hostility with China that MacArthur advocated. MacArthur's persistent challenge to the directives of President Truman led to the inevitable, as on 10 April 1951 Truman dismissed the general from his command, ending his military career and involvement in Korea.

Popular support of MacArthur was extremely high in the United States and his speech to Congress made him even more respected. On his return to the US he was greeted by massive parades and applauding crowds, but he also was the object of persecution by the Truman administration. To the end, MacArthur claimed that the interference of the administration had prevented him from winning the Korean War, which continued to be stalemated until the cessation of hostilities in 1953.

Bibliography

Maech’ön yarok (Personal Accounts of Maech’ön)

*Maech’ön yarok* is an undisclosed history collection of the final years of the Choson period written by Hwang Hyön (1855-1910). This work covers the period from 1864 until 1910 and is comprised of six volumes in seven fascicles. It covers the first thirty years of the reign of King Kojong (r. 1864-1907) in just one volume. However, the last seventeen years of the Choson period are covered extensively in five volumes as the author records many of the significant events that occurred in the tumultuous period that witnessed the fall of the Choson Kingdom.

Among the events that are recorded in the first volume are the regency of Hungson Taewon’gun, the political strife among members of the royal family including Queen Min, and the treaties between Korea, Japan and other countries. The final five volumes provide a chronological history of the events that surrounded the collapse of the Choson Kingdom. Here the author lists such historically significant events such as the 1894 Tonghak Rebellion, the Sino-Japanese War, the assassination of Queen Min by the Japanese, the Russo-Japanese War, and the treaties and machinations of the Japanese that led to the loss of Korea’s national sovereignty. In all, this work covers some of the most important events in the modern history of Korea making it invaluable in the study of this period.

Maeil shinbo (see Seoul shinmun)

Maeil shinmun

The *Maeil shinmun* (Daily News) newspaper was the first daily in Korea and began publication on 9 April 1898. At its inception, Yang Hongmok was president, and others involved at that time include personages such as Syngman Rhee (Yi Sungman), Ch’oe Chongshik, and Yu Yongsok. Originally, the newspaper was published at the Paejae Academy as the *Hyöpsyon hohoebö*, but after its relocation to offices in the Namdaemun district of Seoul, it took the title of *Maeil shinmun*. It was launched with the pledge of contributing in a positive manner to the modernisation of the country and the fostering of a higher culture.

The *Maeil shinmun* was designed as a newspaper for the people and hence, from its beginning, it used the vernacular han’gul script, in order to reach as large an audience as
possible. Moreover, as the paper of the Korean people, the *Maeil shinmun* was at the forefront of the struggle against the intervention of foreign powers in Korean affairs, and helped spread this message throughout the Korean press. One such issue dealing with the foreign powers in Korea was the demand, on the front page of the 16 May 1898 edition, that the Russian and French governments transfer jurisdiction of their coal-mining interests in Korea to the Korean government.

The newspaper, however, was plagued with financial troubles and operational discord and this forced a temporary closure in July 1898. Upon resuming publication, the strife between the various factions of the newspaper resulted in the dismissal of staff members Syngman Rhee, Yu Yongsoo and Ch’oe Chongshik and the rise of a pro-Japanese faction which gained control. The newspaper finished publication with its two-hundredth and seventy-ninth issue, after only fifteen months. Nonetheless, the influence of the *Maeil shinmun* was a major one in that it represented the first daily newspaper in Korea, and acted on behalf of the Korean people during its short existence in a period of great change and turmoil.

**Maengbu Mountain**

Surrounded by numerous other peaks over 2,000 metres high, Mt. Maengbu is part of the lofty Nangnim Mountain Range. The gentle slopes on both the eastern and southern side belie the mountain’s high elevation of 2,214 metres. The steep western slope clearly marks the provincial border between Changjin County in South Hamgyong Province and Kanggye County in P’yongan Province. The rugged terrain and dense conifer forests make access to this area difficult.

**Magazines**

**Introduction**

When Korea came into contact with Western culture at the end of the nineteenth c., among the many areas influenced was literature. This time of great changes in Korea also marked the advent of magazine publishing in Korea. In this period there were basically four types of magazines: those published by religious organizations; those developed by Korean students studying abroad; those that were published by organizations or academic societies; and those that were published in order to bring about the cultural enlightenment of their readers. Of these groups, the first magazines that were published in Korea were for foreign audiences and were published by religious organizations. Specifically, *The Korean Repository* published by F. Ohlinger in January 1892 was the first magazine, in a modern sense, published in Korea.

Of the magazines in Korean and for a Korean reading audience, *Surihak chapchi*, which was published in December 1905, was the first academic magazine in Korea. Shortly thereafter, *Sonyōn hanbando (Korean Peninsula Youth)* in November 1906 marked the first children’s magazine published in Korea. In November 1908 the magazine that is widely credited with being the first modern magazine published in Korea, *Sonyōn (Youth)*, appeared. The publisher was the eighteen-year old Ch’oe Namssōn who aimed his literary magazine at a broad audience. *Sonyōn* marked a major turning point in the publication of Korean magazines.

**Censorship**

The period after the Japanese seizure of Korea was marked by heavy censorship of magazines and newspapers since media had played major roles in the opposition movement against Japanese encroachments in Korea. In the period of 1910-1919 magazines were limited to those that dealt with religious, technical or literary themes, and
this period saw a total of forty-nine different magazines published. Notable among these are *Pulkün chögogi* (Red Jacket) which was the first bi-monthly magazine in Korea and *Yushim* (Mind Only) the first Buddhist magazine in Korea. After the 1 March 1919 Independence Movement, Japanese policy in Korea changed somewhat and this allowed a broader spectrum of magazines to be published. In this period magazines such as *Kaebýök* (Genesis), *Ch'angjo* (Creation), *P'yehö* (Ruins), *Shinch'öng* (The New Heaven and Earth), *Shin'yöja* (New Woman), *Örini* (Children), and *Munyeshidae* prospered and made great strides both in their social and literary contributions.

**Post World War II**

The period after liberation in 1945 is marked by a flourishing of many types of magazines that carried themes ranging from politics and societal problems to literary and children-orientated issues. The audiences that the magazines were geared towards became even more selective. This resulted in the issue of publications that were aimed at general, children and female audiences, various academic disciplines, technical fields, political views and regional concerns of the nation. Some of the most notable magazines of this period include *Kön'gyuk kongnon* (Nation Building Opinion), *Miissang* (The People’s Voice), *Munye* (Literary Arts) which sold out its first issue of four-thousand copies in ten days in August 1949, *Hümang* (Hope), *Sasanggye*, *Hagwön*, *Hyöndae munhak* (Modern Korean Literature) and *Yöwon*.

**Current trends**

In recent years the number of magazines has continued to increase. In 1946 there were about 140 magazines published in Korea. This number soared to almost 1300 in 1989 including 1 073 monthly, 58 bi-monthly, and 139 quarterly publications. The range of topics covered by these publications is extremely diverse and includes politics, social issues, financial issues, fashion, hobbies, literary concerns, academic matters and many other aspects of modern life. Magazines are one of the fastest growing segments in Korean media with the bulk of profits coming from advertising along with comparatively high cover prices. One rapidly-expanding area is that of women’s magazines. In 1994 there were nineteen weekly and seventy-six monthly magazines devoted completely to women’s issues.

**Advertising**

Magazines have been able to increase their share of the advertising revenue in Korea through aggressive marketing of their product. Magazines also use investigative reporting techniques that catch the attention of potential readers. Market leaders such as *Weekly Chosun* use a combination of marketing and aggressive reporting techniques to secure a large readership. Other magazines focus on one segment of the market such as fashion or a particular hobby. In 1995 advertising in magazines came to a total of 176.1 billion won which accounted for 3.6 per cent of the total advertising market.

**Sonyön hanbando**

*Sonyön hanbando* (Korean Peninsula Youth) is acknowledged as the first children’s magazine in Korea. The inaugural issue of this magazine was November of 1906 and the last issue was published in April 1907, for a total of six issues. The head of the magazine was Yang Chaegöng, and the staff was headed by Cho T’aejin and Ch’An Sulwön among a total of fifteen members. The magazine in its initial issue proclaimed that it aimed to promote a free and independent spirit, and the equality of all within the Great Han Empire, so that its people could gain enlightenment. Moreover, it sought to illumine educational matters like a lighthouse.
The content of the magazine focused on new education and new literature was also emphasised, with the principle theme of enlightenment for the people. However, the magazine used mainly Chinese characters in its composition and did not break from the styles used in the writings of the past age. The main writings in the magazine include Yi Haejo's novel *Chamsangt'ae* (Moss on the Mountain Peak) that was serialised, Yi Injik's *Sahoehak* (Sociology), Won Yongui's *Kyoyuk shillon* (New Education Theory) and *Taehan munjon* (Korean Grammar) by Yu Kiljun. There are presently copies of this publication at both Seoul National University Library and Yonsei University Library.

**Sonyön**

*Sonyён* (Youth) is widely acclaimed as the first modem magazine in Korea. The first issue was in November 1908 and it ceased publication with its twenty-third issue in May 1911. Ch’oe Namsén was the creative force behind this magazine. In 1906 Ch’oe went to Japan to study and enrolled in Waseda College in the Geography and History Department. However, due to a debate at a mock assembly and the problems arising from this, around seventy Korean students, including Ch’oe were expelled. The nineteen year old Ch’oe then took his remaining school expense money, bought printing equipment and returned home to Korea to publish a magazine.

Initially Ch’oe wrote, edited and published the magazine by himself. The stated purpose of the magazine was: ‘Let our nation of Korea be a nation of young men. For this purpose, they must be educated to be capable of bearing that responsibility’. However, the readership of the magazine was very small with the first issue having just six, the second fourteen and up until the eight and ninth issues the number of readers did not exceed thirty. Even after the first year, readership was less than two hundred. From the second issue of the third volume Ch’oe shed his role of independently managing all aspects of the magazine and brought in as writers such as Yi Kwangsú and Hong Myonghili. Soon after the publication of the eighth issue the magazine was banned, but after three months publication was allowed to resume. Again, after the first issue of the fourth volume in January 1911, the magazine was again closed down by the Japanese authorities. After four months, in May 1911, the final issue was published.

*Sonyён* was designed to enlighten and inspire the youth of Korea. The charter of the magazine set out in the first issue stated: ‘Since this magazine wishes our young people to be strong, steadfast and thoughtful in character, it will not print words that stimulate minds to be lazy, weak, or false to even the slightest degree. However, if a work is helpful in forming beautiful thoughts and sound discipline to even a small degree, it will be published despite its lightness’. The magazine also served to introduce the so-called ‘new-style’ poetry. In the first issue of the magazine, Ch’oe’s poem *Hae egesŏ sonyён ege* (From the Sea to the Youth) marked the first example of this type of poetry in Korea. Moreover, the magazine served to blaze the path for the pure literary magazines that were to shortly follow it such as *Ch’ŏngch’un* (The Youth), *Ch’angjo* (Creation), *P’yehŏ* (Ruins) and *Paekcho* (White Tide).

**Pulkun chŏgori**

*Pulkun chŏgori* (Red Jacket) was a children’s magazine published by Ch’oe Namsén, and is notable in that it was the first bi-monthly magazine in Korea. It was printed in a tabloid style that was issued by Shinmun’gwan publishing company. In January 1913 the first issue was published and this was followed by bi-monthly publication until June of the same year for a total of twelve issues. However, it is not certain that the twelfth issue was ever published. The purpose of this magazine was given as for both entertainment and as a learning-tool for children. It sought to enlighten children while at the same time providing an interesting atmosphere for them. The magazine contained many interesting stories and drawings for children.
Yushim

*Yushim (Mind Only)* was a Buddhist moral training magazine that was first published in September 1918 and ceased publication after three issues in December of the same year. The editor and compiler of the magazine was Han Yongun. Contributors include Ch’oe Rin, Ch’oe Namsôn, Yu Kôn, Yi Kwangjong and Kim Munyôn, among others. The works published in this magazine also include those that won literary prizes, such as *Insaeng Úl chillo* (*The Path of Human Existence*) by Kim Sunsok and *Kohakaesaeng* by Han Yongun. The magazine was primarily designed for the enlightenment of Buddhist readers.

Kaebýök

*Kaebýök (Genesis)* was a monthly magazine that began publication on 25 June 1920. It was published by the Kaebýöksa that was set up under the guise of the National Cultural Realization Movement (*Minjok munhwâ shihyönd undong*) of the Ch’ŏndogyo Party. It published its last issue, the seventy-second, on 1 August 1926 when it was forced to close due to pressure from the Japanese colonial government. The magazine served as an extension of the views of the Ch’ŏndogyo (the Heavenly Way) religion on the blending of new and old culture and was a part of their anti-Japanese movement. *Kaebýök* was a synthesis of various topics such as the arts and sciences, religion and literary arts. At the time of its inception, Ch’oe Chongjong was head of the magazine, Yi Tonghwa was the editor and Yi Tusong was the publisher. The reason behind the publication of this magazine is given in the inaugural issue as being, ‘In order to introduce the ideology of the world, the spirit of self-determination of people must be instilled, the ideology of Ch’ŏndogyo and nationalism should be elevated, and social reconstruction and scientific enlightenment should be broached...’.

*Kaebýök* was roughly divided into three sections and the literature and arts section shared space among novels, *shijo*, dramas, essays, literary theory and pictures. The literary style of the magazine was of mixed *han’guil* and Chinese character script. The magazine, however, was subject to intense censorship from the Japanese government, and eventually, in 1926, the magazine was forced to close due to this. In November 1934, Cha Sangch’an began publication of the magazine again for four issues, but the magazine was again closed on 1 March 1935. However, the magazine that was published by Cha was not the same as the original *Kaebýök*. After liberation Kim Kijon revived the magazine and published nine issues beginning with number seventy-three where the original magazine had ceased publication. This effort also failed with the outbreak of the Korean War.

Writers whose work appeared in *Kaebýök* include literary critics such as Kim Kijon and Pak Yonghŭi. Among the literary men that appeared in this publication, Cho P’osŏk, Hyŏn Ch’ŏng’un, Kim Tongin, Yi Sanghwa, Yŏn Sangsŏp and Pak Chonghwa are notable. The art works of painters such as No Suhyon, Kim Unho, Yi Sangbŏm, O Il’yŏng, Kim Ungwŏn and Ko Huidong also were published in the magazine. Additionally, the calligraphy of Kang Am, Un Yang, Sŏng Tang, Sŏk Ch’ŏng and Kŭng Che also graced the pages of *Kaebýök*. This magazine is representative of publications during the colonial period that struggled against the Japanese and strove to provide enlightenment for the Korean people. Moreover, the magazine also advanced Korean literature during the 1920s by publication of both literary works and criticisms, and also introduced Koreans to foreign literature.

Ch’a’ngjo

*Ch’a’ngjo (Creation)* is considered as the first general literary magazine in Korea. Its first issue was in February 1919, and its ninth and final issue came out in May 1921. Within this magazine some seventy poems, nineteen novels, four dramas, sixteen reviews and
forty-nine poems translated from foreign languages appeared. The founding staff of the magazine was Kim Tongin, Chu Yohan, Chǒn Yongt’ae, Kim Hwan and Ch’oe Sŏngma’n. From the second issue they were joined by Yi Kwangsu, from the third Yi Il and Pak Sŏgyun, from the seventh Kim Myŏngsun and O Ch’ŏnsŏk, from the eighth Kim Kwanho, Kim Ok and Kim Ch’anyŏng, and for the ninth issue Im Changhwa joined the staff of the magazine. The editing, printing and publishing of the first seven issues took place in Tokyo, while the eighth issue was edited in P’yŏngyang and printed and published in Seoul. The ninth issue was completely done in Seoul.

Ch’angjo introduced much important literature to the Korean reading public including novels by Kim Tongin such as Yakhan ch’a’i sŭlp’ ‘am, Mal’im yŏt’’un cha’yo and Paettaragi, and Chǒn Yongt’ae’k’s Ch’onch’i? ch’ŏnjac? (Idiot? Genius?) among other works. Short pieces include Chu Yohan’s Pul nori, Ch’angganho and Pyŏl; mit’e honjasŏ (Alone Under the Stars) among others.

Ch’angjo along with the subsequent P’yehŏ (Ruins) and Paekcho (White Tide) served to establish a foundation for modern literature in Korea. It had a particularly strong influence in the settlement of Korean modern literature with the publication of Chu Yohnan’s freestyle poetry and Kim Tongin’s novels which helped solve the problems with the new novels and establish their form. From its inception Ch’angjo was opposed to a view of literature as ‘great words of a moralist’, or ‘works with which to pass time’. Its import to modern Korean literature is that it helped to define what modern literature was to be in Korea, and this can be seen in its wandering and groping with this huge concept in the works present in the magazine.

P’yehŏ

P’yehŏ (Ruins) was a literary magazine with an inaugural issue in July 1920 and its second and final issue published in January 1921. The editor and publisher of this magazine was Ko Kyŏngsang, and the staff members were Kim Ok, Namgun Pyŏk, O Sangsun, Hwang Sŏgu and Pyŏn Yŏngno. Novels were written by Yŏn Sangsŏp, Yi Iksang and Min T’aewŏn, and other contributors included Na Hyesŏk, Kim Wŏnju, Yi Hyŏngno and Kim Ch’anyŏng. The maiden issue of the magazine was published by Ko Kyŏngsang’s Hoedong sŏgwan publishing company and was one thousand issues. The second volume was published by Yi Pyŏngjo’s Shinbandosa company.

In the first issue of P’yehŏ a quote from a poem by J.C. Schiller explained the title of the magazine: “Things of the past are destroyed, and the age has changed/ my life comes from the ruins.” Before the first issue of the magazine Korea had seen the crushing of the 1 March 1919 Independence Movement by the Japanese and the nation was beset by disenchantment and economic failure. Hope was lost among the people, the volition to stand up was defeated, and at the same time there was an atmosphere of decay. O Sangsun wrote in his Shidaego wa kū hûisaeng (The Bitter Age and the Victims) ‘Our Choso’n is the Choso’n of desolate ruins; or age is an age of grieving and anguish.’ In actuality among some of those who wrote in this magazine, such as Yi Iksang and Kim Ok among others, the ideology of decadence was disavowed. In the end, the ideology of P’yehŏ was a mixture of several elements such as decadence, sentimentalism, idealism and romanticism among others.

Shin ch’ŏnji

Shin ch’ŏnji (The New Heaven and Earth) was a general magazine published directly after liberation by the Seoul Shinmunsa publishing company. In January 1946 the former news organ of the Japanese Government General in Korea, the Maeil shinbo changed its name to the Seoul shinmun in an effort to shed its old skin, and to further cleanse itself began publishing this magazine. Most general monthly magazines publish a few issues and then
disappear, but due to the persistence of Seoul Shinmunsa, *Shin ch'6nji* remained for ten years and had a major influence on Korean literature in the post liberation period. The various changes in editors and the management of the Seoul Shinmunsa resulted in the ideology of the magazine undergoing periodic changes. This was particularly noticeable in the period during and after the Korean War when the magazine gradually came to be very pronounced in its support of the government and the ruling party. In the period after liberation, *Shin ch'6nji* should be remembered as a monthly magazine that made large contributions to the development of democracy in Korea in the course of its ten year publication.

**Örini**

*Örini (Children)* was a literary magazine for children that centred around Pak Chŏnghwan and was published by Kaebyŏksa publishers. Its first issue was in March of 1923, and its 122nd and last issue was in July of 1934. At its inception the magazine was published twice-monthly but soon changed to monthly publication. However, for various reasons it seemed to always miss about one issue a year. The text in the magazine was a mix of *han'gŭl* and Chinese characters, but the literary items were always in *han'gŭl*. Each issue would have pictures along with articles and averaged about seventy pages. In the beginning of the magazine it was under the direction of the Ch'ŏndogyo Youth Association and Pak Chŏnghwan. However, after the death of Pak, the magazine was directed by Kim Okpin, Yi Chŏngho, Kim Kijŏn, Ko Hansŏng, Son Chint'ae and Yun Sŏkchung among others.

*Örini* was divided into sections for children's songs, stories, dramas and other items and helped establish these genres in children's literature. It is also regarded as the birthplace of many songs and stories for children in modern Korean literature. Works such as Ma Haesong's *Omŏni tŭl sŏnmul* (*Mother's Present*) and Pawinari wa agi pyŏl were very important works in children's literature. In addition songs were created for the magazine such as Pak Chŏnghwan's *Hyŏngje pyŏl* (*Brother Star*), Yun Kūgyŏng's *Pandal* (*Half Moon*), Yu Chiyŏng's *Kodi1rim* (*Icicle*), So Tokch'ul's *Poro p'yŏnji* (*Spring Letter*) and Yi Wŏnsu's *Kohyang ŭl pŏn* (*Spring in My Hometown*) among others. This magazine is also regarded as being very important in the development of children's literature. Some of the individuals who wrote for this magazine include Chŏng Insŏp, Han Chŏngdong, Yun Sŏkchung, Yi Wŏnsu, Pak Mog'wŏl and Yi Kujo.

The magazine was revived after liberation in May 1948 with the publication of issue 123 and continued until issue 137 in December 1949 when the magazine again closed. The man behind this revival was Ko Hansŏng who had worked on the staff of the original magazine. The content of *Örini* after liberation was much the same as it had been before. However, the magazine failed to capture the attention of the Korean children of this age and subsequently ceased publication.

**Munye shidae**

*Munye shidae* (*Era of Literary Arts*) was a literary magazine that was first published in November 1926, and the second and final issue of the magazine was in January 1927. The editor and publisher was Chŏng Inik. The magazine was printed on A5 size paper and the first issue consisted of 118 pages and the second of 206 pages. The inaugural issue stated that the purpose of the magazine was not to be a pure literary art magazine, but instead one that could be read with pleasure and as a hobby. The subtitle on the cover of the first issue reflected this view with the words, 'Pleasure in the Literary Arts'. Accordingly, the magazine did not have characteristics typical of a literary magazine.

The contents of *Munye shidae* included essays, poems, novels, dramas and critiques among other items. The greatest part of the magazine was devoted to essays. Among the
essays included in the magazine were Yang Chudong’s *Susangno*ck in both the first and second issues, Saengjonyo*ok sodiumwalha*wa by An Chaehong, Sŏl Úisik’s *Hwadane sŏsŏ*, Shim Hun’s *Monguyb youngsteria ûl ëlg*, Chu Yo’hun’s *Hammun külja ûl ëpsa*ja, and Hong Nan’pa’s *Shikkurun sesang* in a total of sixty-six essays. Poems included Chŏng Chiyong’s *Sanet saekshi túnnyŏk sanæ*, Pak Seyŏng’s *Nongbu adûl ûl t’anshik* and the *shijo* by Ch’oe Namson entitled *Illamgak chilsa* among a total of nineteen poems. Novels included Ch’oe Sŏhae’s *Tongdaemun*, Yŏm Sangsŏp’s *Chokūman il* and Song Yo’ng’s *Sŏkkong chohap taep’ye* among a total of ten novels. Also included in the magazines were six poems translated into Korean and three critiques including Yi Unsang’s *Hamnijokin chamön*.

*Munye* (Literary Arts) was a pure literary monthly magazine that was launched in August 1949 and ceased publication with its twenty-first issue in March 1954. The publisher of the magazine was Mo Yunsuk, and the editor was Kim Tongni until Cho Yŏnhyŏn took over from the fifth issue of the second volume. This was a magazine that sought to support pure literature and bring new talent into the literary world. However, during the period of the Korean War publication of the magazine was erratic and some members of the magazine staff were killed.

Through this magazine novelists such as Kang Shinjæ, Kwŏn Sŏngun, Im Sanyon, Chang Yonghak, Ch’oe Ilam, Pak Sangji, Sŏ Kŭnbae and Son Ch’angso’p were introduced to the public. Also poets including Son Tongin, Yi Tongju, Song Ëk, Chŏn Ponggŏn, Ch’oe Inhŭl, Yi Ch’ŏlyun, Yi Hyŏnggi, Pak Chaesam, Hwang Kûm-ch’an and Han Sŏnggi were presented in this magazine along with literary critics such as Ch’ŏn Sangbyŏng and Kim Yangsu.

*Minsŏng* (The People’s Voice) was a general cultural magazine introduced directly after liberation. This monthly magazine sought to delve into the problems of the popular masses. Its first issue was published in December 1945 and Yu Myŏnghan was the publisher and editor. In the vortex directly following liberation this magazine covered many diverse issues and featured writings by well known individuals such as Kim Ku, Shin Sŏgu and Yi Chŏngsun. Also, the magazine featured special issues that covered topics such as the political change in mainland China, matters of general interest such as articles on Picasso, topics on dramas, movies and music and small domestic matters (such as the location of the kitchen in Korean homes). Other issues of special importance include a March 1949 issue on the reunification of Korea with articles written by An Chaehong, Cho Soang, Hām Sanghun, Hyŏn Sangyun and Ŭm Hangso’p. In the June issue of the same year there were articles by the Minister of Foreign Affairs Im Pyŏngjik, concerning reparations from Japan, and the Vice-Speaker of the National Assembly Kim Yaksu, detailing the achievements and reflections of the National Assembly. This was criticised by the Syngman Rhee (Yi Sŭngman) government since equal time was given to both issues, despite the former article serving as the government’s mouthpiece on an important issue. The magazine published its forty-fifth and final issue in May 1950.

*Sasanggye* was launched in April 1953 and issued as a monthly general cultural magazine. The first publisher was Chang Chunha who was followed by Pu Wanhyŏk. At the outset this magazine was published under the auspices of the National Ideology Research Centre (Kungminsasang yŏnguwon) under the title of *Sasang*, launched earlier in August 1952. Amidst the turmoil surrounding the Korean War it sought to unify national ideology, help
establish a free democracy and oppose communism. From this magazine that participated in moulding public opinion came the independent Sasanggye that was marketed as a full-scale cultural magazine.

At its inception Sasanggye was about one hundred pages, but later issues averaged around four hundred pages. The fundamental direction of this publication included: 1) national unification issues; 2) cultivation of democratic ideology; 3) economic development; 4) creation of a new culture; 5) the nurturing of national self-respect. In the first issue of Sasanggye the magazine's guiding ideology was outlined as: 'All ages and countries will be elucidated, and correct world and human views are what we will try and establish in this publication'. The magazine also established several literary prizes including those for categories such as literature, academic thesis or dissertation, translation and newcomer's literary prize.

At the inception of the Third Republic the magazine joined the struggle for freedom of the press, and as a result in 1962 the publisher Chang Chunha received the Magsaysay Prize. Particularly during the Third Republic, the magazine was at the forefront of the struggle to preserve democracy and criticizing the actions of the government. When Chang Chunha entered the political world in 1968, the task of publishing the magazine fell to Pu Wanhyok. However, the magazine continued to suffer from financial difficulties and ultimately closed after publishing its two hundred and fifth issue in May 1970. Sasanggye left behind a wealth of academic and cultural writing. In the 1950s and 1960s the magazine brought about democratic enlightenment and unshackled democracy, and for these reasons it is highly acclaimed among Korean magazines.

Hagwŏn

Hagwŏn (Academia) is a monthly magazine designed for student cultural enlightenment that began publication in the midst of the Korean War. The magazine 20 segi (Twentyith Century) changed its name to Hagwŏn in November 1952, and this date is considered to be the initial publication of the magazine. The publisher was Kim Iktal, president of the Taegu publishing company, Taeyang Ch'ulp'ansa. The publishing company behind the magazine has changed several times but at present it is the Hagwŏn ch'ulp'ansa in Seoul. The magazine serves to provide both academic and leisure activities for junior and high school students. It has had a large influence in shaping the market for magazines that cater to this segment of the market. It has contributed to the development of young literary talent in Korea by having offered the Hagwŏn munhaksang (Hagwŏn Literary Prize) for over twenty years to talented young writers. In addition, the magazine has fostered an appreciation among students in matters of politics, law, education, freedom of speech and other matters through its treatment of these subjects.

Hyŏndae munhak

Hyŏndae munhak (Modern Literature) is a representative of a pure literary magazine of Korea that began publication in January 1955. It is the longest continually-published magazine in Korea and is presently well over its four-hundredth issue. The managing editor at its inception was Cho Yŏnhyon and the editor was O Yŏngsu. At its inauguration, the magazine declared that, 'literature was at the core of culture' and its mission was to 'build modern Korean literature'. Accordingly, the magazine established the Modern Korean Literature Prize (Hyŏndae munhaksang) in 1955, and in 1991 the magazine honoured a total of thirty-six writers in the four categories of poetry, novel, drama and literary criticism. To mark its thirtieth anniversary, Hyŏndae munhak in 1985 put together a collection that included about 20 000 works. Following this, in 1988, a collection of the magazine's previous thirty-three years featured some 268 different poets, 100 novelists, eight
playwrights, sixty-two critics and seven essay writers. Contributors include Ch'oe Illam, Pak Kyŏngni, Yi Pŏmsŏn, Mun Tŏksu, Kim Săngok and Son Changsun, among many others.

 Yöwŏn

 Yöwŏn (Women’s Circle) was a general women’s magazine that was published in Seoul and founded in October 1955. The publisher of the magazine was Hagnwŏnsa and the person charged with publication was Kim Iktal. By June of 1956 the magazine was published as an independent magazine of Yöwŏnsa by Kim Myŏngyŏp. The magazine included items concerning culture, amusements, lifestyle information and articles that combined to make this magazine, along with Yŏsŏng, the two most popular women’s magazines in Korea. Yöwŏn was particularly popular among working and college women. It served to pave the way for later women’s magazine such as Chubuntu saenghwal, Yŏsŏng tonga and Yŏsŏng chungang, and eventually fell victim to the intense marketing battles among these women’s magazines. In April 1970 it published its one-hundred and seventy-fifth and final issue. This magazine is remembered as the first women’s magazine after liberation and served to elevate women’s cultural enlightenment.

 Paekcho

 Paekcho (White Tide) was a pure literary magazine founded in January 1922 by Pak Chonghwa, Hong Sayong Na Tohyang and Pak Yŏnghŭi. Hong was the editor of the magazine and in order to avoid Japanese censorship the magazine used a foreigner as a publisher. The first issue’s publisher was the American missionary Henry Appenzeller, and he was followed by other foreigners in the same capacity. At its inception the magazine was planned to be published every other month, but this process never was carried out smoothly. The second issue of the magazine was in May 1922, and the third and final issue was in September 1923. The four men who played the most important roles in the creation of Paekcho were all educated in the Western style academies that had been established in Korea around the turn of the century. Pak Chonghwa and Hong Sayong had attended the Hwimun School, while Na Tohyang and Pak Yŏnghŭi had studied at the Paejae Academy. After the failure of the 1 March 1919 Independence Movement, the country faced a desperate situation. These men wanted to create a magazine where they could gather literary and ideological currents for the nation’s young people. In the end, they met with Kim Tŏkki, Hong Sajung and other supporters and with their help established a publishing company. This company would first publish the literary magazine Paekcho and then the ideological magazine Hûkcho (Black Tide).

 Paekcho featured a poetry section of the magazine with poems such as Yi Sanghwa’s Na ūi ch’imshillo, Pak Yŏnghŭi’s Kkum ūi nararo and Wŏlgwang ūro tchan pyŏngshil, and Pak Chonghwa’s Hŭkbang pigok and Sa ūi yech an. Novels published in the magazine include No Tohyang’s Yŏibalsŏ, Hyŏn Ch’ŏngŏn’s Halmŏn ūi chugŭm and Pak chonghwa’s Mongmaenun yŏja. The literary tendency of this magazine was frequently towards romanticism. However, the novels tended to be aligned with the vague of the times, which was in the direction of naturalism. The staff of the magazine was tied to the so-called Paekcho Faction, and their literary tendencies reflected an inclination towards Western romanticism. In the aftermath of the 1 March 1919 Independence Movement failure, the Paekcho Faction felt that literature would provide the nation’s youth a reflection of the times. The poetry in particular resonated with emotions of grief, lamentation, desperation, yearning for death and such sentiments. Paekcho along with Ch’angjo and P’yehŏ, helped form the foundation for modern literature in Korea.

 Bibliography
Magok Temple

Situated in South Ch’ungch’ōng Province on the southern slope of Mt. T’aehwa, Magok Temple is one of the main temples of the Chogyo Order. Concerning the name Magok (Flax Valley), there are three explanations. According to one story, the temple was founded by Chajang in 640 C.E. It is said that at the opening ceremony, the crowds of devotees who came to hear Chajang talk were ‘as thick as flax fibres.’ Other sources say that the name comes from the Ma (Flax) clan who originally lived in this area. According to another story, the temple was founded by the Shilla monk Musôn, who named the temple ‘Magok’ in honour of his teacher Magok Poch’61.

For about two centuries around the end of the Greater Shilla Period and the beginning of the Koryô Period, the run-down temple was used as a bandit hideout. During the Koryô Period, Chinul (National Master Pojo) and his disciple Suu received a royal order to reconstruct the temple. According to legend, when Chinul first ordered the bandits to leave the site, the bandits tried to attack him. Using magical powers, Chinul rose up into the air and with his magical powers, created a large number of tigers who chased the bandits. Terrified, the bandits swore to Chinul that they would leave the site and forever mend their evil ways. The monastery complex that was constructed on the site at this time was twice as large as the present-day one, but most of the buildings were destroyed during the Hideyoshi Invasions (1592-1598). In 1651, Kaksun restored the temple’s main buildings. During the Japanese occupation, the monastery served as an important administrative temple.

Magok Temple’s intriguing connection with outlaws and rebels continued right up to recent times. When Kim Ku (1876-1949) assassinated Suchita, a Japanese officer who had been involved in the assassination of Queen Min, he was imprisoned in Inch’ón. He later escaped and hid out at Magok Temple, disguised as a monk. In front of the main hall, the juniper tree that Kim Ku planted still stands.

In addition to an interesting two-storey Main Buddha Hall (Treasure No. 801), Vairocana Hall (Taegwang Pojón; Treasure No. 802) and Yongsan Hall (Treasure No. 800), the temple houses a number of important historical relics, including a large bronze bell (South Ch’ungch’ōng Province Tangible Cultural Asset No. 62) that was cast in 1654 and an 8.4-metre high stone pagoda (Treasure No. 799). The bronze incense container (South Ch’ungch’ōng Province Tangible Cultural Asset No. 20) with designs in silver that was discovered at the temple is now kept at the Dongguk University Museum. In addition, the temple has several old copies of Buddhist sutras.

HMMS. vol. 7.

Mai Mountain

Mt. Mai (Horse Ears) is situated in Chinan County in North Ch’olla Province. The present name comes from King T’aejong (r. 1400-1418), who likened the two huge granite peaks to horse ears. Nowadays, the eastern peak (678 metres) is commonly referred to as the female Mt. Mai, and the western peak (685 metres) as its male counterpart. Unsu and T’ap (Pagoda) Temple are also found in this area. The latter gets its name from over eighty cairns
that were built there by Yi Kabyong during the 19th century. Yi took irregularly shaped stones and built precariously balanced columns and round cones. In addition, the ancient Kumdang Temple, founded during the Shilla Period, houses a number of important historical objects. In order to better preserve this natural wonder, the area was designated a provincial park in 1979.

Malttugi

Man’gi yoram (Handbook of the Ten Thousand Techniques of Governance)

Man’gi yoram is a work on Chosón period finance and military regulations compiled by Sŏ Yongbo and Shim Sanggyu in 1808 under order from King Sunjo (r. 1800-1834). This work consists of eleven volumes, six in ‘Chaeyong p’yŏn’ which deals with matters of public finance and five for ‘Kunjŏng p’yŏn’ which concerns military questions.

The first volume in ‘Chaeyong p’yŏn’ includes regulations on the taxation of the people for the support of the royal family and military offices. The second details the regulations on land taxation and the salaries for various government officials. The third describes matters concerned with the nation’s tax revenues, and the fourth describes public finance policy, payment of taxes in kind and also includes regulations concerning the nation’s mining activities. Volume five covers regulations concerning markets, shops, foreign trade and tributary missions, while the sixth volume describes regulations on various government warehouses.

In ‘Kunjŏng p’yŏn’ the first volume describes regulations on military organisations such as the Five Military Commands (owi) and the police garrison in the capital (P’odoch’ŏng) among other institutions. The second outlines regulations concerning the Board of Military Affairs (Pyŏngjo) and other high military posts, while the third details regulations concerning military posts and encampments of various types. The fourth volume includes regulations on the defence of the national boundaries and coastline and the operation of naval ships. The fifth and final volume contains regulations concerning the Six Garrison Forts (Yukchin) and other national defence matters.

The original hand-written copies of this work have been transmitted to the present time in addition to later printed versions. This work is a valuable source of data for the study not only the financial policies and regulations of the Chosŏn period, but also for gaining an understanding of the military operations and preparedness of this period.

Man’gyŏng River

The Man’gyŏng River flows through the central Honam Plain to discharge into the Yellow Sea. Almost 100 kms. in length, the river is formed from the Kosan, Soyang and Chŏnju streams. It runs westward from Samnye and then south of Iksan before joining with T’ap Stream in Kunsan’s Taeya Township. From this point, the Man’gyŏng flows into a large estuary on the Yellow Sea.

Before the advent of Korea’s modern transportation network, the stretch of the Man’gyŏng between Samnye and the coast was used for transport. In the 1920s, Kyŏngch’ŏn Reservoir and Taea Reservoir were constructed on the upper reaches of Kosan Stream. In the 1930s, a dike was built across the Man’gyŏng and in the 1940s, an irrigation canal over 80 kms.in length was built to enable water from the Taea and Kyŏngch’ŏn reservoirs to reach the reclaimed areas on the west side of the Okku Peninsula. Current plans for the river focus on developing the area’s industrial, agricultural and tourist potential, as well as using the estuary as an international gateway between Korea and Southeast Asia.

[History of Korea]

Mani Mountain

Mt. Mani (467 metres), situated on Kanghwa Island in Kyŏnggi Province, was actually a separate island before the dykes were built at Karŭng and Sŏndu Port. In ancient times, the mountain was known as ‘Mari-san’ or ‘Mŏri-san’ (Head Mountain). As the tallest point on Kanghwa, the mountain served as the symbolic ‘head’ of the island. Later, due to phonetic similarities, the name was changed to the Buddhist ‘Mani-san’ (Magical Gem Mountain). From the top of the mountain, one looks out over Kanghwa Island, the smaller islets in the Yellow Sea, numerous salt flats and vast stretches of reclaimed land.

On the mountain’s summit, there is an altar for worshipping Tan’gun, the mythological founder of Korea. Made up of stacked stone, the altar is over five metres high. Although the exact date of construction is not known, the structure seems to be over 4,000 years old. During the Koryŏ and Chosŏn periods, ceremonies were performed at the altar.

With sites of historical and religious interest, the mountain is becoming more and more popular as a tourist destination. Several hiking trails go up the mountain to the altar. In addition, the ancient Chŏngsu Temple, which was originally founded during the reign of Shilla’s Queen Sŏndŏk (r. 632-647), is found half-way up the mountain. Treasure no. 161.

March First Movement (Samil undong) [History of Korea]

Maritime Affairs and Fisheries, Ministry of [Government and Legislature]

Masan

Situated in the southern part of South Kyŏngsang Province, Masan includes the town of Naeso and the townships of Kusan, Chinbuk and Chinjŏn. Mt. Muhak (767m) stands on the city’s western border and Mt. Ch’ŏnju (640m) rises in the north. Due to its location on Korea’s southern coast, the area’s weather is mild with an average yearly temperature of 14c. The city has an annual rainfall of 1 468mm, making it one of Korea’s wettest areas.

In the past, the city developed as one of South Kyŏngsang Province’s major commercial and industrial centres. As a result, 98 per cent of the working population is employed in the commercial and industrial sectors, compared to the nominal 2 per cent in the agricultural and other sectors. In 1969, the Namhae Expressway was built, linking Masan with Pusan and other cities. Then in March 1970, part of the city at the northern tip of Masan Bay was designated the Masan Free Export Zone. As a result, numerous businesses were set up and the area began to attract foreign investment. In 1977, the Kuma Expressway was built, providing the city with ready access to Taegu and other points further north.

Factories in the Masan Free Export Zone produce a vast variety of products including textiles, electronics, electrical appliances, machinery and other manufactured items. This requires a workforce of not less than 300 000. The law requires that all of the goods produced in the Zone must be exported. Possessing an ample supply of high quality water, the area was traditionally famous for its ch’ŏngju (refined rice wine) and soy sauce. In addition, hanji (Korean paper) and ceramics were produced here. Formerly, fishing was an important source of income for local residents, but since the 1970s, pollution from the
city's industry and a decline in fish stocks has declined commercial fishing.

Tourists come to the area to see the city's scenic and historical sites and to enjoy the area's mild weather. From the top of Mt. Muhak, there is a panoramic view of Masan Bay and the city. On a bluff to the southeast of the peak there is a small pavilion known as Kwanhaejong. Nearby, a traditional building houses a stele in commemoration of Ch'oe Ch'iwon who is believed to have taught students here. Northeast of the stele stands Hoewon Sŏwon, (private academy), and to the east lies Monggo Well. In the thirteenth c. when a combined force of Mongolian and Koryŏ soldiers set off from here on an expedition against Japan, the well was used to supply drinking water to the troops. Other tourist attractions include the Tot Island Resort in Masan Bay and the Kap'o Resort on the west bank of Yulgu Bay.

Kyung Nam University, in Happo, serves as the city's leading educational institution.

Mayang Island

Situated in South Hamgyŏng Province, Mayang Island serves as a natural barrier sheltering the port of Shimp'o. The island has an area of 7,064 sq. kms. and a coastline of 16.5-kms. It has a relatively cold winter with an average January temperature of -6c. and a more temperate high-summer average of 23c.

During the Japanese occupation, the island served as a whaling base and in 1927, an unexpectedly large sardine catch led to the establishment of more than twenty fish-oil factories. The seas around the island are celebrated as one the leading wall-eye pollack fishing grounds on the east coast.

McMeavy, Brown, John [United Kingdom and Korea]

Medicine

Oriental Medicine

Medicine, no matter what form it takes, generally has three basic aims: to explain why people become ill, to prevent them from doing so, and to cure them once they fall ill nonetheless. Oriental medicine, known as Hanli in contemporary Korea, for well over a thousand years provided the most sophisticated and effective tools available to the Korean people to achieve those goals. Moreover, it continues to furnish many of the strategies and remedies modern Koreans adopt today to preserve or regain their health.

As long as there have been people on the Korean peninsula, there have been people afflicted by one disease or another there. And as long as there have been ill people in Korea, there have been those who have tried to cure, prevent, or at least explain their illnesses. Korean medicine is thus as old as the Korean people themselves. The earliest attempts at healing and prevention of disease probably involved taboos and the ritual banishing of evil spirits as well as the consuming of herbs and other natural substances which trial-and-error had indicated might have medicinal properties. Such primitive approaches to health and healing are characteristic of all pre-literate societies and there is no reason to believe the Korean people were any different.

It was not until Koreans adopted medical theories and practices from China, sometime before the 7th c., that they finally acquired a sophisticated medical theory which provided a unified explanation of why diseases occurred, how they could be prevented, and, if prevention failed, how they could be diagnosed and treated. Chinese medicine did not replace traditional concepts of health and healing. Instead it supplemented religious
assumptions of a multitude of causes and cures for disease with an underlying unifying role for a cosmic force called *ki*.

**Ki, the fundamental life force**

*Ki* is a difficult term to translate into English, since it functions as both energy and as matter. It is both the fundamental physical material out of which the body and the mind are made as well as the invisible force which gives that material life. A healthy body is one in which *ki* circulates freely without impediments and operates in an orderly and harmonious fashion. Disease is the result of some imbalance or irregularity in the circulation or functioning of *ki*. Health, in the Chinese medical tradition which Korea adopted, could be restored, protected, or enhanced by restoring, protecting, or enhancing *ki*.

This could be done in a number of ways. Oriental medicine offers many specific prescriptions for specific ailments, usually combinations of various vegetable, mineral, and animal substances which are boiled or mixed together before being swallowed. It also prescribes stimulation of *ki* through either acupuncture, the insertion of needles into certain specified points on the body, or moxibustion, the burning of a small amount of vegetable matter on those same points. In addition, it recommends certain physical exercises and breathing techniques for those who wish to remain healthy, as well as encouraging them to be moderate in their enjoyment of food, drink, and sex.

Whether they prescribe pharmaceuticals, acupuncture, moxibustion, gymnastic and respiratory exercises, a more moderate life-style, or, more likely, a combination of two or more of the above, Oriental medicine doctors take a functional and holistic approach to diagnosing and treating their patients.

The main assumption behind Oriental medicine is that human beings are a part of nature and must align themselves with nature in order to be healthy. Practitioners of Oriental medicine believe that the entire natural world is essentially nothing more than a network of interrelated and intertwined processes and events. As they see it, each individual human body is but one node in that universal network, one small integrated pattern of functional interactions within the all-encompassing cosmic web of interrelating and interdependent networks. Such a perspective leads them to pay particular attention to *ki*, the energizing force both within the body and throughout the natural world, and to whether or not the various manifestations of *ki* within the body are harmoniously cooperating with each other as well as with the *ki* in the world around them.

Within the body, *ki* manifests itself as the energy flowing through certain invisible channels in such a way that an acupuncture needle inserted into one part of the body can affect the flow of *ki* to an entirely different part of the body. *Ki* also appears as the major organs of the body, though such organs as the heart, the lungs, the kidneys, the liver and the spleen are viewed in Oriental medicine more as coordinating centers for five different primary physiological functions than as five distinctive anatomical structures.

**A functional and integrative approach**

Physicians who practice traditional medicine are more concerned with what the heart does, for example, than what it looks like. That is why there are no operating rooms in Oriental medicine hospitals. Instead of removing or refashioning dysfunctional organs, Oriental medicine doctors seek to rectify the dysfunctions in the overall physiological system. Pharmaceutical correctives and acupunctural stimulation are preferred over structural remedies to restore harmonious functioning to those physiological networks which have somehow become overactive or underactive and are no longer synchronized with the rest of the body.
Moreover, since those doctors are concerned more with how the body as an intertwined network of interacting physiological networks is performing overall than with what is happening in any one part of the body in isolation, the medicines they prescribe are always a mixture of several ingredients, designed to compensate for the effect an ingredient intended to strengthen the liver, for example, might have on the spleen. Practitioners of Oriental medicine would not want to save the liver at the expense of their patient's health in general.

Since the body is perceived as a network of internal functional systems interacting with an external natural world composed of similarly interrelating and intertwined processes and events, when physicians decide which acupuncture points or pharmaceutical prescriptions are most appropriate for a particular patient, they have to take into account the specific external environment in which that patient's body is operating at that time. The *ki* which forms that external environment interacts with the human body in five distinctive ways, labeled wood, fire, earth, metal and water. Those labels refer, not to physical substances, but to patterns of action and interaction, to phases in an endless cycle of growth and decline.

**The five phases**

Wood, for example, represents increase and growth, which becomes fire, representing peak growth and activity. Peak activity cannot be sustained forever. It is soon replaced by earth, which stands for that neutral point in a process when it has stopped accelerating but has not yet begun to slow down. Once a particular pattern of activity begins to weaken, it is linked with metal, which represents decrease and decline. That leads to water, representing maximum decrease and inactivity. Maximum inactivity cannot last forever, anymore than peak activity can. Water must eventually be replaced by wood, which starts the whole cycle all over again.

In diagnosing and treating a patient, a physician is supposed to take into consideration which one of those five phases is dominant right then. For every calendar year, as well as for particular times within the year, one of those five phases sets the overall tone, determining how normal health and disease should be conceived at that particular time. Both diseases and effective medical treatment when wood is ascendant, for example, are believed to be different from the diseases most prevalent and the treatments most effective when fire is ascendant.

In determining how changes in the natural environment affect medical treatment, these patterns in nature are correlated with particular patterns of physiological functions within the body. For example, the heart is identified with fire, the lungs with metal, the spleen with earth, the liver with wood, and the kidneys with water. Moreover, physicians assume that the way these five phases interact within the body as well as the way the body and its physical environment affect each other is no different from the way these five phases interact in nature.

The five phases interact in two primary ways: either strengthening and reinforcing one another, or restraining and weakening one another. In the cycle of production, already discussed above, wood produces fire, which produces earth, which produces metal, which produces water, which, in turn, returns this generative cycle to its starting point, wood. In the converse cycle of counteraction, wood controls earth, which controls water, which controls fire, which controls metal, which in turn controls wood. When these five phases are correlated with annual and seasonal characteristics as well as with the five primary physiological systems, physicians can then tentatively identify diseases and prescribe remedies in accordance with whichever phase is ascendant at a particular time.

**Holistic correlations**
Physicians of Oriental medicine rely on a system of systematic correlations, which links all pharmaceutical substances and all organs of the body with the five phases, in deciding which substances to prescribe. For example, a physician treating a patient with a liver ailment first determines if the liver is overactive or underactive. If it is overactive, he tries to calm it down with a metal-related ingredient, but if it is underactive he tries to stimulate it with a drug in which a water-related substance is the most powerful ingredient. A water-related ingredient is not necessarily a liquid nor is a metal-related substance necessarily metallic, however. Those correlations with the five phases are determined by the effect those substances have, not by their physical properties. Oriental medicine lets centuries of accumulated experience tell it which medications to use for which diseases. Five-phases correlations are brought in primarily to explain and systematize what clinical practice has already proven effective.

In a further refinement on what experience has taught them, physicians also take into account the six climatic conditions into which each year is divided: windy, cold, hot, moist, dry, and fiery. Both the five phases and the six climatic conditions, as well as their interaction with one another, are taken into consideration when diagnosing, treating, or predicting the course of a disease, since they characterize not only the external physical environment but also the corresponding internal physiological environment of the patient.

That is not all. Physicians must also consider the psychological condition of the person they are treating. A misfunctioning liver, for example, could be the result of excessive anger, or vice versa. And extreme depression could damage the lungs, just as dysfunctional lungs could produce depression. In treating any illness, physicians of Oriental medicine are told to take into account the entire physical and psychological state in which their patient is in, as well as the particular climatic and environment conditions under which that condition has arisen.

Better yet, physicians should work to minimize the chances that such malfunctioning, such disharmony within the body as well as between the body and its surroundings, will occur. Oriental medicine, theoretically at least, is primarily preventive rather than curative medicine. When Oriental physicians classify their drugs into three basic categories, according to the effect they have, they rank those drugs which fortify ki, enhance overall physical well being, and promote longevity in first place, above those drugs which merely attack specific diseases. Those same physicians also encourage their patients to improve the circulation of ki within their bodies by eating right, breathing properly, and exercising frequently before they fall ill, rather than having to rely on medicinal concoctions or acupuncture to restore a physiological harmony they never should have lost in the first place.

Koreanization
This is the basic theory of Oriental medicine and, though its origins are Chinese, it has become thoroughly Koreanized over the centuries. This Koreanization became especially evident during the Chosŏn dynasty, particularly during the reign of King Sejong (r.1418-1450) and in the years following the publication of Tongŭi pogam (A Treasury of Eastern Medicine) by Hŏ Chun (1546-1615). Under King Sejong’s direction, several important medical manuals, utilizing Korean as well as Chinese prescriptions and practices, were published in the 15th c. Among them was the 85 volume Hyang’yak chipsŏngbang (‘The Great Collection of Native Korean Prescriptions’). Completed in 1433, this encyclopaedic pharmaceutical guidebook identified 959 different disease categories and described 703 different mineral, vegetable, or animal products available on the peninsula which could be used to treat them.

Almost two centuries later, in 1613, Hŏ Chun published his Tongŭi pogam, a medical
encyclopædia which placed this pharmaceutical cornucopia within a comprehensive Korean philosophy of Oriental medicine. Starting off with an explanation of the basic concepts of Oriental medicine, Ho went on to provide detailed descriptions of human physiology and anatomy of the various things which can go wrong with the various parts and processes of the human body. He also included a catalogue of the medicinal substances available in China and Korea, where they can be obtained, how to prepare them for human consumption, and when to prescribe them. His final chapters are a detailed description of when and how to use acupuncture and moxibustion. Ho sprinkles this overview of the basic principles and practices of Oriental medicine with Taoist physical exercises and breathing techniques, encouraging physicians to pay more attention to promoting the health of their patients so that they will not have to pay as much attention to healing them. His physicians' manual was so complete and so well-organized that it has been reprinted many times, not only in Korea but in China and Japan as well. Ho's emphasis on preventive medicine, on fortifying the body before illness strikes, has been a distinctive characteristic of Oriental medicine in Korea ever since. Ginseng, a medicinal root for which Korea has long been famous, is the best known of the many tonics which Korean physicians, reflecting developments in Chinese medical thought since the 13th c. tend to prefer over the purgatives still favoured by some traditional physicians in China.

Oriental medicine today

In contemporary Korea, this focus on preserving health by strengthening the body over the long term, augmenting its ki and fostering the continued harmonious interaction of its formative physiological processes, keeps Oriental medicine the medical strategy of choice for many of those suffering chronic rather than acute ailments, as well as for many of those who are healthy but wish to become even healthier and live even longer. Oriental medicine has not been supplanted by Western medicine in the 20th c. On the contrary, Oriental medicine continues to flourish alongside Western medicine, in a complementary rather than an antagonistic relationship.

Koreans who might go to a specialist in Oriental medicine when they feel a little rundown will probably go to a physician trained in Western medicine when ailed with influenza and feel the need for an injection. They will go to a Western-style hospital if they suffer a stroke but will probably seek out an Oriental-medicine clinic to alleviate chronic lower back pain. Oriental medicine remains so popular that the home appliance departments of leading department stores in Seoul sell electrical versions of the clay pots traditionally used for preparing Oriental medicine. Aerobics classes, based on Western medical concepts, are well-attended, but so are institutes which teach physical exercises and respiratory techniques similar to those found in Tongil pogam.

Belief in the efficacy of Oriental medicine remains so strong that, in the 1980s and early 1990s, pharmacists trained in Western medicine began adding Oriental medicines to the repertoire of prescriptions they could fill for the patients who visited their pharmacies. When the government of South Korea announced in 1993 that only those who had formally studied Oriental medicine were authorized to dispense Oriental medicines, leading medical schools began adding classes in Oriental medicine to the curricula for students studying Western medicine. In a further sign of the continued vitality of Oriental medicine in contemporary Korea, from 1995 physicians specializing in Oriental medicine are allowed to fulfill their military obligation by serving either as army doctors or as chief physicians in the government's rural health centres, just as doctors of Western medicine have long been able to do.

Traditional Korean medicine is not merely surviving as Korea approaches the 21st c. it is thriving. In 1994 there were eleven accredited colleges of Oriental medicine in the Republic of Korea and almost 14 000 licensed specialists in Oriental medicine. Moreover, the number of both students and practitioners has been growing steadily. As long as Koreans continue
to see plausibility in the explanations Oriental medicine offers for why diseases occur, and find effectiveness in the advice and remedies it provides for preventing or treating those diseases, Oriental medicine will continue to thrive, and medical practice on the Korean peninsula will remain a rich tapestry of both Western and Oriental concepts, practices, and prescriptions.

D Baker

Western Medicine

History

Western medicine found its way to the Orient towards the end of the Ming dynasty through Western contacts and the introduction of Western medical books. The early writings on medicine were among those items translated into Chinese and then brought to Korea by the late seventeenth c. The earliest extant records of Western medical documents in Korea are found in the writings of the neo-Confucian scholar Yi Ik (1682-1764). In the fifth volume of his Sŏngbo saesŏl (Insignificant Explanations) Yi included biological principles and theories concerning the circulatory, respiratory, brain and central nervous system that were found in the works that Johann Adam Schall had introduced into China in 1622. Other works after this included commentaries on the medical technologies and theories of the West. Notable among these are Yŏrhwa ilgi (Jehol Diary) of Pak Chiwon (1737-1805), Chŏng Tongyu’s (1744-1808) Chuyŏngp'yŏn and Chŏng Yagyong’s (1762-1836) Ûryŏng, all of which served to introduce many of the Western medical arts to Korea.

Western medical practices began to enter Korea from the time of the Kanghwa Treaty of 1876 (Kanghwa-do Choyak) that served to open Korean ports to foreign powers. Medical knowledge and practitioners came from Japan, America and Europe. In 1877, the Japanese navy established the Chesaeng Dispensary in Pusan for Japanese residents. This dispensary could also be used by Koreans and is considered as the first Western medical facility in Korea. It was followed in 1880 by the establishment of the Saengsaeng Dispensary in Wŏnsan, and in 1883 by a clinic opened by the Japanese at their consulate in Inch’ŏn, together with one at their legation in Seoul.

Western medicine, primarily that of Germany, had begun to reach Japan by the end of the eighteenth c. German medicine was foremost in the world, and by the end of the nineteenth c. the Japanese had directly imported German medical knowledge. Through Japan, the German medical expertise entered Korea, where it had considerable influence in the development of Western medicine.

The American influence in propagating Western medicine in Korea began with Horace Newton Allen who was both a missionary and a doctor of medicine. In September 1884, Allen travelled to Korea from Qing China. He was entrusted with the medical care of the staff at the United States Legation in Seoul, and soon afterwards, that of the other diplomats in Seoul. Allen established the Wangnip Hospital in Seoul in 1885. This hospital was intended not only for the foreign diplomats serving in Korea, but also for the Korean people for whom it is seen as the beginning of Western health services. After the Reforms of 1894 (Kabo Kyŏngjang), the number of Western hospitals and health services in Korea increased dramatically. In June 1894, in the midst of these reforms, a Hygiene Office (Wisaengguk) was established under the control of the Home Office (Naemu amun), and a laboratory was opened to manufacture vaccines produce blood serum, and undertake bacilloscopic examination. In 1899 a hospital (also under the direct jurisdiction of the Home Office) was established and named the Kwangjewŏn. This hospital served the populace and it included an Oriental Medicine Clinic and Pharmacy. One of its functions was the examination of prostitutes. In 1907, the Taehan ŏiwŏn Hospital was established under the direct supervision of the State Council (Ŭijŏngbu). This hospital took over the administration of the Kwangjewŏn Hospital and also enlarged its educational and hygienic facilities. In December of the same year, the operations of the Taehan ŏiwŏn were divided
Early medical education was brought about in both the public and private spheres. In 1899, under the Ministry of Education (Hakpu), a school was established, which offered a three-year course in Western medicine. With the establishment of the Taehan-uiwon in 1907, this school was placed under its direct control and became the Medical Education Department of the hospital. In 1910, it divided into the two sections of medical education and pharmacology. Around this same time other hospitals with education departments were established in Taegu and P'yöngyang by the government. Of the private medical schools in Korea, the first was established in 1899 as a part of O.R. Avison's Chejungwön Hospital. However, this school never produced graduates. In 1904, after donations by the American Ohio based Severance Hospital, Chejungwön was renamed after its benefactor and its medical school became the Severance Medical School. Its first graduating class was in 1908. Severance Medical School is the predecessor of the School of Medicine at Yonsei University.

In the colonial period, medical education and facilities expanded considerably. Keijö Imperial University initially offered a four-year medical training course which was extended to six years in 1932. The department of medicine of Keijö Imperial focussed on Japanese students, and the enrolled Koreans did not fare nearly as well, with a twenty-five per cent, or thereabouts, failure rate. The medical profession was, however, one option for Koreans who wished to pursue a higher education, and those who did graduate came to hold considerable importance in Korean society. It is apparent, though, that the improved medical facilities during the colonial period offered minimal health care to the average citizen, and it was the Japanese living in Korea who received most benefit.

**Medicine after Liberation**

After liberation, medicine in Korea underwent many changes in order to modernise it and to meet the needs of the people. The greatest influence directly after liberation was from the American presence in Korea, which assisted in the provision of basic medical services. Under the authority of the Ministry of Public Health and Welfare, thirteen departments relating to medicine and public health were established, and regional offices of the Ministry were set up in each province. Medical education under the American Military Government adopted many of the features found in the training of medical practitioners in America. For example, the courses span a six-year program of study, followed by a state examination and then a hospital internship. In addition, many Koreans went abroad to study medicine.

With the establishment of the Republic of Korea in 1948, medical care and training became the responsibility of the Ministry of Public Health (Pogön pu) and the Ministry of Social Affairs (Sahoe pu), which controlled medical care and training matters in their thirteen departments. In 1955, under the Government Organisation Law (Chöngbu chojik pôp) the Ministry of Public Health and the Ministry of Social Affairs were combined into the Ministry of Health and Social Affairs (Pogön Sahoe pu) charged with the responsibility of overseeing the various spheres of medicine in Korea.

Part of the health care system in Korea features the research and development of new ways to combat disease and to improve public health. There are many institutes which are funded wholly or partially by the central government in addition to private organisations that conduct research into health-related matters. Some notable accomplishments in the realm of public health include the containment of communicable diseases such as tuberculosis and cholera, and the implementation of an effective family-planning program that has witnessed a sharp downturn in the growth rate of the South Korean population. These accomplishments have been both due to the commitment of resources by the Korean government and the interest of international bodies such as the World Health Organization (WHO).
In 1994, general and special hospitals and clinics numbered more than 14,200. There were also over 7,700 dental clinics, 238 health care centres, 1,327 health sub-centres and more than 2,000 primary health care centres. There are more than 180,000 hospital beds available and this figure is supplemented by nearly 40,000 beds in the various clinics. The large university hospitals in Korea are as well equipped as any in Asia and provide excellent medical services to their patients.

Of the problems being addressed in regard to medical care in Korea, the most serious is the imbalance of medical facilities in the urban regions, and in particular in Seoul. In the rural sector, the government has actively promoted the development of local primary health care centres equipped with modern equipment and staffed by trained health care professionals to ensure that communities have adequate services. Other problems that seem to have been resolved include the introduction of a comprehensive medical insurance program and the issuing of clear regulations concerning the role of each type of health care facility. The government is also actively endeavouring to create a modern medical system that will be adaptable, thus allowing it to meet the needs of Koreans in the future.

Memorabilia of the Three Kingdoms (see Samguk yusa)

Metalwork (see also Science and Technology)

Prehistoric Period

Bronze implements have been in use on the Korean peninsula since about 1,000 B.C.E. The early Bronze age in Korea is characterised by the use of mandolin-shaped daggers and multi-knobbed, coarse-lined mirrors. Although early farming implements made of bronze have not been found, bronze woodworking tools (used to shape wooden tools) did exist, as well as weapons, such as arrowheads and spear points.

