The second period of Park’s rule came about with his resignation from the military and election as Korea’s president. Park formed the Democratic Republican Party (DRP), which served much the same purpose as had the SCNR. Park won the 1963 election with a total of 47 per cent of the vote. During this term Park continued the implementation of his economic reforms that were to have a great impact on Korea, and additionally succeeded in ratifying a normalization treaty with Japan that provided both capital for economic reforms and much-needed technology. As South Korea underwent massive social changes that arose due to the rapid industrialization process, the polarization between the wealthy and the poor became extreme. This process resulted in severe criticism of Park and his ruling methods. Moreover, the opposition parties during this period began to combine their efforts to oust Park. In 1970 a new opposition party emerged, the New Democratic Party, led by two young leaders, Kim Young Sam (Kim Yōngsam) and Kim Dae Jung (Kim Taejung), who were highly critical of Park. The result was the popular support for Park was rapidly eroding and in the 1971 election he only narrowly defeated Kim Dae Jung to retain power.

In addition to his dissipating domestic power, changes on the international scene caused concern for Park. The Vietnam War was escalating and causing the United States to reevaluate her Asian goals, and the Nixon administration was establishing policies of détente with the Soviet Union and dialogue with China (PRC), all of which seemed to herald a new age of American global diplomacy. Park was further troubled by the Nixon administration’s decision to withdraw a combat division from Korea. In the face of mounting domestic criticism and international uncertainty, Park declared a state of emergency in December 1971.

The third period of Park’s rule is characterized by the enforcement of the Yushin Constitution that harshly limited the democratic rights of the Korean people. His Yushin (revitalizing) reforms were aimed at eliminating political opposition to his regime and at
The Yushin Constitution stipulated that the president was to be elected by the National Council for Unification (NCU) that was easily manipulated by Park, thus creating a legalized dictatorship for him. This system was to remain in effect until 26 October 1979 when Park and his chief body guard, Ch’a Chich’o1 were assassinated by his KCIA chief Kim Chaegyu.

The accomplishments of Park are many: he provided stability for South Korea that enabled economic growth; the normalization of relations with Japan proved to be a major diplomatic coup that also enabled economic growth in Korea; under his leadership South Korea consolidated her relationship with the United States by sending troops to Vietnam and supporting their international policies; and most of all it was Park’s economic development plans that allowed the so-called ‘Miracle on the Han’ to occur and usher in an era of economic prosperity for South Koreans. Park also instituted major social changes in Korea through his rural revitalization program the New Village Movement (Saemaul undong) and allowed the quality of life in rural areas to approach that in the cities. However, despite his many accomplishments, many remember Park for his brutal suppression of democratic liberties and an overwhelming desire to retain political office. Moreover, it was his regime that served as a model for the ensuing Chun Doo Hwan (Chon Tuhwan) regime and its authoritarian rule, along with the seemingly systematized corruption that plagued South Korean politics in the decades that followed.

In order to determine the origins and descent of a race, it is necessary not only to consult relevant documentary records, but also to collate the findings of scholars in a wide range of fields, including anthropology, archaeology and linguistics. However, difficulties remain in clarifying the origins and descent of the Korean people due to insufficient research in these areas. The Korean race belongs to the Mongoloid group, whose unique characteristics (including high cheekbones and double eyelids) are thought to have developed as adaptations to the cold climate in the region around Lake Baikhal in Siberia. The original Mongoloid group can be further divided into two subgroups which are both physiologically and linguistically differentiated. The first of these two groups is variously known as the Palaeo-Siberians, Palaeo-Asiatics or Palaeo-Mongols, while the second is known as the Neo-Siberians or Neo-Mongols. However it remains unclear when this division occurred. What is known is that these groups further divided into numerous races, and that the Neo-Siberian group later came to comprise two broad linguistic groups, the Ural and the Altai. It is considered probable that the Korean language belongs to the latter group, due to certain features which are common to Korean and other languages in the Altai group, such as vowel harmony, agglutinative grammar, and the absence of consonant clusters. Although Korean possesses certain structural differences from other languages in this group, such as
its honorific forms, it is thought that these constitute unique developments which probably occurred after the language had branched off from its Altaic roots. It can therefore be concluded that the Korean people constitute a branch of the Altaic subgroup of Neo-Siberians.

The regions to the south of Lake Baikal are characterised by forest and grassland which extends through Inner and Outer Mongolia as far as the Great Wall of China and eastward into Manchuria. The forests of north-eastern Manchuria continue south into the Korean Peninsula. It is considered that similarity in ecological conditions facilitated early southward movement of various Mongoloid peoples, and it is estimated that this movement took place during the period between the latter part of the Fourth Ice Age and the following ice age, leading to the spread of Neolithic and Bronze Age culture throughout the above regions. It appears that Neolithic culture was introduced into the Korean Peninsula through two routes, one extending into the western and southern parts of the peninsula from southern Siberia and western Manchuria and the other extending into the north-eastern part of the peninsula from eastern Siberia via the Amur basin and eastern Manchuria. Ceramic artifacts of the former type are characterised by pointed or rounded bottoms and by a half-egg shaped structure, while those of the latter type are identified by this flat bases. Although it is estimated that Palaeo-Siberians introduced Neolithic culture to the Korean peninsula, almost no fossil evidence has been found to confirm this hypothesis.

Bronze Age culture subsequently spread throughout Mongolia, Manchuria and the Korean peninsula during the Karasuk period. Daggers, spears, chisels, bronze buttons are among the artifacts that have been discovered, which date from both the Mongolian and Manchuria-Liao ning (Yoryŏng) Bronze Ages, however, differences exist between items from these two regions. These differences, such as the development of a lute-shaped dagger in Manchuria, are thought to be a result of the different living patterns of peoples in each region, nomadic in Mongolia and agricultural in Manchuria. The Korean Bronze Age was a direct extension of that of Manchuria.

Although belonging to the same Altai group, the physical characteristics of the Koreans differ in certain respects from those of the Mongol or Tungus peoples. The short, high skull of the Koreans is less rounded than that of the Mongols, and differs markedly from the medium to long skull of the Tungus, the latter thought to be a product of interbreeding with the Palaeo-Siberians during the period of southward migration from Siberia. Branching off from the Altai group, the Korean people moved south to settle in the region around the north-eastern part of the Great Wall, and in Manchuria and the Korean Peninsula, coming to form a distinct ethnic unit. Farming activity commenced along the aluvial plains of numerous river basins; increased agricultural activity led to the further development of Bronze Age culture; and village-based state structures came to be established. The most prosperous among these, Ko Chosŏn (Ancient Chosŏn), succeeded in creating an alliance of several states. Korean mythology and folk rituals are derived from the traditions of Siberian shamanism, and similarities between Korean folk culture and those of the numerous races of Siberia represent evidence of historical links between these peoples.

**Photography**

Photography was introduced to the Korean peninsula c.1870, by American, British and French soldiers, engineers, and cultural missionaries. Lieut. J.A. Bull (USN), Percival Lowell, Isabella Bird-Bishop, Constance Tayler, and Leonie Cuvillier were among the
Korea's earliest photographers include Kim Yongwŏn, Chi Unnyŏng, and Hwang Ch'ŏl. The name of Chi Unnyŏng is particularly significant for the period, as he was commissioned in 1884 by King Kojong to take the royal portraits. Outside the court circle, cameras, equipment, and film were too expensive to be in regular use. Portrait photography began to flourish, however, from 1895 following the enactment of legislation to force Korean males to remove the traditional topknot. Portraits were in demand to record their traditional appearance, before the barber's scissors were applied. In early 1900, several hundreds of people visited the Ch'ŏnyŏn-dang Photo Studio to have their photos taken.

When Japan annexed Korea in 1910, many Japanese photographers came into the country as well, and significant photos were taken by these early contributors, too. It is still unknown, however, who took two crucial photos used in A Century of Japanese Photography. The photo of the Korean crown prince in 1907 standing reverentially next to the Japanese Resident-General is one of these; the other is the image of several hanged Korean demonstrators from the March 1st Independence Movement of 1919.

After Korea's liberation in 1945, more Western photographers went to Korea - especially during the Korean War (1950-1953). Joining American photojournalists like David Douglas Duncan and Margaret Bourke-White in Korea, were 'photo legends' like Britain's Bert Hardy, who captured the only images of the Battle of Inch'on, on 15 September 1950, to be published (by Picture Post Magazine). ROK Army photographers also served meritoriously during that conflict, as did North Korea's soldier-photographers.

Since 1960, the best photographers of Korea have made names for themselves at home and abroad. One of the leading photographers ever to work in Korea, and a native of Seoul, is H. Edward Kim. Mr. Kim worked for 'National Geographic' from 1967 to 1985, during which time he became the first America-based photojournalist to be allowed into North Korea in the post Korean-war era. He also contributed to, or singlehandedly wrote and photographed essays on South Korea for that magazine. Mr. Kim has won a number of prestigious awards, including various honours from the University of Missouri, 'Pictures of the Year' competitions and the White House competitions. Today, he publishes 'Seoul Magazine', a picture journal similar to America's 'Life Magazine'. He also has published a number of excellent photobooks - including 'Korea: Beyond the Hills', 'The Family of Dolls', 'The Korean Smile', and 'Decade of Success'. Other recent native-born photographers of note are: Joo (Chu) Myŏng (who was born in North Korea and whose book 'Korean Traditions - As Seen Through Paper Windows' is a landmark of documentary photography in Korea); Taewŏn (Tony) Chŏng (formerly chief photographer for the UPI and Reuters news agencies in Seoul); Yim (Im) Hyangja (a great abstract pictorialist as well as being president of Time Space Inc. in Seoul); and Young-im (Yŏngim) Kim, a leading abstract photographer and exhibiter in Korea during the 1980s (and now a leading documentarian in New York City at work on a series of photobooks, entitled The Korean Community in New York), to name only a few of the most prominent since 1960.

Other leading photographers who were born in Korea and have worked there include: Limb Eung-Sik (Im-Ungshik) - the renowned Korean architectural photographer; Edward B. Adams (the grandson of missionaries and the head of an international school in Seoul, as well as the author of several exemplary photobooks on Korea); and Dr. Bong-Oh Cha (erstwhile Professor of Political Science at the University of Ulsan and an exhibiting Korean-American photographer).

Although very little has been written about the earliest Korean photographers in the English-language media, documentary trends from the late nineteenth c. have been reinforced over
the years, with a good sampling of abstract work added in more recently. The influence of Russian and Japanese photo-artists has been most profound in the latter case; while the influence of Western academic, governmental, and news-gathering organisations has been a leading influence in the documentary outlook of many Korean photographers, especially in South Korea, down to the present day.

*Pibyŏnsa t'ungnok* (Records of the Border Defence Council)

*Pibyŏnsa t'ungnok* is a massive chronological record of the *Pibyŏnsa* (Border Defence Council) of the Chosŏn period. This work encompasses the years from the reign of Kwanghae (1608-1623) to 1892 in the reign of King Kojong (r. 1863-1907). There are 273 volumes in this hand-written work.

The *Pibyŏnsa* was established in 1510 during the reign of King Chungjong (r. 1506-1544) and was designed to defend the nation from foreign invasions. Originally, the Council focused on the defence of Korea's northern border, but this changed as the situation surrounding Korea transformed over the years. The records before 1616 are not extant as many were lost in the 1592 Japanese Invasion. Further records were lost in the subsequent Manchu Invasion of 1636. Each volume in this collection represents a chronology of one year. However, many individual volumes have been lost and since only one copy was made each year, it was not possible to replace these.

*Pibyŏnsa t'ungnok* is a valuable record from the Chosŏn period that reveals many aspects in the structure, operation and activities of the Pibyŏnsa. This military organization played a crucial role in the defence of Chosŏn, and therefore this historical record provides much data concerning events in the nearly three-hundred years that it covers. This work was converted to standard 'block' Chinese characters and re-issued as a twenty-eight volume work in 1959-1960 by the Kuksa P'yŏnch'ăn Wiwŏnhoe (National History Compilation Committee). The original version of this work is presently stored at the Kyujanggak Library.

Plants (see also Korea)

As a result of the Korean peninsula's north-south orientation and the topographical variations, there are major differences in temperature and precipitation which result in a considerable variation in the types of flora. The mean temperature variation in the course of the year is from 5 deg. C to 14 deg.C, with precipitation ranging from 500 to 1500 millimetres. From sea level to the 2744 metres of Mt. Paektu on the northern border of Korea, a diversified floral region exists. Consequently, there are some 4200 kinds of plants growing in Korea, with 407 of these not found outside the peninsula and the islands of Korea. Of these 407 endemic species, eleven are of the fern family, sixteen are gymnosperms and the remaining 380 are angiosperms.

Sub-Tropical Zone Flora

The area in which sub-tropical flora is present in Korea is restricted to the southern coastal regions and the many islands in this region, including Cheju, Ullung and Sokhuksan. In particular, Cheju Island is home to a large number of species including some seventy broad-leaved evergreens, like Camellia japonica L. (tongbaek namu); Cinnamomum camphora Sieb. (nok namu); Quercus myr sinae folia Bl. (kashi namu); Neolitsea aciculata (Bl.) Koidz. (saedogi); and Citrus aurantium var. daidai Makino (kwang kyul). Cheju has unique herbal plants such as Pollia japonica Thunb. (nado saenggang) and Crinum asiaticum var. japonicum Bak. (munjuran), as well as broad-leaved deciduous trees like Elaeagnus submacrophylla Serv. (k'un pori chang namu). The southern coast of Cheju and the southern slopes of Mt. Halla are home to an even greater number of sub-tropical plants. Some of Cheju Island’s flora is also found on other Korean islands, including Elaeagnus submacrophylla Serv. (k'un pori chang namu).

Ullung Island, which is located at 37° 30' north latitude, also has a considerable number of sub-tropical plants, including small plants such as Daphniphyllum macropodum Miq. (kulgori); and broad-leaved trees like Ilex integra Thunb. (kamt'ang namu); and Aucuba japonica Thunb. (shik namu). The temperate conditions which prevail on the Korean islands, allow for the distribution of sub-tropical species as far north as Taech'ong Island, which is off the coast of Hwanghae Province These plants, whose seeds are distributed largely by sea currents, include Camellia japonica L. (tongbaek namu); and Neolitsea sericea (Bl.) Koidz. (ch'amshik namu).

Temperate Zone Flora

The temperate zone accounts for the largest portion of the Korean peninsula. The mountainous terrain of Korea provides excellent locations for the deciduous broad-leaved trees such as Quercus acutissima Carruth. (sangsuri namu); Quercus aliena Bl. (kalch'am namu); Quercus serrata Thunb. (cholch'am namu); Carpinus tschonoskii Max. (kaesǒō namu); and Fraxinus rhynchopylla Hance (mulp'ure namu). There are also many bush-like species including Forsythia koreana Nakai (kaenari); Rhododendron mucronulatum Turcz. (chindallae); Rhododendron dauricum L. (san chindallae); and Rhododendron yedoense var. poukhanense (Lev.) Nakai (sanch'oltchuk). Herbaceous plants found in Korea include Miscanthus sinensis Anderss. (ch'amoksae); Calamagrostis arundinacea (L.) Roth (sil sae p'ul); Chrysanthemum zawadskii var. latilobum Kitamura (kujol ch'o); Platycodon grandiflorum (Jacq.) A. DC. (toraji) and Melampyrum roseum Max. (kkotnyŏn-n̓i papa p'ul). Endemic to Korea are Abeliophyllum distichum Nakai (misŏn namu); Hylomecon hylomeconoides (Nak.) (maemi kkor); Aconitum chiisanense Nakai (chiriba kkor), and others.
Arctic Zone Flora

At the higher elevations, quite a broad range of flora exists. Typically-found species in the mountain ranges include needle-leaved varieties such as Abies nephrolepis Maxim. (punbi namu); Abies koreana Wils. (kursang namu); Thuja koraiensis Nakai (nunch'ükpaek); Pinus pumila Regel (nunja namu); Juniperus chinensis L. (hyang namu); and Taxus cuspidata S. et Z. (chumok). Deciduous plants found at the higher levels include, Quercus mongolica Fisch. (shin'gal namu); Quercus dentata Thunb. (ttokkal namu); Chosenia bracteosa Nakai (ch'aeyang podUl); Betula platyphylla var. japonica Hara (chajak namu); Salix myrtilloides L. (chinp'ori podUl); and Syringa dilatata Nakai (susu kkot tari). The bush-like Echinosophoro koreensis Nakai (kaenusam) is endemic to areas of high elevation in Hamgyŏng and Kangwŏn provinces, and Sasa coreana Nakai (shinidae) is found in the northern regions of Hamgyŏng Province, and this represents the northern limits for members of the bamboo family. Endemic herbal plants include, Hanabusaya asiatica Nakai (kumgang ch' orong kkot) found in the northern areas of the country and Rheum coreanum Nakai (changgun p'ul) in the Mt. Paektu area in the northernmost reaches of Korea. Major species of the northern forests are Picea koraiensis Nakai (chongbi namu); Pinus koraiensis S. et Z. (chat namu); Abies holophylla Maxim. (chat namu); and Picea jezoensis Carr. (kaenii sam). An examination of the plants of some areas reveals changes in past climatic and geographical conditions. One such plant is the Vaccinium uliginosum L. (tUltchuk namu) which only grows on the summits of Mt. Halla on Cheju Island and the highest mountains in Kangwŏn Province, thereby revealing that it is a relic species which has remained in these locations from earlier, and colder, times. Empetrum nigrum var. japonicum K. Koch (shiromi) is found only on the peaks of the northernmost Korean mountains such as Mt. Paektu and the southern summit of Mt. Halla on Cheju Island, which tends to support the claim of some scholars that the mainland and Cheju Island were connected in the distant past. Moreover, Diapensia lapponica var. obovata Fr. Schm. (tolmaehwa namu), is present only on Mt. Halla and some Japanese mountains, which suggests the Japanese archipelago and Cheju Island may have once been part of the same land mass.

Flowering Periods

July, being the hottest month, is the peak of the flowering season for most plants, although there are many that bloom at different times in either the spring or autumn. Spring-flowering plants include Forsythia koreana Nakai (kaenari); Rhododendron mucronulatum Turcz. (chindallae); Lonicera praeflorens Batal. (olgoebul namu); Fraxinus rhynchophylla Hance (mulp'ure namu); Gingko biloba L. (linhaeng namu); Iris rossii Bak. (kakshiput kkor); Pulsatilla cernua (Thunb.) Spreng. (kanunip halmi kkor); and Viola mandshurica W. Becker (chebi kkor). Summer-flowering plants include, Paeonia japonica Miyabe et Takeda (paek chagyak); paeonia lactiflora Pall. (chŏk chagyak); Paeonia suffruticosa Andr. (moran); Iris ensata var. spontanea (Mak.) Nakai (kkot ch'angp'o); Lilium concolor var. partheneion Bak. (hanūl nari); Lilium hansonii (Leichtl. (sŏmmal nari); and Anemone narcissiflora L. (param kkor). There are many others. Plants that flower in the autumn include, Miscanthus sinensis Anderss. (ch'amŏksae); Miscanthus sacchariflorus Benth. (murŏksae); Sedum aizoon L. (kanūn kirin ch'o); Gentiana scabra var. buergeri (Miq.) Max. (yongdam); Elsholtzia splendens Nakai (kkot hyangyu); and Chrysanthemum zawadskii var. latilobum Kitamura (kuchŏl ch'o). The winter-flowering Camellia japonica L. (tongbaek namu) grows on Cheju and other southern islands.

Bibliography

Pogil Island

Pogil Island is situated off Korea’s southwestern coast, about 18 kms. southwest of Wando Island. Administratively, the island is part of Nohwa Township in South Cholla Province’s Wando County. The island covers a total area of 33 sq kms. and has only a small population (5,481 in 1985). Due to the warm currents off the coast, the area’s weather is characterised by mild temperatures. The temperatures swing is considerable, from an average of 0.1c. in January to 25.3c. in August. Annual rainfall averages 1398mm, but the island’s snowfall is minimal.

Only 12.4 per cent of the island is arable land. Most of this grows rice, barley, bean, sweet potato, garlic, radish, and other vegetables. The island has a commercial fishing fleet of the order of 225 boats. Fish catches include anchovy, Spanish mackerel and sea bream. Divers bring in abalone along the coast and there is also oyster farming.

Dolmen on nearby Nohwa Island indicate that Pogil Island was probably inhabited during the early Iron Age. In later times, however, the island was desolate due to frequent attacks by Japanese pirates. In 1667, Yun Sondo (1587-1671), styled Kosan, moved to the island along with his family and retainers. Yun built a residence as well as landscaped ponds and gardens, naming the new settlement Puyongdong (Lotus Village).

Yun had earlier raised an army to fight the Qing invaders. When he learned that the king had surrendered to the enemy, he was deeply disappointed and thus decided to abandon all worldly concerns and to leave for Cheju Island. After two days on the water, Yun’s ship anchored at Pogil Island, where he rested and acquired fresh drinking water. Impressed with the great beauty of the Pogil, Yun decided to stay.

Yun gave poetic names to many of the island’s famous spots such as Misan (Beautiful Mountain), Oundae (Five Clouds Hill), Toktungdae (Solitary Lamp Heights) and Sùngnyongdae (Rising Dragon Heights). He constructed his residence, Naksōjae, on the northern side of the island. One kilometre from the area, he created a grotto which he named Tongch’ón Sŏksnl (Eastern Heaven Stone Chamber). Much of the information about Yun and the early history of the island comes from his work Kosan Yugo (Posthumous Manuscript of Kosan).

Pohanjae chip (Collected Works of Pohanjae)

Pohanjae chip is the collected works of the Chosŏn scholar-official, Shin Sukchu (1417-1475). This work, which is titled after the pen name of the author, consists of seventeen volumes in four fascicles and is a wood-block printed work. It was first published in 1487 by the Royal Library but this edition is no longer extant. The oldest edition presently surviving is the one published in 1645. It has also been reproduced in recent years.

The contents of this work are quite varied and include various types of writing, poetry, records of the author’s travels and memorials to the throne. Pohanjae chip also contains prefaces written by such prominent literati as Sŏ Kŏjong, Hong Ŭng and Kim Chongjik among others. This work is historically significant since the author was a high ranking government official during the cultural zenith of Chosŏn, and therefore his writings provide insight into the composition of the upper classes and the court at this time. A copy of the 1645 edition of this work is now kept at the Kyujanggak Library.
Pohyon Mountain

Situated in North Kyongsang Province on the border of Yongch'on and Chongsong County, Mt. Pohyon (1124 metres) is part of the Chungang Mountain Range. Since the mountain actually consists of a set of ridges, it is also known as the Pohyon Mountain Range. The area supports a large number of rare plant species. Many chestnut trees once grew here, but these were all cut down during the Second World War. Pomnyong Temple lies to the south of the mountain. An interesting legend surrounds the founding of the temple. A woman's husband was dying of a terminal illness. In desperation, the woman gave her husband some wild ginseng that she had found on the mountain. When her husband was miraculously cured, the woman donated her entire fortune to have a temple built on the very spot where she had found the rare herb. In addition, the Pophwa and Chonggak Temple sites are located at the mountain's western base.

Politics (see also History of Korea)

Constitution

The ROK has a democratic political regime based upon a separation of powers, and a presidential system of government. The constitution provides for the independence of the executive, legislature and judiciary, and a framework of checks and balances. Presidential elections must be free and competitive, and the president's term of office is limited to a single period of five years. The constitution guarantees the right of all citizens before the law, freedom from arbitrary detention, and freedom of residence. The constitution also establishes certain economic and worker rights, including the right to own property, the right to work, freedom of choice of occupation, the right to a fair wage, fair compensation, and free collective bargaining.

There have been nine amendments to the constitution during the ROK's history since it was initially promulgated by the first session of the National Assembly on 17 July 1948. The first two amendments occurred during the First Republic, on 7 July 1952, giving the legislature the right of no-confidence in both a cabinet system and a bicameral legislature; and on 27 November 1954, abolishing any limit on the presidential term of office. During the Second Republic, there were two more amendments: on 15 June 1960, providing for the introduction of a bicameral legislature and a cabinet system of government to replace the presidential system; and on 23 November 1960, to provide for an exception to the principle of no retrospective punishment. (This amendment was aimed at allowing punishment for those found responsible for rigging the previous presidential election).

In the period covered by the Third Republic, amendments five and six took place. These occurred on 17 December 1962, when the presidential responsibility system was resurrected; and on 21 October 1969, when the two-term limit on President Park Chunghee's presidency was abolished, allowing him to stand for a third term, and the National Assembly was extended and its members permitted to serve on the cabinet concurrently. During the Fourth Republic, there was the seventh amendment, of 27 December 1972, which provided a legal foundation for the introduction of the Yushin system. The eighth amendment was introduced on 27 October 1980, to lay the legal foundations for the establishment of the Fifth Republic. It called for a reduction in the President's powers in favour of a strengthened National Assembly and judiciary, and for limits on the President's term of office to one seven-year term. On 27 October 1987, the ninth amendment was made, giving birth to the Sixth Republic.

The revised constitution of 1987, meant that the President would be elected by direct popular vote, and would serve for a single term of five years. The President no longer has the powers to dissolve the National Assembly, nor to take emergency measures, unless of a financial nature. It stipulated that the National Assembly sessions be extended from ninety
to one hundred days, and that the legislature should have the right to examine all aspects of state affairs on a regular basis. The Assembly was also given the right to pass a non-binding motion calling for the dismissal of the Prime Minister or any member of the State Council, and to approve the appointment of the Prime Minister. With regard to the judiciary, the Chief Justice has to be appointed by the President with the approval of the National Assembly. Justices of the Supreme Court are now appointed by the President on the recommendation of the Chief Justice, with the approval of the National Assembly. A Constitution Court was established by the amended constitution, whose task it is to rule on the constitutionality of a law upon request of the courts, and to rule upon impeachment, jurisdictional disputes between the different arms of government, and other matters prescribed by law.

Guarantees of freedom of the individual, speech, the media, and of assembly have been reinforced through the prevention of censorship of these activities. As far as criminal cases are concerned, victims may attend court hearings in person to present their cases; and victims, or their families, may receive compensation from the state for injuries received, if the offender is incapable of paying. Workers' rights were guaranteed in relation to no gender discrimination, the terms and conditions of work, the payment of a minimum wage, and free, collective bargaining. Improved welfare for women, senior citizens and the young was also demanded by the revised constitution.

Political Crises

There have been a number of political crises facing the ROK in recent years, of varying impact, intensity and duration. Many of these crises have their origins in political party instability and an absence of democratic legitimacy. The elections in April 1988 for the 13th National Assembly resulted in the ruling Democratic Justice Party gaining only forty two per cent of the votes cast, with fifty five per cent taken by the opposition. The opposition included the Party for Peace and Democracy (PPD) of Kim Dae-jung, the Reunification Democratic Party (RDP) of Kim Young-Sam and the New Democratic Republican Party (NDRP) of Kim Jong-pil. This furnished the opposition with power, for the first time in the life of the ROK, to oppose government legislation, leading to a legislative impasse which almost paralysed the government, and hindered political and economic progress. This blockage paved the way for a revolutionary change in ROK politics when, on 22 January 1990, President Roh Tae-woo and the two opposition leaders, Kim Young-Sam and Kim Jong-pil, joined forces to create a new ruling party, the Democratic Liberal Party (DLP). Thus the 'one-Roh, three-Kim' four-party system was abruptly disbanded in favour of an unequal 'one Roh, two-Kim' potent alliance, versus a weak 'one Kim' opposition. This meant that the new ruling DLP had a three-quarters parliamentary majority, and the opposition's influence was suddenly decimated. Beneath this dramatic development there lurked potential sources of instability which included, first, the possibility that the democratic process might be impeded by such a conservative alliance; secondly, that the alliance might not be able to function effectively because it bore no signs of any deep-rooted unity, either ideologically, politically or strategically; third, it had the potential of bipolarising ROK politics by radicalising what opposition there was.

Throughout 1990 and 1991, the ruling DLP displayed signs of internal instability, factional infighting, and disarray, which adversely affected its operational effectiveness. In February 1991, the government was faced with the Suso housing scandal which revealed a case of extensive bribery and corruption, that led to a cabinet reshuffle and a personal televised apology from the President. In May 1991, the ROK experienced the worst popular unrest since Roh became President as thousands of students participated in street demonstrations throughout the country. This was provoked by the beating to death of a student demonstrator by riot police. The protests included demands for the resignation of Roh's government, and combined with the traditional demonstrations commemorating the Kwanju massacre. The protests were accompanied by eight recorded cases of self-immolation, some
of which led to death, thus fuelling more protests. The President was forced to replace the Prime Minister in view of the mounting disorder, and when his successor, Chung Won Shik, was assaulted by students in June, the government decided to take a much tougher line. Unlike the disturbances of 1987 which ended the Fifth Republic, those of 1991 did not have the support of the middle class. Although the DLP won a clear victory at the local elections of June 1991 for the metropolitan and provincial assemblies (564 out of 866 seats), the result confirmed the growing regionalism in ROK politics, with the DLP gaining no ground in the south west of the country.