Around the fourth c. B.C.E., iron culture was introduced from China. Around the same time, another bronze culture of Scytho-Siberian origin entered Korea. From this period, farming implements such as hoes, ploughshares and sickles were made of iron. Weapons from this period include iron and bronze daggers and spear points. Horse trappings and components of horse-drawn vehicles also existed, evidently for use by the ruling elite. Bronze belt buckles, in the shape of animals, were probably also used by the upper class.

Koguryŏ

Many of the early metalwork artifacts of the Koguryŏ Period are from tombs. However, since most of the Koguryŏ and Paekche tombs have been looted, few artifacts remain. The articles that have been recovered include such things as headgear, earrings, bracelets, weapons and various implements for horse-riding.

The general nature of Koguryŏ headgear is known through Chinese records and Koguryŏ wall paintings. However, the gilt-bronze crowns excavated from Koguryŏ tombs are of a different style. This would seem to indicate that these latter crowns were of a special design used in burials. This may also hold true for the gold crowns of Shilla.

Chinese records refer to the Koguryŏ custom of wearing earrings, and the discovery of gilt-bronze earrings at grave sites confirms these records. Koguryŏ earrings are almost all of the thin-ring style. Many of the Koguryŏ earrings have a metal strip hanging down from the earlobe ring, with an ornamental piece at the end. The mid-section of the metal strip is also decorated.

Weaponry, such as metal spear points, arrowheads and knives, was also made at this time.
In addition to long knives, which could be used in battle, short knives were produced for everyday use.

**Paekche**

Two Paekche crowns have been discovered, one in Naju and one in Iksan. The Naju crown consists of two sections. Round, flat bronze decorations have been affixed to both crowns. Due to differences between these crowns and those mentioned in historical records, some have suggested that these gilt-bronze crowns were solely used for funerary rites.

Paekche earrings have been found at Kumo Village in Kongju and in the tomb of King Muryong (r. 501-523). These earrings are all of the thin-ring variety, and the earrings from Kongju, like those of Shilla, have dangling heart-shaped decorations. The earrings from King Muryong's tomb are of pure gold. Other Paekche metalwork, such as hairpins, bracelets and bronze mirrors, have been discovered along with various weapons. In addition, an interesting 'seven-branch dagger' (ch'ilchido) has been discovered in Tenri City, Japan. The inscription indicates that it was a gift from a Paekche envoy. The branches are thought to represent a sacred tree -- a common symbol in Shamanism.

**Shilla**

Six pure-gold crowns have been discovered in Kyöngju and another one has been found in Koryöng. These crowns were probably used only for funerals of the most high-ranking royalty. The gold and gilt-bronze crowns worn by Shilla kings or members of the upper class differed from those of Paekche and Koguryö.

Shilla earrings are of both the thin-ring and thick-ring style. They have an earlobe-ring, a dangling link, and a bottom decoration. In addition to earrings, ornate necklaces, belt buckles and bracelets have been discovered, as well as numerous metal eating utensils, gear for horses, and weapons. Shilla metalworkers also produced both short and long coats of armour. The short armour only covered the torso, but the longer armour went down as far as the knees.

**Greater Shilla**

With the unification of the peninsula, Shilla had greater access to the flourishing art of Tang China. At the same time, Shilla's burgeoning Buddhist culture signified a greater demand for Buddhist icons and ritual implements. Guilt-bronze statues and sarira containers demonstrate the elegant artistry of this period. Perhaps the most impressive Buddhist artifacts from this era are the large temple bells. At least five large bells from the Greater Shilla Period are extant. In terms of style, these bells differ significantly from those of China or Japan. The girth of the bells gradually widens toward the bottom before slightly narrowing again. The outsides of the bells are decorated with various designs and Buddhist motifs, particularly with graceful pictures of fairies. Designed to hang from a large wooden beam, the bells were struck on the exterior with a large piece of wood hanging from a swinging apparatus.

Since most of the tombs from the Greater Shilla Period have been looted, few metal artifacts have been recovered. The metalwork from this period includes eating utensils, belt buckles and other items of personal attire.

**Koryö**

Large temple bells continued to be made during Koryö. The Koryö bells tend to be smaller in size, and with the passing of time, the quality of craftsmanship declined. In contrast with the Shilla bells, which were made with an approximate 1 to 1.3 ratio between the top and
bottom, early Koryŏ bells had only a 1 to 1.2 or 1.1 ratio. After the twelfth century, when the bottom diameter decreased to less than 40 cm., the bottom diameter and height tended to be similar. As the exterior design styles changed, pictures of fairies were replaced by standing images of Buddhas or bodhisattvas.

In addition to bells, numerous gongs were produced for temples. Like the temple bells, these round metal instruments were hung on the temple grounds and struck at different times to announce temple functions. Sarira containers were also produced at this time.

Numerous bronze mirrors were manufactured during Koryŏ. Most of these were replicas of foreign mirrors from China, Manchuria or Japan. Koryŏ artists also imitated the styles of earlier eras to produce the classical-style mirrors that came into vogue in Sung China. Numerous articles of personal attire were also produced during this period. For example, belt buckles were made, with designs in relief or intaglio.

Chosŏn Period and the Modern Era

The metalworkers of Chosŏn continued to produce numerous items for everyday use. The Koryŏ tradition of bell manufacture was maintained with several innovations regarding the external designs. There were also innovations regarding the manufacture of knives and swords. Prior to the Hideyoshi invasions (1592-1598), Korean metalworkers learned the Japanese techniques for making high quality knives and swords with strong blades.

During the twentieth c., Korean metalwork has been influenced by the introduction of techniques from the West. Some attempts have been made to integrate modern methods with traditional metalwork. In addition, some modern artists have attempted to revive Korea's ancient metalworking techniques in order to preserve the vital link to the nation's unique artistic traditions.

Miam ilgi (Diary of Miam)

Miam ilgi is the diary of Yu Hŭich'un, styled Miam, covering the period from the tenth month of 1567 until the fifth month of 1577. It is composed of eleven volumes and has been designated Treasure number 260. Originally the work was composed of fourteen volumes but three of these are no longer extant.

This work describes the events that surrounded the official life of the author both while posted to the royal court in offices such as the Office of the Censor-General (Saganwŏn) and the Office of Special Advisers (Hongmun'g'wan), and while in the provinces. The thoroughness of this work led to it being chosen, along with Yi I's Kyŏngyŏn ilgi, to help in the composition of Sŏnjo shillok (Veritable Records of king Sŏnjo) since many other records were destroyed in the 1592 Japanese Invasion. This work contains valuable data from the middle Chosŏn period and is considered by many scholars to be one of the most valuable private diaries written in the Chosŏn period. This work was published from 1936 to 1938 by the Chosŏnsa P'yŏnsuhoe.

Mich'ŏn, King (r. 300 to 331)

King Mich'ŏn (? -331) was the fifteenth king of Koguryŏ and ruled from 300 to 331. He
was also known as King Hoyang, and his names included Ulbul, Ulbulli and Ubul. Mich'on was the grandson of King Sŏch'on (r. 270-292) and when his father was executed in 293 by his elder brother King Pongsang (r. 292-300), Mich'on fled and lived as a labourer and salt peddler. However, when Pongsang was dethroned in 300, Mich'on ascended to the throne with the help of Ch'ang Chori, the prime minister (kuksang).

During Minch'on's rule, the Chinese Jin State was disintegrating and this had a tremendous effect on the political situation of the neighbouring countries. Minch'on took advantage of the Chinese weakness and in 302 attacked the Xuantu Commandery (Kor. Hyŏndo) taking some eight-thousand prisoners. In 311, his army occupied the western coast of the Liaodong Peninsula. In 313 and 314, after a prolonged struggle, Koguryŏ captured the Lolang Commandery (Kor. Nangnang) and at this time occupied the whole of the Taedong River region. After this, in 317, Koguryŏ again attacked the Xuantu Commandery and at this point began to rapidly expand her territory to the west and south. In this process in the early fourth c. the Bayan, part of the Tungus people, began to gradually increase their strength and expand their activities in the Liaodong Peninsula area, which inevitably led to conflicts with Koguryŏ. In the end, Koguryŏ with the assistance of Later Zhao, was able to subdue the Bayan by 330.

Eleven years after the death of Mich'on in 342, the Earlier Yan state attacked Koguryŏ and sacked its capital. During this attack, the royal palace was razed, the queen mother was seized, some fifty thousand people were taken into captivity, and the grave of Minch'on was opened and his remains desecrated. This was indeed a pitiable end for the powerful ruler who had done so much for the Koguryŏ Kingdom.

Min, Queen (see Myŏngsŏng, Queen)

Min ch'ungjong yugo (The Posthumous Works of Prince Min Yŏnghwan)

Min ch'ungjong yugo (The Posthumous Works of Prince Min Yŏnghwan) is a collection of writings of Min Yŏnghwan (1861-1905) a prince and patriot of the Chosŏn Kingdom who gave his life for the nation in the last years of the Kingdom. The author of this work is not only remembered as being a member of the family of Queen Min, but also as an adept statesman and enlightened innovator of the Chosŏn period.

The first volume contains sixty-one memorials to King Kojong (r. 1863-1907) including Min's plea to the King to renounce the 1905 Protectorate Treaty (Ul'pa Poh'o Ch'oyak) between Korea and Japan. Volume two, 'Ch'onil ch'àek', contains the author's opinions on matters such as defence of the nation against Japan and Russia, political reforms, financial policy change for the country and educational reform. Volume three entitled 'Haech'on ch'ubom' is an account of his world travels that began in 1896 to attend the coronation of the Russian Czar. During this trip, Min visited the United States, Canada, Britain, Russia and Japan. This volume describes the diplomatic relations with the countries that Min visited. 'Sagu sokch'o', the fourth volume, is also a record of the travels of the author. This volume centres on Min's trip to Europe to attend the Sixtieth anniversary of Queen Victoria's ascending to the throne in England. Min also visited Germany, Austria, France, Italy and Russia during this trip. The fifth volume is a supplement to the work and describes the events that occurred just before Min's death. The two essays in this supplementary volume are both anonymous and are complemented by articles from newspapers that detail the situation of Min's untimely suicide in 1905.

This work provides insight into the disorderly period that surrounded the loss of Korea's sovereignty to Japan. The author's unique perspective on the plight of Korea from not only the standpoint of a patriot but also as a member of the royal family adds to the value of this work. Min ch'ungjong yugo was published again in 1971 by the National History
Min Jok Sa

Located in Seoul’s Chongno Ward, Min Jok Sa is a publishing company established on 9 May 1980. Yun Chaesung is editor, and the company publishes general works as well as books on philosophy and religion.

Min Kyōmho

Min Yonghwan (1861-1905)

Min Yonghwan was a royal prince, patriot and civil official of late Chosön. His family’s ancestral home is in Yŏhŭng, his courtesy name was Munyak and his pen name was Kyejŏng. He was born in Seoul the son of the Minister (p‘ansŏ) of the Board of Taxation (Hojo). In 1878 he passed the civil service examination and was appointed as Ninth Counsellor (ch’ôngja) of the Office of Special Counsellors (Hongmungwan) and later held various posts, before being selected as president (taesasŏng) of the National Confucian Academy (Sŏnggyun’gwan) in 1882. However, in the same year the Military Mutiny of 1882 (Imo kullan) erupted and his father was killed. In 1884 Min was appointed as Third Minister (ch’am’ul) of the Board of Personnel (jjo) and then held disparate positions before being designated as Minister of the Board of Taxation in 1887. In 1888 and 1890 he served as Minister of the Board of War (Pyŏngjo) and in 1893 he was nominated as Minister of the Board of Punishments (Hyŏngjo).

Min was appointed ambassador to the United States in 1895 but did not proceed to the post due to the Japanese assassination of Queen Min (1851-1895), which deeply affected him. He returned to his hometown and withdrew from political life for several months after this incident. But in 1896 he was appointed envoy extraordinary (t’ŭngmyŏng chŏn’gwŏn kongs’a) to Russia in order to attend the coronation of Emperor Nicholas II, and was accompanied on this tour by Yun Ch’iho (1865-1945) among others. On this occasion, Min travelled through Japan, Canada, America, England, the Netherlands, Germany, Poland and Russia before returning to Korea after ten months. In the following year, he was appointed as envoy extraordinary to England, Germany, Russia, Poland, Italy and Austria, and during his tour of duty attended the sixtieth anniversary of the coronation of Great Britain’s Queen Victoria.

On his travels abroad, Min had gained much knowledge of the political, social and economic systems of the Western powers and he appealed to King Kojong (r. 1863-1907) to introduce western-style institutions to Korea. However, the domestic situation in Korea was in extreme disarray at this time and it was not feasible to implement many changes. Min was appointed to the State Council (Uijŏngbu) and as Minister (taeshin) of the Home Ministry (Naebu) in 1898 but was subsequently dismissed from these positions for his involvement in the Independence Club (Tongnip hyophoe), which was directed at establishing a Korean sovereign and a modern state. On being reinstated, Min continued to serve in high positions within the government, but after the Japanese victory in the Russo-Japanese War (1904-1905), the cause for Korean sovereignty was lost. At the conclusion of the war, the Japanese forced Korea to sign the Protectorate Treaty of 1905, which essentially caused the latter to forfeit her sovereignty and any rights for diplomatic intercourse. Min was outraged at this and pleaded with King Kojong to renounce the treaty and have the traitorous ministers who ratified it executed. However, the Japanese police placed Min under house arrest and his final act was to protest the loss of Korea’s independent future. Min committed suicide on 30 November 1905.

The Republic of Korea honoured Min posthumously in 1962 with the Order of Merit for
National Foundation. He is remembered as a visionary who saw that modernisation was the only way for Korea to maintain her independence and also as a patriot who strongly resisted the Japanese encroachments in Korea. Min’s literary collection, Min ch’ungj6ng yugo (The Posthumous Works of Prince Min Yonghwan) has survived and is a record of the many activities of the author.

Ministries, Governmental (see Government and Legislature)

Minjung shinang [Christianity]

Minjung Sŏgwan

Situated in Seoul’s Chongno Ward, Minjung Sŏgwan was founded by Yi Pyŏngjun on 11 November 1945. The company published about twenty foreign language dictionaries, a Korean language dictionary, literary collections, poems and essays, as well as introductory works for various fields of academic study. In March 1977, the company became insolvent, leading to its liquidation in May 1979. Its chief editor and staff were then employed by another publisher – Minjung Sŏrim. Today, Minjung Sŏgwan remains officially registered as a publishing company, but it publishes only high school textbooks dealing with the study of classical texts.

Minsŏng [Magazines]

Minŭmsa

Located in the Kangnam Ward of Seoul, Minŭmsa is a publishing company established on 20 December 1991. One of its first publications was Taeu haksul ch’ongsō, an extensive series of academic books treating a wide range of subjects. Today, the company specialises in philosophy, the social sciences and literature. It also publishes the literary periodical Segye üi munhak. (World Literature)

Minyo [Music]

Miryang

Situated in North Kyŏngsang Province, Miryang consists of the towns of Samnangjin and Hanam, and the townships of Tanjang, Muan, Pubuk, Sannae, Sanoe, Sangsam, Sangdong, Ch’ŏngdo and Ch’odong. Mt. Unmun (1,888m), Mt. Kaji (1,240m), Mt. Ch’ŏnhwang (619m) and other peaks of the Taebaek Mountain Range rise on the eastern side of the city and Mt. Hwaak (932m) stands in the northwest. The Naktong River flows along the city’s southern border.

With fertile plains on the lower reaches of the Naktong and Miryang rivers, Miryang is North Kyŏngsang Province’s second largest rice producer after Kimhae. Approximately 23 per cent of the city’s area is arable, of which 70 per cent is used for rice cultivation, and the remainder for dry-field crops such as barley, wheat, radish, Chinese cabbage, red pepper, watermelon and strawberry. Orchards in the area produce pear, apple, peach, persimmon, chestnut and jujube. In the city centre there is a research institution which undertakes research into the many farming products and aims at improving the strains of crops. For example, the centre has engineered over sixty improved varieties of barley, including Miryang Number 30, a variety with a natural resistance to insect pests. From earlier times, the area has been famous for its textile and ceramics industries. Textile factories today produce artificial silk, cotton and woollen fabrics and silk. The city also has a number of
mines which excavate iron, zinc, tungsten, felspar and molybdenum.

Tourism is centred around the area’s scenic spots and historical sites. P’yoch’ung Temple, just south of Mt. Ch’ŏnhwang in Tanjang Township, is the city’s most important Buddhist site. This ancient monastery houses numerous important historical relics including the robes worn by Yujŏng (Grand Master Samyŏng, 1544-1610). Within an extremely narrow rock gorge near the temple, one finds Kŭnggang and Mujigae (Rainbow) Waterfalls, and to the south lies Ch’ungch’ung Waterfall. On the northern side of Mt. Ch’ŏnhwang is Ŭrŭmgol (Ice Valley), which is cold even during the summer. Here lies Shiryehobakso, a small pond which has formed in a hollow granite basin. The pond is famous as a site where rain ceremonies were once held.

In downtown Miryang next to Miryang Bridge stands Yŏngnamnu (Treasure No. 147), which is considered to be one of Korea’s three great pavilions. First built during the Koryŏ period, the pavilion has been burnt down and rebuilt several times since then. Confucian schools in the city include the picturesque Ch’ilt’an Sŏwŏn in Tanjang Township’s Mich’on Village, Yerim Sŏwŏn in Pubuk Township’s Husap’o Village and Miryang Hyanggyo in Kyo Village next to Paegun Temple. As for modern colleges, Miryang Industrial College is next to the farming products research institution in Miryang and Miryang’s Junior College of Sericulture is in Naei Village.

Mo Island

Mo Island is situated just east of Chin Island off the coast of Haenam County. Administratively, the island is part of Uishin Township in South Cholla Province’s Chindo County. This tiny island covers an area of 0.24 sq. kms. and has a coastline of 2.8 kms. 1987 statistics show that the island had a population of 196.

The island’s topography is characterised by gentle slopes, the highest point being a mere 48.4 metres in elevation. Because of this, almost the entire island is composed of arable land. Residents are employed in agriculture and fishing. Boats operating from the island catch a wide variety of fish including eel, achovy, perch and shrimp. Laver and brown seaweed are also gathered along the island’s shores. During the extremely low tides of the 3rd lunar month, a 2.8-km.-long strip of land is exposed, connecting the island with Hoedong Village on Chin Island. Hundreds of visitors arrive at this time to walk the isthmus.

Mogun chip

This anthology of works by Yi Saek (1328-1396, styled Mogun) consists of thirty-five volumes of poems and twenty volumes of prose. Yi Saek is regarded as one of the two most eminent writers of the Koryŏ dynasty, the other being Yi Kyubo (1168-1241). The collection includes the author’s biography, monument inscriptions, records, prefaces, memorials to the King, precepts, funeral addresses and essays, and contains much historical material of value for the study of the late Koryŏ and early Chosŏn periods. Some of the poems are also descriptive of historical events such as the activities of the Red Turbans and the Japanese invasion.

According to Yi Ch’ŏm’s preface for the Mogun Sŏnsaeng munji appearing in the Tongmunson, the Mogun chip was first compiled by the author’s youngest son, Yi Chongsŏn, in seventy volumes and published about 1404. Some volumes were later lost by fire, and a second edition was published in fifty-five volumes. Sometime later this collection was divided, with poems and prose published separately. Yi Chŏn, a grandson of the author, published the Mogun shi chŏngsŏn (A selection of poems by Mogun) in six volumes, and in 1583 a descendant of the author, Yi Chŏng, was instrumental in publishing Mogun mun’go (a collection of prose by Mogun) in eighteen volumes in five fascicles.
Another descendant, Yi Töksu, published the *Mogün simun’go* (An anthology of works by Mogün) in fifty-five volumes, during the reign of King Injo (1628-1649), and this edition was republished in 1686. This extant authentic edition of thirty-five volumes of poems and twenty volumes of prose, was reproduced by the Taedong Cultural Research Institute of Songgyun’gwan University in 1961, in a reduced photographic version as part of the Yögye myǒng hyǒng chip.

**Mohadang chip** (Collection of Mohodang)

*Mohadang chip* is an anthology of Sa Yaga, a naturalized Japanese general who surrendered to Korean forces during the 1592 Japanese Invasion, and then changed his name to Kim Ch’ungsŏn. This work consists of three volumes in one fascicle and is a woodblock-print. It was first published in 1798 and then again in 1842. At the beginning of the first volume there are prefaces written by Kang Seryun, Ch’ŏng Shin and Kang P’ilhyo, and at the conclusion of the work there is an epilogue by Pak Kwangsŏk. The first volume consists of the author’s letters to the Korean king, a written oath to the king and other miscellaneous writings. The second contains a chronological record of the author’s life, and the third contains tributes written by others praising the life and accomplishments of Kim.

This work is notable in that although there are many accounts of Japanese surrenders to the Korean army during the 1592 Japanese Invasion, this is the sole account that is written by a Japanese. The author, after pledging loyalty to the Korean king, served in defense of Korea with great honor. This work provides a unique perspective on the period surrounding the 1592 Japanese Invasion and the subsequent Manchu invasion of the early part of the seventeenth century.

**Mokp’o**

Mokp’o is a port city situated at the southeastern tip of South Cholla Province. Two-thirds of the city is built on reclaimed land, and the city is continuing to expand through land reclamation. Úidal, Talli, Nul, Changjwa, Kohwa and Hŏsa islands are all included within the city limits. In addition, there are several low mountains in the area. Centrally located in Taeban-dong near the downtown area, Mt. Yudal (229 metres) offers a panoramic view of the city. The area is characterised by mild weather and average yearly temperatures of 13.4 deg. C.

During the Japanese occupation, Mokp’o was an important port for the shipment of rice and cotton to Japan. After liberation, its importance as a shipping centre declined as ports like Pusan and Inch’ŏn expanded. Today, factories in the area produce ceramics and other products. Fishing is another important part of the local economy. Each day, boats bring in catches of skates, octopi, croakers, harvest fish and hair-tails to be sold at fish auctions.

During the twentieth century, Mokp’o’s transportation network has undergone continuous improvement. The city is the final stop on the Honam railway line. Ferries operating out of the harbour go to both Hong and Cheju islands. In addition, a car ferry has operated between Mokp’o and Lainyungang, China, since 1997. In order to alleviate Korea’s heavy air-traffic problems, an international airport is also under construction.

In addition to its role as a transportation hub, the city has several sites of interest to visitors. The National Maritime Museum displays numerous artefacts, documents and salvaged ships. Across the street at the Folk Museum, various old coins, coral, shells and handicrafts can be seen. At the Namnong Memorial Museum, built in memory of Hŏ Kŏn (styled Namnong), paintings by five generations of Hŏ’s family are on display. Hŏ Kŏn is remembered as one of the most popular painters of the Chinese Southern School tradition.
Many famous artists have come out of Mokp’o. The Western-style painters Kim Hwan’gi and Kim Amgi as well as the oriental-style painter Hó Kö’n both hail from this area. Writers such as Pak Hwasŏng and Ch’a Pŏmsŏk, musicians such as Cho Sanghyŏn and Shin Yŏnghŭi as well as the dance innovators Ch’oe Ch’ŏnga and Yi Maebang are also from here.

The city has a number of educational institutions. The Mokp’o Poetry Fellowship Hall can still be seen in Chukkyo-dong. The hall was built by Chŏng Manjo (1859-1936), a scholar specialising in classical East-Asian literature. In the spring and autumn, hundreds of scholars from around the nation used to gather at the hall for poetry writing examinations. In modern times, the area’s link with ancient artistic traditions has been maintained. At the Municipal Classical Music Institute, operated by the city, traditional music is taught to a wide range of students, from elementary school children to adults. The city is also home to Mokpo National University, Mokpo Technical College, Mokpo Commercial College and Mokpo National Maritime University.

Möllendorff, Paul Georg von

Paul Georg von Möllendorff (1847-1901) was a German diplomat who had a major role in late Chosŏn politics. He was the first official Western adviser to the Chosŏn government, serving from 1882 to 1885. The period in which Möllendorff was active in Korea was one of great change and international competition, and so his activities had important influences on the course that Chosŏn took.

Möllendorff was born into an aristocratic family on 17 February 1847 in the small town of Zedenik in Prussia. When he became eighteen, he entered the University of Halle and studied jurisprudence, and both occidental and oriental languages, among other subjects. He proved so adept at languages that he eventually became capable of research in German, English, French, Italian, Spanish, Russian, Polish, Dutch, Serbian, Hebrew, Chinese, Manchurian, Korean, and Japanese, to varying degrees of competency. It is not surprising, then, that Möllendorff came to be acknowledged as one of the foremost experts of Asian linguistics. In 1869, he went to China as an assistant secretary in the Chinese Imperial Maritime Customs service, and by 1874, had entered the German foreign service, eventually rising to the position of vice-consul at Tientsin. During this period, he developed close relationships with influential men in the Chinese, Russian and Japanese governments, such as Li Hongzhang, Takezoe Shinichirō and Karl Waebere.

Möllendorff left the German foreign service in 1881 and then joined the staff of Li Hongzhang, the Chinese Viceroy. Li thought that if Chosŏn had an adviser such as Möllendorff, his country would never have entered into such an unfair treaty as she had with Japan in 1876. Acting on Li’s advice, Möllendorff began his study of the Korean language. King Kojong (r. 1863-1907) learned of Möllendorff from Kim Hongjip (1842-1896) and Cho Yongha (1845-1884), who had returned from working out new trade regulations with China. While there was some opposition from the Germans, Americans and British to the appointment of Möllendorff as Kojong’s adviser, the opinion of Viceroy Li proved sufficient for the appointment of Möllendorff. The duties attaching to his post were outlined in a contract and stipulated that he was: a) to assist with the foreign affairs of the Chosŏn government; and b) to establish and administer the Chosŏn Customs Service, while this organisation was under the control of the Chosŏn government. Also included in the contract were a salary and accommodation arrangements for Möllendorff, along with clauses allowing for his removal from office. Arriving at the royal court in December 1882, Möllendorff became the first Westerner to meet King Kojong.

Möllendorff adapted well to his position in Korea and soon gained the confidence of Kojong. He was appointed to various positions and quickly rose to that of Vice-Minister
of the Office of State Affairs (T'ongni amun), along with his duties at the Customs Service. Möllendorff remained aloof of Chinese influence in his duties in Korea, and this became a point of contention between him and Viceroy Li, who sought to use the German as a means to increase the influence of China over Korea. Möllendorff recognised the struggle of the Japanese and Chinese for control of Choson, and thus sought to bring a third power into Korea. Hence, he worked to convince King Kojong and Queen Min (1851-1895) of the necessity of a Western presence in Korea, and to this end brought Russia to the fore in the Korean court. In 1884, Möllendorff assisted in the negotiation of a treaty with Russia, which was represented by his old acquaintance Karl Waebber, and he became even more pro-Russian in his outlook after the coup d'etat of 1884 (Kapshin Ch’ongbyŏn).

The Chinese, who saw their influence in Korea on the wane, were not about to relinquish their role as the major power in Korea. Hence, in the aftermath of the coup d'etat, the Chinese stepped up their influence in all aspects of the Choson government, and in particular, Yuan Shikai, a Qing general, openly sought to intimidate Kojong with the threat of replacing him. As a result, Möllendorff himself was replaced at the prompting of Yuan by the American Owen N. Denny. Moreover, the heretofore independent Customs Service of Choson was subordinated to a like agency in China. Möllendorff then left Korea and returned to China in 1885. He returned briefly to Korea in 1888, holding hopes of again serving as an official adviser to Kojong, but circumstances did not allow him to do so. Once again in China, he worked on the compilation of two dictionaries, one Chinese-German and the other German-Chinese. He remained in contact with King Kojong throughout the 1890s and even as late as April 1900, the Korean monarch sought to have Möllendorff return to Korea as his adviser. The objections of the Japanese and Russians, however, prevented this from occurring. Möllendorff remained in China where he died in 1901 at the age of fifty-four.

Bibliography

**Mongsan hwasang pŏbŏ yangnok ŏnhae**

This work comprises six chapters of excerpts of the precepts of the Chinese Buddhist priest Meng Shan of the Yuan period and one chapter of those of Poje, a high priest of the Koryŏ dynasty who had visited Meng Shan in China. It was translated by the eminent priest Shinmi during the reign of King Sejong (1418-1450) and published by the official publishing office for Buddhist sutras, in which Shinmi was active.

Only one copy of the original wood-block edition of this work is known to have survived and is in the possession of Mr. Yi Inyŏng. The date of publication is not known, but from internal evidence such as the quality of the paper and the engraving style it would appear to have been published during the time of King Sejong. The preface was printed with metal type but only one page of it remains and this does not include the date. This edition was reproduced by the publisher Tongmun’ gwan in 1954.

Other editions published in the time of King Chunjong (1488-1544) are as follows:

1. Kounsa edition, printed at the Koun temple in South Ch’ungch’ŏng Province in 1517 with four other works of Buddhist precepts. A copy is in the possession of Dr. Yi Pyŏnggi.
2. Yujomsa edition, published by the Yujŏm temple in the Diamond Mountains in 1521. A copy is held by Mr. Song Sokha.
3. Chungdaesa edition, published with four other works of precepts by the Chungdae
temple in Cholla Province in 1543. A copy is held by the Yonsei University Library.

All editions of this work are of interest for the study of change in the Korean language.

Situated on the coast in the western part of South Cholla Province, Muan County is comprises the towns of Muan and Illo, and the townships of Mangun, Mong’’an, Samhyang, Unnam, Ch’onggye, Hyön’gyoŋ and Haeje. The county covers a total area of 427 sq. kms. and as of 1988 had a population of 95 698. The Yongsan River flows along the city’s western and southern border before reaching the Yellow Sea. Narrow landbridges connect the townships of Haeje and Unnam with the mainland. Within the county, there are two inhabited and twenty-five uninhabited islands. Due to the county’s southern location and low altitude, the local weather pattern is mild, with an average yearly temperature of 13.3°c. and an average rainfall of 1 071mm.

Approximately four-fifths of the county’s workforce is employed in the agricultural sector. Of the county’s 181 sq. kms. of arable land, some forty-four per cent is used for rice and fifty-six per cent for dry-field crops, including tobacco. In the coastal waters, high quality shellfish and laver are harvested.

The county offers several scenic attractions. In the summer, visitors from Mokp’o and other nearby cities flock to T’omnŏri Beach. This two-kilometre-long white-sand beach is situated next to a delightful grove of two-hundred-year-old pines. Mt. S'ungd'al (318m) in the centre of the county is another popular tourist destination. The mountain is famous for
its picturesque ridges of partially exposed granite. It is home to Pöpch’ön Temple and Mogu Hermitage, two of the area’s oldest Buddhist monasteries. According to records, the monk Yuanming came here from China during the Yuan period and established a hermitage on the mountain. Five-hundred disciples trained under him, achieving enlightenment under his guidance. As a result, the mountain came to be known as Mt. Sùngdal (Monks’ Attainment).

Buddhist relics found in the area include a standing stone Buddha at Yaksa Temple in Sôngdong Village, a five-storey stone pagoda in Shin’gi Village and two stone guardian posts at the Ch’ongji Temple site in Taech’i Village. Confucian sites found here include Muan Hyanggyo (County Public School founded in 1394) and P’yōngsansa (a shrine commemorating Ch’oe Ikhyŏn and Ki Uman) in Hyŏng’gyŏng’s P’yōngsan Village.

In addition to historical sites, the area has a number of unique traditions. The Tongdangi T’aryong, a folk-song, is especially popular. The song is sung on Ch’usŏk Day (the harvest moon festival) or during the first lunar month to the rhythm of musical instruments improvised from household items such as upturned bowls and chopsticks banged together. The song begins with the nonsensical ‘Tongdangida Tungdangida, Tanggidungdangi Tungdangida’ followed by lyrics on the difficulty of living with one’s parents-in-law or of romantic love.

[Agricultural rites; Dance]

**Mudang**

[Shamanism]

**Mudūng Mountain**

Mt. Mudūng (1,187 metres) is part of the Mudūng-san Provincial Park, which is situated in South Chŏlla Province. During Paekche times, the mountain was called Mujin-ak, during Shilla times, Mu-ak, and during Koryŏ Times, Mt. Sŏsŏk. Except for the exposed rock around the summit, the area consists of gentle, earthen slopes. The mountain supports approximately 900 plant species, 465 of which have medicinal properties. The area’s mild climate also makes it an ideal location for tea cultivation. Chŏngshim Temple, the mountain’s largest extant temple, houses a number of historical artifacts, including a Pirosana (Vairocana) statue made of iron (Treasure no. 131). Wŏnhyo Temple, another important historical site, was founded by the famous Shilla monk Wŏnhyo. Destroyed during the Korean War, it has been rebuilt on a much smaller scale. With its gentle slopes and clear streams, the mountain is a favourite weekend picnic area for those living in nearby Kwangju.

**Muhak (see Chach’o)**

**Muju County**

Situated in the northeast corner of North Chŏlla Province, Muju County includes the town of Muju and the townships of Mup’ung, Punam, Sŏlch’ŏn, Ansŏng and Chŏksang. The county has an area of 641.56 sq.kms., and 1988 statistics record a population of 40,905. The Sobaek Mountain Range runs through the entire area of the county with Mt. Tŏgyu (1,614m), the county’s highest mountain, rising in the south, Mt. Tae’dŏk (1,290m) in the east and Kittae Peak in the north. The county’s terrain is characterised by deep valleys, rocky highlands and elevated plateaus. The weather pattern shows an average annual temperature of 11°C and a rainfall of 1,200 mm.

The area’s rugged topography allows little land for farming, only 12 per cent being arable. Of this, about half grows rice and the remainder dry-field crops and speciality crops such as
alpine vegetables, tobacco, ginseng, medicinal herbs and mushrooms. Orchards produce
persimmon and apple. Apiculture is another source of income. Mining operations include
iron and zinc in Sŏlch’ŏn Township, molybdenum in Punam Township, and gold, felspar,
silica and limestone are mined/quarried in Chŏksang Township. Light industry consists of a
small shiitake mushroom processing plant and a raw silk processing plant in the town of
Muju.

Since ancient times, Muju County has been famous for its high mountains and clear
streams. Mt. Tŏgyu, its key attraction, has been designated a national park (See Tŏgyu
Mountain). With an average winter temperature of minus 8c., the area offers an ideal
winter sport venue. The Muju Resort was recently built here to provide ski facilities to the
growing number of Korean skiers. Muju has Korea’s longest downhill run, of 3 220
metres. Other tourist attractions include Masan Cave in Chŏksang Township’s Sashin
Village, North Chŏlla Province’s Natural Education Garden and Yongch’u Waterfall in
Ansŏng Township’s Kongjŏng Village. On Mt. Chŏksang (1 029 m.), there is a large
boulder, from which a panoramic view can be had of Mt. Kaya to the east, Mt. Chiri to the
south, the Yellow Sea to the west and Hwa-ak (Blossom Peak) to the north.

Northwest of Annyŏndae, inside Chŏksang Fortress, lies An’guk (Pacifying the Nation)
Temple. Constructed in 1277, the temple received its present name when a special monks’
corps was deployed there. These soldier-monks protected the archive built here in 1641 to
store documents of the Chosŏn kingdom. However, the recent construction of an electricity
generating station nearby, necessitated the temple’s relocation to the site of Ho’guk Temple.
Here there is a scroll painting of a Buddha (North Chŏlla Province Tangible Cultural Asset
No. 20). Between Mt. Tŏgyu and Highway 37, is the old site of Paengnyon Temple.
Artefacts found at the site include a Vinaya platform and the Chonggwandang stupa,
(North Chŏlla Province Tangible Cultural Asset No. 102).

In Muju’s Tanggalan Village is Han’p’ungnu, a two storey pavilion. The structure was burnt
down in 1592 during the first Hideyoshi Invasion but was restored in 1599 and remodelled
in 1783. Together with Hanbyŏkdang in Chŏnju and Kwanghalla in Namwŏn, Han’p’ungnu is considered to be one of the three great pavilions found in the Chŏlla area.
Confucian schools in the area include Muju Hyanggyo (founded in 1398 in Muju’s
Umnae Village); Paeksan Sŏwŏn (founded in Mup’ung Township’s Hyŏnnae Village in
1608); Chukkye Sŏwŏn (founded in 1713 in Ansŏng Township’s Chukch’on Village), and Tosan
Sŏwŏn (founded in 1813 in Ansŏng Township’s Sajon Village).

Village rituals (tongje) still common in this area include the Tangsanje (ritual to worship the
mountain spirit); Sanshinje (ritual to worship the guardian spirit of the mountain);
Ch’ŏllyongje (ritual to worship the heavenly dragon); Chot’apche (ritual held around a
cairn); Chimt’aeeje (ritual held before a long pole with a grain-filled sack dangling from the
top); Changsŏngje (ritual to the guardian poles at village entrance); Tokkaebijje (ritual to
goblins); P’ungamujje (ritual to worship the guardian spirit of wind and rocks); Sushinje
(ritual to the guardian spirit of water); Kluje (ritual of prayer for rain); and the
Kamummegije (ritual to get end a period of drought).

Mun’gwa

Mun’gyŏng

Situated in the northwestern corner of North Kyŏngsang Province, Mun’gyŏng is
comprised of the towns of Ka’in and Mun’gyŏng and the townships of Nongam, Tongno,
Masŏng, Sanbuk, Sanyang, Yŏngsun and Hogye. Mt. Chuhul (1 106m), Mt. P’oam
(962m), Mt. Taemi (1 115m) and Mt. Hwangjŏng (1 077m) rise in the north and other
peaks between 800 and 1000 metres high stand in the west. The elevation drops as one
approaches the southeast, eventually giving way to the flat terrain of the Sanyang and
Yongsun townships.

Due to the region’s rugged topography, only 16.3 per cent of the city is arable. Most of the area’s farming land is located along Yong River and the Kum and Choryong streams. Rice is cultivated here, along with barley and tobacco. In the mountainous regions, Songi mushrooms are grown and sericulture operations are prevalent. Approximately 82.5 per cent of the city is covered by forest, and there are numerous tree farm operations attempting to meet the growing demand for wood. In particular, timber is needed for rail sleepers in local mines. Of the ninety-three mines presently operating in the area, there are eighty-two coal mines, ten mines that excavate non-metallic minerals and one mine that excavates metallic minerals. Taking advantage of the region’s abundance of clay and fuel wood, there are also a large number of pottery kilns in the Mun’gyöng area.

With Mt. Wörrak National Park in the northeast, part of Mt. Songni National Park in the west, and the famous pass known as Mun’gyöng Saejae in the north, the city boasts numerous tourist destinations. Mt. Chuhül and Mt. Choryöng are particularly popular with hiking enthusiasts. On the typical five-hour hike up Mt. Chuhül, one walks past the first gate of Mun’gyöng Saejae, Yöngung Waterfall, Hyeguk Temple, a mineral spring, Mt. Chuhül’s peak and Mun’gyöng Saejae’s second gate. To better preserve this picturesque region, the area has been designated Mun’gyöng Saejae Provincial Park. In Nongam Township’s Chonggok Village, one finds Taejong (Big Well) Park. Formed around 1918, the park gets its name from a large spring to the north of Chonggok Village. Here, the Songni and Nongam streams flow through thick forests of large pines. Suanbo hot springs is another popular tourist destination in the area.

In addition to beautiful scenery, the area contains a large number of historical sites and relics. Ancient temples in the region include Taesöng Temple founded in 587, Unam Temple, Shimwön Temple and Yun’il Hermitage. In Sanbuk Township at the foot of Mt. Undal, one finds the ancient Kimnyong Temple. Originally known as Unbong Temple when founded by Undal in 588, the temple gets its present name from a local magistrate by the name of Kim. After giving Buddhist offerings on Mt. Undal, Kim’s wife gave birth to a shinnyö (divine girl). Soon after, she had a boy whom the couple named ‘Dragon’ (yong). The Kim family then became prosperous, and thus the temple came to be named after the pious magistrate’s son. Hyeguk (Kindness to the Nation) Temple is another monastery that has had its name changed. Originally known as Pophüng Temple, it was renamed after King Kongmin, who took refuge here to escape troubles in the capital.

Pongam Temple, located in Kaën, houses most of the city’s Buddhist artefacts. Here, one finds Grand Master Chijöng’s stupa and stele (Treasures No. 137 and 138), a three-storey pagoda (Treasure No. 169) dating from the ninth century, a Koryö-era pagoda and stele (Treasures No. 171 and 172) commemorating Grand Master Chongjin, the Hwanjöktang pagoda, the Hamhödang pagoda and a bell-shaped stupa (North Kyöngsang Province Cultural Sites No. 133-135). Near the temple complex, there is also a rock carving of a seated Bodhisattva (North Kyöngsang Province Tangible Cultural Asset No. 121). In addition to Buddhist sites, there are a couple of old Confucian schools in the city, such as Mun’gyöng Hyanggyo founded in 1392 and Künam Söwön located in Sanbuk Township’s Söjung Village.

Mun, King (r. 737 to 794)

King Mun (? —794) was the third king of the Parhae Kingdom and ruled from 737 to 794. His name was Taehümnu and he was the son of King Mu (r. 719-737) the second king of Parhae. The Parhae Kingdom occupied a very delicate international position being bordered by both Tang China and Greater Shilla to the south. However, the founder of the Kingdom, the former Koguryö general Tae Choyöng (King Ko, r. 699-719) had managed to carve a kingdom in Manchuria incorporating both refugees from the fallen Koguryö
Kingdom and the indigenous Malgal people. The ruling class of Parhae was composed of members of the former Koguryŏ Kingdom and this is evidenced in their use of the title Kuguk (derived from Koguryŏ) to refer to their state as recorded in the Chinese history book Xin Tangshu (New History of Tang).

Mun’s father had extended the territory of Parhae by attacking the seaport of Dengzhou on the Shandong Peninsula and Mun continued to enlarge the territory of Parhae. He took advantage of the An Lushan Rebellion in Tang to extend the domain of Parhae over the entire Liaodong Peninsula and bringing much of the former lands of Koguryŏ under his control. Moreover, in order to create a balance of power in the region, King Mun maintained diplomatic ties with Japan and various northern tribes to keep the alliance of Shilla and Tang at bay. Parhae did, however, eventually establish diplomatic relations with Tang and in 762 Tang began to refer to Parhae as the nation of Parhae instead of the fief of Parhae. Moreover, the Chinese recognised King Mun as the sovereign of the nation and at this time Parhae entered into the flourishing of their culture that would extend for another seventy years through the reign of King Sŏn (818-830).

Munsŏng, King (r. 839-857)

King Munsŏng (?—857) was the forty-sixth king of Shilla and reigned from 839 until 857. His family name was Kim, his name was Kyŏngung and he was the son of King Shinmu (r. 839). Immediately preceding Munsŏng’s accession to the throne in 839, there were major struggles among the chingol (true-bone) aristocracy for the throne.

From the time after King Kyŏngdŏk (r. 742-765), the strength of the monarchy in Shilla deteriorated as the power of the chingol aristocracy increased, despite repeated attempts by the monarchy to check this rise. Upon the death of King Hŭngdŏk (r. 826-836), a large-scale struggle broke out among the aristocracy for control of the throne. At first a cousin of Hŭngdŏk was put forth by his supporters as the heir to the throne, but he was soon killed by his nephew, King Hŭigang (r. 836-838), who took the throne for himself. Hŭigang, however, could not control the machinations of the aristocracy who desired the throne and thus took his own life in less than two years. Hŭigang was succeeded by his cousin, King Minae (r. 838-839) who scarcely held the throne for a year before being usurped by King Shinmu, who was supported by the powerful warlord Chang Pogo (?—846) and his forces. Munsŏng then ascended to the throne with the assistance of Chang upon the death of his father. Chang, however, was not satisfied with being the power behind the throne, and began to make moves to establish his claim on it. Hence, when he tried to arrange for his daughter to become Munsŏng’s queen, members of the aristocracy rose up against the pairing of the king with the daughter of a commoner like Chang and prevented this. Shortly thereafter, Chang was assassinated in 846, and the over 10,000 troops under his command at Ch’ŏnghae Garrison were moved to Pyŏkkol County (present Kimje) where they no longer posed a threat to the throne.

The reign of Munsŏng was marred by continual uprisings by various members of the Shilla aristocracy and prevented the king from ever gaining full control of the decaying kingdom. In 857, the dying king passed the throne on to King Hŏnan (r. 857-861), presumably under pressure to relinquish the throne by the forces around him.

Munsu Mountain

Mt. Munsu (621 metres) is situated on the border of North and South Chŏlla Province north of Changsŏng. Along with Mt. Pangjang (734 metres), Mt. Kosŏng, and Mt. T’aech’ŏng, it is part of the Noryŏng Mountain Range. Remains of a fortress can be found about five kilometres south of the mountain. Munsu Temple, from which the mountain gets its name, lies on the northern slope.
Music

1. Ritual and banquet music of the Chosŏn dynasty court.

Music of the Chosŏn dynasty court was and still remains divided into three main categories based on origins: aak, music taken from China and felt to be performed in an authentically Chinese style; tangak, music from China, but stylistically modified in Korea; and hyangak, music of Korean origin. Written, notated sources for much of this court repertory survive from as early as the 15th c. In the 20th c., an unfortunate habit in Korea of loosely referring to all court music as aak has arisen.

Aak (in the strict definition) arrived in Korea as a gift from the Chinese emperor in 1116 and was soon put to use in court rites, especially state sacrificial rites such as the sacrifices to Royal Ancestors (T’aemyo or Chongmyo) and to Spirits of Land and Grain (Sajik). This ritual use of aak has continued, with some interruptions and losses, to the present, and the modern descendant of the music is still performed in context in the semi-annual Sacrifice to Confucius (Sŏkchŏn) at the Munmyo shrine at Sŏnggyun’gwan University in Seoul. The music is preserved by the government-sponsored Korean Traditional Performing Arts Centre (Kungnip Kugagwŏn), the chief institution for preservation of court music and dance.

Aak is slow, stately music performed with a strictly regular beat, each melodic note lasting about four seconds long and ending with an upward rise of pitch. In addition to sixty-four dancers, there are two groups of musical instruments in the Sacrifice to Confucius, a Courtyard Ensemble (hŏn’ga) near the compound entrance and a Terrace Ensemble (t’ungga) on the stone terrace of the shrine building. In modern times, the two ensembles have similar instrumentation, including many instruments of Chinese origin: tuned bronze bells (p’yŏnjong) and stone chimes (p’yŏn’gyŏng), bamboo flutes (yak, chŏk, ch’i) globular earthenware flute (hun), wooden tiger with serrated back (ἡ), several large drums, etc. Since the 15th c., the aak repertory has consisted of only two short melodies.

In the 15th c., there were numerous pieces of tangak in active court use for banquets and other court ceremonies, but the core tangak repertory has now dwindled to only two short ensemble pieces, both deriving originally from Chinese musical settings of ci poetry imported during the Koryŏ period from the early Song dynasty: Pohŏja (Pacing the Void) and Nagyangch’ un (Springtime in Luoyang). Several variant pieces deriving from Pohŏja are also in the repertory, and the characteristic process of modifying extant music in preference to composing new music has meant that the Korean court repertory in general is poor in number but rich in variation. Both Pohŏja and Nagyangch’ un are performed in what is felt to be a more Korean style than is aak, and their instrumentation includes double-reed pipes (p’iri) and bowed strings (haegŭm and ajaeng) as well as the more formally Chinese tuned bells and chimes.
Hyangak accounts for all the rest of the court repertory, and it was also used mostly during banquets and other celebrations. The term can be used to refer to all native Korean music, but in normal practice it means only the court music of native origin. An important and sizeable part of the hyangak repertory is the set of two suites for large ensembles which are performed at the annual Sacrifice to Royal Ancestors at the Chongmyo shrine in Seoul: Pot'aepp'yōng, with song texts praising the civil achievements of the royal ancestors, and Chōngdaeēp, praising their military accomplishments. The suites, each now consisting of eleven slow and imposing movements, were arranged in the 15th c. by King Sejo from longer suites assembled by King Sejong from then extant pieces of tangak and hyangak. The performing ensembles for the Chongmyo music, like those for the aak of the Sacrifice to Confucius, are divided into Courtyard and Terrace, but they are impressively larger and employ additional instruments such as bowed strings (haegüm and ajaeng), double reeds (multiple p'iri, conical t'aep'yōngso), and a large gong. Another type of ritual music, modelled in the late 18th c. upon the Chongmyo music is that for the Kyōngmo-gung, the shrine of King Chōngjo’s father; it is now performed only in concert.

Other hyangak includes military music such as Ch'wit'a (Beating and Blowing), which uses one of the largest orchestral groups in the repertory; it maintains a comparatively rapid and steady beat, reflecting its marching associations. It is more common nowadays to hear a derivative piece, Tae-Ch'wit'a, which is played on a small group of loud instruments including conical double-reed pipe (t'aep'yōngso), conch shell (nagak), long trumpet (nabal), gong (ching) and brass cymbals (chabara). Surviving examples of music originally performed at banquets and other court ceremonies include: Sujech'ōn, a slow fifteen-minute piece in several sections with remarkable drawn-out phrases for bowed string instruments; Yōmillek, an orchestral piece deriving from a 15th c. tune which has expanded through decoration, variation, and repetition to a modern length of over eighty minutes; and Haeryōng, a twenty-minute piece with bells and chimes, plus loud wind and bowed string instruments.

2. Music of the upper classes

The generic term for music performed by the upper classes (the ruling yangban and the more clerical chungin) under less formal circumstances than court rites and ceremonies is chōngak. Like the much older term aak, chōngak has in this century been used loosely to refer collectively to all court music and music of upper classes, but the more useful basic definition covers only two main types of music: instrumental chamber ensemble music and elegant vocal music with poetic texts.

A. Instrumental music

The instrumental repertory of chōngak consists of several variations of a single suite of pieces, Yōngsan hoesang. The versions are distinguished by details of instrumentation, number of movements, and technical points of musical construction. Individual movements from the various versions are often used for dance accompaniments and other occasional purposes. A number of the movements are variants of each other, so that the music is interesting from the structural standpoint and possesses a developmental, coherent quality absent in much of the court music. Yōngsan hoesang is felt by many Korean musicians to be the pinnacle of the elegant, restrained aspect of Korean music, as distinct from the rough, individual, and extrovert style of much of the folk music. The historical development of Yōngsan hoesang, from a single short piece to a set of variants and additions, can be traced in notated sources from the 15th c. onward, especially in the 18th and 19th centuries.

(i) The version most often heard is Hyōnak Yōngsan hoesang (Yōngsan hoesang for string ensemble), a suite of nine movements in which the lead instrument is the six-string long zither kōmun'go. Other instruments in the mixed ensemble include the 12-string long
zither kayagüm, the trapezoidal dulcimer yanggüm, the two-string fiddl haegüm, large bamboo flute taegüm, a gentle double-reed pipe se-p'iri, small bamboo flute tanso, and hourglass drum changgu. In a full performance, which takes about fifty-five minutes, the suite progresses from exceedingly slow to a swaying, dance-like tempo at the end.

(ii) P'yöngjo hoesang is similar to Hyönak Yongsan hoesang, except that it has only eight movements, is irregularly transposed to a different pitch level, and has the rough-sounding double-reed hyang-p'iri rather than se-p'iri, plus a few more instruments, so that the ensemble is somewhat larger and louder. The melodic line is also rather more decorated.

(iii) Kwanak Yongsan hoesang is a wind ensemble version of the suite, again with eight movements. The wind instruments include two double-reed p'iri, the large flute taegum, the two-string fiddle haegum (here classified as a wind instrument as it possesses the same sort of sustaining ability), hourglass drum changgu, and barrel drum chwago. Although the ensemble is smaller than the two previous versions, the resulting sound is quite penetrating.

(iv) Pyölgok is a suite of nine movements which are variants of movements from the more standard Yongsan hoesang versions, strung together as a 'special piece'(pyölgok). The ensemble is the same as for Hyönak Yongsan hoesang.

B. Vocal music

Three genres of vocal music come under this heading: kagok (lyric songs), shijo (poetic incantation), and kasa (narrative, descriptive poems).

(i) The musical forms kagok and shijo need to be considered together, since both set the same type of poetry, confusingly referred to as shijo. Poems in the form now called shijo have existed in Korea for a number of centuries, though most of the texts (regardless of wishful attribution) appear to be from the 18th c. onwards. Most traditional shijo texts are to be found in surviving notebooks of singers, complete with a shorthand musical notation consisting of memory aids to help a singer attach the text to an already memorized melody, of which there were only a comparatively small number (dozens of different texts being sung to each melody). In the notebook sources, the shijo texts are grouped according to which kagok melody they are sung.

Structurally, the shijo poetic form consists of three lines, each in four syntactic groups of varying numbers of syllables (attempts to describe the form in terms of numbers of syllables are fundamentally misconceived). Kagok and the musical form also known as shijo both are structurally interlocked with the three-line / four-group poetic structure and are unconcerned with syllable counts.

The history of kagok goes back to the Koryó dynasty (918-1392), and it is musically traceable to notated sources as early as the 16th c. As in the court music repertory, kagok consists mainly of variants of a very few original model tunes, and the sources show how the most popular variants of any given time became the models from which subsequent sets of variants were drawn.

The present repertory of kagok consists of forty-one pieces, of which twenty-six are for male voice and fifteen are for female voice. There are several established orders of performance, for male only, female only, and alternating. The final female song, T'ae'pyöngga, is often sung as a male-female duet. Kagok is generally sung by a vocalist with a gentle chamber instrumental ensemble of instruments described above: the flute taegum, double-reed se-p'iri, two-string haegum, 12-string kayagüm, 6-string komun'go, the trapezoidal dulcimer yanggüm, and hourglass drum changgu. The style is highly refined and restrained, requiring tasteful performance by the players and cultivated
The musical form *shijo* dates from the 18th c. and is essentially a simplified incantation for the *shijo* poetic form for those unable or unwilling to undergo the extensive training required for singing the more complex *kagok*. The correlation to musical phrase and textual group is very straightforward, and basically anyone culture enough to write a *shijo* poem could also convey it as music. The only essential accompaniment is the hourglass drum *changgu*, but flutes and fiddle may also be added if available.

(ii) The form of *kasa* is related to that of the poetic form *shijo*, having four syntactic groups per line; the difference lies in the number of lines, which in the case of *kasa* range from several dozen to over a thousand. These long texts typically deal with narratives such as travel diaries, and often contain long passages of lists (of striking geographical features, etc.). Twelve texts are performed in the standard musical *kasa* repertory. Their musical structure of course corresponds to the four-part line division of the poetry. Performance is by singer with instrumental ensemble typically consisting of double-reed *se-p'iri*, large flute *taegüm*, fiddle *haegüm*, and drum *changgu*.

**Folk Music**

Korean discussions of folk music face a dilemma. The most widely appreciated genres, *p'ansori* (epic story-telling through song), *sanjo* ('scattered melodies' for solo instrument and drum accompaniment), and *Samul Nori* (a percussion quartet) are today essentially urban. They comprise a high art canon developed and performed by professional or semi-professional musicians. In contrast, revisionist *minjung* populism argues the merits of rural and local and amateur oral genres transmitted from the past. Boundaries between the two canons have never been strict, not least because of a long-standing interplay between the musicians themselves.

In Korean scholars' accounts, the term *minyo* combines two appropriate Sino-Korean characters for the people (*min*) and song (*yo*). It defines songs with no recognised composers, a shrouded and timeless history, and few prescribed texts. *Minyo* vary from village to village and tend to use simple strophic melodies. *Minyo* are the 'songs of the people', the equivalent of German *volkslied*, sung in work, for entertainment, and at funerals.

A number of folksong areas are distinguished. *Namdo minyo* come from the southwestern Cholla provinces (the Honam region). Singers use a tight throat and considerable chest resonance. Emotion comes from the vocal character - *aewan ch'ong* ('sad voice') - and a characteristic tritonic pitch scheme in which a deep and vibrating dominant (the *ttaniün mok*) is separated from a high falling appoggiatura known as the 'breaking tone' (*kkangniün mok*) by a plain and barely vibrated tonic. The characteristic song is *Yukchabaegi*, given in a slow and flexible six-beat chinyangjorhythmic cycle (18/8).

*Sodô minyo*, from Pyongan and Hwanghae provinces, contain comparable, sometimes tearful, emotion. Songs move gradually from a low pitch register to a high climax, then conclude in a series of descending portamento. Nasal resonance is used, coupled to a low sonorous vibrato. The characteristic song is the free-rhythm *Sushimga*. Excerpts of *Sushimga* often conclude other songs. There are three common more regular rhythmic cycles, *todi ri* (6/4), *semach'i* (9/8) and *kutkari* (12/8). *Sodô minyo* are preserved by migrants around Seoul as the ROK's Intangible Cultural Asset (*muhyon munhwajae*) no.29. Folk singing in the DPRK is ostensibly based on *Sada minyo*, but with less vibrato and no nasal resonance.

*Kyônggi minyo* typify what we would expect to find near the capital city: Kyônggi province surrounds Seoul. Songs tend to be joyful, lyrical and bright, using a relaxed
throat and less nasal resonance. Regular rhythmic cycles such as chungmori (12/4) and kutkori (12/8) feature. Nillida and Norae karak are representative songs. To the East, beyond the Taebaek mountain range, much of the three styles continue, but a distinct and unified pentatonic mode described as menari jo or sanyuhwaje can be discerned. In the south-eastern Kyongsang provinces (the Yongnam region), the irregular and unaccompanied menari sori is the characteristic song. In the central Kangwon province, versions of Arasong, notably Kangwondo arirang and Chongsan arirang, are faster and more regular. Once typical throughout the north-eastern Kangbuk region, Orang taryong (Shin kosan taryong) favours a consistently high pitch range but is lighter and less emotional than Sushimga.

A final region, based on the southern island of Cheju, is also distinguished. Farming songs favour free and expansive rhythmic textures and florid, highly ornamented melodies. Threshing songs and lullabies are built from short, repetitive phrases. Songs reminiscent of Kyonggi are still sung around the old administrative centre of Songup.

The term 'minyo' was introduced from Japan as commercial recordings made by professional singers appeared. Recordings tended to feature entertainment songs with widespread provenance. Sometimes known as shin minyo ('new folksongs'), these were popular 'songs for the people' (yuhaeng minyo and tongsok minyo are alternative designations). These songs have fixed texts and can combine textual fragments taken from several regions. Examples include Namhansansong, Hanobaengnyon, and many Taryong. Historical precedents include Chapka ('vulgar songs') and Sonsori taryong or ipch'ang ('standing songs').

Arirang, now Korea's 'national' folksong, has a curious history. Arirang catapulted to fame with a silent film produced by Na Un'gyu in 1926. It became a symbol of the independence struggle. Local versions survive throughout the peninsula, from the archetypal Chongsobsarirang to Chindo arirang and Miryang arirang. The first transcription - in a missionary journal - dates only from the 1890s, but scholars suggest that the song could predate or derive from the Koryo dynasty Chongsan pyolgok, while its curious phrase structure suggests mid-Chosun poetry.

Kayagum pyongch'ang developed both amongst male instrumentalists and as one of the skills fostered by kisaeng (entertainment girls). In pyongch'ang, a singer take texts from pansori or folksongs and accompanies him/herself on the 12-string zither.

Pansori is performed by a singer once known as a kwangdae with two props - a fan and a handkerchief - and a drummer. Pansori mixes song (sori), narration (anari), and drama (pallim) and is long: a complete madang (story) may take five or six hours to tell. The earliest documented source is a 1754 text by Yu Chinhwan of one madang, Chunhyangga (Song of Spring Fragrance). 'Eight great singers' are known from the late 18th c., and twelve stories are listed in a poem, Kwanuhui, by Song Manjae (1788-1851). Pansori achieved its greatest popularity in the 19th c., when the government official Shin Chaehyo (1812-1884) collected texts for six stories. Five of these remain: Chunhyangga, Shimch'ongga (Song of Shimch'ong), Hungboga (Song of the Two Brothers), Sugungga (Song of the Underwater Palace) and Chokpyokka (Song of the Red Cliff).

Attempts to create a Korean version of western opera based on pansori, ch'angguk, began in Seoul around 1908 and has continued in the ROK with recent productions of the Kungnip ch'angguk tan (National Traditional Opera Troupe) directed by Ho Kyu and others. In the DPRK, the elitist nature and raspy vocal character of pansori has been rejected, replaced since the 1970s by multi-composer operas performed by the Pi pada kaguk tan (Sea of Blood Opera Troupe). In the ROK, decline was countered by the appointment of pansori as Intangible Cultural Asset no.5 in 1964. Recently, popularity has increased through a pansori hakhoe (pansori study association) and the 1993 film,
The best p'ansori singers are said to come from Cholla province. Two vocal styles are distinguished, Tongpy'onye (said to be 'majestic, expansive, like sunrise') and the rarer Sŏp'y'onje - 'sad and touching, like sunset'. Tone colours include chŏlsŏng (iron voice), ch'ŏngsŏng (clear voice), and surisŏng (tough voice). Singers talk about 'acquiring the voice' (tigum), of 'breaking the voice' through solitary 'I 00 day' sojourns in mountains where they compete against waterfalls. Seven melodic types are delineated, from the typical of Namdo minyo to the chung-based ujo used for songŏnmok, in character close to Kyŏnggi minyo, are used in bright, cheerful, and peaceful scenes. Sŏllŏngje comes from the shout of the attendant who once preceded a king or high official, while the restrained and level sŏkhwaje is used for reportage. There are seven basic rhythmic cycles that underpin songs: slow chinyangjo (18/8), walking-paced chungmori (12/4), fast chungjungmori (12/8) and chajinmori (12/8), 'rushing' hwimori (12/8), and the irregular ônmori and òtchungmori.

Shamans vocalisation, particularly amongst the hereditary practitioners in Cholla, is similar to p'ansori. Vocational ties notwithstanding, shamans use two tone colours deplored by the myŏngch'ang (great singers) of p'ansori: hoensŏng, the so-called 'yellow voice' and hamsŏng, a veiled voice without clear enunciation. Shinawi denotes instrumental ritual music, though since the mid-20th c. it has also identified a professional folk music ensemble. Shinawi involves improvisation around set melodic cells. It is living music, with each player working off of others as they generate a state of hung (elation). Depending on the region, shinawi may be given as a shaman dances or as she rests. In central Korea the shaman may join in, vocalising textless phrases. Salp'uri (6/8+6/8), tosalp'uri (6/4) and tŏngdŏngungi (12/8) are the most common rhythmic cycles.