The fragmentation and feuding within the DLP led to growing disillusionment among the electorate, with opinion polls showing a majority of the public disenchanted with politics and the political parties. This disenchantment, particularly with the ruling DLP, deepened in 1992. In January, the local elections were postponed on the grounds that National Assembly elections were due in March, and presidential elections in December. The main opposition parties, including Kim Dae-jung's newly named Democratic Party (DP) and the recently formed United People's Party (UPP), were enraged at what they regarded as Roh's moves to erode the ROK's democracy in this way. Public opposition to the DLP was made apparent at the legislative elections in March, when the ruling party suffered a humiliating reversal, losing its overall majority. From this time, the National Assembly was brought to a standstill as the opposition parties disrupted normal functioning as a continuation of their campaign against the decision to cancel the local elections. This campaign continued until August when agreement was reached over the postponed elections, and President Roh announced he was resigning from the DLP and was forming a neutral cabinet, to make the presidential election contest a fairer one.

The factionalism within the DLP was manifested in 1991 and 1992 in regard to the presidential succession crisis. At the end of 1991, Kim Young-sam's bid to become the DLP's presidential candidate appeared precarious in view of the strained relations between him and President Roh, and the latter's preference for the candidate to be chosen by a party convention without any candidate being formally endorsed by the current President. Roh found it politically inexpedient to support Kim's candidature because Kim's years as a dissident made him highly unpopular with those in the DLP who were formerly associated with old DJP. This unpopularity existed in at least two of the factions within the DLP. Conflict within the DLP over the nomination of Roh's successor was exacerbated following the party's collapse in the March elections, for which Kim Young-sam was widely blamed. Although Kim Young-sam secured the DLP presidential election nomination in May, gaining 66.6 per cent of the vote, the decision triggered violent demonstrations in Seoul and elsewhere as thousands of students castigated Kim as being a traitor, and demanded democratic reforms and the dissolution of the DLP. In addition to popular opposition, Kim's rival for the candidature, Lee Jong-chan, declared that the vote had been rigged, and announced that he would stand for the presidential elections as an independent candidate. He later changed his mind about becoming a candidate, but announced that he had formed a new organisation called the National Alliance for New Politics. This declaration made the prospect of a split in the DLP's conservative vote, already likely because of the proposed candidature of Chung Ju-yung of the UPP, even more so. On the left, Kim's main opponent would be Kim Dae-jung. More problems of instability for the DLP were to arise in September 1992, when a group of its legislators left the party and formed the New Korea Party, which allied itself with the UPP.

In the wake of the inauguration of Kim Young-sam as President, on 25 February 1993, Kim's campaign to eradicate corruption in political and military life, has led to resignations and dismissals among top appointments made by the new President. On 8 March, President Kim was forced into making a partial cabinet reshuffle to replace ministers whose corruption had led to their departure. The December presidential election brought chaos and disorganisation to the opposition parties, as Kim Dae-jung, leader of the DP resigned; and as Chung Ju-yong later quit politics, and the UPP was dissolved.
Political Culture

The political culture of the ROK reveals an amalgam of the Chinese Confucian, native Korean, and western liberal democratic, traditions. The western democratic input is arguably stronger now than at any time in the ROK's brief history. Although the ROK officially adopted a western democratic constitution, modelled on the American formula, when it became independent in 1948, any real commitment to democratic values was noticeably lacking for many years. The institutions that formally attended the implementation of the first ROK regime never really took root in Korea, until recently. The Confucian culture predominated in ROK political thinking, and was reinforced by the Korean indigenous tradition, the key features of which were aristocratic rulers, a hierarchical societal structure, and a notable individual independence. Many of the characteristics of the Confucian and the Korean native cultures were alien to those of western democratic doctrine.

The Confucian emphasis on paternalism and authoritarianism, and on deferential relations towards others, especially superiors, based upon politeness and restraint, instead of on personal advancement and material gain, did not accord well with the notion of popular political participation and an assertive citizenry willing to challenge the system. It thoroughly opposed the idea of adversarial relations in the legislature, and in political and election campaigns. Indeed, it frowned upon opposition that challenged established rule altogether. The absence of popular opposition, helped to prevent the ROK's democratic institutions from becoming securely established, and enabled successive leaders to continue ruling in a bureaucratic authoritarian manner. This, in turn, hindered legitimacy. In addition, the ROK's precarious international political circumstances, originating in the Korean war, and manifested mainly in a continuing confrontational relationship with the communist DPRK, meant the long-term maintenance of a vast military establishment, facilitating a direct leadership role for the military in the political arena. The ever-present external military threat, combined with a perceived need to modernise and industrialise rapidly, provided successive governments, particularly under President Park, with the justification of arming themselves with extensive bureaucratic powers.

However, in more recent times, domestic economic and social advancement and increased contact with the west, have combined to give new weight to the individualistic and competitive traits inherent in the Korean native tradition. The emergence of a large and more forthright middle class, and a successful capitalist business category, has brought with it a set of values not entirely compatible with Confucian ethics, demanding equality, fairness, justice, individual freedoms, material acquisition, personal advancement, and a right to be heard. It was in response to demands such as these, that Roh Tae-woo offered his reform package in June 1987 in recognition of the need for enhanced popular participation.

These reforms are being extended and deepened under the current leadership of Kim Young-sam, in response to the changes in Korean society that have taken place since 1987. These changes have come about as the result of domestic economic difficulties, industrial maturity, and labour shortages, which have helped to increase public political awareness and interest. This heightened political interest has been accentuated by the fall of communism in eastern Europe, and the breakup of the Soviet Union, which have altered the ROK's international environment and given her a new role to play in the world, and a new confidence. With improved popular political participation, has come a gradual public interest in the institutions of democracy. More accommodating rulers are emerging with this trend, and gradually the ROK is developing a more integrated political culture, and her democracy appears to be acquiring a degree of legitimacy.

Politics and Economic Growth
In 1962, the ROK was a backward country, with an agrarian society, experiencing extreme poverty. She had no export trade and had to rely on imports of raw materials and manufactured goods. In the period from 1962 to 1989, the ROK's economy grew at an astounding pace, from a GNP of $2.3 billion to one of $210.1 billion. During the same period, the manufacturing sector increased its share of GNP from 14.4 per cent to over 31.6 per cent; domestic savings rose from 3.3 per cent to 37.7 per cent; and the ROK labour force went from a 79 per cent engagement in the primary sector to a 70 per cent engagement in the secondary and tertiary sectors. In 1986, the ROK achieved a surplus in her balance of payments for the first time.

This spectacular economic success story was not accompanied by a similarly remarkable advance in the institutionalisation of democracy in the ROK. Indeed, the opposite was the case, with economic development spearheaded by a determined and ruthless authoritarian elite, under the leadership of President Park Chung-Hee, which took over management of the mobilisation and allocation of capital, supervised the apportioning of projects to private businesses, and kept the work force under tight control. The state did not, therefore, itself assume ownership of the means of production, but it was able to promote the export-led economy that it intended through the deft use of incentives, the granting and withholding of resources and capital, and state guidance. In these circumstances, the ROK underwent rapid economic advancement unhindered by labour problems, and in the absence of any middle-class pressure to liberalise or democratise. The lack of an assertive independent bourgeoisie willing to challenge the regime, arose because the business and managerial stratum of ROK society was located in the government-supported chaebol. The success of the ROK form of state-planned development was assisted by the presence of a number of factors, such as, a homogeneous social structure and a work force keen to achieve economic advancement; a single-minded and resolute leader; a relatively well educated society and, capital.

However, as a consequence of this, the ROK experienced a high degree of imbalance in its societal development, with stunning economic progress, unattended by any commensurate political and social advances. By the mid-1980s, the ROK had a pluralist, well-educated society, that sought individual freedoms, rights, and political participation, commensurate with its economic achievements. The Roh Tae-woo constitutional and other reforms of June 1987 were made in response to opposition demands for change, and with the establishment of the Sixth Republic, authoritarian governments came to an end in the ROK. As a consequence of the Roh reforms which gave the work force greater freedoms and rights, and in view of the American pressure on the ROK to liberalise her economy, and open it up to competition, the ROK economy began to slow down after 1989. It experienced slower growth, high inflation and deteriorating balance of payments as imports grew. The GNP fell to 6.7 per cent in 1989 from the 12 per cent level of previous years. The growth rate of the manufacturing sector dropped from 18.8 per cent in 1987 to 3.7 per cent in 1989, and the export growth rate dropped from 36.2 per cent in 1987 to 2.8 per cent in 1989. In 1991, economic growth showed some signs of recovery, but most of it was attributable to a growth in domestic demand. That year, consumer prices rose by 9.3 per cent, compared with an average of 2.5 per cent between 1984 and 1987. The balance of payments deficit was $8.7 billion compared to a surplus of $4.6 billion in 1989. In 1992, GNP dipped to 5 per cent, the balance of payments deficit was $4.5 billion, and the consumer price index rose by 4.5 per cent.

The gradual implementation of democracy in the ROK since 1987, has not had a directly beneficial effect on the economy. Import liberalisation and market deregulation have not combined to sharpen the competitiveness of ROK products, as was anticipated. It has been widely felt that the moves towards democracy and the higher levels of per capita income, have together contributed to an erosion of the ROK's competitiveness in global markets before new institutions could be created to promote competitiveness using a highly-skilled and sophisticated work force. To address the recent problems of rising inflation and wages, and growing consumerism, the current ROK administration is attempting to control internal
demand; and to stimulate investment in technological innovation, plants and equipment, both to make ROK products more competitive, and to enable the ROK to manufacture the goods that she currently imports; and to encourage foreign investment in hi-tech industries. These aims are set forth in the government's recent 100-day economic-revitalisation scheme.

**Politics and Integrated Rural Development**

When the ROK came into existence, until the early 1960s, agriculture was the most important sector in the ROK economy. There were two land reform programs in 1948 and 1950, and these were followed by the establishment of cooperative movements and community development programs. Under the first land reform program, implemented by the US Military Government, farmland covering 199,000 hectares was taken from the colonial Japanese and sold to 505,000 tenant farmers, fairly cheaply. Under the second reform program, implemented by the ROK government, 601,000 hectares of farmland was purchased from landlords and sold to 1,166,000 farmers. These reforms had a marked impact on land distribution and altered the class structure in the countryside, as the landlord class disappeared and the number of owner-farmers increased greatly. This restructuring provided a suitable foundation for the agricultural renovation of the 1960s and 1970s. However, the government of the ROK did not give the necessary support to the new owner farmers to enable them to maintain their new ownership; many then fell into poverty and this impeded the agricultural renovation programs of the 1980s.

In the ensuing years, after 1962, successive ROK governments concentrated on achieving economic growth through development strategies that focused upon the manufacturing sector. As far as the rural sector was concerned, the policy was to try to maintain the rural population at an optimal level, by encouraging development of the countryside, and by improving the agricultural economy. In particular, ROK governments strove for rice self-sufficiency. The rural transformation program of the 1970s, initiated by President Park Chung-hee, concentrated on rural mobilisation, the provision of agricultural credit, through cooperatives, a guidance system associated with agriculture and extension services under the Office for Rural Development, and the New Community movement (Saemaül Undong) aimed at implementing extensive farm and village improvements, all under very rigid bureaucratic control. The program did help to improve the lot of the countryside, much of it through self-help schemes, but the large degree of government pressure, political interference, evidence of widespread corruption by those administering the program, and the fact that rural incomes actually declined in the 1970s and 1980s vis-a-vis those in the urban areas, engendered much opposition to the program in the countryside, and it had to be dropped in the late 1980s. It also helped to contribute to the pronounced degree of rural alienation in regard to government policies that still exists because of the perception that governments have not focused their activities and resources upon the welfare of the rural sector in a committed way, that the people in the countryside have been discriminated against, and that no governmental effort has been made to discover rural attitudes to its policies. It was not until 1986 that the Tenancy Management Act was eventually passed. This legislation, and accompanying support schemes were really only designed to help expanding farms, and did not address the welfare needs of the poor and the retired. Other wider support plans to alleviate rural poverty have been proposed but never implemented.

Despite the agricultural restructuring programs over the past three decades and the rise in farm household income in the same period, relative poverty is a matter of growing concern in the early 1990s, with the rural sector still suffering from relative under development, and with the slowing down of the growth of the farm sector. Much of this recorded poverty is to be found amongst the landless rural poor, or those with land under one hectare in size. Although poverty in the agricultural sector has been reduced since the 1960s, its continuing
prevalence has much to do with the relative neglect of the countryside compared to the urban areas, under ROK regimes, and the fact that a huge development gap now exists between the rural and urban areas, as a consequence of the unbalanced development strategies of the 1960s and 1970s. Throughout the 1960s and 1970s, agricultural and rural restructuring was used to bolster industrialisation by providing cheap food and labour for the cities and towns. Once this was achieved, support for the agricultural sector was largely withheld. This policy of giving preferential treatment to the urban population over the rural population has meant that people in the rural areas now often suffer from poor housing and road and transport facilities, a lamentable sewage and water supply system, a defective secondary education system, and an inadequate agricultural infrastructure. All of this has led to a mass migration of youngsters from the countryside to the urban areas, leaving a serious employment problem in the agricultural sector. While farm productivity has increased in recent decades, the agricultural industry is now finding sustainability hard and this is not helped by increasing foreign pressure on agricultural markets.

The rural sector now badly needs a sustained development program if it is to thrive. The extent of political alienation in the countryside resulting from the authoritarian, inflexible, and corrupt rural reform programs of the 1970s and 1980s suggests that the government would be foolhardy to adopt that approach again. In order for it to promote a program that attracts widespread support from the countryside, it will have to be one that encourages political allegiance and trust and popular participation, and it will have to be much more democratic in nature than before.

**Political Parties**

In the period from 1948 to 1986, the ROK had experienced over a hundred political parties. Most of these, and their successors have not enjoyed longevity, or made much of a political impact. Their ephemerality has often been due to the fact that they have sprung up as the result of a personal following. Those that have lasted longer have frequently been constrained by their restricted constitutional role and because institutionalisation of the party in the political system has been weak.

Between the April 1988 parliamentary elections and January 1990, the ROK had a competitive four-party political system for the first time in its history, as the elections bestowed on the opposition collectively, the power to block government legislation. The four parties consisted of the conservative, Democratic Justice Party (DJP), which was the ruling party; the centrist Party for Peace and Democracy (PPD), led by Kim Dae-jung, the centre-right Reunification Democratic Party (RDP), led by Kim Young-sam, and the right-wing conservative New Democratic Republican Party (NDRP), led by Kim Jong-pil. However, the strength of the opposition rendered the National Assembly's legislative powers impotent and, following a period of political manoeuvring, a new ruling party, the Democratic Liberal Party (DLP), came into being in January 1990, after the leaders of the former DJP, RDP and NDRP agreed to a merger into one single party. This gave the new ruling party three-quarters of the seats in the National Assembly. It also radically altered the traditional format of deeply hostile government versus opposition relations. In fact, the opposition was drastically emasculated by this development, and following the poor showing of the opposition PPD in the local elections, when it only gained nineteen per cent of the votes, and the DLP won forty nine per cent, its leader Kim Dae-jung decided to try to unite all elements of the antiwar opposition. In April 1991, the PPD merged with the small New Democratic alliance, to become the New Democratic Party (NIP). In September 1991, the NIP merged with the small Democratic Party, to form a new group called the Democratic Party (DP), led by Kim Dae-jung and Kim Eui-taek.

In January 1992, a new party was launched, the United National Party (UNP), which later was renamed the United People's Party (UPP), presided over by the chairman of the Hyundai industrial group, Chung Ju-yung. This was a conservative party created to defend
the interests of big business in the face of attempts by Roh's leadership to reduce its powers. This introduced the three-party system and set the stage once again for pluralistic competition, especially given the poor showing of the ruling DLP in the National Assembly elections of 24 March 1992, and the UPP's success.

With Roh Tae-woo's announcement that he was resigning from the DLP, and forming a neutral cabinet, in September 1992, members of the two factions of the DLP that were opposed to Kim Young-sam's presidential candidacy, began leaving the DLP. By this time, Kim Young-sam's rival in the DLP for the presidency, Lee Jong Chan, had set up his own conservative party, known as the National Alliance for New Politics, and some of those who had recently resigned from the DLP, joined this new party. At the presidential election on 18 December 1992, Kim Young-sam won forty two per cent of the votes cast. The failure of the opposition candidates led Kim Dae-jung, leader of the DP, to resign, and the UPP leader to leave politics. The UPP was subsequently disbanded. The ROK now has two main parties. Thus, political party stability still remains somewhat illusive.

Origins of the Political System

The Japanese surrender in 1945 did not bring Korea the independence she had so long desired. Instead, it was the prelude to a divided peninsula in political and ideological conflict with itself, as the 38th parallel divided North Korea, under Soviet occupation, from South Korea, under American occupation. In the three years from 1945 to 1948, South Korea was ruled by the US Army Military Government. On 15 December 1945, Korea was placed under the trusteeship of the four major powers, the US, the USSR, Britain and the PRC, supposedly as a provisional step to unite the country under democratic rule. However, the division between the two countries on the Korean peninsula was only accentuated as the Soviet Union and America each imposed her own political system on the area under her control. In 1948 two ideologically opposed governments were established in North Korea and South Korea. The Republic of Korea was given a democratic presidential system of government, founded upon the US model, based upon the separation of powers. On 10 May 1948, the ROK held her first general election. The first National Assembly began functioning on 31 May, and by 17 July, a constitution had been drawn up. On 15 August, the government of the ROK was officially established, and Syngman Rhee was the ROK's first President. However, the strong emphasis placed upon democracy was soon found to be much too optimistic for a country that had never experienced democratic institutions or values, that had to come to terms with the remaining vestiges of Japanese colonial rule and a ravaged economy, together with the close proximity of an extremely hostile state which was continually threatening to undermine the ROK's existence.

The withdrawal of the American occupation forces in 1948, and the ensuing communist inspired Cheju and Yŏsu-Sunch'ŏn rebellions in the ROK, in the same year, in which 30 000 people were killed, helped to smother democracy in the ROK, and provided considerable ammunition to the new President's growing autocratic rule and to the suppression of democracy. During the course of the First Republic, almost all democratic principles, such as the freedoms of assembly, the press, speech; and individual rights, were all suppressed. The executive dominated the judiciary and the legislature; the Prime Minister's position was abolished; all opposition was eventually silenced as the result of the extension of the pernicious and pervasive National Security Law. This ruthless authoritarianism only increased with the turmoil, emanating from the severe social and economic dislocation as a result of the Korean War (1950-1953). In the face of mounting hostility from the public, the President indulged in further corrupt and despotic practices to maintain his autocratic military rule.

Present Day Political System

Under the present political system in the ROK which was established in February 1988
when the Constitution of the Sixth Republic was adopted, the ROK comes much closer to the democratic ideal that was intended for her in 1948. Until now many of her formal democratic institutions have looked fragile, and as though liable to be breached. The separation of powers has now been strengthened, as have the checks and balances, and the executive's power has been curtailed as that of the legislature has been increased. Democracy has been enhanced by the restoration of the freedom of the press, amnesty for political criminals, and respect for the autonomy of local governments and universities. New workers rights, including the right to collective bargaining, a fair minimum wage, and just conditions of employment, did lead to substantial conflict between management and workers initially, and to increased strikes and some violence, and the government responded by replacing some of the controls that it had removed. However, this situation has now settled down, as both sides in industry have accommodated to these reforms, and the government has attempted to distance itself from industrial relations.

Other evidence of the growing legitimacy of the democratic system in the ROK includes the fact that for the first time, the country has a truly civilian government; also, the National Security Law has been greatly scaled down, and restructured to enable it to concentrate its activities more on the movements of individuals and organisations overseas, rather than on monitoring closely the actions of the domestic population as it did previously. Also, the anti-corruption campaign mounted this spring by President Kim has been designed to make the behaviour of leading political and other figures more accountable and visible to the nation at large. As far as various aspects of economic, political and social life in the ROK are concerned, President Kim Young-sam has called for reforms on the basis of openness and self-regulation, with which the entire citizenry of the state will become totally involved. The emphasis is now on the participation of all to help implement changes, rather than on the government solely deciding policy and imposing reforms upon the nation from above.

With respect to the holding of political elections and the question of political parties, these matters still pose some problems for the ROK's democratic political process. The decision not to hold an election when pledged to do so, as happened in January 1992, when President Roh announced the cancellation of the local elections, indicates a continuing residual misuse of democratic powers. Also, the degree of corruption and fraud that accompanies most political elections, is illustrative of the fact that certain democratic institutions still tend to remain something of an alien concept among leaders and led alike. Again, the party system is not a stable one. Parties do not tend to become consolidated and firmly established. The ROK's political history is awash with instances of parties forming, merging, and withering away, with ever shifting alliances and allegiances, and this is still happening. The whole concept of a healthy opposition and adversarial politics is one with which the ROK still has difficulty in coming to terms.

**Reunification of the Two Koreas**

During most of the 1980s, while the cold war was still under way, the two Koreas each put forward a host of proposals for achieving territorial reunification and national unity. Both sides attempted to make use of the reunification question for domestic propaganda purposes, and there was little real incentive or desire to make progress on this score. However, a combination of events, beginning in the late 1980s, helped to put new vigour into the reunification issue. The two most important of these were these. First, President Roh Tae-woo's 'Nordpolitik', initiated in 1987, which sought to improve ROK relations with the communist countries situated to the north: the PRC, the Soviet Union, and eastern Europe. Second, the demise of communism among the Soviet satellite states in Europe, and the collapse of the Soviet Union, leading to the end of the cold war. These developments paved the way for improved relations with the ROK's former adversaries, and eventually the establishment of diplomatic relations between the ROK and Russia in 1990, and between the ROK and the PRC, in 1992. In addition to this, the reunification of the two Germanies and the two Yemens, focused attention on what should be done regarding the
continuing division on the Korean peninsula. These developments gave a boost to inter-
Korean dialogue, and especially to the reunification issue, with Russia and the PRC
reportedly urging the DPRK to engage in meaningful talks with the ROK to try to resolve
the problem.

Progress in the inter-Korean high level talks between both sides' Prime Ministers led, in the
sixth round, to a signed 'Agreement on Reconciliation, Nonaggression and Exchanges and
Cooperation', on 19 February 1992. A 'Joint Declaration of the Denuclearisation of the
Korean Peninsula' was also signed on the same day. These agreements were designed to
lay the foundation for joint efforts to build mutual trust and understanding, in order to
proceed thereafter to establishing peace and unity, without external interference. The South-
North Basic Agreement represented an important milestone on the road to unity, because it
was constructed on the mutual understanding that unification was essential for the future
prosperity of the Korean peninsula, and it provided a basic formula for improving South-
North relations and for achieving unification by peaceful means. However, the progress
made in inter-Korean dialogue in 1991 and the beginning of 1992, was halted later in 1992
because of hostile disputes between the two Koreas regarding the matter of inter-Korean
nuclear inspections, the DPRK's subsequent notice of withdrawal from the NPT, and the
ROK's resumption of the Team Spirit exercise with the US, in 1993. In recent months,
therefore, the reunification process has not advanced far. Other deeper problems, however,
are hindering the reunification negotiations. Developments in the international political
environment, particularly the DPRK's growing isolation, compounded by her economic
troubles, and the problems associated with Germany's reunification, have caused
P'yöngyang to distance herself from meaningful talks on unity for fear that she might be
absorbed as East Germany was. For Seoul, the most worrying problem is the likely cost
she will have to bear if the DPRK collapses and she has to assume the burden of unifying
the two countries. The signs are that Seoul will have to foot a much larger bill, relatively
speaking, than the former West Germany has had to do.

In addition to what has been discussed above, both Koreas have on offer incompatible and
problematic schemes for reunification. The ROK government announced the 'Korean
National Community Unification Formula' on 11 September 1989. This called for an
interim stage, a North-South coalition, to manage unification affairs between the two sides
before unification was finally achieved. In that time both Koreas would recognise each
other despite their different political systems, and work together in the interests of
cooperation and common prosperity. The main problem with this formula is that it
presupposes that the South will absorb the North, and it fails to give due recognition to the
DPRK's current chronic difficulties.

The DPRK formula was originally for unification based upon a confederation system as a
transitional measure, until full reunification was achieved. This was first put forward in
August 1960, but when the plan was updated in October 1980, the ultimate establishment of
a democratic confederal republic of Koryø§o meant that a confederation was to be, not a
transitional arrangement, but the final form of a unified state. In March 1990, Kim Il Sung
has added a related 10-point policy to the 1980 formula. The central idea behind the DPRK
plan, is that a confederation should be set up initially while the present political systems of
North and South remain intact. Once set up, the 10-point policy would be implemented to
increase cooperation between the two separate sectors of North and South. However, the
DPRK lists a number of preconditions which must be met by the ROK before the
confederal public plan can be put into effect. These, in effect, mean that the South must
renounce its present regime in favour of the form of regime prevailing in the DPRK. This
suggests that P'yöngyang has still not abandoned her strategic goal of a revolution in the
ROK followed by the South's communisation. This can never be acceptable to the ROK.
Apart from this drawback, it is impossible to see how two countries can become a unified
state when both retain diametrically opposed political systems, ideologies and values.
Politics and Women

The first ROK constitution of 1948 conferred upon women the franchise and equal rights with men. But despite these legal provisions, access to higher education, and occupational successes, women in the ROK are still the victims of sexual inequality and discrimination. The basic problem is the pervasiveness of the Confucian culture which requires that women be totally submissive to men. The patriarchal nature of this culture both discriminates against women and oppresses them as well, and this practice has become more visible with the ROK's industrial and economic advances. The response of women has been somewhat ambivalent, a mixture of spirited opposition and meekness. This ambivalence has been well illustrated by the recent campaign to highlight the grievances of those involved in the 'comfort women' scandal, and to receive compensation, which gained publicity in the media, beginning in 1991. This concerned the exploitation of the women who were seconded as sex slaves to the Japanese Army during the Second World War. The fact that this issue was submerged for so long was due to women's subservience to men in Korean society, and because men in power did not wish to draw attention to the general problem of women who today are still victims of a patriarchal society's customs and mores, often experiencing low-wages and oppressive social and work practices. In a sense the 'comfort women' issue is still being played out in the sex industry that is attendant upon the American military presence in the ROK.

The 'comfort women' question was brought to the surface by three women's organisations which petitioned Roh Tae-woo before his official visit to Japan in June 1990. Before the Japanese Prime Minister Kaifu's visit to Seoul in October 1990, ten women's organisations sent letters to Kaifu demanding a confession, an apology, and compensation. Although the Japanese government played down the issue, the ROK media kept up the pressure, and in 1991, a number of documents came to light revealing details of the atrocities committed against some of these women. One of the main impediments to the demands for a full investigation however, was the acquiescence of the victims themselves, very many of whom were too ashamed to come forward. This has much to do with Confucian ethics which demand that a woman must only have sex with her husband, and that the loss of virginity by other means is considered to be a worse fate than death.

In terms of political representation, women have made very little progress. Between 1948 and 1991, only sixty one were elected to the National Assembly. Once there, women have never achieved leadership posts enjoyed by male members. For instance, none has ever been chosen to chair a standing committee where the main legislative business is conducted. When women are assigned to committees, these are ones generally associated with women's work. Although women have occasionally run for the highest offices in the land, they have not fared well. In the ROK's history, only eight women have attained cabinet positions, and on each occasion, they have been given posts associated once again with women's work, such as education, health and social welfare. In contrast, women have done much better when it comes to representation on executive branch committees which have the task of uniting government officials and civilian leaders, to assist the executive in the decision-making process.

The existence of a strong women's political movement which includes the Korean Women's Development Institute, the Korean Research Institute for Women and Politics, and the Centre for Korean Women and Politics, has worked to enhance the status of women in the political sphere. One of the main concerns of this movement is to increase the numbers of women in government. Their leaders believe that it is imperative to extend female representation to help overcome the political passivity which is given added impetus by women acquiescing in their traditional submissive role. An increase in their numbers would assist in influencing policy affecting women, and would provide role models for aspiring female candidates.
As the result of the campaigning by women's organisations, measures have been taken by the government to improve the position of women in the ROK. In 1987, a Ministry of Political Affairs II was set up specifically to look into women's status and needs, but it lacked the formal powers granted to other ministries. This ministry acts as the secretariat for the Women's Policy Review Board, deciding policies affecting women, and coordinating women's groups which represent a variety of views. In addition, reforms were made to the Family Law, in December 1989, which aimed to upgrade the woman's position in the family as a wife and mother, and to overcome some of the legal inequalities between men and women in the family relationship. In 1993, President Kim Young-sam has promised improved equality and welfare for women. However, male dominance is a continuing reality in the Korean culture, and this is mirrored in all areas of society, including the political sphere. It is very hard for women to attain positions of high responsibility, not only because of male opposition, but because aspects of the Korean culture conspire to prevent women from realising their aspirations.

Politics and the Workforce

The work force in the ROK was for many years quiescent in the face of highly authoritarian regimes which kept it under rigid control. This prevented both the growth and development of the labour movement, and the emergence of trades unions as a viable interest group capable of campaigning for workers' rights. However, the package of reforms announced by Roh Tae-woo on 29 June 1987, dramatically altered this situation, giving a dynamic impetus to the whole labour movement subsequently freed from government controls, thus facilitating a transformation of its structure and the birth of a plethora of organisations. The number of union members increased from 1 050 201 in 2 742 unions in June 1987, to 1 267 457 in 4 103 unions six months later. At the same time, union power has been extended from its location in manufacturing industry, into the domain of office workers and white collar sectors. The Federation of Korean Trades Unions (FKTU) expanded into many areas, such as telecommunications, insurance, taxis, and others, which were prohibited until the Labour Law of November 1987. With the government reforms, workers came to support actively trades unions which promised to campaign for better workers' rights and benefits, and which aimed to enhance their political participation.

Government policies have altered markedly since 1987 in the business sphere. Government interference has been reduced, and state corporatism has been abandoned. Governments now aim to foster an equidistant relationship between management and labour, encouraging both sides to compromise with one another in a spirit of harmony, thus avoiding if at all possible the tense, confrontational relationship that has been inclined to prevail between the two sides in the past. When considering the provisions of the Labour Law of 1987, the government took soundings from both sides of industry, as well as from other groups.

In the wake of the 1987 reforms, the trades unions asserted their new found freedoms, and a wave of strikes took place, accompanied by some violence and illegal actions, which disrupted industry, and subsequently led to spiralling wage costs. The government responded by clamping down on some of the disputes, arresting the union leaders responsible, and then by reinstating certain controls which are still in place today. Since that time, management-labour relations have settled down. The position of the labour force has improved, and labour organisations seek to participate in politics in a more positive manner. In 1993, after three years of economic slump, management and labour have been involved in unprecedented cooperation over negotiations for this year's wage levels, with the the KFTU and the Korea Employers' Federation (KEF) reaching a rare agreement in March on this matter, free from government intervention. Both organisations understand that unless they work together, economic prosperity will elude both of them.

President Kim Young-sam's 100-day economic revitalisation scheme calls for a diminished role for government in business relations. He would much prefer that management and
labour resolve their own differences, rather than having government resort to its former authoritarian methods to resolve them. He believes that it is not desirable for a civilian-led government to interfere in this way. However, the government is retaining some control over wage negotiations, by laying down its own wage guidelines for government employees and workers at state-owned businesses. It has also imposed limits on those chaebol currently paying their employees 1.5 times or above, the national average wage. The government wants to streamline wages of employees throughout industry to reduce upward pressure on wage demands.

Pohyŏn Temple

Pōmō Temple

Pōmō Temple is situated on Mt. Kŭmjŏng in Pusan. As one of the main temples of the Chogye Order, this large temple complex serves as a major monastic training centre for Korean monks. According to the Pōmōsa ch'anggŏn sajŏk (Record of the Founding of Pōmō Temple), the monastery was founded during the reign of King Hŏngdŏk (r. 826-836). The king, concerned about an imminent Japanese invasion, called on Ûisang, the famous Hwaŏm master, for spiritual guidance. After the two spent seven days chanting to the Hwaŏm Dharma protectors, the enemy ships suddenly turned and fought with each other until the entire fleet was destroyed. In gratitude, the king is said to have ordered the construction of Pōmō Temple.

Since Ûisang died in 702, this early record is clearly mistaken. Since the Memorabilia of the Three Kingdoms (Samguk yusa) also mentions the temple in connection with Ûisang, the claim that the temple was founded in 678 by ìuisang after he returned from China is probably accurate. In spite of some disagreement concerning dates, the historical records and legends all indicate the temple’s early connection with the Hwaŏm Sect and its function as a spiritual bulwark against Japanese invasion.

According to early records, the monastery had extensive land and slave holdings during the Greater Shilla Period. When it comes to the Koryŏ Period, records of the temple’s history are strangely silent. Concerning the Chosŏn Period, it is known that the temple was burnt down during the Hideyoshi Invasions (1592-1598) and rebuilt in 1602 only to burn down again. In 1613, the temple was again reconstructed. In the years that followed, the monastery continued to expand, recapturing its earlier splendour.

At present, the temple houses a number of important artefacts. In addition to the Main Buddha Hall (Treasure No. 434) and the famous Ilchu Gate, there is a three-storey pagoda (Treasure No. 250) from the Greater Shilla Period, a 2.62-metre-high stone lantern from Shilla and an altar painting of Vairocana Buddha that dates from Chosŏn. Accessible via the Seoul-Pusan Expressway, the temple is a popular destination for tourists throughout the nation. In past years, the temple has also been the site of the national ordination ceremonies for Chogye monks.

Ponghwa County

Situated in the northern part of North Kyŏngsang Province, Ponghwa County is comprised of the town of Ponghwa and the townships of Myŏngho, Murya, Pŏpchŏn, Pongsŏng,
Due to the area’s rugged terrain, only about 12 per cent of the land is arable. Of this, two-thirds is used for growing dry field crops such as millet, corn, beans, potatoes, red peppers, ginseng, jujubes and alpine vegetable varieties. In the mountainous areas, medicinal herbs and mushrooms are cultivated. In Sŏkp’o Township’s Taehyon Village, there is Korea’s largest lead and zinc mine, and another mine in Soch’on Township’s Punch’on Village produces high-quality zinc mined in Popchon Township, gold in Ch’unyang Township and there is a zinc refinery in Sŏkp’o Township’s Sŏkp’o Village.

With both the T’aebaek and Sobaek mountain ranges running through the area, the county boasts a large number of scenic areas. Mt. Ch’ŏngnyang Provincial Park is one of the county’s top tourist destinations. With gneiss cliffs and picturesque gorges, the mountain attracts visitors throughout the year. Within the park, one finds eight caves and the scenic Kwanjang Waterfall. There are a number of Shilla-era temples in the park, such as the Ch’ŏngnyang, Kakhwā, Ch’wisŏ and Hongje temples. Pyŏkch’on Valley in Sŏkp’o Township is another beautiful area, which is famous as a habitat of the yŏlmogŏ (Brachymystax lenok), a fresh water fish of the salmon family. Other popular tourist sites include Ojŏn mineral springs in Murya Township, P’yŏngch’on Cave in Soch’on Township and Hoegok Cave, a limestone cave located in Ch’ŏnnyang Township.

As well as natural beauty, the area boasts a number of interesting historical sites. In addition to the Buddhist relics on Mt. Ch’ŏngnyang, there are a number of stone statues and pagodas scattered throughout the county. In Ponghwa’s Sŏdong Village, there is a three-storey pagoda (Treasure No. 52). Inside the structure, 99 clay replicas of the pagoda were discovered. There are a number of old Confucian schools in the area, including In’gye Sŏwŏn, Munsan Sŏwŏn, Och’on Sŏwŏn, Tan’gye Sŏwŏn, Tongmyŏng Sŏwŏn, Munam Sŏwŏn, Mun’gye Sŏwŏn, Togye Sŏwŏn, and Sanggye Sŏwŏn, which was founded in 1588 in Ponghwa. All of these schools were closed down when Taewŏn’gun abolished all but 47 of the nation’s sowŏn in 1871. The area’s first modern educational institution was Kwangsong School, built in Ch’unyang Township’s Uiyang Village in 1910.

Pongjŏng Temple

Pongsŏn Temple

Pongsŏn Temple, one of the main monasteries of the Chogye Order, is located in Nam Yangju in Kyŏnggi Province. Tanmun (National Master Pŏbin) founded Unak Temple at the site in 969; however, by the reign of King Sejong (r. 1418-1450), the dilapidated temple had to be demolished. When King Sejo (r. 1455-1468) died, he was entombed near the site. In 1469, Queen Chŏnghŭi therefore built another monastery there to look over the king’s grave, calling it Pongsŏn Temple. The large bronze bell (Treasure No. 397) still found at the temple was also cast at this time. In 1551, the monastery was designated a head temple of the Doctrinal sect (Kyojong). During this time, the temple served as a leading educational institution for monks and laity until 1592 when it was completely burned down in the Hideyoshi Invasion (1592-1598). In 1593, the temple was rebuilt by Nanghye, only to be burnt down again during the Manchu Invasion of 1636. A year later, Kyemin rebuilt the monastery. Further repairs were made in 1749 by Ujŏm.
In the following years, Pongsŏn Temple continued to function as a leading administrative centre. When Korea's temples were reorganised in 1790, the temple was put in charge of all the temples in Hamgyŏng Province. In 1848, the temple was once more repaired. In 1902, when Korean temples underwent another reorganisation, the monastery became responsible for all the temples in Kyŏnggi Province. A decade later under the temple regulations announced in 1911, the monastery was designated as one of Korea's thirty-one main temples (ponsa). At this time, the monastery continued its tradition as a leading educational centre. In 1926, the abbot Wolch'o restored the temple and built the Samsŏng-gak (Three Sages Shrine). However, the entire temple was once more destroyed by fire during the Korean War. Beginning in 1956, the temple was slowly rebuilt, becoming the monastery that is seen on the edge of Seoul today.

The temple has continued to be a leading force in making the Buddhist teachings accessible to the common people. The present Main Buddha Hall was the first in Korea to use Korean letters (han'gul) on its plaque. In addition, both a han'gul and Chinese character edition of Lotus Sutra has been embossed on bronze tablets which line all four walls of the Main Buddha Hall. In spite of its tragic history, the temple still has several important artefacts, including an altar painting of the Seven Stars which was done in 1903 and a newly constructed, five-storey stone pagoda. The pagoda houses some of the Buddha's sarira which were brought from Sri Lanka in 1975. There is also a stupa, set up in 1981, that contains remains of the monk Uhhŏ.

**Population** (see also Korea)
South Korea had a population of 45.2 million in 1996 and a density of 455 persons per square kilometre. Anticipating moderate growth South Korea's population is expected to reach 46.8 million in 2000 and 49.7 million in 2010. By 2020 South Korea's demographic transition will have been completed — 100 years after it commenced. (North Korea had an estimated population of 23.9 million in July 1996.)

Demographic transition — *Mortality:*
Korea's transition from high to low mortality commenced around 1920 and proceeded until the 1940s. (Between 1909 and 1944 Korea's population increased from 10 million to 25 million.) Although disrupted by liberation from Japan, political separation and the civil war (1950-53) the transition has continued in South Korea since 1960. Increasing life expectation at birth has stemmed from improvements in mortality stemming from the extension of primary health care to rural areas, increases in the quality and accessibility of medicare, better nutrition, and provision of clean water. The death rate has declined from 12.1 per thousand in 1960 to 6.7 in 1980 and 5.9 in 1996. The targets for life expectancy in 2000 is 70 years for males and 74 years for females. Infant mortality is expected to be 15 per thousand. (North Korea's death rate in 1996 was 5.5 deaths per thousand the infant mortality rate was 25 per thousand.)

Fertility

The transition from high to low fertility has been much more rapid than mortality. Until 1960 the birth rate was stable at 40 births per thousand people every year because there was little or no population control.

The successful incorporation of population control into five-year economic planning since the introduction of the National Family Planning Program in 1962 led to a decline in the birth rate to 30 per thousand in 1970 and 16 per thousand in 1985. Measures included financial incentives to encourage a one-child family and sterilisation after the first delivery, mobile family planning clinics targeting high risk groups (e.g young people with limited education, the urban poor and remote rural residents). Exemption from the education allowance tax is limited to the first two children. The success of these measures resulted in the total fertility rate declining from 6.0 births per woman in 1960 to 2.1 births per woman in 1985. Thus, by the mid-1980s population had reached replacement level. By 1996 the total fertility rate has declined to 1.6 births per woman. (North Korea's fertility rate in 1996 was 2.3 births per woman.)

South Korea's population growth has declined from 3 per cent in 1960 to 0.88 per cent in 1996. Assuming the current level of fertility between 1.5 or 2 per cent Korea has reached below replacement level. Zero population growth will not be attained before year 2020 because of the dynamics of age-structure effects. (North Korea's population growth rate in 1996 was 1.74 per cent)

The proportion of those 14 and under declined from 42.3 per cent in 1960 to 22.6 per cent in 1996 and will continue to decrease with declining fertility levels. The share of those between 15 and 64 has increased continuously from 54.8 per cent in 1960 to 71.6 per cent in 1996. A peak of 72.2 per cent is expected in year 2000 after which the proportion of those between 15 and 64 will decline slowly. Conversely, the proportion of those over 65 have increased from 3.8 per cent in 1970 to 5.8 in 1996. In 2000 those over 65 will account for 6.8 per cent. By year 2020 those over 65 will have tripled to 20 per cent. (In North Korea 30 per cent of the population was aged between 0-14 years; 66 per cent between 15 and 64 years; and 4 per cent over 65 years.)

Measures have been implemented to assure the long-term care of the aged include a national pension system implemented in 1988 to cover all those between 18-60 years not previously covered. Although there has been a gradual decline in the extended family in South Korea the elderly still turn to their family for support. Living arrangements for the elderly reflect available economic resources dictated primarily by the cost of housing. Often their resources have been depleted by spending on their children's education, extravagant weddings and early retirement..

International migration
Before the Second World War when Korea was part of the Japanese Empire, Koreans emigrated predominantly to Manchuria and Japan. After the war these destinations were superseded by the United States. Before 1965 the number of Korean-Americans, however, was negligible. After the Immigration and Naturalisation Act 1965 there was an influx of Korean immigrants to the United States.

There are now an estimated 5 million Koreans living abroad (2.7 million in Asia, 1.7 million in North America and 0.5 million in Europe). Permanent Korea residents in China total 1.7 million, Japan 700,000, Russia 500,000 and the United States 1.5 million. Most of those in China are concentrated in the three north-eastern provinces of Heilongjiang, Jilin and Liaoning; those in Japan in Osaka, Nagoya and Kobe; and those in the former Soviet Union in Uzbekistan and Kazakhstan having been forced there from Vladivostok by Stalin's regime in the 1930s.

Since 1988 emigration from the Republic of Korea has been factored into population projections at 40,000. During the 1980s there was an outflow of temporary workers to work on construction sites in the Middle East but these activities have tapered off. The government has been concerned about a 'brain drain' and has required trainees to return home for a specified period. Immigration has not been a major concern in the Republic of Korea (though illegal Chinese immigrants are increasingly seen as a problem). There are no significant ethnic minorities in the Republic of Korea.

During the 1990s the absence of surplus labour in rural areas led to the introduction of 100,000 guest workers from Bangladesh, China and the Philippines. An estimated 50 per cent are staying illegally in Korea. Most guest workers are Koreans from China engaged in low paying work in factories and restaurants. (No international migration was recorded for North Korea in 1996.)

Spatial distribution

Rapid industrialisation since the 1980s has brought about marked changes in the distribution of settlements. In 1960, 28.0 per cent of the population was urban. Following further rural-urban migration the urban population had doubled to 57.8 per cent in 1980 and further increased to 74.4 per cent in 1990 — a trend leading to an increase in one-person households in rural areas. The number of cities had increased from 12 in 1945 to 74 in 1996. Of these, 68 were local cities and six were metropolitan areas — Seoul, Pusan, Taegu, Kwangju and Taejon.

Metropolitan growth has been focused on Seoul and Pusan. Seoul city increased from 2.4 million in 1960 to 10.8 million in 1994 (approximately 25 per cent of the national population). Its 600 sq. km area had a density of 17,836 per sq. km making it one of the densest cities in the world. Although population has continued to increase in Pusan there has been an absolute decline in Seoul — a reflection of high real estate prices. However, Seoul's sixteen satellite cities have experienced marked population growth as have those around Pusan. Seoul's daytime population is probably between 14 and 15 million. Metropolitan Seoul has more 40 per cent of South Korea's total population and Pusan and Kyongsang has 18 per cent. Thus, almost three-fifths of the population is concentrated in the two major metropolitan areas.

The primacy of Seoul and the imbalance between urban and rural areas have led to government initiatives to curb the growth of both Seoul and Pusan and to stabilise the urban hierarchy. Tax incentives have been offered industries to relocate from Seoul; satellite cities created (including Pudang and Ilsang on the outskirts of Seoul); new industrial centres planned as part of the Third Comprehensive National Land Development Plan, 1992-2001; educational facilities improved in non-urban areas and services in smaller cities; and government offices relocated away from Seoul. Greater employment opportunities have
been provided in regional centres and resettlement allowances offered the urban poor. Net migration to the metropolitan areas has declined sharply since the 1980s. Most inter-provincial migrants, however, have been attracted to the Kyŏnggi province surrounding Seoul.

A relatively new phenomenon has been recognition of an urban corridor between Seoul and Pusan. Besides Seoul and Pusan, three of Korea's four other cities with populations over one million are located in this Kyŏngbu Corridor — Inch'ŏn, Taegu and Taegu. Another fifteen cities have populations over 200,000. Stretching 400 km, this corridor has an urban population of 26 million. The backbone of this corridor is provided by the Seoul-Pusan expressway. This will be strengthened when the fast rail system is completed. (Most people in North Korea are concentrated on the plains and lowlands with the least-populated regions being the mountainous Chagang and Yanggang provinces adjacent to the Chinese border.)

Status of women

Improvements in the status of women have been recognised by government as part of its policies to meet its demographic targets. Traditionally, preference for male children has been prevalent in Korea. Coupled with ultrasound techniques, female abortion has created a social problem as there is now a significant gender imbalance in rural areas. Reduced preference for sons has been one of the government target's to enhance the status of women.

Women with one child who accept sterilisation are eligible for welfare assistance and housing loan priorities. Since 1983 job opportunities have been made available to women under the Labour Standard Law that were previously reserved for men. Provisions have been made for maternity leave, more nurseries are being provided and the family law has been revised to enable women to become head of the family and eliminate discrimination against women in property inheritance. Twenty years is the minimum legal age for women at marriage.

North Korea

Little is known either about the population dynamics of North Korea or its urban system. There is evidence of a high rate of urbanisation and a high proportion of non-agricultural population. Pyŏngyang has a population of over one million and eight small and medium-size cities are located in an embryonic corridor development between Kaesŏng and Shinŭiju.

Port Hamilton (see Kŏmun Island)

Poryŏng

Situated in the southwestern part of South Ch’ungch’ŏng Province, Poryŏng is comprised of the town of Ungch’ŏn and the townships of Namp’o, Misan, Sŏngju, Chŏn’ŏn, Chugo, Chusan, Chup’o, Ch’ŏnbuk, Ch’ŏngna and Ch’ŏngso. Recently formed by combining
Taech’ŏn City with Poryŏng County, the city covers an area of 559.71 sq. kms. The southwestern tail of the Ch’aryŏng Mountain Range runs through the area, and near the coast, these mountains give way to plains. Within the city’s boundary are over 80 small islands including Wŏnsan Island and Oeyŏn Island. Administratively, most of these are part of Och’ŏn Township.

The city has about 17 400 hectares of arable land. Over half of this grows rice, and the remainder dry-field crops. Fishing also makes an important contribution to the local economy. Boats operating out of local ports bring in catches of yellow corbina, hairtail, sea bream, shrimp and shellfish. Salt flats are established along the coast. In the south and northwest, there are many coal mines which produce over 1.4 million tons of coal annually.

Poryŏng offers a diverse range of scenic attractions including both coastal areas and mountains. The most popular beaches are Much’angp’o Beach in Ungch’ŏn and Wŏnsando Beach on Wŏnsan Island. Mt. Osŏ (791m) in the northeast and Mt. Sŏngju (680m) in the east are two of the most visited mountains. Mt. Sŏngju (Sage Residence) gets its name from the ancient spiritual adepts who once lived there. According to records, Muyŏm (799-888) returned to the area in 845 after 30 years of training in Tang China. After Muyŏm died on the mountain at Ohap Temple, the temple’s name was changed to Sŏngju Temple, after which the mountain is named. This famous temple was one of the ‘Nine Mountain Sŏn Centres’ (Kusan Sŏnmun) of Greater Shilla and early Koryŏ. Although the temple is not extant, there are several relics at the site including a stele commemorating Nanghye (National Treasure No. 8); a five-storey pagoda (Treasure No. 19); three three-storey pagodas (Treasures No. 20 and 47 and South Ch’ungch’ŏng Province Tangible Cultural Asset No. 26); a stone lantern (South Ch’ungch’ŏng Province Tangible Cultural Asset No. 33); a stone staircase and a standing Buddha image. Paegun Temple and the Sŏngju Coal Mine are also located on the mountain.

Other Buddhist relics in the area include a stone stele holder exquisitely carved into the fanciful shape of a tortoise in Poryŏng’s Subu Village; a five-storey pagoda in Poryŏng Village; a three-storey pagoda in Kyōsŏng Village; and a stupa at Tanwŏn Temple. There are several Confucian schools in the county, such as Namp’o Hyanggyo south of Mt. Ongma (602m); Och’ŏn Hyanggyo in Och’ŏn; and Shinan Sŏwŏn in Namp’o next to the Talshin Village Fortress. Namp’o Hyanggyo was founded during the reign of T’aejong (1400-1418), repaired in 1530 and later moved to its present location. Och’ŏn Hyanggyo was established in 1901.

Local traditions are maintained by the Manse Poryŏng Cultural Festival which is held on 30 September and 1 October every year. Events at this time include the Kwangsanje (a ritual for safe and successful mining), P’ungnyŏnje (a ritual to pray for a good harvest) and P’ungŏje (a ritual for a bountiful catch of fish) at Och’ŏn Harbour; a costume parade; a folk-tradition contest and athletic events.

**Posŏn**

Posŏng County

Posŏng County is situated in the southern part of South Cholla Province. Consisting of two towns (ūp) and ten townships (myŏn). The county comprises 662 sq. km of land, of which 65 per cent is mountainous and 27 per cent is flat. Branches of the Sobaek Mountain Range traverse the region which contains several mountains and numerous hills.

A number of famous nationalists hail from this area. Na Ch’ol (1863-1916), founder of an indigenous religion called Tan’gun’gyo, and Sŏ Chaep’il (Philip Jaison Suh, 1863-1951), founder of the nationalist Independence Club, were from this area. An Kyuhong (1879-
1909) established a rebel army here in 1908 and fought against the Japanese, but was captured and died in prison.

During the Japanese occupation, the county was famous for its stubborn resistance to the colonial occupation. In 1922, an incident at a local *hyanggyo* (county public school) nearly led to a rebellion. When the Posŏng community brewed rice wine for use in Confucian rites at the local *hyanggyo*, a Japanese tax official ordered the wine confiscated since it represented a violation of the colonial liquor tax law. The official was seized and the community leader, Pak Namhyŏn ordered that he be killed on the school grounds. After apologies by the local police head, he was released. The next day, however, Pak and the other scholars involved were arrested. This led to a rally by locals calling for a national uprising. The Japanese, afraid of a repetition of the March First Movement of 1919, released the detained scholars and changed the liquor law to allow wine brewing for rites at *hyanggyo* throughout the nation. The *hyanggyo*, originally founded in 1397, can still be seen in the town of Posǒng.

A large portion of the county’s residents are engaged in agriculture. The area produces both rice and barley. The rice cultivated in those areas adjacent to the ocean is well known for its quality. Besides these staple crops, the area is famous as a major centre for the cultivation of Korean tea. With a climate and soil ideally suited for tea plantations, Posǒng produces 80% of Korea’s total tea output. Red peonies are another local specialty crop. The roots of the flower are used as a traditional herbal medicine. The area also produces beans, sweet potatoes, persimmons, chestnuts, cotton and hemp. Fishing contributes to the local economy. Boats, operating out of the area’s small harbours, catch shrimp, oysters and anchovies, and collect seaweed.

Although the area has a number of scenic areas, the local tourist industry is relatively undeveloped. The county has several old Buddhist monasteries, including Mt. Ch’ŏnbong’s Taewŏn Temple. Originally founded during the Shilla period, the temple houses several regional cultural assets including Küngnak (Paradise) Hall and a stupa commemorating National Master Chajin. There are several other important Buddhist relics in the area, including a seated stone Buddha figure (South Cholla Tangible Cultural Asset No. 122) in Pungnae Township, and a five-storey pagoda (South Cholla Tangible Cultural Asset No. 141), a seven-storey pagoda, and the Wŏllim Temple site (founded in the Koryŏ period) in Nodong Township. Near Hoech’ŏn Township, there is Yulp’o Beach - the county’s only beach area.

**Pou**

Pou (1301-1382), styled T’aego, was born Hong Pohŏ in Hongju. He was ordained when he was about twelve years old, becoming a disciple of Kwangji at Hwaŏm Temple. In his later teens and twenties, Pou travelled around Korea, visiting famous teachers. Through his twenties, he meditated on the Sŏn (Zen) case, ‘The myriad things return to one. What does the one return to?’ He pursued the case for a decade until he achieved awakening around 1338. Five years later, he achieved great enlightenment as he contemplated the enigmatic response ‘No’ to the question, ‘Does a dog have Buddha nature?’ Three years after his great enlightenment, Pou went to Chunghŭng Temple in Hanyang (modern-day Seoul) and began to teach. He was a popular Sŏn master who drew large crowds of students.

In 1346, Pou went to Daguan Temple in the capital (modern-day Beijing) of Yuan China. A year later, he headed for South China to meet famous masters who were residing there. He hoped to meet the famous Zhuyuan, but the master died before Pou arrived. Pou therefore went to see another well-known Sŏn master, Shiwu. When Pou showed him some of his writings, Shiwu was greatly impressed. After a detailed dialogue, Shiwu formally recognised Pou’s enlightenment. Pou stayed with Shiwu for another month.
before returning to the Yuan capital where the emperor recognised his accomplishments by giving him a golden robe.

Pou returned to Korea in 1348 where he lived for four years by farming. In 1352, King Kongmin (r. 1351-1374) ordered Pou to the capital. After giving the king advice on cleaning up government and restoring Buddhism, Pou eventually returned to Mt. Sosol. Another royal invitation came in 1356. At this time, Pou was invested with official regalia and was designated Royal Preceptor. During this period, Pou, while fulfilling his role as leader of the Buddhist establishment, attempted to unify the various Sôn sects. As a standard for Sôn communities, he advocated the Pure Rules of Baizhang, which, among other things, advocated that monks engage in self-supporting labour.

In 1357, Pou asked for permission to leave the capital. When he was refused, he secretly left. However, King Kongmin summoned Pou again in 1362. After four years of service, Pou requested, and was granted, permission to leave. A few years later, the monk Shindon became close to King Kongmin. Shindon used his position to amass a great deal of wealth while attacking his enemies.

In 1368, Pou travelled to Ming China. Shindon, claiming that Pou was plotting sedition, persuaded the king to take away all of Pou’s honorary titles and have him defrocked. However, the king pardoned Pou in the following year, allowing him to return to Korea. With the demise of Shindon in 1371, Pou again rose to the rank of National Master. In 1382, Pou returned to Mt. Sosol where he died.

Through his example as a Sôn Master who refused to be moved by fame or politics, Pou has had a tremendous influence on Korean Buddhism of the Chosôn and modern period. In fact, virtually all later lineages of Korean Sôn claim to descend through his branch of the Linjì Lineage. Pou wrote several works and letters. Many of his sermons and poems are recorded in the T'aego chip. His stele stands at the site of T'aego Temple on Mt. Samgak.

Bibliography

**Poŭn chip**

Poŭn was the style of Chŏng Mongju (1337-1392), the author of this collection of poems and other literary works. It consists of about 300 poems and ten other prose works. Some of the poems throw light on the diplomatic relations of his day. The original collection was in four volumes and included poems, miscellaneous writings, calligraphy, and annals. An additional collection was in three volumes. The whole collection was published nine times during the Chosôn dynasty, between 1533 and 1900, and was included in the Yŏgye myŏnghyŏn chip published in 1961 by the Taedong Cultural Research Institute of Sŏnggyun'gwan University.