Sanjo is thought to have developed from a combination of shinawi, p'ansori and minyo. Many believe it was invented by Kim Ch'angjo (1865-1920) for the kayagûm zither. Sanjo was codified into a series of 'schools' (ryu, a loan-word from Japan) named after founders, amongst them Ch'oe Oksan, Kang Taehong, Kim Yundok, Pak Sanggûn, Sŏng Kûmyŏn and Kim Chukp'a. This century, sanjo has been adapted for the kömun'go (zither), p'i ri (oboe), haegûm (fiddle), taegûm (flute), ajaeng (bowed zither), and hojŏk (shawm). In the ROK it is considered the basic solo instrumental form. A sanjo ensemble has also been developed. In the DPRK, short sanjo such as that developed by a teacher of Kim Yundok, Ch'ong Namhui, are still taught.

Sanjo comprises a sequence of movements, passing from a slow and concentrated opening chinyangjo (18/8) to a fast quadruple hwimori or tumach'i (12/8 or 4/4) resolution. In between, the sequence gradually increases in tempo. Sanjo can last for up to an hour, and often include an integral tuning piece tasi1rim. Once taught entirely by rote, scores have been used for teaching since 1960. This, and the respect accorded 'schools', has curtailed any improvisation beyond the ordering of chunks of pre-composed melodic material.

Rhythm is well developed in Korea. Nongak provides a case in point. Nongak is deeply rooted in Korean history; today's bands mix village rites with military drills, work support and pure entertainment, all overlaid with either the world of travelling troupes or isolated farming villages. 'Nongak' is an all-embracing term, but local terms suggest a multiplicity of uses: Kut indicates a general performance. Maegut, a term which abbreviates characters for 'stamping on the spirits', prescribes a village rite typically given at New Year. Kŏlip indicates fund raising activities while kunak and kŏlgung suggest military processions and palace links. P'ungmul, p'ungjang and ture are associated with work teams in farming and, occasionally, fishing, and rites to ensure a good harvest. P'an'gut implies an entertainment event in an open space.

The music of rural bands divides into three basic styles: Kyŏnggi, chwado and udo. As
with Kyŏnggi minyo, the first prescribes a repertory geared to an urban fringe. Chwado and udo are applied as if looking southwards from Seoul, so that udo (right) specifies the western rice plain and chwado (left) the central and eastern hills. Udo bands are said to favour slow rhythms, performers keeping together in the spirit of egalitarianism. Chwado bands are said to feature solo segments, to emphasise superior playing techniques and virtuosity, and to favour fast patterns. Chwado and udo bands employ a set of rhythmic patterns known as shibi ch'a or shibi ch'ae. These are identified by ching (large gong) strikes and include the simple il ch'ae ('one strike': a single beat repeated over and over) and the common sam ch'ae ('three strikes': similar to ch'iilch'aein). Others such as ch'il ch'ae ('seven strikes') and shibi ch'ae ('twelve strikes') accompany specific dances. Some are complex: the processional o ch'ae ch'il kut ('five strikes processional') in North Ch'olla presents a sequence of 10+14+10+9+6 beats.

The four basic nongak instruments are the lead kkwaenggwari (small gong), the pulse-keeping ching, and two drums: the changgo (double-headed hour-glass drum) is used to imitate both large and small gongs while the puk (barrel drum) adds a solid bass. Dancers hold small sago drums. In addition, a nabal trumpet often announces the band and a soaenap shawm adds an improvised melody. Local ritual performances may last several days, but rural bands are in near-terminal decline. The genre is sustained in the ROK through local and central government sponsorship. However, student groups have since the 1970s gathered under the p'ungmul label to recreate local bands on many a university campus.

Itinerant troupes, Sadang p'ae, Namsadang p'ae and Kŏsa p'ae, were active until the 1960s, performing music, dance, acrobatics and juggling for payment. Since 1978, professional bands have had a sure future. In that year, four professional musicians led by Kim Tŏksu (b.1952) performed for the first time under the name Samul Nori. Samul Nori have given their name to a genre, and Seoul now has some 25 professional teams. The basic Samul Nori repertory comprises Pinari (a prayer for blessing), P'angut, a drum ensemble Samdo sol changgo and pieces representing each nongak style: Honam nongak from the Chŏngju area in North Ch'olla, Youngnam nongak from Samch'ŏnp'o in South Kyŏngsang, and Uttai p'ungmul from the central Ch'ungch'ŏng provinces. Samul Nori is distinct from both amateur nongak and the music of itinerant troupes. Local bands stood and danced, but Samul Nori sit, concentrating on rhythmic development. Rituals and work allowed the endless repetition of simple patterns by local bands, but the concert stage on which Samul Nori function requires rigid successions of rhythms in a pre-timed programme.

Samul Nori have not discarded the past. The performers insist they play old music from an indigenous tradition. Yet Samul Nori have provided a new momentum for Korean folk music to break free from the dying and 'outmoded' to appeal to an increasingly internationalised, primarily middle-class urban audience. New directions have been explored. Samul Nori have combined with traditional orchestras in compositions like Pak Pŏnhun's Shin mŏdum (1988) and with jazz musicians such as Bill Lazwell and Shankar. Sanjo has become the basis for orchestral music by Yi Kangdŏk (Sanjo Fantasia, 1972), and Paek Taeung (Sanjo for Orchestra). New p'ansori adaptations have emerged such as Yesujŏn (The Story of Jesus) by Pak Tongjin and an adaptation of the dissident poet Kim Chih'a's Ojŏk (Five Enemies, 1993) by Im Chint'aek.

Western music

Many Koreans trace the introduction of western music back to American Protestant missionaries active in Korea after 1884. A handful of hymnbooks appeared quickly after the first, Changsŏn'ga, was published in 1893. Three strophic vocal genres emerged early in the 20th century: kagok (lyric songs, usually with patriotic texts, but distinct from older Korean songs because of diatonic harmony) and tongyo (children's songs) took over the
mantle of popular expression, while *yuhaengga* (popular songs, after Japanese *enka*) reflected new recording technologies. Electronic and acoustic *Kyŏng ūmak* ('light music') and *ppongtchak* (a derogatory onomatopoeic reference to the fox-trot rhythm), still the staple music of ROK tea houses and DPRK popular songs, are descendants.

An imperial brass band was established in 1900, which soon replaced traditional ensembles in state ceremonies. Founded on German-Japanese practice, it was directed from 1901 by Frans Eckert (1852-1916). Korean instrumental composition, accordingly, was modelled on 18th and 19th c. European styles favoured in contemporary Japan.

Western music (*yangak*) was easier to listen to than the refined court and functional folk genres of traditional music (*kugak*). *Yangak* soon dominated, although assimilation was never simple. The weakness of monarchy and state meant that few fought to retain *kugak*. Hymns and vocal music matched appealing texts to singable melodies. They became music for the masses. Missionary schools and the Japanese administration saw *yangak* as part of enlightenment and development. So did early independence fighters. Consider the early *Aegukka* (National Anthem). After an experiment setting Korean words to the British national anthem, 1896 saw *Auld Lang Syne* adopted as the foundation stone was laid for *Tongnip mun*, the Independence Gate.

Public and subscription concerts developed - with the exception of *ch'anggŭk* - around western music, after the first piano recital at the Seoul YMCA in 1911. Composers emerged, following the western example. Consider Hong Nan'pa (Hong Yonghu, 1898-1941), the revered composer of the song cited as the first truly Korean composition, *Pongsŏnhwa* ('Balsam Flower'; 1919). Hong entered the western music section at the *Ch'oyang chŏngak chŏnsūpso* (Korean Classical Music Institute) in 1915. He later studied in Japan and America. In 1922, he founded the *Yŏnakhoe* to research western music. He taught western music in three Seoul schools that later became major universities - Chungang poyuk hakkyo, Ihwa haktang, and Kyŏngsŏng poyuk hakkyo. In 1936 he founded the Seoul Radio Orchestra. And he wrote two books advancing western music: *Umak manp'il* and *Chŏt mudae ŏi kiak*.

Many other musicians followed Hong and went abroad to study. Some have settled abroad, notably the composers Eaktay Ahn (1906-1965), Isang Yun (b.1917), Nam June Paik (b.1932) and Younghui Pagh-Pahn (b.1945), and performers such as the Chung family - the conductor Chung Myung-whun (b.1953), the violinist Kyung-hwa Chung (b.1948) and the 'cellist Myung-hwa Chung (b.1944). (1993 saw the beginning of an initiative to train local performers in Seoul, with the admission of 98 freshmen to a new National School of Music.)

After 1945, political factors split local composers into functional and aesthetic camps. The former were essentially expressionists and socialists, and many settled in the DPRK. Kim Sunnam (1913-1983) is representative. He composed proletarian pieces such as *Kŏng'uk haengjin'gok* (Foundation March for the Nation), *Sanyuhwa* (Mountain Flower) and *Imjin haengjaengga* (Song of Resistance). Yet Kim's life in the DPRK was far from smooth. He went to the USSR to study under Khachaturian in 1952. Ordered back a year later, he was purged and sent to Shinp'o, South Ham'gyŏng province, where he was forbidden to compose until 1965. Rehabilitated, he became chairman of the composition section at the Pyŏngyang Music and Dance College and vice-chairman of the Choson Musicians' League.

The aesthetic camp settled in the ROK. Influential composers included La Un-yung (Na Unyông) (b.1922) and Yi Sanggûn (b.1922). 1952 saw the founding of the Korean Contemporary Music Society, 1955 the Korean Composers Club, and 1957 brought membership of the ISCM (International Society for Contemporary Music). Entrenched conservatism remained unchallenged until after Isang Yun's 1967 abduction by the ROK
regime. Sukhi Kang (b.1934), Kim Chŏnggil (b.1934) and Paek Pyŏngdong (b.1936) followed Yun back to Germany, but returned to Seoul, converted to European formal and structural techniques. In 1969, Kang set up a festival to showcase contemporary music, known since 1975 as the Pan Music Festival. Kang composed the first electronic music in Korea. Kim toyed with aleatoric devices and Paek with pointillism. The 1980s saw a 'Third Generation' led by Yi Kŏnyong who attempted to redefine 'Korean music' by rejecting servitude to the West and reinstating a national identity.

The Sŏul kyohyang aktan (Seoul Philharmonic Orchestra) was established in 1945 as the Koryŏ kyohyang aktan (Korea Symphony Orchestra); by 1991 it had given almost 3 500 concerts. The KBS kyohyang aktan was set up in 1956, tied to the state broadcasting company (as the Kyŏngsŏng pangsŏng kwanhyŏn aktan had been since 1934). A Kungnip kyohyang aktan (National Symphony Orchestra) began in 1969. A new Korea Symphony Orchestra began as a private concern in 1985 which, based at the Seoul Arts Centre, now gives 80 annual concerts. Korean productions of opera began in 1948 with Verdi's La Traviata staged by the Kukche op'erasa. Since 1962, opera has centred around a national opera group based at the Kungnip kūkch'ang (National Theatre).

Western music still reigns in contemporary South Korea. In 1991 there were 619 traditional and 2 598 western music concerts. Of the western concerts, 80 were recitals of new compositions, 1 137 instrumental and 661 vocal, 68 opera and 632 other events. 1 234 (47.9 per cent) were given in Seoul. The state radio, KBS, tells a similar story. In 1989, FM1 devoted 78.6 per cent of air time to western classical music, 2.4 per cent to kagok, and 14.2 per cent to traditional music, while FM2 gave 47.6 per cent of air time to Korean pop, 38.1 per cent to American and European pop, and 14.3 per cent to kyŏng umak. Again, in 1988, 16.7 per cent of record sales were of Korean music - traditional music, kyŏng umak and Korean pop - while 83.3 per cent were western recordings, imported or produced locally under licence. After liberation, Korean songs and the western classical canon quickly replaced Japanese songs in school books. Only in the 1970s was it made mandatory to proportion some classroom teaching to kugak. But in 1987, the balance remained strongly in favour of western music, for 1 711 university students were registered to study kugak and 16 792 yangak.

**Musical Instruments**

**Systems of Classification**

Koryŏ scholars classified instruments for use in the court as tangakki (from Tang and Song China; *Tangak* defines the repertory) and hyangakki (indigenous; *Hyangak* defines the repertory). *Tangakki* arrived at various times, but particularly as part of gifts sent by the Chinese Northern Song emperor Hui Zong. *Koryŏsa* (History of the Koryŏ Dynasty, 1452) tells us that 167 instruments came in 1114 to support *Dasheng xinyue*, music for banquets, and 428 in 1116 to support *Dasheng yayue*, the source of Korean aak ritual music. Many of the surviving 60 or so Korean instruments arrived as part of these gifts. By the early 15th century, classification also considered historical association and timbre, absorbing the Chinese *p'al um* distinction of eight materials: bamboo, wood, metal, silk, skin, stone, gourd, and clay. This system was never precise. The *yanggu1m* (dulcimer), for example, tends to be placed within the silk category though it has metal strings, and there is no category for the *nagak* (shell trumpet). The *saenghwang* (mouth organ) is classified as a gourd, reflecting the windchest used several centuries ago, though windchests are now wood, metal, or lacquer. The *saenghwang* is, because of mythical associations, separated from both *hun* (ocarina) and *so* (bamboo panpipes). Similarly, although both the *t'aepp'yŏngso* ("great peace pipe") and *p'iri* (oboe) are double reeds, the first is classified as wood and the second as bamboo.

*Akhak kwebŏm* (Guide to the Study of Music; 1493) adopts a division into three types of music, reflecting King Sejong's (1418-1450) reconstruction of ritual music undertaken in 1430. Thirty-seven instruments are listed as *abu akki*, instruments for ritual music, and 13 as *tangbu akki*, a generic term for anything from Song and Tang China. Seven are given as *hyangbu akki*, native instruments for indigenous music. Korean folk classifications remain varied but distinct. Typically, *melodic* instruments imitate the voice or attract spirits in shaman rituals and are talked about in terms of relaxed and smooth-sounding verbs such as *nolda* (to play) and *hada* (to do). *Percussive* instruments, described in terms of the brash and hard verb *ch'ida* (to hit), provide the quintessential *changdan* rhythmic cycles that underpin virtually all genres, generating an atmosphere for dance and entertainment.
**Chordophones**

The *kayagüm*, in its traditional form a 12-string half-tube plucked zither, resembles the Chinese *chêng*, the Mongolian *yaiga*, the Japanese *koto*, and the Vietnamese *dan tranh*. Two distinct traditional versions survive. The larger, associated with court and literati ensembles, is known as the *pöpkömu*, *p'ungnyu kayagüm* or *ch'ôngak kayagüm* (*pöp* = law; *p'ungnyu* = elegant music; *ch'ôngak* = "upright" or "correct" music) and has a body made from a single piece of paulownia wood. Twelve wound silk strings are held by pegs (*tolgwae*) above a fixed hardwood bridge (*hyŏnc'h'im*) near the top and pass over movable bridges known as *anjo* or "kirogi pal (wild geese feet)"). The strings are tied in coils behind cord loops at the lower end, and the cords (*pudol*) are secured around characteristic sandalwood "yangidu ("ram's horns") at the base. The smaller instrument, called the *sanjo kayagüm* after a popular folk genre, has a similar soundboard but sides and back of a harder wood such as chestnut. The backpiece typically has three soundholes - a new moon (*ch'osaeng tal*) above a stylized character for happiness (*hūi*) and the full moon (*porūn tal*).

Pottery artefacts show that a similar instrument existed prior to the 4th century, and four 8th century instruments survive as *Shiragi koto* ("zithers from Shilla") in the Shosoin repository at Nara, Japan. *Samguk sagi* (History of the Three Kingdoms), tells of a 5th century development. King Kashil of the Kaya tribal federation heard a Chinese *chêng* and commented that since countries do not share languages they should not have the same music. U Rük, a musician from Sŏngyŏl prefecture, was ordered to compose music for a new instrument. He wrote twelve pieces which, after he had fled to Shilla in 551, were reconstructed as five new court works.

Recently, *kaeryang kayagüm* have appeared. First, the now-defunct *chogum* was devised in the 1940s, replacing cords with pegs and mounting the *kayagüm* body on a stand. In South Korea at the end of the 1980s, Hwang Pyŏngju developed a 17-string instrument which, with a range of 3 octaves, allowed an overlap between the traditional low court scale (*E♭*–*B♭*), *sanjo* (*A♭*–*E♭*), and the higher range needed to accompany singing (*B♭*–*F*). String cords were replaced by anchoring pegs and wound silk has given way to nylon strings. In North Korea a 21-string version has been standard since the 1960s, with metal tuning pegs and nylon strings. This keeps the old range but fills in diatonic pitches, allowing for the introduction of harmonic and heterophonic structures. Back in South Korea, Yi Sŏngch'ŏn commissioned two new versions, one a scaled-down version of the *sanjo kayagüm* designed for small children, and the other a 21-string instrument with a 4-octave range.

The *kŏmun'go* is a six string half-tube zither with 16 fixed frets (*kwae*) and three movable bridges (*chu*). The six twisted silk strings are plucked by a bamboo stick (*sul-tae* or *shi*) above a leather cover described as a hawksbill (*taemo*) or deer (*sasu§m*). In construction, bodies resemble *sanjo kayagüm*. Bridges sit beneath the outer strings while the three central strings run across frets. Only strings 2 and 3, *yuhyŏn* (played string) and *taehyŏn* (big string) play melodies. In court use the open strings are tuned *E♭*, *A♭*, *D♭*, *B♭*, *B♭*, *B♭*. The *kŏmun'go* is often called the *hyŏng'um* a name derived from *hyŏnhakkŭm* (black crane zither). *Samguk sagi* quotes a legend from the earlier *Shilla kogi* (Old Record of Shilla) which explains this: 'A Chinese *qin* was kept in the northern Koguryŏ court. Nobody knew how to play it, so the king offered a reward that persuaded Wang Sanak to remodel it as the *kŏmun'go*. As Wang played the new instrument a black crane flew into the room and danced. Possible dates given by scholars vary, though the end of the 4th century is favoured. The *kŏmun'go* became the favoured literati instrument, so featured in countless paintings. Most old scorebooks include *kŏmun'go* tablatures. In North Korea, partly reflecting its aristocratic heritage and partly its percussive sound, it is no longer used. The *ajaeng*, a bowed half-tube long zither with movable bridges, has also disappeared in the North. In South Korea it survives as both a court instrument with seven silk strings tuned to encompass a 9th, and as a folk version with an eighth string, a second
soundboard, and a much wider range. The former is bowed using a rosined stick of forsythia, but the latter a 'cello bow. In Koryŏ times the ajaeng was labelled as a tangak instrument, but by the late 15th century played in some hyangak ensembles.

Three further zithers were imported. The 7-string lacquered kŏm employed a narrow pentatonic scale. The 25-string sŏl was tuned to a chromatic scale in which the 13th string remained mute and, unique amongst Korean zithers, had a painted paulownia soundboard decorated with a bird motif. Forty-two sŏl and seventy-three kŏm arrived from China in 1116, but Koreans lost the playing technique. Although placed in the orchestra for the Rite to Confucius, they were only restored in the 1970s. The final zither, the 15-string taejaeng, remains obsolete. Four were imported in 1114.

The haegŭm is a 2-string spike fiddle with Chinese roots. First mentioned in the 13th century Korean song, Hallim pyŏgok, Akhak kwebŏm describes how the haegŭm contains all eight materials: a bamboo resonator and neck, wooden pegs, rosin (earth), a metal base plate, silk strings, a gourd bridge, leather on the bow, and a resonator coated with crushed stone. Today, hard wood tends to replace bamboo, and the soundboard is paulownia. Haegŭm play in most of the court repertory, where they are perceived to bind sustained wind sounds to plucked zithers. Although in decline, perhaps because of their peculiar nasal sound, they were once key instruments in folk and shamanistic ensembles. The haegŭm is normally played while seated, with the resonator supported by the base of the right foot above the left knee. The bow, tensed by the hand, passes between the strings. The strings are tuned a fifth apart and there is no fingerboard.

North Koreans have redesigned the body. Like Western violins, the soundboard is now hardwood. Four metal strings run over a raised fingerboard and the separate bow is tensed mechanically. Four sizes are employed, approximating the four Western orchestral strings: so haegŭm (range f-f'''), chung haegŭm (Bb-g''') and tae haegŭm (Bb'-g'') have strings tuned in fifths, each sounding a tone beneath violin, viola and 'cello equivalents; the large chŏ haegŭm, like the double-bass, is tuned in fourths: D', G' C, F.

Three obsolete long-necked lutes are preserved in Seoul. The tang pip'a has 4-strings, a long neck bent back at the pegbox, 4 large frets on the neck and 8 thin frets on the soundboard, and was included in the 1116 gift. It was played with a fan-shaped wooden plectrum (palmok) or three artificial nails (kajogak). The hyang pip'a, which survived amongst literati until the 1930s, was one of three string instruments in the ancient Shilla court. It has a straight neck, five strings, and 10 wooden frets glued to the soundboard. A wooden stick (sultae) was used as a plectrum. The third lute is the 4-string wŏgŭm with 13 frets. Its name (wŏl = moon) reflects the round soundbox and seems to derive from Yuan Xian, one of the 2nd century Seven Sages of the Bamboo Grove in China. Koguryŏ tomb paintings from the 4th to 7th centuries attest to its use in Korea.

Three harps brought from Beijing in 1937 are also preserved: sugonghu, a vertical harp with 21 strings and a soundbox, wagonghu, an arched harp with 13 strings and integral soundbox, and sogonghu, a vertical harp with 13 strings but no soundbox. All three are obsolete and, indeed, apart from Chinese Sui sources, there is little evidence for any except the sogonghu in Korea. A relief on a bell dated to 721 at Sangwŏn temple in Kangwŏn province depicts the sogonghu, and two similar instruments, apparently from the southwestern Paekche, are preserved in Nara.

The dulcimer, yanggŭm ("western zither") was likely brought to Korea in the late 18th century, several centuries after Christian missionaries imported it to China. An 1817 score book, giving the alternative name kurach'olsa kŭm, suggests European origins. Flat and trapezoid, the yanggŭm is still struck with a single bamboo beater in South Korea. Two choirs, comprising seven sets of four metal strings, pass over two bridges that alternate raised edges with gaps. Since strings can be tuned on both sides of the raised bridges, this gives a potential 28 pitches of which 21 are tuned to give the range eb to ab''. In North
Korea, two beaters are used, achieving a fluency akin to contemporary Central European dulcimers.

The final chordophone is the ongnyugüm, a North Korean box zither reflecting Kim Ch'ong'il's decree that instruments should be modernized to compete with Western music. Developed in 1973, alterations continue to be made. The ongnyugüm, with a single row of between 29 and 33 strings tuned diatonically, has a maximum range of four octaves plus a fifth ascending from C. Chromatic alteration is achieved by a pedal and pulley mechanism adapted from the orchestral harp. Strings, colour coded for 5ths and octaves, pass across fixed bridges resembling the anjok of kayagüm. The ongnyugüm play kayagüm - like ornaments by pushing and stretching strings to the left of the bridges, and a complex of melodic and harmonic material is fashioned on the right. The large range ensures that the ongnyugüm features prominently in ensembles.

Aerophones

The large transverse flute, taegüm, is perhaps the best-loved of Korea's wind instruments. Made from a length of yellow bamboo (hwang chuk), this was one of three flutes in the Shilla samjuk ensemble, the other two being the similar but shorter chunggüm and sogüm. The taegüm alone has a mirliton created from bamboo or reed tissue (kaltae) which gives the instrument its characteristic, buzzing sound. Good instruments are said to be made from five years' growth of bamboo, and should have ducts running along either side between prominent nodes. The top is sealed with wax above a large blowing hole (ch'wi kong). Beneath the mirliton's oval hole (ch'ông kong) there are six finger holes (chi kong) and between two and five "Big Dipper" holes (ch'ëlsông kong) drilled to define the sounding length. Court instruments employ a range from bb¹ to eb² and the slightly shorter sanjo instruments c¹ to g⁵b⁵. The taegüm overblows at the octave, giving three distinct ranges. Three tone colours are distinguished: clear and highly vibrated soft blowing (chi5 ch'wi), elegant and strident medium blowing (p'yi5ng ch'wi) and triumphant hard blowing (yök ch'wi). The taegüm is considered ideal for solos and ensembles, and it features widely in court and folk genres.

A legend in Samguk yusa (Romance of the Three Kingdoms) accounts for its invention. King Shinmun (r.681-692) heard that a mountain was floating in the Eastern Sea near Kamun temple. An astrologer told him that his father had returned as a dragon along with a general to give him a treasure to protect the realm. A servant reported that there was a bamboo plant on the mountain peak that split into two during daylight but fused as a single shoot each night. The king crossed to the mountain, where he cut the bamboo and made a flute from it. Whenever the flute was played, enemies retreated, illnesses were cured, and the sea remained calm. Hence, it was called the man p'ashik chok, the "flute to calm 10 000 waves."

In North Korea, based on the sanjo instrument, the taegüm now has metal keys designed to produce a chromatic scale and is made from a smooth hardwood. Similar modifications have been made to the tanso, once a vertical notched pipe made from old dark ojuk bamboo with a base cut from the root bulb. A posterior thumb hole and four anterior fingerholes produced a two octave range stretching upwards from g¹. Old examples have been uncovered made from jade and, reflecting the perception that the tanso is an easy instrument suitable for school use, many plastic instruments are now available. In the North, the hardwood lacquered or varnished two-piece tube now has six anterior finger holes and metal keywork. The kaeryang tanso is able to imitate much of the taegüm repertory, and three comparable registers are now distinguished, again based on octave overblowing.

The history of the tanso is virtually unknown prior to the 19th century, when King Sunjo (r.1801-1834) is said to have imported it. This merely indicates it was not used in court
ensembles. Similar vertical flutes have existed for many centuries in China and Japan and, perhaps more significantly, Koreans in the rural countryside still refer to any blowing instrument as p'iri, even the tanso. A related Korean instrument, t'ungso, has six fingerholes and was once part of the Rite to Royal Ancestors; Akhak kweböm describes a range of just over two octaves. Less standard t'ungso still exist in the countryside. One, in the mask drama Puch'ông saja norûm, has a mirliton (described as the t'ungae) and only four fingerholes.

One transverse flute, chi, and two vertical flutes, yak and chôk, arrived from China in 1116. They are retained only for the twice annual Rite to Confucius, where they contribute a peculiarly Korean rising inflexion at the end of each melodic tone. All three are made from yellow bamboo though the chi, which may have been used in Paekche, tends to employ older, darker wood. The yak has 3 finger holes and a major 7th range, c–b. The chôk, made from a similarly plain tube with 5 finger holes and a posterior thumb hole produces a major 10th range, c to eb'. The chi duplicates this range an octave higher. It features a raised mouthpiece and five finger holes, the first of which is placed on the side, covered by the left thumb. A cross-shaped opening at the base can also be stopped. The tangjôk was a transverse bamboo flute, now obsolete. With six or seven finger holes, it was imported to play Chinese music in Koryô times.

Panpipes, so, are confined to the Rite to Confucius. Received as gifts from China in 1114, 1116, and 1406, contemporary instruments are little changed from 15th century illustrations. Sixteen notched bamboo pipes are arranged in a row moving from the shortest (highest pitch) at the centre to the longest (lowest pitch) at each end. The pipes are held in a wooden frame said to resemble the unfolded wings of a phoenix. Folded phoenix wings give shape to the 17 pipes of the mouth organ, saenghwang or saeng. Arranged around a gourd, metal or wood windchest, each pipe has a finger hole near its base and is slit near its top. Sixteen pipes have internal free metal reeds which sound when the finger hole is closed. One pipe is mute. The range is eb to c". A stone relief of Deva musicians and a bell at Sangwôn temple demonstrate Shilla use of the saenghwang, and Chinese sources state it was known in Paekche. In 1114, Hui Zong sent 10 mouth organs; others arrived in 1116. The Ming emperor Taizu sent two in 1406, and more were purchased from the Qing capital in 1657. There is no evidence to show that saenghwang were ever successfully produced in Korea. The limited repertory today consists of rites and a single duet with the tanso, Chajin hanip, although the saenghwang has been used by modern composers. The hun, a tear-shaped globular flute or ocarina, shares the same limited court repertory. Made from baked clay it has a blowing hole at its apex, two posterior thumb holes and three anterior finger holes. Akhak kweböm describes how 12 weak chromatic pitches can be produced, some by partially covering holes.

Much more common, the p'iri is a small pipe typically constructed from a length of bamboo pipe with a large bamboo double reed (kaltae). Pillyul and sagwan were alternative names used in the past. There are three traditional versions. Hyang p'iri (indigenous oboe) and se p'iri (slender oboe) are cylindrical and have eight fingerholes. Both produce a range of a 10th without overblowing, ascending from bb', with extensions of a further 3rd possible by embouchure adjustment. Hyang p'iri feature in court pieces such as Sujech'on and Samhyôn yôngsan hoesang, in p'iri sanjo, and in folk ensembles, while se p'iri are restricted to vocal accompaniments and to the suite Kwanak yôngsan hoesang. Chinese documents state that precursors formed part of Koguryô music ensembles invited to the Sui (518–618) court, and Ch'oe Chiwôn (b.857) suggests oboes were present in the five dramatic forms of Shilla, hyangak Ŝchabyŏng osu. The tang p'iri is slightly conical and tends to be made from old and dark bamboo with prominent nodes. Twelve were included in the 1114 gift, with seven anterior fingerholes and two thumb holes. Sejong shillok (Annals of King Sejong) records that King Sejong "improved" the instrument, arguing that the lower thumb hole was redundant. Tang p'iri overblow at the 11th, giving a range from c' to a"", and are used in the remaining tangak and hyangak
The *kaeryang p'iri* in North Korea comes in two sizes, both made from hardwood with metal keywork. The *tae p'iri* has a double reed placed over a tube (리두 류지오월간) held by a cork washer atop the instrument body. The range is almost three octaves (c-b⁷). The *chō p'iri* has a long doubled-back body ending in a conical bell, with the reed attached to a curved metal pipe. The range is B⁷-b⁷. Throughout Korea, stripped-bark pipes, typically called *hodugi*, were made until the 1970s from a single piece of bark detached from its core by twisting. A further variant is the leaf. Akhak kwebom calls this a *ch'ojok*. Usually, leaves of mandarin and citron trees are folded in two to create a double reed, but a leaf rolled into a tube is also described.

Three aerophones have antecedents in Asian battlefields, all of which play in a military processional, *Taech'wit'a*.. The *nabal*, also used by folk bands, is a long trumpet made of several lengths of brass tube. The *nagak*, with alternative names such as *na* and *sora*, is a conch shell mentioned in records from early Koryo. The *t'aep'yóngso* ("great peace pipe") is a double-reed shawm thought to have come from North Asia in Koryo times, but first mentioned as a *tangbu akki* in Akhak kwebom. Apart from processions, the *t'aep'yóngso* plays three melodies in the annual Rite to Royal Ancestors and, under other names such as *hojok*, *soenap* and *nallari*, improvises melodies for many folk bands. In South Korea, the conical tube is still made from Chinese date (jujube), with 7 finger holes and a posterior thumb hole. A small double reed sits atop a metal pipe, and a metal bell completes the base. The reed makes this a difficult instrument, a feature now overcome in North Korea where the *kaeryang soenap*, in medium (*chung soenap*) and large (*tae soenap*) versions, uses a reed similar to an orchestral oboe. Boehm-style metal keys are added to a hardwood body cons-iderably longer than the traditional 32cm.

**Idiophones**

A Korean director's clappers, *pak*, comprise six rectangular wooden slabs bound with cords through holes cut near their top. The outer slabs are cracked together, once to begin and three times to finish a piece. In the Rite to Royal Ancestors, they also signal changes. Three idiophones based on Chinese models are retained solely in the Rite to Confucius. The *ch'uk* is a green trapeziform wooden box with a thick stick inserted through a central hole. Struck three times against the base, the stick signals the start of a piece. The *δ* is a wooden tiger whose backbone has a prescribed 27 notches. A split bamboo stick is dragged down the backbone three times to signal the end of a piece. The *pu* is a baked clay vessel. A split stick used on the rim marks the beginning of each melodic note. Rural Koreans have used a variety of *pu* - like idiophones to accompany songs, including gourd or pottery water vessels such as the *hobok* in Cheju and the *mul pagaji* in Cholla. A development of the latter, in reality a chordophone, adds the bow used to tease cotton into strands (*hwal*) above the resonating vessel to produce sounds such as "tungdōngi."

Small and large gongs are described by today's folk bands with the onomatopoeic *kkwaenggwarei*, *kkwaengma*, etc, and *ching* or *kümjing*. The small gong is the instrument of a leader, *sangsoe* ("leading iron"). Akhak kwebom recalls that they once played in the first and second wine offerings in the Rite to Royal Ancestors. Described in terms of metal as *sogum* and *taegum*, they were allied within a Chinese system of elements to Autumn, the colour white, and the direction West. The *taegum* used a stick wrapped in deerskin; a soft beater is preferred for *ching*. The *sogum* was held in a frame mounted by a dragon's head; *kkwaenggwarei* are held by the hand, fingers damping sounds at the back of the body.

*Ulla*, a set of 10 plate gongs mounted vertically in a wooden frame, were used at court banquets during the 18th and 19th century. Now obsolete, the gongs are preserved, arranged in three rows tuned to give diatonic tones from a⁷ to c⁷. References to cymbals,
as chabara, para, and chegüm, are found from the 11th century onwards. They feature in shaman rituals and Para ch'um, a Buddhist dance, and also play in the processional, Taech'wita. Korea has long produced and used bronze bells for civil functions and at Buddhist temples. Shamans, too, use many bells, from small single instruments in Cholla, through bowl gongs in Kyongsang, to pangul bell trees further north. Additionally, Buddhist temples bristle with wind chimes and small brass fish plaques, while temple blocks known as mokt'ak are still played to signal prayers and ask for alms.

Splendid sets of clapperless bronze bells (p'yŏn'jong) and stone chimes (p'yŏn'gyŏng), housed in magnificent decorated frames with animals and birds carved on cross-pieces and at each foot, came to Korea in 1116. The 16 elliptical bells are tuned to give a chromatic c to eb scale. The 16 lithophone chimes, carved from calcite quarried locally since the 15th century, sound an octave higher. Along with single clapperless bells (t'ükchong) and stone chimes (t'ükkyŏng), they survive in the Rite to Confucius, though in single pairs rather than the massive numbers prescribed back in the 12th century. The two large sets also play in the two extant Tangak pieces, Namyangch'un and Pohoya, where they appear to have replaced a set of 16 iron slabs, the panghyang. Panghyang were used in Korea by 1076, and five sets came as part of the 1114 gift. Now they are played only in the Rite to Royal Ancestors.

Membranophones

One drum is ubiquitous to virtually all Korean music genres. This is the changgo or changgu, a double-headed barrel drum. Some historical sources refer to it as seyogo, "narrow waisted drum". This, and an additional name for the body, chorongmok, confirm the characteristic hourglass shape, seen from Koguryo tomb painting onwards. Wooden bodies are most common, nowadays turned on a lathe from a single piece of paulownia wood. Pottery bodies still survive and the 13th century Wenxian tonggao, cited in Aksak kweben, states that both pottery and wood were used for ancient Chinese instruments. In Cholla and Ch'ungch'ŏng provinces some bodies are now made from two interlocking alloy bowls, while the Arirang company produces plastic bowls in Seoul. One recent development in North Korea is a drum kit based on the changgo model which includes pedalled bass drums, standard changgo, and tiny single bowled instruments.

Changgo in the court tend to be large and have red lacquered bodies. They are played while seated. Lighter bodies, oiled or varnished but rarely painted, are needed for folk use, where the instrument tends to be carried. Aksak kweben prescribes horseskin for the heads (p'yŏn), but cow, goat or pig often suffices. The left head is struck by the hand whenever the drum is used in accompaniment, to give a low thud. The right head, struck with the yŏl ch'ae, a thin whip-like stick, produces a higher pitch. It requires a tight, thin skin, nowadays typically goat or dog. Each skin overlaps the circumference of the bowls and is stretched around a metal ring. The heads are laced together with cords known as chihongsan, and tension can be increased by tightening leather or plastic thongs (karak chi or ch'uksu). It is now common for two sticks to be used in folk bands, supplementing the thin stick with a mallet (the kunggul ch'ae or k'ung ch'ae). The flexible stem of the mallet allows players to produce virtuosic passagework.

An obsolete variant of the changgo, the kalgo, is mentioned in Aksak kweben. This had double lacing and two sets of thongs so that each skin could be separately tightened. Two other drums are essential to folk bands. The puk, named with a generic and onomatopoetic term, is a shallow double-headed barrel drum also used to accompany p'an' sori. It was once made from a single trunk, but now tends to comprise interlocking slats. It is struck variously with a single stick, a stick and the hand, or in Miryang and Chindo with two sticks. A more decorated version, the yonggo, is hung at the waist in Taech'wita, and beaten on the upper skin with two sticks. Sogo, small double-headed frame drums with handles are also common. There are instances where sogo have been
made from cloth rather than skin, a practice which parallels the Irish bodhrán. Various alternative names exist: maegu puk specifically relates it to agriculture, while "the way" in pŏpku implies a Buddhist connection.

Fourteen additional drums were once used in the court. Most are barrel drums, and some are obsolete. The large chwago is hung vertically in a simple frame and was first pictured in an 18th century depiction of dance. The similar kyobanggo, supported in a cross-frame so that one head is vertical, was described in the 1452 Koryo sa, and today is retained only in one royal dance, Mugo. The larger chunggo was used during Songjong's reign (1469-1494) in sacrifices to the god of war. The sakko and small iJnggo (sak = start, iJng = respond) were held vertically in frames decorated with dragons and tigers, but fell into disuse in the 19th century. Elaborately decorated, it was used alongside sakko and similarly fell into obscurity. References to it go back to the 12th century Hui Zong gifts.

Four drums are still employed at the Rite to Confucius. The cholgo plays with the terrace ensemble and the chin'go with the courtyard ensemble. Both have red bodies and are mounted with skins vertical. The chin'go is the largest drum still used, with skins 110cm in diameter. The nogo and nodo each consist of two red drums mounted at right angles to each other. Nogo are suspended on a pole inside a decorated wooden frame; only one head of each is struck. Nodo are pierced by a wooden pole with tigers at the base. Knotted thongs attached to each side of the body strike the heads when the instrument is rotated. Both play part of the starting signal for each piece of music, and the nogo additionally punctuates each 4th melodic note.

Four related drums became obsolete when the Japanese forced Korea to abandon rites to heavenly and earthly spirits. The noego and noedo were painted black to symbolize their use for heavenly spirits: noe means thunder. The yŏnggo and yŏngdo were painted yellow: yŏng signifies spirits. The noego had six and the yŏnggo eight conical drums arranged in a ring within a wooden frame and played like the nogo. The noedo had three and the yŏngdo four barrel drums mounted on a pole like the nodo and played similarly.

Composers

The concept of 'composer' is in Korea intimately tied to the introduction of Western music. Korean music is considered part of an oral tradition with few known composers, despite legends that describe how U Rūk wrote for the kayagum in Kaya and Shilla and Wang Sanak for the kōmun'go in Koguryŏ.

Early in the 19th c., Yi Kyugyŏng's travel diaries brought news of western musical theory, but western music began to appear only after Protestant missionaries became active. Mission hymns were duplicated at the Ewha (Ihwa) school in 1888, and a hymn book, Ch'ansŏngga , was published in 1893. Early compositions were consequently, and almost
without exception, vocal. Indeed, Hong Yonghu’s (Hong Nanp’a, 1900-1940) song, Pongsŏnhwa (Balsam Flower, 1919), is often cited as the first truly Korean composition. Compositions until liberation in 1945 also had little harmonic or structural excitement, as Pongsŏnhwa and the surviving corpus of Japanese-influenced kagok (lyric songs, often with patriotic texts, always distinct from the traditional literati song due to diatonic harmony), tongyo (children’s songs) and yuhaengga (‘popular’ songs) demonstrate.

Western music was also experienced through brass bands, and the German Franz Eckert (1852-1916), who arrived in 1901 to direct a court band modelled on German-Japanese practice, trained a number of early composers, including Chŏng Sain (1881-1958), Paek Uyong (1880-1950) and Kim Inshik (1885-1963). Others typically went abroad to study. An Ik’dae (1907 or 1911-1965) went to America in the 1920s, to Budapest in 1930 to work with Kodaly and Dohnanyi and to Germany in 1933. An became trapped in a romantic time-warp, and his Aegukka (National Anthem; used in South Korea since 1948) seems influenced by Richard Strauss. Reputed to imitate a German folksong, it premiered as part of his Symphonic Fantasy: Korea (1938). Kim Sunam and Yi Könu went to Japan, where they embraced Expressionism. Hyŏn Chemyŏng (1902-1960) returned from studies in America in 1928 and Chi’ae Tongsŏn (1901-1953) returned from Germany in 1932. After liberation, Isang Yun (b.1917) left for Paris in 1956 then moved to Berlin to work with Boris Blacher. Nam June Paik (Paek Namjun; b.1932), known for his experimental works, went to Japan in the 1950s and then to Cologne to work with Stockhausen.

The conservatism remained, despite affiliation to the International Society for Contemporary Music (ISCM) from 1956 onwards, and the establishment of a Contemporary Music Society in Seoul in 1958. In the latter Society, a group of Seoul National University alumni were particularly active: Kim Talsŏng and Yi ŏngi had studied further in Vienna and Kim Yongin spent time in America. Chŏng Hoegap, a fellow alumni, stayed in Korea writing, for instance, a Symphony (1957), Concerto for Kayagiim and Orchestra (1960) and a Korean Dance Suite (1967; an orchestral transcription followed in 1970).

Kim Sunam and Yi Könu were amongst those who emigrated to the North. There, state dogma, partially based on Zhdanov’s 1930s socialist realism, but filtered through Mao Zedong’s 1942 talks at Yanan, favoured popular compositions. Tonality was to remain highly rated, alongside metrical regularity and simple melodies, as can be seen in orchestral works from the period 1970-1986 by the Inmin yesulga (People’s Artists) Kim Yŏngyu, Kang Kich’ang, Kim Rinok, Kim Kilhak, Ri Chŏngŏn and Kim Yunbun printed in Chosŏn ŭmak chŏn’ji 8 and 9 (1991). Given the requirement of the self-reliance philosophy promoted by Kim Il Sung-juche (chuch’e), that music must reflect the Korean heritage, many compositions include parts for kyaeryang akki (‘improved’ traditional instruments). Students of such instruments play a repertoire of newly-composed solo pieces, published in workbooks alongside exercises and arrangements, which couple westernized melodic and harmonic constructs to simple and compound metres that have little connection to old court and folk music. Songs remain a favoured genre, witness the prodigious output of Ri Myŏngsang and Kim Oksŏng (both have now died) and the 536 songs dating from 1949-1980 published in Chosŏn ŭmak chŏn’ji 5 (1987). In addition, the ideology surrounding chipch’e yesul (collective art) led in 1971 to the development of Pi pada (Sea of Blood). This was a ‘revolutionary’ opera written by a group of composers including Kim Wŏngyun, Kang Kich’ang and Rim Taeshik. Pi pada is claimed as a unique Korean development, despite parallels in Chinese revolutionary opera, and incorporates pangch’ang, songs sung by an off-stage chorus that meet the populist requirement.

Kim Wŏngyun (b.1917) is perhaps the North’s most senior composer. He claims to have been a farmer, self-trained in music when in the 1940s he wrote the song Kim Ilson changgang ūi norae (Song of General Kim Il Sung; 1946) and the Aegukka (National
Anthem; 1947). Subsequently he studied in Moscow, where his graduation piece in 1960 was the symphonic poem *Hyangt'o*.

Since the early 1980s, Expressionism has begun to stretch tonal structures in works such as Pak Minhyok’s *Sahyangga* for violin and orchestra, Kim Yŏngju’s *Monnijó Samilpo* ŏi meari for violin and piano, and Kang Yonggŏl’s *Noulbikkin padaga* for violoncello (all published in 1985). Signs are emerging that modern European music is being studied by younger composers at the Yun Isang ŭmak yŏn’guso (Isang Yun Music Institute).

Earlier, and following Yun’s 1967 abduction and subsequent imprisonment in South Korea, Seoul discovered the avant garde. By 1967 Yun had an international reputation, cemented through works such as the orchestral *Reak* (1966) and the chamber pieces *Loyang* (1962), *Gasa* (1963) and *Garak* (1963). A petition signed by, amongst others, Stockhausen, Stravinsky, Boulez and Otto Klemperer encouraged his release. A number of composers followed him back to Germany. Sukhi Kang (b.1934) worked at the Stadttliche Hochschule für Musik, Hanover in 1970-1971 and at the Technische Universität, Berlin between 1971-1975. Kim Chŏnggil (b.1934) left for Hanover in 1970, Paik Byung-dong (Paek Pyŏngdong, b. 1936) studied at the same Stadttliche Hochschule between 1969-1971, Younghai Pagh-Paan (Pak Yŏnghŭi, b.1945) and Yi Manbang (b.1945) studied under Klaus Huber in Freiburg. These brought back a new - and urgently needed - concern for structure and formal development procedures.

Much sterile argument has concerned whether composers for Western instruments write Korean or Western music. Many - Yun Isang, Sukhi Kang, and Paik Byung-dong among them - would say they are individualistic, neither Western nor Eastern. Yun’s compositions from the 1960s typically take inspiration from Korea, either in historical illusion or in respect to percussion or melody, yet are governed by structural techniques, particularly serialism, learnt in Europe. From *Reak* through the *Concerto for Cello and Orchestra* (1976) to the 1990 *Kammerkonzert I* and *II*, Yun’s orchestra is divided into three blocks: soft and steady strings, brash and thrusting brass, and fluttering woodwind. A balance of East and West remains in works such as *P’iri* (1971), where the imprisoned soul is heard in flurries of ornamentation on the solo oboe. Here and elsewhere long, elastic melodies counter cellular structures surplant serialism as if balancing *yin* and *yang*. Yun states he taps into the endless cosmic flow of music, and this is particularly the case in the five *Symphonies* composed between 1983 and 1987. Yun says these can be played end to end in a kind of mega-structure.

Kang Sukhi is more eclectic in both approach and design. His output spans the first electronic music in Korea (composed on primitive equipment), *The Feast of Id* (1970), the ‘rationalistic’ and highly structured orchestral work *Catena* (1975) and chamber music inspired by his native land such as *Nong* (1973) for flute and piano. In the latter, traditional ornaments (*nonghyŏn*) become the focus as melody retreats into the background. *Mup’la* (1982) for flute orchestra liberally interprets a legend about the invention of the Korean bamboo flute, while *Buru* (1976) turns to Buddhist philosophy and Korean shamanism as it builds a long melody crafted from the typical southwestern tritonic folksong mode, *kyemyŏnjo*. The orchestral *Dalha* (1978) is based on the old piece *Sujech’ŏn*, echoing the world of the court in sturdent sound blocks and elaborate ornamentation.

Paik Byung-dong is more academic, as his early *Un-I* for oboe and piano (1970) and *Un-II* for piano (1972) confirm. Both use serial techniques, subsuming vertical harmonic structures beneath a concern for counterpoint, complex melodic flurries, and flexible rhythms. Both reflect Paik’s study of Sino-Korean philosophy. He is rarely particularly strict, witness the free parallel octave sequences and tone clusters in *Sonata-Sonore* for piano (1985) and the aleatoric vertical (harmonic) and horizontal (melodic) mix of *Guitariana* for two guitars (1984). His favoured melodic and rhythmic indeterminacy was successfully transposed to traditional Korean instruments in the ensemble *Un-tack Ollak*.
Paik remains at the forefront of Seoul's composition scene together with Kim Ch'ong-gil. Kim, however, is more active in the international arena. Kim Chonggil. Paik, however, is more active in the international arena. Kim Chonggil.

For kayaguim trio.

Paik remains at the forefront of Seoul's composition scene together with Kim Ch'ong-gil. Kim, however, is more active in the international arena. Kim Chonggil. Paik, however, is more active in the international arena. Kim Chonggil.

He is impossible to list all worthy Korean composers: in 1989, 1539 undergraduates in 13 colleges majored in composition in South Korea. This represents a potential pool of massive proportions. One group who have taken advantage of the increased opportunities afforded by the South's increasing affluence is women, and a Korean Society of Women Composers (Hanguk yoseong chakkokka hoe) was formed in 1981.Lee Young-ja (Yi Yongja) is the most senior member. She studied in Seoul, Paris, Brussels and New York, and her works retain French influence. Her Sonata (1972) starts with a fluid Andantino that quickly develops oscillating bass ostinati and blocks of descending chord clusters. Her Self-Portrait for Harp and Piano (1990) couples similar clusters to glissandi and rapid melodic florries that explore two non-complementary six-note scales. Other representative works include the Piano Trio (1970), Piano Concerto (1973), Violin Concerto (1975), and a piano Sonata (1985). Suh Kyungsun (So yongsun, b.1942) favours small ensembles. An Illusion (1977) for two flutes and percussion and Phenomenon I (1982) for two pianos are representative. Monody coupled to elaborate serial techniques feature in the seven-section, arch-shaped Concerto for 9 String Instruments and the five-section solo violin piece, Pentastich (1988). Again, many others ought to be mentioned, amongst them Lee Chan-Hae (Yi Ch'anhae), Oh Sook-ja (O Sukja), Hurh Bang-ja (Ho Pangja) and Hong Sung-Hee (Songhui) in Korea, and the German residents Pagh-Paan Younghee and Chin Unsuk.

The development of shin kugak or ch'angjak umak, 'new' or 'creative' music for traditional instruments, has been trapped by the nostalgia boom. Respect for the past does not readily permit escape from the tradition. Kim Kisu (1917-1986), who began as a komungo student and rose to become director of the Korean Traditional Performing Arts Centre (Kungnip kugakwon) is normally considered the first shin kugak composer. Now often criticised, and thus awaiting a thorough examination, his works were common concert items until the early 1980s. His first acknowledged piece, Hwangwha mannyon chi kok (Ten Thousand Year Chrysanthemum; 1939) established his style: it sets a text by the nationalist Yi Nungkin (1868-1945) to music reminiscent of the court piece Yomillak, presenting broad melodies without harmony through a large-scale, stentor orchestra. Western influence is clear: a conductor replaces the old director with his clappers, ornaments are written out rather than assumed, and Western staff notation replaces the traditional mensural changganbo score. The blend remains in Kim's later, often more overtly patriotic compositions, except that Western meters regularly replace Korean rhythmic cycles. Examples include Kohyangso (Birthplace; 1944), Ch'ongbaek hon (Pure White Spirit; 1952) Tashi on S dul (Return to Seoul; 1953) and Pabungsan (Breaking the Bonds; 1954).

Composers such as Yi Sanggyu (b.1944) have kept Kim's style. Yi has won at least seven prizes for his compositions, and was the founding music director and conductor of the KBS Traditional Music Orchestra (KBS Kugak Kwanhyon Aktan). Traditional music is always behind his works. Chajin hanip (1972) for oboe and orchestra sets as its basic melody a movement from the court suite Yongsan hoesang. Folksongs appear, for instance in Um (Sound; 1980) for chorus, and the epic sung storytelling, p'ansori, becomes the basis for two operas, Hwang bo ka (1977) and Kwangdae ka (1979). Whereas traditional ornaments can be quite dissonant, Yi builds more open, consonant structures. Western triads are ignored in favour of vertical harmonic structures built on fourths and fifths. Byung-ki
(Pyŏng'i) Hwang's first acknowledged piece, Kŭkhwa yŏp'eso (Beside a Chrysanthemum Tree; 1962) was likewise entirely traditional, but Sup (Forest; 1963) initiated a series of works for kayagŭm which explored new realms. The four movements—'Green Shade', Cuckoo', 'Rain', and 'Moonlight'—combine court melodies and rhythmic cycles taken from the folk genre sanjo with descriptive painting, lyricism, and new techniques such as octave alternations and intricate ostinato-plus-melody patterning. This blend of old and new reached its zenith in Ch'imhyang mu (Dance to an Indian Perfume; 1974), a piece that explored Buddhist art of the Shilla period. There are three movements linked by common A and E tonal centres. The first employs melody and rhythm reminiscent of sanjo, while the ternary second introduces new ideas that echo Japanese koto compositions: arpeggios, 'micro-tonal shading' where a common pitch is produced on two adjacent strings, flicked tones, and left-hand melody (traditionally, only the right hand plucked the strings). Fireworks in the third movement ensure that Ch'imhyang mu will remain a favourite with performers. All of Hwang's pieces except the modernistic Migung (Labyrinth; 1975) keep this comfortable style. Given the controversy surrounding recent works such as the 1988 Olympic commission, Pyŏgŭl nŏmŏsŏ (Beyond All Barriers), Hwang has become an establishment figure more than an evolving composer.

Yi Sŏngch'ŏn (b.1936) was roundly criticized for his suite Norit'o (Playground; 1965, for piano but revised for kayagŭm in 1966). Yi trained under Chŏng Hoegap and Kim Talsŏng in Western composition and employed a more contemporary grammar: despite echoes of Hwang's earlier Sup, his music did not fit the fingers of traditional performers. Fallow years followed before Yi turned his attention to education, producing the Brittenesque Ch'ŏngsonyŏn ŭl wihan kugak kwanyŏnak immun (Young Person's Guide to the Traditional Orchestra; 1974) and a set of children's songs with Korean melodic contours and traditional instrument accompaniments (published, for example, in Kugak tongyo; 1989). Yi also set about developing a new zither, the 21 sting kayagŭm. This essentially enlarged the old instrument, retaining the basic form but enlarging the range. The result, witnessed in Pada (Sea; 1986) was melodies that mixed bass and treble contours with almost orchestral textures filled with triadic harmony.

Two other approaches have been attempted. Kim Young-dong (Kim Yŏngdong, b.1951), after training at the Traditional Music High School and Seoul National University, became dissatisfied with mere imitation of the old. During the 1970s he turned to popular genres, producing influential student songs and receiving prizes for drama, dance, film and theatre music. Kim employs Western instruments and Western music structures with little concern for clichés: Kim's audience is Korean. In the 1980s he superimposed this populist approach on concert pieces for traditional ensembles. Maegut (Shaman Ritual to a Falcon; 1981) and Tan'gun shinhwasa (The myth of Tan'gun; 1983) were the results. Maegut opens with a solo male singer intoning in standard modes then suddenly gliding upwards to a thin falsetto: the falcon rises. Tan'gun shinhwasa matches old percussive punctuation with mysterious and new ocarina chords and resonant gong clashes. A different approach has developed with Baek Dae Woong (Paek Taeng, b.1943), Park Bum Hoon (Pak Pŏmhun, b.1948), Yi Pyŏnguk (b.1951) and others. Increasingly centred on Chungang University, this group takes its inspiration both from the folk tradition and from performers. They decry the staid approach of those who argue the past must be respected. In the 1990s, both Yi Pyŏnguk and Kim Young-dong have embarked on a series of recordings of what they describe as 'meditation music' (myŏngsang umak). Yet the results sound curiously simple in their popular appeal: it is difficult to believe that such compositions will stand the test of time.

Musical Instruments

Systems of Classification

Koryŏ scholars classified instruments for use in the court as tangakki (from Tang and Song China; Tangak defines the repertory; Hyangak defines the repertory). Tangakki arrived at various times, but particularly as part of gifts sent by the Chinese Northern Song emperor Hui Zong. Koryŏsa (History of the Koryŏ Dynasty; 1452) tells us that 167 instruments came in 1114 to support Dapeng xinyue, music for banquets, and 428 in 1116 to support Dapeng yayue, the source of Korean aak ritual music. Many of the surviving 60 or so Korean instruments arrived as part of these gifts. By the early 15th century, classification also considered historical association and timbre, absorbing the Chinese p'al distinction of eight materials: bamboo, wood, metal, silk, skin, stone, gourd, and clay. This system was never precise. The yanggŭm (dulcimer), for example, tends to be placed within the silk category though it has metal strings, and there is no category for the nagak (shell trumpet). The saenghwang (mouth organ) is classified as a gourd, reflecting the windchest used several centuries ago, though windchests are now wood, metal, or lacquer. The saenghwang is, because of mythical associations, separated from both bun (ocarina) and so (bamboo panpipes). Similarly, although both the t'aep'yŏngso ("great peace pipe") and p'iri (oboe) are double reeds, the first is classified as wood and the second as bamboo.

Akhak kwebŏm (Guide to the Study of Music; 1493) adopts a division into three types of music, reflecting King Sejong's (1418-1450) reconstruction of ritual music undertaken in 1430. Thirty-seven instruments are listed as abu akki, instruments for ritual music, and 13 as tangbu akki, a generic term for anything from Song and T'ang China. Seven are given as hyangbu akki, native instruments for indigenous music. Korean folk classifications remain varied but distinct. Typically, melodic instruments imitate the voice or attract spirits in shaman rituals and are talked about in terms of relaxed and smooth-sounding verbs such as nolda (to play) and hada (to do). Percussive instruments, described in terms of the brash and hard verb ch'ida (to hit), provide the quintessential changdan rhythmic cycles that underpin virtually all genres, generating an atmosphere for dance and entertainment.

Chordophones

The kayagŭm, in its traditional form a 12-string half-tube plucked zither, resembles the Chinese chêng the Mongolian yatga, the Japanese koto, and the Vietnamese dan tranh. Two distinct traditional versions survive. The larger, associated with court and literati ensembles, is known as the pŏpkŭm, p'ungnyu kayagŭm or ch'oŋak kayagŭm (pŏp = law; p'ungnyu = elegant music; ch'oŋak = "upright" or "correct" music) and has a body made from a single piece of paulownia wood. Twelve wound silk strings are held by pegs (tolgwae) above a fixed hardwood bridge (hyŏnch'ĭm) near the top and pass over movable bridges known as anjok or "k'iogyi pal (wild geese feet)". The strings are tied in coils behind cord loops at the lower end, and the cords (pŭdil) are secured around characteristic sandalwood "yangidu ("ram's horns") at the base. The smaller instrument, called the sanjo kayagŭm after a popular folk genre, has a similar soundboard but sides and back of a harder wood such as chestnut. The backpiece typically has three soundholes - a new moon (cho'saeng tal) above a stylized character for happiness (hŭi) and the full moon (porŭm tal).

Pottery artefacts show that a similar instrument existed prior to the 4th century, and four 8th century instruments survive as Shiragi koto ("zithers from Shilla") in the Shosoin repository at Nara, Japan. Samguk sagi (History of the Three Kingdoms), tells of a 5th
century development. King Kashil of the Kaya tribal federation heard a Chinese chéng and commented that since countries do not share languages they should not have the same music. U Rúk, a musician from Sŏngyŏl prefecture ( ), was ordered to compose music for a new instrument. He wrote twelve pieces which, after he had fled to Shilla in 551, were reconstructed as five new court works.

Recently, kaeryang kayagūm have appeared. First, the now-defunct chogūm was devised in the 1940s, replacing cords with pegs and mounting the kayagūm body on a stand. In South Korea at the end of the 1980s, Hwang Pyŏngju developed a 17-string instrument, which, with a range of 3 octaves, allowed an overlap between the traditional low court scale (Eb– bb'), sanjo (Ab– e b''), and the higher range needed to accompany singing (Bb– f'). String cords were replaced by anchoring pegs and wound silk has given way to nylon strings. In North Korea a 21-string version has been standard since the 1960s, with metal tuning pegs and nylon strings. This keeps the old range but fills in diatonic pitches, allowing for the introduction of harmonic and heterophonic structures. Back in South Korea, Yi Sŏngch'ŏn commissioned two new versions, one a scaled-down version of the sanjo kayagūm designed for small children, and the other a 21-string instrument with a 4-octave range.

The kŏmun 'go is a six string half-tube zither with 16 fixed frets (kwae) and three movable bridges (chu). The six twisted silk strings are plucked by a bamboo stick (sultae or shi) above a leather cover described as a hawksbill (taemo) or deer (sasum). In construction, bodies resemble sanjo kayagūm. Bridges sit beneath the outer strings while the three central strings run across frets. Only strings 2 and 3, yuhyŏn (played string) and taehyŏn (big string) play melodies. In court use the open strings are tuned Eb, Ab, Db, Bb, Bb, Bb'.

The kŏmun'go is often called the hyŏn'gŭm a name derived from hyŏnhakki1m (black crane zither). Samguk sagi quotes a legend from the earlier Shilla kogi (Old Record of Shilla) which explains this: A Chinese qin was kept in the northern Koguryŏ court. Nobody knew how to play it, so the king offered a reward that persuaded Wang Sanak to remodel it as the kŏmun'go. As Wang played the new instrument a black crane flew into the room and danced. Possible dates given by scholars vary, though the end of the 4th century is favoured. The kŏmun'go became the favoured literati instrument, so featured in countless paintings. Most old scorebooks include kŏmun'go tablatures. In North Korea, partly reflecting its aristocratic heritage and partly its percussive sound, it is no longer used.

The ajaeng, a bowed half-tube long zither with movable bridges, has also disappeared in the North. In South Korea it survives as both a court instrument with seven silk strings tuned to encompass a 9th, and as a folk version with an eighth string, a second soundboard, and a much wider range. The former is bowed using a rosined stick of forsythia, but the latter a 'cello bow. In Koryŏ times the ajaeng was labelled as a tangak instrument, but by the late 15th century played in some hyangak ensembles.

Three further zithers were imported. The 7-string lacquered kūm employed a narrow pentatonic scale. The 25-string still was tuned to a chromatic scale in which the 13th string remained mute and, unique amongst Korean zithers, had a painted paulownia soundboard decorated with a bird motif. Forty-two still and seventy-three kūm arrived from China in 1116, but Koreans lost the playing technique. Although placed in the orchestra for the Rite to Confucius, they were only restored in the 1970s. The final zither, the 15-string taegi, remains obsolete. Four were imported in 1114.

The haegūm is a 2-string spike fiddle with Chinese roots. First mentioned in the 13th century Korean song, Halim pyŏgok, Akhak kwebŏm describes how the haegūm contains all eight materials: a bamboo resonator and neck, wooden pegs, rosin (earth), a metal base plate, silk strings, a gourd bridge, leather on the bow, and a resonator coated with crushed stone. Today, hard wood tends to replace bamboo, and the soundboard is paulownia. Haegūm play in most of the court repertory, where they are perceived to bind sustained wind sounds to plucked zithers. Although in decline, perhaps because of their
peculiar nasal sound, they were once key instruments in folk and shamanistic ensembles. The *haegum* is normally played while seated, with the resonator supported by the base of the right foot above the left knee. The bow, tensed by the hand, passes between the strings. The strings are tuned a fifth apart and there is no fingerboard.