**Poŭn County**

Situated in North Ch'ungch'ŏng Province, Poŭn County has the town of Poŭn, and the townships of Naebuk, Naesongni, Maro, Sanoe, Samsŭng, Suhan, Oesongni, T'anbu, Hoenam and Hoebuk. Covering an area of 599.66 sq. kms., the county had a population of 66 031 as given by 1988 statistics. Poŭn County consists of a mountain-locked basin surrounded by the Sobaek and Noryŏng mountain ranges. Poch'on Stream, a tributary of the Kum River, flows through the area, and Taech'ong Lake occupies the county's southwest corner. With an average temperature of 11.2c, there is a wide seasonal variation,
1086

from an August average of 23.6c. to a January average of minus 6.3c. The county has an average average rainfall of 1 249mm.

Of the county’s 13 000 hectares of arable land, slightly more than half grows rice and the remainder dry-field. The marked differences between day and night temperatures makes the county ideally suited for jujube cultivation, with more than 3.5 million tons of this date-like fruit produced each year. Other products include tobacco, persimmon, edible fern, mushroom and sericulture.

With a minimum of industrial development, the county’s natural environment has remained relatively free from pollution. The key tourist attraction is Mt. Songni, which was designated as a national park in 1970. With its picturesque hiking trails and the magnificent P’opchu Temple, the park is visited by more than a million people each year. The temple houses numerous ancient artefacts including an exquisite stone lamp supported by two lions. Carved in 720, the lamp has been designated National Treasure No. 5. Other relics found here include a large bronze bell, a seated Buddha in relief and an enormous iron cauldron, cast in 720 C.E., which was used to cook rice for the 3000 monks who resided at the temple during its heyday. In the middle of the temple grounds, one finds the five-storey P’alsang-jôn (Hall). The prototype for this spectacular structure was first built in 553 when the temple was founded, and the present structure was built in 1624, making it one of the temple’s oldest wooden buildings. Until 1986, a 27-metre-high concrete statue of Maitreya overlooked the monastery, but the statue began to crack and had to be demolished. It has been replaced with a 33-metre-high bronze statue made of the cast metal. Sitting atop a gigantic stone base containing a ground level shrine, this new statue was completed in 1989, at a cost of about US$4 000 000. There is a 5-kilometre-long hiking trail leading from the temple to the 1 033-metre-high peak known as Munjangdae. From here, a commanding view of the surrounding area can be had.

The county has a number of historical sites associated with Chosôn. At the southwest entrance to Mt. Songni National Park, there is a 600-year-old pine tree known as the Grade Two tree. Legend has it that the tree raised its limbs to allow King Sejo (r. 1455-1468) to pass under. The king honoured the tree by giving it an official appointment. Other important sites include Paekpungsas (a shrine in honour of Yi Ch’ön’gye) in Po’ôn’s Sansôn Village and Sanghyôngsas (a shrine in honour of U T’ak, U Kilsaeng and U Hyōnbo) in Hoebuk’s Aegok Village. In Po’ôn’s Kyosa Village, is Po’ôn Hyanggyo, a Confucian school founded during the reign of King Sejong (r. 1418-1450).

Proverbs

Proverbs are found all over the world and Korea is no exception. They are part of the spoken language and provide an insight into the effects of cultural conditions, language and local variations on expression. Speakers of a language use its proverbs -- like its phrasal idioms, collocations, and lexical items proper -- in certain regular ways with certain meanings. Proverbs are consistently described as self-contained sayings with the following elements: pithy or pregnant in meaning; traditional expressions or items of knowledge which arise in recurring performances; didactic tendency perhaps expressing an injunction in social behaviour or transmitting facts of experience; and the notion of a fixed form recognisable as such to members of the linguistic community.

It was from the compilation of Ŭy yadam (Ŭ’s Unofficial Histories) or Tongmun yuhae
in mid-Choson that the word for proverb, sotam, came to be used in Korea. But it is known that proverbs were spoken and heard well before mid-Choson and this can be seen in historical records such as the Samguk yusa (Memorabilia of the Three Kingdoms).

Korean proverbs occur in either of two basic instances. First, from a description of an historic incident, and second, as a portrayal of a general, frequently-occurring, event. The following three examples are cases that have become established as proverbs in which expressions concerning a special event and which contain proper nouns have changed their meaning to now refer to a general event:

Like Prime Minister Hwang’s family sharing a skirt between a mother and two daughters
Like Cho Charyong using an old sword.
One cannot be forced to become governor of P’yongyang.

A proverb comes to reflect the true countenance of a society’s language only after it has moved from an individual position to its conclusion as a social, literary and general expression. While in the process of social settlement a proverb will often partially change its meaning, or evolve into a completely different phrase. The proverb of ‘Minister Hwang’s spoiled egg’ evolved from the Chinese phrase of, ‘The egg has bones’, which then changed to, ‘There is a bone in the egg, too’. The proverb of, ‘Kulwon dances with himself’ went through the middle stage of, ‘As a serpent (kurongi) dances with itself’. and then became a completely different expression, ‘As a serpent goes over the wall’. The first example occurred when the Chinese character for ‘bone’ (kol) was transcribed by the phonetic han’gul writing system, and in the second example the change happened when the name of the ancient Chinese poet Ju Yuan (Kor. Kulwon) changed into a lexical item with a similar pronunciation, kurongi.

It was commonly thought that proverbs were produced only in times long past, and nowhere near the present-day, since they reflect former lifestyles and ways of thinking and expression. The English proverb, ‘Possession is nine (or eleven) points of the law’ is a good example of this, having an obsolete legal-like origin so lost in antiquity that it defies explanation. However, there are popular sayings in Korea that have become, or are on the way to becoming proverbs. In the early part of the twentieth century, the saying

Doctors and lawyers are thieves produced by the country

was prevalent, and this is now settled as a proverb. The often-used expression, ‘Half-matchmaking and half-dating’, has the distinct possibility of becoming a proverb, since it describes a common event that is a mixture of a person’s indiscriminate behaviour and another’s will, and is a happening experienced by many in Korean culture.

The structure of proverbs

Korean proverbs can be divided into long and short forms. The short version is a phrase or simple sentence which conveys a complex notion, while the long form is a compound sentence. The external shape of a proverb thus reveals a rhythmic or accidence harmony. Rhythmic harmony is accomplished by the use of rhyme, and there are many Korean proverbs that possess this quality. Here are two:

Ai ch’ire, songjang ch’irie. (Taking care of a child, taking care of a corpse.)
Param punun taero, mulgyol ch’innun taero (Blowing with the wind, flowing with the tide)

Other simple proverbs display the fundamental shape of traditional Korean prose. Some examples of these are:
Those Korean proverbs displaying accidence harmony are in the form of compound or complex sentences, and which, because of their structural stability, take the so-called 'standard form'. Two examples are:

What is said in the daytime is overheard by birds, and what is said in the night is overheard by rats.
The words that come in are fine only when the words that go out are fine.

Although proverbs are often very short consisting only of three or four words, they can have a discordant structure in their meaning that is confrontational and caused by the employment of metaphor. An example is the proverb,

A monk’s comb

where the components create a discordancy, and from such discord arises a figurative (metaphorical) meaning. Here, the proverb is expressed to meet a given situation. The literal meaning, of course, is a comb owned by or in the possession of a monk, but the figurative meaning is of something that is of no use although one has it or owns it. Figurative meaning can be established for many proverbs, indeed, some authorities exclude the literal statements from the class of proverbs proper, preferring traditional saying as the term covering both literal and figurative sayings.

The aggravating feature of discord in Korean proverbs is seen in the following examples,

After losing money, one gets slapped (loss 1) and (loss 2)
Whipping a galloping horse (speed 1) and (speed 2)

These proverbs have a characteristic of gradual addition that becomes magnified in their further interpretation. This characteristic of adding is coupled with relativity, and these two are important aspects of meaning discord. However, although there is discord in meaning, further meaning from the expressed words cannot be extracted, and thus the surface meaning as it stands becomes the basic meaning of some proverbs:

No child is good fortune (-happiness) is (+happiness)
The words make the speech (language 1) is (language 2)

If no meaning function is added, then such statements exist simply as statements but cannot be considered as proverbs since the figurative function is absent. However, the proverb ‘No child is good fortune’ carries an implied meaning of, ‘there is no need to envy the children of others’ in usage and ‘The words make the speech’ is considered to be a proverb in light of its implied meaning of, ‘One should watch what he says’.

The figurative function of a proverb gains its meaning by the implication that it generally receives from society. A proverb can be said to carry its figurative function continuously because of the implied meaning of the language society that commonly uses it. In other words, when it is based on a figure of speech, it is interpreted in a surface meaning that is taken from the base meaning. Moreover, it carries a secondary additional meaning.

Korean proverbs may be seen as having two functions: that of instruction and that of satire. An example is the proverb,

Under the lamp is dark
which can be interpreted with a basic meaning of ‘things that are close are not known’. This basic meaning can be thought of as an indirect expression that implies an order, indication or warning depending on how it is used. Therefore, the eventual implied meaning of this proverb can be viewed as one of instruction. However, some proverbs cannot be used as instruction and as such have the function of satire. The proverb,

To have twelve kinds of skills but no food for dinner

illustrates this point. The basic meaning here is that having many skills does not necessarily enable one to support one’s self. Yet this proverb can carry an instructional quality if, for example, it is used to caution a young person who is attempting too many hobbies. Contrary to this, if a friend who is acknowledged for his many talents asks to borrow money, the use of this proverb to indicate the friend in his absence has a sarcastic ring to it. Other proverbs, such as,

Would a single hand make a noise?
Would a chimney not make smoke?

are more likely to be used for their sarcastic function than for anything else.

Other central features of Korean proverbs are voluntariness and convenience. Popular usage is judged from the fact that the basic meaning of a proverb must surely be veracious. Since proverbs are often used, however, with the intent of being able to rationalise and adapt to daily circumstances, when comparing two proverbs side by side it is possible to express basic or implied meanings that are completely opposite:

Flour becomes finer the more it is beaten, words become tougher the more they are used
Meat is tasty when chewed, words are tasty when spoken
There is no cute part of a crippled child, getting filial devotion from a crippled child

These pairs of proverbs have different views on the same situation or circumstance, and thus each clause can be said to provide a completely opposite meaning to the other.

Commonsense and sarcasm are established qualities in Korean proverbs. Logic is disputed with ease, because of the fact that many contradictions co-exist in human society, and they act as paradigms of this. This can be reflected in the view of the nation or of religion, thus:

If he wins he is a loyal servant, if he loses he is a traitor
If he is good he is a loyal servant, if he becomes bad he is a traitor

These proverbs premise that the common people in traditional times had an objective view of political power. Accordingly, they were sarcastic, as in the following examples:

An improper yangban shouts in the market place
The calf of a great vassal’s house does not know how frightening the butcher is

These two proverbs show also that the common people placed the rulers before them as a fait accompli.

Religion, too, has its place in Korean proverbs. With Buddhism, the negative view held of this religion since late Koryŏ is evident in these:

Like a monk who is kicked in the scrotum runs away
A monk soaked by the rain
One does not offer a ritual to Buddha
The deduction is clear that monks were the objects of blame and ridicule rather than respect throughout Choson. If there were extant proverbs concerning monks from Shilla or early Koryŏ, they would likely show the important influence that Buddhism had on the cultural development of these kingdoms. However, by late Koryŏ, Buddhism was decadent and viewed by the people as a corrupted and degenerate faith.

**Data and research**

The compilation of proverbs in Korea seems to have begun in the late seventeenth century with Hong Manjung’s *Sunaji*, which contained one hundred and twenty-four proverbs that were translated into Chinese characters. Other early collections include, Yi Tŏngmu’s *Ch’ŏngjanggwan chŏnso* and Cho Chaesam’s *Songnam chapchì*. These early collections were all compiled in Chinese characters.

The collection of proverbs in modern times, and in *han’gul*, began in 1913 with Ch’oe Wŏnshik’s *Chosŏn iŏn*, which lists over nine-hundred proverbs. Following this, in 1922, Kim Sanggi published his *Chosŏn sŏktam* which included all of the proverbs in Ch’oe’s 1913 work and a further six-hundred. The first ‘complete’ collection of proverbs in Korea was in 1940; the result of a collaboration by Pang Chonghyŏn and Kim Sayŏp. This work contains over four thousand proverbs, and bears the title, *Sŏktam taesajŏn* (Encyclopaedia of Proverbs). It served as the foundation for proverb research until the 1960s. In 1962 Yi Kimun compiled *Sokdam sajŏn* (Dictionary of Adages) which contains over 7 000 proverbs and is considered to be the embodiment of the subject since it also includes their origins and provides examples of usage. *Sŏktam sajŏn* is the authority for recent studies and research into proverbs and their origins. The study and research of proverbs and their usage continues to be an area that attracts much scholarly attention in Korea.

Puan County

Puan County is situated in the western part of North Chŏlla Province on the coast of the Yellow Sea. The county consists of the town of Puan and the townships of Chinsŏ, Chulp’o, Chusan, Haengan, Hasŏ, Kyehwa, Paeksan, Poan, Pyŏnsan, Sangsŏ, Tongjin and Wido. The county borders Kimje to the north, Chŏngŭp to the east and Koch’ang County to the south. It covers a total area of 484.78 square kilometres, and as of 1988, the population stood at 104,602. Most of the county consists of the Pyŏnsan Peninsula. The county’s eastern area is made up of level terrain and hills under 100 metres in elevation. Kisang Peak (509m), Ongnyŏ Peak (433m) and Mt. Sŏkpul (288m) are to the west and in the north lies Ch’ŏngho Reservoir. West of the peninsula is Wi island as well as several smaller islands.

Most of the county’s arable land is devoted to rice cultivation, but dry-field crops such as wheat, beans, green vegetables, sweet potato, tobacco and ramie are also grown. Fishing is another important source of local revenue. Local fishermen bring in catches of yellow corbina, sea bream, hairtail, shrimp, octopus and clam. Salt flats are to be found along the coast.

Extensive efforts have been made to reclaim the long tidal flats along the outer edge of the Pyŏnsan Peninsula. The Kyehwa Island Project in particular deserves mention as the largest reclamation project ever undertaken in Korea. This project was originally undertaken as a means to compensate the thousands of people whose homes were submerged by water after a multi-purpose dam was constructed on the Sŏmjin River in the early 1960s. Requiring sixteen years to complete, the project created 3,968 hectares of new land. The paddy-fields built on this land produce up to 11,000 tons of rice and 3,600 tons of other grains annually.

With several popular beaches and some interesting hiking areas, Puan County offers scenic attractions to suit many visitors. Pyŏnsan Beach and Kyŏkp’o Beach are two of the area’s top tourist destinations. Kyŏkp’o Beach, the second largest on the Pyŏnsan Peninsula, was the site of the provincial naval headquarters during Chosŏn. The beach is surrounded by picturesque cliffs made of sedimentary rock and thus called Ch’aesŏk-kang (Painted Rock River).

In addition to its natural attractions, the area contains a number of important historical sites. In Kuam Village, there are thirteen dolmens. These are unusual in that their stone props are tall and some have as many as eight. The largest capstone of these dolmens measures 6.5 metres across. Buddhist temples in the area include the picturesque Naeso Temple (founded as Sorae Temple in 633), Wŏlmyŏng Hermitage (founded by Sŏn Master Pusŏl in 692) and Kaeam Temple in Sangsŏ Township. Old Confucian schools found here include Puan Hyanggyo (established in 1414 and moved to its present location in Sŏoe Village in 1608), Todong Sŏwŏn (established in 1534), Yuch’ŏn Sŏwŏn (established in 1652), Ongjong Sŏwŏn (established in 1694), Ch’ŏnggye Sŏwŏn (established in 1707) and Tongnim Sŏwŏn.

There are old kiln sites at Yuch’ŏn Village in Poan Township and next to Highway 30 in Chinsŏ Township’s Chinsŏ Village. Though technically unsophisticated, works from these kilns are now thought of as valuable antiques. Pottery produced at the Chinsŏ kilns featured diverse patterns and shapes. Bowls, dishes, wine bottles and other vessels with plain patterns have been found here along with inlaid or underglazed pieces bearing peony, chrysanthemum, crane and cloud designs.

A number of traditional rituals are still performed in this area. Tae Village on Wi Island
holds the county’s most elaborate Tangsanje (a ritual to worship the guardian spirit of the mountain). The ritual begins with a Sanshinje (mountain spirit rite) on the 3rd day of the first lunar month, followed by another ritual at a shrine on a nearby cliff. The participants then descend to the village where they participate in tug-of-war and other games. Later, a Yongwangjie (ritual to the Sea King) is held, and this is followed by the final event called ‘casting off misfortune.’ At this time, the village’s ‘misfortune of the previous year’ is put on a small boat, which is put out to sea and burnt.

**Publishing and Printing**

**History**

The history of Korean printing and publishing traces back to the Greater Shilla period and then made tremendous progress in both the subsequent Koryŏ and Chosŏn periods. In the Shilla period printing and publishing developed as a means for reproducing Buddhist literature when the propagation of Buddhism was spreading throughout the kingdom. It is through this cultural context that Koreans are thought to have adopted their basic knowledge of printing and publishing from China.

The first stage of printing in Korea is found in making print copies from engraved stone. This process eventually led to printing with wooden blocks with raised mirror-image letters or drawings which made the process of printing more efficient. There have been various discoveries of stone plates such as those that were carved for the sixty-volume Avatamsaka Sutra (Yukship hwadum kyong) that was completed in 667 CE by the Buddhist priest Úisang at the behest of King Munmu (r. 661-681) of Shilla. These plates were stored at Hwaom Temple in the Chiri Mountains of Kurye County, South Chōlla Province. Other items that were used for printing in this age included the making of various types of seals and stamps that were inscribed with various symbols, personal names, names of government posts and so on.

Wood block printing, or xylography, is thought to have begun in China during the Tang Dynasty (618-907). Wood block printing presented the Chinese, and later the Koreans, a way in which to spread the teachings of Buddhism to mass audiences. Although the exact date of the first wood block printings is not known, the oldest extant example of printed material in the world is found in Korea. The Dharani Sutra (mugu chonggwangdae tarani kyong) was found in October of 1966 inside the second story of a pagoda at Pulguk Temple during renovation work on the site. It is a small scroll of 6.5 cm wide and 4.0 cm in diameter, and is thought to have originally been about 7.0 metres in length although only about two-thirds of this is extant. The date of this work is thought to be sometime before 751 CE when the temple was completed. The authenticity of the date of this document is confirmed by both the use of new style characters created by the Sung Dynasty Empress Wu (r. 684-705) that were in vogue during this period, and the fact that the container in which it was sealed was undisturbed and in the pattern of this era. As for other printings of the Shilla period, there are records of the making of a Tripitaka at Haein Temple during the reign of King Aejang (r. 800-809) and in addition there are records of the scholar Ch’oe Ch’iwôn (b. 857) having his poetry printed. However, these works are not extant today.

By the subsequent Koryŏ period, wood block printing had become further developed. Since Buddhism was the official religion of the Koryŏ Kingdom, many temples were built and sutras were printed in order to propagate the religion widely. However, this period was a turbulent one and there were numerous invasions by the Khitan, Jurchen and Mongols, and as a result many works are no longer extant. The oldest existent work from this period is also a dharani which is entitled Pohyopin tarani kyong and dates from 1007.

The major publication of the Koryŏ period was the carving and printing of the Koreana
Tripitaka (P’alman taejang kyŏng) which was undertaken to ward off attacks of the Khitan by invoking the powers of Buddha. The first attempt to carve and publish this mammoth work was in 1011 during the reign of King Hyŏnjong (r.1009-1031). This work continued for many years and was finally completed in 1087. However, it was destroyed by the Mongol Invasion in 1231. The second edition of the Koreana Tripitaka was begun in 1236 and completed in 1251. This work consists of about 81,000 wooden blocks and is presently stored at Haein Temple.

Wood block printing in Koryŏ also included other Buddhist sutras such as the Great Wisdom Sutra (Taebanya kyŏng), Three Renditions of the Avatamsaka Sutra (Sambon hwaŏm kyŏng) and the Golden Light Sutra (Kumgwang myŏng kyŏng), the wood blocks for all of which were carved at Hyŏnhwa Temple under decree from King Hyŏnjong. There were also books other than Buddhist scriptures produced in this age. With the implementation of the civil service examination during the reign of King Kwangjong (r.949-975) the demand for the Chinese classics began to increase. When the demand became great enough, the government sponsored printings of various classics. In 1045 seventy copies of the Book of Rites (Yegi) were printed in addition to other classics.

The major innovation in the history of printing in the Koryŏ period was the development of movable metal typefaces. Movable type printing was first developed in China when a man named P‘i Sheng of Sung China developed a method of using clay-baked type for printing in the years between 1041 and 1048. However, this type did not become widespread due to the painstaking method required for making it and the fragile nature of the type. The use of movable metal type is thought to have originated in Koryŏ and the first records point to this happening in the middle of the thirteenth c. The collection of the great scholar Yi Kyubo (1168-1241) entitled Tongguk Yisangguk chip (Collected Works of Minister Yi of Korea ) mentions that twenty-eight copies of his Sangjŏng yemun palmi (Compendium of Rites and Rituals ), which consisted of fifty chapters, were printed in 1234. This is over two hundred years before Johann Gutenberg invented movable metal type in Germany in 1440.

The use of movable metal type in Korea was quite widespread, and at the end of the Koryŏ dynasty an office was established by the government to supervise this and it was continued on in the Chosŏn dynasty. The use of movable metal type was undertaken in a major way in this period as a type-casting office (Chujoso) was established and cast hundreds of thousand of pieces of type in a style called kyemi cha which was named for the year in which it was made (1403). Several books were printed using the kyemi cha type and these are extant at the present time such as Tongnae sŏnṣaeng kyojŏng puksa sangjŏl and Shipch’il sach’an kogŭm t’ongyang. In 1420 a new type was created to replace kyemi cha, and this was also named after the year. Kyŏng cha was made of copper and was of a smaller size and better defined that its predecessor. This was followed by the kabin cha type in 1434 which was used as the standard type of the Chosŏn dynasty until late in the sixteenth c. There were a great many books printed in this period using movable metal type.

The use of metal type in Korea was far greater than in China and this can probably be attributed to the limited resources of Korea. China needed to print a great number of books so the expense of carving wood blocks, which could be used for a prolonged period of time, was justified. However, Korea needed to produce a far smaller number of copies of a given book, so the expense and resources required to make wood block carvings was hardly warranted. Instead, the metal type could be rearranged many times to create a great number of works. The time and expense of producing the metal type was borne by the government, but since it was a long-term investment the cost was not too great.

The Japanese Invasion of 1592 was devastating to Korea’s publishing and printing industry. The Japanese destroyed or plundered most of the existing metal type in Korea.
The Koreans created wooden type that was used until 1668 when the first casting of metal type after the invasion took place. Various other castings followed this until the end of the nineteenth c. when lead type was introduced from abroad in 1883. This type was used until the colonial period and the last work published with this type was Ch’ŏnggu shich’o (Ch’ŏnggu Poetry Collection) in 1914.

Modern Period Printing and Publishing

In 1883 the first Western printing presses were brought into Korea. In the following year Kwanginsa Insuwae Kongsa was the first modern press established in Korea. Some of the first works that it turned out include Ch’unghyogyong chip and Nongjong shinp’yŏn (New Approaches to Farm Management). These works and the printing company have great cultural and historical significance since they represent the first Western-style printing in Korea.

The greatest initial impact in the development of a modern style publishing industry in Korea was through the medium of newspapers. The first newspaper in Korea was the thrice monthly Hansŏng sunbo which was published by the government’s Office of Culture and Information (Pangmun’guk) beginning in 1883. However, this newspaper ceased publication in the next year. In 1896 Sŏ Chaep’il founded The Independent (Tongnip shinmun) which is the first modern newspaper published in Korea. Initially, this newspaper was published three times a week, but soon became a daily, and since it was published in han’gul it provided information concerning the situation of Korea to her citizens at a time when the nation was undergoing tremendous turmoil. In 1898 another newspaper, Capital Gazette (Hwangsong shinmun), followed and continued the tradition of opposing the Japanese manoeuvres in Korea. This paper was printed in a mixed script of both han’gul and Chinese characters so it did not secure the broad audience of The Independent. However, the editor of the newspaper, Chang Chiyŏn, also bitterly resisted the Japanese machinations in Korea and this newspaper became known for its opposition to the Japanese and the incompetent Korean government. Other prominent papers of this pre-colonial period include the Korean Daily News (Taehan mail shinbo) which began publication in 1905, the Independence News (Mansaebō: 1906), and Korea People’s Press (Taehan minbo) of 1909.

After the advent of the colonial period, Japanese censorship on publications was suffocating and many newspapers and magazines were closed down. However, newspapers played an important role in that they served as not only a means to provide information to their readership, but also to introduce new literature to readers in the form of serialised novels. Works such as Hyŏl ūi nu (Tears of Blood) and Ch’iaksan (Pheasant Mountain) of Yi Injik, An Kuksŏn’s Kŭmsa hoeul rok (Proceedings of the Council of Birds and Beasts) and Yi Kwangsu’s Mujŏng (The Heartless) introduced the reading public to new concepts such as free love, freedom of expression and new notions from the West in the form of these so-called ‘new novels’ (shin sosŏl) that were serialised in the newspapers of Korea.

In the period just before the colonial period and after its advent, publishing in Korea ran under full steam. Many publishing houses sprang up in Korea, with the majority of them located in Seoul, but also houses in Taegu and P’yŏngyang opened. This new age of publishing saw a great many novels from the Chosŏn period republished. Among these works Ch’unhyang chŏn (The Story of Ch’unhyang), Yuch’ungnyol chŏn (The Story of Yu Ch’ungnyol), Choung chŏn (The Story of Cho Ung) and Ongnu-mong (Dream of the Jade Chamber) proved tremendously popular with the readers of this period and all were published over twenty times. Of course, publishing did not only mean the reissue of classical era works. Many new novels also were printed and thereby acquainted the audiences with writers such as Yi Injik, Yi Haejo, Yi Sanghyŏp, An Kuksŏn and Yi Kwangsu. A main feature of this new age of publishing was the newly created relationship
between the writers, the publishers and the reading public. Works of this period were directed at the tastes and interests of the readers, and those that were successful in this aspect were published. Unlike in the previous age, one’s social standing did not necessarily equate to success in writing: writers now had to attract their audience.

Another major impact on publishing in this period can be found in magazines. Before the turn of the century there were very few magazines in Korea, and none that can be considered as such in the modern sense of the word. However, with the publishing of Sonyŏn (Youth) by Ch’oe Namsŏn in 1908, many magazines with various themes appeared in Korea, despite heavy censorship by the Japanese government after 1910. The period of 1910-1919 saw forty-nine different magazines published. Notable among these are Pulkăn chŏgŏri (Red Jacket) and the Buddhist magazine Yushim (Mind Only). After the First of March 1919 Independence Movement, Japanese policy changed somewhat and magazines flourished. In particular, this period witnessed many diverse publications such as Kaebyŏk (Genesis), Ch’angjo (Creation), P’yeho (Ruins), Shinch’ŏnji (The New Heaven and Earth), Shinyŏja (New Woman) and Arini (Children). These publications introduced readers in Korea to a wide spectrum of writers in many different forms such as poetry, essays, short stories and short novels.

Towards the end of the Japanese colonial period, the Japanese implemented their assimilation policy that was designed to completely purge Korea of her identity. This policy started in about 1935 and was into full swing by the late 1930s. The Japanese banned all forms of cultural expression in Korea that could be considered nationalistic in even the slightest degree. Therefore, newspapers published in Korean were banned including the Tonga ilbo and the Chosŏn ilbo in 1940, along with all other Korean language newspapers. This was followed in 1941 by the prohibition of the magazine Munjang (Literature) and all other magazines published in Korean. At this same time the leading members of the Korean Language Society (Chosŏn hakhoe) were jailed on charges of trying to inspire a nationalist movement, and as a result of the imprisonment and subsequent torture by the Japanese police, Yi Yunjae and other Korean linguists died in prison. Novelists, poets and other writers were forced to write in Japanese if they wanted their works published, and many of these individuals were gaoled, with some dying while incarcerated, for opposing the oppressive colonial policies of the Japanese.

The extent of the Japanese desire to obliterate Korean culture can be seen in different aspects. First, their prohibition on the Korean language not only extended to printed material, but also the language used in society, education and the home. Second, they wished to supplant Korean culture with their own and as a result propagated their own myths concerning the founding of Japan, such as Amaterasu ōmikami, in Korea in an attempt to replace indigenous Korean culture with that of Japan, or reveal that the two countries were of common origin. In short, the Japanese sought to erase the essence of Korean national consciousness and destroy the identity of the Korean people.