North Koreans have redesigned the body. Like Western violins, the soundboard is now hardwood. Four metal strings run over a raised fingerboard and the separate bow is tensed mechanically. Four sizes are employed, approximating the four Western orchestral strings: *so haegum* (range f-f'"), *chung haegum* (Bb-g'"), and *tae haegum* (Bb'-g") have strings tuned in fifths, each sounding a tone beneath violin, viola and 'cello equivalents; the large *chö haegum*, like the double-bass, is tuned in fourths: D', G'C, F.

Three obsolete long-necked lutes are preserved in Seoul. The *tang pip'a* has 4-strings, a long neck bent back at the pegbox, 4 large frets on the neck and 8 thin frets on the soundboard, and was included in the 1116 gift. It was played with a fan-shaped wooden plectrum (palmok) or three artificial nails (kajogak). The *hyang pip'a*, which survived amongst literati until the 1930s, was one of three string instruments in the ancient Shilla court. It has a straight neck, five strings, and 10 wooden frets glued to the soundboard. A wooden stick (sultae) was used as a plectrum. The third lute is the 4-string *wogum* with 13 frets. Its name (wöl = moon) reflects the round soundbox and seems to derive from Yuan Xian, one of the 2nd century Seven Sages of the Bamboo Grove in China. Koguryö tomb paintings from the 4th to 7th centuries attest to its use in Korea.

Three harps brought from Beijing in 1937 are also preserved: *sugonghu*, a vertical harp with 21 strings and a soundbox, *wagonghu*, an arched harp with 13 strings and integral soundbox, and *sogonghu*, a vertical harp with 13 strings but no soundbox. All three are obsolete and, indeed, apart from Chinese Sui sources, there is little evidence for any except the *sogonghu* in Korea. A relief on a bell dated to 721 at Sangwön temple in Kangwön province depicts the *sogonghu*, and two similar instruments, apparently from the southwestern Paekche, are preserved in Nara.

The dulcimer, *yanggum* ("western zither") was likely brought to Korea in the late 18th century, several centuries after Christian missionaries imported it to China. An 1817 score book, giving the alternative name *kurachöl'sa küm*, suggests European origins. Flat and trapezoid, the *yanggum* is still struck with a single bamboo beater in South Korea. Two choirs, comprising seven sets of four metal strings, pass over two bridges that alternate raised edges with gaps. Since strings can be tuned on both sides of the raised bridges, this gives a potential 28 pitches of which 21 are tuned to give the range eb to ab". In North Korea, two beaters are used, achieving a fluency akin to contemporary Central European dulcimers.

The final chordophone is the *ongnyugum*, a North Korean box zither reflecting Kim Chôngil's decree that instruments should be modernized to compete with Western music. Developed in 1973, alterations continue to be made. The *ongnyugum*, with a single row of between 29 and 33 strings tuned diatonically, has a maximum range of four octaves plus a fifth ascending from C. Chromatic alteration is achieved by a pedal and pulley mechanism adapted from the orchestral harp. Strings, colour coded for 5ths and octaves, pass across fixed bridges resembling the *anjok* of *kayagum*. The *ongnyugum* play *kayagum*-like ornaments by pushing and stretching strings to the left of the bridges, and a complex of melodic and harmonic material is fashioned on the right. The large range ensures that the *ongnyugum* features prominently in ensembles.

**Aerophones**

The large transverse flute, *taegüm*, is perhaps the best-loved of Korea's wind instruments. Made from a length of yellow bamboo (hwang chuk), this was one of three...
flutes in the Shilla samjuk ensemble, the other two being the similar but shorter chunggĩm and sogũm. The taegũm alone has a mirliton created from bamboo or reed tissue (kal'tae) which gives the instrument its characteristic, buzzing sound. Good instruments are said to be made from five years’ growth of bamboo, and should have ducts running along either side between prominent nodes. The top is sealed with wax above a large blowing hole (ch’wi kong). Beneath the mirliton’s oval hole (ch’ong kong) there are six finger holes (chi kong) and between two and five “Big Dipper” holes (ch’ilsong kong) drilled to define the sounding length. Court instruments employ a range from bb′ to eb′′ and the slightly shorter sanjo instruments c′ to gb′′. The taegũm overblows at the octave, giving three distinct ranges. Three tone colours are distinguished: clear and highly vibrated soft blowing (cha ch’wi), elegant and strident medium blowing (p’yŏng ch’wi) and triumphant hard blowing (yŏk ch’wi). The taegũm is considered ideal for solos and ensembles, and it features widely in court and folk genres.

A legend in Samguk yusa (Romance of the Three Kingdoms) accounts for its invention. King Shinmun (r.681-692) heard that a mountain was floating in the Eastern Sea near Kamun temple. An astrologer told him that his father had returned as a dragon along with a general to give him a treasure to protect the realm. A servant reported that there was a bamboo plant on the mountain peak that split into two during daylight but fused as a single shoot each night. The king crossed to the mountain, where he cut the bamboo and made a flute from it. Whenever the flute was played, enemies retreated, illnesses were cured, and the sea remained calm. Hence, it was called the man p’ashik chak, the “flute to calm 10000 waves.”

In North Korea, based on the sanjo instrument, the taegũm now has metal keys designed to produce a chromatic scale and is made from a smooth hardwood. Similar modifications have been made to the tanso, once a vertical notched pipe made from old dark ojük bamboo with a base cut from the root bulb. A posterior thumb hole and four anterior fingerholes produced a two octave range stretching upwards from g′. Old examples have been uncovered made from jade and, reflecting the perception that the tanso is an easy instrument suitable for school use, many plastic instruments are now available. In the North, the hardwood lacquered or varnished two-piece tube now has six anterior finger holes and metal keywork. The kaeryang tanso is able to imitate much of the taegũm repertory, and three comparable registers are now distinguished, again based on octave overblowing.

The history of the tanso is virtually unknown prior to the 19th century, when King Sunjo (r.1801-1834) is said to have imported it. This merely indicates it was not used in court ensembles. Similar vertical flutes have existed for many centuries in China and Japan and, perhaps more significantly, Koreans in the rural countryside still refer to any blowing instrument as p’iri, even the tanso. A related Korean instrument, t’ungso’, has six fingerholes and was once part of the Rite to Royal Ancestors; Akhak kwebŏm describes a range of just over two octaves. Less standard t’ungso still exist in the countryside. One, in the mask drama Pukch’ŏng saja norŭm, has a mirliton (described as the t’ungae) and only four fingerholes.

One transverse flute, chi, and two vertical flutes, yak and chŏk, arrived from China in 1116. They are retained only for the twice annual Rite to Confucius, where they contribute a peculiarly Korean rising inflexion at the end of each melodic tone. All three are made from yellow bamboo though the chi, which may have been used in Paekche, tends to employ older, darker wood. The yak has 3 finger holes and a major 7th range, c-b. The chŏk, made from a similarly plain tube with 5 finger holes and a posterior thumb hole produces a major 10th range, c to eb′. The chi duplicates this range an octave higher. It features a raised mouthpiece and five finger holes, the first of which is placed on the side, covered by the left thumb. A cross-shaped opening at the base can also be stopped. The tangjŏk was a transverse bamboo flute, now obsolete. With six or seven finger holes, it
was imported to play Chinese music in Koryŏ times.

Panpipes, so, are confined to the Rite to Confucius. Received as gifts from China in 1114, 1116, and 1406, contemporary instruments are little changed from 15th century illustrations. Sixteen notched bamboo pipes are arranged in a row moving from the shortest (highest pitch) at the centre to the longest (lowest pitch) at each end. The pipes are held in a wooden frame said to resemble the unfolded wings of a phoenix. Folded phoenix wings give shape to the 17 pipes of the mouth organ, saenghwang or saeng. Arranged around a gourd, metal or wood windchest, each pipe has a finger hole near its base and is slit near its top. Sixteen pipes have internal free metal reeds which sound when the finger hole is closed. One pipe is mute. The range is e\textsubscript{b} to c\textsuperscript{tm}. A stone relief of Deva musicians and a bell at Sangwŏn temple demonstrate Shilla use of the saenghwang, and Chinese sources state it was known in Paekche. In 1114, Hui Zong sent 10 mouth organs; others arrived in 1116. The Ming emperor Taizu sent two in 1406, and more were purchased from the Qing capital in 1657. There is no evidence to show that saenghwang were ever successfully produced in Korea. The limited repertory today consists of rites and a single duet with the tanso, Chajin hanip, although the saenghwang has been used by modern composers. The hun, a tear-shaped globular flute or ocarina, shares the same limited court repertory. Made from baked clay it has a blowing hole at its apex, two posterior thumb holes and three anterior finger holes. Akhak kwebŏm describes how 12 weak chromatic pitches can be produced, some by partially covering holes.

Much more common, the p'iri is a small pipe typically constructed from a length of bamboo pipe with a large bamboo double reed (kaltae). P'illyul and sagwan were alternative names used in the past. There are three traditional versions. Hyang p'iri (indigenous oboe) and se p'iri (slender oboe) are cylindrical and have eight fingerholes. Both produce a range of a 10th without overblowing, ascending from b\textsubscript{b}, with extensions of a further 3rd possible by embouchure adjustment. Hyang p'iri feature in court pieces such as Sujech'on and Samhyŏn yŏngsan hoesang, in p'iri sanjo, and in folk ensembles, while se p'iri are restricted to vocal accompaniments and to the suite Kwanak yŏngsan hoesang. Chinese documents state that precursors formed part of Koguryŏ music ensembles invited to the Sui (518-618) court, and Ch'oe Chiwiin (b.857) suggests oboes were present in the five dramatic forms of Shilla, hyangak šchabyiing osu. The tang p'iri is slightly conical and tends to be made from old and dark bamboo with prominent nodes. Twelve were included in the 1114 gift, with seven anterior fingerholes and two thumb holes. Sejong shillok (Annals of King Sejong) records that King Sejong "improved" the instrument, arguing that the lower thumb hole was redundant. Tang p'iri overblow at the 11th, giving a range from c' to a\textsuperscript{tm}, and are used in the remaining tangak and hyangak repertories.

The kaeryang p'iri in North Korea comes in two sizes, both made from hardwood with metal keywork. The tae p'iri has a double reed placed over a tube (ridū ryŏlgyŏlgwan) held by a cork washer atop the instrument body. The range is almost three octaves (c-b\textsuperscript{bm}). The chŏ p'iri has a long doubled-back body ending in a conical bell, with the reed attached to a curved metal pipe. The range is B\textsuperscript{b}-B\textsuperscript{bm}. Throughout Korea, stripped-bark pipes, typically called hodugi, were made until the 1970s from a single piece of bark detached from its core by twisting. A further variant is the leaf. Akhak kwebŏm calls this a ch'ojok. Usually, leaves of mandarin and citron trees are folded in two to create a double reed, but a leaf rolled into a tube is also described.

Three aerophones have antecedents in Asian battlefields, all of which play in a military processional, Taech'wit'a. The nabal, also used by folk bands, is a long trumpet made of several lengths of brass tube. The nagak, with alternative names such as na and sora, is a conch shell mentioned in records from early Koryŏ. The t'aep'yŏngso ("great peace pipe") is a double-reed shawm thought to have come from North Asia in Koryŏ times, but
first mentioned as a *tangbu akki* in *Akhak kwêbôm*. Apart from processions, the *t'aep'yôngso* plays three melodies in the annual Rite to Royal Ancestors and, under other names such as *hojôk, soenap* and *nallari*, improvises melodies for many folk bands. In South Korea, the conical tube is still made from Chinese date (Uujube), with 7 finger holes and a posterior thumb hole. A small double reed sits atop a metal pipe, and a metal bell completes the base. The reed makes this a difficult instrument, a feature now overcome in North Korea where the *kaeryang soenap*, in medium (*chung soenap*) and large (*tae soenap*) versions, uses a reed similar to an orchestral oboe. Boehm-style metal keys are added to a hardwood body considerably longer than the traditional 32 cm.

**Idiophones**

A Korean director's clappers, *pak*, comprise six rectangular wooden slabs bound with cords through holes cut near their top. The outer slabs are cracked together, once to begin and three times to finish a piece. In the Rite to Royal Ancestors, they also signal changes. Three idiophones based on Chinese models are retained solely in the Rite to Confucius. The *ch'uk* is a green trapeziform wooden box with a thick stick inserted through a central hole. Struck three times against the base, the stick signals the start of a piece. The *sogum* is a wooden tiger whose backbone has a prescribed 27 notches. A split bamboo stick is dragged down the backbone three times to signal the end of a piece. The *pu* is a baked clay vessel. A split stick used on the rim marks the beginning of each melodic note.

Rural Koreans have used a variety of *pu* - like idiophones to accompany songs, including gourd or pottery water vessels such as the *hôbôk* in Cheju and the *mul pagaji* in Chôlla. A development of the latter, in reality a chordophone, adds the bow used to tease cotton into strands (hwâl) above the resonating vessel to produce sounds such as "tungdongi."

Small and large gongs are described by today's folk bands with the onomatopoeic *kkwaenggwari*, *kkwaengma*, etc, and *ching* or *kümjing*. The small gong is the instrument of a leader, *sangsoe* ("leading iron"). *Akhak kwêbôm* recalls that they once played in the first and second wine offerings in the Rite to Royal Ancestors. Described in terms of metal as *sogum* and *taegum*, they were allied within a Chinese system of elements to Autumn, the colour white, and the direction West. The *taegum* used a stick wrapped in deerskin; a soft beater is preferred for *ching*. The *sogum* was held in a frame mounted by a dragon's head; *kkwaenggwari* are held by the hand, fingers damping sounds at the back of the body.

**Ulla**, a set of 10 plate gongs mounted vertically in a wooden frame, were used at court banquets during the 18th and 19th century. Now obsolete, the gongs are preserved, arranged in three rows tuned to give diatonic tones from ab to c". References to cymbals, as *chabara*, *para*, and *cheqôm*, are found from the 11th century onwards. They feature in shaman rituals and *Para ch'um*, a Buddhist dance, and also play in the processional, *Taech'wit'a*. Korea has long produced and used bronze bells for civil functions and at Buddhist temples. Sharmans, too, use many bells, from small single instruments in Chôlla, through bowl gongs in Kyôngsang, to *pangul* bell trees further north. Additionally, Buddhist temples bristle with wind chimes and small brass fish plaques, while temple blocks known as *mokt'ak* are still played to signal prayers and ask for alms.

Splendid sets of clapperless bronze bells (*pyônjông*) and stone chimes (*pyôn'gyông*), housed in magnificent decorated frames with animals and birds carved on cross-pieces and at each foot, came to Korea in 1116. The 16 elliptical bells are tuned to give a chromatic c to eb" scale. The 16 lithophone chimes, carved from calcite quarried locally since the 15th century at Namyang, sound an octave higher. Along with single clapperless bells (*t'ükchong*) and stone chimes (*t'ükkyông*), they survive in the Rite to Confucius, though in single pairs rather than the massive numbers prescribed back in the 12th century. The two large sets also play in the two extant *Tangak* pieces, *Nagyangch'ûn* and *Pohôja*,
where they appear to have replaced a set of 16 iron slabs, the panghyang. Panghyang were used in Korea by 1076, and five sets came as part of the 1114 gift. Now they are played only in the Rite to Royal Ancestors.

Membranophones

One drum is ubiquitous to virtually all Korean music genres. This is the changgo or changgu, a double-headed barrel drum. Some historical sources refer to it as seyogo, "narrow waisted drum". This, and an additional name for the body, chorongmok, confirm the characteristic hourglass shape, seen from Koguryō tomb painting onwards. Wooden bodies are most common, nowadays turned on a lathe from a single piece of paulownia wood. Pottery bodies still survive and the 13th century Wenzian tonggao, cited in Akhak kwebōm, states that both pottery and wood were used for ancient Chinese instruments. In Cholla and Ch'ungch'ong provinces some bodies are now made from two interlocking alloy bowls, while the Atrang company produces plastic bowls in Seoul. One recent development in North Korea is a drum kit based on the changgo model which includes pedalled bass drums, standard changgo, and tiny single bowled instruments.

Changgo in the court tend to be large and have red lacquered bodies. They are played while seated. Lighter bodies, oiled or varnished but rarely painted, are needed for folk use, where the instrument tends to be carried. Akhak kwebōm prescribes horse skin for the heads (p'yǒn), but cow, goat or pig often suffices. The left head is struck by the hand whenever the drum is used in accompaniment, to give a low thud. The right head, struck with the yǒl ch'ae, a thin whip-like stick, produces a higher pitch. It requires a tight, thin skin, nowadays typically goat or dog. Each skin overlaps the circumference of the bowls and is stretched around a metal ring. The heads are laced together with cords known as chihongsa, and tension can be increased by tightening leather or plastic thongs (karak chi or ch'uksu). It is now common for two sticks to be used in folk bands, supplementing the thin stick with a mallet (the kunggul ch'ae or k'ung ch'ae). The flexible stem of the mallet allows players to produce virtuosic passagework.

An obsolete variant of the changgo, the kalgo, is mentioned in Akhak kwebōm. This had double lacing and two sets of thongs so that each skin could be separately tightened.

Two other drums are essential to folk bands. The puk, named with a generic and onomatopoeic term, is a shallow double-headed barrel drum also used to accompany p'ansori. It was once made from a single trunk, but now tends to comprise interlocking slats. It is struck variously with a single stick, a stick and the hand, or in Miryang and Chindo with two sticks. A more decorated version, the yonggo, is hung at the waist in Taech'wit'a, and beaten on the upper skin with two sticks. Sogo, small double-headed frame drums with handles are also common. There are instances where sogo have been made from cloth rather than skin, a practice which parallels the Irish bodhrán. Various alternative names exist: maegu puk specifically relates it to agriculture, while "the way" in popku implies a Buddhist connection.

Fourteen additional drums were once used in the court. Most are barrel drums, and some are obsolete. The large chwago is hung vertically in a simple frame and was first pictured in an 18th century depiction of dance. The similar kyobanggo, supported in a cross-frame so that one head is vertical, was described in the 1452 Koryōsa, and today is retained only in one royal dance, Mugo. The larger changgo was used during Sŏngjong's reign (1469-1494) in sacrifices to the god of war. The sakko and small tingga (sak = start; tingga = respond) were held vertically in frames decorated with dragons and tigers, but fell into disuse in the 19th century. The huge 150cm-deep kŏn'go (kŏn = build) had two skins over 100cm in diameter. Elaborately decorated, it was used alongside sakko and similarly fell into obscurity. References to it go back to the 12th century Hui Zong gifts.
Four drums are still employed at the Rite to Confucius. The chŏlgo plays with the terrace ensemble and the chin'go with the courtyard ensemble. Both have red bodies and are mounted with skins vertical. The chin'go is the largest drum still used, with skins 110cm in diameter. The nogo and nodo each consist of two red drums mounted at right angles to each other. Nogo are suspended on a pole inside a decorated wooden frame; only one head of each is struck. Nodo are pierced by a wooden pole with tigers at the base. Knotted thongs attached to each side of the body strike the heads when the instrument is rotated. Both play part of the starting signal for each piece of music, and the nogo additionally punctuates each 4th melodic note.

Four related drums became obsolete when the Japanese forced Korea to abandon rites to heavenly and earthly spirits. The noego and nocdo were painted black to symbolize their use for heavenly spirits: noe means thunder. The yŏnggo and yŏngdo were painted yellow: yŏng signifies spirits. The noego had six and the yŏnggo eight conical drums arranged in a ring within a wooden frame and played like the nogo. The nocdo had three and the yŏngdo four barrel drums mounted on a pole like the nodo and played similarly.

Myoch’ŏng (?-1135)

Myoch’ŏng was a Buddhist priest famed for his abilities at prognostication and geomantic theory. He wielded considerable influence over King Injong (r. 1122-1146) and in 1135 led a rebellion. He is thus often referred to as ‘an evil priest’. He came from the subsidiary capital, Sŏgyŏng (Western Capital; now P’yŏngyang), which had its own alternate governmental offices. Nevertheless, the primary capital, Sanggyŏng (now Kaesŏng), was the seat of power, and its civil bureaucracy was composed of powerful yangban who championed Confucianism as the means of statecraft. The leading member of the Sanggyŏng élite was Kim Pushik (1075-1151), a historian and court-official, who was descended from the highest ranks of the Shilla nobility. Kim was Myoch’ŏng’s greatest foe.

At the time Myoch’ŏng rose to power within the court, Confucianism and Buddhism were political competitors, and Myoch’ŏng’s prestige was a symptom of the throne’s weakness. While Yi Chagyŏm’s attempted coup d’état in 1126 highlighted the instability of the throne, Myoch’ŏng’s promise of magical insight was anodyne to Injong’s sense of insecurity. His appeal to Injong was further strengthened by the Sŏgyŏng faction’s role in countering Yi.

Yi was willing to make Koryŏ a tributary state of the Chin, and the Sŏgyŏng faction was bitterly opposed on the ground that such an acknowledgement was humiliating. Having successfully checked Yi, they turned to the question of national safety. In 1127 Myoch’ŏng and his disciple, the official court geomancer Paek Suhan, convinced the king to make geomantic theory the basis for preventing the outbreak of natural calamities. It was on this basis that he would advise making Sŏgyŏng the centre of government.

The following year he petitioned the king to erect a royal palace at the site of a military barracks in Sŏgyŏng; he unctuously pronounced the site so auspicious that ‘the Chin will of their own capitulate and be reduced to a tributary state [of Koryŏ]’. The king ordered its construction. In 1131, he also ordered, on Myoch’ŏng’s request, the construction of a citadel as well as a hall dedicated to the worship of the Eight Divinities in which native, animimistic deities were included among Buddhas and Bodhisattvas. In short, Myoch’ŏng saw native divinities on a par with those of Buddhism.

Upon completion of the construction projects in Sŏgyŏng, Myoch’ŏng petitioned the king to change his title to ‘emperor’ and subjugate the Jurchen-Chin rulers to the north in Manchuria. Myoch’ŏng also argued that the rebellion of Yi Chagyŏm proved Sanggyŏng was no longer a favourable site for government and advocated moving the capital to Sŏgyŏng. This would have effectively made the Sŏgyŏng faction dominant and was thus a challenge to the Sanggyŏng élite.

In 1132 Myoch’ŏng devised an ingenious strategy which crystallized all his political intentions into a single act. During King Injong’s visit to Sŏgyŏng, he had large rice cakes filled with hot oil, pierced, and then submerged in the Taedong river. Little by little the oil seeped to the surface of the river, giving off a bright multi-coloured sheen. He said this was the saliva of the Spirit Dragon which proved Sŏgyŏng’s geomantic strength, and he had his other confederates petition the king to adopt the title ‘emperor’ and attack the Jurchen-Chin.

His strategy was uncovered, and shortly thereafter King Injong’s father-in-law wrote a petition: “We pray that Your Highness will execute Myoch’ŏng [and the Sŏgyŏng faction], thereby removing these sprouts of evil.” In spite of this, the king’s feelings seem to have changed little. In 1134, however, the kingdom was ravaged by a variety of weather disturbances which were seen to indicate disharmony between natural and human affairs.
Lim-wan, a Sung Chinese professor at the Koryŏ Confucian Academy, wrote a petition which named Myoch'ŏng as the source of disharmony and accordingly demanded the heads of Myoch'ŏng and his co-conspirators.

Just at this time King Injong was preparing to go to Sŏgyŏng. Kim Pushik managed to dissuade the king from leaving, and Injong subsequently ended all royal visitations to Sŏgyŏng. With few exceptions, the court rallied around Kim Pushik and called for punitive action against Myoch'ŏng and the Sŏgyŏng party.

In January 1135 Kim, Chogwang, Yudam, and other leaders stormed the government buildings in Sŏgyŏng. They imprisoned those with direct ties of allegiance to Sanggyŏng and founded a country, Taewi, in which petty officials from Sŏgyŏng were elevated to positions of great authority. They then set-off for Sanggyŏng. Although it does not seem that they had any intention of harming the king's person, they were determined to force Injong to accede to a single demand -- that Sŏgyŏng be made the primary capital.

In the meantime, King Injong had made preparations for war, and Kim Pushik, then sixty-one years old, was selected as field marshall of the government force. His first course of action was to assassinate Myoch'ŏng's disciple, Paek Suhan, Chŏng Chisang, and another Sanggyŏng official who formerly had been sympathetic towards the idea of Koryŏ's independence from the Jurchen-Chin.

After being outflanked by Kim's troops, Myoch'ŏng's erstwhile confederate, Chogwang, was convinced of the impossibility of victory. Two weeks after the start of the rebellion he beheaded Myoch'ŏng, Yudam, and Yudam's son, and despatched an envoy, presumably, to gain exoneration for his role in the uprising. The envoy was imprisoned, whereupon Chogwang resolved to continue the rebellion. In the following February, Kim's troops finally made a decisive attack, and Chogwang and the remaining leaders committed suicide.

Kim Pushik was celebrated for his military deeds and given three high positions within the court. He was, nevertheless, not immune from criticism, and some officials accused him of wasting time in quelling the rebellion. His motives in assassinating Chŏng Chisang were also suspect given that neither he nor Paek Suhan had had any opportunity to take part in what was a spontaneous and desperate uprising. His envy of Chŏng's poetic skill was widely known, and some believed that he used the rebellion as a pretext to give vent to his personal grudge against Chŏng.

What seemed to be primarily a factional struggle between Sŏgyŏng and Sanggyŏng was, in fact, a conflict with deep historical roots. Myoch'ŏng's insistence on making Sŏgyŏng the primary capital recalled the glorious former state of Koguryŏ whose capital was Sŏgyŏng and from which the name Koryŏ derived. Kim Pushik, on the other hand, was descended from the royal house of Shilla: the very state which had vanquished Koguryŏ. Myoch'ŏng's plan for moving the capital thus represented to Kim the danger of losing his political base of power and a challenge to the historical lineage on which that power rested.

The uprising also represented a newly emerging intellectual conflict between the Buddhists and the Confucians. This was brought into relief by the argument over changing the title of king to emperor which was requisite for any offensive military strike against the Jurchen-Chin. In essence, the use of emperor would have clearly indicated a change in self-consciousness among the Koryŏ elite, and seeing themselves as an independent and autonomous state, Myoch'ŏng felt, was the necessary step.

It is recorded that Myoch'ŏng had the support of roughly half the kingdom for his plan that the king take the title 'emperor' and subjugate the Jurchen-Chin. In the court, he was supported by nine out of ten officials. If true, Kim Pushik's real victory was less military than intellectual.
Writing in the early part of this century, the Korean historian Shin Ch’ae-ho addressed this victory and called it the single most important event in the previous thousand years of Korean history. With Myoch’ong’s defeat, the Koryó rulers no longer questioned their status, and the system of Sadae (serving the great) as espoused by Kim Pushik became an unquestioned political doctrine. In turn, this doctrine was adopted by the subsequent Chosón dynasty which perforce disdained both Buddhism and animism as it made Neo-Confucianism the state ideology. Shin Ch’ae-ho keenly observed in Kim’s victory the end of Korea’s willingness to assert an individual religious, political, and cultural heritage and poignantly saw in this the origin of Japanese colonial rule.

Myohyang Mountain

Situated just south of Húich’on on the border of North and South P’yong’an Province, Mt. Myohyang (1909 metres) is traditionally considered to be one of Korea’s ‘four mountains of great renown’ (sadae myŏngsan). These four mountains are situated in each area of the nation, with the Diamond Mountains (Mt. Kúmgang) in the east, Mt. Chiri in the south, Mt. Kuwol in the west, and Myohyang in the north. The name ‘Myohyang’ (Wondrous Fragrance) is a Buddhist term describing an extraordinary incense which has a fragrance that can be smelled even though one is upwind of it. This appellation evidently comes from the large amount of aromatic trees on the mountain, such as the spindle tree and the Chinese juniper.

Mt. Myohyang is important, not only for its scenic beauty, but also for its early connection with Korean foundation myths. According to the Memorabilia of the Three Kingdoms, an older record states that in ancient times, a figure called Hwanin was residing in heaven. Aware that his son, Hwanung, wanted to descend to the world of humans, Hwanin made him three heavenly seals and sent him to govern the world of men. Hwanung therefore gathered together a retinue of 3000 followers and descended to the summit of a “Mt. T’aebaek.” Iryó (1206-1289), the author of the Memorabilia, claims that this was, in fact, Mt. Myohyang; hence, the mountain has been linked to the Tan’gun story from at least the mid-Koryó Period, if not earlier. Even now, there is Tan’gun Cave at the site where Tan’gun is believed to have appeared.

In addition to its association with Korea’s foundation stories, the mountain has often been the site of important historical events. In 1174, Cho Wich’ong led a rebellion that almost succeeded in toppling the government in Kaesong. Two years later, when he was killed, the remnants of his forces retreated to Mt. Myohyang where they continued to harass government forces. During the Koryó Period, Mt. Myohyang also served as the battlefield for numerous clashes between the Koryó and the invading Khitan.

During the Hideyoshi Invasion (1592-1598), the mountain served as the stronghold of the monk armies led by Hyujong (1520-1604), styled Sosan. Hyujong called on monks throughout the nation to join in the fight against the Japanese. Along with Yujoong, who led
forces based in the Diamond Mountains, and Ch’ŏyŏng, who led force based in Mt. Chiri, Hyujŏng successfully led a direct attack on the Japanese forces occupying the capital. In his final years, Hyujŏng went back to Mt. Myohyang, passing away at the famous Pohyŏn Temple.

Due to the mountain’s scenic splendour, it is sometimes referred to as ‘the Diamond Mountains of the west.’ Piro Peak is the mountain’s highest point, followed by Ch’ilsŏng (1,894 metres), Kangsŏn (1,613 metres), Hyangno (1,600 metres) and Pŏbwang Peak (1,391 metres). Crystal clear streams trickle through the high valleys before passing over large granite cliffs to form Yongyŏn, Pisŏn and Ch’ŏndaegi Waterfall. One of these rivulets, Wŏllim Stream, cuts through Yongam Valley to form spectacular cliffs over 400 metres high.

Mt. Myohyang’s striking beauty has made it a favourite site for temples. Since Koryŏ times, Pohyŏn, Anshim, Wŏnmyŏng and Kwangje Temple have been in existence along with Yun’il Hermitage and Kŭmgang Cave. The Pohyŏn Temple gets its name from the tradition that the bodhisattva Pohyŏn (Samantabhadra) once resided there. With its picturesque scenery, links to both ancient myths and history, and rich Buddhist heritage, Mt. Myohyang is one of Korea’s favourite tourist destinations.

Myong Ji University

Located in the city of Yongin in Kyŏnggi Province, Myong Ji University (Myŏngji Taeakk’yo) was established in Seoul’s Pukch’ang-dong as the women’s school, So’ul Kodŏng Kajŏng Hakko, in August 1948. In July 1952, the school was reorganised as Kŭnhwa Yŏja Ch’ogŭp Taehak with Chŏn Hodŏk as dean. In March 1955, its name was changed to Sŏul Yŏja Ch’ogŭp Taehak. The school faced a financial crisis in 1956, and Yu Sangg’iun assumed control. Under Yu’s guidance, the school was transformed into Sŏul Mulli Sabŏm Taehak, a two-year, co-educational institute for secondary-school teachers. At this time, the school moved to a new campus in Seoul’s Chung Ward.

In 1962, Sŏul Yŏja Ch’ogŭp Taehak was reorganised into Sŏul Mulli Shilgwa Taehak. It aimed to give young people the technical skills being demanded by Korea’s rapid industrialisation. A year later, it became the four-year Myong Ji College, and in 1967, a graduate school was established. After merging with Kwandong Taehak in February 1972, the college took on a Christian inclination. In 1974, the college transferred to Namgajwa-dong in Seoul and five years later, another campus was built at Yongin.

In September 1983, the college became a university with Pak Ilgyŏng as president. Throughout the 1980s and 1990s, an expansion program was under way. Today, there are six colleges. At the Yongin campus, are the Colleges of Arts and Physical Education; as well as Engineering and Natural Science; and at the Seoul campus, there are the Colleges of Business Administration; Humanities; and Law and Political Science. For postgraduate studies, there are; in addition to the Graduate School itself, the Graduate Schools of Adult Continuing Education; Distribution and Logistics; Education; Engineering; Local Autonomy; Industrial Technology; International Business and Trade; Securities and Insurance; and Transportation and Tourism.

University publications include the Myŏngdae Shinmun in Korean and The Myong Ji
Myongch'ŏn County

Myongch'ŏn County extends to the coast in the southern part of North Hamgyŏng Province. This large county covers a total area of 2,080.43 sq.kms. Topographically, the county consists of rugged terrain with defined plains running along Myonggan Stream in the northeast and Hwadae Stream in the south. Kam't'o Peak and other peaks of the Hamgyŏng Mountain Range rise in the northwest, while the Ch'ilbo Mountain Range runs from the northeast to the southwest. Famous for its extraordinary rock formations, Mt. Ch'ilbo (906m) is often called 'the second Kŭmgang (Diamond) mountain.' As a mountainous region, the county's climate is characterised by sharp seasonal fluctuations, with an average January temperature of -9.6°c., an average August temperature of 22.1°c. and an average yearly rainfall of 667mm.

A number of ancient historical artefacts have been found in the county. In Changdŏk Village, mammoth bones have been discovered and in the Hago Stream area, there are more than five-hundred ancient tombs. Earth mounds mark the old military site of Myonggan Fortress in Ibam-dong, and in Hau’s Myongch’ŏn Village, there is the Myongch’ŏn Town Fortress. Measuring 1.0 km. in circumference and standing 3.0 metres high, Myongch’ŏn Fortress was built in 1517 to block Jurchen invasions and was expanded during the reign of King Injo (1623-1649). Other fortresses in the area include Taesadong-bo, twelve kms. west of the town of Myongch’ŏn; Sosamadong-bo, twelve kms. to its north, and Kalma Fortress, seventy-four kms. to the southeast.

During the Japanese occupation, local residents were often in confrontation with the occupying forces. In March 1919, a market-day in Haga Township was used as the occasion to gather over two-thousand people for an ‘independence’ protest. This was followed by spontaneous uprisings in the Sangu, Sanggo and Sŏ townships. One of the most famous participants was Tong P’ungshin. Affested after burning down a Township Hall and the houses of several politicians who were sympathetic to the Japanese, Tong eventually committed suicide while in prison.

Myongji Mountain

Situated in Kap’yŏng County in Kyŏnggi Province, Mt. Myongji (1,249 metres) is part of the Kwangju Mountain Range. To the north-east, lies Mt. Hwaak (1,468 metres), to the south Mt. Taegŭm (704 metres) and Mt. Ch’ŏng’u (619 metres), to the west Mt. Kangssi (830 metres) and Mt. Ch’ŏnggye (849 metres), and to the east Ch’oktae Peak (1,124 metres). With its picturesque terrain and dense forests, the mountain is frequented by visitors from both Seoul and Chunch’ŏn.

Myongji Mountain

Situated in Kap’yŏng County in Kyŏnggi Province, Mt. Myongji (1,249 metres) is part of the Kwangju Mountain Range. To the north-east, lies Mt. Hwaak (1,468 metres), to the south Mt. Taegŭm (704 metres) and Mt. Ch’ŏng’u (619 metres), to the west Mt. Kangssi (830 metres) and Mt. Ch’ŏnggye (849 metres), and to the east Ch’oktae Peak (1,124 metres). With its picturesque terrain and dense forests, the mountain is frequented by visitors from both Seoul and Chunch’ŏn.

Myongjidŏk Mountain

Mt. Myongjidŏk (911 metres) is situated on the border between Hwanghae Province’s Koksan County and Kangwŏn Province’s Ich’ŏn County. Along with Mt. Idŏk (1,298
metres), Mt. Ponghwang (1,250 metres) and Mt. Ibaem (1,107 metres), the mountain is part of the Mashingnyong Mountain Range. The area near the summit is characterised by exposed rock. Although scattered conifers cover the mountain, most of the soil lacks vegetation. Graphite and copper mines operate throughout the area.

Myŏngjong, King (r. 1170-1197)

King Myŏngjong (1131-1202) was the nineteenth king of Koryŏ and reigned from 1170 to 1197. His given name was Ho, childhood name Hun, and his courtesy name Chiden. He was the third son of King Injong (r. 1122-1146) and the younger brother of King Uijong (r. 1146-1170). His queen was the daughter of Kim On, the Lord of Kangnŏng, and when her son Kangjong (r. 1211-1213) became king she was elevated to queen dowager Uijong. In 1170 when the military revolt led by Ch'ŏng Chungbu (1106-1179) broke out and his brother was deposed, Myŏngjong was placed on the throne.

The reign of Myŏngjong was a period in which the throne was totally dominated by the military, and he was no more than a figurehead for the military leaders. A junta led by Ch'ŏng, Yi Ŭibang (? -1174), and Yi Ko (? -1171), ruled through the Chungbang, or supreme military council, which they had established. These men, however, strove for personal power and eventually Yi Ko was assassinated by Yi Ŭibang, who was in turn killed by Ch'ŏng. Ch'ŏng then able to rule alone for several years before being killed by an ambitious young commander, Kyŏng Taesŭng (1154-1183), in 1179. Kyŏng only managed to hold power for a few years before his death from illness, and once again control of Koryŏ was thrown into chaos. Yi Óimin (? -1196), originally of slave status, seized power and ruled with brutal ferocity for over a decade until he too was killed in 1196 by the brothers Ch’oe Ch’umghan (1149-1219) and Ch’oe Ch’ungsu (? -1197). The rise to power of the Ch’oe brothers marked the end of the chaotic struggles of military commanders for supremacy, as the Ch’oe’s and their descendants effectively controlled Koryŏ until the mid-thirteenth c. Shortly after seizing power Ch’oe Ch’ungsu died leaving his brother in complete command of the Kingdom. Ch’oe Ch’unghan further consolidated power by replacing Myŏngjong with his brother King Shinjong (r. 1197-1204).

Quite clearly, Myŏngjong was only a token king who was completely dominated by the powerful military figures of his day. The Koryŏ court remained under military control until the Mongol invasions of the mid and late thirteenth c., being then replaced with Mongolian equivalents. The Koryŏ monarchy did not regain control until the reign of King Kongmin (r. 1351-1374), in the waning years of the kingdom.

Myŏngnang (fl. 635)

Myŏngnang was born the aristocrat son of the sagan Chaeyrang and Lady Namgan, and the nephew of the famous monk Chajang. In 632, he went to Tang China to study Tantric doctrines. According to legend, in 635, as Myŏngnang walked along the coast of the Yellow Sea on his way back to Korea, the Dragon King beckoned him to visit his undersea palace. In the palace, the Dragon King gave Myongnang one thousand gold coins. More importantly, he transmitted esoteric teachings to the monk. Myŏngnang received the coins and tried to head back to land, but found that the Dragon King’s castle was surrounded by water. Myŏngnang finally reached dry land by burrowing through the ground under the Dragon King’s palace. After much digging, he came up through the well of his own house. Myŏngnang made his old residence into a temple and used the gold that he had received to decorate the pagoda and Buddha statues of the temple. The temple glittered with such brilliance that it came to be known as Golden Brilliance (Kumgwang) Temple.

In Korea, Myŏngnang founded Shilla’s Shinin (Divine Seal) sect. This sect, later based at Kumsan Temple, was associated with miracles and state-protection Buddhism (hoguk pulgyo). Thus, at the end of the Three Kingdom’s Period when Shilla and Tang forces
turned on one another, Myöngnang and twelve other monks received royal support to build Sach’ónwang (Four Heavenly Kings) Temple as a spiritual centre protecting the nation. In the Samguk Yusa (Memorabilia of the Three Kingdoms), it is said that the monks called on the spirits of heaven and the sea after which a mighty typhoon arose and sank the attacking Tang vessels. In 671, the Tang forces mounted another attack which was again sunk through Myöngnang’s magical powers.

Bibliography

Myöngsŏng Mountain

Situated on the border of Ch’ŏrwŏn County in Kangwŏn Province and P’och’ŏn County in Kyŏnggi Province, Mt. Myöngsŏng (923 metres) is part of the Kwangju Mountain Range. The mountain is surrounded by Mt. Kwangdŏk (1,046 metres) to the east, Mt. Paegun (904 metres) to the south-east, and Mt. Sahyang to the south. At the south-west base of the mountain lies the Sanjong Lake resort area and Chain Temple. To the north lies the Yonghwa Reservoir. Mt. Myöngsŏng is also known as Mt. Urŭm. Both names are thought to come from a legend about Kungye, the leader of Later Koguryŏ, who purportedly fled to the area around 929 C.E. only to be killed a year later. It is said that upon Kungye’s demise, the birds in the area made crying sounds (myöngsŏng or urŭm).

Myöngsŏng, Queen (1851-1895)

Queen Myöngsŏng (Queen Min) was the queen of King Kojong (r. 1863-1907). Her family’s ancestral home is in Yŏhung But she was orphaned at eight years when both parents died. After Kojong’s accession in 1863, his father Hŭngsŏn Taewŏn’gun (1820-1898) sought a queen for his son. He did not want to become a victim of the royal in-law families that had dominated Chosŏn since the start of the nineteenth c., and accordingly looked for a queen from a family without strong political connections. Upon the recommendation of his wife, he selected the young Min as queen for his son. The young queen was exceptionally bright and furthered her knowledge by reading works such as Ch’unch’u (Spring and Autumn Annals) in her leisure time.

The conflict between Queen Min and the Taewŏn’gun began with the birth of Prince Wanha by a palace lady and the favouritism that the Taewŏn’gun showed towards this child coupled with desire to name it crown prince. Behind this incident were the factional politics that surrounded the late years of Chosŏn and Queen Min’s involvement with the Noron (Old Doctrine) Faction that opposed the Taewŏn’gun. Moreover, time was on Queen Min’s side since as Kojong became older, he began to show the desire to escape from the regency of his father and establish his own rule. Therefore, in 1873 when the Taewŏn’gun was driven from power by the combination of the Confucian officials that he had antagonised and the newly emerging power of the Min family, Queen Min seized this opportunity to solidify her political power. At this time, although Kojong was king in name, it was Queen Min who chiefly controlled the destiny of the government.

The policies of the Min-led government were not popular with many and as a result of corruption among the clerks at the Sŏnhyech’ŏng (the Office of Revenue Raising and Disbursement), the military was not paid. As an outgrowth of this a mutiny broke out. The brunt of the Military Mutiny of 1882 (Imo Kullan) was aimed at the Japanese and the Min family whom the soldiers blamed for the corruption of the government and the
encroachment of the Japanese. Thus when this broke out, Min Kyömhho, the superintendent of the Sônhyech'ông, was killed and Queen Min was forced into hiding for fear of her life. In addition, the Japanese legation was burnt to the ground and a Japanese military officer was killed. The result of this uprising was a shift in power in Chosôn as the Taewôn’gun once again took control of the government.

It was during this period that Queen Min began to reveal her adroit political skills. In 1885 the Kômundo Incident (the British occupation of Kûmun-do Island) occurred and the German adviser to the Chinese Government, P.G. von Mollendorff, along with the Chinese diplomat, Ma Qian-chang were dispatched to Japan to appraise the situation and reach a settlement with the British. At this time diplomatic contacts with Russia, Qing and other foreign powers became increasingly important as these nations strove for hegemony over Korea. It was Japan, however, that revealed the most influence in Korea and pushed the Reforms of 1894 (Kabo kyôngjang) into law in Chosôn. These reforms attempted to circumvent the political authority of Kojong, Queen Min and the Taewôn’gun. Therefore, Queen Min sought an ally for herself and her clan in the Russian forces in Korea that were vying with Japan for control. Queen Min knew that in order to drive the Japanese from Korea she would need the aid of the Russians and therefore made overtures to the Russians for support. The pro-Japanese faction within the Chosôn government sought to rid themselves of their political enemy and plotted to have the queen dethroned. However, Queen Min discovered this plot and was able to purge many of the pro-Japanese elements from the government and replace them with pro-Russian men such as Yi Pömjin and Yi Wanyong, thereby giving the government a pro-Russia slant. The Japanese sought to regain their lost influence and targeted the Queen as their greatest obstacle. Therefore, the Japanese minister, Miura Gore, authorised an attempt on the Queen’s life and this was carried out on October 8, 1895. Queen Min was savagely beaten to death by the Japanese and this event served to hasten the fall of Korea into the treacherous hands of the Japanese.

The assassination of Queen Min caused a great outrage among the Korean people and can be said to mark the beginning of the armed insurrections against the Japanese imperialists. However, with her death the pro-Japanese forces with the Chosôn government were unchecked and thus Chosôn soon fell under the colonial domination of the Japanese. Therefore, the Queen is not only remembered for her political skills, but also as being the last obstacle to the Japanese colonial occupation of Korea.

**Myôrak Mountain**

Situated west of Namch’on, Mt. Myôrak (816 metres) is the main peak of the Myôrak Mountain Range which runs through the middle of Hwanghae Province. To the south-west of the mountain lie Mt. Undal (600 metres) and Mt. Changsu (747 metres). The mountain is characterised by rough terrain with steep slopes on its southern side. At the foot of the mountain to the west, beans, millet and other grains are cultivated. The forests are made up of pines, firs and silver firs.

**Mythology**

**Introduction**

Myths represent an expression of a religious system or ceremonies with supernatural beings as their main focus. A large variety of myths pertain to the origin of the universe; the birthplace of mankind; the life history of a deity; the rationale for the establishment of social systems; and the formation of a society’s culture. By and large, myths should be differentiated from legends, the latter being mostly concerned with human beings and their secular activities, while myths are most often based on supernatural beings or activities originating in the sacred realm.
In Korea there are essentially four types of myth: 1) foundation myths that retell the origins of the founders of the various Korean kingdoms; 2) clan-founder myths that retrace the founding father of a clan to supernatural origins; 3) village myths concerning the tutelary deity of a given village; and 4) shaman myths that provide a history of various deities in the shamanistic pantheon and the rationale for the perpetuation of shamanist practices and beliefs. The common feature of the four categories of Korean myths is the belief in supernatural intervention in the profane realm, and hence, the necessity of mortal man to pay homage to these sacred powers.

Another division used for the classification of myths is that of the subject of the myth. Essentially there are two types of subjects: those that centre on a protagonist of humble origin and recount the process in which he or she became a deity through the accomplishment of some extraordinary proceedings; and those that recount a being of the supernatural realm performing some phenomenal task that has resulted in it being highly venerated by man. The model of the former case is quite often manifested in shamanist myth, or ponp'uri, which essentially narrates the origin of shamanist deities. Examples of these origin myths of shamanist deities are found in Pari kongju shinhwa (The Myth of the Abandoned Princess) and Chesok ponp'uri (The Tale of Chesok). Conversely, the latter category of myth is revealed in the foundation myth of the Koguryo Kingdom, the Tongmyŏng wang shinhwa (The Myth of King Tongmyŏng). Moreover, myths concerning the founders of given clans often have a similar form as those recounting the foundation of a kingdom.

Korean myths commonly reveal a strong relationship with the origins of the concept of ancestor worship, and are often thought of as the beginnings of religions and religious practices based upon ancestor worship. Myths with their base in ancestor worship are manifested in the form of lineage records of generations of ancestors. For example, the Tan'gun shinhwa (Myth of Tan'gun) is a record of the founders of Kochosŏn and provides a record of three generations of the founders, while the Tongmyŏng shinhwa is a record of the founding lineage of the Koguryŏ kingdom and gives an account of four generations. Shamanist and clan founder myths also are structured in much the same manner, with the Pari kongju shinhwa providing an account of some four generations of the protagonist's lineage and clan founding myths similarly formed.

A further characteristic of Korean myths is, (with the exception of shaman myths) a close relationship with historical events. Foundation myths are also the retelling of the historical events that led to the foundation of various Korean kingdoms, and thus represent the coexistence of mythology and history. Those who founded the early Korean states are said to be either heavenly beings or their progeny, and these possess both human and divine qualities. Most often these beings are descended from the heavens, manifest human form, and establish a kingdom. This process of the humanisation of supernatural forces reveals a desire on the part of the composer groups of these myths to be able to exert control of the powers of the sacred realm. Hence, in past times the recitation of a founding myth acted as a means to supplicate the forces of the supernatural, which indicates the religious function of these myths.

Foundation Myths

Iryŏn (1206-1289) tells in his Samguk yusa (Memorabilia of the Three Kingdoms) the story of Tan'gun, Lord of the Tan (Birch) tree, portrayed as the founder of Kochosŏn, traditionally translated as (Land of) Morning Calm. Iryŏn relates: 'A bear and a tiger were living in the same cave. They used to pray to the Crown Prince of Heaven, seeking to change into human shape. The Prince gave them (each) a bunch of mugwort and twenty corns of garlic, telling them that if they ate this and hid from the sunlight for a hundred days, they would obtain a human form. (In this way), after twenty-one days, the bear
obtained a woman's shape, but the tiger, being unable to practise such control, was consequently unable to transform. So the bear-woman constantly prayed beneath the Tan tree that she might produce a child. The Crown Prince of Heaven wedded her, and as a result she became pregnant and bore a son who was called King (Wanggôm) and Lord of the Tan tree. He established his capital at P’yöngyang, and for the first time the land was called Chosôn.' (SGYS i, pp.1b-2a)

We may note in passing that, in the author's view, the transformation of the bear into a woman represents a later development, since in the earliest stage of the evolution of Korean legends it is the animals themselves which are alleged to have given birth to human ancestor figures. This is illustrated in the instance of the wife of Pak Hyökkôse, the founder of Shilla, who is said to have been born from the left flank of a dragon (see Sanguk sagi (History of the Three Kingdoms) i, p.1a; SGYS i, p.13a). In other instances it is the earth itself which gives birth to the mythical hero: thus the first three inhabitants of Cheju Island are said to have sprung from the soil (Koryôsa xxxvi). In the northern kingdom of Puyô, a male baby shaped like a frog but golden in colour (and hence called Kûmwa 'Golden Frog') was discovered under a stone and taken by a childless king to become crown prince (SGSG xiii, p.1a; SGYS i, p.8a). Not infrequently in such stories the birth-place itself is indicated by some sort of heavenly message -- a mysterious voice, a ray of sunlight (as in the Koguryô legend at SGSG xiii, p.2a, SGYS i, p.8b), or the neighing of a horse (SGSG i, p.1a; SGYS i, p.12b). We should also note that, in this stage of development, certain animals seem to be venerated. Thus, in the third c. Chinese text, San Guo zhi we read that, '(The Ye people) regard the tiger as a god and offer worship to it' (San Guozhi, Wei zhi xxx, p.36a in San Guozhi jijie). The same text states that others venerate the cockerel as a spiritual being.

In any case, as we have just seen, it is not until what may be termed the second stage in the evolution of Korean legends that a woman appears as the mother of the hero, as the following legend illustrates very well.

'Koguryô is sprung from Puyô. They themselves say that their ancestor was Chumong, whose mother was the daughter of a river god. She was confined in a room by the King of Puyô. When the sunbeams shone in upon her, she withdrew to avoid them, but the rays pursued her. Soon she became pregnant, and gave birth to an egg. The King of Puyô had the egg thrown to the dogs, but they would not eat it; so he fed it to the pigs, but likewise, they rejected it. So he had it abandoned on the road, but the horses and oxen avoided it, and when he had it left in the fields, the birds came down in flocks and covered it with their feathers. The King (tried to) break it, but was unable to do so, and at last he returned it to its mother, who wrapped it with cloths and put it in a warm place. (At last) a little boy broke through the shell and came out.' (This is the sixth c. Weishu (History of the Wei Kingdom) version (WS c, p.1a) of a legend, which is first found as the origin legend of Puyô itself in the first c. Lanheng, ii, p.81).

In this Weishu version of a Korean story we find a completely evolved cosmogony: here are the three worlds of Creator-Heaven embodied in sun-rays, Earth represented by the various animals, and the Waters incarnated in the figure of the River God's daughter. It is worth noting that this third world of the Waters symbolises at one and the same time death and resurrection. Thus in this same legend of Chumong as retold in the later 'Old Sambuk-sa' version preserved in the notes to Tongguk Yi sangguk chip (Collected Works of Minister Yi of Korea) iii, p.6b, we read, 'As he was resting under a great tree, a pair of doves came and perched together. Chumong said, “In my time of need, here are the envoys of my divine mother bringing me the wheat grain.” Then he took his bow and shot at them, hitting the two with one arrow. Opening their crops, he discovered the wheat grains; then he spat water onto the birds and they came back to life and flew away.'

Chumong indeed creates his own 'world' upon earth and, in order that it may come about,
his putative father, Haemosu, the Crown prince of Heaven, is obliged to embody himself in animals which represent the three worlds -- Heaven, Earth and the Waters -- appropriating their respective energies and their physical and spiritual properties, thus, ‘Then the River God transformed himself into a carp, and swam off into the waves flowing before his courtyard. Then the Prince turned himself into an otter and caught him. Consequently, the River God changed again, this time into a stag, and fled (by land); the Prince, however, assumed the shape of a wolf and pursued him. The River God then changed into a pheasant, but the Prince turned into an eagle and struck at him.’ (*Tongguk Yi sangguk chip* iii, p.4a).

**Anthropomorphism and Tutelary Animals**

Among the ancestors of the Korean people, a bond was perceived to exist between the human being and the animal that was his or her tutelary spirit or alter ego. This connection is clearly shown in one of the panels of a Shilla vase where a man and a woman copulate alongside animals. Significantly, this familiarity between animals and humans led to the appearance of anthropomorphism amongst the ancient Koreans. Thus the account of a girl born from a dragon in SGYS i, p.13a continues, ‘She was extremely beautiful, but her lips were like a chicken's beak. So they took her and bathed her in the river to the north of Talsŏng, and her beak fell away.’ So also, the second ruler of Koguryŏ, ‘Hunting in the country around Mount Ki, he found a strange man with feathers beneath his armpits. He brought him back to court and, giving him the surname U ('Feathers'), married him to his daughter.’ (SGSG xiii, p.8b; note that in ancient China those who had obtained the secret of immortality were often depicted with feathers on their bodies).

The same sort of connection between an individual and a particular animal appears in a legend about the Shilla king Kyŏngmun (r.861-875), as told in SGYS ii, pp.16b-17a: ‘Uncountable numbers of snakes gathered every evening in the king's bedroom. Startled at this, the women of the palace were going to drive them away, but the King said, "Without these snakes I could not sleep peacefully; don't stop them!" Every time he lay down to sleep they used to creep over his chest with their tongues protruding.’

Other legends show tutelary animals such as these in the service of the hero, who in turn is aware that he can acquire the sacred powers of such animals with celestial help. Again, we turn to the legend of Chumong in WS 100: ‘Chumong left Puyŏ and fled south-eastwards until a great river barred his way. He wanted to cross, but there was no bridge, and the pursuers from Puyŏ were close behind. Then Chumong addressed the water, saying, "I am the son of the sun, and maternal grandson of a river god. Today I am escaping from my enemies, yet now they are almost upon me. How shall I cross over?" Then the fish and the turtles rose to the surface of the river to form a bridge, and Chumong was able to get across. Afterwards the fish and the turtles drifted apart, and the horses of his pursuers could not cross over.’

Subsequently, Chumong goes on to set up a capital and found the kingdom of Koguryŏ. Another version of the Chumong saga shows the hero not merely making use of the help of animals, but also dominating them, if necessary by threats. ‘(Chumong) went hunting in the west and caught a snow-white stag, which he then hung upside down on Haewŏn ('Crab Plain'), vowing that, unless Heaven sent down rain to flood the capital of the (his rival Song-yang) King of Piryu, he would not release it, and (telling the deer) to invoke Heaven if it wished to escape its plight. The deer cried so loud and bitterly that the sound reached Heaven. (Then) it rained in torrents for seven days, flooding Songyang’s capital. In the sixth month, Song-yang came to offer the submission of his kingdom’. (*Tongguk Yi Sangguk chip* iii, p.7a).

Here we see that the hero has succeeded in gaining control over the natural world with the help of an animal, a deer, which was especially considered as the messenger of Heaven.
Other legends show the central character, with increasing self-confidence, rejecting the power of the shamans who were believed to be capable of communicating with the three worlds of Heaven, Earth and the Waters. Thus, SGSX V, p.8b tells a story of the Koguryo king Ch’adae (r. 146-165; traditionally regarded as a tyrant): 'As the king hunted at P’yŏngyu-wŏn, a white fox followed him and barked; when the king shot at it, he missed. The king then consulted the chief shaman, who said, "A fox is an ominous creature and no good sign; moreover, this one is white, which is even more uncanny. Yet, Heaven cannot reiterate its words - this is why it manifests itself in such ominous portents, with the object of making the ruler of men, through fear and trembling, examine himself and thereby reform. If my lord will cultivate virtue, then he can change this misfortune into blessings." The King retorted, "Unlucky is unlucky; lucky is lucky. Once you have already seen it as ominous, then you go on to take it as fortunate. What lies are you fabricating?" And he had the man put to death.'

Even more eloquent of a change of attitude is the following anecdote concerning an ancestor of the founder of Koryŏ, Hogyŏng (whose name incorporates the word for tiger). In a document quoted in the preface to the Koryŏsa (History of Koryŏ), he is said to have taken shelter in a mountain cave along with nine companions. When a tigress appeared and roared loudly the men decided to throw their caps out of the cave; whoever owned the one which the animal seized would go out and face it. This happened to be the one belonging to Hogyŏng, but when he came out to fight the tigress the animal suddenly disappeared, while the cave collapsed, burying the other nine men. Hogyŏng went back to get the people of his village to come and bury the men who had perished; but before doing so they offered worship to the mountain deity who then appeared and announced that, being a widow, she had (as a tigress) encountered Hogyŏng and now wished to marry him and share the administration of the spirit realm with him, "I beg you to accept appointment as Great King of the Mountain."

Having spoken, she disappeared, along with Hogyŏng. His fellow villagers then erected a shrine to Hogyŏng as Great King (of the Mountain). Because of the nine men who had perished simultaneously, they renamed the mountain Nine Dragons. However, Hogyŏng could not forget his former wife, and came each night to sleep with her as if in a dream. Consequently, she gave birth to a child...'

The important point here is not the marriage of the human hero to an animal, but his evident preference for his original human wife; in turning away from the path marked out for him by the will of the deity he rejects the sacred powers of the animals. The story shows a new era opening in the spiritual development of the people, one in which human beings, moving away from the natural world of the animals, themselves become deities, while alongside them appear imaginary creatures.

**Nabuk Stream**

Beginning in the vicinity of Mt. Kosŏng and Mt. Taeyŏnjŭk, Nabuk Stream flows about 43.0 kms. through North Hamgyŏng Province’s Kyŏngsŏng County before entering Ch’ŏngjin Bay on the East Sea. The stream’s upper and middle sections, which run down the steep eastern slopes of the Hamgyŏng Mountain Range, have not developed flood plains. Between the stream’s lower section and Susŏng Stream to the north lies Susŏng Plain, the largest plain in North Hamgyŏng Province.

**Nach’ŏl**

**Naem sŏnsaeng munjip** (Collected Writings of Master Naem)

*Naem sŏnsaeng munjip* is a literary collection of the middle Chosŏn period civil-official
Chŏng Inhong (1535-1623). It is of fifteen volumes in seven fascicles and titled after the pen name of Chŏng. This woodblock-print work was compiled and edited by a descendant of Chŏng in 1911, and does not contain a preface or postscript.

The first volume of Naean sŏnsaeng munjip contains twenty-three poems, and the second to tenth volumes contain various memorials to the throne and other official writings. In the eleventh volume there are miscellaneous writings and in the twelfth various epitaphs and funeral odes are included. Volume thirteen contains fourteen epigraphs while the final two volumes are supplements to the work and contain poetry and other writings of Chŏng.

This collection provides valuable data for the study of the political factionalism and turmoil of the sixteenth and seventeenth centuries. It was republished in 1984 by Asea Munhwa Sa.

Nagan Village

Najin

Situated in the northeastern part of North Hamgyŏng Province, Najin is the northernmost of Korea's large ports. Surrounded by Kyŏnghŭng County, Chongsŏng County and the East Sea, the city has an area of 136 sq.kms. It consists of coastal plains, but has Mt. Songjin (1 146m) and other peaks of the Hamgyŏng Mountain Range in the north. The city's climate is relatively mild, with an average yearly temperature of 7.0c. and an annual rainfall of between 800 and 900mm.

Najin’s port opened to foreign trade in 1921. Beginning in 1932, as the city became an important transportation point for goods going into and out of Northern Manchuria, the port facilities were upgraded and a central business district was constructed. With Soch’o Island and Taech’o Island serving as natural breakwaters, Najin Bay is navigable by large vessels. As a result, fisheries and shipyards have developed. Because of its strategic location to both Russian and Chinese borders, the city also serves as an important military base.

There are prehistoric artefacts on Ch’odo Island and in Najin-dong, but relatively few from later eras. On Yŏndu Peak, there are remnants of a fire signal platform.

Naju

Situated in the western part of South Cholla Province, Naju embraces the town of Namp’yŏng and the townships of Kongsan, Kûmsŏng, Tado, Tashi, Tonggang, Munp’yŏng, Pŏnnam, Ponghwang, Sanp’o, Seji and Wanggok. Recently expanded to include the areas formerly known as Naju County, the city now covers a total area of 592.61 sq. kms. Kuksa Peak (440m) and Mt. Pongch’ŏn (336m) are at the city’s southeast corner and Mt. Kûmsŏng (452m) is to in the north. Most of the remaining land is undulating. The Yŏngsan River, which flows from the north to the southwest, and Naju Lake in the east are the city’s main sources of water. Naju Lake was formed in September 1976 with the completion of Naju Dam along the ‘Taech’o River. The dam is 31 metres high, 496 metres long and supplies irrigation water to over 11 000 hectares of rice fields.

Naju has mild weather, with an average yearly temperature of 13.2c. and an average annual rainfall of 1 245mm. With its good water supply and the extensive Naju Plain along the Yŏngsan River, the city is well-suited for agriculture. Of Naju’s total area, about 26 000 hectares are arable, with over two-thirds of this used for rice and the remainder dry-field crops. Naju also produces peaches and grapes, and enjoys the distinction of being Korea’s leading producer of pears. Introduced by the Japanese, Naju pears (also known as Arirang pears) taste best in the winter after they have been stored for several months. In addition to
farms, there are mines/quarries in the area that excavate pagodite, gold, silver and clay. The city is also well known for its woven mats made from hare’s-foot fern (Davallia mariesii).

The Naju area contains many historical sites. Buddhist artefacts found here include a stone lantern in Namp’yŏng’s Tongsa Village; a five-storey pagoda in Seji’s Songje Village (South Chŏlla Province Tangible Cultural Asset No. 78); a two-storey pagoda at Pugam Temple in Tashi’s Kaun Village; a standing Buddha figure in Naju’s Ch’ŏl’ŏn Village; and a standing Buddha figure in Manbong Village. Other artefacts can be seen at Chungnim Temple in Namp’yŏng; Purhoe Temple in Tado; Unhŭng Temple in Tado; Tabo Temple just south of Mt. Kŭmsŏng; and Shimhyang Temple in central Naju.

Since Naju was one of the major cities of the Cholla region, a large number of educational institutions were set up here during Chosŏn. Confucian schools from this time include Naju Hyanggyo (founded in 1398); Namp’yŏng Hyanggyo (founded in 1420 and moved to its present location in Namp’yŏng’s Kyoch’ŏn Village in 1534); Wŏlch’ŏng Sŏwŏn at the foot of Mt. Wŏlch’ŏng (founded in 1659); Changyŏn Sŏwŏn near Chungnim Temple in Namp’yŏng; Pongsan Sŏwŏn in Namp’yŏng (founded in 1541 in honour of Paek In’gol); Sŏlche Sŏwŏn and Kyŏnghyŏn Sŏwŏn in Noan; and Pan’gye Sŏwŏn in Pŏnnam (founded during the reign of King Sukchong [r. 1674-1720]). In terms of size, Naju Hyanggyo is one of the three largest Hyanggyo in Korea. The school’s architectural layout resembles that of the national Confucian shrine in Seoul. Unlike most Hyanggyo, this school’s shrine is in the foreground and Myŏngnyundang, the lecture hall, is situated to the rear. Modern schools in Naju include Dongshin University in Taeho-dong and Kwang-ju Arts College in Namp’yŏng.

Village festivals and rituals are still commonly held in this area. At most villages, the tangsanie (Shaman ritual to worship the deity of the mountain) is held in front of an old guardian tree or trees where the village’s tutelary spirit is believed to reside. During times of drought, a kiuje (ritual of praying for rain) is held at an altar in the mountains, at which time a grave is opened as an act of desecration. It is believed that the mountain spirit (sanshin) will then send down rain to purify the area.

Naksan Temple

Naktong River

With its source on Mt. Hambaek (1,573m) in the city of T’aebaek, the Naktong River passes through the lowlands of southeastern Korea on its way to the Southern Sea. The Naktong is 525 kms. in length, making it the longest river in South Korea and the second longest on the Korean peninsula. The river is referred to as the Nak-su (Nak River) in the Tongguk yŏji sŭngnam (Augmented Survey of the Geography of Korea) and is called the Naktong-gang (Naktong River) in the Taengni chi (Ecological Guide to Korea) which was written during the reign of King Yŏngjo (r. 1724-1776). The name Naktong (East of Nak) is said to refer to the river’s location east of the ancient Karak (Kaya) Kingdom.

The river has an average yearly effluence of approximately 11 billion cubic metres, but this amount can double, or decrease by more than half, during particularly wet or dry years. Since two-thirds of the yearly effluence occurs between the months of June and September, land along its banks is subject to periodic flooding. Due to heavy erosion along its western location, the Naktong transfers an estimated 10 million tons of sand and silt to the ocean each year.

In 1973, following a five-year developmental study of the Naktong River system, thirty sites were proposed as possible locations for dams. Of these, eighteen were deemed economically feasible, with the Andong, Imha and Hapch’ŏn dam sites being designated the most suitable. Since the remaining fifteen sites were on the river’s tributaries, even if all
the sites were developed according to plan, it is estimated that only 31.5 per cent of the total river system and 22.4 per cent of the total effluence would be utilised. In terms of capacity and hydro-electricity, the river system’s most important dams are the Nam River Dam built in 1970 in Chinyang County and the Andong Dam built in 1976 in Andong. In addition to dams, a dyke was built on the lower reaches of the river in 1987 in order to prevent seawater from backing up the river during neap tides. Previously, overflow of salt water had caused damage to rice crops as well as tainting Pusan’s water supply.

Archaeological finds indicate that people have lived along the Naktong River since prehistoric times. One of the key palaeolithic sites is in Sŏkchŏk Township in North Kyŏngsang Province’s Ch’ilgok County. At this site, across from the Kumi Industrial Area, stone hammers and other stone implements have been discovered. The area’s prehistoric culture began to form in earnest during the Neolithic period and flowered during the Bronze and early Iron Ages. Most of the artefacts from these latter periods are concentrated in the Taegu, Yŏngch’ŏn and Kyŏngju areas. Land contiguous to the Naktong was also home to the Chinnan and Pyŏnhan, two of the Three Han states that came into being prior to the Three Kingdoms. In early first c. C.E., the walled-town state Saro began to expand in this area, and eventually developed into the large Shilla kingdom.

With its ancient history and picturesque scenery, the Naktong River has often been eulogised in Korean literature. During the reign of King Myŏngjong (r. 1170-1197), Yi Hyŏnbo wrote the poem Ŭbu sa (Fisherman’s Song) which is about leaving his government post and coming to the river in order to escape sectarian strife of the time. The poem was actually a modified version of a regional folk song that existed prior to the reign of King Ch’ungmok (r. 1344-1348). In modern literature, the river has served as a symbol of the ancient heartland of the nation. In 1938, Kim Yongho published his long poem Naktong-gang in which he describes the sorrow of farmers forced off their land during the Japanese occupation. This was followed by poems bearing the same title by Yi T’ahû and Ch’oe Han’guk, whose poem was first published in Japan while Ch’oe was living there. In the mid-1950s, Yu Ch’ihwan wrote his poem Kyoreui Ŭmóniyŏ, Naktong-gang iyŏ (Naktong River, Mother of Our People). The river also forms the background of a number of famous novels, particularly those of Kim Chŏnghan.

**Nam Cheju County**

Nam (South) Cheju County is split into two areas which are situated to the west and east of Sŏgwip’o on the southern part of Cheju Island. With beautiful natural wonders and numerous sites of historical interest, the county is a popular destination for tourists visiting the island. On the eastern edge of the county stands Mt. Sŏng’s sunrise peak. South of the peak, lies the popular Shinyang and P’yo’sŏn beaches. Located on one of the most remote sections of the island, P’yo’sŏn Beach was relatively undeveloped as a tourist site until the 1970s, when a newly constructed road reduced the travel time from Cheju City to an hour. Inland from P’yo’sŏn Beach, lie the Sŏng-ŭp Folk Village. Here, tourists can see an entire village constructed in the traditional Cheju style.

Many historical relics are located in the county. In the Taejong Township, excavations have unearthed signs of dwellings dating from the Bronze Age. Several dolmens have also been discovered in this area. There are also several buildings dating from the Chosŏn period, including the Chŏnggŭi Hyanggyo (County public school) and Ilgwanhŏn, a government office. These two buildings have been designated Cheju Province Tangible Cultural Asset No. 5 and No. 7 respectively. In Nam Cheju County, there is also a monument to Hendrik Hamel. In 1653, Hamel along with other Dutch sailors was shipwrecked on the Cheju Island coast. The crew was subsequently detained in Korea for thirteen years. After repeated attempts to go back to their homeland, some of the seamen finally managed to return via Nagasaki, Japan. When he reached Europe, Hamel eventually published an account of his experiences.
Agriculture plays an important role in the county’s economy. Sweet potatoes, rape, beans and barley are all grown here along with a number of warm weather crops such as tangerines. Livestock and poultry also play an important role in the local economy. In addition, numerous fishing boats operate out of small harbours such as Sŏngsan and Mosŏl port. Except for several food processing plants, there is relatively little industrial development in the area.

Nam Mountain (Nam-san)

Kyŏngju’s Mt. Nam

Mt. Nam is situated south of Kyŏngju in North Kyŏngsang Province. During the Three Kingdoms Period, Kyŏngju, then known as Sŏbŏl or Sŏrabŏl, was the Shilla capital. The small chain of mountains known as Mt. Nam formed a natural barrier protecting the southern approach to the city. The mountain’s two highest peaks are Suri Peak (494 metres) and Kŭmo Peak (468 metres). The areas to the west and east of Mt. Nam are called Western and Eastern Mt. Nam respectively.

In total, the Mt. Nam area has over forty valleys, and of these, only a few lack sites of historical interest. The area contains relics from the stone age, dolmen dating from the bronze age, and countless historical artifacts. Although many of these have been moved to the Kyŏngju or National Museum, many can still be seen in situ.

In particular, the mountain has a great number of historical sites associated with both Shilla and Greater Shilla culture. There is the Na Well (Najŏng) where Shilla’s first king, Pak Hyŏkkŏse, is said to have been born, and near the site of the ancient palace, one can still see the old foundations of an armory and provisions storehouse built during the reign of King Munmu (r. 661-681).

Since Mt. Nam was considered a sacred mountain by Shilla Buddhists, there are also approximately 78 Buddha statues as well as evidence of about 61 stone pagodas. In Ponghwa Valley, there is the famous Ch’ilbul (Seven Buddha) Hermitage. Among the numerous Buddhist artifacts found at Nam-san, the relics at this site are the greatest in both scale and design. The site gets its present name from the carving of seven Buddha images, dating from the Shilla period. Countless other carvings, full-figure, in intaglio, and in relief, are found throughout the area.

With such a large number of important historical objects, Mt. Nam has sometimes been called an open-air museum. Numerous tourists and historians frequent the area to learn about Korea’s ancient historical heritage. Knowledge of Mt. Nam’s history continues to grow as archaeological excavations continue to uncover further clues to Korea’s past.

Seoul’s Mt. Nam

Seoul’s Mt. Nam (Nam-san), also known as Mt. Mongmyŏn, is situated north of the Han River. This 265-meter high mountain has traditionally served as a popular resort for people living in the capital. It has now been made into a park. A cable car runs up to Namsan Tower. From here, visitors can get a panoramic view of the city.

Bibliography

Nam River
The Nam River is a tributary of the Naktong River which flows south from Mt. Togyu in South Kyongsang Province’s Hamyang County to Chinju before turning northeast to meet the Naktong in Haman County’s Taesan Township. On its 186 km.-long course, the river joins with the Tökch’ŏn River as well as the Im, Wi, Yang, Pinyŏng and Haman Streams. During summer, the riverain receives heavy rainfall when low pressure fronts from the southwest meet the Sobaek Mountain Range to the north. As a result, the area was previously subject to periodic flooding, but river levels were contained with the construction of the Nam River Dam in 1970. As well as its main function of flood control, the dam provides irrigation water to the surrounding area and generates electricity for use by Chinju and the Chinsam Industrial Area.

Nam Yangju

Situated in Kyonggi Province northeast of Seoul, Nam Yangju is comprised of the towns of Oebu, Chinjŏp and Hwado, and the townships of Pyŏllae, Sudong, Choan, Chin’gŏn and T’oegywŏn. Located at the southern end of the Kwangju Mountain Range, the city contains several peaks including Mt. Ch’ŏlma (711m), Mt. Ch’ŏnma (812m) and Mt. Yebyong (683m). The northern and southern branches of the Han River converge at the southern end of the city.

Due to the city’s rapid urbanisation, there has been a steady reduction in cultivated land. In addition to rice, barley and other grains are grown here along with some vegetables and fruits. In the mountainous areas, chestnut and pine nuts are also harvested. Dairy farming, chicken, pig and deer breeding are other important sources of income for local residents.

Centred around Oebu, the city’s factories produce a number of items including textiles and electronics; however, in the greenbelt areas of the city that border Seoul, development is restricted. On the Han River at Oebu’s P’aldang Village, there is the P’aldang Dam, which provides electric power and water to the Seoul metropolitan area.

Easily accessible from Seoul, the city has an active tourist industry. In the winter, Seoul residents frequent the Ch’ŏnma Ski Resort. In the summer, the area’s mountains are popular weekend destinations for hiking and picnics. In Chinjŏp Township’s Pup’yŏng Village, one finds the Kwangnŭng Spring. Believed to have medicinal effects, the water is said to be especially good for women and children. On the Han River, there are several popular resorts. The P’aldang Resort is popular with sports fishermen who come to catch carp, mandarin fish, eels and other freshwater fish. The Pam Island Resort, located in Chinjŏp Township, has boats and other recreational facilities.

There are a number of important historical sites in the area. Dolmens have been found in the eastern part of the county and remains from prehistoric dwellings have been discovered in Oebu Township near the Han River. As for Chosŏn period sites, there are numerous important graves including the tombs of Tŏkhŭng Taewŏn’gun (King Sŏnjo’s father), Master Yuryang, Master Chŏng Yagyong (1762-1836, styled Tasan) and Hŭngson Taewŏn’gun (1820-1898) who acted as de facto ruler when Kojong ascended the thrown at the young age of 11. Buddhist artefacts include the bronze bell (Treasure No. 397) at Pongson Temple, which was cast in 1469 and the stone stupa at Sujong Temple. In addition, there are numerous Confucian shrines and monuments scattered throughout the county.

Namdae Stream (Ch’ŏrwŏn County)

Beginning at Suri Peak (642m), Namdae Stream flows for about 44 kms. through Ch’ŏrwŏn County. The stream widens after passing through Kimhwa and then turns north at T’osŏng Village. At Chŏngyŏn Village, it joins the Hant’an River. Part of the Namdae gorge was formerly used to provide access to Mt. Kŭmgang (Diamond Mountains region).
and a railway to the mountain ran along the stream’s banks.

Namdae Stream (T’aebaek Mts.)

Namdae Stream flows some 51 kms. from the eastern slopes of the T’aebaek Mountain Range to the East Sea. The Namdae runs from south to north, close to Highway 35 in Kangnung and joins Wangsan Stream just east of Mt. Chewang (842 m.) to form the Kangnung Reservoir. The stream’s course then changes to the northeast near the Yongdong Expressway to pass through suburban Kangnung. It enters the East Sea at Anmok Beach, at the southern end of Kyongp’o Provincial Park. Much of the beach is of alluvial sand deposited by the stream. The Namdae’s lower section, originally known as Nam Stream, is renowned for its clear water, freshwater fish and eel. It is also the site of the famous Kangnung Tano Festival.

Namdae Stream (North Cholla Province)

As a tributary of the Kūm River, Namdae Stream flows for about 10 kms. from Mt. Minjuji, Mt. Taedok and other peaks of the Sobaeck Range, through the northeastern part of North Cholla Province’s Muju County. Because of the rugged terrain through which it passes, almost no flood plains have developed along the stream’s banks. During the Three Kingdoms era, the stream ran along the border separating the kingdoms of Shilla and Paekche. Even today, there are dialectical differences between the residents of Mup’ung Township (which belonged to Shilla) and Sōch’ŏn Township (which belonged to Paekche). With clear water and picturesque surroundings, Namdae Stream attracts large numbers of local visitors. The section of the stream between Naep’o Village and the Kuch’ŏndong Valley is an important habitat for Korea’s marsh snail (*Semisulcospira libertina)*.

Namdae Stream (North Hamgyŏng Province)

Namdae Stream flows 99 kms from the Mt. Kodu area in North Hamgyŏng Province to the East Sea. The upper section of the stream is dotted with oddly-shaped rocks and runs through a heavily-forested area. Without deviating, the stream flows down the steep slopes of the Hamgyŏng Mountains, and its force erodes the area along its course, depositing large quantities of sand and silt. In Kilchu County, however, the Namdae has created a fertile plain. The Hyesan Railway Line, which is used to transport forest products from the region, runs parallel to the stream.

Namdae Stream (Kangwŏn Province)

With its origin in the northwest part of Kangwŏn Province’s P’yŏnggang County, Namdae Stream (also known as the Shinch’ŏn River) flows north through Anbyŏn County before entering the East Sea. Some 82 kms. long, its tributaries include Yongji Stream, P’ŭngnam Stream and Namsan Stream. On its upper reaches is Kujo Valley, a popular resort area containing Sambang Waterfall, Ko’um Waterfall and the Sambang Mineral Spring. On the stream’s lower reaches lies the Anbyŏn Plain. With its efficient irrigation system and blessed with fertile soil, the plain is famous for the production of high quality rice.

Namdae Stream (South Hamgyŏng Province)

With its origin in Pukch’ŏng County in South Hamgyŏng Province, Namdae Stream runs south for 65 kms. before entering the East Sea. As it descends the steep slopes of the Hamgyŏng Mountain Range, it joins with T’ongp’al and Kŏsŏ streams. With its rapid descent, it picks up large quantities of silt. Along its lower reaches, the stream widens as it merges with Munsŏng Stream. In this confluence is the Pukch’ŏng Plain. Apples are one of
the main agricultural products grown in this region.

**Names, Korean**

Names (*irūm*) are the means by which people distinguish themselves from others. There is an old Korean proverb concerning names, which runs, 'Heaven does not conceive a person without providing a stipend, and the earth does not produce a solitary blade of grass without giving it a name'. Like the objects of nature, all people have names. Moreover, a name transcends a mere label, acting as an extension of the person; the importance of a name is also reflected in the Korean proverb, 'A tiger dies and leaves behind its hide, while a person dies and leaves his name'. Hence, it is arguable whether a name in itself conveys individuality.

In Korea, there are various types of names. There are those that are officially registered and can thus be labeled an 'official' name. Then there are childhood names, nicknames, pen names, and courtesy names that were traditionally given to a male at his coming of age ceremony. Official names are generally composed of a surname, or *sŏng*, and a given name that has two Sino-Korean characters. A pen name (*ho*) was traditionally acquired when a person’s scholarship or virtue had risen above a certain level, and therefore, represents the achievement of a specified level of respect. The use of courtesy names (*cha*) was designed to prevent the careless use of a person’s given name, and childhood names and nicknames were used for young people. In former times, women were generally given only a childhood name, with no official name. After marriage, however, women were referred to by their in-laws using a *taekho*, which was derived from the woman’s family home, and this would serve as their title. A woman who displayed an extraordinary level of virtue would be awarded a *tangho*, which was similar to the pen names of men.

**History of Names**

The oldest extant Korean histories are the *Samguk sagi* (History of the Three Kingdoms) and the *Samguk yusa* (Memorabilia of the Three Kingdoms). Both works begin with the introduction of characters and an interpretation of names, which bespeaks the importance of names. The founder of Koguryŏ was Chumong, a skilled archer, and accordingly the word ‘*chumong*’ means to be skilled in archery in the colloquial language of Puyŏ. Pak Hyŏkkŏse was the founder of Shilla, and his surname Pak was derived from the fact that he was born of a large, gourd-like egg (with ‘*pak*’ meaning a ‘gourd’). Moreover, the name Hyŏkkŏse has been interpreted as meaning the ‘one who governs the world with light’, which alludes to the benevolence with which the king ruled. The surname Kim was taken from the fact that the family founder was born of a money chest. Hence, it is clear that names were not chosen by coincidence even in the earliest days of the Korean kingdoms, and that they were imbued with much meaning.

While Chinese characters were introduced to the Korean peninsula about 1,500 years ago, pure Korean words were used for all people’s names, regardless of social position, until about the seventh c. By Greater Shilla, however, the aristocracy came to be heavily influenced by Chinese culture, and thus Sino-Korean character names began to appear. Heretofore native Korean names for official positions, place names and names of people were changed to Sino-Korean names. One notable example is the title for king, which in the early days of Shilla had been designated with native Korean words such as ‘*kŏsŏgan,*’, ‘*ch’ach’aung,*’, ‘*isagtum,*’ and ‘*maripkan*’ before the Chinese term ‘*wang*’ was adopted in the early sixth c. Shortly after this time, the people of Shilla also began to use Chinese-style names, meaning not just Sino-Korean character names, but also a family name (*sŏng*). The
present style of names such as Kim Yushin or Ch’oe Ch’iwŏn came into use during Greater Shilla. Of course, the use of Sino-Korean character names was limited to those in the upper class and the commonality continued to use native Korean names.

**Koryŏ**

The adoption of Sino-Korean style names that had begun in Greater Shilla was further consolidated during Koryŏ. King T’aejo (r. 918-943), the founder of the kingdom, awarded those who had assisted him in its establishment, with family names. Also, by Kwangjong’s reign (949-975) and the implementation of the government service examination system in 958, Chinese culture had permeated Koryŏ society thoroughly, and it is safe to assert that there were few members of the upper class who did not use Sino-Korean names. With the promulgation of a law in 1055 which required all who desired to sit for the government service examinations to have a Sino-Korean name, the predominance of the Chinese style names over native Korean ones was complete among the upper class. The adoption of this regulation would seem to indicate that the commoners of this period still retained native Korean names.

**Chosŏn**

With the fundamental policy of the Chosŏn government focussed on the elevation of Confucianism and the suppression of Buddhism, Chosŏn society became increasingly based in Chinese civilisation. It was the upper class, however, that adhered to Chinese culture, while the lower class continued to use native Korean names. From examinations made of military registers and records preserved at temples, it is known that women and lower society men continued to have native Korean names, with only those in the upper-class using Sino-Korean names. The use of Sino-Korean character names, which were more esteemed, and the retention of Korean names by those at a lower level of society, reflects the social status of the classes. Thus, the phenomenon of the widespread adoption of Sino-Korean character names by Koreans is seen as a comparatively recent event. Testimony to this is a census conducted by the Japanese Government General in Korea in 1910, which reveals that over fifty per cent of the population did not have family names. From this, it is evident that having a Sino-Korean character name was directly related to a person’s status, and that many commoners or lowborn members of Chosŏn society had no need for a Sino-Korean character name.

During the colonial period one of the harshest impositions on the Korean people was a requirement that they adopt Japanese names as part of the obliteration of Korean culture. Thus, those Koreans who wished to have any dealings with the government or official agencies were forced to take Japanese names. Naturally, one of the first acts of the Koreans after liberation was to abrogate their Japanese names and once again assume their age-old names.

**Korean Surnames**

Korean surnames are quite unique in several respects when compared to those of neighbouring China and Japan. The form of Korean surnames is generally one Sino-Korean character like those in China, although there were twelve two-character names recorded in the 1985 national census, with Namgung and Hwangbo being the most common of these. Perhaps the most notable feature is the very small number of surnames in Korea compared to those in use in other countries. Where China can provide nearly two-thousand six hundred Chinese-character names and Japan almost one hundred thousand different surnames, Korea has a relatively small number of around two hundred and seventy surnames, as of the mid-1980s. Five alone of the Korean surnames (Kim, Yi, Pak, Ch’oe and Ch’ong) account for more than fifty per cent of the population. As a result, there are various proverbs concerning the commonality of these names and the competition
between them as reflected in sayings such as, "The surnames of the lowborn class are not Kim, but instead Yi", or vice versa.

While the number of surnames in Korea is unusually small, this is not to imply that all who bear the surname of Kim or Pak are of the same family. Surnames are further differentiated by family origin, or pon'gwan, which indicates the location of a person's ancestral home. Thus, while there were over 8,700,000 individuals with the surname Kim in 1985, there were also some 285 different pon'gwan for these people. In all, there were 3,435 different pon'gwan recorded in the census of 1985, so in reality the number of different surnames and pon'gwan is actually quite substantial. Other surnames with the largest number of pon'gwan are, predictably, Yi with 241, Pak with 128, Ch'oe with 127 and Ch'ong with 122. The five largest lineages then, are the Kim family of Kimhae with over 3,800,000 members; the Miryang Pak family with 2,700,000; the Ch'onju Yi family with 2,300,000; the Kyongju Kim family with 1,500,000 and the Kyongju Yi family with 1,200,000, as shown by 1985 statistics. Of course, the degree of consanguinity among the various branches of these large lineages is quite vast, and naturally, there are many sub-branches within them.

Aesthetics of Names

Since a person's name represents a life-long appellation and is also an extension of the person, the selection of a name for a child is not a trivial affair. Moreover, in former times the selection of a name was also thought to be of the utmost importance in determining the fate of the child. In both past times and present there are Koreans throughout the country who offer their services in selecting a name, which is indicative of the importance given to this task. Accordingly, a whole system of beliefs and practices has developed around the selection of names.

With surnames being inherited from a person's ancestors, naming in Korea implies the selection of the two Sino-Korean characters that form the given name. Further, since the first of the two Sino-Korean characters is often a generational character, the process of naming involves the selection of a single character. The generational character is shared by all members of a lineage in a single generation, and this is considered an age-old practice, with records of this custom extending to the Koryó period. The single character, then, is chosen in respect to its harmony with the other two, more or less, fixed characters of the name.

The first characteristic of selecting a good name is that it sounds soft and clear. If the name has a harsh sound, the impression of the listener may be the same. And since the Korean language has many phonological sound changes that are the result of various morphemes coming into contact with each other, these possible changes must be considered when selecting a name. The second characteristic of a good name is that it is harmonious in regard to its components. Thus, the vowel harmony of the name is quite important to avoid names that are overly bright or heavy. Third, it is essential that commonly used Sino-Korean binomials be avoided, in order to not create a trite sounding name. In selecting a name, the meaning should be as impartial as possible. Fourth, the visual balance of the characters is also important and should be neither too complicated in writing nor obscure in meaning. Hence, the fundamental ideologies of selecting names lie in the quest for harmony in both meaning and sound.

Namhae County

Located on islands just off the coast in South Kyongsang Province, Namhae County is comprised of the town of Namhae and the townships of Kohyon, Nam, Mijo, Sangdong, Sangju, Sŏ, Sŏlch'on, Idong and Ch'angsong. Made up of seventy-nine uninhabited islands and two inhabited islands, the county covers an area of 354.31 square kilometres
and as of 1988, had a population of 80,641. Influenced by warm currents of the southern coast, the county’s weather is mild, with an average annual temperature of 14.2°C. The county receives an average yearly rainfall of 1,452mm, making it one of the wettest areas in Korea.

Approximately twenty-five per cent of the county’s total area is arable. Of this, about sixty per cent is used for rice growing and the rest for dry-field crops such as barley and other grains, legumes, sweet potatoes and garlic. About fourteen per cent of the population is employed in fishing and related industries. There are eighteen or so factories in the area, and a shipyard in the town of Namhae that builds small craft. Since the Namhae Grand Bridge opened in 1973, access to the mainland has become much easier. Express and ordinary passenger ferries are in service between Noryang Village in Solch’ŏn Township, Yŏsu, T’ongyŏng and Pusan.

With its numerous islands and high mountains, the county boasts a large number of scenic attractions. Sangju Beach, located about twenty kilometres south-east of Namhae, is one of the areas top tourist spots. Made up of fine sand, the beach is two kilometres long and sixty to one hundred and fifty metres wide. Mature pine trees form a dense belt along the coastline. Popular in the summer as a swimming spot, the beach is also used by sportsfishermen and hikers. Other popular tourist destinations include Songnam Beach in Mijo Township, Yongmun Temple, Hŭibang Temple and Pori Hermitage Situated on Mt. Kâm (701m), Pori Hermitage is surrounded by spectacular rock formations. From the temple, there is a commanding view of the southern coastline. Within the temple compound lies Chwasŏndae, a rocky bluff where Grand Master Wŏnhyo is said to have meditated. Nearby, there are two rock caves. The hermitage is famous as one of Korea’s major prayer retreats.

The area has a number of interesting traditions. Sŏksa nori (stone-throwing) has been handed down in this region. Also called sŏkchŏn, it is played mainly on Ch’usŏk (the 15th day of the 8th lunar month) along with a Ssirum (Korean wrestling) tournament. In this simple game, contestants throw fifteen fist-sized stones at a target on a vertically-set two-metre long log (ten-fifteen centimetres circumference), from a distance of about fifteen metres. Each contestant throws the set of stones five times and the one who records the most hits is the winner.

The most common village ritual in this region is the Tangsanje (Shaman ritual to the guardian spirit of the mountain). In addition, a P’ungoje (Shaman ritual to pray for a bountiful catch of fish) is observed on the shore in Kach’ŏn Village. The entire village performs this ritual on the 23rd day of the tenth lunar month at the site of two large boulders which symbolize a man and a woman.

Namhan Mountain

As the counterpart of Pukhan (North of the Han) Mountain, Mt. Namhan gets its name from its location south (nam) of the Han River which flows through Seoul. Rising 460 metres, this granite mountain has historically served as a natural barrier protecting the Seoul area from invasion. In 672, after Shilla had unified the Korean peninsula, a few stone fortifications were built on the mountain. In 1621, during the Chosŏn Period, a much larger network of stone fortifications were built, remains of which can still be seen today. The mountain has a long history as an important battleground. During the Manchu Invasion of 1636, King Injo (r. 1623-1649) fled to the fortress and held out for over forty days before finally surrendering. The victorious Manchu armies burned down the buildings of the fortress. In 1744, the stone walls were repaired and temporary palace quarters were built. Buddhist monk armies (sŏnggun) were also stationed on the mountain, and nine monasteries were constructed to meet their needs. However, the fortress suffered further damage during the Korean War. In order to protect the mountain’s important historical
heritage, the area was designated a provincial park in 1971.

Namin (Southerners)  [History of Korea]

Nammyŏng chip (Collected Works of Nammyŏng)

Nammyŏng chip is a literary collection of Cho Shik (1501-1570, styled Namyŏng) a scholar of the Chosŏn period. The work was published by Cho's disciples in 1604 but this first edition, save for the preface to the work which is recorded in Sŏae chip (Collected Works of Sŏae), is no longer extant. Once more in 1622 Cho's cortège led by Chŏng Inhong published this five volume, three-fascicle work using woodblock print. The work was republished for the third time in 1636 by another of his followers, Pak In, and this time was comprised of nine volumes. In 1640 the original collection was reissued as a five-volume, five-fascicle work, and a supplement of nine volumes in three fascicles was also published. Then in 1764 these two editions were combined into fourteen volumes in eight fascicles.

This work contains a wide variety of writings by the author including poetry, odes, theses, personal letters, memorials to the throne and many other writings that expound the author's theories concerning the universe and laws of nature. Cho was keenly interested in the behaviour of men and how they progress towards cultivation of their minds and knowledge on the ways of the universe. He is often highly critical of Daoism and Buddhism in his writings and advocates self-discipline. The photo-reproduction of this collection has been printed in recent years by Asea Munhwa Sa, and a modern translation of the original text by Turyu Munhwa Yŏnggu."o.

Namp'o (see Chinnamp'o)

Nam P'ot'ae Mountain

Situated in Hyesan County in South Hamgyŏng Province, Nam P'ot'ae Mountain (2,485 meters) is part of the Mach'ŏllyŏng Mountain Range. To the north of the mountain lies Puk P'ot'ae (2,289 metres), to the west, Mt. Sobaek (2,174 metres), and to the south, Changgun Peak (2,108 metres) and Paeksa Peak (2,099 metres). Nam P'ot'ae is characterised by steep slopes; however, it has a relatively flat summit made up of seven peaks of roughly the same height. As with the other high peaks near Mt. Paektu, this mountain was formed through volcanic action.

Namsan Public Library

Namsan Library is situated on the western edge of Namsan Park in the centre of Seoul. The library has a wide coverage of subjects in its holdings, and the building has reading rooms for students and researchers. Facilities include a multi-media room (second floor), a language and literature room (third floor), a natural science room (fourth floor) and a room devoted to liberal arts and sociology (fourth floor). For the disabled, the library offers a special service, with books, computerised indices and internet access. After a disabled user has registered with the library, she or he can telephone or fax the library to request items by mail. On the second floor, there is also a facility which provides employment information and internet access for job searches. In addition, the library has set aside rooms where it runs special classes and seminar of interest to the public.

Namwŏn

Situated in the southeast corner of North Chŏlla Province, Namwŏn is comprised of the town of Unbong and the townships of Kŭmji, Tŏkkwa, Tong, Taegang, Taesan, Pojŏl,
Samae, Sannae, Songdong, Suji, Ayong, Ibaek, Chusaeng and Chuch'on. The present city was formed when Namwŏn was expanded to include those areas previously known as Namwŏn County. Panyya Peak (1728m), T'okki Peak (1534m) and Myongsŏn Peak (1586m) rise in the southeast corner of the city, Mt. Ch'ŏnhwang (910m) stands in the north, and Mt. T'aedu (775m) in the south. The area has an average temperature of 11.8°C and receives 1250mm of rain each year.

Most of the area's agriculture is devoted to rice cultivation, but some dry-field crops are grown including tobacco, green vegetables, medicinal herbs and sansongi mushrooms. Chestnuts and walnuts are also grown here. As for industry, there are raw silk processing plants, cigarette factories and rice-hulling operations.

The area has a large number of tourist attractions. In the southeast corner of the city lies part of Mt. Chiri National Park (See Chiri Mountain), perhaps the nation's foremost hiking area. Just southeast of the city centre is the Namwŏn Tourist Complex. From here, one can visit Kwanghallu (Treasure No. 281), a famous pavilion originally called Kwangt'ongnu when established by Hwang Hui in 1419. Next to the pavilion is Kwanghallu Garden. The spot is famous as the place where Ch'unhyang, the heroine of the novel Ch'unhyang chŏn, met her lover. Nearby one finds Ojak Bridge and Ch'unghyangsa, a shrine dedicated to Ch'unhyang. Built in 1920, the shrine houses a painting portraying the legendary Ch'unhyang. Within the area, can be seen the ancient Taebok Temple, as well as the Manbok Temple site.

Historically, the area's most important monastery is Shilsang Temple in Sannae Township's Ipsok Village. The temple was founded by Hongch'ŏk in 828 as one of the 'nine mountain' Sŏn (Jap. Zen) centres (Kusan Sŏnmun). Within the temple complex, there are ten or so artefacts of historical significance. In Chuch'on Township's Yongdam Village can be found the Yongdam Temple site. The temple which stood here was founded during the reign of Paekche's King Sŏng (r. 523-554). Legend has it that a large serpent, which lived in a pond near the site before the temple was built, destroyed crops and killed local villagers. The monk Tosŏn built a temple here naming it Yongdam (Dragon Pond) Temple. From this time, the serpent was never seen again. The standing stone Buddha (Treasure No. 42) found here dates back to the early Koryŏ Kingdom. There is also a slender seven-storey pagoda at the site. Built during the late Koryŏ period, this 9.95-metre-high structure has been designated North Ch'olla Province Tangible Cultural Asset No. 11. Other important Buddhist artefacts in Namwŏn include an interesting Koryŏ-era Buddha figure carved out of a large rock in Taesan Township's Shin'gye Village.

Confucian schools in the city include Unbong Hyanggyo (founded in 1410 and moved to its present location in 1640), the extensive Namwŏn Hyanggyo (founded in 1410 and moved to its present location in 1443), Ch'angju Sŏwŏn founded in 1579, Unbong Sŏwŏn (founded in 1639), Yogye Sŏwŏn (founded in 1692), Yongam Sŏwŏn (founded in 1635), Tugok Sŏwŏn founded in 1766 and Iho Sŏwŏn founded in 1837.

The Namwŏn Sŏdang (village schools), unlike most Confucian private schools, is still active. Run by the Kaengjong Yudohoe, an association of modern Confucian scholars, the school serves as the headquarters for the nations sŏdang. The students are male and wear traditional Korean clothing and long braided hair. The school's curriculum covers the Ch'onjamun (One Thousand Character Classic), the Four Books (Sasŏ) and the Three Works of Confucian Canon (Samgyong). Namwŏn has, of course, its modern schools, as well as Seonam University in Kwangch'i-dong.

The region's folk culture, is promoted by various festivals and rituals that are held on a regular basis. On 8 April, the Ch'unhyang Festival is held in memory of Ch'unhyang, a woman remembered for her unswerving faithfulness to her lover. The festival includes visiting the tomb of Ch'unhyang, a memorial service for Ch'unhyang, folk music and
games, poetry recitals and a Miss Ch'unhyang pageant.

Nangnim Mountain

Situated on the border of North and South P'yŏngan Province, Mt. Nangnim (2,104 metres) is part of the Myohyang Mountain Range which extends south-west from the Nangnim Mountain Range. The mountain is surrounded by Mt. Ungŏsu (2,099 metres) to the north-east, Hyangni Peak (1,987 metres) to the south-west and Hwang Peak (1,736 metres) to the east. Three gentle ridges run down from the summit. The streams flowing down the mountain's western slope feed into Chiktong Stream, while the run-off from the eastern and southern slopes form the headwaters of the Taedong River.

Nanjangi ka ssoaollin chagŭn kong (Small Ball Launched by a Dwarf)

Nanjung Chamnok (Miscellaneous Records of Times of Turmoil)

Nanjung Chamnok is an unofficial historical account of the disturbances that beset the country from 1582 until 1610 written by Cho Kyŏngnam, a member of the volunteer corps in Namwon. This work is comprised of four volumes in two fascicles and is hand-written. It includes accounts of the events surrounding the 1592 Japanese Invasion from the author’s perspective as a participant in the volunteer corps, and other important occurrences throughout the nation are also detailed. Volume one of the work covers the period from 1582 until the seventh month of 1592, volume two from the eighth month of 1592 until the sixth month of 1593, volume three from the seventh month of 1593 until the end of 1598, and the fourth volume from 1599 until the second month of 1610.

This work provides insight into the activities of the people and defence forces during the Japanese invasion, and therefore is valuable for research on this time in Korea. Moreover, the book also provides useful data concerning the politics, social conditions, economic activities, military organization and culture of Korea during this period.

Naro Island

Situated off of Korea’s southern coast, Naro Island is actually two islands, known as the Inner (nae) and Outer (oe) Naro islands, separated by a narrow strait. Administratively, the islands belong to Pongnae Township in South Cholla Province’s Kohŭng County. 1986 statistics show the islands as having a population of 11,341. The region’s topography is characterised by low hills of between 100 - 200 metres in elevation with Mt. Mach’i (380m) and Mt. Changp’o (360m) at the southern end of Outer Naro Island.

The island’s agriculture is generally limited to garlic and barley fields situated on reclaimed land along the coast. From 1966, the island was developed as a commercial fishing centre and fishing remains the main source of employment. Over time, a shipyard, freezer facilities and marine product processing plants have been built here. Local fishing boats bring in catches of anchovy, sea bream, filefish, hairtail and harvest fish (Pampus argenteus). However, the fishing industry in the islands is now in decline as a result of depleted fish stocks and competition from Ŷŏsu, Pusan and other large ports.

Tourism is centred around Narodo Beach which is located on Outer Naro Island. This 1.5-kilometre-long white sand beach is ideal for young children since the water remains shallow for about 100 metres from the high-water mark. Next to the beach, there is a pine forest with trees of 250 to 300 years old. During the summer, visitors flock to the area to swim, fish and buy marine products at wholesale prices. To the west of the beach, is Pongnae Temple. Outer Naro and the southern coast of Inner Naro have been designated as part of Tadohae National Marine Park.
There are several sites of historical interest on the island In Shin’gum Village on Outer Naro Island, plain pottery and carved bone implements have been excavated from a shell mound. In Pongnim Village, there is a stone fortress (2 metres high and 504 metres in circumference).

The islands are well served with schools -- five primary, two junior high and one high school.

**National Academy of Arts**

Located in Seoul’s Sŏch’o Ward, NAA (Taehan Min’guk Yesurwŏn) was established in July 1954 with Ko Hŭidong as chairman. The Academy exists, inter alia, to increase institutional support for the development of the nation’s cultural heritage; to enhance the status of artists; and to promote both domestic and international exchanges in the field of art. As part of its promotional activities, the Academy offers awards to those who have made significant contributions to the advancement of Korean art, or performed outstanding research, as well as to artists who have produced notable works. It also serves in a consultative capacity to the government concerning issues that affect the development of traditional culture and art. NAA publications include Yesurwŏn bo (The NAA Gazette); *Han’guk yesul chi* (Journal of Korean Art); Yesul nonmun chip (Collection of Art Treatises); and *Han’guk yesul ch’ongjip* (Comprehensive Collection of Korean Art).

**National Academy of Science**

The National Academy of Science (Haksurwŏn) is located in Sŏch’o ward in Seoul. It is established in 1954 in order to renew institutional support for the development of the sciences and enhance the statusus of scientists in Korea. The academy serves as a consultant to the Ministry of Education regarding scholarly works, science, language and culture. In addition, it awards scientists and writers who have produced outstanding works of scholarship.

**National Agricultural Cooperative Federation**

The National Agricultural Cooperative Federation (Kukhoe Tosŏgwan) was founded on 20 February 1952 in Pusan, the provisional capital of the nation during the Korean War. The library initially housed a modest collection of 3 604 volumes, and was managed by four staff members. In 1975, it was moved to the National Assembly Building in Seoul’s Yŏido and then transferred to new accommodation in 1988. The library was reorganised in 1994, at which time the staff roll was two-hundred and seventy-six.

Today, the library acquires, processes, analyses and manages information in support of the legislative processes and the oversight of state affairs by National Assembly Members in accordance with Chap. 11, Article 1 of the National Assembly Library Statute. Administratively, it comprises the Legislative Research and Analysis Office; the Acquisition and Processing Bureau; the Reference Service Bureau; the Information Technology Management Bureau; the Office of Planning, Budgeting and Auditing; and the General Services Division.

The library’s total collection is in the order of 1280 000 volumes, including 14 350
periodicals, 820 newspaper subscriptions, 370,000 Korean master's and doctoral dissertations, 1,700 maps and over 500 art pieces. In addition, bound newspapers, microform materials, audio and video tapes and CD-ROMs are available. The library also has about 700 computer terminals, which are connected to the National Assembly Total Information On-line Network (NATION) via a local-area network (LAN) system, making it possible for users to obtain information from library databases and commercial information services while working in their own offices.

National Conference for Unification

National Defence

History

The first Korean states such as Ko Choson, Puyò and Samhan defended themselves against an increasing number of northern invaders, without a systematic organisation of their military forces. However, these states developed locations that were conducive to the defence of the people, such as hillside plateaus. They surrounded their central territory with earthen walls to provide protection from attack. The hostile engagements among the small states that dotted the Korean peninsula were characterised by frequent alliances of the ruling classes so as to increase their societal foundations. The first consciousness about 'national defence' occurred when battles moved away from the hub of the state to its outer reaches, thus minimising damage to the actual foundation of the state. Hence, examining the structure of the military systems of, say, Puyo and Koguryo, it is seen that the presence of military outposts and other fortifications on the outer boundaries of the state become increasingly prevalent. It was this awareness of the importance of keeping invaders at a safe distance from the centre that allowed early states such as Saro and Karak to develop into the early Shilla and Paekche kingdoms.

Three Kingdoms

By the time of the rise of the Three Kingdoms, the structure of government had developed into a centralised apparatus that focused on a monarch and an aristocratic ruling class. National defence consciousness thus gave prominence to the protection of the rulers. The importance of military fortifications such as fortresses also became increasingly significant as war between Koguryo, Paekche and Shilla intensified in the struggle to gain control of larger pieces of territory. The importance of properly administering military outposts can be seen in their incorporation in the structure of the early states. Consequently, in Koguryo the fortresses were under the jurisdiction of the pu, in Paekche the pang, and in Shilla the chu. Conscription of peasants living near the fortresses became commonplace.

Of the Three Kingdoms, Koguryo was best able to merge society with the military, as reflected in the large territory that it controlled in northern-most Korea. Under King Kwanggaeto (r. 391-413) Koguryo greatly expanded its domain, to encompass the northern part of the Korean peninsula, as well as most of modern-day Manchuria, and the Liaodong Peninsula in present-day China. Indeed, Koguryo rivalled the Chinese kingdoms for supremacy in all of northeast Asia, from the fourth through the early seventh centuries. In 612, the Chinese Sui dynasty launched a massive attack on Koguryo with a force said to exceed a million men. The attack on Koguryo’s first line of defence, the fortress at Liaodong, failed and the Sui army was forced to try a frontal assault on the Koguryo capital of P’yongyang. The Sui sent a force of about three-hundred thousand troops for this attack but they were lured into a trap at the Salsu River (now Ch’ongch’ón River) by the Koguryo general Ulchi Mundok, and were virtually annihilated. In the aftermath of the battle, less than three-thousand troops stood to be counted. The Sui was forced to cease its attack, and crippled by its losses, it was soon overthrown by the Tang dynasty. Koguryo
was then forced to contend with invasions by the Tang. It repelled these attacks until the Tang allied with Shilla and eventually subdued Koguryô. However, the fact that Koguryô was able to hold out for a period of nearly fifty years, although outnumbered by attacking Chinese forces, indicates its achievements in military organisation and national defence.

The military organisation of Shilla prior to unification of the peninsula, was centred around six garrisons (chöng), each commanded by a member of the Shilla aristocracy. The troops in each of the chöng were carefully selected and highly motivated elite forces. The number of chöng increased to ten after the defeat of Paekche and Koguryô. They were supplemented by nine units of the sôdang (oath bannermen similar to personal retainers who had pledged their services to a particular commander). In addition, there were the hwarang (Flower of Youth) of Shilla. These were companies of young men from aristocratic families who were trained in military and cultural affairs. They supplemented the elite troops of the chöng and sôdang. Thus, with the aristocracy participating in military affairs to a high degree, the cohesion of the military and the central ruling aristocracy of Shilla was very strong. This together with the alliance with Tang China, allowed Shilla to eventually defeat its two rivals in the mid-seventh c.

After the unification of the Korean peninsula, the structure of the Shilla military forces was further transformed. The nine sôdang, which had previously been composed only of men from the Shilla capital, were expanded to include those from other areas including Paekche, Koguryô and the Malgal. By the reign of King Shinmun (r. 681-692), the sôdang had supplanted the chöng as the core of the Shilla military, and pledged their loyalty directly to the monarch. Additionally, they were stationed in the capital while the chöng were now located in important defensive locations throughout the kingdom, with at least one chöng in each of Shilla’s nine provinces. Lesser military units provided defence and most likely police services, in the five secondary capitals of Shilla.

Koryô

From the very beginnings of Koryô, there were territorial battles with Later Paekche to the south and the Khitan to the north. National defence and military preparedness thus became important priorities. The founding king T’aæjo (r. 918-943) led the assault of Later Paekche himself, and his personal army became the core of the national army of Koryô. In the reign of King Sôngjong (r. 981-997), the army had been reorganised into the Two Guards (kun) and Six Divisions (wi). The Six Divisions were formed first, and were composed of the Division of the Left and Right (ch’wayne wi), Divine Tiger Division (shinho wi), Elite Striking Division (hängwi wi), Internal Security Division (kâm wi), thousand Bull Division (ch’ongwi wi), and Capital Guards Division (kammun wi). The first three of these were the best of the nation’s combat troops and were charged not only with the protection of the capital, but the frontiers as well. The Internal Security Division functioned as the capital’s police force; the thousand Bull Division was utilised during state ceremonies, and the Capital Guards Division stood watch at the palace and gates to the city. The Two Guards, formed after the Six Divisions, were the highest-ranking armies of Koryô, and acted as the king’s personal bodyguards. In addition to the Two Guards and the Six Divisions, there were also provincial armies that were formed from the private troops of the gentry families and brought under government control as the Resplendent Army (kwanggun). This army was later reorganised into provincial garrison forces and stationed at various locations along the northern border of Koryô.

King T’aæjo viewed his new kingdom as the successor of Koguryô and thus sought to regain the domain that the earlier kingdom had enjoyed. Therefore, Koryô had a policy of northern expansion from its inception and this brought the kingdom into constant conflict with the peoples of the northern regions. The Khitan, for example, who had overrun Parhae in the northern reaches of the peninsula and Manchuria but were now an obstacle to an expansionist Koryô. Inevitably the two states collided. After Koryô built six garrisons
to the south of the Yalu River, the Khitan launched a number of attacks. These were initially successful and Khitan demanded various concessions from Koryŏ while occupying territory as far south as Kaesŏng. The Khitan, however, withdrew from Koryŏ before the desired settlement was obtained. In 1018, a third major Khitan invasion force was annihilated at Kuju by a Koryŏ army led by General Kang Kamch' an (948-1031). The two nations then entered into a state of coexistence and their relations were conducted in a mostly peaceful manner.

Other states to the north of Koryŏ caused problems for the Korean kingdom such as the Jurchen people’s who came to power in the early twelfth c. Koryŏ had sought to prevent attacks from the north by constructing a wall from the mouth of the Yalu River in the west across the peninsula to the East Sea at present-day Yŏnp'o. This massive construction project took some twelve years to complete (1033-1044) and required the labour of thousands of men. It was not, however, entirely effective in keeping at bay foreign incursion and was breached on several occasions. Relations with the Jurchen never culminated in an invasion, as Koryŏ acknowledged the suzerain power of the northern kingdom after it had defeated Sung China in 1127. Hence, it was the submissive posture of Koryŏ that served as its best defence against the Jurchen.

The greatest challenge to the national defence of Koryŏ came with the rise of the Mongol Empire in the thirteenth c. The Mongols had actually assisted Koryŏ with its defeat of a Khitan army in 1219, and they looked on Koryŏ as a tribute state. This view was not, however, shared by Koryŏ and discord between the two nations eventually led to a series of devastating invasions by the Mongols, beginning in 1231. The military-dominated court of Koryŏ fled to Kanghwa Island, and because of their aversion to crossing stretches of water, the Mongols would not attack. The Koryŏ court refused to surrender, while in the meantime the Mongol army pillaged the countryside.

The main element of the Koryŏ army under the military rule of the Ch’oe house was the so-called Three Elite Patrols (samb'yŏlch’o), which had supplanted the government armies with the rise of the Ch’oe military rulers, and now constituted the main source of resistance against the Mongol invasion. The Mongol forces, however, were too powerful and the guerrilla resistance of the Three Elite Patrols proved to be futile in the face of the immense Mongol army. Thus by 1270, with the will to resist of the Koryŏ government broken, and with the termination of the Ch’oe military rule, Koryŏ petitioned the Mongols for an armistice.

Even after ties with the Mongols were broken in the late fourteenth c., Koryŏ never recovered full control of its own destiny or territory. The final years of the kingdom were marked by an increasing number of peasant uprisings, and struggles among the gentry families and military trying to seize power. The gentry families controlled large tracts of land and also had private armies that were designed to protect the interests of the families against any intrusion. Consequently, the foundations of Koryŏ were weakened beyond the point of repair and the kingdom came eventually into the hands of Yi Sŏnggye (King T’aeho, r. 1392-1398) in 1392. He then founded Chosŏn.

**Chosŏn**

The northern policies of Koryŏ were inherited by the new Chosŏn dynasty, which also had to contend with the general disarray of the country’s defences. Accordingly, King T’aeho directed much of his attention to consolidating Chosŏn’s defences. He was unable, however, to centralise control of the military forces of the country due to the prevalence of private armies belonging to members of the royal household. It was left to King T’aejong (r. 1400-1418) to abolish all private armies in 1400, and attach them to the Three Army Headquarters (Uihŭng Sŏngunbup), charged with the supervision and control of Chosŏn military apparatus. The military were again reorganised by King Sejo (r. 1455-1468) in
991

1464 with the establishment of the Five Military Commands (Owi Toch’ongbu), Each consisted of five divisions of troops based in the capital.

The Five Commands (Owi) refers to the five military commands of North, South, East, West, and the Centre. Each of these divisions was charged with the defence of its respective region of the country. The troops in each of the Five Commands were composed of a core of professional soldiers who had successfully passed the military part of the civil service examination. Conscripted soldiers from the commoner class supplemented this well-trained core; but the conscripted portion of the Chosôn army was relatively small and inconsequential to the overall defence of the nation.

Each province had its own land and sea commands, something that proved to be of greater importance than the centrally-located Five Commands. Also, strategically located areas of national defence concern had additional commands. For example, Hamgyông Province, important in defence against the Jurchen to the north, had two army commands, as did Kyôngsang province, to fend off Japanese invasions. Chôlla province had two naval commands to safeguard the lengthy coastline that was vulnerable to raids by Japanese pirates. Garrisons established under the authority of the provincial land and sea commands were composed of commoners who served fixed terms of military duty.

As a means for rapidly communicating messages or information to or from the capital, a system of signal fires was established throughout the nation. In the event that more detailed information was required, Chosôn also had a nationwide post station system that could transport documents quickly.

The threat of invasion from the north and the incorporation of the area up to the Tuman River into the Chosôn domain was accomplished by King Sejong (r. 1418-1450). He established six garrison forts in the northern areas and secured the area as a permanent part of Chosôn. At the same time, an expedition was launched against the Yain in the Yalu region and four outposts were established there, thus securing the area up to the Yalu River as part of Chosôn. The new territory gave Chosôn not only additional land for cultivation, but also made the northern boundary a natural defence line of two rivers. The Yain people were placated by establishing trading posts in the northern areas where they could barter their furs and horses for cloth, farming implements and grains. Moreover, as an additional policy, they were encouraged to settle in Chosôn after pledging allegiance to the Chosôn government. Despite these concessions, the Yain rose up against Chosôn in the late sixteenth c. under the leadership of Nit'anggae and sacked several of the northern Chosôn garrisons. This uprising, quickly repressed by Chosôn government forces, marked the end of the conflicts with the Yain.

Mid-Chosôn experienced two invasions that had disastrous consequences for the Chosôn government and the populace. The 1592 Japanese Invasion, which lasted until 1598, touched nearly every part of Chosôn and soaked up huge national resources. It was only repelled with the assistance of the Chinese Ming dynasty. During this period, however, there were some military innovations that proved to be effective defences against the invaders. The most notable was the so-called ‘turtle ships’ (kôbukson), developed by Admiral Yi Sunshin (1545-1598). These ships gave the Chosôn navy a decisive edge in the sea battles. The turtle ships had cannon mounted at all stations and were protected by what is thought to have been iron-plated cladding, protruding with many iron spikes, designed to prevent an enemy from boarding. Yi’s complete dominance in the sea battles led to the Japanese troops on the Korean peninsula being hampered by poor lines of supply. This resulted in their advance being confined to the south-eastern Kyôngsang Province. Overall, however, the Chosôn army performed poorly in the defence of the nation and many of the victories of the war were secured by volunteer armies or bands of Buddhist monks, who figured prominently in national defence.
The fall of the Ming dynasty and rise of the Qing in China presented another national tragedy for Choson, and eventually resulted in invasions by the Manchu nation in 1627 and 1636. The dynastic change in China presented a difficult issue for Choson, which had pledged loyalty to the Ming. Under the adroit foreign policy of Prince Kwanghae (r. 1608-1623), Choson managed to stay clear of the potentially dangerous situation in China. Kwanghae directed his efforts to enhancing the military and defensive capabilities of the nation. Political turmoil in Choson, however, resulted in Kwanghae’s dethronement and his replacement by King Injo (r. 1623-1649), who was supported by the Westerner Faction (sōin). As a result, Choson adopted a pro-Ming, anti-Manchu policy that proved disastrous. The Manchu were alarmed at the change in the Korean posture and launched their first invasion in 1627, advancing as far south as P'yongsan in Hwanghae Province before Choson sued for peace. The Choson government, however, refused to honour the peace accords and was subjected to a second invasion, led by the Qing emperor, in 1636. Injo then personally surrendered to the Qing emperor and Choson entered into a tribute relationship with the Chinese state.

By the late seventeenth c., a great deal of Western technology had entered Choson through China, and this contributed to the development of small arms, such as muskets. In 1628, a Dutchman, Jan Janse Wellevree, who had been shipwrecked off the coast and was detained at the will of successive Choson kings for the remainder of his life, imparted to Korean artisans his expertise in the casting of metal for ordnance purposes, principally cannons. The isolationist policy of Choson combined with the resistance to change by many in the entrenched ruling class, however, did not permit the realisation of many of the technological advances that had been introduced to Korea. Hence, the defence posture of Choson remained largely unchanged from the sixteenth c. forward, a significant factor in the fall of the dynasty to foreign powers towards the conclusion of the nineteenth c.

In the late nineteenth c. incursions into Korean waters by foreign vessels increased, prompting a renewed interest in the establishment of more effective defence measures. The Hūngsŏn Taewŏn'gun (1820-1898), the father of King Kojong (r. 1863-1907), tried to improve the nation’s defence by increasing armouries for casting cannon and building further defence emplacements. In this period, Choson vigorously pursued an isolationist policy, which was in stark contrast to the modernisation of Japan. This resulted in the Korean nation falling significantly behind Japan in the constantly-changing field of military technology. When Japan decided it wanted its ships to enter Korean ports for trading purposes it used the pretext of the Unyŏ Incident to land a military contingent, backed by two warships, and forced Choson to enter into a treaty that opened its ports to trade with Japan. The realisation of the need for modernisation came too late to prevent the imperialist designs of Japan and the Treaty of Kanghwa (Kanghwa-do Choyak) marked the downfall of Choson.

The final thirty years of Choson witnessed many ‘catch-up’ attempts at the modernisation of military and defence capabilities. King Kojong wished to modernise and reform the military and sought advice from a wide range of foreign military experts, including Russian, Japanese and French. Kojong reorganised the former Five Commands of the capital into the Palace Guards Garrison (Munwiyŏng) and the Capital Guards Garrison (Changgŏyŏng), and created a special military force trained in Western military tactics known as the P'yŏlgigum. However, the political turmoil resulted in the new units being abandoned as Kojong lost power to his father. Adding to the disarray in Choson was the increase in popular uprisings. The most notable was the Tonghak Uprising of the mid-1890s. It led to great social instability, and in the increased presence of Japanese and Chinese troops on Korean soil. After the Sino-Japanese War over Korea in 1894, defence measures were subject to Japanese intervention and Choson had quite simply lost its ability for national preservation, thus ushering in the colonial period, from 1910 - 1945.
Modern Period

Introduction

At the end of World War II, Soviet troops occupied the northern half of Korea, and United States troops the southern half, thus dividing the peninsula into north and south. This divide was tested in 1950 during the Korean War when the North Koreans invaded the south. The war ended in 1953 with a truce agreement re-establishing the de facto division of Korea.

Despite the end of the Cold War and its effects elsewhere in Asia, the Korean peninsula still contains one of the world's greatest concentrations of opposing military forces. North Korea's army of about one million is stationed along a narrow, demilitarised zone (5 kms. wide x 250 kms. long). On the other side are well-armed South Korean forces that number 750 000. The South Korean capital, Seoul, which accounts for thirty per cent of South Korea's population and fifty per cent of its GNP, is only forty kms. south of the demilitarised zone and within eight minutes of take-off by North Korean combat aircraft. These forces remain in place. Until recently, North Korea was seen as unpredictable, combative and more unmanageable than it was at the height of the Cold War when its large communist neighbours, China and the former USSR, were in a position to exercise their economic influence to restrain its behaviour.

Defence expenditure

Defence expenditure in both halves of the Korean peninsula remains relatively high. North Korea has the heaviest burden as it has a smaller economy (1988 GDP $US23 billion), a smaller population (23 million) and fewer resources than South Korea (population 45 million; 1992 GDP $US321 billion). While South Korea spends around 4.0 per cent of its GNP on defence compared to 22.0 per cent for North Korea, the South still spends roughly twice as much as on defence as the North. This disparity has contributed to North Korea's interest in a nuclear option, a relatively cheap but powerful capability.

Armed Services - Republic of Korea

South Korea's armed forces are quantitatively inferior to those in the North. South Korea has an armed force of 820 000, divided into 700 000 in the army, an airforce of 55 000 and a navy of 65 000. Between 1965 and 1973 about 300 000 Korean troops gained combat experience in Vietnam serving under us operational command.

South Korea's military forces are structured for defence. It has fewer mobile forces than North Korea and less than half the number of North Korea's tanks and armoured vehicles. North Korea has a 2.6 : 1 superiority over the South in artillery and multiple rocket launchers. South Korea's navy has a technological edge over the North but is quantitatively inferior. South Korea's airforce consists of about 1 000 aircraft including 480 tactical aircraft and 500 helicopters. It is considered superior to North Korea's airforce in quality and capabilities.

Armed Services - Democratic People's Republic of Korea.

North Korea has an armed force of 1 050 000 personnel. Of the total, about 920 000 are in the army. The army is divided into 144 divisions and brigades including 55 infantry divisions, 23 mechanised infantry brigades, 14 tank brigades (with 3 700 tanks and 2 500 armoured vehicles), 30 artillery brigades (with 10 000 guns) and 24 special forces brigades (with 100 000 personnel). The structure of the North Korean forces shows a bias towards commando, mechanised, armoured and artillery forces (comprising 62 per cent of the total). North Korea maintains a highly trained river crossing-engineering force with over 500
amphibious vehicles and more than 2 300 demountable pontoon bridges.

North Korea's navy is divided into the East Sea Fleet and the Yellow Sea Fleet. It has a strength of 45 000, with 25 relatively old diesel attack submarines, (the second largest submarine fleet in Asia), 48 midget submarines, one frigate, 450 patrol boats, missile boats, torpedo boats and fire support ships. There are also another 270 support vessels, including 100 high speed hovercraft each capable of carrying 30 battle-ready personnel.

North Korea's airforce has a strength of about 82 000 with over 1 600 aircraft including 760 combat aircraft and 290 helicopters. Most of the fighter aircraft are MiG-15/17/19/21s of 1950s and 1960s vintage but there are two regiments with 46xMiG-23s and 1 regiment with 30xMiG-29s. North Korea also has 80 bombers and about 300 light transport aircraft.

North Korea's armed forces are limited by economic bottlenecks caused by a primitive infrastructure, a lack of fuel, a shortage of skilled labor and a lack of access to modern defence technologies. North Korea is, however, continuing to research and develop what the South perceives as offensive weaponry, such as MiG-29s, improved tanks, chemical weapons and short range Scud and longer range Nodong and Taepodong missiles.

Arms Reductions

North and South Korea signed an Agreement on Reconciliation, Non-aggression and Exchanges and Cooperation in December 1991. It was the first official document governing relations between the two Koreas. Both sides undertook to discuss and carry out steps to build military confidence and realise arms reduction, including the mutual notification and control of major movements of military units and military exercises, the peaceful utilisation of the DMZ, exchanges of military personnel and information, phased reductions in armaments including the elimination of weapons of mass destruction and attack capabilities, and verifications thereof.

Numbers of us personnel in Korea have been reduced by 7 000 since 1991 as the US shifts its strategy from a leading role to one of providing support for the South Korean armed forces. Further withdrawals of US forces have been suspended pending improved cooperation from North Korea on the nuclear issue (see below). The US has withdrawn its tactical nuclear weapons from South Korea.

North Korea has called for the reduction of military forces on both sides down to a level of 100 000 each. It claims to have reduced the level of its armed forces with a unilateral reduction of 100 000 in 1987 and a further 150 000 in 1988. Reductions in manpower are a logical step for North Korea which is desperately short of skilled manpower. Most of the demobilised soldiers have been assigned to economic construction battalions and according to South Korean sources, they can be easily re-mobilised.