After being freed from the colonial yoke of Japan in 1945, the importance of the ability to freely publish and write was of the utmost significance. This freedom to publish materials of many types without the fetters of colonial oppression witnessed an explosion in the number of publishing houses in South Korea. As many as two hundred new publishers would register in a single year, and nearly an equal amount would close their doors due to intense competition and poor management. It can be surmised that of the many publishers that opened after liberation, for each one hundred companies that opened their doors, only one per cent of these managed to survive. The number of books published yearly in Korea is presently about 30,000 titles a year. Of the 29,564 titles published in Korea in 1994, books with a literary theme were the largest group (6,054), followed by reference books (4,691), children’s books (4,389) and those concerning science and technology (3,890). In 1995, the numbers were slightly lower at a total of 27,407 titles, again led by literature (4,771), reference books (4,691), children’s (4,163), social sciences (3,502) and
At the root of the publishing industry structure is the relationship between the writer and the publishing company. There are many publishing companies in Korea that range from small companies to university presses, and ultimately to large publishing companies that control a significant share of the market in Korea. However, the process of finding a new writer who will appeal to a large audience is not an easy one. In order to encourage new writers, the publishing companies of Korea offer many literary prizes as incentives to aspiring writers to produce and submit their works for publication. The bulk of the literary prizes in Korea are offered by the publishing companies, although there are some that are sponsored by other organisations which do not have a financial stake in the publication of the work.

After a publishing company decides to publish a particular work, it then undertakes the task of editing the work, marketing it and finally printing and distributing it. The marketing of works has taken on increasing importance in recent years with the intense competition within the book industry. Therefore, books are often heavily promoted before they are actually delivered to bookstores through newspaper advertisements, the distribution of advertising flyers in other publications by the same company and through methods such as the dispersal of advertising in the form of free book marks and the like. All of these items create interest in a book and therefore help its saleability. Meanwhile the book is printed and distributed to a network of bookstores throughout the nation.

The publishing companies treat each book in a different manner. Books designed for the mass market are naturally heavily promoted and distributed in large quantities. However, reference, technical and academic works are not promoted in this manner. The promotion that these books are given, if any, is limited in scope to their target audience. Books are also distributed to bookstores that specialise in certain types of books. Large bookstores carry a diverse range of titles, of course, and most types of books can be found in these locations. However, smaller specialised stores do not offer the scope of works that their larger counterparts do, and instead specialise in a particular area. An example of this can be found in the bookstores often located in the vicinity of university campuses that feature many books of a political nature, yet not many general titles.

With the number of books published each year in Korea, not to mention newspapers, magazines and journals, the importance of this market is quite large from a financial aspect. Nevertheless, the impact of electronic media such as television, radio and computers has yet to be fully assessed on the publishing industry. Historically, Koreans have read a large number of books, and this can be seen in the large numbers of both publishing companies (7 381 at the end of 1992) and the number of bookstores which numbered 5 371 in the same year. However, the increased interest in electronic media among the young people of Korea today may have a negative effect on these numbers in the future.

Puch’ön

Puch’ön, situated in Kyŏnggi Province, was upgraded to a city in 1973. Since that time, it has developed into one of the nation’s most populated metropolitan areas. Positioned between the port city of Inch’ón and the Seoul Metropolitan area, the city is ideally suited for industrial development. Today, its factories produce numerous items, including machinery, metalwork, electronics, chemicals, textiles, food products and glass.

In the area around Pŏmbŏk-dong, there is a large religious community formally known as the Taehan Yesu Puhŭng Hyŏphoe (Korean Community for Christian Revival). In 1957, the group erected numerous factories and schools along with over 300 houses in a rundown section of the city. Over 10 000 members of the group then moved into the newly built community, which is commonly referred to as Shinang-ch’ŏn (Faith Village). The residents make various products including soy sauce, caramels and blankets, bearing the trademark ‘Shion.’

In the southern part of the city, there are several educational institutions, including Sŏngshim Women’s College, Seoul Theological Seminary, Puch’ŏn Industrial College and Yuhan Industrial College. In addition to its colleges, the city has a total of 86 parks. In order to encourage interest in traditional culture and the arts, the city has held the Poksagol Arts Festival annually since 1985. Many art forms are displayed at the festival, including photography, traditional dance, choir music and plays.

Pugin (Northerners) [History of Korea]

Puk Cheju County

Puk (North) Cheju County is split into two areas which are situated to the west and east of Cheju City on the northern part of Cheju Island. With beautiful natural wonders and numerous sites of historical interest, the county is a popular destination for tourists visiting the island.

Several important historical artefacts are located in this area. Neolithic remains have been found in the Pille Cave in Aewŏl Township. In particular, a jawbone of a deer and a brown bear were discovered here in 1973, suggesting that humans may have lived on Cheju Island as long ago as 70 000 - 80 000 years. Other prehistoric remains, including Dolmen, have been found scattered throughout the area. As for remains from the historical era, there was once a number of stone fortresses in this area, including the Choch’ŏn, Myŏngwŏl, Aewŏl, Susan, Ch’agwi and Hwanhae fortresses. Little remains of most of these stone fortifications. In addition, there are several old buildings in the area, including the Yŏnbuk Pavilion and the Shrine to Layman Ch’uja. These have been designated Cheju Province Tangible Cultural Asset No. 3 and No. 9 respectively. There is also an ancestral shrine commemorating General Ch’oe Yong.

In addition to tourism, agriculture plays an important role in the county’s economy. Sweet potatoes, rape, beans, sesame and barley are all grown here along with a number of warm weather crops such as tangerines. Livestock and poultry also play an important role in the local economy, and there are several cattle breeding operations on the foothills of Mt. Halla. Fishing is another important source of income for local residents. Numerous small fishing boats operate out of Hallim and Ch’uja harbour.

Puk P’ot’ae Mountain

Situated on the border of North and South Hamgyŏng Province, Puk P’ot’ae Mountain rises to a height of 2 289 metres, making it the highest point of the Mach’ollyŏng Ridge.
To the south lies its counterpart, the 2,435-metre high Nam P’ot’ae Mountain. To the north-west lies Mt. Sobaek (2,174 metres) and to the south-east, Mt. Amu (1,803 metres). Due to its high elevation, Puk P’ot’ae’s summit consists of bare rock and steep precipices covered with low-lying shrubbery. The surrounding area contains Korea’s highest mountains. This region, along with the Mt. Paektu region, was formed through the third or fourth phase of volcanic activity that occurred during the early Cainozoic era. Because of its rugged terrain, high elevation and remote location, the mountain slopes remain largely untouched by development.

Pukhagüi (Discourse on Northern Learning)

Pukhagüi is a discourse written by the shirhak (practical learning) scholar Pak Chega (1750–?) that discusses the customs and institutions of Qing China and promotes the so-called Northern Learning (pukhak non). It consists of two volumes in one fascicle and was written in 1778. Northern Learning is a part of the larger shirhak ideology that advocated the acceptance of economic reforms and enrichment and derives its name from the contemporary trends in Qing China.

This work is also a journal of the travels of Pak to Qing and details many of the sights that he encountered while in China. Pak notes many of the modern features of the Chinese nation such as the use of tile roofs, bricks, the types of bridges and roads in addition to the structure of the Qing markets and commerce systems. The work also features the opinions of the author on how to improve the dire economic situation prevailing in Korea, namely his advocating the implementation of a variety of reforms that would allow Korea to advance both culturally and economically.

Pukhagüi contains descriptions of the Qing nation and its institutions under thirty separate headings, and also contains seventeen treatises of the author on what improvements Korea needs to make and how to implement these. The work is valuable for both the study of the late Chosŏn period and the ideologies of the progressive thinkers of this period. The ideological position of Pak was not popular in his own time, as the yangban class of Chosŏn did not, for the most part, desire any change to the status quo. Moreover, the acceptance of culture from Qing, who many deemed little more than a barbarous tribe, was also rejected wholly by this class. This work has been recently republished under the same title, first in 1962 by the National History Compilation Committee (Kuksa P’yŏnch’an Wiwŏnhoe) and then in 1971 by Eul Yoo Publishers (Úlyu Mun’go).

Pukhak (Northern Learning) [History of Korea]

Pukhan Mountain

Mt. Pukhan (837 metres) is situated on the border of Seoul and Kyŏnggi Province. Paegundae, the highest point, lies in close proximity to the steep Insu Peak to the north and Man’gyŏngdae to the south; hence, the mountain is also called Mt. Samgak (Three Horns). It is also called Mt. Han or Mt. Hwa (Flower), and in Shilla times, it was called Pua-ak. Many of the peaks on the mountain, such as Sŏkka (Shakyamuni), Pohyon (Samantabhadra), Munsu (Munjusri), Nahan (Arahants), and Wŏnhyo Peak, have names associated with Buddhism. Over thirty Buddhist temples are found here, including Sangun, Chin’gwan, Sŏngga, Hoeryong, Kwangbop, Munsu, Wŏnt’ong, Hoegye and Tosŏn Temples and Wŏnhyo Hermitage. In addition, the large Kugira seated Buddha in relief (594 metres high) daily draws crowds of Buddhist pilgrims who pray and chant in front of the figure.

In addition to its religious associations, the mountain has both early and recent links to Korean history. Pi (Stele) Peak gets its name from a stele (National Treasure no. 3) erected during a royal tour by the Shilla King Chinhŭng (r. 540–576). At the start of Chosŏn, the
monk Muhak (1327-1405), impressed by the geomancy of the mountain, convinced King T’aejo (r. 1392-1398) that the Seoul area was a suitable site for the founding of the new dynasty. Mt. Pukhan offered numerous advantages for the building of a capital. In addition to the area’s geomantic advantages, the mountain had many large granite precipices and steep, rocky gorges, making it an ideal barrier to invasions. In 1711, the Chosŏn government decided to fortify this natural defence by building Pukhan Fortress - an eight-kilometre stone wall running along the ridge connecting Nahan and Wŏnhyo Peak. Of the wall’s original fourteen gates, Taesŏ, Taenam, Taesŏng, Poguk, Taedong and Yongam Gates still remain.

Easily accessible, the mountain is a favourite tourist destination for Seoul residents who come to picnic in the valleys, hike the rugged trails, or rock climb on steep granite cliffs like those of Insu Peak. From the top, it is possible to get a good view of Seoul and the mountains that surround it. In order to preserve Mt. Pukhan’s natural resources, the area, along with the adjacent Mt. Tobong, was designated Pukhan-san National Park in 1983.

Puksŏng Hoe (North Star Society) [History of Korea]

Puktae Stream

With its origins on Mt. Turyu on the border of North Hamgyŏng and South Hamgyŏng Province, Puktae Stream flows 118 kms. to the south before entering the East Sea to the east of Tongp’yŏng Village in Namduil Township. In the Shinjŭng tongguk yŏji sŭngnam (Newly Augmented Survey of the Geography of Korea), the stream is referred to as Imai Stream, while it is called Puk (North) Stream and Puktae (Northern Large) Stream in the 1782 work Chūngbo munhŏn pigo (Enlarged Bibliography of Korean Materials).

The Puktae is formed from the convergence of two small creeks, one flowing down the Kanji-dong Valley southeast of Mt. Turyu, the other down the Nongsang-dong Ravine to the southwest of the mountain. After reaching Kwangch’ŏn Township, the stream widens and sandy islets are formed. The water’s swift current means that few level areas border the Puktae. Along it, are minerals sources, including lead, magnesium and zinc.

Pulchisa (Buddha Land Co. Ltd.)

Situated in Changch’ung-dong in Seoul’s Chung ward, Buddha Land Co. Ltd. (Pulchisa) was established on 28 August 1992. With Kim Hyŏnggyun as editor, the company specialises in works related to Buddhism, Eastern philosophy and liberal arts.

Pulguk Temple [Architecture]

Pulgun chogŏri [Magazines]

Pulssi chapyŏn [Buddhism]

Punch’ŏng ware [Ceramics]

Puram Mountain

Located on the border of Nam Yangju and Seoul, Mt. Puram (Buddha Rock) gets its name from the rock on its peak which is thought to resemble a Buddha wearing a pointed cap. Mt. Puram’s 508-metre granite peak is connected with a lower 420-metre peak. On the upper peak, there are remains of a stone fortress. Between the two peaks lies Puram Temple accompanied by several hermitages on the mountain’s south side. Hikers frequent
the mountain to enjoy the view of Mt. Pukhan to the west of the mountain and Mt. Surak to the north.

**Puril Ch’ulp’ansa**

Situated in Tong Ward in Kwangju, Puril Ch’ulp’ansa is a publishing company founded on 20 June 1984. The company specialises in works of religion and philosophy.

**Pusan**

Pusan, South Korea’s largest commercial port and second largest city, is situated on the southeastern tip of the peninsula. The city covers an area of 749.17 square kilometres and as of 31 December 1996, had a population of 3,866,000. Mt. Kŭmjŏng (802 metres), Mt. Paegyang (642 metres) and Mt. Kowŏn’gyŏn run from north to south, dividing the city proper in half. The Naktong River flows past the western slopes of these mountains into the ocean. The area is warm in winter and breezy in summer, with an average annual temperature of 14 degrees centigrade.

Pusan has a long history as an international port. In 1423, it was one of the three ports opened to Japan. During the centuries that followed, the port was opened and closed several more times in accordance with the political climate between Japan and Korea. With the signing of the Treaty of Kanghwa in 1876, the port was again forced open. As the city came under increasing Japanese control during the decades that followed, the Japanese colonial administration set to work modernising the port. When the Russo-Japanese War broke out in 1904, construction of a railway was also begun in order to transport troops to fight the Russians. In the following decades, the Japanese also built wharves and further modernised the port.

When the Korean War broke out in June 1950, South Korean forces retreated to the ‘Pusan perimeter’ while U.N. forces were brought into the peninsula via Pusan’s harbour. The combined forces then successfully launched a counter-attack. During the three years that the war lasted, Pusan served as the nation’s temporary capital. Deceased soldiers from sixteen U.N. allies are now honoured in a cemetery on the outskirts of Pusan. In 1963, one decade after the war, Pusan became a directly administered municipality. The city’s new status reflected its growing importance as a key industrial centre.

The backbone of Pusan’s economy is its giant port which handles 95% of Korea’s container cargo and about 58% of all incoming and outgoing cargo. Numerous manufacturing firms have been set up in Pusan in order to take advantage of the harbour facilities. Many of these firms are located in the Sasang and Changnim Industrial Complexes. Steel, textiles and processed marine products are three of the city’s largest industries.

The Pusan Cooperative Market is the largest fish market in Korea. Every day, fish and other marine products are auctioned off to be sold in markets throughout Korea. Stretching from Ch’ungmu-dong to Namp’o-dong, the Chagalch’i Market is famous as a retail fish market catering to both local residents and tourists. The original market was much larger than it is now, but its area had to be reduced to make way for expansion of the harbour. Boats from Pusan’s port go to Cheju Island, along the coast to Ch’ungmu, Namhae Island or Yŏsu, or even to international destinations such as Shimonoseki, Fukuoka or Osaka in Japan.

With its international port, the city hosts a large number of sailors and tourists. The commercial Ch’oryang-dong street has become especially popular as a shopping district catering to the needs of foreigners. Haeundae and Tadaep’o Beach also draw large crowds of tourists throughout the summer months.
There are several stone fortresses in the area. Of these, the Paesan Fortress site is the oldest such fortress in Pusan while Kŭmjŏng Fortress (Historical Site No. 215) has the distinction of being the longest fortress in Korea. There are also a number of Buddhist artefacts in the area. In addition to the numerous cultural treasures at Pŏmŏ Temple (See Pŏmŏ Temple), there is a pair of banner-pole supports at the Mandŏk Temple site, a five-storey stone pagoda (Pusan Tangible Cultural Asset No. 9) situated outside of Pusan National University, and a three-storey stone pagoda (Pusan Tangible Cultural Asset No. 10) outside of Tonga University.

Pusan has a large number of educational institutions. The Korea Maritime University was founded in Pusan in order to train the next generation of young people to work in the maritime business. All of the school’s students receive scholarships covering both room and board. In their junior year, students undergo a two-month training course on board a training ship that visits various international ports. The city is also home to Dong-A University, Dong-eui University, Kosin University, Pusan National University, Pusan Womens University, Pusan Catholic College, Dongseo University, Pusan University of Foreign Studies, Pusan National University of Education and Kyungsung University.

**Pusan Municipal Museum**

Situated in Taeyŏn-dong, Pusan Municipal Museum (Pusan Shirip Pangmulgwan) was established in 1978. The museum’s collection is comprised of more than two thousand relics, including earthenware, metalware, clothing, articles from ancient tombs, and shell-mound relics. As well as holding exhibitions, the museum provides educational services for the community. It has held special summer vacation seminars for students since 1985, and seminars for the general public since 1988. The museum also publishes an annual report for specialists engaged in historical research.

**Pusŏk Temple**

[Architecture]

**Puyŏ (see History of Korea)**

**Puyŏ County**

Situated in the southwestern part of South Ch’ungch’ŏng Province, Puyŏ County comprises the towns of Puyŏ, and the townships of Kuryong, Kyuam, Nam, Naesan, Sŏksŏng, Sedo, Yanghwa, Oksan, Oesan, Ŭnsan, Imch’ŏn, Changam, Ch’och’ŏn, Ch’ungwha and Hŭngsan. The county covers a total area of 668 sq. kms. and has a population of about 124 000 (1988 statistics). Mt. Sŏngdae (631m), Mt. Munbong (600m), Mt. Mansu (433m) and other peaks of the Ch’aryŏng Mountain Range run along the northwest border of the county while the Kŭm River flows through the east. Influenced by coastal winds from the nearby Yellow Sea, the area has an average yearly temperature of 12c., an average January temperature of minus 3c., and an average yearly rainfall of 1239mm.

Arable land forms about 232 sq. kms. of the county. Of this, 160 sq. kms. grows rice and 72 sq. kms. dry-field crops such as barley, vegetables, ginseng and tobacco. The area’s tradition of ginseng cultivation began when refugees from Kaesŏng came into the area during the Korean War. Adjacent to Sŏch’ŏn County, ramie (Boehmeria frutescens) is grown, and watermelon and melon are cultivated commercially in the vicinity of the Kŭm River. The area’s coal mines are centred around the Oesan and Naesan townships. Local industry is limited to a few small plants such as a red ginseng processing factory and a match factory in Puyŏ.
In 538 C.E., the Paekche Kingdom moved its capital to the Puyŏ area. As a result, the county has a large number of important historical sites. In Ch’ŏch’ŏn Township, there is the Songguk Village Prehistoric Site (Historical Site No. 249), which dates from Korea’s Bronze Age (c.1000 - 400 B.C.E.). Seven archaeological excavations of the site have revealed wooden palisades, moats, jar coffins and thirty-three Bronze Age rectangular and circular dwellings of the subterranean pit type. Carbonated rice grains found in the dwellings indicate that rice was cultivated in the region at this time.

One of the area’s key tourist attractions is the Puyŏ National Museum in the town of Puyŏ. Here are a large assortment of ancient artefacts such as bronze spearheads, daggers, pottery, musical instruments, embossed roof tiles, celadon, funeral urns and bronze bells. In addition, three Chosŏn buildings -- a county magistrate’s office, his residence and a guesthouse for government officials, have been relocated to the museum’s grounds. Behind the museum stands Mt. Puyŏ, the site of the ancient Paekche palace. With its pleasing temples and pavilions, the mountain is now a park. Legend has it that when Paekche fell, King Uija along with 300 court ladies leapt to their deaths from Nakhwaam (Rock of Falling Flowers), a high cliff above the Paengma River, to avoid capture by the invading Chinese and Shilla armies. A pavilion named Paekhwajong now stands on top of the rock to commemorate this tragic event. In Nungsan Village, a group of large mounds are thought to be the tombs of Paekche kings and royalty. The tombs date from 538 to 600 C.E. At the site, there is a modern reconstruction of a tomb (developed from an ancient tomb painting), and a small museum with scaled-down reproductions showing the method of construction of the various tombs.

Important Buddhist sites in the area include the Chŏngnim Temple site next to Highway 4 in the town of Puyŏ, Muryang Temple in Oesan and Taejo Temple to the east of Highway 29 in Imch’ŏn. Outside Taejo Temple, there is a 10-metre-high Maitreya image which was carved circa twelfth c.. The temple’s Amitabha Triad is one of the largest seated Buddha images in Asia. Confucian schools found here include Hongsan Hyanggyo in Kyowon Village next to Highway 4, Puyŏ Hyanggyo just south of Highway 40 in Puyŏ, Sŏksŏng Hyanggyo just east of Sŏksŏng Stream, Imch’ŏn Hyanggyo just east of Highway 29 in Imch’ŏn, Tonggok Sŏwŏn in Sedo, T’oesu Sŏwŏn just west of Highway 29 in Imch’ŏn and Ch’ilsan Sŏwŏn (established in 1687) near the Kum River in Imch’ŏn.

In Ùnsan Township’s Ùnsan Village is a hillock known as Mt. Tang. On this are the remains of an earthen fortress and on the southern slope, there is a shrine. The Pyŏlshinje, the province’s most important traditional ceremony, is held here every year during the first lunar month. This attracts large crowds of between 50 000 and 100 000 spectators. For three days before the ceremony, officiants abstain from eating meat or fish and cleanse their houses by installing taboo ropes containing slips of paper. These ropes are also hung over Unsan Stream from which the water to cook the offerings is taken. The offered food is prepared only by men. Lasting two weeks, the Pyŏlshinje involves the cutting of trees for camp posts; a day of rest; acquisition of flowers; a second day of rest; the calling down of the spirit; a parade and invocation lasting four days; a farewell to the pyŏlshin and a Hadang exorcism; a third day of rest; a Toksan rite performed solely by the chief officiant, and the erection of new changsŏng (guardian posts) at the village entrance. Although the origins of the ceremony are obscure, some claim that Unsan was a battlefield in ancient times and by consoling the soldiers who died in battle there, the rites prevent outbreaks of epidemics in the area. In 1966, the ceremony was designated an Intangible Cultural Property.

Railway Museum
The Railway Museum (Ch'ŏldo Pangmulgwan) is situated in the city of Ŭiwang in Kyŏnggi Province. In 1981, items from the museum's present collection were displayed at the Railway High School (Ch'ŏldo Kodŭng Hakkyo) in Yongsan Ward in Seoul. In December 1988, the collection was moved into a newly-built museum at a transportation and railway educational complex in Ŭiwang's Ŭiam-dong. By 1991, the collection of almost four thousand items had filled seven exhibition halls. The Railway Museum holds periodic exhibitions and also operates a theatre where visitors can watch films on the history of Korea's railways.

Reforms of 1894 (Kabo kyŏngjang)  [History of Korea; Japan & Korea; Society]

Regional planning

History

Regional development planning in Korea (then Chōsen) originated during the Japanese Occupation. Several land surveys and sectoral plans were undertaken by the Japanese to manage the Peninsula's land use and develop its resources. The Japanese thrust was to develop the north as the industrial area and the south as the agricultural base. During Japan's Greater East Asian Co-Prosperity Sphere in the early 1950s the role of Korea was recast as a longitudinal north-south structure to provide a bridge from Japan to other parts of its Empire. After the liberation of Korea the emphasis was on rebalancing the lop-sided structure developed under Japanese control. Before progress could be made the industrial plants, electricity generating plants and transport and communications infrastructure were destroyed during the Korean War (1950-1953). The rest of the decade was spent on restoring them in the now bifurcated country. It was not until the 1960s that regional planning was resumed in South Korea and key developments launched.

Since 1961 South Korea's highly-centralized government has controlled and monitored the country's export-oriented, economic growth which has transformed a poor, agricultural country into an industrialized nation. The policy has channelled benefits to people in particular regions and to large conglomerates (chaebŏls). A recurrent theme is how development trends have generally favoured the Seoul-Pusan axis, and the Kyŏngsang provinces in particular, at the expense of the central-western provinces, the Ch'ungch'ŏng and North and South Cholla provinces. Once the disbenefits of this pattern of regional development became pronounced regional planners sought to reshape South Korea's spatial structure.

Four significant phases can be traced between the 1960s and 1990s which reflect attempts by regional planners to shift South Korea's key development axes. Four major changes can be traced: the initial reinforcement of the northeast-southwest axis during the 1960s; the creation of a southern axis during the 1970s; the addition of a western axis together with a proposed northwest-southeast axis as a step towards the creation of a radial-circular transport network during the 1980s; and the inclusion of west-east and eastern axes and strengthening of the original northwest-southeast trunk axis as part of a grid-type network during the 1990s with the northwest-southeast axis still in a planning stage (Figure 1).

(Bring in Figure 1)

Northeast-Southwest Axis, 1960s: Regional development under the military government of Park Chung-hee centred on a series of individual plans focused on specified regions and a few sectors. In particular, the military government was preoccupied with industrialization along the Seoul-Pusan axis reflected in a bid to maximize economic
growth. As industrialisation progressed in the late 1960s large-scale industrial estates were established in Seoul, Inch'on and Ulsan which were complemented by expressways and multipurpose dams.

One consequence of concentrated development was that previously prosperous agricultural activities within the central-western provinces were neglected. In particular, inattention to upgrading rail services, and poorly-connected roads, disadvantaged the North and South Cholla provinces. Renowned as Korea's 'rice bowl', their farmers were handicapped by their adherence to wet-rice cultivation. Initially, South Korea's agricultural economy was devastated by the introduction of farm products from aid-givers and the government's policy of pegging locally-grown items to control inflation. This problem was compounded by the small share of national investment afforded agriculture and the lack of reliable access to growing urban markets. Not surprisingly, the North and South Cholla provinces were unattractive to investors.

**Southern Axis, 1970s.** During the 1970s regional development was undertaken under the *First Comprehensive National Land Development Plan, 1972-81.* The focus of regional development remained fixed on the Seoul-Pusan Corridor but was expanded to incorporate a series of export ports. These included the string of port-industrial towns created in the 1960s — notably Ulsan and Pohang. In 1973 Pohang was the site of Korea's first, large iron and steel mill. The new port-industrial towns of Onsan and Ch'angwŏn were added as part of the development of the Southeastern Coastal Industrial Belt. As these economic activities spilled over the border of South Cholla, both the Yŏch'ŏn Industrial Complex and Kwangyang were included in the Industrial Belt. Offering relative security from North Korea and low transport costs, the Industrial Belt's major ports were those closest to Japan which provided the major market for the products of the heavily-subsidized, capital-intensive, export-oriented, heavy and chemical industries (e.g. steel, shipbuilding and petrochemicals). These industries were encouraged to make South Korea's defence industries self-reliant — a move prompted by US President Carter's decision to withdraw military bases during a deterioration in North-South relations. The ports, therefore, largely determined the location of industries in South Korea during the initial promotion of high volumes of heavy industrial exports and imports.

Also in fashion were export industrial estates. They included the free trade zones at Masan (1970) and Iri (1971). Masan was attractive to Japanese corporations which controlled almost 80 per cent of its firms. Local industrial estates were intended to attract industry from Seoul. The inland centre of Kumi was also selected as the base for a large-scale industrial estate for electronics. This had more to do with the fact that it was the birth-place of President Park than any intrinsic locational advantages (it was also designated a heavy industrial complex!). Complementing these export-oriented industrial initiatives was heavy expenditure on the seaports of Inch'on and Pusan.

These new regional initiatives bypassed South Korea's west coast. Without a revival in agriculture, and in the absence of compensating developments in manufacturing and service employment, the North Ch'ungch'ŏng, Kangwŏn and both Cholla provinces experienced net population losses. The losses from the Cholla provinces were more serious. Migrants from the area moved to Seoul, where surveys showed they constituted a disproportionate number of the urban poor (and presumably a smaller share of an emerging middle class) Alienated from the mainstream of South Korean life, people from the Cholla provinces aligned themselves with the Peace and Democratic Party led by Kim Daejung (Taejung) to protect their regional interests. The Kwangju incident in 1980 reinforced their resentment.

**Western Axis, 1980s.** During the early 1980s attempts were made to counter the side-effects of a bi-polarized, regional development pattern. This was reflected in the over-concentration of population on Greater Seoul (9.7 million in 1985) and Pusan (3.5 million in 1985), which together monopolized central managerial functions, and the progressive
depopulation of lagging rural regions. Other developments were centred on Taejŏn and Taegu — the former is also the site for South Korea's first technopolis (Taeduk Science Park). Both were alternative bases to suburban Seoul (Suwŏn) for the development of motor cars, electrical appliances and electronics. In turn, these areas were incorporated into regional economic clusters in four zones outside the Capital Region. The real need, however, is to deconcentrate political and economic power from Seoul which has been exerted over provincial areas since the Chosŏn dynasty.