Posture

For Pyongyang, it is the US that threatens a surprise attack against the North and it is the US and South Korea jointly that present a forward-based offensive posture near the demilitarised zone. According to North Korean officials, South Korea is constantly upgrading the quality and quantity of its air, naval and ground attack weaponry. From the North Korean perspective, the annual combined US/ROK 'Team Spirit' military exercises were provocative and intimidating. The exercises were seen as part of a plan 'to launch a first strike on the north' or an assault on Pyongyang, using 'huge forces from the American mainland and the Pacific' and tactical nuclear weapons carried on submarines offshore or stored in South Korea.

Meanwhile, North Korea's armed forces, mechanised vehicles, tank formations and
artillery are deployed within 100 km. of the DMZ, mostly in underground facilities and tunnels. Two thirds of North Korea's airforce are located at forward airfields close to the DMZ. There were reports that North Korea had prepositioned military supplies in hardened underground sites near the demilitarised zone, trained special river-crossing units and deployed new mechanised army brigades near Kaesong to the west of Panmunjom. US assessments concluded that North Korean forces were so deployed in forward assembly areas and were ready to strike at such short notice that warning time was as low as four hours. North Korea was seen as 'perched on the starting blocks with a capability to surge and scramble in a hurry' in a classic blitzkrieg across the demilitarised zone towards Seoul, using heavy fire-power and armoured and mechanised units.

The United States rejects the view that North Korea's forces are postured for defence and that they need to dig in close to the DMZ because of vulnerability to air attack.

Military Aid

South Korea's armed forces have been armed, trained and equipped by the United States. The US has provided large quantities of military equipment and defence technology to South Korea as either grant aid (the total between 1950-1988 was around US$5.64 billion); or, after 1974, foreign military sales under concessional finance (US$6.48 billion). American training of around 36,000 South Korean military personnel has also helped transform the South Korean armed forces into one of the best equipped in Asia with modern aircraft like the F-16, M551 light tanks, and the Stinger air-defence system. US technological assistance has been instrumental in establishing the South Korean defence industry. Today, South Korea is almost self-reliant in the production of arms and military equipment, including modern frigates, helicopters, missiles, self-propelled artillery and tanks. US military and financial aid for South Korea since the end of the Korean War has been one of the major reasons why the military and economic balance in Korea has tilted in favour of the South.

Today, it is South Korea that is contributing to the costs of the US military presence in Korea and it now pays up to one third towards the overall costs.

North Korea's allies have been unable to match the resources of the US. North Korea has depended on the former Soviet Union and China for much of its modern military equipment, such as fighter aircraft. But the flow from both has virtually ceased, unless North Korea pays with hard currency which it doesn't have. Russia and China have indicated that they will supply North Korea with spare parts for existing weapons and defence equipment but will not provide sophisticated military equipment. North Korea, therefore, is likely to fall even further behind South Korea's superiority in conventional weaponry and capabilities, hence its temptation to acquire a nuclear deterrent capability. North Korea, however, has been able to produce most of its basic ground force equipment since 1970, including tanks, multiple rocket launchers, anti-aircraft guns, howitzers and transport vehicles. More recently, it has developed the capability of manufacturing Taepodong surface-to-surface missile systems with a range sufficient to reach southern Japan.

National Service

The regular forces in North Korea serve for five years in the army and three to four years in the navy and airforce. They are backed up by reserves of six or seven million civilians between the ages of 14 and 60, (equal to nearly one third of all North Koreans).

In the South, there is a system of universal military service (conscription) for two to three years, for all eligible youths aged 19. After completion of their service, most become members of South Korea's Homeland Reserve Forces (totalling about 4.5 million).
Paramilitary Forces

North Korea has a commando force of 100,000. This force could be sent through tunnels under the demilitarised zone or carried by light transport aircraft and helicopters for operations behind South Korean defences. North Korea has a fleet of midget submarines, about 300 AN-2 aircraft and up to 100 Hughes 500-C helicopters that could be used for insertion of commando forces behind South Korean lines.

History and United Nations Role

Korea, once part of the Japanese colonial empire, became the focus of Cold War rivalry between the United States and the USSR immediately after the defeat of Japan in World War II. In May 1948, elections were held in South Korea but not in the north of the country, where the United Nations was denied access. In August 1948, the Republic of Korea was proclaimed as the only lawful government in Korea. In September of that year, the Democratic People's Republic of Korea (DPRK) under President Kim II Sung was established in the north. Both governments claimed to represent Korea and each denied the legitimacy of the other. On 25 June 1950, the North launched a surprise attack that overran ninety per cent of the South. On 26 June 1950, the UN Security Council approved a resolution describing the attack as 'a breach of the peace and an act of aggression'. It was pushed through the Security Council by the United States in the absence of the Soviet representative. The People's Republic of China was not then a member of the UN. The resolution called on UN members to render all assistance to restore peace. UN forces from sixteen nations, led by the US, counter-attacked behind the North Korean frontline at Inchon on 15 September 1950. The UN forces then swept north towards the Yalu River. This drew a Chinese response and on 16 October 1950, a force of over one million 'volunteers' from the Chinese People's Liberation Army intervened. A stalemate ensued, roughly along the lines of the 38th parallel where the DMZ in Korea is today. After two years of negotiations and 500 meetings, the war ended with an Armistice Agreement on 27 July 1953. The armistice is a truce, not a peace treaty and no political accord has yet been reached to terminate the UN role in Korea. The US has maintained the UN presence in Korea ever since. The sixteen nations involved in the Korean War (Australia, Belgium, Canada, Colombia, Ethiopia, France, Greece, Luxembourg, Netherlands, New Zealand, the Philippines, Thailand, Turkey, the Union of South Africa, the United Kingdom and the United States) are, theoretically, committed to helping South Korea in the event of a resumption of hostilities. According to the sixteen nation declaration that they signed after the war on 27 July 1953, they agreed that, 'in the event of a renewal of armed attack from the North, the signatories should be again united and prompt to resist'. In practice, however, the security of South Korea depends primarily on the United States.

China withdrew its forces from North Korea in 1958 but maintained a close 'lips and teeth' relationship with North Korea during the 1950s, the 1960s and the early 1970s.

Both Koreas joined the United Nations in September 1991 in a move hailed as opening up the possibility of normalisation of relations between the two Koreas, and the ultimate reunification under UN auspices.

United States armed forces in Korea

The US has supported South Korea since the Korean War when US personnel based in Korea exceeded 350,000. The foundation of the military relationship is the 1954 ROK-US Mutual Defense Treaty which provides for collective defence against external armed aggression.

Article II of the Treaty provides that:
The parties will consult together whenever, in the opinion of either of them, the political independence or security of either of the parties is threatened by external armed attack. Separately and jointly, by self-help and mutual aid, the parties will maintain and develop appropriate means to deter armed attack and will take suitable measures in consultation and agreement to implement this treaty and to further its purposes.

Article III provides that:

Each party recognises that an armed attack in the Pacific area on either of the Parties, or in territories now under their respective administrative control, would be dangerous to its own peace and safety and declares that it would act to meet the common danger in accordance with its constitutional processes.

Article IV provides that:
The Republic of Korea grants, and the United States of America accepts, the right to dispose United States land, air and sea forces in and about the territory of the Republic of Korea as determined by mutual agreement.

In 1955, the number of US forces in Korea was reduced to 73,000 and in 1960 they were cut to 60,000, comprising two divisions and support personnel. The 7th Infantry Division (20,000 men) was withdrawn in 1971 by President Nixon in the era of détente with China. This and the collapse of Vietnam in 1975 forced South Korea to implement a series of programs to modernise its armed forces, even to the point of considering nuclear weapons (a shortlived plan that was abandoned after strong US pressure).

As part of the means for deterring an armed attack on South Korea, the US and South Korea have, since 1968, held annual Security Consultative Meetings of the US and ROK Defence Ministers and Chairmen of the Joint Chiefs of Staff to discuss common security issues. A ROK-US Combined Forces Command was established in 1978 to coordinate the US and South Korean preparedness for an attack from the north. Large-scale military exercises (called 'Team Spirit') have been held annually since 1976 to both prepare for and to deter an attack from the North. These combined forces exercises have involved up to 100,000 South Korean troops and 40,000 Americans.

In 1977 President Carter announced plans for the withdrawal of the remaining US forces in Korea. He changed his mind in 1979 after revised intelligence estimates suggested the North was much stronger (by up to 30 per cent) than had been previously assumed.

Today, the US retains in South Korea one division of about 36,400 troops (the Second Infantry Division of the 8th US Army), 134 M-60 and M-55 medium tanks and 250 fighter aircraft, including F-16s, A-10 ground attack aircraft and OV-10 counter-insurgency helicopters. The American ground forces are equipped with some of the most advanced weaponry, including anti-tank and air defence missile systems in the US inventory. There are also substantial US military forces in the Pacific including warships and fighter aircraft based in Japan.

US forces are in Korea under the command of the United Nations Command, Military Armistice Commission, and the ROK-US Combined Forces Command (UNCMAC). In 1991, a South Korean Army Major General was appointed as senior member of UNCMAC. The Combined Forces Command (CFC) plans and directs the defence of South Korea, including the deployment of South Korean forces. While the CFC is today controlled by an American officer, command is being handed over to a South Korean four-star general appointed as Combined Ground Component Commander in 1992.

US involvement
If North Korea attacked the South, North Korean forces would immediately encounter the US Second Infantry Division. US involvement, as a consequence of this so-called trip-wire arrangement would be instant. The 1954 ROK-US Mutual Defence Treaty and the 1982 US Joint Chiefs of Staff Posture Statement means that several hundred US Marine Corps and carrier-based aircraft in the Pacific, as well as B-52 bombers from Guam could be committed to action in Korea. Contingency plans envisage the use of nuclear armed missiles aboard US warships or carried on US aircraft based in the Western Pacific.

The US response, given its Persian Gulf experience, would be massively destructive of North Korea's infrastructure, cities and military capabilities. Pyongyang must be very conscious of this risk.

North Korea's survival strategy in the late 1980s and early 1990s began to shift towards the development of a nuclear option. From Pyongyang's perspective, that would ease the heavy burden of a huge conventional military capability; it would secure North Korea against attack from the United States; it would solve North Korea's loss of support from China and Russia and it would provide a cheap source of energy. North Korea developed a complete nuclear fuel cycle and a plutonium product capability at the Yongbyon Nuclear Research Centre, located about ninety kms. north of Pyongyang. This move, however, provoked a crisis in Northeast Asia, with the United States contemplating a pre-emptive air strike at the facilities in Yongbyon.

North Korea - the nuclear issue

North Korea signed the Nuclear Non-Proliferation Treaty (NPT) in 1985. In November 1991, South Korea's President Roh Tae Woo announced that there were no nuclear weapons in the South, a statement endorsed by US President George Bush. In December 1991, North and South Korea signed a bilateral agreement (the Joint Declaration of the Denuclearisation of the Korean Peninsula) to neither possess, build, use or store nuclear weapons, or reprocess spent uranium fuel into fissionable material. In January 1992, North Korea signed the safeguards agreement in Vienna permitting inspections of nuclear facilities as required by the NPT. However, after inspections of North Korea's nuclear research and power generation facilities in June 1992, as required under the International Atomic Energy Agency (IAEA) safeguards regime, the IAEA claimed there were inconsistencies between the information provided by North Korea and the results of its own investigations. The IAEA's request for special inspections of two additional sites in North Korea was refused by Pyongyang on the grounds that the IAEA was engaged in espionage on behalf of the US. In May 1993, Pyongyang renounced its membership of the NPT, raising fears of a nuclear armed North Korea, a prospect with serious implications for the region. Pyongyang demands that before it considers rejoining the NPT, the US must address its fears of a US nuclear threat, the future of the US-ROK combined military exercises, the question of inspection of US nuclear weapons in South Korea, assurances about the IAEA's impartiality and the application of US negative security assurances to North Korea (regarding non-use of nuclear weapons). The US, however, demands that North Korea must remain in the NPT, cooperate with the IAEA and implement the North-South Denuclearisation Declaration.

By October 1994, with the intervention of both China and Russia, North Korea agreed to dismantle its suspect nuclear reactors at Yongbyon in exchange for two light-water reactors that cannot produce weapons grade plutonium. The light-water reactors, costing over $US 5.2 billion, are to be paid for mainly by South Korea and completed by the year 2003. In addition, the United States agreed to provide North Korea with 500 000 tonnes of heavy fuel oil each year until 2003 to compensate for the loss of energy production at the Yongbyon and associated nuclear facilities.
North Korea has sometimes threatened to resume the Yongbyon programme if the United States delays the supply of fuel oil as its part of the Nuclear Framework Agreement. But it has, so far, adhered to its part of the agreement and has, with one or two aberrations, generally behaved in a rational and responsible manner. It has committed itself to abide by the terms of the 1953 Armistice Agreement that ended the Korean War and has joined South Korea, the United States, China and Russia in four-party talks to try and establish a lasting peace on the peninsula. North Korea has also agreed to resume high-level military talks with the US and it is helping America account for the remains of US servicemen missing in Korea since the war.

**North Korea’s former friends and allies**

There is now a great power consensus between China, Russia, Japan and the United States on maintaining peace and stability on a non-nuclear Korean peninsula.

Previously, the situation in the Korean peninsula was complicated by rivalry, misperception and tension between these great powers. China felt threatened by US bases in South Korea and elsewhere in the Western Pacific. China also saw the USSR as a socialist-imperialist power seeking bases on China’s periphery. This perception of threat from the USSR strengthened China’s inclination to support North Korea.

The perception of being encircled by hostile forces comprising China, Japan, the US and South Korea in the Pacific and by NATO in Europe led Moscow to value a close alliance with Pyongyang. Even up to the mid-1980s, the Soviet Union was prepared to supply North Korea with new tanks, anti-aircraft and long range artillery, modern combat aircraft and various missile systems. In return, the Soviet Union gained access to North Korean ports at Wonsan and Chongjin and overflight rights for intelligence collection by Tu-95 BEAR-D naval reconnaissance aircraft.

However, North Korea’s relatively favourable strategic circumstances changed after the deaths of Mao Zedong and Leonid Brezhnev. North Korea’s only allies reassessed their strategic and national economic priorities.

China gradually came around to accept the US presence in South Korea as a significant contribution to regional stability. Washington and Beijing came to see that they had a shared strategic interest in preventing war in Korea.

China began to share the same strategic interest with the USSR during the process of Sino-Soviet rapprochement that culminated in the Gorbachev/Deng summit in May 1989. The USSR for its part, acted with restraint in the quality and quantity of military equipment that it has been willing to provide and it has ceased joint naval exercises with North Korea.

North Korea’s ability to exercise strategic leverage between China and the USSR has therefore evaporated. Improved relations between the United States and Mikhail Gorbachev’s USSR completed the circle around North Korea. The USSR chose to normalise relations with South Korea in September 1990.

For Russia, North Korea now has no strategic value. It is, rather, a piece of ideological baggage left over from history. Moscow’s predominant interest lies in developing economic relations with South Korea and avoiding conflict in Northeast Asia. Russia’s President Boris Yeltsin re-affirmed this policy on North and South Korea.
For its part, China regards North Korea as irrelevant to its plans for developing a Northeast Asian economic zone with South Korea, the Russian Far East and Japan. China's vital geo-economic interests are in trade and economic cooperation with South Korea, and not support for an impoverished, stubbornly communist North Korea. China has retained its ties with North Korea, but successive Chinese leaders have also made it clear to Pyongyang that China's PLA will not support the North in an attack on the South (according to remarks made by Zhang Xiangshan of the PRC's International Liaison Department, reported in Yomiuri Shimbun, Tokyo, 25 June 1984, p.2.). China is reported to have made clear to the US that it would not support North Korea except in the event that the latter is first attacked (Sankei Shimbun, reported by South China Morning Post, 8 January 1988).

China and South Korea are natural trading partners just one day apart by ship across the Yellow Sea. China is already South Korea's fifth largest trading partner and some of South Korea's biggest multinationals such as Kia, Hyundai, Samsung and Daewoo have set up joint ventures in China's Northeast. As Shandong's Governor Jiang Chunyun remarked, "the geography is obvious to everyone". (South China Morning Post, 21 July 1988). China normalised relations with South Korea in August 1992.

China and Russia announced that trade with North Korea would be conducted on the basis of cash, rather than barter, as in the past. The result has been a further decline in the North Korean economy and severe shortages of fuel and power. Although South Korea has normalised its relations with North Korea's former allies, the North has yet to achieve similar breakthroughs with Japan and the US, both of whom remain supportive of South Korea. The United States in particular remains firmly committed to South Korea's security.

In many respects, however, it might be said that peace in the Korean peninsula is now at hand after decades of hostility, tension and the threat of war. The decline of communism in neighbouring China, planning failures in North Korea's agricultural sector and the death of Kim Il-song have contributed to Pyongyang's new directions. Meanwhile, the US, Japan, China and South Korea have maintained massive food aid and fertiliser programmes to North Korea after the country was devastated by extensive flooding in 1995 and 1996, and a severe drought in 1997. More importantly, a more magnanimous policy towards North Korea has evolved. President Kim Young Sam's more conciliatory policy has been followed by President Kim Dae Jung.

Bibliography

It is often said that the Korean national flag is the only philosophical flag in the world, a reference to the ideas embodied in its design. But while the design draws on ancient precepts, the idea of having a national flag arose only towards the end of the 19th c., at a time when the notion of a nation-state was beginning to gain the attention of Korea's national leaders and scholars. As elsewhere, it was considered that a national flag would, along with other things such as a national anthem, serve as a concrete symbol of Korea's distinctness as an independent entity among other nations.

However, the idea was first mooted by a Chinese legation officer in Japan, Huang Zunxian, in his Zhaoxian Celiie (Policy for Korea), a book which the Korean envoy Kim Hongjip brought back from Japan in August 1880. In this book, Huang suggested that Korea consider using the dragon flag of the Ch'ing as both their army and national flag. Later, as a high official in the negotiations for the April 6 1882 Korean-American Treaty of Amity and Commerce, Kim Hongjip discussed possible designs and colours with the Chinese emissary, Ma Chien-chung. It was during these discussions that the idea of using the t'aeguk symbol arose.

In August 1882, Korea's emissary to Japan, Pak Yonghyo (Prince Kumnu), enlisted the aid of the British captain of the vessel by which he returned to Korea in preparing some three designs for a flag, all of which had the blue and red t'aeguk motif in the centre. Pak presented one of these to the Korean authorities, who on 27 January 1883 ordered that it be used throughout the kingdom as the official flag.

Although the flag was banned by the Japanese between 1910 and 1945, it was treasured by nationalists and other Koreans as a symbol of their nationhood, and was sometimes waved during demonstrations. On 15 October 1949, this flag, called the T'aegukki, was proclaimed the official national flag of the Republic of Korea. The Democratic People's Republic of Korea adopted a different flag around the same time.

**Design**

The earliest example of the t'aeguk design is found on a stone sculpture at the Kamiinsa
temple built in 628 C.E. in Kyongju. But the ëmyang (Ch.yin and yang ) philosophy represented by the t’aegük can be traced even further back in Korean folk myth, traditional medicine and art.

The flag has a white background with a t’aegük circle in red and blue at the centre and three black bars on each of the four corners.

White background

This represents purity and peace, values prized by the Korean people, who traditionally favour white clothing, even for mourning attire.

T’aegük circle

In much East Asian philosophy, including schools of Confucianism, the t’aegük pictures the origin of the universe and human life and expresses the truth about them. The eminent 16th c. Korean philosopher, Yi Hwang, described the t’aegük as "the ultimate being that will rule everything but will not be ruled by anything." Identical with the universe, the t’aegük principle is present in each being; the ultimate human virtue therefore is the t’aegük principle.

This principle, found in Buddhism, Confucianism and many other areas of Korean tradition, prescribes harmony and the balance between opposites. Yang, depicted in red on the upper part of the circle, represents the sky. ëm, in dark blue at the lower part represents the earth. Betwixt the sky and the earth exist humans, societies and nations. With the continuation and harmony of ëm and yang, all things grow and prosper. ëm and yang, also regarded as female and male principles, are opposite yet inseparable components: they contrast yet complement each other.

Four black bars

The broken and solid bars also derive from classical philosophical precepts, and in this case represent the variety of forms and possibilities in the universe, a diversity which is generated and held together by the t’aegük.

Kôn at the upper left corner, represents heaven and justice.

Kam at upper right represents water and wisdom.

I at lower left represents fire and energy.

National Folk Museum

The National Folk Museum (Kungnip Minsok Pangmulgwan) is located in the Kyongbok Palace grounds in Seoul. The museum’s collection was established in 1945, with items donated by Song Sokha, a leader in folk culture studies. Destroyed during the Korean War, the museum was restored by the Cultural Property Preservation Bureau (Munhwajae Kwalliguk) in Kyongbok Palace in 1966. In order to find a home for the expanding collection, the museum, under the name Han’guk Minsok Pangmulgwan, was moved to a refurbished building within the palace complex in 1975.

The museum’s collection comes from private sources; from folklore articles preserved in the Ch’angdok Palace; and by way of new acquisitions. As well as these, over a thousand traditional lamps were donated by the Korea Electric Company, and material related to printing was transferred from the National Museum of Korea. The museum contains numerous exhibits showing the Choson lifestyle and customs as well as items in everyday use, with explanatory notes accompanying many of the exhibits. Other exhibits include farming implements; handicrafts; pottery; lacquerware; apparel; shaman implements; and a
traditional Korean house from Andong in North Kyongsang Province.

**National History Compilation Committee**

NHCC (Kuksa P’yŏnch’an Wiwŏnhoe) is situated in the city of Kwach’ŏn in Kyŏnggi Province. The committee was established as the Kuksagwan (National History Office) in August 1945 in Seoul’s Kyŏngbuk Palace. It acquired its current name in 1949 and moved to its present location on the outskirts of Seoul in 1987. NHCC’s administrative structure is composed of three offices: the General Service Division, the Historiographic Office and the Research Office. Operating under the direct control of the Ministry of Education, the committee conducts research on national history, compiles and publishes Korean history-related materials and collects various types of data and materials related to national history. The staff of NHCC is composed of fifteen experts on Korean history. These historians decide on matters related to the compilation of national history and data collection. In order to support their research activities, the committee’s library houses an extensive collection of historical works including approximately twenty-thousand old books and fifty-thousand manuscripts.

**National Institute of Agricultural Science and Technology (NIAST)**

Located in Suwon in Kyŏnggi Province, the NIAST was established in December 1994 with the merging of the Agricultural Sciences Institute, Agricultural Biotechnology Institute and the Agricultural Chemicals Research Institute. The newly-formed Institute became responsible for the standards and inspection of fertiliser and agricultural chemicals, a task previously performed by the National Agricultural Materials Inspection Office. The Institute’s activities are concerned with management of the environment in the agricultural context, as well as research and development related to bio-resources and crop protection. Through its activities, NIAST aims to elevate agricultural incomes while developing agricultural management systems that are both economically and environmentally sustainable.

**National Institute of Health and Social Affairs**

Located in Seoul, the NIHASA (Han’guk Pogon Sahoe Yŏn’gwŏn) is a governmental organisation established to promote the health and welfare of the Korean people. The institute’s thirty-four researchers undertake surveys and conduct research into health issues -- disease, disease vectors, food, and food additives, et al. NIHASA also offers a diverse range of training programs. The institute is affiliated with WHO (World Health Organization).

**National Livestock Cooperatives Federation**

[Financial institutions]

**National Museum of Contemporary Art**

The National Museum of Contemporary Art (Kungnip Hyŏndae Misulgwan) is located in Kwach’ŏn in Kyŏnggi Province. Founded by presidential decree in 1969, the museum’s collection was first exhibited at Kyŏngbok Palace in Seoul. In order to find places for an increased number of items, the museum was moved to Tŏksu Palace in 1973. In August 1986, it transferred to a newly-constructed building in Kwach’ŏn.

The museum’s collection ranges from the early twentieth c. to the present-day. In particular, the curators have collected works representing the modern evolution of art. The museum also has a library with a collection of over 6000 books and 3000 research theses, all of which are available to both specialists and the general public. There is also a data library with videos, slides, and a wealth of other information on 4000 or so Korean artists.
In addition to its exhibitions, it conducts research programs and promotes international exchange.

National Museum of Korea

The National Museum of Korea (Kungnip Chungang Pangmulgwan) came into being as the Yi Royal Household Museum (Iwangga Pangmulgwan) which was opened in Ch'anggyöng Palace in 1909. In 1915, the museum was reorganised as the Japanese Government-General Museum (Ch'ongdókp'u Pangmulgwan) and the collection was moved to Kyöngbok Palace. On Korea's liberation in 1945, the museum was restored as the National Museum of Korea (Kungnip Pangmulgwan), with a collection exceeding 13 000 exhibits.

By 1950, the collection had grown to 20 000 items. However, several days after the commencement of the Korean War on 25 June 1950, the North Korean forces took Seoul in a lightning thrust southwards, and part of Kyöngbok Palace and several thousand pieces in the museum were destroyed by bombs or artillery shells. The officials were unable to move the collection to a safe haven and were forced to abandon it. Fortunately, when Seoul was retaken on 28 September, the 18 000 or so pieces remaining were found intact in Töksu Palace. In November 1950, just two months before the see-saw assaults of the opposing armies placed Seoul in Chinese and North Korean hands, every single piece of the museum's collection was transferred to Pusan.

At the end of the war in 1953, the collection was brought back to Seoul and was again kept at Kyöngbok Palace. It stayed there for only a short while, however, soon being transferred to Nam Mountain, and then to Töksu Palace. In 1972, the National Museum was constructed within the Kyöngbok Palace compound. In August 1986, the collection was moved into the former Japanese Government-General Headquarters located directly in front of Kyöngbok Palace. With the ROK government's decision to demolish the building, the museum was moved to the former Socio-Education Centre, in December 1996.

Today, the National Museum is in 1, Sejong-no, Chongno-ku, Seoul. Its building consists of two storeys and a basement exhibition area (in all 18 346 sq. m. of floor space), which contains in all more than 140 000 artefacts and art treasures. Of these, 4 500 artefacts are exhibited in eighteen permanent galleries, which include laser-disk and touch-screen audio-visual guides. In the basement, items of Buddhist sculpture; metal art objects; paintings; historical texts; blue-and-white porcelain; the Dongwon Collection; the Iuchi Collection; and artefacts from other countries are on display. The first floor galleries exhibit Koryö celadon; Chosön punch'öng ware; Chosön white porcelain; a replica of a typical male abode (sarangbang) and a model of the original Kyöngbok Palace. The second floor exhibits relics from the Prehistoric era and the Three Kingdoms. The National Museum assists the preservation of Korea's cultural heritage, not only through its vast collections, but also by its conservation and research programs; in providing educational programs to the public, in publishing academic reports, and in its promotion of international exchange programs.

National Puyö Museum

The Puyö National Museum (Kungnip Puyö Pangmulgwan) is located in Puyö in South Ch'ungch'öng Province. The museum's collection was initially formed through the efforts of the local historical association, Puyö Kojö Pojonhoe. In 1945, the Puyö branch of the National Museum was founded, with Hong Sajun as chief curator. Unlike many other Korean museums, both the museum and its collection escaped serious damage during the Korean War. In 1965, a new museum with a modern exhibition hall and facilities was constructed. Today, most of the museum's collection consists of Paekche relics recovered from the Puyö area, with earthenware vessels accounting for over half of the museum's
National Science Museum

The National Science Museum (Kungnip Kwahakkwan) is situated in Yusǒng District in Taejòn. Established in Seoul in 1945, it was reduced to ashes during the Korean War. In 1970, the museum was re-established in a five-storey building in Waryong-dong in Seoul. This was followed by the construction of the Industrial Exhibition Hall in 1979. Between 1985 and 1990, new facilities for the museum were built within the Taeduck (Taedǒk) Science Town in Taegǒn at its present location.

The National Science Museum promotes public awareness of science, with the special aim of fostering an interest in science among Korean youth. Museum facilities include the Permanent Exhibition Hall, Space Theatre, film theatre, seminar rooms, laboratories, open-air theatre and collection rooms. The Permanent Exhibition Hall (8,570 square metres) contains over six thousand pieces. Items on exhibition include over two thousand natural history pieces, some two thousand history of science and technology items, over five hundred natural science items, nine hundred and sixty technological displays and thirty-five ‘hands-on’ items. In addition to these exhibits, the National Science Museum conducts educational programs, which include lectures, film shows, nation-wide science exhibitions, and there is a computer education program, as well as an inventions contest for students.

[People, Korean]

Natural Resources

Natural resources in a narrow definition can indicate metals, non-metals and fossil fuels, but in a wider interpretation can include underground and other water resources, marine resources, forest products, thermal springs and geothermal heat. Some natural resources such as granite are not generally thought of as such, yet they have many uses in construction. The Korean peninsula, while being relatively small, has many natural resources that have contributed greatly to the economic development of the Korean economy.

Energy Resources

While energy resources such as oil and natural gas have not yet been discovered, nor are thought to be present on the Korean peninsula; geological and seismic surveys and drilling on the continental shelf surrounding the peninsula from 1963 to 1976 did reveal a small, but not economically viable, amount of crude oil. Explorations off the Cholla coast exposed deposits of Mesozoic Era oil, shale and semisolid oil. However, investigations into the procedure for extracting an economically sufficient amount of this oil have yet to prove fruitful. On the other hand, the Korean peninsula is richly endowed with various coal resources, primarily anthracite from the later Palaeozoic Era in the P’yǒngan Group and the Mesozoic Era in the Taedong Group. The P’yǒngan Group reserves are particularly rich and account for some eighty-five per cent of the peninsula’s total. There are some coal reserves in the southern part of the peninsula, which were estimated at about fifteen billion tonnes in 1981. Much of the reserves in the south, however, are of rather low quality sub-bituminous coal, and have not yet been developed.

Nuclear Fuel Resources

Domestic reserves of uranium are found in Pre-Cambrian Era black slate metamorphic rock,
along with reserves of pegmatite and other minerals in locations such as those around Taejön; Kūmsan; Po'n; Miwŏn; and Yongyu Village; as well as elsewhere. In the Okch'ŏn Group surrounding the Taejön area, low-quality uranium is found embedded in various slate formations. If technical advances permit the economical extraction of this ore, it will prove to be an extremely valuable natural resource. Technical difficulties exist at present in extracting the thorium content from the uranium ore, thus making it unusable; but it is thought that technology will eventually solve this problem. The thorium content results in the presence of monazite in large quantities in alluvial fans, so much so that Korea is considered to have some of the largest monazite reserves of any country. Riverbeds such as on the Han, Yŏngsan, and Sŏmjin rivers, and the seashores of the East Coast are major sites of monazite deposits. Moreover, monazite found on the ocean floor is also an important national resource. Reserves of monazite and other rare-earth elements are estimated at 150,000 tonnes.

Iron Ore Reserves

Various ores that are mined in Korea have been crucial to economic growth, including iron, tungsten, nickel, molybdenum, and cobalt as well as others. Among these metals, only tungsten and molybdenum are extracted in quantities that exceed national needs, and are thus valuable exports. Most of the prominent iron ore reserves are found in Musan and Sŏngjin counties of North Hamgyŏng Province; Iwŏn and Tanch'ŏn counties of South Hamgyŏng Province; Kaech'ŏn and Chunchha counties of South P'yŏngan Province; Ŭnyul, Hwangju and Chaeryŏng counties of Hwanghae Province; Yangyang County of Kangwŏn Province; and Chungwŏn County of Ch'ungch'ŏng Province. The highest quality iron ore is found in the western parts of Hwanghae and South P'yŏngan provinces. Iron ore extraction in the southern part of the peninsula includes operations in Chŏngsŏn and Samch'ŏk counties of Kangwŏn Province; and Chunch'a County of Ch'ungch'ŏng Province. The production of iron ore since the late 1970s has been at an annual rate of 500 to 600 thousand tonnes in the south, and at about 9.5 million tonnes annually in the north, thus displaying the overwhelming disparity of iron reserves in the ROK and the DPRK.

The southern half of the peninsula holds important reserves of manganese, with the largest being located in Ponghwa County of North Kyŏongsang Province. Additionally, significant reserves of zinc and lead are being mined in Ponghwa County. Production of manganese peaked in 1975 at 3,500 tonnes, down to a low of 39 tonnes in 1979. Tungsten and molybdenum reserves are also important in the south, with mines located in Kangwŏn, North Ch'ungch'ŏng and North Kyŏongsang provinces. In 1978, reserves and potential reserves in the south were estimated to be in excess of 370,000 tonnes, which represented about seven per cent of the world's reserves, but South Korea's annual production stands at over ten per cent of global production. Other important reserves in the south include nickel, cobalt, niobium, tantalum and vanadium.

Metal Resources

Metals mined in Korea include copper, lead, aluminium, and some others. Copper reserves are primarily found in South Kyŏongsang Province, with the total of known and estimated reserves thought to be nearly fifteen million tonnes. Lead and zinc are important minerals in the South, with major mines located in the Kangwŏn and North Kyŏongsang provinces. While aluminium and bauxite production is not today important, during the colonial period both were extracted in fairly significant quantities. Magnesite reserves in Tanch'ŏn and Kilju of North Hamgyŏng Province are substantial. Gold and silver reserves are relatively insignificant, with gold production being less than one tonne a year in the South. The combined North-South production of silver has exceeded one-hundred tonnes annually, with a ratio of about 6:4 between South and North Korea.
Industrial Raw Materials

Important natural resources in Korea utilised by the chemical industry include fluorite, limestone, feldspar, and dolomite. Other natural resources are used in the chemical industry on a smaller scale. Silicon dioxide and silica exceed the amount needed by the electronics industry and the excess is exported. Mica and mercury are among other natural resources used by the electronics industry.

Natural Resource Exports

Important raw materials exported by Korea include kaolin; agalmatolite; talc; and graphite. Kaolin is chiefly mined in the Hadong and Sanch'ong areas of South Kyongsang Province, and graphite is found in Kyonggi and South Ch'ungch'ong provinces. Agalmatolite is primarily produced in the Haeinam and Wondo regions of South Cholla Province, as well as Tongnae and Yangsan in South Kyongsang Province. Production of talc in the South is primarily in North Ch'ungch'ong Province.

Building Stone Resources

Korea has abundant supplies of various building stone such as granite; andesite; tuff; sandstone; slate; marble; gneiss; and ophiolite, and this is by no means a complete list. These resources are widely utilised in construction work.

Non-renewable Marine Resources

Marine resources of Korea can largely be divided into renewable and non-renewable resources, with the former consisting of marine life and the latter of minerals. The mineral resources in the seas surrounding the peninsula are abundant with non-metallic substances such as sulphur; halite; potassium; and coal present; and metallic minerals including copper; zinc; lead; iron; nickel; gold; silver; mercury; fluorite; beryllium; tin; and tungsten are among others also found. Moreover, the sea also distributes additional resources such as precious metals, sand, pebbles and lime. The shallow seabed around the peninsula contain minerals such as apatite. The deep seas off the peninsula hold major reserves of manganese nodules; iron; nickel; cobalt; and copper. Hence, the peninsula’s seas are guardian to rich reserves of minerals that have many applications in industry and manufacturing.

Renewable Marine Resources

Marine creatures have long provided an essential part of the Korean diet and continue to do so. Fish such as the Alaskan pollack; tuna; mackerel; and anchovies together with marine creatures such as squid; crustaceans; and various types of seaweed are always in demand. The fishing industry can be divided into coastal, deep-sea and cultivation fisheries, with each segment of the industry fulfilling a different need. Coastal fishing is historically the most common type and remained the major fishing operation until the mid-1970s. The Korean peninsula is surrounded by both cold and warm-water currents, which attract many different fish. In 1992, this segment of the marine industry brought in a total catch of 1.3 million tonnes, which accounted for 43.6 per cent of the South’s total catch. Deep-sea fishing provides large catches of many fish that are not always caught in Korean waters, and in so doing it has, of course, to obey many international regulations and restrictions. Nonetheless, deep-sea fishing is of great importance to Korea. Fish cultivation is considered a vital branch of marine resource management, where fish are spawned and developed in captivity, with a proportion released into open water, thus providing a renewal of marine resources. Additionally, there are other forms of aquaculture practised in Korea, such as the cultivation of shellfish and seaweed beds -- operations that allow for the thorough utilisation of the extensive Korean coastline to meet the demand of the people for marine products. South Korea’s total catch in 1994 approached 3.5 mill. tonnes, with 1.48
mill. tonnes coming from coastal operations, 1.10 mill. tonnes from cultivation fisheries and almost 900,000 tonnes from deep-sea fishing. Not only does this industry provide Korean consumers with a wide range of marine fare, it is also a major export outlet, with a value exceeding 1.7 billion US dollars.

Neo-Confucianism and Choson Society (see Confucianism)

New Democratic Republican Party [Politics]

New History of Korea, A

A New History of Korea is a comprehensive overview of the various developmental processes that Korea has passed through during its long history. This work, written by Ki-Baik Lee (Yi Kibaek) was translated by Edward W. Wagner with Edward J. Shultz, and published in 1984 by Harvard University Press. Lee's original work in Korean was entitled Hang'guksa Shillon (A New History of Korea) and was first published in 1961 before its revision and re-issue in 1967 and 1976. The translated work, consisting of 474-pages, is comprised of sixteen chapters and covers the history of Korea from the Palaeolithic period until the April 1960 Student Revolution.

Lee's work set the standard for all subsequent works on Korean history in the English language, and it remains as a most comprehensive and authoritative Korean history. While there were earlier efforts, such as those by Homer Hulbert in 1905 and James Scarth Gale in 1927, there was no expansive history published to take advantage of the vast amount of Korean scholarship from the 1960s forwards. Hence, A New History of Korea filled an acute need for an academically suitable, English language history on Korea for contemporary scholars.

A New History of Korea shows Lee's depth of scholarship, with his detailed explanations of the reasons for the occurrence of various events in Korean history, and his intricate weaving of political, social, cultural, religious and economic factors that have so often altered the course of his country's history. Particularly notable is the fact that the author has shown the various cultural and religious developments in Korean history as a consequence of history, and explained in a straightforward manner the rationalisation for these occurrences. Hence, this work is not only valuable for students of Korean history, but for all students of Korean studies, regardless of their field.

Insofar as the contribution of the translation of this work by Wagner and Shultz is concerned, it has provided the present generation of Korean studies scholars with a much needed standardization of terminology concerning historic Korea. This is of no small importance since before the publication of this work there existed no such standardised glossary for official positions, major literary works and and historical events in Korean history. Moreover, the work also contains numerous maps that help the student new to Korea to picture the locales where historical events occurred and the territories concerned. Other appendices to this work include charts outlining the the dynastic lineages of the Korean kingdoms and a select bibliography that provides commentary on various, more specialised, works in Korean studies.

While A New History of Korea ends with the Student Revolution in 1960, it is nevertheless a comprehensive and useful book, especially for the study of pre-colonial Korea. Lee's scholarship is at its best in dealing with the traditional Korean kingdoms, and his work continues to be a yardstick for other works concerned with these particular periods in Korea's history.

New Korea Association (Shin'ganhoe) [Japan and Korea]
New Korea Democratic Party (see Reunification Democratic Party)

New Korea Society (see Shin'gan Hoe)

New Korea Youth Association (Shin Han Ch'ŏngnyŏn Tang) [History of Korea]

New Religions

Shin chongyo or shinŭng chongyo, terms for what in the Chosŏn Dynasty were called perverse teachings or heresies, and during the Japanese occupation and later by established religions, yusa chongyo (false or quasi-religion). The terms, applied to religions that emerged since 1860 when Tonghak was founded, contrast with institutionalized religions supported or tolerated by government. New religions are distinguished from diffuse shamanism or folk belief by claiming an identifiable founder, a religious organization, doctrine and/or scriptures. However, the borders between a new religion, a reformist sect of an established religion, and shamanist or welfare associations are unclear.

Estimated numbers of new religions range from around 160 to 404 (most agree 250 to 300 presently exist, and over 400 or 500 since 1860), as many are virtually extended families, extremely unstable and short-lived. The current number of believers in South Korea is conservatively estimated at 1.6 million, and generously up to 3.5 million. North Korean numbers are unknown.

Before 1860, new religions were suppressed or incorporated into existing religions. With the collapse of court authority, savage exploitation by the elite, epidemics and natural calamities, the prohibition of Catholicism, and the unresponsiveness and corruption of existing religions, marginalised intellectuals pursued new values. On the basis of shamanist possessions or revelations they formed new religions, attracting believers desperate for an alternative.

In late Chosŏn the fundamental themes of most new religions appeared with Tonghak (1860), the Chŏng yŏk thought of Kim Hang (Ibu, 1880s), Kang Ilsun's Chungsan'gyo (1902), Na Ch'ŏl's Taejong'gyo (1909), and the predictions in the Chŏnggammok of a new dynasty. These promised a utopia and salvation of the nation.

Oppressed by the Japanese colonialists, the new religions fragmented Chungsan'gyo (reportedly into over 100 'sects'), or newer religions formed, their themes more nationalistic. Some were exploitative or secret societies; others were reforms of existing religions. Second generation organizers emerged, disputes erupted after the founders died, and the Japanese authorities gaolced many for subversion or scandal, and so new religions rapidly flamed and disappeared. Most went underground when the colonial administration ordered the 'dissolution of quasi-religions' in 1936, surfacing only after Liberation in 1945, which brought an unprecedented religious freedom. New religions suddenly proliferated; some were imported, and Christian-based new religions flourished. The crises experienced ever since late Chosŏn continued during the Korean War, and then rapid economic growth brought alienation for the disadvantaged. The founders and followers of the new religions now tended to be poor and ill educated. Ofen mudang created their own religious bodies in the 1970s because the Saemaül Movement (New Village) pressured them in an anti-superstition campaign.

Classifications of new religions vary, for most overlap. The earliest groups were Tonghak and its epigones, Chŏndogyo (1905) and Shich'ŏn'gyo (1906) - some 25 'sects'; Confucianistic adaptations of the views of Kim Hang (1826-1898), who reinterpreted the Chou Yi as the Chŏng yŏk or correct symbolic analysis of the new order of the universe.
initiated in Korea, and the largely defunct Confucianistic revivals of the 1920s and 1930s; Chóngsan'gyo groups (from 1902) - over 60 'sects' active; Ta'n'gun or national ancestor worshipping Taejonggyo and some 45 'sects'; Buddhistic (70+ groups), many reformist Buddhism for laity or shamanistic; Taoistic, especially Kaksedo (1915) - the other 11+ groups weak; Pongnam or water-cure groups (around 16) stemming from Kim Pongnam (1898-1950), popular among women divers (sea harvesters); Protestant-based, numbering over 100 bodies, with Ch'ondó'gwan and Tong'ilgyo (Unification Church) the largest; shamanistic (first in 1902, latest 1988) or spirit-worshipping, centred around influential mudang; the unclassifiable due to complex content (16+ groups), the largest Chóngilgyo; and foreign new religions from China (especially Ilgwando), Japan (10+ groups, especially Sōka Gakkai and Tenrikyō), and America (Jehovah's Witness, Mormons, etc). Some 'sects' shift across classifications over time and many are transient.

Historically syncretic, borrowing elements of established religions (Taoistic or folk shamanism, Buddhism, Confucianism, Christianity), these new religions are nationalistic. Based on the Confucian mandate of Heaven theory legitimating dynastic change, distressed people believed the geomantic predictions of the Chónggammok that a new dynasty and earthly paradise was nigh in southern Korea. The promises of the Christian Messiah's second coming, and the Buddhist surety that the future buddha, Maitreya would rescue all from the evil last days, suggested that a saviour would appear in Korea to herald the new age or Korean utopia. That saviour or harbinger would be Korean, as the Koreans were believed to be a chosen people who would be rescued from their tribulations. That saviour's powers could be manifested in shamanistic possession, ecstasy, faith-healing and magical incantations, or in leading the faithful to overcome Korea's enemies, first the Japanese and later godless communism.

News Agencies

Bureau Network

The North Korean national news agency - known as the Korean Central News Agency (KCNA) - which was founded in 1946, is the primary agency for gathering and spreading news in that country. It operates bureaus throughout North Korea and in several Asian countries as well.

South Korea contains two indigenous news agencies. One of them is the North Korea-watcher, the Naewoe Press, which was founded in 1974, and the other is the national news agency, Yŏnhap Tongshin, which was established in 1980 when the Hapdong News Agency and Orient Press were combined. Yŏnhap operates bureaus throughout South Korea and around the world - including its bureaus in London, Paris, New York,
Foreign News Agency Agreements

KCNA has information exchange agreements with many foreign news agencies - including Informatsionnoye Telegrafnoye Agentsstvo Rossii (RIA-Novosti, also from Russia); Rossiyskoye Informatsionnoye Agentstvo - Novosti (or RIA-Novosti, also from Russia); and Xinhua (New China) News Agency (from the People’s Republic of China). All three of these agencies have bureaus in North Korea.

Yonhap has news exchange contracts with 40-plus worldwide and regional agencies, including the Associated Press and United Press International (or AP and UPI, U.S.A.); Reuters (United Kingdom); Agence France-Presse (or AFP, France); Xinhua (China); AAP Information Services (Australia); Agenzia Nazionale Stampa Associata (or ANSA, Italy); Kyodo Tsushin (Japan); Deutsche Press-Agentur (Germany); and TASS (Russia).

'Infomax' Services

Yonhap Tongshin (or Yonhap News Agency) originated an on-line, real-time computer information service near the start of the 1990s that provides economic stories and business statistics to more than 300 clients in South Korea. The biggest share of its clients are businesses, banks and other financial institutions, and government agencies. Among the bits of data that flow to Yonhap's clients are trade figures, interest rate fluctuations, currency exchange rates, and commodity prices. The agency's Infomax Department (employing 30 full-time staff and using 20 computer terminals) is assisted in its work by Yonhap's Foreign, Economic, and Editorial news departments. Infomax goes hand-in-hand with the satellite transmissions and other up-to-date technologies utilized by that agency. No other news service on the Korean peninsula is outfitted as well to transmit news to its clients, and Yonhap takes great pride in being fully-computerized.

Information Distribution

In North Korea, news agency information is distributed by wire and computer, as well as via a daily newspaper (the Korean Central News or Choson Chugang Tongsin), a photographic periodical (Photographic News or Sajin Tongshin), and a yearbook (Korean Central Yearbook (Choson Chugang Yongbo). KCNA also issues daily press releases in English, Russian, French, and Spanish.

In South Korea, Yonhap's information used to be received and distributed by wire (the practice has existed in Korean news agencies since liberation from Japan in 1945; previous to 1945, the Japanese news agency Domei operated in Korea); now it is done almost exclusively by computer, as well as via newsletters (feature and news), a yearbook (Korea Annual), and a monthly photo magazine (Segye, or The World). Meanwhile, the Naewoe Press uses wire, computer, and periodical publications to transmit its news. Vantage Point is its monthly journal of news on North Korea, and that is distributed free-of-charge to interested parties.

International Communication

KCNA relies on its sources, correspondents, and clients in 'friendly countries' to pass along and receive news on international subjects. Foremost among those friendly countries are Russia and China. But other countries are involved as well. For instance, in 1981 representatives of 23 news agencies met in Malaysia to form the Asia-Pacific News Network (ANN), a long-time goal of UNESCO. Seven news agencies from Communist countries - Xinhua (China), Tass (the-then-Soviet Union), Vietnam News Agency, Korean
Central News Agency (North Korea), Khaosan Pathe Lao (Laos), Bakhtar (Afghanistan), and Montsame (Mongolia) were admitted to membership. South Korea’s newly-formed Yonhap Tongshin was not included in that organization.

More recently with Yonhap, though, as a result of improvements in its transmitting facilities, it has become possible for that news gatekeeper not only to provide a foreign and domestic news service to about 500 domestic clients through a computerized system using the Korean alphabet and Chinese characters, but also to transmit an English news service of 5,000 words daily to its 110 overseas subscribers through a relay of communication satellites.

Newsletter and Photo Journal

KCNA issues newsletters and/or press releases daily in English, Russian, French, and Spanish. It also offers the newspaper, photo journal, and year-book mentioned above.

The Naewoe Press issues its monthly newsletter, Vantage Point, which takes long, hard looks at North Korea, its practices and policies. Meanwhile, Yonhap issues weekly 'hard-news' newsletters and twice-monthly feature newsletters, in addition to the monthly picture magazine mentioned above. That magazine, Segye, is a glossy, attractive picture journal written in Korean. It displays fine photojournalistic pictures, taken most often by Yonhap's photographic staff, but sometimes by free-lancers. Yonhap also publishes a photo annual, which presents many of the best news pictures taken by South Korean photojournalists.

Resident Correspondents

It is impossible to obtain an accurate count of the staff of KCNA. However, it is certain that members of its staff operate in every major city of North Korea, as well as in the friendly countries already mentioned.

Yonhap News Agency recently expanded both its domestic and foreign news coverage, with a staff of more than 300 reporters, writers and editors in its head office in Seoul, and more than 100 correspondents throughout the rest of the country. It maintains 11 overseas bureaus with a total of 13 correspondents in the cities mentioned above.

Bibliography

Newspapers (see also under each Newspaper)
Newspapers

History of Newspaper Development

The first newspaper in Korea was around the 15th c., when the court issued the Chobo (Court Gazette) which was distributed among the ruling class and government officials. However, it was not until 1883 that the first newspaper approaching modern-style appeared. At this time, the thrice-monthly Hansông sunbo, written in Chinese characters, was published by the government. It was followed in 1896 by the first genuinely modern newspaper, the Tongnip Shinmun (The Independent) established by Sô Chaep’il. This newspaper started in a small way (300 copies) as a four-page tabloid issued three times a week, with three pages in Korean and one in English. In commemoration of the first edition on 17 April 1896, a national 'Newspaper Day' was declared and 17 April each year is observed as a holiday by the Korean press.

Japanese colonization between 1910-1945 inhibited the independent development of mass media, due to draconian controls exercised by the authorities. Only a few Korean newspapers were allowed to be published. The Korean War and major political upheavals in Korea, since 1945, have singly and collectively, depressed, biased and transformed this industry.

Oligarchical control over the dissemination of information has been monopolised by the government and a few media moguls. The latter are closely associated with chaebol (family-owned corporations). Government changes now under way in the industry are characterized by three general strands: deregulation, liberalization and internationalization of the media, with effectiveness and competitiveness as the desired result.

While government media policy leans towards deregulation, foreign media and their products hinder development of the Korean media market. The media are under pressure to keep down costs, and the rather gloomy forecast is one of intense competition, with viable profit margins increasingly difficult to attain. Internationalization of the media forces the industry to cope with the changing international market. Driven on by a fierce profit-oriented market structure, the mass media clings to the unhealthy philosophies of sensationalism and commercialism to sell their products.

The Dailies Market
Daily newspapers are among the most important media in Korea. Due to the country's rapid economic development and achieved higher living standards, newspaper sales have steadily increased. (Table 1.)

The oldest continuously published newspapers in Korea are the Chosun Ilbo and the Dong-A Ilbo, both were established in the early 1920s. Now, metropolitan and provincial newspapers offer a wide range from which to choose (Table 2).
While major dailies remained profitable throughout the 1980s and the early 1990s, there is a growing fear of decreasing profit margins in the face of fierce market competition. Of the many elements that have caused a transformation of the newspaper industry from a seller's market to a buyer's market, the most important were political and industrial liberalization. The terms 'liberalization and competition' can be applied right across the mass media spectrum.

Technological improvement has dominated the newsprint industry and has drastically shortened the production process, primarily to meet deadlines and thereby win the 'speed game' over competitors. Prototype has been replaced by computer type-setting (CTS). The national dailies have introduced a fully-computerized production system and in a more modest way, local newspapers, such as the Pusan Daily, have followed suit in order to be competitive. The industry's captains believe, however, that unless the more conventional and resource-wasting individual delivery systems are replaced or at the minimum 'fine-tuned', newspapers cannot hope to win in the competition with the electronic media.

Four dailies, the Chusan Ilbo, the Dong-A Ilbo, the Joong-ang Ilbo, and the Hankook Ilbo control 60 per cent of the Korean newspaper market. Two English-language dailies are also in production. They are the Korea Times, a sister paper of the Hankook Ilbo, and the Korea Herald, which is owned by the Korea Traders' Association. Each of these papers publishes around 100 000 copies a day. Of total industry revenue, the four major companies absorb 70.7 per cent. The newspapers are heavily dependent on advertising which accounts for more than 80 per cent of total earnings, but which also consumes about 55 per cent of total space in each newspaper produced.

Advertising

Between 1981 and 1991 media advertising grew from revenue earnings of 218 billion won to 2,000 billion won. Remarkably, Koreans spent 3,000 billion won in 1993 supporting the media, which accounted for just over 1.0 per cent of the GNP.

Several hundred advertising agencies operate across Korea, but of these only 115 are permitted to engage in radio and TV advertising. In a consumer-oriented economy, advertising expenditure is led by electronic equipment, and food and beverages. Table (3) provides a breakdown of the distribution of advertising sales by the various media outlets.

Journalists and Censorship
Although now diminishing in their stringency, media control laws can be said to still seriously threaten journalism's autonomy. Numerous statutes, including the Publication Law, Broadcasting Law, National Security Law, National Secrecy Act and so forth, inhibit critical journalist practice, a fundamental element of democracy. It is only from 1987 that the people's movements have been able to voice their independent opinions. In newspaper reporting, journalists have been hampered in their tasks by direct censorship and by indirect controls.

Journalists in Korea have long been favoured with higher than average salaries. However, there is growing concern about the stressful conditions under which they have to work, particularly with super-level competition arising since the liberalization of the media. Journalist associations have taken to advertising their members' grievances, by regular full-page notices in the dailies. Many think that true and honest reporting has had to be sacrificed to the sensational and commercial, for the sake of company profit. Table (4) shows media employment in selected years between 1980 and 1993.

Nim üi ch'immuk (Silence of Love, The)  [Literature]

1988 Olympics in Seoul (XXIVth Olympiad)  [History of Korea]

No Ch'ónmyǒng (1911-1957)

No Ch'ónmyǒng, a leading modern female poet, is best known for her poem "Sasum" (Deer). She is commonly referred to as the "deer poet." She was born in 1911 in Changyon, Hwanghae Province. After her father's death in 1919 her family moved to Seoul where she entered Chinmyǒng Elementary School. In her fifth year she was promoted by examination and advanced to the Chinmyǒng Girls' Middle School. In 1934 she graduated from the English literature department of the present Ewha Women's University. During her university years, before No took active part as a member-contributor in the Shiwǒn (Poetry Garden) magazine, she published seventeen of her poems in magazines such as Ewha, Shintonga, and Shingajǒng.

No was active in the Dramatic Arts Society, playing the role of Anya in Anton Chekhov's "The Cherry Orchard" alongside Mo Yunsuk, who was also a notable woman poet and a member of the Poetry Garden magazine. For three years No worked as a reporter for the arts section of the Chosǒn chungang ilbo newspaper. She then travelled through North Jiandao before returning to Seoul to work for the publications section of the women's journal Yǒsǒng and the arts section of the Maeil shinbo newspaper. After Liberation in 1945 No worked as senior editor at the Pumyǒ shinmun and the Seoul shinmun newspapers. When the North Korean army occupied Seoul in the early stages of the Korean War, No was unable to flee the city. She was afterwards imprisoned by the South Korean authorities for her association during this time with Im Hwa's left wing Writer's Federation. In the later years of her life she lectured at Sorabol School of Arts and worked for the publications office of Ewha Women's University. In 1957 she died of cerebral
anemia.

No's formal debut as a poet came during her years at Ewha Womans University, but when she was still a student at Chimnyong Girls' Middle School she submitted a poem to a Japanese children's magazine and won a prize. In 1938 her first collection of poems, (S), was published. This collection included her most well-known poem, "Sasum" (Deer). Her second collection, Windowside (Ch'angbyŏn), was published in February 1945. At this time No was still working as a reporter for the Maeil shinbo, and according to reports she was able to publish this collection in Korean, even though it did not possess any overt pro-Japanese content. In 1953 her third collection, Looking at the Stars (Pyŏl ŭl ch'yŏda pomyŏd) was published. This was a response to her time in prison, and is characterized as expressing her longing for home and desire to escape the painful realities of life. It also contained some patriotic, anti-communist poems. Her final collection, Songs of a Deer (Sasum ŭi norae), was published posthumously in 1958. The Complete Works of No Ch'ŏnmyŏng, published in 1960, is also available.

HMMTS v. 5

Jennifer M. Lee

No Sashin (1427-1498)

No Sashin was a scholar-official of the early Chosŏn period. His family's ancestral home is in Kyohwa, his courtesy name was Chaban, and his pen names were Pojinjae and Ch'ŏnundang. His father, No Mullae, was the Third Deputy Director (tongjisa) of the Royal House Administration (Tollyŏngbu).

In 1451 No passed the Classics Licentiate Examination (Saengwŏn shi) and in 1453 the Civil (mun'gwa) and the Military Service (pyŏnggwa) examinations and was selected as a scholar at the Hall of Worthies (Chiphyŏnjon). After this time he held various other posts including Lecturer (chikkang) at the National Confucian Academy (Sŏnggyun'gwan) and Draftsman (ŭnggyo) at the Royal Office of Decrees (Yemun'gwan). By 1460 he was Fourth Inspector (chip'ŏng) at the Office of the Inspector-General (Sahŏnu). In 1463 No was appointed as Second Counsellor (chikchehak) at the Office of Special Counsellors (Hongmun'gwan) and at this time he supplemented Yŏhae, commentary to the Yŏkhak kyemong. In 1465 he was appointed as Minister (p' ansŏ) of the Board of Taxation (Hojo) and also compiled Kyŏngguk taejon (The National Code) together with Ch'oe Hong. Later in the same year he moved from the Board of Taxation to the position of Governor (kwanch'alsa) of Ch'ungch'ŏng Province where he investigated and rectified the injustices present in his domain. In 1469 he held various positions in the State Council (Ŭijŏngbu), eventually being promoted to Fifth State Councillor (uch'ansŏng). In 1470 he was promoted to Fourth State Councillor (chwant'ansŏng) of the State Council and simultaneously held office as Minister (p' ansŏ) at the Board of Personnel (Ijo). In 1476 he was Director (yŏngsa) of the Royal House Administration and also gave lectures at the National Confucian Academy on matters such as the Four Classics. He also helped King Sŏngjong (r. 1469-1494) with the civil administration. In 1485 he was appointed as First Minister (yŏngsa) of the Office of Ministers-without-Portfolio (Chungch'ubu) and helped P'yŏngan and Kyŏnggi provinces recover from various calamities. In 1487 on the occasion of a new emperor to the Ming throne, No travelled to China as part of an official congratulatory mission sent by Chosŏn. In 1492, he served as Second State Councillor (chwaŭijong) and in 1495 as Chief State Councillor (yŏngŭijong). However, due to an incident involving the success of his wife's relatives in the government service examination, No was censured and he then resigned from his post. During the Purge of 1498 (muŏ sahwa) No was among the neo-Confucian literati who were expelled and he died of disease.
on his way to his place of exile.

No’s literary works include the aforementioned Kyŏngguk taejon, which served as the basis for the legal code of Chosŏn until the late nineteenth century and also works such as Samguksa ch'ŏljo (Abridgement of the History of the Three Kingdoms) that he compiled along with Sŏ Köjong (1420-1488) and Yi P’a. In addition also with Sŏ, he edited and compiled Tongguk yiŏi sŏngnam (Augmented Survey of the Geography of Korea) is another work of No’s that he wrote in collaboration with Sŏ Köjong, Sŏng Im, and Yang Sŏngji.

*Nogye chip* (Collected Works of Nogye)

*Nogye chip* is the literary collection of Pak Illo (1561-1642), styled Nogye, a Chosŏn period poet. This work consists of three volumes in two fascicles and is woodblock printed. There are a total of three editions of this work with the first having been published in 1800, the second in 1904 and the last in 1959. The second edition is much like a supplemented version of the first edition while the 1959 edition is very similar to the first edition.

The first volume contains various discourses and several types of poetry in both five-syllable and seven-syllable quatrains. The second volume contains other miscellaneous writings including various essays and biographies. The third volume of this work is the most famous and contains around sixty shijo and several examples of kasa. The literature in the third volume is highly acclaimed for its literary merit and valued for research into Korean literary history.

*Nojang*  [Literature]

*Non’gyae* (? -1593)

Non’gyae was an official kisaeng (female entertainer) who lived in the Chinju region of South Kyŏngsang Province. She is remembered for her patriotic martyrdom at the time when the Japanese had overrun Chinju during the 1592. During the time of the 1592 Japanese Invasion, Chinju Fortress was sacked by the Japanese troops, and it is widely circulated that Non’gyae seduced a Japanese general and then plunged to her death along with him from a clifftop overlooking the Nam River. The record of this event was passed on by word of mouth and does not appear in official records until 1620. In Ou yadam (Ou’s Unofficial Histories) it is recorded that this kisaeng, for whom society had little more than disdain, sacrificed her own life for the good of the nation. On the other hand, the people of Chinju hold the patriotic actions of this heroine in great esteem and the rock from which she is said to have plummeted to her death, is known as the ‘Rock of Righteousness’ (‘iiam).

However, despite the degree of reverence that the people of the Chinju hold Non’gyae in,
an account of her life is not included in Tongguk shinsok samgang haengshil to (New Supplement to the Illustrated Guide to the Three Relationships). This records the lives and deeds of virtuous women, filial sons and loyal retainers. The omission is probably due to the fact that the compilers of this work were steeped in the Confucian ideology that would not give official recognition to the virtuous conduct of a lowly kisaeng. Nonetheless, the citizens of Chinju honoured the actions of Nongyae in erecting an altar at the river side where she gave her life and in offering sacrificial rights to her righteous spirit. On a nationwide level, there are religious rites offered to Non'gyae in many locales and this bespeaks of the undying admiration the people have for her.

In the nineteenth c. many different aspects of Non’gyae’s life were revealed, such as her being born in Changsu of Cholla Province, being of a yangban (upper class) family, her surname being Chu, and that she was either the lover of Hwang Chin or Ch’oe Kyŏnghoe. However, none of this conjecture is confirmed by historical documents and there are no real facts known concerning the birth or early life of Non’gyae. Nevertheless, she is still venerated by the Korean people as a true heroine who put her country before her own life. Presently, at Chinju Fortress there is a monument marking the spot where Non’gyae is said to have jumped to her death, together with a statue of her likeness.