Indeed, by the mid-1980s both the Ch'ungch'ŏng and the two Cholla provinces had less than their share of regional output as a proportion of South Korea's population. Their per capita income was only 80 per cent that of the national capital which, in turn, was exceeded by the Kyŏngsang provinces. In particular, the southwest provinces had a low share of key industries, such as textiles, machinery, metals and electronics which dominated by Seoul and Pusan metropolitan areas and the Kyŏngsang provinces. Only the chemical industries were marked in the Cholla provinces - due to location of the country's second largest oil refinery and petrochemical complex at Yŏch'ŏn. Petrochemicals, however, are not renowned as a great employment generator. Although there are strong arguments supporting the cost-effectiveness of the Seoul-Pusan axis it has resulted in uneven distribution of industry and aggravated regional discontent in the Cholla provinces.

The Second Comprehensive National Land Development Plan, 1982-1991 was activated in a bid to still the discontent and promote a more balanced regional development. This has meant dispersing industry from Seoul and Pusan and improving accessibility to the North and South Cholla provinces. Simultaneously, the government is seeking to mitigate the Cholla provinces' alienation from the country's booming economy and to capitalize on South Korea's new geopolitical position brought about by China's 'open door' policy.

In 1988 the Prime Minister's Office established the Standing Committee for West Coast Development. Its main strategy has been to designate six areas for capital-intensive agricultural, industrial and high-technology development (Figure 2). Connections between existing coastal and inland urban centres were to be upgraded to create two agglomerations — the Kunsan-Iri-Chŏnju-Ch'ŏngju T-shaped Axis and the Kwangju-Naju-Mokpo Axis — in a bid to provide higher-level central management services. These attempts to redress this imbalance, and to capitalize on cheap industrial land in the Cholla provinces and the opportunities of trade with China, have sent land prices skyrocketing.

(Bring in Figure 2)

The problems associated with South Korea's regional structure have been compounded by the political power structure of the Korean government. President Park Chung-hee drew heavily upon the Kyŏngsang provinces for army officers and high-ranking bureaucrats. Reinforced by educational and social ties in Taegu, this preferment was intensified by the heads of nine of the top twenty chabŏl families coming from Kyŏngsang. Drawing on government privileges available for export activities since the early 1960s — unlimited imports and preferential loans from foreign banks — economic power has been highly concentrated on a few chabŏls headed by Kyŏngsang (or Taegu) families. In turn, this web of influence, was heightened by the recruitment of ex-officers into corporations and government (including Cabinet). These regional antagonisms stemming from the regional political structure were further aggravated by the realignment of the former opposition leaders, Kim Young-sam (from the southeast) and Kim Jong-pil (from the Ch'ungch'ŏng provinces), with the ruling Liberal Party under Roh Tae-woo.

Northwest-southeast axis, 1990s. A fresh set of directions for tackling the perennial problems of regional disparities including the overconcentration of economic activities in Seoul with its attendant infrastructure deficiencies and environmental problems. These were embodied in the Third Comprehensive National Land Development Plan, 1992-2001
(Figure 3). Constraints have been imposed on the location and expansion of manufacturing activities in the Seoul Metropolitan Area. A new north-east-southwest axis is proposed to create more balanced regional development (though most activity is likely to be concentrated in the central and southwestern parts of the axis). Simultaneously, existing industrial zones in the southern will be restructured through R&D and the promotion of high-tech industries. Following the implementation of local autonomy in 1995 local governments are likely to take a more active role in regional development.

(Bring in Figure 3)

Another new feature is the incorporation of plans for the development and management of the demilitarised zone between North and South Korea. Although the timing and method of unification is uncertain a new set of regional planning ideas will have to be entertained when it is agreed. Clearly, the South is the industrial base while the North has rich mineral and energy resources.

Already trade relations have been established. These are likely to intensify given the North's need for food and consumer goods and the South's requirement for cheap and plentiful labour. As the German experience has highlighted, the costs of merging the two separate societies will be great. North Korea's population is larger relative to South Korea compared with East Germany and West Germany; North Korea's economy and infrastructure is in worse shape that East Germany; South Korea's per capita income is less than half that of West Germany; and the two Koreas have had little contact since 1948. If unification proceeds, the reconnection of severed transport arteries between the North and South will give the new Korean Commonwealth the opportunity to capitalise on its geopolitical position.

Research Centre for Ocean Industrial Development (RCOID)

With its location in the National Fisheries University of Pusan, RCOID was founded in 1990 as a non-profit, non-governmental institute. Today, with support from the Korea Science and Engineering Foundation, RCOID works to develop technologies to improve coastal fishing grounds, as well as fish and shellfish farming operations around the Korean Peninsula. In particular, it aims to provide unified and systematic research in the areas of fisheries, oceanography, aquaculture and marine environment. The Research Centre offers a training program in aquaculture and fishing technology.

Research Centre of Technology and Industrial Manpower (RCTIM)

Located in the city of Ch'ŏnan in South Ch'ungch'ŏng Province, RCTIM is a government organisation conducting research and training programs in the fields of vocational training, national technical qualifications and human resource utilisation. RCTIM also works to promote domestic and international cooperation on research projects.

Research Institute of Industrial Science and Technology
Founded as the Pohang Iron and Steel Company’s Technical Research Laboratory in 1977, RIST acquired its present title in 1987. By the end of 1994, more than 2,000 projects had been completed or were under way. In 1995, the Institute was granted KOLAS (Korea Laboratory Accreditation Scheme) accreditation. Present-day research is in environmental and industrial fields, including iron and steel-making, advanced materials, and automation.

Rhee Syngman (1875-1965)

Syngman Rhee (Yi Sŭngman) was an independence fighter, politician and the first president of the Republic of Korea. His family’s ancestral home is in Chŏnju, his given name was Sŭngnyong and his pen name was Unam. Rhee was born in P'yŏngsan of Hwanghae Province and was the son of Yi Kyŏngsŏn. When Rhee was nine years old he was stricken with smallpox that blinded him. His family tried many traditional cures but with no success. At last Rhee’s father took him to Horace Allen, a doctor and Presbyterian minister, who cured the boy within a few days. This is said to have sparked Rhee’s interest in the West. In 1894 he entered Paejae Academy and in the next year became an English teacher at the Academy.

It was during Rhee’s time at Paejae Academy that he met Sŏ Chaep’’il (1866-1951) who had studied in America. Sŏ formed the Hyŏpsŏnhoe, which would later become the Independence Club (Tongnip Hyŏphoe), which sought to bring about enlightenment and reform to Chosŏn. Rhee was very active in the Independence Club and this eventually resulted in his being arrested for anti-Japanese activities that caused him to be incarcerated from 1898 to 1904. During his imprisonment, Rhee was subjected to all types of torture and abuse from the Japanese and this certainly played a major part in his lifelong distrust of the Japanese.

After being released from prison, Rhee travelled to the United States where he attended George Washington University in 1905. After graduating in 1907 he entered Harvard University where he received his Master’s Degree in 1908. He then entered Princeton University to pursue his doctorate. After the completion of his dissertation he graduated in 1910, making him the first Korean to receive a PhD from an American university. 1910 is also the year in which Japan officially colonised Korea, and when Rhee returned to Korea in the following year he began his anti-Japanese activities. In 1912 he was implicated in the so-called ‘Case of the Imprisoned One Hundred Five’ (paegoin sakkŏn) and in order to escape imprisonment, he fled to the United States with the help of an American missionary.

Rhee travelled to Hawaii where he operated the Korean Academy (Hanin Hagwŏn) and also launched the Han’guk t’aep’yŏngyang (Korean Pacific) in 1914 and the monthly magazine, T’aep’yŏngyang (Pacific), which continued publication until 1939. Rhee remained active in the United States throughout the Japanese occupation lobbying for the support of the United States. He was elected president, in absentia, of the Korean Provisional Government (Taehan Min’guk Imshi Chŏngbu) formed in Shanghai in 1919 and retained this position for nearly twenty years before losing it to reformers in Shanghai. However, the greatest part of Rhee’s energies were devoted to his lobbying efforts in the United States, and this is where his greatest import was.

At the conclusion of World War II and Korea’s liberation from Japan, Rhee returned to his homeland in October 1945, and was promptly selected as chairman of the Korean Provisional Government (KPR). The KPR was largely responsible for the dismantling of the Japanese colonial apparatus throughout the southern parts of Korea. This was a group that was participated in by many different factions and encompassed a broad spectrum of political ideologies.
Rhee’s ability to speak English fluently and the fact that the Americans knew of him played a major role in his rise to power in post-liberation Korea. He was staunchly anti-Communist and it is perhaps this quality that enabled him to become the favourite of the conservative forces that were present in Korea at the time. Rhee’s chief rival, Kim Ku (1876-1949), sought a middle ground that preferred the incorporation of groups from both the right and the left into the Korean government, while Rhee was against not only the communists but also any group that showed a willingness to work with the communists. At the time the commander of the United States of America Military Government in Korea (USAMGIK), General John R. Hodge, needed to put the support of the United States behind a candidate who would garner the greatest support. Accordingly, despite his personal dislike of Rhee, he came to acknowledge the popularity of Rhee who thus became the front runner for taking power in Korea.

With the failure of the United Nations (UN) to convince the Soviet Union to allow general elections throughout the Korean peninsula, South-only elections were held in May 1948. At this time Rhee was seventy-three years old and his political behaviour is more easily compared with that of a late Chosön period king than of his Princeton University professor, Woodrow Wilson. Rhee’s ambition for personal power is seen in the political system that he was forced to accept in order to continue to receive support from the Americans and resulted in his accepting an elective democracy with constitutional safeguards against unchecked executive power. However, once Rhee assumed power he quickly moved to emasculate this system in order to strengthen his grip on power.

A key tool that Rhee utilised for acquiring additional power was the National Security Law (NSL) that was passed by the National Assembly in 1948. This law was in theory to be used in cases of national emergency, but in fact Rhee wielded it as a club to bludgeon any opponent who dared to challenge his power. During the Korean War and after, Rhee carried out systematic purges of the government ranks to strengthen his grip on power. He also used the NSL to intimidate the National Assembly to pass laws that increased his power. In 1952 when he was up for reelection he used the threat of the NSL to coerce the National Assembly into allowing a popular vote for the election of the president. The assembly-men who opposed this law were simply incarcerated by Rhee until after the vote was taken, thereby ensuring the passage of the law and tactically his reelection to a second term.

In 1954 Rhee again altered the Constitution to allow for a special exemption to the two-term limit for the president of the Republic. At this time he formed his own political party, the Liberal Party (Chayu Tang), which was a group of opportunists who were loyal only to Rhee and their own desire for power. After the formation of the Liberal Party, the National Assembly became little more than a rubber stamp operation for Rhee’s political whims. Moreover, virtually all of his political opponents had been eliminated. Some such as Kim Ku were assassinated, probably with Rhee’s involvement, while others such as Kim Kyushik had been kidnapped by the North during the War. Others had died from illness and the balance were arrested for violations of the NSL. Therefore little stood in Rhee’s way and he was elected for a fourth term as president in the March 1960 elections. His desire for complete power and total disregard for the democratic process in this election brought about his downfall.

For the 1960 elections Rhee chose Yi Kibung as his vice-president and ensured the success of his ticket by committing wide-scale election fraud. The reaction to the fraudulent election was overwhelming as students throughout the country rose up in protest at the virtual dictatorship of Rhee. The outbreak of the April Student Revolution, which was eventually joined by the general Korean population, caused demands for the resignation of Rhee to grow. At this time US policy towards Korea shifted from toleration of Rhee’s tactics to public condemnation of the regime. Moreover, the demonstration by 300 university
professors for Rhee’s resignation revealed that the upper class of Korea was also demanding a change. The final element that contributed to the resignation of Rhee was the refusal of the Martial Law Commander, General Song Yoch'an, to fire upon demonstrators. Thus, Rhee’s power had been stripped, and on April 26 Rhee resigned.

After resigning from office Rhee, and his wife Francesca Donner, returned to Hawaii where Rhee died in 1965. Rhee is remembered not only for his independence activities, but also his staunch opposition to the communist regime in the North. In this aspect, and his dogmatic quest for unification of the peninsula by force, he well represented the ideology of the conservative Cold War forces of the right, which also gained much strength after the conclusion of World War II. While Rhee was far from a democratic president of the South, he did institute policies that saw educational opportunity become widespread and the literacy rate of the South nearly triple in the fifteen years after liberation. This increase in education, ironically, helped bring about his downfall, as the students demanded a change to a truly democratic system.

Roh Tae-woo (1932- )

Roh Tae-woo (No T’aeu) is a soldier, politician and former president of the Republic of Korea. Roh was born near Taegu in Kyongsang Province and after liberation he was sent to the prestigious Kyongbuk High School where he made political connections that would follow him for the rest of his life. It was at this time that he met Chun Doo Hwan (Ch’ŏn Tuhwan) who would become his close friend and political ally. When the Korean War broke out, Roh joined the army and later was admitted to the Korean Military Academy along with Chun. The two men were in the infamous eleventh class of the Academy that was the first to complete the full four-year program.

Roh served in various capacities in the military forces even travelled to Fort Bragg in the United States for special training. In addition in Vietnam he was promoted to commander of a battalion in the famous Tiger Division that served with great distinction in that conflict. After returning to Korea, Roh continued to work his way up the ladder of the military hierarchy and by 1979 was a Major General in command of the Ninth Division. It was also at this time that President Park Chung Hee (Pak Chŏnghŭi) was assassinated, throwing the once stable nation into a period of turmoil.

After the death of Park, Choi Kyu Hah (Ch’oe Kyuha) became acting president and promised to implement democratic reforms. Choi was elected president by the National Council for Unification (NCU) and stated that there would be a constitutional referendum within a year. However, instead of political reform there emerged a fierce power struggle between various political players of the day, namely Choi, Kim Young Sam (Kim Yŏngsam), Kim Jong Pil (Kim Chongp’il) and Kim Dae Jung (Kim Taejung), for control of Korea’s destiny. It was at this time that certain elements in the military forces, namely Chun, Roh and Major-General Chŏng Hoyong began to plan their seizure of the government. Their taking of power was prolonged over ten months and entailed three phases.

First, the trio plotted a mutiny within the army itself to gain control. Over the evening of December 12-13 (the 12-12 Incident), Chun, Roh and Chŏng carried out a bloody insurrection that enabled them to seize control of the military forces. Roh’s Ninth Division guarded the approaches to Seoul and occupied strategic positions throughout the city and after a seven-hour battle at the ROK Army Headquarters and the adjacent Ministry of Defence, the army was subdued. Yi Hŭisŏng was appointed as Army Chief of Staff and Martial Law Commander, Roh was the head of the Capital Garrison Command and Chŏng was charged with the Special Forces. Chun next took control of the Korean Central intelligence Agency (KCIA), which triggered massive protests throughout the nation. After this martial law was extended and the National Assembly was dissolved, paving the way for Chun to take the reigns of government. It was at this time that the Kwangju Massacre occurred in which military forces harshly suppressed an uprising against Chun. Shortly thereafter, Chun took control of the government with his election as president.

For Roh’s role in helping his friend Chun illegally seize power, he was appointed head of the Defence Security Command and was promoted to a four-star general. He retired from the army in 1981, and entered politics and held key posts in the Chun administration. In 1981 he was appointed Minister of Political Affairs and later was named the head of the Seoul Olympic Organising Committee. By 1985 he was the head of the ruling Democratic
Justice Party (DJP) and was clearly the heir to Chun. In 1987 massive demonstrations by broad segments of Korean society were commonplace, as the people had grown weary of the Chun regime. Therefore with the announcement of elections in 1987 the opposition parties rallied against the Chun regime, but Roh deflated their protests by announcing an eight-point program on June 29 that promised direct presidential elections, broad human rights guarantees, and the restoration of Kim Dae Jung's political rights. Chun approved this and Korea readied herself for presidential elections.

Roh narrowly won the presidential election on December 17, 1987 with 36.9 percent of the vote. The opposition was unable to compromise and put forth a single candidate and this resulted in Roh continuing the legacy of military rulers in South Korea. Roh proved to be a much gentler president than his friend Chun and his Sixth Republic brought about many changes to the face of Korea. Democratic rights were greatly enhanced under Roh and in addition his so-called 'Northern Policy' made great headway in the development of relations with both the Soviet Union (later the Russian Federation) and the People's Republic of China. In this light Roh can be seen as an excellent diplomat who helped ease the Cold War tensions that had gripped the Korean peninsula for four decades.

Roh also peacefully stepped aside at the end of his term and allowed the South Korean government to be turned over to the first true civilian leader since the early 1960s. However, the very reforms that Roh brought about came back to haunt him. In September 1995, Roh admitted to public prosecutors that he had received 'kickbacks' from the heads of the large business conglomerates during his term in office. In addition the South Korean government conducted an investigation into the illegal seizure of power by Chun and Roh in December 1980 and the subsequent Kwangju Massacre in the following year. As a result, Roh faced the death sentence but due to leniency on the part of the prosecutors, he was only sentenced to life in prison.

Roh is chiefly remembered for the great amount of wealth that he accumulated during his rule and for his role in the bloody events that followed the death of Park Chung Hee. However, it should be remembered that he brought about many events that have helped Korea become a stronger nation. Without the democratic reforms that Roh initiated, his own prosecution would never have been possible. Moreover, during his term the economy of Korea reached new peaks and relations with the Soviet Union and the PRC were improved, which served to greatly improve the international situation surrounding Korea. Furthermore, these reforms helped put pressure on North Korea to enter into diplomatic relations with other nations, somewhat altering its isolated stance. Finally, it was on Roh's watch that South Korea successfully hosted the 1988 Summer Olympics, which garnered much positive publicity for Korea.

Ross, John [United Kingdom and Korea]

Russia and Korea

Early relations

The first contacts between Russia and Korea can be traced to mid-17 c., when the Russians appeared on the Pacific Coast. At that time, Korean merchants made sporadic deals with Russians. Korean riflemen (100 in 1654 and 200 in 1655) were sent at the request of Beijing to fight in the ranks of the Chinese army against Russians during the Albazin conflict. In the 17th and 18th cc., Russian officials and missionaries in China sometimes met members of the Korean missions to Beijing. However, until the mid-1860s all these contacts were episodic events and had no serious consequences. The real Russo-Korean
relations began only in the 1860s when, according to the Aigun Treaty of 1858 and the Beijing Treaty of 1861, Russia established her control over the lower River Amur region (Manchuria) and thus appeared on the Korean border.

The period of establishment 1861-1894.

The Russian local authorities in the Far East established connections with their Korean counterparts as early as 1861, when the border line was demarcated, but until 1884 these contacts were mostly connected with border problems and ever-increasing Korean emigration to Russia. The Russo-Korean trade was mostly local and its scale was much less than the scale of Korean trade with Western countries and Japan. Cloth was the main import, cattle the main export. The trade was conducted by Korean merchants, with the role of the Russians being insignificant.

After the opening of Korea in 1876, when Korea signed treaties with Japan and the western powers, Russia also took some steps to penetrate to Korea. On 7 July 1884, the Treaty of Amity and Commerce was signed in Seoul. The Treaty was mainly modelled upon the Korean-British Treaty of 1884 because Russia wanted to get advantages in Korea at least comparable with those its main rival already had. The Treaty declared Pusan and Inch'on as ports open for Russian trade. Russia also obtained the status of a most favoured nation. These regulations were secured in 1888 by the Convention of Land Trade.

In the 1870-80s the Russian Naval Command was in urgent need of an ice-free base on the Far East coast and several times studied the possibility of occupying a suitable Korean port. These projects were only discussed, however, and not really supported in government circles. Generally speaking, in the 1860-1880s period, Russian diplomacy did not aspire to establish domination in Korea. It was absolutely unrealistic since there seemed to be no military or economical potential in this distant region. The main goal of Russian policy in Korea was to ensure its neutrality and thus to counteract Chinese and British influence. Such an approach was demonstrated during the Kōmundo Incident. On 15 April 1885, British warships occupied the Korean island of Kōmundo to control the main Russian navigational route on the eve of possible war. Russia began to prepare corresponding measures (the occupation of a Korean port or the establishment of a Russian protectorate were discussed). However, as soon as Britain withdraw her troops in 1887 these projects were also abandoned.

Russia in search for domination, 1894-1904.

At the beginning of the 1890s, Russian policy in Korea changed considerably. This was the time when the Far East instead of the Near East became the main object of Russian colonial expansion. This reorientation became possible after the construction of the Trans-Siberian Railway had begun in 1891.

After the Sino-Japanese War of 1894-1895, Korea and Manchuria become the main object of Russian claims. This resulted in rivalry with Japan, which Korean patriots tried to exploit to attempt to secure Korea. In the 1894-1904 period, Russia was the main force standing in the way of the increasing Japanese expansion on the Peninsula. Russia was especially popular among the conservatives, including King Kojong himself.

The Russian influence grew gradually from 1891, but it increased dramatically in 1895, when King Kojong, who after the assassination of Queen Min in October 1894, and who had been placed under full Japanese control, suddenly escaped from his palace to the Russian legation. For 375 days he ruled the country from this asylum. A new government consisting mostly of pro-Russian statesmen was formed. This incident marked the beginning of Russian domination in Korea. It was recognized by the Japanese in a special
Russo-Japanese memorandum (Seoul, 14 May 1896) and in the Moscow Protocol (Lobanov-Yamagata Agreement, 9 June 1896).

In Spring 1896, a special envoy, Min Yonghwan was sent to Petersburg and Moscow to attend the coronation of Nicholas II and to seek military and financial aid. He returned to Korea in October with numerous promises from the Russian government and the first group of military advisers (Colonel D.Putiatu, with 13 officers and sergeants). For a year these advisers trained a special battalion of king's guards as well as a few dozen officers and senior NCOs. On 5 November 1897, K. Alekseev, a former official from the Russian Ministry of Finance, was appointed as the main financial adviser of the Korean government and Commissioner of the Korean Maritime Customs Service (the latter post was not really occupied by him as the existing Commissioner, an Englishman, Brown, refused to retire). In December 1897 the Russo-Korean bank was established to promote Russian economical penetration into Korea.

However, increasing Russian expansionism disturbed Korean nationalists, who, not without foundation, thought it may be dangerous for Korean independence. The Independence Club launched an active campaign against Russian advisers and concessions. A new minister, A. de Speyer who replaced the clever and tactful K.Waeb in September, 1897, also contributed to a decline in Russian influence. In Spring 1898, Kojong, being pressed by both public opinion and Japanese diplomacy, had no option but to dismiss Russian military and financial advisers. The Russo-Korean Bank also had to cease operations only a few months after its beginning (it was formally liquidated in 1901). Yet Kojong and the bulk of Korean conservatives retained their pro-Russian orientation.

The decline of Russian influence in Korea was confirmed by the Tokyo Protocol (Rosen-Nishi Agreement, 25 April 1898). According to the Protocol, Russia and Japan agreed not to appoint advisers to Korea. Russia, practically, recognized the Japanese dominative role on the Peninsula.

One of the main reasons of Russian failure in Korea in the 1890s was economic weakness. The scale of Russian trade with Korea was approximately 30-40 times less than Japanese-Korean trade. Thus, searching for ways to increase their influence, Russian authorities after 1894 had actively supported Russian business in Korea. The mining concession of M. Nishchensky and Bryner's timber concession were the biggest Russian projects. However, both projects were economically fruitless.

In the early 1900s, an increasing role in the Russian government was played by the so-called Bezobrazov group. It consisted of court aristocrats who dreamed about more aggressive imperialist policy in Manchuria and Korea. Between 1900-1904 this group, having good personal contacts with the Tsar, bypassed S.Witte and other moderate politicians and succeeded in establishing full control over policy in the Far East.

In 1903, the Bezobrazov group used some economic projects (mainly Bryner's concession) as a tool to cover a military presence in Korea. At the same time, Russia tried to establish a naval base in Yong-amp'o. All these steps resulted in conflict with Japan, which aspired to make Korea its colony. Attempts to solve the conflict peacefully failed and open confrontation become inevitable. War began in February 1904 and Russia was defeated.

**Russian withdrawal from Korea, 1904-1921.**

After the disastrous Russo-Japanese war Russia was swept out of Korean politics. Until 1911, Russian local authorities in the Far East, in spite of the central government's pro-Japanese orientation, sometimes supported guerrillas and anti-Japanese emigration. Such conduct was forbidden by the Russo-Japanese Treaty of 1911, but the local administration was not too active in observing these restrictions. The Annexation of Korea, World War
and Russian Civil War, however, stopped political contacts of two countries.

Inter-war period, 1921-1945.

Russian policy in Korea in the 1920-1930s was also passive. Its main goal was to create and strengthen the Communist movement and to use the Korean independence movement to weaken Japan - the main Russian enemy in the Far East. In the 1920s, Russia promoted the unification of small, rival left-wing groups into the Korean Communist Party (1925). These attempts were not especially successful since the new-born Party was dissolved by a special decision of the Komintern in 1928 because of endless factional struggle. Many Korean communists lived in Russia and some of them later become victims of Stalin's purges. In the 1930s, Russia supported the Korean guerrillas in Manchuria.

A. Lankov

Soviet-Korean and Russo-Korean Relations 1945-1993

Loyal to the promises given to the Allied powers, the USSR entered the war against Japan on 9 August 1945. Korea was thus liberated from her colonial yoke; a result of the allies' joint war effort against the Japanese aggression. In Korea proper only the Soviet army was fighting and its 25th Army, which operated there under Colonel-General I. Chistyakov, suffered heavy losses, in Korea itself and on the way to it. More than 4 700 soldiers were killed or severely wounded. The Pacific Fleet and the Air Force of the USSR also had losses. The US Army landed in Korea with no significant troop losses on 8 August 1945.

Marshall Stalin's directive of 20 September 1945 stated that, 'The Soviet Army entered North Korea in order to defeat the Japanese invaders and has neither the purpose of establishing Soviet order in Korea nor that of acquiring the Korean territory'. Nevertheless, the emerging 'Cold War' quickly told on the policies of the USSR and the USA in Korea. Soviet and American troops remained in the territories of their respective occupation being to the north and south of the 38th Parallel which was the dividing line between them, after the task of accepting the Japanese capitulation was fulfilled. Military powers spared no efforts to establish the influence of their respective countries and to help the formation of the friendly regimes in their zones of occupation.

In the north of Korea the Board of Soviet Civil Administration was established, headed by General A. Romanenko and from 1947 - General N. Lebedev. Provincial affairs were supervised by the advisers drawn from the ranks of highly-positioned political officers from the divisions stationed at a given place. There were 113 military headquarters in the towns and larger villages. This system of the Soviet military administration was supposed to rule North Korea and to provide for all sides of the people's lives, including leisure and work. The general supervision of the Soviet policies in Korea was entrusted to Colonel-General T. Shtykov. From the first days of liberation, throughout Korea democratic organs of local self-government were emerging. Unlike the US administration which ignored and gradually wiped them off, (in the South), the Soviet Command in the North immediately recognized the People's Committees and widened their participation in supervising economic and cultural life. In October 1945, the representatives of the People's Committees from all five provinces of North Korea met in P'yŏngyang to determine a general structure and set urgent tasks of the newly-born bodies of power. The necessities of further centralization and improvement of the administrative system led to the establishing of the Administrative Bureau of the Five Provinces (November 1945) under which 10 departments were formed to supervise over different branches of the economy, culture, and social order. Only Koreans worked there while Soviet specialists were their advisers.

In these administrative bodies the nationalist leaders at first prevailed, with the well-known political figure of Cho Manshik, at the head. Soviet military bodies helped the Communists to squeeze them out. Favourable circumstances for this appeared when the guerrillas of Kim
II-sung, who spent several years in the Soviet Far East, and the participants of the anti-Japanese struggle headed by Kim Tubong, along with a big group of Koreans, party and economic officials from the USSR, arrived in Korea. On 10 October 1945, the North Korean Organizing Bureau of the Korean Communist Party was established, which occupied a foremost position in the political system emerging in the North. Two months later, Kim II Sung occupied the leading position in this body, with the support of the Soviet administration. In August 1946, through the merger of the Communist and New People's Party (leader Kim Tubong) the Korean Workers' Party was formed, which remains as a major force in North Korea today.

After the liberation, out of 1,034 large and medium-sized industrial plants, 1,015 were moribund. Transport and communication systems were ruined, and the supply of foodstuffs and other goods deteriorated. Soviet administration along with the People's Committees spared no efforts to revitalize the economy. In November 1945, the Command of the 25th Army helped in putting some of the factories into operation, offering trophy materials and equipment, financial support, transportation, food and specialists. By mid-1946, 228 factories had resumed work, to be followed by others. The railway regiment sent by the USSR revived the North Korean railway system. Efforts were taken to educate the national cadres, to organize trade and to prevent epidemics.