Nongak

Nongga chipsŏng (Compilation for Farmers)

Nongjŏng ch’waryŏ (Essentials of Farm Management) [Agriculture]

Nongjŏng shinp’yŏn (New Approaches to Farm Management) [Agriculture]

Nongp’o mundap (Dialogue of Nongp’o) [Agriculture]

Nongsa chiksŏl (Straight Talk on Farming) [Agriculture]

Nonsan

Situated in the southeastern part of South Ch’ungch’ŏng Province, Nonsan consists of the towns of Kanggyŏng, Nonsan and Yŏnmu, and the townships of Kayagok, Kwanggŏk, Nosŏng, Tumja, Pŏlgyok, Pujŏk, Sangwŏl, Sŏngdong, Yangch’ŏn, Yŏnsan, Unjin, Ch’aean and Haji. Formerly known as Nonsan County, the city covers an area of 604.63 square kilometres and as of 1988, had a population of 182 000. Mt. Kyeryong (845m) rises on the county’s northeastern border, and Mt. Taedun (878m) is on the southeastern border. Nonsan has an average temperature of 12.4 deg.c. and annually receives 1234mm of rain.

Except for the mountainous areas along the eastern border, most of the city consists of level terrain suitable for farming. Approximately 230 sq. kms. of the city area are arable land. Of this, 161 square kms. grow rice and 69 square kilometres cultivate dry-field crops such as barley and other grains, tobacco, vegetables, ginseng and flax. Factories in the city include refineries, breweries and textile mills.

Tourists are drawn to the area’s mountains, Buddhist temples and other historical sites. Scenic attractions include Mt. Kyeryong National Park in the northeast and Mt. Taedun Provincial Park in the southeast. Nonsan Reservoir (also known as T’apjong Reservoir) is popular with anglers who come to fish for carp. Built during the early 1940s, the reservoir holds 31 610 000 tons of water and provides irrigation to 5 197 hectares of rice paddies.
Kwanch’ok Temple is one of the city’s most visited Buddhist monasteries. Situated in Unjin’s Kwanch’ok Village, the temple was founded during the early Koryo period. In the temple grounds is the 18-metre-high Maitreya statue (Treasure No. 218) that was carved in 968 C.E. The statue was built with three large blocks of granite: one piece for the head and body and two pieces for the arms. The figure wears a cone-shaped hat with two square, flat sections near the top which serve to prevent rain from eroding the structure. Other important Buddhist sites include Ssanggye Temple in Kayagok’s Chungsan Village and the old site of Kaet’ae Temple (founded in 936) in Yonsan.

A large number of Confucian schools exist in the area, such as Unjin Hyanggyo (founded in 1380) in Unjin’s Kyoch’on Village, Nosŏng Hyanggyo (founded in 1398) just west of Highway 23 in Nosŏng, Yŏnsan Hyanggyo (founded in the mid-Chosŏn period) in Yŏnsan’s Kwandong Village, Ch’unggok Sŏwŏn (founded in 1692) in Pujŏk’s Ch’unggok Village, Tonam Sŏwŏn (founded in 1634) in Yŏnsan’s Im Village, Chungnim Sŏwŏn next to the Kŭm River in Kanggyŏng, Haengnim Sŏwŏn south of the Honam Expressway in Kayagok, Hyaom Sŏwŏn just north of the Honam Expressway in Kayagok, Kŭmŏk Sŏwŏn, Nogang Sŏwŏn (founded in 1675) in northern Kwangsŏk and Ponggok Sŏwŏn. Kongyang University in Nonsan’s Naedong Village is a modern educational institution.

Nosa chip (Collected Works of Nosa)

Nosa chip is the anthology of the late Chosŏn period scholar Ki Ch’ongjin (1798-1876, styled Nosa). It was published by the disciples of Ki in 1882 and consists of twenty-two volumes. Subsequently in 1890 another fifteen volumes were published using movable type. The work was reissued in 1902 as a woodblock-print work.

The work is notable for the ideological views of the author, which revolve around the dualistic relationship between i and ki. I is a patterning or formative element that accounts for the behavior of all things in the universe, while ki is the concretising and energising element. These two concepts were viewed as inseparable and mutually dependent since neither could exist without the other. Various schools of neo-Confucian thought advocated the supremacy of one of these concepts over the other, and the author of this work is conspicuous by advocating the supremacy of i over ki.

In addition to the author’s philosophical views, this work also contains many essays on the various aspects of Confucian thought which display the great knowledge of the author. However, the work is most noteworthy for the ideological concepts of the author, which were in marked contrast to others in his time. This collection was included in the 1976 Nosa sŏnsaeng munjip (Literary Collection of Master Nosa) published by Asŏng Munhwa Sa, the 1982 Ki Ch’ongjin chŏnjip (The Complete Works of Ki Ch’ongjin) published by Asea Munhwa Sa, and Nosa sŏnsaeng munjip (Literary Collection of Master Nosa) published in 1983 by Pogyŏng Munhwa Sa.

Nosongdang Ilbon haengnok (Nosongdang’s Japan Travelogue)
The Nosongdang Ilbon haengnok is an account of travels in Japan by Song Húigyŏng, who was sent as an envoy to the Japanese court by King Sejong of the Chosŏn dynasty in 1420. Chosŏn rulers often dispatched envoys to Japan and many accounts have been written, but this is the earliest of such accounts and the journey had an important bearing on events during the reign of King Sejong.

In Chosŏn's early years diplomatic relations with Japan were sensitive as a result of, among other things, a Korean attack on a pirate base at Tsushima. After this assault, at the end of which Korean forces had to withdraw, the Muromachi Shogunate sent a Buddhist Monk, Ryōgei, to Korea for the purpose of ascertaining the political situation and to sound out Korea's intentions regarding another attack on Tsushima. The priest was sent under the pretense of requesting the Taejanggyŏng, the Tripitaka Koreana. For its part, Korea realized the difficulty sending another expedition against Tsushima and decided to employ conciliatory policies toward Japan. It therefore sent Song Húigyŏng in an attempt to establish peaceful relations.

The author departed from Seoul on the fifteenth day of the first month of 1420. He reached Hakata in Kyushu and was officially received there and in Akamazeki (Shimonoseki). He then proceeded to Kyōto. When the envoy's party arrived in Kyōto, Shōgun Yoshimochi was still hostile toward Korea and refused to receive the Korean. Though conceding nothing, Song Húigyŏng's skilful diplomacy eventually led to a meeting with the Shōgun who at last consented to receive the royal message from Korea as well as a copy of the Tripitaka Koreana. The envoy then returned to Korea and reported the establishment of friendly diplomatic relations between the two countries to King Sejong.

The journey took Song Húigyŏng nine months and ten days and his observations on various Japanese social institutions, customs and scenery, as well as the account of his diplomatic experiences are expressed in 224 poems and supplementary essays in the Nosongdang Ilbon haengnok. There are two records in the Annals of King Sejong of this diplomatic journey, but none in Japanese historical material and for this reason alone the work is considered an important historical source. Among important matters described by Song Húigyŏng are the political relationship between the Shōgun and the feudal lords, the economic situation as a whole, shrines and temples and the daily life of the common people of Japan. He also noted that Japan had established a monetary economy and developed three-crop farming. Reflecting his own deeply-felt, scholarly Confucian values, Song Húigyŏng stated that Japan would be an important nation, provided its people knew humanity and righteousness.

The oldest of the extant editions of the Nosongdang Ilbon haengnok is that published during the reign of King Chŏngjo in 1800. This edition was based on a version copied from a text taken to Japan during the Japanese Invasion of 1592. Another edition was copied and published in Japan. In 1889, the Asian Association carried the extracted text of this work in the Sixth Collection of Kaiyōroku, thus introducing the work to the academic world. In 1933, Taiyōsha published Nosongdang Ilbon haengnok under the title Köchū Rōshōdō Nihon gyōroku.

Nŏul

Nuclear Non-Proliferation Treaty (Haek kwangsan kŭmji choyak)

Nuhang sa (Song of a Humble Life)
O Kwangun (1689-1745)

O Kwangun was a late Choson period civil-official. His family's ancestral home is in Tongbok, his courtesy name was Yongbaek and his pen name was Yaksan. His father, O Sangsun, was the First Secretary (tojŏng) of the Royal House Administration (Tollyŏngbu). In 1719 he passed the augmented civil service examination (chŏnggwang shi) and then served as the Fifth Tutor (sŏlsŏ) for the future King Yongjo (r. 1724-1776). After this in 1728 he served at the Office of the Special Counsellors (Hongmun'gw'an), first as Sixth Counsellor (such' an) and then as Fifth Counsellor (kyori).

At about the time that the Yi Injwa Rebellion of 1728 broke out, Yongjo implemented his t'angp'yŏng ch'ae k (policy of impartiality) that sought to appoint men from each of the four colours (sasaek), or factions to an equal amount of positions in the government. O was instrumental in the implementation of this policy. By the appointment of an equal number of officials from the Old Doctrine (noron), Young Doctrine (soron), the Southerners and the Northerners, the government achieved a state of balance that it had not experienced for some time. This served to greatly enhance royal authority and provide political stability through the long reign of Yongjo and the subsequent reign of Chongjo (r. 1776-1800). However, even this far-sighted policy was not able to eradicate the roots of political factionalism.

O continued his rise in the Choson government and was appointed as Inspector (anhaeksa) of the Yongnam region in 1729 and then as Inspector-General (taesahon). In 1737, he was appointed as Censor-General (taesagan). In 1740, along with Won Kyŏngha and Chŏng Uryang of the soron faction, O issued the statement: 'if the political factionalism were to disappear, then there would be a resultant reverence for moral obligations and justice.' In 1743 O was appointed to the Board of Rites (Yejo) as the Second Minister (ch'amp'an) and in 1744 was appointed as Governor General of Kaesŏng.

Extant literary works of O include the preface in Yu Hyŏngwŏn's Pan'gye surok (Pan'gye's Treatises) and a collection of his own writings, Yaksan man'go. He was posthumously conferred the rank of Minister (p'anso) of the Board of Rites and Director (taejehak) of the Royal Office of Decrees (Yemun'gw'an).

Ö Yunjung (1848-1896)

Ö Yunjung was a politician of the Enlightenment Movement of late Choson. His family's ancestral home is in Hamjong, his courtesy name was Sŏngjip and his pen name Iljae. He was born in Po'n of Ch'ungch'ŏng Province. He passed the civil service examination at twenty-one and was appointed as Recorder (chusŏ) in the Royal Secretariat (Sŭngjŏngwŏn). After this he held a variety of positions including Fifth Counsellor (kyori) at the Office of the Special Counsellors (Hongmun'gw'an), Fourth Inspector (chip'yŏng) at the Office of the Inspector General (Sahŏnbu) and Magistrate of a large county (kun'su) in Yangsan. In 1877, he was appointed as Secret Inspector (amhaeng osa) in Chŏlla Province and for nine months he investigated diverse matters in each of the districts throughout Chŏlla and then reported to the court on cases of official graft, corruption, or illegal use of conscripted labour. Ö proved to be quite conversant with the problems confronting the farmers of the region and he proposed a number of reforms including the abolition of miscellaneous taxes, reform of the land tax system and the elimination of the samsup'o (grain and cloth tax for the military). Although King Kojong (r. 1863-1907) and the court deliberated on these measures, they did not become law. It not until the Reforms of 1894 (kapo kyŏngjang) that Ö himself personally brought in these and associated measures.

In 1881, some sixty Koreans were sent to Japan on the so-called 'gentleman's sightseeing tour (shinsa yuramdan)' that was, in reality, a fact-finding mission on the progress and effects of the Japanese modernisation. Ö Yunjung, Cho Chun'yŏng, Pak Chŏngyang and
Hong Yongshik were among those who were on this journey that had a profound impact upon the members. At this time, Kim Hongjip, the ambassador to Japan, received some books from the counsellor to the Qing delegation in Japan, Huang Zunxian. One of these, entitled Chaoxian celie (A Policy For Korea) and written by Huang himself, stressed that Korea should adopt Western institutions to strengthen herself against foreign aggression and form treaties with China, Japan and even America to keep Russian imperialism at bay. Before returning to Korea, Ō travelled to Shanghai to study the Chinese situation. After his stay of more than a year in Japan and China, he returned to Korea with a clear vision of the reforms that were necessary for Choson in order to improve her situation both domestically and internationally.

Upon his return to Korea, Ō was appointed as Inquirer (munūigwan) and he again travelled to China. During his stay there he had frequent contact with Li Hongzhang for the purpose of concluding a friendly commercial treaty with the United States. However, before Ō could finish this mission, the Military Mutiny of 1882 (imo kullan) erupted in Korea and he returned to Korea with the Qing army. Once the mutiny had been quelled, Ō again returned to China and at this time concluded the Choson-China Land and Sea Trade Accord (Chaj-Chung suryŏk muyŏk changjŏng) which somewhat reformed the former unequal trade treaties that had existed between Qing and Choson. In 1883 Ō was appointed as Northwestern Area Diplomatic Commissioner (sŏbuk kyŏngnyaksa), subsequently completing the Chunggang Trade Regulations (Chunggang muyŏk changjŏng) and then the Hoeryŏng Trade Regulations (Hoeryŏng t'ongsang changjŏng).

After the Coup d'Etat of 1884 (kapshin chŏngbyŏn), in which Ō played no part, and the subsequent government that centred on the political faction of Queen Min (1851-1895), Ō's role in the government was unimportant. However, with the outbreak of the Tonghak Rebellion in 1893, he was sent to Po'ın County as the Military Commander of Ch'olla and Ch'ungch'ŏng provinces (yangho sunmusa) where he attempted to persuade the Tonghak army to disband. The Tonghak were particularly outraged at the corruption of the Min government and demanded that changes be made. Ō, however, was not successful in breaking up the Tonghak Army.

With the enactment of the Reforms of 1894 (kapo kyŏngjang) Ō joined the new government led by Kim Hongjip as the Minister of Finance (t'akchi taeshin). Here, he sought to enact sweeping tax and fiscal reforms for the new government. However, with the backlash that followed from the Japanese assassination of Queen Min in 1895, the pro-Japanese government of Kim Hongjip was ousted by the pro-Russian faction. At this time, Ō was among the members of the Kim Hongjip government killed in the power struggle.

Among the writings of Ō that are extant, Chongjŏng yŏnp'yo covers his life in government service and his views on many of the important events that surrounded the final years of the Choson Kingdom.

Ōbu sashisa (Fisherman's Calendar) [Literature]

Odae Mountain

Situated east of Kangnŭng in Kangwŏn Province, Mt. Odae (1,563 metres), along with Mt. Sŏrak to the north, is part of the T'aebaek Mountain Range. Piro Peak, the mountain's highest point, is surrounded by Horyŏng, Sangwang and Tūro Peak. To the south-east of Piro Peak stand Mt. Tongdae (1,434 metres), Noin Peak (1,338 metres) and Mt. Hwangbyŏng (1,407 metres).

Unlike Mt. Sŏrak to the north, Mt. Odae is characterised by round summits and relatively few areas of exposed rock. With its deep layers of soil, the area supports abundant plant life. In addition, the mountain is home to approximately 17 mammal species, 35 bird
From earliest times, the mountain has been associated with Buddhism. According to the Memorabilia of the Three Kingdoms (Samguk yusa), the monk Chajang went to China’s Mt. Wutai (Kor. Mt. Odae) in 636 C.E. in order to see the Munsu Buddha. Chajang received a Sanskrit verse in a dream, which was later interpreted by a mysterious monk (who was actually the Munsu Buddha). Chajang was told to return to Mt. Odae in Korea which ‘ten thousand Munsu Buddhas make their permanent abode.’ Following the monk’s advice, Chajang returned to Mt. Odae where he indeed met with the Munsu Buddha. Years later, Wŏlchŏng Temple was founded on the site of Chajang’s old hermitage. Still active, the temple houses a number of important historical artifacts. Sangwŏn Temple, located just east of Mt. Odae’s main peak, was also founded by Chajang. In addition, Saja, Kwanŭm, Sujŏng, Chijang and Mirŏk Hermitage are also located in this area.

To the east of Mt. Odae, the gentle terrain gives way to the rocky crags and picturesque gorges of the Sogŭmgang Valley. The area gets its name from the Chosŏn Confucian scholar Yi I (1536-1584), commonly known by his penname Yulgok. In his travelogue Ch’ŏnghak san’gi, Yulgok described the area as a miniature (so) version of the Diamond (kŭmgang) Mountains. This scenic valley contains many famous sites, including Shipcha Pool, Shiktang Rock and the lovely Kuryong (Nine Dragons) Waterfall. Remains of Ami Fortress lie near the waterfall, marking the site of a battle between Koguryŏ and Shilla troops. In order to preserve the area’s pristine environment and important historical heritage, Mt. Odae, along with Sogŭmgang Valley to the east, was designated Odae-san National Park in 1975.

Odong Island

As part of Yŏsu in South Cholla Province, Odong Island occupies an area of 0.12 sq. kms. This tiny island consists of hilly, forested terrain with foreboding sea cliffs. At times during Chosŏn, Odong served as a naval training base. In 1935, a 768-metre-long, 7-metre-wide causeway was built connecting the island to the mainland. There is a lighthouse on the island’s south coast. In order to preserve the area’s natural beauty, Odong Island was designated part of Hallyŏ National Marine Park in 1968.

Oju yŏnmun changjŏn san’go (Random Expatiations of Oju)

Oju yŏnmun changjŏn san’go is an encyclopaedic work of late Chosŏn shirhak (practical learning) scholar Yi Kyuyŏng (1788-?). This huge collection consists of sixty fascicles in a like number of volumes and is handwritten. This work is valued highly by scholars of Korean history and philosophy for the vast array of information it contains, under some 1
400 topics. These include astronomy, calendars, mathematics, history, geography, economics, literature, phonetics, the Confucian classics, Western literature, religion, metallurgy, medicine, land surveying techniques, flora and fauna. The subjects discussed the depth of Yi’s scholarship, and show the breadth of shirhak learning.

Shirhak scholarship played an important role in the latter part of Chosŏn after it had been transmitted from China and propagated in Korea. The importance placed on empirical learning vis-à-vis the heretofore neo-Confucian scholarship that stressed vague theoretical issues can be seen in works such as Oju yŏnmun changjŏn san’go, which represents the culmination of shirhak learning. During the colonial period Ch’oe Namsŏn reproduced an edition of this work, which is now kept at Kyujanggak Library. In 1958, Oju yŏnmun changjŏn san’go was republished by Dongguk Munhwasa in a two-volume set.

**Okch’ŏn County**

Situated in the southern part of North Ch’ungch’ŏng Province, Okch’ŏn County consists of the town of Okch’ŏn, and the townships of Kunbuk, Kunsŏ, Tongi, Annam, Annae, Ivŏn, Ch’ŏngsan and Ch’ŏngsŏng. The county covers an area of 535 sq. kms. and as shown by 1989 statistics, had a population of 73,301. Located where the Noryŏng Mountain Range splits from the Sobaek Range, the county’s terrain is mountainous with Mt. Kŭmjŏk (652m) rising in the north, Mt. Ch’ŏnggŭm (465m) and Mt. P’arŭm (762m) in the east, Mt. Wŏri (551m) and Mt. Mani (640m) in the south and Mt. Hwan (581m) and Mt. Masŏng (497m) in the west. Mountain winds make for sharp fluctuations in daily temperatures during both early summer and early autumn. In general, the local climate is characterised by sharp season fluctuations, with January temperatures averaging -3.8c., and an August average of 26.0c. The county receives an annual rainfall of 1,135mm.

About 11,600 hectares of the county area are arable. Of this, almost half grows rice and half grows dry-field crops such as barley, bean, potato, sweet potato and red pepper. Cotton is also grown. Stock breeding and sericulture also contribute to the local economy. Mineral resources found in the area include alluvial gold, graphite, anthracite, silica and feldspar. The city’s industrial sector, overshadowed by that of nearby Taejon, is limited to ko-hemp wallpaper, wig-making, tie-dyed fabrics, silk mills, and tobacco drying plants.

The county has a number of scenic and historical attractions. From Mt. Masŏng, there is a commanding view of the Okch’ŏn basin and the city. On the summit can be seen remnants of Masŏng Fortress. Fragments of earthenware from the Three Kingdoms suggest that the fortress dates from this time. Southeast of the mountain in Samch’ŏng Village lies Yongun Temple. Founded by Ûishin in 552, this ancient monastery houses a magnificent rock carving of a standing Buddha, a pair of stone pagodas and two altar paintings. In Chŏngsŏng’s Changsu Village, is Kangjŏl Cave. Discovered in 1975, this limestone cave is believed to have formed around six hundred million years ago. A short distance from the entrance is a twenty-one sq. metre chamber with a sandy floor. Just metres past the chamber stalagmites can be seen, together with a small pond. Bowing to safety considerations, this ancient cave has not been opened for tourism.

Old Confucian schools found in the area include Okch’ŏn Hyanggyo in Okch’ŏn’s Kyodong Village and Ch’ŏngsan Hyanggyo in Ch’ŏngsan’s Kyop’yŏng Village (both founded in 1398) and Samgye Sŏwŏn (founded in 1621) in Ivŏn’s Kangch’ŏng Village. As for shrines, there is Samch’ŏngsa in Okch’ŏn’s Samch’ŏng Village built in honour of the scholar Kwak Shi and Wŏndŏksa in Ivŏn’s Yongbang Village built in honour of the progenitor of the Miryang Pak clan.

**Ondol**

**Ongjin County**
Administratively part of the Inch’ŏn Metropolitan City, Ongjin County consists of 37 inhabited, and 98 uninhabited islands. The county covers an area of 204 sq. kms. and has a population of about 22,000. With a maritime climate, the county’s weather is relatively mild with an average annual temperature of 12.1 deg.C and an average annual rainfall of 1,090mm.

Since most of the islands that make up the county are mountainous, only 6,000 hectares or so are arable, but this is offset by high soil fertility. Of the land under cultivation, some 3,000 hectares grow rice, while slightly less is used for dry-field crops. Local marine products include yellow corbina, skate, blowfish, flatfish, shrimp, crab, clam and seaweed. In addition, the area’s extensive salt pans are commercialised.

There are several historical sites within the county. On Taeyŏnop’yŏng Island in Songnim Township, is Ch’ungminsa, a shrine dedicated to General Im Kyŏngop (1594-1646, styled Ch’ungmin). In former times, the shrine was used for periodic rituals when the seafaring villagers would pray for an abundant catch. Other important sites include Ssanggye Temple on Taebu Island and a stele commemorating the March First Movement of 1919 in Chin Village on Tŏkchŏk Island.

**ŏnjin Mountain**

Situated in Hwanghae Province in Suan County, Mt. Ŭnjin is the main peak of the Ŭnjin Mountain Range which runs along the provincial border between Hwanghae and South P’yŏngan Province. Although the mountain’s summit is flat, the terrain of the area is characterised by steep cliffs and bare rock faces. The mountain has abundant mineral resources, including gold, silver, molybdenum and copper. However, the area’s irregular rock formations prevent easy access to the area. The famous Buddhist monasteries, such as Sujŏng, Pulgak and Panya Temple, that once stood here, have all gone to ruin.

**ŏnum chi** (Record of the Korean Language)

*ŏnum chi* is a comparative study of han’gŭl and hanmun (Sino-Korean writing) and was written by Yu Hŭi in 1824. The work is titled after the popular designation for the Korean script ‘ŏnumun,’ in the early nineteenth century. It was not published as an independent book, but included as part of the author’s collected works Munt’ong. Yu’s work, began at the end of Chosŏn, cited and criticised the scholarship of many of his predecessors, such as Shin Sukchu, Ch’oe Sejin and Yi Yongik, in establishing his own theories concerning the Korean language. The work is written in Sino-Korean and is quite short. The contents consist of an introduction, the fifteen initial sounds in Korean, explanations of the changes in the sounds of Korean, a list of the fifteen vowels in Korean, and various explanations of the differences of vowel sounds, among other items.

In 1937, the Society of Korean Language Research (Chosŏn Hakhoe) reproduced *ŏnum chi* and this served as the basis for the 1958 version of the work that was translated by Yu Ch’angdon and published under the title of *ŏnum chi chuhae* (Record of the Korean Language, with Annotations). The original work is presumed to have been destroyed during the Korean War. *ŏnum chi* is prized by present-day scholars of the Korean language as both a record of the language during the early nineteenth century and for the linguistic theories that the author advocates.

**Onyang Folk Museum**

Situated in Onyang in South Ch’ungch’ŏng Province, the Onyang Folk Museum (Onyang Minsok Pangmulgwăn) was established by Kim Wŏndae in October 1978 with Kim Hongshik as chief curator. The museum’s collection consists of more than seventeen
thousand items contained in three regular, and two special exhibition halls. The first hall contains items associated with coming-of-age ceremonies, weddings, ancestral rites and funerals. In the second hall are work implements that were used for agriculture, fishing, hunting, weaving and livestock breeding. The third hall contains items related to handicrafts, folk beliefs, recreation and academic studies. The museum’s two special halls are set aside for exhibitions of folk paintings and Buddhist art.

**Öorang Stream**

Öorang Stream flows 103 kms. from the southern part of North Hamgyöng Province to the East Sea. With its source on Kwesan Peak (2 277m) in the Hamgyöng Mountain Range, the Öorang joins Myonggan Stream near Ponggang Railway Station before entering Kyongsŏng Bay. At first, the stream flows southwards but its mid-section changes to an easterly direction. Topographically, the upper-reaches flow through granite while the middle and lower sections are contained by basalt formations. In Öorang Township, the stream has formed the Öorang Plain, an area used for rice, barley, wheat and corn cultivation, as well as sericulture and cattle breeding. Along the middle section of the stream is Samp’o Hot Spring and on the lower section are Changyŏn and Mugye lakes.

**Örini** (see Magazines)

**Oryun**

[Society]

**Osan**

Osan is situated in southern Kyonggi Province. The area’s terrain is generally flat, but has a number of low hills. Hwangguji Stream flows past the city in the northwest and Osan Stream flows to the southeast. In addition, there are a number of reservoirs, the largest of which is Sŏrang Reservoir north of Nojŏk Peak (160m).

With numerous reservoirs for irrigation and approximately 40 per cent of the area of arable land, the city has ideal conditions for agriculture. Rice and grains used to be the main crops, but emphasis is now placed on dry-field crops, fruit-growing and garden plants. In addition, a number of poultry and dairy farms exist. Located on the Kyŏngbu Expressway on the way from Seoul to Taejŏn, Osan has recently undergone development as an industrial centre. Factories produce textiles, manufactured goods, electrical appliances, electronics and chemical goods (including perfume). As for education, Tertiary education needs are met by Hanshin University in Yangsan-dong.

The city has a number of important historical relics. In Chigot-dong, there is Tok Fortress, which is believed to date from the Three Kingdoms period, and next to the fortress stands Pojŏk Temple. Confucian sites include Kwŏllisa in Kwŏldong. This shrine was originally founded as a library and lecture hall by Kong Sŏrin, who was sixty-four generations removed from Confucius. Legend has it that there was a drum hanging from the gingko tree in the courtyard that Kong would strike to keep his students alert during lectures. In 1792, King Chŏngjo changed the name to Kwŏllisa and had a memorial portrait of Confucius enshrined. Rites are still held here in the autumn and spring. In the northern area of the city near Panwŏl Peak (118m), there is a memorial stele commemorating the first battle of U.N. troops in the Korean War. The battle was fought here on 5 July 1950, just 10 days after the beginning of the war.

**Oship Stream** (Kangwŏn Province)

With its source on Mt. Paekpyŏng (1 259m) on the border of Samch’ok and T’aebaek in
Kangwŏn Province, Oship Stream flows for 52 kms. to the East Sea. Until late-Chosŏn, the Oship was fringed by a dense forest catchment, but during the Japanese occupation, wholesale felling was carried out for timber needed by regional coal mines, and consequently it became heavily polluted, chiefly by waste from the mines. The name Oship (Fifty) comes from the numerous bends on the stream's lower section. More recently, work has been done to straighten the stream's course. Since 1969, the Oship has been stocked with salmon fingerlings from the Samch'ŏk fish hatchery. The Chuksŏru Pavilion is a local scenic attraction and is located close to Chuksŏ Bridge in central Samch'ŏk.

Oship Stream (North Kyongsang Province)

From its source on Mt. Taedun (905m), Oship Stream flows through the centre of North Kyongsang Province's Yŏngdŏk County into the East Sea. Its tributaries include Shinan, Kwandong and Taesŏ streams. For most of its 40-kms. the Oship is followed eastward by Highway 34. On the west side of the town of Yŏngdŏk, the stream gradually widens as it turns southward to accompany Highway 7. At Kanggu Village, where it discharges into the sea, is Kanggu Beach. In earlier times, large quantities of sweetfish were caught at Kanggu Port, but today the stocks of this fish are greatly depleted.

P'ahan chip (Jottings to break up idleness)

The P'ahan chip by Yi Illo (1150-1220), is an anthology of literary essays, historical narratives, Chinese verses, and accounts of ancient and contemporary life and customs, especially of the western capital, now P'yongyang, and of K'aegyŏng, now Kaesŏng. It was written in 1260 and comprised three volumes and one fascicle.

The volume of P'ahan chip was published in photostat during the Japanese occupation of Korea by Kosŏ kanhaenghoe (Association for the publication of old books).

P'aju

Situated in northwest Kyŏnggi Province, P'aju is comprised of the towns of Kŭmch'on, Munsan, Pŏbwŏn and P'aju, and the townships of Kwang't' an, Kyoha, Wŏllyong, Chŏksŏng, Chori, Chindong, T'anhyŏn and P'ap'yŏng. Mt. Kamak (675m), Mt. Nogo (401m), P'aril Peak (464m) and Aengmu Peak (622) rise along the city's eastern border, while the Imjin River flows through the city before joining the Han River in the southwest.

The low plain along the lower reaches of the Han and Imjin rivers is one of the nation's key grain producing regions. Of the P'aju area, about 34 per cent is arable and most of this is devoted to rice cultivation. With two large rivers, numerous streams and a number of small reservoirs, the area has an extensive irrigation system. Dry-field crops such as legumes, Chinese cabbage, cucumber, and watermelon, along with orchard crops of apple, pear and peach are also harvested here, while the area's speciality crops include hot peppers, garlic and ginseng.

P'aju's industrial development has lagged behind other areas of Kyŏnggi Province; however, a number of medium-sized factories have been set up, producing wigs, sweaters and electronics for export. The Kyŏngŭi Railway Line and Highway 1 link the city with Seoul.

The demilitarised zone (DMZ), separating North and South Korea, cuts through the northwest corner of the city. Many tourists come to visit the truce village of P'anmunjŏm, since this is the only location in the DMZ where visitors are permitted. From 25 October 1951 until the end of the Korean War, peace talks were held here. In the years following the conclusion of the war, P'anmunjŏm has continued to be the centre of a number of historical events. In 1968, the kidnapped crew of the American warship USS Pueblo were
sent to South Korea via the village, and in 1976, two American servicemen, while attempting to chop down a tree in front of an observation post, were hacked to death by North Korean soldiers. An American soldier defected to North Korea from here in 1983, and a year later, a Russian tourist defected to the South, triggering a battle that left three North Koreans and one South Korean dead. In 1989, this was also the place where the Hanguk University student Lim Soo-kyong and Catholic priest Moon Gyu-Hyon came back to Korea after an illegal visit to the North. Both were immediately arrested and charged with violating the national security law. On the southern side, foreigners are permitted to visit the village, but Koreans are not allowed unless they have special permission. Similar tours are also run by North Korea on the northern side.

P'aju also has a number of historical relics and sites. In Kwangt'an Township’s Punsu Village, there is an interesting 17.4-metre high rock carving of two Buddhist figures (Treasure No. 93). The carvings show similarities with others at Andong’s Ich’ŏn-dong and Ich’ŏn’s Yŏngwŏl Hermitage. Built during the Koryŏ period, the figures wear round and square hats, a Koryŏ period innovation used to prevent the rain and elements from damaging the faces. According to local legend, the figure on the left is male and the one on the right is its female counterpart. Other Buddhist artefacts can be seen at the Pogwang and Yongsang temples.

There are several Confucian schools in the area, such as Chaun Sŏwŏn in Pŏbwŏn’s Tongmun Village, P’asan Sŏwŏn in P’ap’yŏng Township’s Nullo Village, Kyohy Hyanggyo in Kŭmsan’ŏn’s Kŭmnung Village, P’aju Hyanggyo in P’aju, Yongju Sŏwŏn in Wŏllong Township’s Tŏgūn Village and Chŏksŏng Hyanggyo in Chŏksŏng Towship’s Kuŏp Village.

*P'alcho pŏp* (Eight-article Law) [Society]

**P'algong Mountain**

Situated north of Taegu in North Kyŏngsang Province, Mt. P'algong is part of the T'aebaek Mountain Range. Piro Peak, the mountain's highest point, rises up 1,193 metres between West (Sŏ) Peak and East (Tong) Peak. In ancient times, Mt. P'algong was called Mt. Kong or Puak. The mountain gets its present name from historical events surrounding the fall of Greater Shilla. In 927, Kyŏnhwŏn, the leader of Later Paekche, stormed Sŏrabol (present-day Kyŏngju), the Shilla capital. Wang Kŏn, the leader of Later Koguryŏ, led a force of 5,000 soldiers south to attack Kyŏnhwŏn. When the two armies met in the Mt. P'algong area, Kyŏnhwŏn’s forces managed to surround Wang Kŏn’s army. However, a general by the name of Shin Sugyŏm, disguised as Wang Kŏn, suddenly drove his horse carriage into the enemy lines. During the pitched battle that ensued, Shin and seven other generals were killed. Wang Kŏn, who barely managed to survive the ordeal, later become the first King of the Koryŏ Dynasty. Thereafter, the mountain was named after the eight ministers (*p'algong*) who valiantly gave their lives to save the king.

The mountain is also connected with the Hideyoshi Invasions (1592-1598). At that time, the monk Yujong, responding to Hyujong’s call to rise up against the Japanese invaders, gathered together a monk army which he commanded from Tonghwa Temple. Nowadays, the monastery is one of the main temples of the Chogye Order. The temple contains many cultural relics including a seated Buddha figure (Treasure no. 243) carved onto the face of a rock at the temple’s entrance. Other famous temples, such as Ŭnhae, Songnim, Puin, P'agye and Kwanŭm, are located on the mountain, as well as numerous hermitages. Due to its historical importance and value as a tourist destination, the mountain has been designated P'algong-san Provincial Park.

*P'algwanhoe* [Agricultural rites; Buddhism; Dance]
P'alman taejanggyŏng (see Buddhist Canon, Korean)

P'alsea (For the Instruction of Eight-Year Olds)

P'alsea is a primer for Manchus that was compiled in Chosŏn during the early eighteenth c., and was a one-volume wood-block print. The content of P'alsea is quite similar to that of Soaron and Ch'ŏngŏ nogŏldae, and was designed to teach Manchu for use by Korean envoys. The original editions of this work are no longer extant, but many copies exist of the 1777 revised version that combined P'alsea and Soaron, and was edited by Kim Chinha and Chang Chaesŏng. The title of this work is derived from the story within that concerns an eight-year old boy who answers a series of difficult questions posed to him by the emperor.

It is a valuable resource for the study of the Manchu language. Copies are now kept at the Kyujanggak Library and The British Library among other places. In 1956 Tongbanghak Yŏn'gu guso reissued this book.

P'ansori [Music; Literature]

P'o [Clothing]

P'och'ŏn County

Situated in Kyŏnggi Province, P'och'ŏn County is comprised of the town of P'och'ŏn, and the townships of Kasan, Kunnae, Kwanin, Naech'ŏn, Sohŏl, Shinbuk, Idong, Ildong, Yŏngbuk, Yŏngjung, Ch'āngsu and Hwahyon. Branches of the Kwangju Mountain Range run along the north, east and south. As some of the area's highest peaks, Mt. Kwangdŏk (1 046m), Mt. Paegun (937m) and Kungmang Peak (1 168m) rise on the county's northeastern border.

Agriculture is hindered by the county's rugged terrain and poor quality soil. As a result, farming is primarily centred around dry field crops such as beans, barley, potatoes and green vegetables. There are also a large number of dairy farming and stock breeding operations, while sericulture is common as a supplementary source of income. Industrial development in the area is limited, but there are some factories producing foodstuffs for the military forces and liquor. P'och'ŏn is especially famous for its makkŏlli (unrefined rice wine) which is made with water from the Paegun-dong Valley.

With high mountains and picturesque valleys, the county boasts a large number of tourist attractions. Throughout the year, visitors come to see the lovely Paegun-dong Valley. Considered one of the county's 'eight wonders,' Mt. Paegun has several oddly-shaped rocks as well as Yang Pongnae Cave, which is said to have been frequented by the calligraphy master Yang Soŏn (styled Pongnae) in the early Chosŏn period. Mt. Hyŏndŭng (936m), located in Hwahyon Township, is another scenic mountain popular with hikers. With its interesting rock formations and clear streams, this mountain has been referred to as the 'Lesser Diamond Mountains' (Sŏgŭm'gang). Among its sights, Hong (Rainbow) Waterfall is considered to be one of the county's 'eight wonders.' The mountain also contains remnants of a fortress wall that is said to have been built by Kungye (?-918, founder of Later Koguryŏ) in his struggle against Wang Kŏn (r. 918-945, founder of Koryŏ kingdom). On the mountain, one also finds Hyŏndŭng Temple, which was rebuilt by National Master Pojo (Chinul, 1158-1210), and a three-storey stone pagoda.
There are a number of other historical sites and relics scattered throughout the county. In Kasan Township’s Kümhyön Village, there is a giant dolmen, and other dolmen have been found throughout the area. Several old shrines can also be seen here. Ch’üngsönsgsa (Kyönggi Province Tangible Cultural Asset No. 64), in Shinbuk Township’s Kach’e Village, commemorates the great Shilla scholar Ch’oe Ch’iwón, while Ch’onghaesa, in Ch’angsu Township’s Ch’udong Village, was built in honour of Yi Chiran who helped Yi Sŏnggye found the Chosŏn dynasty.

There are also a number of old Confucian schools in the area, including Kasan Township’s Hwasan Sŏwŏn, Kunnae Township’s P’och’ŏn Hyanggyo (founded in 1173) and Shinbuk Township’s YongyŏnSŏwŏn... Modern schools in the area include Daejin University and Pochon CHA Medical University.

P’ohang

Situated in North Kyongsan Province, P’ohang is comprised of the towns of Hŭnghae, Kur Yongp’o, Och’ŏn and Yŏnil, and the townships of Chukchang, Ch’ŏngha, Kigye, Kibuk, Songna, Shin’gwang, Taesong, Taéo and Tonghae. The present city was formed by combining P’ohang city with Yŏngil County. Hyangno Peak (930m), Mt. Ch’imgok and other peaks of the ‘aebaek Mountain Range run through the northwest part of the city and the Hyŏngsan River flows south of the central area into Yŏngil Bay.

Rice is the area’s major crop. In addition, green vegetables, tobacco, peaches, grapes and mushrooms are grown in the area. Fishing is another important source of income. Fishing boats, operating out of Kur Yongp’o and other ports, bring in large catches of mackerel pike, cuttle-fish, octopus, gizzard shad, yellowtail and filefish. In addition, there are abalone and seaweed farming operations in both Kur Yongp’o and Yangp’o.

P’ohang Port is the largest on the east coast and it was the first port in Korea to be able to accommodate cargo ships of over 100 000 tonnes. Taking advantage of the city’s modern port facilities, a number of industries have been set up in the area. Most notably, the city is home to POSCO (P’ohang Iron and Steel Company), the world’s second largest steel maker. Founded in 1968, the company employs over 200 000 workers.

This heavily industrialised city has attracted a number of important research projects. In Hyoja-dong, one finds Pohang University of Science and Technology, a premier Korean research institution. At the university, there is the P’ohang Accelerator Laboratory, a project that was started in 1988 and finished in 1994. This is the largest scientific project in Korean history. Pohang Iron and Steel Company and the Korean government funded the project, with a total investment of about US $180 million. In addition to the university, there are Pohang Junior College in Hŭnghae’s Chukchŏn Village, Handong University in Hŭnghae’s Puk District and Pohang Industrial College near the city centre.

Local tourism is centred around the city’s numerous beaches. Located just north of the central area, Songdo Beach is particularly popular. Pukpu Beach, located to the north, is 1.7 kilometres long, making it the longest beach on Korea’s east coast. Visitors also come to the area to see historical sites such as Pogyŏng Temple in Songna Township. Founded by Ilcho during the reign of King Sŏngdŏk (702-737), the monastery houses a number of artefacts including a stupa and stele commemorating National Master Wŏnjin (1171-1221) and a five-storey pagoda. In the valleys around the temple, there are twelve spectacular waterfalls, and Mt. Naeyŏn (710m) and Hyangno Peak (930m) rise to the west. South of the central area, lies Honggye Waterfall, Oŏ Reservoir and Mt. Unje’s Oŏ Temple, which was founded by Chajang during the Shilla period. Other Buddhist artefacts include ten ancient niche-carvings which were recently discovered in a natural cave in Chichaeng Township’s Imjung Village.
A number of Confucian schools exist in the area, including Kokkang Sŏwŏn, Sammyŏng Sŏwŏn, Sŏsan Sŏwŏn, Haksan Sŏwŏn in Songna Township, Ibam Sŏwŏn in Chukchang Township, Kwangnam Sŏwŏn in Kuryongp’o’s Sŏngdong Village, Och’ŏn Sŏwŏn in Och’ŏn’s Wŏn Village, Chungnim Sŏwŏn in Chihaeng’s Umnae Village, Changgi Hyanggyo in Chihaeng Township, Yongil Hyanggyo just south of P’ohang Industrial College on the Hyŏngsan River and Hŭnghae Hyanggyo in Hŭnghae’s Oksŏng Village.

In Taebŏ Township stands the Changgigap lighthouse. Built in 1903, this 26.4-metre structure was the first lighthouse to have been built in Korea. In 1984, a lighthouse museum was constructed at the site. Since P’ohang was the scene of intense fighting during the Korean War, there are also a number of war memorials in the central area.

Near the central business district in Yonghŭng-dong, is Yŏnhwa Peak. Also known as Mangbu-san (Watching for Her Husband Mountain), the peak is associated with a legend going back to Shilla times. It is said that in the years leading to Greater Shilla’s fall, the kingdom’s monarchs and officials had become extremely decadent. At this time, there lived a man named Sorang who had a wife famous for both her looks and virtue. The king, hearing rumours of the wife’s outstanding beauty, thought up a plot to have his way with her. Since a Japanese envoy was then visiting the Shilla court, the king ordered Sorang to go back with the visitor as an envoy to Japan. During Sorang’s absence, the king brought Sorang’s wife to the palace and tried every form of enticement to get her to sleep with him, but she adamantly refused. Furious, the king finally confiscated all of the couple’s belongings and sent her away. The wife wandered until she came to Mt. Mangbu which overlooked the East Sea. There she built a hut and waited for her husband to return. However, Sorang’s ship sank on the return voyage, and the wife, unaware of the mishap, spent the rest of her days on the peak, patiently waiting. After she died, a shrine was built (which is not extant) and the peak’s name was changed to Mt. Mangbu.

P’yŏngch’ang County

Situated in Kangwŏn Province, P’yŏngch’ang County is comprised of the town of P’yŏngch’ang, and the townships of Toam, Taehwa, Mit’an, Pangnim, Pongp’yŏng, Yongp’yŏng and Chinbu. Encompassing 1 460 square kilometres, P’yŏngch’ang is the largest county in Kangwŏn Province. As the area where the T’aebaek and Ch’aryŏng mountain ranges meet, most of the county’s terrain is mountainous with Mt. Hwangbyŏng (1 407 metres), Mt. Parwang (1 458 metres) and Mae Peak (1 173 metres) rising in the northeast, Mt. Kariwang (1 561 metres) in the east and Mt. Hŭngjŏng, Mt. T’aegi (1 261 metres) and Mt. Paektŏk in the west. In the northeast, the Yŏngdong Express Way, built in 1975, crosses the 830-metre high Taegwallyŏng Pass to link the Kangnŭng area with Seoul. In the south, the mountains give way to lower elevations.

Due to the area’s rugged terrain, a mere ten per cent of the county’s area is arable and only two percent of this is used for rice cultivation. In the remaining area, dry field crops such as potatoes and garlic are grown. Corn, which was previously one of the area’s main crops,
is now being replaced by alpine vegetable farming. In particular, the county provides nearly all of the nation’s seed potatoes.

With cool summer temperatures that do not dry out pastures, the Taegwallyŏng area is ideal for stock breeding and dairy farming. Several of the nation’s largest cattle breeding operations are located here, including the Samyang Taegwallyŏng Cattle Station as well as Hanil Nongsan. Taking advantage of the area’s Alpine climate, a number of research agencies such as the National Animal Breeding Institute, the Kangwŏn Province Potato Seed Research Station and the Alpine Experiment Station of the Rural Development Administration have been established in this area. Numerous alpine vegetable crops, including radishes, cabbages, lettuce and carrots, are also grown in Taegwallyŏng’s high altitudes.

The county’s tourism is centred around Mt. Odae National Park (See Odae Mountain) in the north and the Yongp’ŏng Ski Resort, which opened in 1974 in Toam Township. The resort, also known as Dragon Valley, is covered with snow throughout the winter. Hoenggye Village, just north of the resort, is famous for its dried pollacks. Brought in from Chumunjin on the east coast, the pollacks are soaked in Hoenggye Stream for a night and then hung on racks to dry throughout the winter. Much of the county’s remote mountainous area has not been touched by industrial development or tourism. As a result, this is one of the few remaining places in South Korea where deer are still occasionally seen in the wild.

In addition to natural wonders, there are a number of old historical sites in the region. Besides the numerous Buddhist artefacts enshrined in Mt. Odae’s Sangwŏn Temple and Wŏlcŏng Temple, there are a number of relics in P’yŏngch’ang, including three five-storey stone pagodas, in Chung Village, Sang Village and Yudong Village (Kangwŏn Province Tangible Cultural Asset No. 30) and a seated stone Buddha figure in Pangnim Village. In Chínbu Township, there is a three-story stone pagoda (Kangwŏn Province Tangible Cultural Asset No. 29).

There are also several ancient stone fortresses, including remnants of the No Fortress at P’yŏngch’ang’s Chung Village, remnants of the Mt. T’aegi Fortress in Pongp’yŏng Township and the Taehwa Fortress in Taehwa Township. Examples of Chosŏn architecture include the P’yŏngch’ang Hyanggyo (county public school, Kangwŏn Province Tangible Cultural Asset No. 101), founded in 1658, and the Pongsan Sŏwŏn (private academy) in Pongp’yŏng Township.

P’yŏngjo hoesang [Music]
P’yŏngp’ung Mountain

Situated east of Maengsan on the border of South Hamgyŏng and South P’yongan Province, Mt. P’yŏngp’ung (1,353 metres), along with Mt. Sasu (1,747 metres) and Modo Peak (1,833 metres), is part of the Nangnim Mountain Range. Numerous ridges extend out from the mountain’s flat summit, and the entire area is covered with broad-leaved trees. The east side of the mountain gives way to cliffs and deep gorges, whereas the western slope is relatively gentle.

P’yŏngt’aek

P’yŏngt’aek is situated in Kyŏnggi Province, to the south of Seoul. With the Kyŏngbu Expressway running through the eastern sector of the city and a train line running through
the western sector, the city is easily accessible from Seoul or other major cities. P'yŏngt'ae'k is characterised by flat terrain and elevations around sea level. In fact, tidal waters from the Yellow Sea occasionally used to flow into the area creating large reservoirs. However, after dykes were built and the Asan Seawall was completed in 1973, the flooding was stopped, making the area suitable for agricultural production.

With its flat terrain, the area is ideally suited for rice cultivation. In hilly areas, there are numerous orchards, which grow apples, pears, plums and other fruits. Since goods are easily transported to the Seoul metropolitan area, the city also has a large number of factories. In spite of its location near Seoul, the area receives relatively few tourists. It has few mountains or lakes and few important historical sites. On Mt. Samgak, there is the Hyŏngch’ung Memorial and a large pavilion. At the foot of the mountain, there is Myŏngbŏp Temple, a monastery run by Buddhist nuns. In Sosa-dong, there is a stele (Kyŏnggi Province Tangible Cultural Asset No. 40) commemorating the Law of Uniform Land Tax (taedong pŏp), which was implemented in 1608. The stele was erected in 1659.

P'yŏngyang

Situated between South P'yŏngan Province and North Hwanghae Province, P'yŏngyang is the capital of the Democratic People's Republic of Korea (DPRK) (North Korea). Most of the city area consists of plains and low hills. It has an average yearly temperature of 9.4c. with sharp fluctuations between summer and winter temperatures, and it receives 924mm. of rain annually. The Taedong River flows through the city before reaching the port city of Namp'o and the Yellow Sea.

Along the Taedong River lies the P'yŏngyang Plain. This limestone plain mostly consists of terra rosa, a type of soil that retains moisture. As a result, rice grows well here in spite of the area's fairly low rainfall. Local farms also grow beans, millet, apple, garden plants and green vegetables. Sericulture and stock breeding operations also exist in quantity in P'yŏngyang.

Mines and quarries in the region produce coal, gold, graphite, clay and limestone. Coal was originally mined in small quantities for use as a household fuel, but during the Japanese occupation, large-scale operations were established to provide coal principally for the Japanese navy. Factories in the city, taking advantage of the water and land transportation network, ample power supply and large work-force, produce a wide array of items among which, steel, sugar, flour, clothing, machinery, liquor, cement, rubber and ceramics.

P'yŏngyang was traditionally one of Korea's top commercial centres, and after it became an open port in 1898, it actively traded with China. During the Japanese occupation, the Japanese developed the city as a strategic base for their advance into China. As a result, large numbers of Japanese moved here to work in the city's developed commercial sector.

Nowadays, P'yŏngyang is a very clean and quiet city with little traffic, even though a thirteen-lane boulevard links the city centre with the suburb of Kwangbok (only about three kilometres distant). Public transport includes a bus service and a tram and subway system. In the Taedong River there are two fountains that lift their water jets 150 metres into the air. There are also a number of parks in the city, such as Moran Park near Mt. Kŭmsu and Mt. Sŏgi Park. However, many of the city's tourists centre on the various monuments and sites praising the late leader Kim Il Sung (Kim Ilsong) and his son, the present head of state, Kim Jong II (Kim Chŏngil).

On the east bank of the Taedong River is a 170-metre high monument known as the Tower of the Juche (Chuch'e) Idea. From the top, one can get a panoramic view of the city. Across the river at the end of Moranbong Street stands the Arch of Triumph which marks
the spot where Kim II Sung made his first rallying speech after the departure of the Japanese at the end of World War II. Northeast of the arch lies Kim Il Sung Stadium, one of the world’s largest sports stadiums, and south of the gate stands the Ch’ollima Statue, a bronze Pegasus commemorating North Korea’s rapid economic development. Next to the statue, stands the Grand Monument, a giant bronze statue of Kim Il Sung with his right hand forward, flanked by his followers.

Behind the monument is the Korean Revolution Museum, founded on 1 August 1948, and on Yongung Street to the east lies the Victorious Fatherland Liberation War Museum. Built in 1953, the latter museum houses displays covering anti-Japanese guerilla activities and the Korean War. Between the two fountains on the west bank of the Taedong River, stands the Korean Central History Museum, which houses artefacts of Korean history from prehistoric times to the present. Other museums in the city include the Metro Museum and the Revolutionary Museum.

P'yongyang is also home to Kim Il Sung University, North Korea’s top educational institution and Mansudae Assembly Hall where the DPRK state assembly meets. Other famous sites include the Students’ and Children’s Palace, the P’yongyang Embroidery Institute, Revolutionary School, P’yongyang Movie Studio, Central Zoo, Kwangbop Buddhist Temple, the Central Botanic Garden and the Revolutionary Martyrs Cemetery.

The city lays claim to a large number of artefacts going back to prehistoric times. Excavations in 1966 at Sangwŏn uncovered stone tools and fossilised faunal remains from dietary debris of early men of the Lower Paleolithic Age. These artefacts are thought to date from 400 to 600 thousand years ago making them some of the oldest signs of human habitation on the Korean peninsula. In addition, Neolithic artefacts have been excavated from over ten sites in the area.

As for Koguryo artefacts, a number of tombs have been found, especially in the Taedong River area. These tombs are distinctive for their elaborate wall paintings. The diverse subject matter of the paintings provides archaeologists with important information on everyday life in the Koguryo Kingdom. In Mujin Village, another group of ancient tombs has been discovered. During the reign of King Tongch’on (r. 227-248), construction was begun here on a royal palace and fortress. Ulmildae and Mansudae fortifications were erected at this time., as was Kujeung, a royal villa near Kirin Cave, but little remains of the structure. According to one theory, this villa was originally the royal palace of King Tongmyong (r. 37-19 B.C.E.), the founder of the Koguryo Kingdom. Here one also finds the Changan and Taesŏng fortresses. In terms of both length and size, the latter is one of the largest stone fortifications found in Korea.

During the reign of King Kwanggaet’o, nine temples were built here. Of these, Yŏngmyŏng Temple is famous as a place where the monk Ado once resided. In 1109, the temple was moved to a site below Kirin Cave. Burnt down during the Sino-Japanese War in 1894, only Ch’ilsongdang (Seven Stars Hall), a stone lion and an octagonal five-storey pagoda remain. Koguryŏ-era Buddhist artefacts have also been discovered at the Taewang Temple site in Tongdawŏn Village and at Kŭmgang Temple, which was founded in 497.

During Koryŏ, P’yongyang served as the kingdom’s ‘western capital.’ In 922, Chae Fortress was constructed followed by Na Fortress in 938. These two stone fortifications came to be known simply as P’yŏngyang Fortress. When the palace of the Western Capital was repaired during the reign of Sŏngjong (r. 981-997), six large gates were built. Of these, Taedong Gate was reconstructed at the beginning of Chosŏn and in 1575, the gate was refurbished as a three-storey structure which can still be seen today.

During the reign of Injong (r. 1122-1146), the monk Myoč’ŏng urged the king to move the capital to P’yŏngyang, claiming that the latter was geomantically more auspicious. In
response to Myoch’ong’s influence, the king built Taehwa Palace near P’yŏngyang in 1129. Eventually Myoch’ong and his faction, in opposition to the pro-China Kaesŏng faction, gathered together an army in P’yŏngyang and established a short-lived state known as Taewi (Great Accomplishment), but the rebellion was quashed in 1136 by government forces led by Kim Pushik.

Chosŏn-era artefacts in the area include Puk Fortress built around Moran Peak in 1714 and nearby Minch’ungdan, an altar built in memory of Chinese soldiers who died fighting in Korea’s defence against the Japanese during the Hideyoshi Invasions (1592-1598). Confucian schools in the city include Yonggok Sŏwŏn, Sŏsan Sŏwŏn, Ch’anggang Sŏwŏn and Sohyŏn Sŏwŏn. In 1993, the North Korean government announced the discovery of the tomb of Tan’gun, the mythological founder of Korea. Bones which purportedly belong to Tan’gun and his wife are on display in the grandiose tomb at the site.

*P’yŏngyang chi* (History of P’yŏngyang)

*P’yŏngyang chi* is a collection concerning the history, geography and customs of P’yŏngyang that was compiled in 1590 by the then governor (*puyun*) of P’yŏngyang, Yun Tusu (1533-1601). This wood-block print work consists of nine volumes in two fascicles. The first volume of this work detailed many items concerning P’yŏngyang including its territory, boundaries, historical records, castles and districts. The second volume relates matters concerning the educational, military and postal systems of the city, while the third includes *inter alia* the location of schools, post stations and temples along with population numbers etc., of the city. The fourth volume is chiefly devoted to historical facts about the city and the fifth includes literary matters, supernatural occurrences and miscellaneous affairs. The sixth through eighth volumes are devoted to literary works such as poetry and the ninth contains essays.

This work along with *Yŏnan ūpch’i* (1581) and *Hamju chi* (1587) are the oldest descriptive geographies of Korea and therefore are quite valuable for the study of the late sixteenth century. However, of these three works, only the original edition of *P’yŏngyang chi* has survived to the present day, making it all the more precious. Given this work’s historical significance, it is not surprising that it has been included in many contemporary collections, most notably the 1990 *Chosŏn shidaesach’an ūpch’i* that was published by Han’guk Inmun Kwahagwŏn.

**Paegam Mountain**

Situated on the border of Wiwŏn and Kanggye County in North P’yŏngan Province, Mt. Paegam (1,823 metres) is a peak on the Chŏgyuryŏng Mountain Range that runs from east to west through the middle of North P’yŏngan Province. The upper elevations of the mountain are only covered with small shrubs, while the lower elevations support a forest of conifers interspersed with broad-leaved trees. The deep valleys on the south-side of the mountain have undergone erosion.

*Paegoin sagŏn* (Case of the One Hundred Five) [History of Korea]

**Paegyang Temple**

Paegyang Temple is located in South Chŏlla Province on Mt. Paegam. Founded in 632 by Yŏhwansang, its name was changed to Chŏng’tŏ Temple when Chun’gyŏn reconstructed the monastery in 1034. In 1350, National Master Kakchin once again led a restoration of the temple, which was followed by Hwanyang’s restoration in 1574. According to legend, when Hwanyang recited the Lotus Sutra, white sheep, mesmerised by the melodic sound of the chanting, would wander over to the temple. Because of this, the monastery’s name was
changed back to Paegyang (White Sheep) Temple and Hwanyang received his name which means, ‘Calling to Sheep.’ The temple was again reconstructed by Hwansōng in 1786, by Toam in 1864 and by Song Manam in 1917. During the thirty years that Song served as the temple’s abbot, he founded a seminary and acted as the headmaster of the Chun’gang Buddhist Technical School.

As one of the main temples of the Chogye Order, Paegyang administers twenty-six branch temples. On Mt. Paegam, there are several affiliated hermitages, including Yaksa Hermitage, Yōngch’ōn Cave, Ch’ōngnyu Hermitage (founded in 1351), Ch’ōnjin Hermitage and Muroe Hermitage. The latter serves as a centre for monastic retreats. Several other hermitages dating from Koryŏ were burnt down during the Korean War (1950-53). Paegyang Temple houses several important artefacts, including a stone stupa that contains the remains of T’aeun (Grand Master Soyo), a famous Chosŏn period monk.

Paek Ijong (1247-1323)

Paek Ijong was a Confucianist of the Koryŏ period. His family’s ancestral home is in Namp’o, his courtesy name was Yakhon and his pen name Ijae. His father, Paek Munjol, was a scholar at the Pomun Pavilion and Ijong was a disciple of An Hyang (1243-1306) who founded the neo-Confucian school in Korea.

In 1275 Paek passed the civil service examination and entered Koryŏ officialdom. In 1298 he accompanied a mission to Yuan to bring the crown prince back to Korea. After returning to Korea, he was again sent to Yuan by King Ch’ungsŏn (1308-1313) to Yanjing where he remained for ten years. During this period he conducted deep study into the neo-Confucian theories of Zhuzi, and when he returned to Koryŏ he brought many books on this philosophy including Jiài (Kor. Karye, Family Rites) by Zhuzi. After his return to Korea, Paek concentrated his efforts on the cultivation of the next generation of neo-Confucianists, and his many disciples include notable scholars such as Yi Chehyŏn (1287-1356), Pak Ch’ungjwa (1287-1349) and Yi Kok (1298-1351).

The study and development of neo-Confucianism that Paek is directly responsible for had a major impact on the ruling ideology of Korea. His mentor, An Hyang, was the first to bring the neo-Confucian ideology to Korea, and Paek is largely responsible for its development and further propagation. The lineage of the transmission of the neo-Confucian ideology in Korea can be traced from An Hyang to Paek who then passed it on to his disciple Yi Chehyŏn who trained Yi Saek (1328-1396), who in turned transmitted it to Kwŏn Kŭn (1352-1409). After the inception of the Chosŏn period, the ideology flourished and helped form the guiding philosophy of the state. Paek’s extant literary works include Yŏn’gŏ shi, Yŏngdangyo and Yŏhongae chipku.

Paek Kwanghun (1537-1582)

Paek Kwanghun was a poet of the mid-Chosŏn period. His family’s ancestral home is in Haemi, his courtesy name was Ch’anggyŏng and his pen name was Okpong. He was the disciple of Pak Sun (1532-1589) and at thirteen travelled to Seoul to study under Yang Ungjong (1519-?) and No Sushin (1514-1590). In 1564 Paek became a literary licentiate (chinsa) but instead of striving to enter officialdom, Paek went to Hohae and concentrated on his poetry and writings. In 1572 when his teacher No Sushin travelled to Ming China as a part of an official mission, Paek went along and earned acclaim from the Chinese for his literary skills and was given the name Master Paekkang.

In 1577, for the first time, Paek entered government service as a Assistant curator (ch’ambang) in such places as the National Daoist Temple (Sogyŏksŏ). He became well known in literary circles and along with Yi Tal and Ch’oe Kyŏngch’ang (1539-1583) was one of the so-called Three Tang Talents of Korea. These Poets preferred the Tang-style
poetry to the later Sung-style writings. For them that it was only through Tang-style poetry that the true self could be expressed. Accordingly, in his poetry, Paek endeavoured to produce works that were faithful to the Tang tradition. Paek’s literary collection Okpong chip (Collected Works of Okpong) has been transmitted to the present time.

**Paek Mountain**

Situated in the northwestern corner of North Korea, Mt. Paek (1 875 metres) is the main peak of the Chogyurryǒng Mountain Range that runs from east to west through Chagang Province and North P’yŏngan Province. The mountain is characterised by rugged terrain and many bare granite outcroppings. Ch’ŏnghaktae, the mountain’s highest peak, is surrounded by Mt. P’albong (1 457 metres) to the north and Moktan Peak (1 606 metres) and Mt. Kagwi to the west. There is a graphite mine in the area south-west of the mountain. In South Hamgyŏng Province, there are three other mountains of the same name.

**Paek Pyŏngdong** (see Paik Byung-dong)

**Paek Yongsŏng** (1864-1940)

Yongsŏng (Buddhist name, Chinjong; given name, Paek Sanggyu) is a towering figure in Korean Buddhism’s modern history. Admired for his political courage and unwavering attempts to enforce the traditional vow of celibacy, he is now considered something of a modern patriarch within the Chogye Order. His traditionalism was, however, augmented by a modern consciousness. He expressed this in his emphasis on modern educational methods and the necessity of the vigorous propagation of Buddhism within Korea by Korean priests. One of the primary means he employed was the translation of sutras from Chinese into vernacular Korean.