At the same time in North Korea (like in the South) a military-police apparatus was being formed -- people's police and security organs were established; with defence squads stationed along the seashore and near the 38th Parallel. For the national cadres of the army, the P'yongyang School was opened in November 1945, and the Central School of Security Workers in July 1946. The Soviet Army appointed teachers and supplied these schools with trophy and Soviet-made armaments, barracks and munitions. With the help of the Soviet Army, police and security forces suppressed, at the end of 1945 several civil disturbances by protestors against economic hardship and the emerging political system of the North.

In Moscow, in December 1945, Foreign Ministers of the USA, USSR and UK met, to discuss the Korean problem and other important matters. The United States delegation proposed a draft resolution suggesting a long (five to ten years) trusteeship over Korea. According to this plan the country was to be ruled at the first stage by the joint military administration headed by the army commanders from the USA and the USSR. After that the administration was to be entrusted to the joint rule of the four nations (USA, USSR, UK and China), with the participation of Koreans only as advisers. After prolonged discussion the Soviet draft was accepted, which supposed that the International Trusteeship over Korea (understood as a system of measures aimed at assisting Korea's progress and building an independent statehood) was limited by the period of 5 years, and with the formation of the Korean democratic government declared a top priority. A joint commission uniting the representatives of the USA and USSR military commands, was to prepare recommendations for the formation of the government on the basis of consultations with the Korean democratic parties and public organizations and with the help of this government to work out proposals for the future agreement of the four powers on the trusteeship.

The decision of the Moscow meeting played a tragic role in the fate of Korea. It ignored the fact that Korea had a centuries-old tradition of statehood, that its people were just fresh from the Japanese colonial yoke and that they reacted very painfully to every possibility of further foreign domination. The trusteeship was looked upon by many people as a protectorate similar to the one forced upon Korea by Japan in 1905. The attitude towards the trusteeship counterposed the national political forces and sharpened the struggle between them which to a great extent predestined the split of Korea.

In the North the Communists and allied organizations favoured the decisions of the Moscow meeting and supported all Soviet steps aimed at their realization. But Cho Nan-
shik and his followers openly opposed these decisions. As a result Cho Manshik was placed under house arrest and soon disappeared from the political scene. His Democratic party changed leadership and offered loyalty to both Soviet administration and Communist Party.

The situation thus changed allowed definite steps to be carved in the formation of North Korean statehood. In February 1946, the Provisional People's Committee of North Korea was established as a central organ of power with Kim Il Sung as its head. During 1946 agrarian reforms which wiped out landlords' rights, together with the nationalization of industry, communications and banks were implemented, labour laws and other important statutes were passed. Elections of candidates for the local People's Committees were held in November 1946 and February 1947. The Congress of these local elected bodies (February 1947) formed the People's Assembly of North Korea under the chairmanship of Kim Tubong, and its executive body -- the People's Committee of North Korea, headed by Kim Il Sung. At the same time the economic development plan for 1947 was formulated. In essence, each and all of these measures enforced North Korea's transition to Soviet-style socialism.

In cognizance of the fact that North Korea was under Soviet military control, all significant steps of the government were undertaken only with the approval of Moscow. Soviet specialists consulted the preparation of all necessary documents, participated in their realization and helped to solve concrete problems of Korean factories and offices, sharing their experience with the Koreans. In October 1946, the Soviet Command handed-over to the Korean government the industrial and mining enterprises, power stations, banks and means of communications which had formerly belonged to the Japanese state, as well as to private owners. Trade was developing between Korea and the USSR. With Soviet assistance, P'yŏngyang University opened in 1946 and a network of cultural and educational bodies emerged. From 1946, Korean specialists of high and medium qualification level were studying in the USSR, with fifty per cent of the cost met by the latter. Also, the Soviet Red Cross opened seventeen fully-equipped hospitals in North Korea and sent four sanitary-epidemiological groups.

From 16 January -- 5 February 1946, representatives of the Soviet and American military administrations met in Seoul to try to resolve urgent economic and administrative problems. The sides failed to reach agreement, hence the natural economic links between the industrial North and the agrarian South were severed and the aspirations of the Koreans to get rid of the 38th Parallel border, which was becoming more and more impenetrable, diminished.

Further rift between the Soviet and American position was connected with the activities of the Joint Soviet-American Commission on Korea which was supposed to prepare the way for the formation of the Provisional Democratic government in Korea. The commission's meetings in March-May 1946, and in May-September 1947, resulted only in discussions on the criteria of the estimate and number of the democratic parties and organizations which were to participate in consultations on the future government. The Soviet side opposed the participation of all those who were against the trusteeship, which meant that practically all right-wing parties were denied participation in the consultations. The uncompromising position of the sides disrupted the work of the Joint commission, which helped only to aggravate the political differences in Korea.

The impossibility of fulfilling the decisions of the Moscow meeting brought about new initiatives which changed the Korean situation drastically. On 17 September 1947, the USA informed the USSR about its decision to hand the Korean question to the United Nations (UN) for consideration. Opposing this, the USSR made a counter-suggestion. This was to pull out all foreign troops simultaneously from the North and South and to allow the people of Korea independently to form their own government. The Socialist forces of Korea
approved this plan and declared themselves ready to guarantee civil peace if the foreign
trops were withdrawn. But right-wing forces, with Rhee Syngman at the head, who had
previously insisted upon the withdrawal, now opposed it on the grounds that South Korea
would be unable to maintain its security.

Despite Soviet opposition, the UN put the Korean question on the agenda. Having refused
to support the Soviet troop withdrawal proposals, the UN (following the American
initiative) formed a Provisional Commission on Korea which was supposed to organize
elections to the National Assembly in both parts of Korea and thereby establish the
government of Korea. This Commission was ignored by both Soviet and North Korean
sides, and was thus blocked from fulfilling its tasks in the North. On the rebound, and
when the UN had given its approval, the Commission decided to hold the elections, but
only in South Korea, on or before 10 May 1948.

The USSR and North Korea rejected this latest decision of the Provisional commission.
Left forces and even some rightist leaders of the South also opposed it. They insisted (and
were proved correct) that separate elections would bring about the split of the country.
Faced with such a calamity, all supporters of the country’s unity cast aside partisan
discussions and tried combining their efforts. From 20-25 April 1948 a united conference
of fifty-six parties and organizations from North and South was held in P’yŏngyang,
which called for the boycott of the separate elections, and for the withdrawal of the UN
Commission and all foreign troops from Korea in order to allow the Koreans to organize
free elections. The USSR supported this program. But it was too late: on 10 May 1948,
elections were held in the South and on 15 August, the Republic of Korea (ROK) was
founded.

At the same time, North Korean statehood was established. In all spheres of this process,
be it Constitution or the formation of the Korean People’s Army (KPA) North Korea was
assisted by the USSR. On 9 September 1948 the session of the Supreme People’s
Assembly declared the establishment of the Democratic People’s Republic of Korea
(DPRK).

The ROK and the DPRK refused to recognize each other and both claimed supremacy. On
12 October 1948, the Soviet government informed Kim Il Sung that it was ready to
establish diplomatic relations with the DPRK, and at the beginning of 1949 the two
countries exchanged ambassadors. By the end of 1948, the USSR, at the request of the
DPRK, withdrew its armed forces from Korea. The USSR refused to recognize the ROK
and for the next forty years ignored its very existence.

In March 1949, Mowcow was visited by Kim Il Sung as the head of the DPRK’s state
delegation, and economic and cultural agreements, as well as some auxiliary documents,
were signed by Soviet and Korean leaders (17th March 1949). Kim Il Sung had talks with
Stalin and other leaders of the USSR, when the Korean problem was actively discussed -
as well as the means of solving it, including, supposedly, the use of force. Some
information about the secret talks on this matter between Stalin and Kim Il Sung has come
to light, but which is not yet verified by documents.

Both Korean states made quick preparation for uniting the country by military means, each
aspiring to do so under its aegis and with the help of its respective allies. The DPRK and
the USSR seemed to be the more active in this regard, since by June 1950 the KPA
substantially outnumbered the South Korean army and airforce (1.4 x personnel; 1.5 x
artillery and heavy mortars; 8 x tanks and 4 x aircraft). Rhee Syngman, never tired of
threatening the North, assured everyone that the people there were ready to rise against the
Communists. In his turn, Kim Il Sung repeatedly talked about ‘liquidation of the
treachery Rhee Syngman clique’, expressing his full conviction that the people in the
South would rise against the government and its American patrons.
From 1949 through the first half of 1950 there were many conflicts on the 38th Parallel, with increasing-scale operations launched by both sides. There is a suggestion that one such conflict, inspired by the South (25 June 1950) transgressed into full-blown war. Accepting the fluid situation that existed on the 38th Parallel, one cannot deny the opinion of those scholars who say that this day Korea saw the transition not from peace to war, but from limited engagement to total war. The USSR immediately backed the DPRK and declared the ROK and those who stood behind it responsible for the war. At the end of June 1950 and the beginning of July, during the period most crucial for peace in Korea, the USSR, fighting for the spokesperson of the People’s China to occupy the seat of the representative of Nationalist China in the UN, boycotted the deliberations of the UN Security Council. Its action in so doing, allowed the USA and its allies to pass through the Security Council a resolution declaring the DPRK as the aggressor, urging all UN members to support the ROK and to commit their troops to the UN United Command, where American representatives were at the head. Thus, the short-sighted and non-effective step of the Soviet government (the Soviet delegation returned to the Security Council soon after) helped to transform the contained civil war in Korea into a dangerous international conflict.

The development of military activities, at first successful for the DPRK, got an opposite turn by the counter-attack of the UN forces with the simultaneous landing operation at Inchon behind KPA lines. The KPA suffered heavy losses and retreated. In some places the UN forces reached the Sino-Korean border and came close to the Soviet border. P’yongyang was occupied by UN forces. In case of further deterioration of the situation, the USSR held ready to send five tank divisions into the DPRK. Intensive talks were held with Peking (Beijing) and as a result, on 25 October 1950, an army of Chinese volunteers crossed the Korean border. Together with the reformed KPA they succeeded in ejecting the UN forces from the DPRK, and the front stabilized for some time along the 38th Parallel.

The USSR was offering the DPRK all kinds of help. KPA and Chinese volunteers got tanks, aircraft, guns, munitions and transport from the USSR. Soviet military advisers worked in headquarters and in front-line units. Because China was being frequently bombed by the US air force, the Soviet air corps was despatched to China, from where it shielded Korea, including P’yongyang, supported by Soviet anti-aircraft units. These caused heavy losses to US aircraft though the USSR was not a declared participant in the war, over three-hundred Soviet officers and other ranks died in it.

Apart from military assistance, the DPRK received from the USSR fuel and chemical goods, many types of machines and equipment, foodstuffs, drugs and other commodities. In Spring 1952, when the DPRK suffered severe food shortages, on the order of Stalin fifty-thousand tonnes of wheat flour was despatched with priority, ‘As a gift to the Korean people’. In the DPRK, a huge Soviet hospital was established and an anti-epidemic group worked; with Soviet doctors deployed in Korean hospitals. Thousands of Soviet specialists helped to reconstruct North Korean cities and factories; and some personnel fell victim to US bombing raids.

Together with its allies, the USSR unleashed an active propaganda campaign in support of the DPRK, using the UN rostrum and other international forums. The protracted character of the war -- the threat of escalating it to a world atomic conflict, - helped to spread in many countries, including those who fought against the DPRK, a mass movement, initiated by the Soviet public, for stopping the war in Korea and the total withdrawal of all foreign troops from there.

In such an atmosphere, on 23 June 1951, Mr Y. Malik, the Soviet spokesman in the UN security Council, addressed the UN and the world by radio. He called for a peaceful solution of the Korean problem, proposing as a first step a cease-fire and armistice with both sides pulling their troops back from the 38th Parallel. His plea was heard, even though the fighting continued. Talks began on 1 July 1951, and against the background of ongoing
hostilities, with changing fortunes for both sides, the talks continued for two years. An agreement was finally signed on 27 July 1953 for an armistice in Korea, which still exists in the absence of a comprehensive peace treaty.

The three years of war brought great losses and devastation to North Korea. In order to secure help from the allies a state delegation led by Kim Il Sung visited the USSR, China and other countries. The USSR offered a gift to the DPRK of 292.5 million roubles (new currency), and widened the network for deliveries of machines, building materials, equipment and foodstuffs. It also sent specialists and expanded the educational opportunities for North Koreans. Gigantic efforts by the Korean people assisted by friendly countries, allowed the DPRK to restore its potential in a time-span of only 3-4 years and to lay the basics for future development.

When the Korean war ended, the USSR undertook some unsuccessful efforts to renew the collective search for ways to a peaceful settlement of the Korean problem. After the Soviet initiative the Korean question was put on the agenda of the Geneva International Conference (April 1954) in which for the first time both DPRK and ROK delegations participated. But the protracted discussions brought no results and it proved to be the last effort to solve the Korean problem internationally.

When the military regime of Park Chung-hee came to power in the ROK (16 May 1961), and military cooperation with the USA grew, the reactions of the DPRK and USSR were predictable. During Kim Il Sung’s visit to the USSR (6 July, 1961) the Treaty of Peace, Cooperation and Mutual Assistance was signed. A similar treaty was signed by the DPRK and China. Passing decades have verified the positive significance of these documents as instruments of peace in the Far East.

From the beginning of the 1960s, relations between the USSR and DPRK cooled. The cause was in the growing differences within the world Communist movement as well as in the formation of the DPRK’s self-sufficiency course. Political contacts dwindled. Economics and technical cooperation continued, but fewer opportunities were utilized. The USSR practically withdrew from its independent constructive line on the Korean question, limiting itself only to formal declarations in support of the DPRK.

This state of affairs continued up to May 1984, when Kim Il Sung again visited the USSR and other countries, being pressed by the DPRK’s economic hardships to do so. The agreement on the improvement of relations between the two countries, reached during this visit, was re-affirmed during the 1986 visit of the DPRK leader to the USSR. After this the contacts between the two countries gained new impetus. Agreements were signed on the border issue, on economic and technical cooperation, including the construction of an atomic power station in the DPRK with Soviet assistance, while trade relations also grew rapidly.

At the end of 1988, USSR policy in Korea underwent a historical about-turn, when Soviet leadership stopped the unreasonable non-recognition policies towards the ROK. This decision was based on the new political thinking proclaimed by President M. S. Gorbachev and on the realised fruitfulness of the cooperation with the quickly developing neighbour. Since the end of 1988, the USSR and ROK have established direct economic ties, a year after consulates were opened, and in September 1990 official diplomatic relations were established. Summit meetings and talks between Gorbachev and Roh Tae-woo in 1990 and 1991 were further milestones in this process.

Though the Soviet leadership assured the DPRK that the normalization of its relations with the ROK was not aimed against the interests of the North, the ruling circles of the DPRK looked at these events negatively, considering it a ‘treason’ of the USSR, which was accused of ‘selling its loyalty to its North Korean ally for US dollars’. From 1990, all
spheres of contact between the USSR and DPRK dwindled. This process further developed after the dissolution of the USSR.

In the Korean policies of today's Russia, the tendency of further alienation from the DPRK and alliance with the ROK is more and more visible. The ROK has become Russia's main trading partner in the Asia-Pacific region. The Russian president, B. Yeltsin, put special stress on this during his visit to Seoul in November 1992. The treaty on the Basics of Relations between Russia and the ROK is supposed to strengthen this cooperation. Political contacts are firm, trade has grown rapidly and a score or so of joint ventures have been established, together with expanded technical and scientific cooperation. Some hundreds of Russian scientists and engineers have worked in research centres and in project departments of South Korean firms. The possibilities for military-technical cooperation also exist, and cultural links have developed. However, the process is not without its difficulties; the main obstacles being Russia's internal instability, together with its bureaucratic problems and legal discrepancies.

The level of Russia's relationship with the DPRK is now very low. Political contacts have been minimized. Russia has not renounced the 1961 treaty but insists on significant changes to it. During his visit to Seoul, Yeltsin declared total withdrawal of Russia's military assistance to the DPRK. Along with other countries, Russia has reacted negatively to the DPRK's alleged nuclear plans. Trade has been drastically diminished (-10x) compared to the late 1980s, to a low of US$200 million (1992 figures). The disruption of traditional economic links has told heavily on the DPRK's economy. It faces problems in paying its debts to Russia and in paying back the Russian deliveries.

The national interests of Russia suppose a balanced policy in Korea, a policy free from ideological bias and presuming mutually beneficial and good-neighbourly relations with both the Korean states. Along with other concerned countries, Russia has the capability to assist the liquidation of military tension in Korea, of encouraging the drawing closer and eventual unification of the two states, and their active participation in the joint efforts to establish peace and stability in North-East Asia.

Ryu Kwansun Memorial Hall

The Ryu Kwan-sun Memorial Hall (Yu Kwansun Kinyŏmgwan) is situated in the grounds of the Ewha Girls High School in Chung Ward in Seoul. The hall was established in 1974
as a memorial to Yu Kwansun (1904-1920), a student of the high school who was imprisoned and tortured by the Japanese police for her role in the March First Independence Movement. With a seating capacity of 2,023, the hall is used primarily for concerts and other musical performances.

*Sa miin kok* (Song of Longing) [Literature]

**Sach’ŏn**

Situated in the southwestern part of South Kyŏngsang Province, Sach’ŏn embraces the town of Sach’ŏn and the townships of Konmyŏng, Konyang, Sanam, Sŏp’o, Yonghyŏn, Chŏngdong and Ch’uktong. With a total area of 395.98 square kilometres, the city combines the areas previously known as Sach’ŏn County and Samch’ŏnp’o. Mt. Waryong (799m) rises in the southeast while Mt. Imyŏng (570m) stands in the west. As a southern coastal area, Sach’ŏn has warm weather, with a yearly average of approximately 14°C and an annual rainfall of 1,400mm.

About twenty-five per cent of the city area is arable land, which is used for rice cultivation and other crops including barley, beans, wheat, grapes, tobacco, hemp and cotton. Orchards in the area grow peaches, pears and persimmons. Sweet potatoes, potatoes and barley are also cultivated here as ingredients for hard liquor and beer. Fishing is another important source of local revenue. Boats operating out of Sach’ŏn Bay bring in catches of filefish, anchovy, hairtail, gizzard shad and mackerel. In particular, the city accounts for approximately eighty per cent of the nation’s file-fish production. As for industry, there are tobacco processing plants centred around Ch’uktong Township, farm product processing plants and textile mills.

With lakes, reservoirs and streams as well as the picturesque Sach’ŏn Bay, the city has a number of scenic attractions. Located in the town of Sach’ŏn just east of Highway 3, one finds Sansŏng Park. Within the park, there is an archery range. Originally founded by Kim Chuyŏl and seven of his friends in 1918, the range was refurbished in 1963. The park is situated within Sach’ŏn Sansŏng, a stone fortification built during the Hideyoshi Invasions (1592-1598).

There is another famous fortification in Yonghyŏn Township’s Sŏnjin Village. This fortress was the scene of heavy fighting at both the beginning and end of the Hideyoshi Invasions. In 1592, General Yi Sunshin destroyed twelve Japanese vessels in Sach’ŏn Bay using his iron-clad kŏbukson (turtle ships). Then in 1598, another big battle was fought here between the Japanese and the allied Chosŏn and Ming Chinese forces. Today, the one-thousand or so cherry trees planted in the castle grounds provide visitors with a spectacular sight at cherry-blossom time.

Historically, the most important Buddhist monastery in the area is Tasol Temple. Located at the foot of Mt. Pongmyŏng in Konmyŏng Township, the temple was founded by Yŏn’gi in 503 C.E. The lovely area around the temple is surrounded by bamboo thickets and pine trees. Chaksŏle’ha, a choice variety of green tea, is grown here. At a cave near the temple, stones have been used to build Pongan Hermitage (South Kyŏngsang Province Tangible Cultural Asset No. 39).

At Hŭngsa Village in Konyang Township stands the Sach’ŏn Maehyang Stele (Treasure No. 614). The stele marks the spot where local residents buried incense in a rite to secure peace for the nation and pray for the appearance of Maitreya, the Buddha of the future. A 204-character invocation has been inscribed on the stele.

In addition to Buddhist sites, a number of Confucian schools exist in the area, including Sach’ŏn Hyanggyo in Sach’ŏn’s Sŏnin Village, Konyang Hyanggyo in Konyang
Township’s Songjŏn Village and Kugye ıtchesin Sach’ŏn’s Kuam Village. Other artefacts to be seen include stone changsŏng (guardian figures) in Chuktong Township’s Kasan Village. These interesting changsŏng were set up during Chosŏn to ensure the safety of the trading lanes along local streams and Sach’ŏn Bay, and to protect the local grain warehouse. Ceremonies are still held on the site each year at one-o’clock in the morning on the first day of the first lunar month.

Sach’ŏnwang Temple  [Architecture]

**Sadae mun’gye**

*Sadae mun’gye* is a compilation of diplomatic correspondence between Ming China and Chosŏn that covers a period from 1592 until 1608. This work is comprised of twenty-three volumes in twenty-three fascicles and was compiled by the Ch’anjip Ch’ông (Office of Compilation) and printed with woodblocks. Originally, this work was much larger, consisting of fifty-four volumes in a like number of fascicles, but many have not survived. The correspondence in this collection covers a great number of topics, but is chiefly focused on the turbulent times that had swept into Korea. The 1592 Japanese Invasion is a frequent topic of these official documents as is the rise of the Houjin, an early name of the Qing. Some of the important events that are contained in this collection include the pleas by Chosŏn for Ming intervention against the Japanese invaders, the particulars of the Ming instructions to King Sŏnjo (r. 1567-1608) concerning the assignment of his second son, Prince Kwanghae (r. 1608-1623) as commander of the Cholla and Kyŏngsang provinces during the Japanese Invasion, and later negotiations between Ming and Chosŏn concerning Kwanghae’s ascension to the throne. Therefore, this work is valuable in the study of Chosŏn foreign policy of the late sixteenth and early seventeenth centuries.

The *Sadae mun’gye* is kept at the Kyujanggak Library. In 1925 the Chosŏnsa P’yŏnsuhoe (Korean History Compilation Committee) included an annotated version of this work along with an index under the title of *Chosŏn saryo ch’onggan*.

**Saemaül Undong**

The 1970 *Saemaül undong* (New Community Movement) was a concerted effort by the government of the ROK to develop and regulate rural society. This movement, launched by President Park Chung Hee (Pak Chŏnghŭi), was designed to solve major problems such as:

1) an unacceptable low rate of increase in agricultural productivity and an extremely sluggish rural economy that could not keep up with the growing food requirements of the burgeoning urban population, and which resulted in large amounts of foreign exchange being used for grain imports;

2) the extremely large number of rural dwellers who were migrating to towns and cities, which added to the administrative burdens and increased the potential for social discord;

3) the growing economic inequity between the rural and urban populations; and
4) to counter the results of the 1971 presidential election which showed that Park had lost much of his support in the predominantly rural areas of southwest Korea.

**Backdrop and Implementation**

Although the ROK was well on the way to industrialisation by 1970, and urban centres were developing in a modern and methodical manner, the conditions in the rural areas remained largely backward, with the standard of living far below that of city dwellers. Therefore, as a way of rectifying these social inequalities, *Saemaul undong* was conceived and put into operation. Fundamentally, it was one of self-help, as the government sought to create an awareness among the rural population of their own ability to make positive community changes. While *Saemaul undong* was not implemented until 1970, the concept of self-help in rural areas is not new and has historically been manifested in such agricultural co-operative activities as the tare, which was a communal labour pool in former times. Hence, *Saemaul undong* sought to bring about the betterment of rural living conditions through the utilisation of community co-operation, pride and self-help.

The elimination of poverty in the countryside was a basic aim of *Saemaul undong* and this was brought about by both community improvements and the modernisation of farming practices. Insofar as community improvement projects are concerned, a major accomplishment was the building of some sixty-five thousand bridges of varying span, between 1971 and 1975, which allowed virtually all villages and some of the more outlying farmsteads to be accessed by motor vehicles. Along with the building of bridges, government buildings in villages and often the villages themselves were also modernised. Thus, the appearance of rural communities was greatly improved through the provisions of *Saemaul undong*.

The modernisation of farming practices had a two-fold effect, viz.,

1) with the use of modern fertilisation, planting and mechanisation techniques, farmers increased their per-acre yields and thus elevated their living standards through increased farm income;

2) the increased yields enabled the ROK government to terminate the flow of substantial amounts of foreign exchange on rice and other staples, and to redirect this expenditure towards industrialisation and infrastructural improvement.

These aims was met partly by the introduction of high-yield rice varieties, which resulted in the average per hectare yield increasing from 3.5 long tons in 1971 to 4.9 long tons in 1977. Other manifestations of *Saemaul undong* included the increased use of chemical fertilisers and the introduction of modern agricultural machines. These steps not only ensured increased crop yield, but also a substantial reduction in manual labour on the farms.

An essential feature of *Saemaul undong* was its core of educational programs. Without an improvement of levels of education in rural areas, the initial impetus of the movement could not be sustained. Therefore, in *Saemaul undong* planning, rural educational programs preponderated. In 1972, training institutes were established to mould new leaders for the rural communities and thus to continue the momentum of the movement for years to come. Educational efforts were not only aimed at improving farming and stockbreeding practice, but also at a general improvement of rural life through hygiene; household budget management; community involvement; eradication of disease; and political involvement programs. The scope of *Saemaul undong* was thus quite broad and it sought to bring qualitative improvement to the lives of people who lived in the rural areas.

**Outcome of the Saemaul undong**
In practical terms, *Saemaul undong* had tremendous consequences on rural communities and standards of living. Aside from marked improvements in crop yields and mechanisation, the movement also contributed to improving the lifestyles of those in the countryside. It was considered so successful in the rural areas that the government extended it to urban centres, in the hope of creating the same dynamic force of self-improvement and self-help. The spirit of self-help and co-operation was kindled in urban areas in manifold neighbourhood projects, such as children’s playgrounds, and the development of areas for leisure activities.

The educational aspects of *Saemaul undong* have remained the strongest legacy of the movement, and still contribute to the fostering of community spirit and co-operation. While the initial education efforts were directed only to those living in the rural areas, this was soon extended to include urban dwellers. Even government employees were required to attend ten-day training sessions. Through *Saemaul undong*, the same spirit of self-help, so effective in transforming rural Korean society, was harnessed to factories and other industrial units, and used to instill feelings of fraternity and occupational pride among the workers. However, the educational role of *Saemaul undong* extended beyond the industrial scene, as many housewives and elderly people joined in the various programs sponsored under its banner.

While the outcome of *Saemaul undong* has been, by and large, positive and has resulted in a substantial improvement in the lives of both rural and urban Koreans, there have been some negative consequences. One has been the discontinuation of former traditions of rural communities, such as the erection of shrines to tutelary deities, under the cloak of ‘modernisation.’ The main focus of the movement in the 1970s and 1980s was modernisation, and hence, traditional aspects of Korean culture were often seen as being inherently inferior, especially to Western culture. Although there has been a revival of interest in traditional society and for many an appreciation of its special qualities, a great deal was lost in South Korea’s rush to industrialise, and this cannot be regained.

**Samak Mountain**

Situated in Kangwŏn Province's Ch'unsŏng County, Mt. Samak (645 metres) is one of the most popular tourist destinations for people living in the Ch'unch'on area. From the top of the mountain, one can get a panoramic view of Úiam Lake and Ch'unch'on City. The main hiking trail up the mountain winds along a clear stream through a narrow gorge of spectacular beauty. The area has a number of sites of religious and historic importance. In addition to temples such as Taewŏn Hermitage, Sangwŏn, Hŭngguk, and Pongdŏk Temples, there are still remnants of the Samak Fortress, which is said to have been built by the Maek people.

*Samashi*  
[Government Service Examination]
**Sambong chip** (Collected Works of Sambong)

The Sambong chip, consisting of fourteen volumes, is a compilation of poems, essays and articles by Chŏng Tojon (?-1398). The most widely disseminated edition is that printed by woodblock in accordance with the orders of King Chŏngjo in 1791 (Chŏngjo 15). The original copy of the second edition of 1465 is now in the possession of Hōsa Bunko in Tokyo.

The work begins with two prefaces, an introduction and a table of contents. The fourteen volumes can be described according to their subject content:

Volumes 1 and 2 cover all the author's poems and verses.

Volumes 3 and 4 comprise various memorials to the throne, records and theories.

Volumes 5 and 6 deal with a wide range of political matters and public administration, comparing the Korean systems with the pertinent Chinese institutions.