Yongsŏng’s early life showed a predisposition to the protection of all life formally emphasized in Buddhism, and it is said on fishing trips as a child he would stealthily release his father’s catch into the water. A more serious story recounts his efforts to feed and comfort a young worker on his family’s property who, having fallen ill, could not work for his food.

By the age of seven Yongsŏng began studying the Chinese classics in the village school, and at the age of thirteen he ran away and went to a temple with the intention of becoming a monk. His parents quickly brought him home, but two years later he fled to Haein temple where he took the formal vows. During this period he experienced an initial enlightenment which focussed his Buddhist devotion.

In 1884 he arrived at T’ongdo temple where he took the two-hundred-fifty vows of a celibate and the two-hundred-fifty vows of a Bodhisattva. While the former set of vows relate to the keeping of monastic discipline, the latter set embody the most profound aspect of Mahayana Buddhism: the promise to strive for the salvation all sentient beings. Throughout his life he would strictly adhere to both.

In 1885 while reading the Chŏndŭng nok (Transmission of the Lamp) at Songgwang temple he again experienced enlightenment, and the next year he had another awakening while wading across a river. He subsequently succeeded his teacher and became a yulsa (master monastic rules; vinaya master), studied sutras and commentaries, engaged in Sŏn meditation, and travelled widely around Korea.

Between the ages of 39 and 42 Yongsŏng began actively working on behalf of Korean Buddhism. He established Sŏn meditation assemblies at various temples, and in 1906, returned to Haein temple where he started the arduous task of restoring the eighty-thousand
wood printing blocks of the *Tripitaka Koreana*.

In 1907, Yongsŏng travelled through China where he visited temples and met with Chinese priests. It is said that one queried whether Korean monks took only the minor vows associated with novices. Yongsŏng, having taken all the vows, sternly informed the offensive fellow that the way of Buddhism was not limited to China.

In 1911 he finally became convinced that Korean Buddhism needed to be thoroughly restructured. As he walked through the streets of Seoul he was shocked to hear the ringing of church bells and to see the activities of the various religions, especially Christianity. Consequently, he resolved to propagate Sŏn. He built a temple called Taegak, and in 1912 erected another hall dedicated to spreading Sŏn.

Yongsŏng’s efforts seem to have attracted many followers, and in 1913 he published *Kwiwŏn chŏngjong* (Returning to the Source of the True Teachings), a long polemical work which detailed his conviction of the superiority of Mahayana Buddhism. Yet he felt that any drastic change would require considerable funds, and so at the age of fifty-three he returned to China where he worked in the mining industry.

In 1919 Han Yongun asked Yongsŏng if he would be willing to sign the Korean Declaration of Independence. He simply said, "Yes" and entrusted to Han his seal. Han was nonplussed by the speed of his response to such a weighty matter, and he returned the following day to receive confirmation. During the ensuing trial his responses to the court were firm and brief. He stated that, given the chance, he would participate in future agitations, and when asked why, he simply said that he liked the idea of independence.

During his year and a half in prison Yongsŏng began studying vernacular translations of the Christian Bible. On gaining his freedom in 1921 he established a translation society, and by the time of his death he had translated some thirty of the most important sutras and commentaries.

Like Han Yongun, Yongsŏng believed that the traditional reliance on alms from the laity had made Buddhist monks social parasites. In 1922 he returned to Manchuria where he purchased land and attempted to put into practice the cornerstone of his Buddhist thought: *sŏnnong ilch’i* (the unity of Sŏn and farming).

Yongsŏng had returned to Seoul by April 1924, where he continued his translation work and wrote for Buddhist journals. At this time the Korean Buddhist community was riven by dissent over the prevalence of married monks, and in May and September of 1926 he wrote two separate petitions to the Japanese Governor General. He urged the government to enforce the monastic prohibition against the 'eating of meat and the taking of wives' in order to ensure both the moral and physical purity of the monasteries. In December 1926, however, the government made it legal for Korean monks to marry.

The following year Yongsŏng obtained a considerable amount of land and put into practice his central idea for the renewal of Korean Buddhism. He planted over ten-thousand persimmon and chestnut trees and attracted a community of monks who divided their days between farming and Sŏn meditation. This community remained vital for some fifty years.

The final thirteen years of Yongsŏng’s life were spent in writing and translating. In addition to magazine articles, he continued making vernacular translations of Buddhist scriptures in the hope that the principles of Buddhism would be more accessible to monks and the laity alike. In this vein, he also wrote various Buddhist hymns based on passages from the sutras.

Yongsŏng was an eccentric individual. From the early 1920’s he did not use the word
Buddhism, but rather taegakkyo (teaching of the great awakening) to describe what he taught. In 1922, he established a hall for the dissemination of the taegakkyo, but this was forced to disband by the colonial government in 1938. He seems to have taken this as a hard knock. On 23 February 1940 he bathed, changed his clothes, and called his students together. After thanking them for their efforts, he announced, “I’m leaving.” He then sat down and died. After his cremation, a funerary relic was found amongst his ashes, and this is now enshrined in a pagoda at Haein temple.

Paekcho (see Magazines)

Paekchŏng class

The term ‘paekchŏng class’ represents two diverse groups of people in Korean history. During Koryŏ it referred to the freeborn peasantry, and in Chosŏn it denoted the lowborn or outcast portion of the population.

In Koryŏ

The paekchŏng of Koryŏ were the freeborn peasantry who did not reside in one of the special administrative districts assigned for the lowborn. Paekchŏng refers to the lack of a fixed role to the state for this class of people, and accordingly, they were not eligible to receive a land allowance (from the state). The paekchŏng were farmers, many of whom worked state-owned lands called ‘people’s lands’ (minjŏn), and they were required to pay one-fourth of their annual harvest to the government as rent. If they worked land owned by the gentry families of Koryŏ, the rent was substantially higher, often reaching one-half of their harvest. Moreover, the paekchŏng were liable for special tribute taxes paid in cloth, and in some areas were further obliged to pay special product taxes which might consist of fruit or other crops, based on the specialised produce of an area. Further, all adult paekchŏng males, aged between sixteen and sixty, were liable for military and corvée labour service.

The lives of the paekchŏng were difficult, but the lack of rigid social-class stratification in Koryŏ provided them some social mobility. The most prominent path for social betterment was in military service. While the army was staffed mostly by a hereditary class of soldiers, when the prescribed levels of staffing dropped, new recruits were sought from among the paekchŏng and even from the ch’onin (lowborn) class. Gaining a position in the military aided the paekchŏng family considerably, as it would be assigned an allotment of ‘soldier’s land’ (kuninjon), and two families to work it. Moreover, they would then be designated as a military household, thus ensuring the well being of their descendants as well. Examples can be cited of members of the paekchŏng class advancing into the officer ranks by virtue of their meritorious service.

The paekchŏng served as the foundation to the agrarian-based Koryŏ economy, and
Although they were heavily tax-burdened and often exploited by the landed gentry, their situation was considerably better than the classes beneath them. Since the upper class relied upon the *paekchöng* to farm their estates, there were various legislative attempts to keep the *paekchöng* tied to the land. Thus, the Koryǒ government implemented relief programs such as the ‘righteous granaries’ (*ūich’ang*), designed to provide relief in times of famine, and special medical offices to care for the sick. Nonetheless, as the upper class and the Buddhist temples increased their exploitation in late Koryǒ, large numbers of the *paekchöng* abandoned the land and many joined roving bands of marauders.

**In Chosón**

With the transition of Korean society from the end of Koryǒ to early Chosón, the term ‘*paekchöng*’ which had broadly encompassed all the free peasantry of Koryǒ, was replaced with various other appellations for the freeborn class, such as *p’yōngmin, yang’in, ch’ommin* and *paeksöng*. On the other hand, ‘*paekchöng*’ came into use to designate those that performed hereditary occupations such as butchers, tanners and wicker-workers, all of whom were considered as being beyond the pale. The origin of the term and its use for indicating those engaged in the lowborn hereditary occupations, is thought to date to 1423, when King Sejong (r. 1418-1450) issued an edict concerning this class of people. In earlier times, these workers had been labelled as *chaein* or *hwach’ok*; names often applied also to nomadic immigrants, such as the Malgal or Khitan, who had been absorbed into Korean society.

The *paekchöng* class not only included the aforementioned low-class category, but also hunters, vagabonds, thieves, stock breeders and even those who had been removed from family census registers. Also included were travelling entertainers (*kwangdae*) and shamans (*mudang*). These individuals were abhorred by society and were expelled from the capital. They were even forced to live in separate hamlets away from the commoners (*yang’in*). During Sejong’s rule, attempts were made to assimilate these ostracised people into the peasantry and they were granted land and instructed in farming techniques. Hence, they became known as the ‘*paekchöng*’ since this was the term traditionally used for freeborn farmers. This attempt to transform the *paekchöng* into farmers did not, however, take root and they continued to engage in their hereditary occupations. Although in a legal sense the *paekchöng* were accorded the same right as other commoners, this did not remove the discrimination they faced in almost every aspect of their lives. Among the many prohibitions, were those banning them from living among the freeborn peasantry, or marriage with anyone in a higher class.

With the Reforms of 1894 (Kabo Kyôngjang) the class system of Chosón was officially abolished, and officially the *paekchöng* ceased to exist. To the people of Korea, however, who had observed this social distinction for centuries past, those engaged in the traditional occupations of the *paekchöng* continued to be treated as pariahs. Thus, there still existed prejudices concerning intermarriage or living close-by these outcasts. Additionally, discrimination against the *paekchöng* existed in almost every other facet of society, for example, in education and employment opportunities. Thus, at the end of Chosón and the beginning of the Japanese colonial period, the social class of *paekchöng* still existed. A census conducted by the Japanese Government General in the first years of colonisation, revealed that there were 7 538 *paekchöng* households, with a total of 33 712 people. In fact, there are solid reasons to think that there were many more than recorded by the census.

During the colonial period, many attempts were made by those of the higher classes to eliminate the discrimination against those of the former *paekchöng* class. Thus, through educational opportunities and economic success, many lowborn members of society were able to elevate their status. Moreover, as the remnants of hierarchical Chosón society continued to disappear, the distinction between those of the former *paekchöng* class and the
peasantry diminished dramatically. As the gradual process of social equality widened after liberation in 1945, discrimination against members of the former paekchónɡ class receded still further. Nonetheless, even today there remains a social stigma attached to those that engage in many of the former paekchónɡ occupations, and their children are discriminated against..

Paektu Mountain

Straddling the border between South and North Hamgyŏng Province, as well as the border between Korea and China, the 2 744-meter high Mt. Paektu is Korea’s tallest mountain. Mt. Paektu is actually part of a cluster of high mountains situated in Korea’s remote north-east region. The Mach’ollyŏng Mountain Range, which runs to the south-east of the peak, includes numerous other peaks over 2 000 metres in elevation, such as Taeyŏnjı Peak (2 360 metres), Mt. Kanbaek (2 164 metres), Mt. Sobaek (2 174 metres), North P’ot’ae Mountain (2 289 metres), South P’ot’ae Mountain (2 435 metres) and Paeksan Peak (2 099 metres).

Mt. Paektu is actually a volcano. Although it is presently dormant, records indicate that the volcano has been active in the recent past. According to the Chosŏn wángjio shillok (Annals of the Choson Dynasty), the volcano erupted as recently as 1597, 1668 and 1702. The caldera is now filled with water, forming the lake known as Ch’ŏnjı. This picturesque lake, made up of stream run-off and melted snow, averages about 200 metres in depth, but is over 300 metres deep in some places. The lake’s excess water flows over the rim to form the 68-meter high Piryong Waterfall. This waterfall is the source of the Songhwa River. The waterfall dries up during times of drought or when the lake freezes during winter. Due to the 400 to 500-meter high walls of the caldera, Ch’ŏnjı Lake can only be accessed via Pyŏnsa Peak or Tal Gate.

Due to the area’s sharp variations in temperature and elevation, the plant and wildlife that inhabit the mountain are very diverse. In elevations between 500 and 1,050 metres, there are conifers, such as larches, silver firs and white poplars, as well as broad-leaved trees such as white birches and poplars. From 1 050 to 1 750 metres, there are large virgin forests of conifers. Above this is the tree line; consequently, the area from 1 750 metres to 2 100 metres is characterised by the growth of low-lying bushes and shrubs. The area above 2 100 metres is hit by heavy winds and is overcast over 300 days a year. Moreover, the winter temperatures can drop as low as -45°C in the winter. Of the plants that grow above the permafrost at this high elevation, one-third are varieties native to the Arctic Circle.

Mt. Paektu has been known by many different names. The earliest reference to the mountain is in the Sanhaijing, which calls it Mt. Buxian (Kor. Mt. Purham). In the Msamguk yusa (Memorabilia of the Three Kingdoms), on the other hand, the mountain, called Mt. Taebak, is referred to as the site where Hwanung descended to earth with a retinue of 3 000 followers to become the progenitor of the Korean race. After the Chinese Han Dynasty, the mountain was known by many other apppellations, but almost all of the names incorporated the Chinese character for white (in Korean, paek), evidently a reference to the summit which was capped with snow almost year around. In recent times, North Korea has used the mythological associations of the mountain for propaganda purposes. Kim Chŏngil, Kim Iilsŏng’s son and successor, is said to have been born on the mountain, and the cabin where he was born has become a North Korean tourist site.

Despite its inaccessible location, Mt. Paektu draws large numbers of South Korean pilgrims every summer, who come to see the lake from the Chinese side. Across the border, many North Koreans also visit the mountain. In addition to beautiful scenery, there are hot springs around the lake that run year around. The temperature of each spring varies from a scalding 82°C to a lukewarm 37°C. The mineral-rich water of these springs is thought to have therapeutic effects.
Paengnyông Island

Situated just below the 38th parallel in the Yellow Sea, Paengnyông Island is part of Ongjin County in the Inch'on Metropolitan Area. Geologically, the island is made up of limestone, shale and quartzite. With an elevation generally between 50 and 100 metres, most of the streams dry-up outside the summer monsoon season. The island has an average January temperature of minus 4.5 deg. c. an average August temperature of 25 deg. c. and an average rainfall of 755.8mm. As Korea's fourteenth largest island, Paengnyông has an area of 45.38 sq. kms. with a 56.75 km. coastline. With the coast of Hwanghae Province's Ch'angsan Point only 17 kms. distant, it is South Korea's northernmost island. In spite of its remote location, however, over five-thousand people inhabit the island. Most of the island's families are originally from North Korea.

Until the early 1970s, fishing was the key source of income, but residents had to convert to agriculture due to the frequent seizure of fishing boats by North Korean authorities. About 30 per cent of the island is arable, with almost 5 sq. kms. used for rice cultivation and 8.86sq. kms. for dry-field crops such as barley, beans and sweet potato. Prices of consumer items are relatively high, reflecting the cost of transporting goods by boat from the mainland. Nearly all of the island's residents are Christians. In Chunghwa-dong, there is a church which was built in 1896, making it one of the oldest in Korea. To meet the educational needs of the residents, there are two primary schools and two primary school branches, one junior high school and one high school. This remote island invites visitors to a number of scenic venues. For example, the extraordinary rock formations of Tumujin are particularly sought out by tourists.

Paengnyông (White Feathers), the name of the island, is said to derive from legend. It is said that a scholar and a young lady who once lived in nearby Hwanghae Province made a vow to marry. The father, who did not approve of the union, sent his daughter away to live on the remote Paengnyông Island. The scholar searched in vain for his lover until one night, he dreamed that a white crane came to him carrying a white slip of paper. He woke to find a slip of paper inscribed with the girl's whereabouts. After finding the girl on the island, the two married and lived happily.

Painting

History

Our knowledge of Korean painting of periods earlier than the Chosŏn dynasty is fragmentary. From the Three Kingdoms Period, murals are extant in Koguryŏ (37 B.C.E. - 668 C.E.) tombs of the 4th to 6th centuries. They show portraits of the deceased and give some insights into the daily life and religious thought of the period. Remains from the kingdom of Shilla (57 B.C.E. - 935 C.E.), such as the 'flying horse' in Tomb No. 155 in Kyŏngju, and square tiles with relief designs of stylized animals, flowers or landscapes from Paekche (18 B.C.E. - 660 C.E.) suggest that both areas were influenced by Koguryŏ styles. According to historical records, Paekche painters, sculptors and brickmakers were involved in the construction of temples in Japan.

A Bureau of Painting was established at the Royal Court in Kaesŏng during the Koryŏ period (918-1392) in order to promote Buddhist painting and sutra copying. Renditions of the Buddha Amitabha and of the Bodhisattva Avalokitesvara are preserved in Japanese temples, such as the 'Avalokitesvara Holding a Willow Branch' at Sensō-ji, Tokyo, dated 1313, by Hyeok. A lacquer screen, dated 1307, of Buddhist figures in a landscape scenery by No Yong suggests an influence of the landscape style of the so called Guo Xi tradition, which dominated Northern China from the 11th to 14th centuries.
The most famous landscape painter was Yi Nyöng. When he went to China in 1124, Emperor Huizong ordered Chinese study under his guidance. Contacts with Yuan China were especially close during the time of King Ch'ungsŏn (r. 1309-1313) who abdicated the throne and lived in the Chinese capital for most of his life. He was acquainted with Zhao Mengfu, a high official, painter and calligrapher and other literati painters.

Painting theory of the Koryŏ and early Chosŏn periods was strongly influenced by the Northern Song literati painters Su Dongpo and Mi Fu, while painting itself seems to have been related with styles of literati painters of the early Yuan who painted in the Guo Xi and Mi Fu traditions. A rare example is a painting of pine trees, bamboo and plum blossoms, called 'Three Friends in the Cold', by Haeae at Myōmanji temple in Kyoto.

The earliest extant dated and signed Korean landscape painting is 'Dream Journey to the Peach Blossom Land', done in the style of Guo Xi by the court painter An Kyŏn in 1447 on the request of Prince Anpyŏng. The prince was famous for his collection of Chinese paintings. Well known literati painters of the period were the brothers Kang Hŭián (1419-1465) and Kang Hŭimaeng (1424-1483). Probably depending on Koryŏ traditions, their paintings show some connections with Yuan period Zen Buddhist painting and with works of the Chinese literati circle around King Ch'ungsŏn. Eminent Japanese master of the Muromachi period, Shubun and Reisai, came to Korea in 1423 and 1463 respectively and received inspiration for their ink painting. Ties were so close that the national identity of Munch'ŏng (Jap : Bunsei), whose works are preserved both in Korea and Japan, is still unclear.

An Kyŏn had many followers in the 16th century. A major work of the An Kyŏn school is an eight-fold screen, 'Eight Views of the Xiao and Xiang Rivers', taken from Korea to Japan by a monk of the Daiganji monastery in the Hiroshima prefecture in 1539.

Around 1500, a new style was introduced from Ming China, the so-called Zhe school. Originally an academic style it was adapted to Korean taste by two scholar painters, Kim Che (1524-1593) and Yi Kyŏngyu'n (1545-1611). Kim Che's 'Boy Pulling a Donkey' which can be viewed at the Hoam Art Museum and Yi Kyŏngyu'n's 'Album with Figures and Landscapes' at the Horim Art Museum are masterpieces of the 16th c. Besides, the An Kyŏn school still flourished, with Yi Kyŏngyu'n's son, Yi Ching (b. 1581), as a prominent follower. Around 1600, a new literati style, later to be called Southern school painting (namjongwha) was introduced to Korea. The earliest extant example is a landscape by Yi Kyŏngyu'n's brother Yŏn'gyun (1561-1611), imitating the late Yuan dynasty master, Huang Gongwang.

Due to the 1592-1598 invasions of Korea by the Japanese warlord Hideyoshi and by Manchu forces (1627 and 1636), painting of the 17th c. is mainly in the form of small album leaves on coarse paper or hemp. The Zhe school still prospered, with Kim Myŏngguk as the great master. Kim Myŏngguk travelled to Japan twice, in 1636 and 1643, as a member of an embassy. Later, in the 18th c., Ch'oe Puk (1712-1786) and Kim Yusŏng (b. 1725) brought Korean Southern school painting to Japan.

Typical for the transition between the Zhe school and the Southern school style are the works of Yun Tuso (1668-1715) and Chŏng Son (1676-1759). Chŏng Son became the most famous Korean landscape painter because of his 'true views' (chimgyŏng) renditions of actual Korean scenery. Besides various portfolios of sites in the Diamond Mountains, the hanging scroll 'Mount Inwang' of 1751 in the Hoam Art Museum is one of his masterpieces. The 18th c. was dominated by literati painters like Cho Yongsŏk (1686-1761); Shim Sajong (1707-1769); Kang Sehwang (1713-1791); Yi Inyang (1710-1760); and professionals like Ch'oe Puk; Kim Hongdo (1745-post 1814); Yi Inmun (1745 1821); and Shin Yunbok (prominent around 1800). Kim Hongdo and Shin Yunbok are famous for
their genre scenes.

In the early 19th c. the scholar, calligrapher and painter Kim Chônghũi (1786-1857) brought new inspiration to Korean Southern school painting. Orchids were his favourite subject, often combined with his virtuoso calligraphy. His students Yi Chaegwan (1783-1837) and Cho Hûiryong (1789-1866) - a lover of plum blossoms - are well known for their landscapes. Kim Such'ol (19th c.) produced highly decorative landscapes and pictures of flowers and butterflies. The last great master of the Chosôn dynasty was Chang Sûngôp (1843-1897), who took up styles of the Chinese eccentrics of the Qing period.

During the period of Japanese occupation Western style oil painting was introduced to Korea. Most successful in combining traditional ink painting with Western elements were Hô Paengnyón (1891-1977). Yi Sangbôm (1897 1972), Pyôn Kwanshik (1899-1975) and No Suhyôn (1899-1978).

Ink Painting

Favourite subjects of Korean ink painting were the 'Four Gentlemen'(being the orchid, chrysanthemum, bamboo and plum blossom); grape vine; flowers and insects; horses and oxen; Buddhist and Daoist figures; and of course, landscape scenery. In China, ink painting is usually associated with the literati, who practised the so-called 'Three Accomplishment' - poetry, calligraphy and painting, for leisure, but in Korea, scholars and professional painters alike followed Chinese literati models.

Though painting in ink on paper was probably produced much earlier, the earliest extant works date from the Koryô period. Literati painters of the early Chosôn dynasty, such as Kang Hûian (1419-1465) and Kang Hûimaeng (1424-1483), followed Koryô and Yuan traditions. Their powerful brushwork, strong contrasts between dark and light ink tones and a tendency towards geometric simplification are typical Korean features. Kim Che (1524-1593) and Yi Kyôngyun (1545-1611) combined the Zhe school style with elements of the style of the Kang brothers. Famous for his ink bamboo was Yi Chông (styled T'anun, 1541- post 1625), while O Mongnyong (b. 1566), a son-in-law of Yi Kyôngyun, excelled in plum blossom painting. Lady Shin (styled Saimdang, 1504-1559), and Hwang Chipchung (1533-1593) became well-known for their grape vines; Yi Am (b. 1499) for his dogs and cats under flowering trees, and Cho Sök (1595-1663) for his birds on trees. Around 1600, a new literati style was introduced to Korea and light colouring became popular, but the heritage of the Kang brothers, namely a powerful brushwork and free inkplay remained typical for Korean ink painting.

Influence of China

Besides the legend of Tan'gun, Korea has another Chinese foundation legend. According to the record Shi ji by Sima Qian (ca.145-190 B.C.E.), Jizu (Kor. Kija), a prince of the Shang dynasty in China, established a kingdom in Korea when his royal house was overthrown towards the end of the second millennium B.C.E. In 108 B.C.E. the Han empire founded a colony in Luolang, (Kor. Nangnan, present-day P'yôngyang) and gave great impulse to the development of Korean culture. A lacquer basket with fine figure painting, dating from this period, is still preserved at the Museum of Korean Fine Art in
Pyongyang. Murals from Koguryo tombs, located by the Yalu River and near Pyongyang show the influence of wall painting of the Han dynasty and later periods. Koguryo took over Chinese script and, in 372, founded a National Confucian academy (T'ae'hak) and officially introduced Buddhism. Paekche and Shilla mainly received Chinese culture via Koguryo. However, the tomb of the Paekche king Munyon (r. 501-523) and his wife strongly suggests direct contacts with the Southern Chinese Liao kingdom (502-557). According to Japanese historical records, a Paekche king sent Buddhist scriptures and statues to Japan in 552, thus functioning as intermediary between his neighbours. After conquering Koguryo and Paekche and unifying the peninsula in 668, Shilla had close contacts with Tang China. The remains of a palace and garden area, called Anapchi 'The Pond of Wild Geese and Ducks', constructed in 674 (restored in the 1980s) and the Buddhist sculptures of Sokkuram Grotto are impressing examples of this period. During the Koryo period (918-1392) contacts were close with Northern Chinese dynasties and North Asian tribes, Northern Song, Chin and Yuan. The famous Koryo celadon was inspired by Song ceramicist, but a Chinese traveller reports in 1123 that he also found forms and designs he had never seen in his homeland. When the Mongols conquered China and in 1280 founded the Yuan dynasty, they forced even closer ties with Koryo through marriages between Korean kings and Mongol princesses. Yuan and Koryo literati assembled around king Ch'ungsǒn (1275-1325) who retired to the Chinese capital after a short reign and was acquainted with such eminent painters and calligraphers as Zhao Mengfu. Chinese styles of the literati arts then entered Korsa, and while late Yuan masters changed styles in China, Korean painters remained faithful to early Yuan traditions even after the beginning of the Chosǒn dynasty (1392-1910). Yi Sŏnggye, the founder of the new dynasty and its first king, Taejo, remodelled state and society according to Chinese Neo-Confucian principles. The painting academy at the royal court, Tohwasō, had bamboo as the main subject for entrance examinations. Bamboo, as a symbol of uprightness, was especially favoured by Confucian literati, and the academy's organisation surpassed similar Chinese contemporary institutions. Chinese styles in painting, calligraphy, architecture and applied arts continued to inspire Korean art, but Korean artists and craftsmen retained their own taste for pureness and natural beauty, as can be seen in the white ceramics of the 17th and 18th centuries.

Bibliography

Genre paintings

Genre paintings in the strict sense of the word - paintings of people engaged in the activities of daily life, painted for their own sake - are not found in substantial numbers for most of Korea's historical periods. Yet, there are not a few pictorial representations that give information on aspects of daily life in different ages, as part of paintings of an entirely different kind, created with purposes having little to do with genre painting as it is generally understood. The oldest examples of such pictures date from the Bronze Age or even earlier: engravings in a rock depicting hunting and fishing scenes, and a bronze object showing agricultural activities. Wall-paintings in the tombs of Koguryo, dating from the 4th through the 6th c., present a variety of scenes from daily life: pictures of men and women in procession, lords and servants, hunters, wrestlers, pugilists, dancers, horsemen and bullock carts, houses and their interiors, a kitchen, stable, a butcher shop. These pictures created for the dead a familiar environment similar to life in this world.

But beginning with the 7th c., for a period of over 500 years, very little is left to document the visual aspects of daily life. In the later Koryo period depictions of daily life appeared in
some paintings of the future Buddha Maitreya preaching in this world, which include, in the
lower part, scenes of farmers tilling the soil. Also, about the same time, special events at
court and scenes from the life of the upper class were chosen as subjects to be painted, but
very little has been preserved. In most cases, we only know from literary sources that such
paintings existed.

A great deal more has survived from the Chosŏn-period, especially from its second half.
Following a tradition begun in the Koryŏ period (but that had its roots in China) important
events, banquets and visits of foreign envoys, were painted to commemorate and document
these occasions. Royal palaces were depicted in an exact, descriptive manner and paintings
called kyehoedo (pictures of association meetings) represented gatherings of members of
the upper class. When the occasion depicted was a meeting of elderly gentlemen of high
status, these pictures were called kirohoedo; (pictures of a gathering of those of venerable
age). The first known kirohoedo was painted during the previous dynasty, in 1203, but has
not survived. Kyehoedo would be made in multiple copies, one for each of the
participants. Until about 1550, kyehoedo depicted the participants in a vast landscape, but
from that time onwards the persons receive more emphasis.

Confucian ideology stressed the importance of the people and their productive labour, and
this led to the depiction of the toil of those engaged in agriculture, the raising of silkworms,
spinning and weaving (kyŏngjikto). Originally the intent of these pictures, for which there
were Chinese models, was to remind the courtiers of the plight of the hard-working
commoners and admonish them not to waste the fruits of such labour. In the second half of
the Chosŏn period, however, this theme was widely used for screens and, becoming ever
more popular, finally came to be part of the folk-painting repertoire.

The 18th c. witnessed important developments in genre painting. So far it had been
executed for ritual or religious purposes, or to document and instruct, now it came to be
more highly appreciated for its own sake. Yun Tusŏ (1669-?) and Kim Turyang (1696-
1763) were among the first representatives of the new trend. In their work human figures
are generally represented within a natural setting which receives at least equal attention, so
that these paintings may be regarded as a compromise between landscape and genre
painting. This changed with Cho Yŏngu, (1686-1761) who in some of his work shifted the
focus completely to human activity. Consequently his works, such as his depiction of two
craftsmen working a lathe, have greater documentary value. The most outstanding genre
painters of this period were Kim Hongdo (1745-1816?) and Shin Yunbok (18th c., exact
dates unknown). Kim Hongdo painted important episodes from the life of the yangban, but
also showed a special interest in the life of the common people. Shin Yunbok preferred
scenes with an amorous flavour - such as men of the upper class dallying with kisaeng - set
against a carefully drawn background which provides much information with regard to
daily life in his day. Another important genre painter was Kim Tūkshin (1754-1822), who
was influenced by Kim Hongdo and whose work is remarkable for its humour. Kang
Hŭiŏn (1710-1764) and Yi Insang (1710-1760) also deserve to be mentioned for their genre
paintings.

In this period, too, scenes from daily life found a place in Buddhist painting. Occasionally
they may be seen in the lower part of paintings devoted to the Ten Kings of the Underworld
or the Buddha Amitabha, to whose Pure Land it was hoped the souls of the dead would go,
thanks to the prayers and offerings of their surviving kin. In style, these depictions of
scenes from worldly life (people drinking, playing chess, quarrelling and dancing,
shamans, itinerant artists, etc.) are extremely close to the genre paintings made for non-
religious purposes.

Of great importance for the knowledge of late 19th c. Korea is the work of Kim Chun'gŭn
(dates unknown), who is better known under his pen-name Kisan. He may not have been a
great artist, but for its documentary value his work is unsurpassed. Although he followed in
the tradition of the Korean genre painters of the 18th c., he seems to have worked mainly for the first westerners who came to Korea (among them P.C. von Moellendorff and the daughter of Admiral Shufeldt) who took sets of his work home. For James Gale's translation of Pilgrim's Progress he made illustrations in Korean style. Altogether, hundreds of his paintings and sketches are preserved in museums all over the world, in Seoul, Washington, Leiden, London, Vienna, Copenhagen and Moscow, constituting an invaluable source for getting to know the physical aspects of Korea at that time. Few subjects were left untouched by Kisan. He depicted seasonal customs, weddings, funerals and judicial procedures, mask plays, acrobats, jugglers, singers, beggars, monks, shamans and exorcists, hunters, farmers, miners, noodle makers, merchants of every description and craftsmen of all kinds, women fetching water, laundering, ironing, spinning and weaving, wine houses and markets, a bathhouse, hot springs and what not. Kisan was not the only one to produce such sketches, although he seems to have been the most prolific. Notable is the work of Kim Yunbo (early 20th c.), who painted scenes of country life and a series depicting punishments current in the Choson period.

Paji

Pak ch'omji

Pak Chega (1750-1805)

Pak Chega was a late Choson shirhak (practical learning) scholar. His family’s ancestral home is in Miryang, his courtesy names included Ch’asu and Sugi, and his pen names included Ch’ojong and Chonggyu. As a boy, Pak excelled in his studies -- poetry, composition and painting. At the age of nineteen or thereabouts he was attracted to the School of Northern Learning (pukhak’pa), which was comprised of men such as Pak Chiwon (1737-1805), Yi Tongmu (1741-1793) and Yu Tükkong (1749-?). Since Pak was an illegitimate son, his options in government service were strictly limited. His excellence in scholarship, however, was widely recognised after the publication of a poetry collection, Konyön chip, which included his work together with that of other writers, such as Yi Tongmu and Yu Tükjong.

In 1778, Pak travelled to China as part of an official envoy headed by Ch’ae Chegong. On this journey, he and Yi Tongmu became acquainted with Qing scholars such as Li Tiaoyuan and Pan Dingyun. Pak was able to witness the high culture of Qing, which was at its high point at this time, and was able to have discussions with Chinese scholars. It was then that Pak wrote perhaps his most famous work, Pukhagü (Discourse on Northern Learning). This consists of two sections; the so-called ‘Inner Chapter’, which contains information on the physical structures of China such as roads, bridges, commerce and medicine, and the ‘External Chapter’ which covers the political and social systems of Qing.

Pak enjoyed a close relationship with King Chongjo (r. 1776-1800) which allowed him to have greater influence in the government than someone of his status would normally have had. He served in the Kyujanggak Royal Library and in 1789 presented a summation of his
work *Pukhagüi* to the King as a proposal for reform of Chosôn. This advocated a modern and progressive economic policy that would enhance and facilitate domestic trade by improving the means and routes of commerce. However, this was far too liberal for the staunchly conservative neo-Confucian ruling class that viewed merchants as the lowest of the four classes of Chosôn. After the death of King Chongjo, Pak was involved in an incident in 1801 and was exiled. He was released from exile in 1805, but died shortly afterwards.

Among his other extant works are the aforementioned *Pukhagüi*, *Chongyu chip* (Collected Works of Chongyu) and *Chongyu sigo* (Poetry Collection of Chongyu).

**Pak Chiwon** (1737-1805)

Pak Chiwon (styled Yōnam) was a leading 18th c. writer and thinker of the shirhak (Ch. *shih hsüeh*, Practical Learning) school. The work of Pak Chiwon is widely recognized, both for its stand against the social ills of Chosôn and for its satire.

Of *yangban* lineage and a descendant of Prince Kūmyang (1562-1635), Pak Chiwon, of the Pannam clan, apparently did not prepare himself well in his early childhood for the state examination. His first opportunity to study seriously and methodically in preparation for it arose only after his marriage, at the age of fifteen to a member of the Chŏngju Yi family. His father-in-law and uncle were both respected neo-Confucian scholars and Pak Chiwon owes much of his scholastic learning to them. He passed the Minor Government Service Examination with the highest honours in 1770 and sat for the follow-up Combined Examination in the same year, but inexplicably did not hand in his examination paper. Following this incident, he deliberately by-passed the higher civil service examination, the most important institution in a literati’s life, in consequence of which he was destined to spend many years in poverty.

This did not deter Pak from writing and his talent made him a celebrity in literary circles by his early twenties. As he honed his literary skills he lost all interest in attempting the government service examination. In 1768 he moved to a location near Paekt’ap and there became closely associated with Pak Chega (1750-1805), Yi Sŏgu (1754-1825), Yu Tükkong (1749-?) and other scholars.

In 1780, Pak travelled to China with his cousin Pak Myŏngwŏn, who was a member of the official embassy sent by Chosôn to mark the seventieth birthday of the Qing emperor. This occasion provided Pak an excellent opportunity to observe the advanced culture of Qing, as well as Western civilisation that was already preponderant in Qing. This visit was to have a lasting impact on his thought and writings. During the journey, he kept a diary which gives details of the many institutions and customs of the places he visited. The * Yöŗha ilgi* (Jehol Diary) provides a thorough commentary on a range of topics concerning the Qing State. It discusses the political and economic systems of Qing, along with matters concerning customs, the Chinese people, poetry, history, religion and nature. This work is widely upheld for its frankness, which was a rare quality of the day since many scholars feared censure for writing anything that could be construed as inflammatory in the slightest degree.

In 1786 King Chongjo (r. 1776-1800) was told of Pak’s financial troubles and appointed him as a Junior Ninth Rank official (*sŏn’gong kamyŏk*). From this time, Pak held a number of minor government posts. He was appointed as Magistrate (*unsu*) of Myŏnh’ŏn County in 1797 and Town Magistrate (*pusa*) of Yangyang in 1800, a position which marked the end of his government service.

Pak’s views on the *yangban* and the social structure of Chosôn are well represented in his works, especially *Yangban chŏn* (Tale of a Yangban), which is a consummate piece of social satire. It is a damning indictment of the *yangban* society of the time, which Pak
manifested by satirizing the economic ethics of the idle, unproductive and pretentious way of life of the Confucianist yangban as hopelessly impractical. He condemned the system by virtue of which the yangban existed as, 'an ethic of worms, thieves and robbers'. He was acutely aware of the country's need to modernize, and attached much importance to the practicality of commercial and manufacturing activity, including agricultural work - which he saw as the salvation of the masses.

Yangban chon does not, however, deny or even fundamentally depart from the social value system or order of the upper class. On the other hand, in Hosaeng chon (The Story of Mr. Hô) Pak was quick to criticize the merchant class and others involved in commerce. From this, one may construct that although he disapproved of the upper class and the literati, it is not a denial per se of the social systems of the former, but rather a suggestion that the upper class should adapt to the changing times. Another work, Hojil (A Tiger's Rebut), satirizes the two faces of a treacherous scholar and a chaste woman by combining reality and fiction.

Pak was critical of neo-Confucianism as well as the Wang Yangming (1472-1529) school for what he saw as empty and useless metaphysical speculation. He always gave his strong support for the development of commercial and manufacturing enterprises and had a deep interest in both agricultural system reform and technical growth.

In his preface to the Yangban chon Pak explains his motive for writing the work as, 'A scholar occupies an official position that is bequeathed by heaven. The mind of the scholar should not seek benefit, should not sway from propriety although he is established in life, and should not relinquish its scholarly duties even if he becomes destitute. However, since the scholars of the present-day do not cultivate their moral obligations and seek justice, instead idly believing in their family power, and buy and sell the nobility of their family, what is the difference between them and the merchants? I am writing Yangban chon since I wish to reveal my feelings on this subject.'

Pak’s scholarship made a great contribution to the development of shirhak thought and through this movement he helped prepare Korea for the country’s eventual acceptance of reform. After he retired from government service he continued to live in Seoul and died there in 1805. There are many extant works by Pak including Yônam chip (Collected Works of Yônam) and the aforementioned Yôrha ilgi. Pak’s short stories such as Yangban chon and Hosaeng chon continue to be popular with readers to the present-day.

Pak Chônghŭi (see Park Chung Hee)

Pak Hanyông (1870-1948)

Hanyông (Buddhist name, Chôngho; most often called himself by the pen-name, Sôkchôn. Yôngho and Hanyong were two other pen-names he used; he was often called Hanyông by others) was the pre-eminent leader in the founding of Korea’s modern Buddhist educational system. Although he was in many respects a traditional Buddhist priest and scholar, he recognized fully the necessity for modern learning and begrudgingly expressed his respect for the educational advances of Christian missionaries. Under his direction, Korean monks were encouraged to undertake mathematics, science, and liberal arts courses which he considered an essential part of their religious training. He saw Buddhism in competition with Christianity and stressed that only educated Buddhist priests could effectively spread the Buddhist teachings and gain converts. In spite of his emphasis on modern education, he was a strict proponent of the traditional vows, especially that of celibacy, and he does not seem to have supported any major changes to the traditional Korean monastic rules.

Although there are various problems with the dates regarding the chronology of his life, it
seems that he entered the priesthood at around the age of twenty and had distinguished himself by the age of twenty-two. He succeeded his master in 1895 and was thus given the distinction of being called Sŏkchŏn. It is said that this name, meaning 'rocky mountain summit', had been transmitted from the priest Paekp’á Kūngsŏn (1767-1852) as a favour to the scholar Ch’usa Kim Chŏnghŭi (1786-1856). Ch’usa had sent to Paekp’á a piece of writing bearing the words ‘sŏkchŏn’ and had requested that it be handed down as a name to his ablest students and in turn, their ablest students.

In 1895 or thereabouts, Hanyŏng wrote a collection of essays and other literary pieces in a text he titled Sŏngnim sup’il. Ch’oe Namsŏn, himself a brilliant Korean scholar, wrote that no matter how hard he tried, his intellectual achievements would never match those of Hanyŏng. Reading this book, one senses that Ch’oe’s praise was warranted. The wide scope of his intellectual interests is daunting enough, but even more surprising considering his age. He addressed topics as diverse as the tea ceremony, Buddhist metaphysics, and the relationship between Sŏn (Zen) Buddhism and poetry composition. His broad interests in traditional aesthetics seem to have marked him as a rare scholar among his contemporaries in the early twentieth century.

Interestingly, he also dealt explicitly and implicitly with the long-standing intellectual dispute between the priest Ch’ŏuli Úisun (1786-1866) and Paekp’á, from whom he traced his lineage as a priest. This was an argument over an obscure point of Sŏn Buddhist metaphysics regarding the means of spiritual enlightenment in Sŏn Buddhism. Ch’ŏuli and Paekp’á each graded Sŏn into different levels commensurate with the spiritual ability of the practitioner, but they vehemently disagreed over the number of levels as well as what to call these different levels.

Ch’usa Kim Chŏnghŭi had also taken part in the argument and had criticized the stance taken by Paekp’á. Hanyŏng, however, defended Paekp’á while vigorously criticizing the famous Ch’usa, and in one essay he even stated that the letters Ch’usa had written to Paekp’á during the course of the dispute and the memorial tablet he had written after Paekp’á had died, ‘seemed to be thoroughly inconsistent’. Hanyŏng’s special interest in this debate seems to have lasted his entire life, and it can be assumed that this was partly of a personal nature, since it was through Paekp’á that he traced his lineage as a Sŏn master and a yulsa (vinaya master, or master of monastic rules of conduct).

In 1896, Hanyŏng began lecturing at monasteries throughout Korea, and it seems he gained recognition for his oratory. After his arrival in Seoul in 1908 or 1909 he rose to national prominence. From 1623 Korean Buddhist monks were officially banned from entering the capital, and after the lifting of this ban in 1895, there had been a flurry of Buddhist activity in Seoul. Like Han Yongun, Hanyŏng had come to the capital with the intention of beginning a Buddhist reform movement, and in 1911, he and Han joined forces in countering Yi Hoegwang’s attempt to merge the Korean Buddhist community with the Japanese Sōtō Sect. It seems that in 1913 he expressed his anger against Han’s proposal that monks be allowed to marry. But notwithstanding their dispute, the two men remained as friends.

From this time, Hanyŏng was engaged mainly in Buddhist educational programs and in writing for Buddhist journals. Despite his status as a Sŏn master, he had been greatly influenced by Hwaŏn thought (Ch.Huayan), and he criticized much of contemporary Sŏn. He was particularly disturbed by the anti-intellectual attitude of many Sŏn priests, and he warned that the traditional Sŏn definition of itself as 'not relying on words or letters', was both dangerous and wrong.

Hanyŏng believed that the future of Korean Buddhism rested on the creation of an educated community of priests who were as comfortable with sutra studies as with modern educational pursuits. To this end, he emphasized the worth of all spheres of human
knowledge, and in 1930 he was awarded a position in the Chungang Pulgyo Chŏnmun Hakkyo (Central Buddhist College), the predecessor of present-day Donguk University in Seoul. In this capacity he was able to directly influence the first generation of Korean Buddhist priests who would combine a traditional monastic education with Western-style academic courses of study, within a university setting.

Bibliography

Pak Hŏnyŏng (1900-1956)

Prominent communist leader, North Korean statesman. Pak was born in South Ch'ungch'ŏng Province, in 1900 in the family of a rice merchant, he received modern education. In his youth, he was greatly influenced by Christianity and contemporary Western ideas. In 1920 Pak moved to Shanghai where he established contacts with nationalist emigration and with early Korean followers of the Communist theory. There he became a member of Irkutsk faction, one of the first Korean Communist organizations. After returning home he began to spread Communist ideas in Korea.

In April 1924 Pak and some other activists tried to create a Communist Party organization in Korea, but failed. Soon, Pak was arrested by the Japanese police. After his release (January, 1924) Pak founded the 'Tuesday' faction, a Marxism study group. In 1925 this group as well as Pak himself played the major role in establishing the Korean Communist Party in Seoul. However, this organization was soon crushed by the police and in 1925-1927 Pak was imprisoned once more. After 1927, Pak who had been released from the prison as a mentally ill (he simulated insanity), left Korea for the Soviet Union and China. In Moscow he studied Communist theory and had close contacts with Comintern, but was not deeply involved in its inner politics and soon left for China. In 1933 he was arrested by the Japanese in Shanghai and imprisoned for 6 years. In 1939-1945 he stayed in Korea (sometimes illegally, under borrowed names) and continued his underground Communist activity.

By 1945 Pak had become the most prominent Communist leaders of Korea. He has got an image of a martyr, who spent almost 10 years in Japanese prisons, and never denied his ideals. He was also an energetic and highly ambitious person, skillful manager, brilliant writer and speaker. In August, 1945 Pak returned to Seoul and after some minor clashes among various rival Communist factions emerged as a chairman of the re-established Communist Party.

Under his leadership, the Communist Party became a major political force in the South Korea. Initially, its Central Committee claimed authority over the North Korean communist organization as well, but in early 1946 an independent party was established in the North under the Soviet tutelage. However, Pak remained to be one of the most influential persons among Korean leftists. After the merger of 2 Marxist parties - the Communist Party of the South Korea and the New People's Party - into the South Korean Workers' Party Pak was elected as its chairman.

In autumn, 1946 Pak, facing the real imminence of a new arrest, left the South for the North. He continued to direct underground actions of the South Korean leftists, but his real influence was diminishing, mainly because of the policy of Kim II Sung (Kim Ilsŏng) who did his best to establish himself as the only supreme leader of the Korean
communists and did not tolerate any rivals. In the North Pak became a leader of the so-called 'domestic' faction inside the Korean Workers' Party. This faction consisted of former underground Communist activists who fled to the North.

After the declaration of the D.P.R.K. Pak became the foreign minister in the North Korean government. He also held some other official positions, but by 1953 he had lost any real political influence. In the spring of 1953 leaders of the domestic faction fell victims of purges. Pak himself was arrested in August 1953 and after a mock trial (15 December 1955) was executed as an American spy.

A Lankov

Pak Hyogwan

Pak Hyogwan was a songwriter of late Chosŏn. Little is known of Pak and even the date of his birth or death are not recorded. His courtesy name was Kyŏnghwa and his pen name Unae. He is known for his part in the compilation of *Kagok wollyu* (Sourcebook of Songs) along with An Minyŏng. This work, along with *Haedong kayo* (Songs of Korea) and *Ch'ŏnggu yŏngŏn* (Eternal Words of Green Hills) are considered as the three most special songbooks of Chosŏn. Pak was favoured by the Taewŏn'gun (father of King Kojong, r. 1863-1907) and even received his pen name from him. Included in *Kagok wollyu* are thirteen of Pak's *shijo*.

Pak Hyŏkkŏse (r. 57 BCE- 4 CE)

Pak Hyŏkkŏse (69 BCE-4 CE) was the first king of Shilla and reigned from 57 BCE to 4 CE. He is also the founder of the Pak family of Shilla. The foundation myth of Shilla is recorded in both the *Sanguk sagi* (History of the Three Kingdoms) and the *Sanguk yusa* (Memorabilia of the Three Kingdoms). The story concerning the founding of Shilla and the origins of Pak Hyŏkkŏse begins in 69 BCE when the village headmen of the Six Villages of Saro gathered on the banks of the Al Stream to discuss the founding of a kingdom and the establishment of a capital city. At this meeting of the headmen, a mysterious light from the heavens shone on a white horse kneeling before a large egg in the roadway. The horse then flew skywards and the egg opened, revealing a male child, who was both handsome in appearance and just in countenance. The headmen took the infant to the Tong Stream and bathed him, causing his body to shine and the birds and beasts to dance. This child was none other than Pak Hyŏkkŏse, and he was given the name Pak since the egg that he had come from was as large as a gourd (also pak in Korean). The headman of Kohŏ Village, Duke Sobŏl, took the infant to his home and raised him. When the boy reached thirteen years of age, the headmen declared him king of the Six Villages of Saro. The area formed by the confederation was known as Sŏrabŏl, Shilla and Saro among other appellations. In the fifth year of his reign, Pak Hyŏkkŏse took Aryŏng as his queen, and together they ruled the kingdom until 4 CE.

The foundation myth of Shilla concerning Pak Hyŏkkŏse reveals that the Six Villages of Saro were unified through his reign of Hyŏkkŏse, and thus this myth can be viewed as a legitimisation of the rule of the king. Since Hyŏkkŏse is shown to have divine origins, his rule over the people of Saro can be justified as the will of heaven, or of a supernatural power. Moreover, it is also argued by some scholars that the rule of Pak Hyŏkkŏse over Saro represents the subjugation of the indigenous people of the Saro Villages by migrant forces, and thus the legend of Pak Hyŏkkŏse evolved in order to create a ruling hierarchy, along with the rationale for their rights to the throne. It is also noted that the creation of
foundation myths was one matter in which the concept of ancestor veneration was perpetuated among the common people, and through this vinculum, the status of the ruling class was further elevated.

Other records of Pak Hyŏkkŏse reveal that in 37 BCE he established Kŭmsŏng Fortress in the Seoul area, and that five years later he built a royal palace in this location. This shows that Shilla was now expanding beyond the Kyŏngju plain and forming alliances with other small states that dotted the Korean peninsula. These early states needed both sufficient population and territory in order to survive in their struggles with neighbouring states, and thus the ruler able to offer guarantees of personal safety and ample resources for farming would attract new population on the fringe of his kingdom, and thus enabling it to grow in strength. The fact that Shilla was able to expand and absorb neighbouring states reveals that its early kings, including Pak Hyŏkkŏse, could attract and increase their populations through their personal talents. This differs considerably from the monarchs of the centralised aristocratic states which developed in the second and third centuries. Pak Hyŏkkŏse bore the title of kŏsŏgan, which is widely interpreted as ‘chief’. This fact points to his role as the leader of a confederation of clans, his appointment being perhaps by virtue of his ability to control the forces that affected agriculture or his role as a shaman. This view is substantiated by the fact that Pak Hyŏkkŏse’s successor Namhae (4-24), was designated as ch’ach’aung, which means shaman.

**Pak Illo (1561-1642)**

Pak Illo was a mid-Chosŏn civil-official who also participated in the 1592 Japanese invasion as a soldier. His family’s ancestral home is in Miryang, his courtesy name was Tŏng, and his pen names were Nogye and Muhaong. Pak is reputed to be a forty-third generation ancestor of the founder of the Shilla Kingdom, Pak Hyŏkkŏse (57-4 BCE). Pak’s life of eighty-two years can largely be divided into two parts: the first encompasses his military activities carried out in the defence of Korea during the 1592 Japanese Invasion, and the second entails his activities as a Confucian scholar during his later life.

When Pak was thirty-one years old the Japanese invaded Korea and he was involved in the military operations of the so-called ‘righteous army’ (ŭbyŏng) in areas such as Tongnae, Ulsan, Kyŏngju and Yöngyang County. In addition, in 1598 he served as a naval commander and carried out many meritorious deeds. In 1599 he passed the military service examination (mukkwa) and served as Officer of the Guard (sumunjang) and as a herald (sŏnjŏng’gwan). He was later appointed as Commander (manho) of Chorap’o on Kôje Island and charged with military affairs there.

Pak’s career as a scholar began when he reached the age of forty. As he pursued academic pursuits, he became acquainted with many moralists and in particular, he held similar views with Yi Tŏkhŭng (1561-1613). Upon his meeting with Yi and thereafter on several important occasions such as Yi’s retirement from official life, Pak wrote short poems (shijo) for his friend. Among these, Saje kok (Song of the Sedge Bank) and Nuhangsa (In Praise of Poverty), both written in 1611, are praised for their excellence. In 1612 Pak attended a ceremony in honour of Yi Hwang (1501-1570) at the Tosan Sŏwŏn (private school) and here he became acquainted with many other literati including Cho Chisan, Chang Yohon and Chŏng Han’gang. Pak continued to be a prolific writer throughout his life and his other notable works include: Yŏngnam ka (Song of the Southeast) written in 1635 and Nogye ka (Song of Nogye) written in the following year. His literary collection, Nogye chip (Collected Works of Nogye) was compiled and published posthumously, and is praised for its literary excellence.

**Pak Maria (1906-1960)**

Pak Maria was an educator and social activist. Her family’s ancestral home is in Miryang
and she was born in Kangūng of Kangwŏn Province. In 1923 she completed her studies at Hosudon Girls’ High School and in 1928 graduated from the English Literature Department of Ehwa Women’s College. She returned to Hosudon and served as a teacher. From her time at Ehwa, Pak participated in various social movements such as those advocating the abolishment of licensed prostitution, and the prohibition of alcohol and tobacco.

Pak travelled to the United States for further study and graduated from Scarlet College in Tennessee in 1932 and in the same year received her Masters Degree from the Peabody College of Education. She returned to Korea and took up a lectureship at Ehwa Women’s College, teaching ethics. In 1935 she married Yi Kibung and at this time became director of the Young Women’s Christian Association (YWCA), a position she would hold for the next ten years. After Korea’s liberation in 1945, Pak’s husband held the office of secretary to Syngman Rhee (Yi Sūngman) and so he and Maria were introduced to the political arena. Moreover, Rhee adopted the eldest son of Pak and her husband as a way to mirror the bond between the two families. Pak was active in international organisations and attended the World Conference of the YWCA held in China and further served as the Korean representative to the Girl Scouts movement. In 1954 she was appointed as head of the English Literature Department and deputy head of the Ethics Department at (what is now) the Ehwa Women’s University.

Pak and her family continued to be very close to Syngman Rhee and his Liberal Party (Ch’ayu Tang). With the fraudulent elections of March 1960, however, the Korean people had grown weary of Rhee’s dictatorship and rebelled in what has become known as the April Students Revolution (19 April 1960). The main target of the rigged election was Pak’s husband who was running as Rhee’s vice-president. As a result, Rhee was forced to step down from the presidency and with this loss of political power, Pak and her entire family committed suicide at their home on 28 April 1960.

Pak Yŏnggyo (Prince Kŭm’nung)

Paksu

Pan’gye surok (Pan’gye’s Treatises)

Pan’gye surok is a twenty-six volume, thirteen fascicle work written by Yu Hŏnggwŏn (1622-1673). Titled after the pen name of Yu, it is a collection of treatises on diverse matters such as, land distribution and taxation, the national examination, the bureaucratic structure of Chosŏn and even broaches such topics as national rituals, customs and language. Upon his retirement from official life, Yu returned to his hometown in North Ch’olla Province and compiled this work over a twenty-two year period. Pan’gye surok was not published as an independent work until nearly a century after the death of the author, when in 1770 a woodblock-print edition was published.

The work (which has a modern version in print) contains a series of proposals for reform of the declining Chosŏn Kingdom, including a return to more benevolent governing of the nation’s farmers. Yu believed that the increased tax burden placed on the farmers in the aftermath of the 1592 Japanese Invasion was immoral and contributing to the ills of the nation. Moreover, this work details plans for reform of the land system of Chosŏn that enabled only the wealthy to own land instead of those who worked it. The exploitation of the farming class was presented as a key to the afflicted state of the country. The author also stressed the need for moral education among the people that would help stem the social deterioration that he saw as a plague upon the country.
Pan'gye surok displays the ideology and calls for reform by one of the great scholars of Choson. The called-for reforms were not well received in Yu's lifetime, as they were far ahead of their time. It provides invaluable data for research of Choson politics and societal problems.

Bibliography

Pang Chöng-hwan (1899-1931)

Pang Chöng-hwan was a scholar in the field of children's literature. His pen name was Sop'a and he was born in Yajugae. In 1909 he entered Maedong Primary School and in the following year transferred to Midong Primary School, graduating in 1913. In the same year he entered Söllin Vocational School, but in the following year dropped out due to his family's straitened circumstances. In 1917 he married Son Yong-hwa, and at that time became active in a youth movement. In 1918 he entered Posong College, and in the following year after the March First Independence Movement, was arrested by the Japanese police for distributing leaflets bearing the independence proclamation. For this he was imprisoned and tortured for about one week before being released. In 1920 Pang entered the Philosophy Department of Toyo University and began his study of children's literature and art.

In 1921, Pang, Kim Kijón and Yi Chôngho, formed the Ch'ondogyo Youth Association. This is heralded as the inauguration of the youth movement in Korea. On 1 May 1922, Pang suggested the notion of a 'Children's Day' (ôrini nal) and in March 1923 year he published the first children's magazine in Korea, Òrini (Children). Òrini was compiled in Tokyo and then published in Seoul. Pang continued to press for a 'Children's Day' and also contributed to worldwide efforts for the development of children's literature.

Despite his untimely death at the age of thirty-two, Pang has left behind many literary works. Sarang ùi sömmul (Love's Gift) was published during his lifetime, but there are some posthumously published works, including Sop'a chǒnjip (Collected Works of Sop'a, 1940) and Sop'a adong munhak chǒnjip (The Complete Children's Literary Collection of Sop'a), among a total of eight works. Pang is remembered for his unwavering devotion to the cause of children's literature and his desire to elevate the status of children.

Pangdae Mountain

Mt. Pangdae (1 436 metres) is situated to the south of Sôrak-san National Park in Inje County. Surrounded by Mt. Chöm'bong (1 424 metres) and Kach'il Peak (1 165 metres) to the north, Kama Peak (1 192 metres) to the west, Maenghyön Peak (1 214 metres) to the south and Kuryongdôk Peak (1 388 metres) to the east, the mountain is part of the Chungang Mountain Range. The north-west slope of the mountain is relatively flat, in contrast with the steep terrain to the south and east. On the summit, there is a television relay antenna, helping to improve broadcast transmissions to this remote area.

Pangmun Sôgwan

Pangmun Sôgwan was a publishing house established in Seoul in April 1907 by No Ikhyông. It was relocated to Seoul's Pongnae-dong, and then to Chongho Street in 1925. The company's publications were aimed at the general public and included translations of foreign novels as well as works by famous Korean authors such as Hyôn Chin'gan, Yi Kwangsu, Yi Sanghyôp and Yôm Søngôp. In the 1930s, the company published Yi Kwangsu's acclaimed work Sarang, a ten-volume collection of literary masterpieces and a five-volume collection of historical novels. Beginning in 1939, it also published Pangmun Mun'go, an eighteen-volume collection of key writings from both East and West, covering a wide range of subjects. The business remained active in the 1940s with publications which included works by Pang Chöng-hwan and Yang Chudong, and further works by Yi
Kwangsu.

Paper, hand-made (see Hanji)

Parhae (see History of Korea)

Parhaego (Treatise on Parhae)

Parhaego (Treatise on Parhae) is a history of the Parhae Kingdom written by Yu Tükkong in 1784. The author of this work consulted many documents in the compilation of this work including Chinese and Japanese sources. This work traces the history and accomplishments of the Parhae Kingdom from the founding king, Ko Wang (r. 698-720), to the collapse of the Kingdom in 926. Included in this work are a series of eighty-three biographies of famous Parhae literati and scholars, and geographical features of the kingdom such as descriptions of the five capitals, fifteen districts and the sixty-two states. The author also includes reports on the official positions of Parhae, foreign relations and its tributary states. Parhaego also includes descriptions of the regional products of Parhae.

The compilation of this work was an effort by the author to create an official history of Parhae much like those that had been created for the Three Kingdoms and for Koryo. Certainly in examining the time period in which this work was written, after the disastrous Japanese and Manchu invasions of the prior century, it can be surmised that this work was designed to bolster national consciousness of the past traditions of Korea. Parhaego is notable in that it sought to authenticate the history and traditions of Parhae as the successor of the Koguryo Kingdom. In addition, this work contains much valuable data that is essential for the study of the Parhae Kingdom.

Pari kongju

[Animism; Literature]

Park Chung Hee (1917-1979)

Park Chung Hee (Pak Chonghui) was a soldier, politician and president of Korea who served terms of office as fifth to ninth (1961-1979) presidency. His family’s ancestral home is in Koryong and his pen name was Chunsu. Park was born in Sangmo Village of North Kyongsang Province and graduated from Taegu Normal School in 1937. For three years after this he served as an instructor at Mun’gyong Elementary School. In 1940 he entered the Manchurian Military Academy, and after two years graduated at the head of his class. He then entered the Japanese Imperial Military Academy and in 1944 when he graduated he was stationed in Manchuria as a second lieutenant. He returned to Korea further promotion followed and by 1958 he held the rank of major-general.

After the April 1960 Student Revolution that significantly assisted the down fall of the dictatorial regime of Syngman Rhee (Yi Sungman), the Democratic Party, led by Chang Myōn, took over the South Korean government. The newly instituted regime put into effect greatly liberalized policies and ensured many democratic freedoms that heretofore had been severely restricted by Rhee’s regime. However, the result of these reforms was widespread
chaos and the inability of the Democratic Party to overcome their own factional divisions did little more than compound the situation.

Against the backdrop of the disordered situation that South Korea found herself in, the military was also experiencing factional problems. The junior officers of the Korean military were disloyal to their seniors who were both financially and politically corrupt and this led to calls for reform. The main advocate of these calls was a lieutenant colonel, Kim Jong Pil (Kim Chongp'il) whose attempt to persuade the Chang government of the necessity for military reform led to the abrogation of commission in February 1961. Thus three months later, Kim and Park, his uncle by marriage executed a relatively quiet coup that put the Korean military in command of the South Korean government. Although it was Kim who had planned this coup, it was Park who emerged as the central player in the new government, and he would remain so for the next eighteen years.

The Park era of Korean government can be largely be divided into three periods: the first from 1961 to 1963 was ruled through a military junta called the Supreme Council for National Reconstruction (SCNR); the second from 1963 to 1972 represents a period of democratization of Park’s rule; and third, from the implementation of the Yushin Constitution in October, 1972 until his assassination in October, 1979 was a period of increased authoritarianism by the Park regime. The initial period provided Park with the chance to restore order to South Korea through the implementation of harsh autocratic laws that resulted in the arrest of thousands, severe restrictions on the press, and the enforcement of puritanical regulations that resulted in the closing of dance halls and bars along with the breaking up of prostitution rings. The SCNR quickly enabled Park to consolidate his political base. Moreover, SCNR created the Korean Central Intelligence Agency (KCIA), headed by Kim Jong Pil, which came to be an important tool in Park’s suppression of various elements in the South.