Volumes 7 and 8 are the most important part of the collection. They are entitled 'Chosŏn Kyŏngguk chŏn' and following their drafting by the author, they became the principal source of the code for the legal and administrative practices of the newly established Chosŏn dynasty.

Volume 9 is a criticism of the doctrines of Buddhism from the Confucian point of view.

Volume 10 has two chapters, which deal with religion and philosophy respectively.

Volumes 11 and 12 are supplementary volumes to the political and public administration matters discussed in Volumes 5 and 6.

Volume 13 is in two parts. The first is a compilation of writings on military science, which reveals another aspect of the wide-ranging interests of the author. Part two is a posthumous anthology of the author's additional poems and essays.

Volume 14 is the author's autobiography and includes as well, prefaces which contemporaries wrote for the anthology. Chŏng Tojon was one of the most loyal aides of King T'aejo and his works are truly representative of the times. For this reason they are important source material for the study of the late Koryŏ dynasty and early Chosŏn dynas

**Samch’ŏk**

Situated on the east coast of Kangwŏn Province to the south of Tonghae, Samch’ŏk is comprised of the towns of Togye and Wŏndŏk, and the townships of Kagok, Kûndŏk, Nogok, Miro, Shin’gi and Hajang, Mt. Tut’a (1 353 metres), Mt. Chungbong (1 284 metres), and other high peaks of the T’aebaek Mountain Range run along the eastern section of the city. These high peaks and ridges block the cooling winds from the northwest, creating relatively mild winters. The city has a population of approximately 130,000.

With much of the city’s land occupied by mountains, the area has limited amounts of arable land. Rice is cultivated in the narrow coastal plain and in the Oshipch’ŏn Valley. The remaining areas cultivate dry field crops such as corn, potatoes, garlic and beans. In addition, orchards in the region produce persimmons - the area’s largest fruit crop.
There are also several hundred small fishing boats operating out of small ports. These boats catch cuttlefish, walleye pollock, and mackerel pike. In the winter, walleye pollock are dried—a process that allows the fish to be stored for long periods of time.

In the early twentieth century, a large number of coal mines operated in the area, but with a recent decrease in the demand for coal, many of these mines have shut down. In modern times, most of the mining operations are centred around the area’s rich lime deposits.

With its high mountains and beautiful coastline, the city has excellent tourist resources. Beaches in the area include the Maengbang, Kungch'on, Yonghwa, Changho, Wolmido, Imwon, and Hosan beaches. Numerous historical relics scattered throughout the city serve as a further attraction to tourists.

There are a number of Buddhist sites here. Yongun Temple, which was originally founded by Pōmil in 891, contains several important historical buildings including the P'alsang (Eight Scenes) Hall and Main Buddha Hall (Kangwŏn Province Tangible Cultural Assets No. 77 and 76 respectively). The temple also houses an old banner-painting (kwaebul, Kangwŏn Province Tangible Cultural Asset No.108). Other popular Buddhist temples in the area include Shinhuŏng and Wŏnho Temple near Kyoga, and Ch'ŏnŭn Temple and Yömbul Hermitage near Mt. Tut'a. A number of old historical buildings are also found here, including the old residences of Kim Chinbae and Kim Nangnyun (Kangwŏn Province Tangible Cultural Assets No. 94 and 95 respectively) in Kŏndŏk Township.

In Shinnam Village there is a shrine to the god of the sea where prayers are offered to ensure a bountiful catch. A tree at the site has been carved into a phallic symbol to appease the soul of a drowned virgin. Outside of the shrine, a stone pagoda stands near a Chinese juniper on which phallic symbols have also been hung.

**Samdang shiin** (Three T'ang Poets of Korea) [Literature]

**Samgang** (three cardinal human relationships) [Society]

**Samgang haengshil to** (see Tongguk shinsok samgang haengshil to)

**Samguk sagi** (History of the Three Kingdoms)

The **Samguk sagi** (50 vols., comp., 1145) was compiled by Kim Pushik (1075-1151) during the reign of King Injong of the Koryŏ dynasty, and deals with the rise and fall of the kingdoms of Shilla, Koguryŏ and Paekche. It is the most important work, together with the Samguk yusa, for the study of ancient Korea. It includes: Annals of the Shilla Dynasty (includes Greater Shilla), 12 volumes; Annals of the Koguryŏ Dynasty, 10 volumes; Annals of the Paekche Dynasty, 6 volumes; Chronology, 3 volumes; Ji, 9 volumes; Biographical Notes, 10 volumes.

Having been compiled nearly 500 years after the fall of Koguryŏ and Paekche and 200 years after Shilla, there was a paucity of Korean source materials remaining, especially for Koguryŏ and Paekche, many records having been lost or destroyed due to war, fire and other calamities. The **Samguk sagi** contains bibliographical references to several works by Kim Tae-mun and Ch'oe Ch'iwŏn which are no longer extant but which were no doubt used as sources. There are also many quotations from Chinese sources such as the dynastic histories and other historical works, particularly regarding wars and general relations with Tang.

There is evidence that the **Ku Samguksa** (Old History of the Three Kingdoms), which existed before the **Samguk sagi**, was used extensively by Kim Pushik, but it is known to
have been significantly modified to conform more closely to the Chinese style, which was much admired by Kim. Much of the first half of the *Samguk sagi* is considered by modern scholars to be fictitious tales added at a later period, although some of these are traditional legends which throw light on the beginnings of ancient Korean society. It has also been shown that the dates given for the founding of Koguryo and Paekche are incorrect. The most important parts are the *ji* and the biographies. The *ji* deal mainly with ceremonies, rituals and customs, geography and official ranks, and are a useful source of information on the daily life and conditions of Shilla society. The geographical sections provide a key to the original method of transliteration of Korean names in Chinese characters, and thus are an important aid to the study of the old Korean language. The biographies include a number of stories of the famous Shilla general Kim Yushin and fifty other men distinguished for their courage, loyalty or literary skill.

The *Samguk sagi* was most probably published in the reign of King Injong of Koryo. Chinese sources record reference to it in the year 1174, indicating that it had reached China by then. No copies of the first edition are extant, and the oldest edition remaining today was probably printed in 1512 by Yi Kyebok with woodblock type. The first movable type edition was published during the reign of King Hyonjong (r.1659-1674). In recent times it has been published a number of times in Korea and also in Japan. The Institute of Far Eastern Studies of Yonsei University (Tongbanhak Yon'guso, present Kukhak Yon'guso) published a detailed index to it in 1956.

**Samguk sagi** (History of the Three Kingdoms)

*Samguk sagi* (History of the Three Kingdoms) translated by Yi Pyöngdo in 1983 is the definitive modern translation of the twelfth century work by Kim Pushik. This two-volume work provides a modern translation of the classic work along with annotations in order to aid understanding. Eul Yoo Publishing Company published this work in 1983.

**Samguk yusa** (Memorabilia of the Three Kingdoms)

The *Samguk yusa* by the Buddhist priest Iryon (1206-1289) is an unofficial compilation of records about the Three Kingdoms, Shilla, Koguryo and Paekche, and it complements the *Samguk sagi*, which represents the official view of the Koryo dynasty on the history of the Three Kingdoms. The *Samguk yusa* is based on material from popular sources, such as folklore, myths, legends, ballads and beliefs, and takes a broader, freer view of history. The word *yusa* (in Ch. *yishi*) is frequently used in book titles for unofficial compilations.

The *Samguk yusa* is in five volumes, two fascicles, and its contents are divided into six sections as follows: Book 1: I 'Wonder 1 (The founding of the Kingdoms)'; Book 2: II 'Wonder 2 (United Shilla)'; Book 3: III 'Rise of Buddhism'; IV 'Pagodas and Buddhist images'; Book 4: V 'Anecdotes of renowned monks'; Book 5: VI 'Miracles'; VII 'Tales of devotion'; VIII 'Seclusion'; XI 'Filial piety'. Included at the end are chronologies of kings and queens of the Three Kingdoms and Karak, and of the Three Kingdoms and Karak with contemporary sovereigns of China.

Book 1: I 'Wonder 1' contains chronological records of the royal families of Shilla, Koguryo and Paekche, and among these are a number which are different from those in the *Samguk sagi*, and which are thus of particular interest. Book 2: II 'Wonder 2', contains thirty-five chapters relating to the history of ancient Korea, including important records of the kings of Shilla. It also includes an account of the Tan'gun myth, which is not mentioned in the *Samguk sagi*. Book 3: III and IV, in thirty-eight chapters, relates to the introduction of Buddhism into the Three Kingdoms, in particular to Shilla. Book 4: V gives an account of the experiences of Wŏn'gwang Pôpsa during his studies in China, and contains biographical notes on the distinguished scholar-priests and high priests of the Shilla period. Book 5: VI, VII and VIII contains chapters on Esoteric Buddhism, spiritual
communion with Buddha achieved by pious believers, and biographical sketches of high priests. Book 5: IX contains five stories of filial virtue. The fourteen hyangga (ancient Korean poems) included in the collection are among the most important works for the study of the form and content of ancient Korean poetry and the idu (ancient Korean transcription system) method of reading it.

Iryŏn is believed to have written the Samguk yusa in his seventies, and it includes a supplement written after his death by Mugik, one of his disciples. The exact date of publication of the earliest woodblock edition is not known, but it is thought to have been during the Koryŏ dynasty. The oldest extant woodblock edition was published in 1512. It was republished in separate parts by Yi Kyebok, and a copy of this edition was held by An Chŏngbok, a distinguished scholar of the late Chosŏn dynasty. The present edition is a photographic reproduction of this copy, which was taken back to Japan by Professor Imanishi Ryū. Several incomplete versions were later found which were apparently earlier than the 1512 edition. The oldest movable type edition in Japan was published in 1904 by the College of Literature, Tokyo University. Several modern editions have been published in Korea, one of them being translated and annotated by Dr. Yi Pyŏngdo in 1956 (revised ed. 1977), and enjoying wide popularity. An index was published as a supplement to Yoksa hakpo, v.5, in 1954, and another entitled Samguk yusa saegin was published by the Academy of Korean Studies.

Samgyo Stream

With its source on or near Kain Peak in Kusŏng, Samgyo Stream flows for about 129 kms. through the plains of North P'yŏngan Province before joining the Yalu River to the south of Shinŭiju. Where the stream merges with the Yalu, there is a delta known as the Shinŭiju Plain. The Ch'ŏnma and Taeha reservoirs have been constructed here to provide irrigation water to local farms. Historically, the stream formed a natural barrier to invasions from Manchurian tribes. Remains of an ancient fortress can still be seen on the summit of Mt. Paengma, to the north of the stream.

Samjinnal [Customs and Traditions]

Sangch'un kok (Song to Spring) [Literature]

Samseong Publishing Company

Located in Seoul’s Sŏch’o Ward, the Samseong Publishing Company (Samsŏng Ch’ulpansa) was established on 23 March 1964. Children’s books and poetry works are prominent in its productions.

Samsŏng Munhwa Chaedan (see Samsung Foundation of Art and Culture)

Samsung Foundation of Art and Culture

The Foundation (Samsŏng Misul Munhwa Chaedan) is a private organisation sponsored by a consortium of Samsung companies. Established in order to promote Korea’s cultural heritage, the Foundation supports academic activities related to Korean studies. In 1992, the Foundation also took over responsibility for the Ho-Am Art Museum with its large collection of artwork and historical relics.

Samsung Group [Industry]

Samul nori [Music]
Samyŏngdang (see Yujŏng)

Sanch’ŏn County

Situated in the western part of South Kyŏngsang Province, Sanchŏn County includes the town of Sanchŏn and the townships of Kūmsŏ, Tansŏng, Samjang, Shindŭng, Shinan, Saengbiryang, Saengch’o, Obu, Shich’ŏn and Ch’ahwang. The county has a total area of 794 square kilometres and as of 1988, its population was 55,770. A spur of Mt. Chiri runs north-south through the west of the county, making a natural border with Hadong County and Hamyang County. Mt. Kalchŏn (764m), Mt. Parang (797m) and Mt. Hwangmae (1,108m) rise along the county’s northern border. The Kyŏngho River runs through the middle of the county.

Because of the area’s rugged terrain, only fourteen per cent of the county is arable. Nearly three-quarters of this land is used for rice cultivation, and the remainder for dry-field crops such as barley, beans, millet and tobacco. Of the non-arable portion, much is taken up by sericulture and the many cattle stations. Clay from the Tansŏng and Taemyŏng quarries is used in the ceramic factories. In addition to ceramics, other types of manufacturing companies are represented here.

With part of Mt. Chiri National Park (see Chiri Mountain) in its western area, the county offers a large number of scenic attractions. Situated just outside of Mt. Chiri National Park in Shich’ŏn Township, Koun Valley is well-known for its serene beauty and gentle slopes. Along the valley are thick forests, clear pools and waterfalls. A popular hike takes one through the valley beginning at Panch’on Village and continuing up to Pae Rock. Mt. Ungsŏk (1,099m), located in the centre of the county, is famous for Sonjang Cave. During the Hideyoshi Invasions (1592-1598), three brothers of the Miryang Son clan gathered together irregular forces to fight against the Japanese invaders.

A large number of ancient Buddhist temples exist in the area, including Naewŏn Temple, Pŏpkye Temple and Taewŏn Temple in Samjang Township, Yulgok Temple in Shindŭng Township, Chŏnggak Temple in Shich’ŏn Township and Songŏk Temple in Tansŏng Township. In addition to these active temples, there is the Tansok Temple site northwest of Mt. Sŏktae in Tansŏng Township. Here one finds two three-storey pagodas (Treasures No. 72 and 73). Other Buddhist sites in the county include a group of Buddha carvings in relief on a rock face at Saengbiryang Township’s Tojŏn Village and a nine-storey pagoda at the Taewŏn Temple site in Samjang Township’s Yup’yŏng Village.

In addition to Buddhist sites, many Confucian schools are to be found in the area, such as Sanch’ŏn Hyanggyo and Sŏgye Sŏwŏn next to Highway 3 in Sanch’ŏng, Tugok Sŏwŏn in Shindŭng Township, Tansŏng Hyanggyo next to Highway 3 in Tansŏng Township, Tŏkch’ŏn Sŏwŏn next to Highway 20 in Shich’ŏn Township and Paesan Sŏwŏn next to Manghae Peak (257m) in Tansŏng Township. In Shinan Township’s Shinan Village, one finds Nosan Chongsa, an ancestral shrine commemorating Mun Ickŏn (1329-1398) who died here. As an envoy to China, Mun obtained cotton seeds which he brought back to Korea for cultivation.

Cultural awareness takes the form of several festivals and celebrations held annually in the area. In October or November, the Mt. Chiri Peace Festival is held. The festival features twenty-five to thirty events, including the Mt. Chiri Mountain Spirit Festival (a Shaman ritual to worship the guardian spirit of Mt. Chiri), a nongak (farmer’s music) contest, a Sino-Korean poem composition contest, a writing contest, sports events and presentation of the Peace Award to persons of distinguished achievement in regional development, security, social service, education and culture.
Sangju

Situated in the western part of North Kyŏngsang Province, Sangju is comprised of the town of Hamch’ang, and the townships of Chungdong, Hwabuk, Hwadong, Hwanam, Hwasŏ, Ian, Konggŏm, Kongsong, Naesŏ, Naktong, Modong, Mosŏ, Oenam, Oesŏ, Sabŏl and Ŭnch’ŏk. The eastern half of the city is characterised by flat terrain, whereas high peaks of the Sobaek Mountain Range run along the western half. A portion of Mt. Songni National Park lies within Hwabuk Township in the northwest.

The fertile Sabŏl and Hamch’ang plains in the northeast make the city North Kyŏngsang Province’s second greatest producer of rice. Other important crops include apples, persimmons, sesame and tobacco. Chŭngch’ŏn Village in Hamch’ang has been famous since Shilla times for its silk. Even today, there are a large number of silk larva production centres in the townships of Hwasŏ, Hwabuk, Naktong and Ŭnch’ŏk. As for mining, in Konggŏm Township one finds the Kirim, Hamwŏn and Sangwŏn mines and in Mosŏ Township, there is Wŏlmyŏng mine which excavates graphite. There are also a number of coal mines in the southwest and north.

With the Naktong River on the east coast and mountains in the west, the city boasts numerous scenic areas. In Hwabuk Township, one finds the Changgak and Ongnyang waterfalls, Munjangdae Peak and the picturesque Hwayang-dong Valley. The Yonghwa Hot Spring, located near Unhŭng, is particularly popular with weary hikers coming down from Mt. Songni’s rugged peaks. Situated in Naktong Township, Kyŏngch’ŏndae Peak is another important tourist attraction. From here, one can get a panoramic view of the Naktong River and the surrounding area.

There are also a number of historical sites in the area. In Hwabuk Township’s Changam Village, one finds a stone fortress believed to have been built by Kyŏnhwŏn (?-936), leader of the shortlived Later Paekche kingdom. In addition, there is the Kŭmdol Fortress on Mt. Paekhwa in Modong Township, the Mt. Nam Fortress to the north of Oesŏ Stream and the Pyŏngp’ung Fortress on Mt. Pyŏngp’ung (366m) near the Naktong River. Ancient Buddhist artefacts are found throughout the area, especially at Yonghwa Temple in Hamch’ang’s Chŭngch’ŏng Village and Namjang Temple to the south of Mt. Noŏm. Old Confucian schools in the area include Tonam Sŏwŏn just west of the Naktong River, Hŭngam Sŏwŏn southwest of Mt. Ch’ŏnbong (436m), Sangju Hyanggyo south of central Sangju, Yŏnak Sŏwŏn in Yangch’ŏng-dong, Hamch’ang Hyanggyo in Hamch’ang’s Kyoch’ŏng Village and Oktong Sŏwŏn in Modong Township’s Subong Village.

In Konggŏm Township’s Yangjŏng Village, there is a stele marking the old site of Konggal Pond. An interesting legend is told in connection with this pond. In ancient times, a man by the name of Kim is said to have been walking back from Kyŏngju when he was joined by a gorgeous young lady on the road. That evening, when the two arrived in Taegu, they stayed together in the same inn. The young lady, having gone out to get some water, came back and tossed it on the floor after which she transformed into a dragon. She then told Kim, ‘I am a female dragon from Kyŏngju’s Dragon Pond (Yongdam) and I have come to wed the male dragon of Konggal Pond. However, there is another dragon in the pond who prevents our wedding.’ The dragon then beseeched Kim to help her, saying that when he went to the pond at the appointed hour, there would be a battle between a white, blue (her lover) and yellow dragon (herself), and he was to kill the white one. Kim did as she asked, but in the commotion of the fight, he accidentally killed the blue dragon. Weeping, the female dragon told him, ‘As I am now a widow, you will have to live with me.’ On his way home, Kim grew sick and died, and on the advice of a Shaman, his body was tossed into the pond, whereupon the female dragon immediately embraced his corpse and dragged it beneath the water.
**Sangmyung University**

Sangmyung (Sangmyŏng) University is located in Hongji-dong in Seoul. It was founded as the women’s educational college Sangmyŏng Yŏja Sabŏm Taehak in January 1965, with Pae Sangmyŏng as president, and in September of the following year, the college was moved to its present location. In 1978, a night school and graduate school were established. As the college transformed from a dedicated educational college to a general college (from 1983), its name was changed to Sangmyung Women’s College. In 1986, it became a university.

At present, the university consists of eight colleges and five graduate schools in two locations. At the Seoul campus are the Colleges of Arts & Physical Education; Education; Humanities, Social Sciences and Natural Sciences; the Graduate School; the Graduate School of Education; and the Graduate School of Computer and Information Science. At Ch’ŏnnan Campus in South Ch’ungch’ŏng Province, are the Colleges of Arts; Design; Industry; Languages & Literature; and the Graduate School of Design.

University publications include the *Sangmyŏngdae Hakpo* in Korean and *The Sangmyung Star* in English.

**Sanjo**

[Music]

**Sansu Library**

Sansu Library was opened in Kwangju on 14 November 1997. It has a varied collection of Korean and foreign books. Its activities include lecture programs and reading groups for members of the public.

**Sariwŏn**

Situated in Hwanghae Province, Sariwŏn was designated a city (shi) in June 1947. The city is presently the provincial capital of North Hwanghae Province and serves as an important transportation hub for the region.

Both the agricultural and industrial sectors of the city’s economy are well developed. Rice, corn and beans are grown here, and there are a number of factories in the city with textiles as the prominent industry. The area is linked to other major cities by the Hwanghae Ch’ŏngnyŏn, Ünp’a and Sŏsariwŏn railways. The Kyŏngŭi highway runs parallel to the Nambuk Kwant’ong road, and Kilsŏngp’o, a river port links the city with the Yellow Sea.

Schools in the area include Sariwŏn Farming College, Sariwŏn Geology College, Sariwŏn First College of Education, Sariwŏn Second College of Education and Sariwŏn Medical College.

**Sarye** (four rites)  

[Society]

**Saryujae chip** (Collected Works of Saryujae)

*Saryujae chip* is the literary collection of Yi Chŏngam (1541-1600), a Chosŏn period scholar-official. This work, titled after the pen name of the author, consists of twelve volumes in five fascicles and was published by a fifth generation descendent of Yi’s in 1736. It is a woodblock-print work.

In the first four volumes of this collection are 557 poems of the author and in volume five
there are additional poems in ancient forms (koshi). In the sixth are the author’s memorials to the throne, the seventh volume contains miscellaneous works and the eighth holds genealogical records and a diary of the author entitled ‘Haengnyŏn ilgi’. The ninth volume contains ‘Haesŏ kyŏrŭi rok’ and ‘Ŭibyŏng yaksok’, both of which contain much data concerning the 1592 Japanese Invasion. The tenth consists of the ‘Waebyon nok’ which is also an account of the 1592 Japanese Invasion. The final two volumes of the collection consist of materials about the author that were added to the collection by his descendants and contemporaries.

Saryujae chip contains much data concerning the 1592 Japanese Invasion from the perspective of the writer who served as a commander of various Korean forces during this period. In particular, ‘Waebyon nok’ is highly valued as a chronology of Japanese invasions and skirmishes with Korea from the time of Shilla. Moreover, ‘Haesŏ kyŏrŭi nok’ and ‘Ŭibyŏng yaksok’ both hold much information concerning the structure of Korean defence forces, the composition of the volunteer armies and their activities during the Japanese Invasion. Therefore, this work provides a copious amount of data concerning this invasion and is invaluable for the study of this period. There are copies of this work at the Kyujanggak, Korea University and National Central libraries among other places.

Sasanggye

[Sasanggye]

Sashi Ch’anyo

The Sashi ch’anyo was a Chinese book on agriculture compiled by Han E of the Tang dynasty. References are made to it in the Xin Tang shu and a number of other traditional Chinese works, one of which states that it was published in 1020. It appears to have been regarded as an important guide to agriculture in the Sung dynasty, but was lost during the Ming period.

Some time before this the Sashi ch’anyo was brought to Korea, where there is evidence that it was highly valued. There are some ten excerpts from it in the Ŭibang yuch’wi (Classified Collection of Medical Prescriptions) and an abridgement of it is found in the last volume of Nongga chipsŏng (Compilation for Farmers). Several other traditional works make reference to it, indicating that it was a significant influence in agricultural matters at that time. However, the full text of the work was not known until recently, when a copy of the Korean edition published by Chwa byŏngyŏng (Left Army Command) in Kyŏngsang province in 1590 was found in Japan. It was apparently taken to Japan during the Hideyoshi invasion in 1592.

The Korean edition is an old style book and is similar in size and shape to Chinese books of the late Ming period. It has ninety pages and is divided into five sections for different times of the year. It describes farming practices, customs, divination and other aspects of Chinese folklore, as well as techniques for building, burials, brewing, and other daily activities. The Sashi ch’anyo is an important source for the study of the agricultural history of China in the Tang dynasty, for which few sources were available until the recent rediscovery of this Korean edition. While the Sung government published the work in 1020, it is now known, from a postscript attached to the Korean edition, that an earlier edition was privately published in Hangzhou in 995. It is therefore assumed that the Korean edition is a reprint of the Hangzhou edition. There are two additional postscripts to the Korean edition: one is by Yu Hŭijam, an official in the time of King Sonjo, and the other is by Pak Son, his successor. Yu had tried in vain to have it reprinted and finally gave it to Pak Son in 1517. Pak also was unable to republish it until 1590, when he paid printers himself to produce it.

In 1961 it was reproduced in a hardbound format by Yamamoto Bookstore in Tokyo, with
an explanatory note by Professor Mitsuo Moriya, an authority on agricultural history.

**Sasŏng t’onghae (Explanation of the Four Tones)**

*Sasŏng t’onghae* is a rhyming dictionary of Chinese characters compiled in 1517 by Ch’oe Sejin (1473-1542), a renowned scholar of the Chinese language. This wood-block print work is composed of two volumes in two fascicles. It acted as a supplement with tones to *Hongmu chŏng’um yŏkhun* (Translation of the Hung-wu Correct Rhymes) that was published in 1455, and to *Sasŏng T’onggo* that included the pronunciation of the Chinese characters but lacked any explanation as to their meaning. Therefore, *Sasŏng t’onghae* acted as both a rhyming dictionary for the pronunciation of Chinese characters and also as a guide to their meaning.

This work provides very useful data for modern day studies in several aspects. First, it is helpful for the study of the standard pronunciation of Chinese characters in the sixteenth c., as it is one of the few works that indicates pronunciation with a phonetic value. Second, the work provides data for research of the Chinese writing system at this time. Finally, it is also essential for the study of the sixteenth c. Korean language. Presently the original edition of this work is not extant, but there is an edition that was printed with movable-metal type before the 1592 Japanese Invasion that is presently kept at Japanese National Congress Library, and a 1614 movable-wooden type edition that is at Seoul National University.

**Sassi namjong ki (Record of Lady Sa’s Trip to the South)**

*Sassi namjong ki* is a novel written by Kim Manjung (1637-1692). There are several editions of this work extant including a han’gul woodblock edition, a handwritten edition, and one that was printed with movable-metal type. Titles of this work also include *Namjong ki* (Record of the Trip to the South) and *Sassi chon* (The Tale of Lady Sa). It is set in Ming China and is a story of family conflicts. However, many scholars contend that this a satirical work that comments on the political realities of the time, in particular the conflicts that arose from the numerous love affairs of King Sukchong (r. 1674-1720).

The content of the work is as follows: the protagonist is Yun Hallim who marries Lady Sa. Together they lead a blissful life for nine years except that they have no children. In order to preserve her husband’s lineage, Lady Sa convinces her husband to take a concubine. Yun does not relish this prospect and initially rejects the advice of his wife, but eventually accedes to her request. Yun takes Lady Ko, who has a jealous and wicked nature, as his concubine. Lady Ko despises Lady Sa, who as the first wife of Yun is given an exalted position and honour. Lady Ko bears Yun a son and then proceeds to slander Lady Sa in every way conceivable. Yun does not believe these lies at first, but eventually succumbs to them and ousts Lady Sa enabling the concubine Ko to assume her position as the official wife. However, Lady Ko then begins an affair with a retainer of Yun’s by the name of Tongch’ŏng. She then schemes to have Yun exiled in a political manoeuvre and takes up residence with Tongch’ŏng. However, by chance Yun discovers her intrigues and is returned to his rightful political position. He then has Lady Ko executed and restores Lady Sa to her legitimate position and they live a happy life from that time forward.

This work is clearly a satire that is based upon the intrigues in the Chosŏn court that arose when King Sukchong deposed Queen Inhyŏn in favor of the concubine Lady (huibibun) Chang. The plot line of the story and the actual circumstances in the Chosŏn court are nearly identical except that *Sassi namjong ki* was written before Queen Inhyŏn was returned to her legitimate position as Queen. Some scholars contend that it was after King Sukchong read this novel that he regretted his behaviour towards Queen Inhyŏn and had her reinstated as Queen. However, this remains speculation, as there is no concrete evidence for it.
On a superficial level, *Sassi namjong ki* is a didactic work that features the evils of the concubinage system that created many social woes in the Chosŏn period. Kim Manjung presents a female protagonist in this work that perseveres through all of the hardships and tribulations that she is presented with and still remains loyal to her husband, and in the end is rewarded by being vindicated. The fantasy-like ending of this work is, however, somewhat different from the actualities of the period when the position of women was very tenuous and they had little choice in accepting their husband’s desires for taking concubines. Therefore, this work can be viewed as a desire on the part of Kim for a more reverent society that was not driven by lust and greed. This aspect of the novel must be viewed as being the result of the strong influence that the author’s mother had on his education and moral development.

*Sassi namjong ki* holds an important position in the historical development of Korean literature not only in its didactic aspects, but also in the fact that this work was written in *han'gul* at a time when there were few works in the Korean vernacular script. Kim advocated the idea that Korean literature should be written in the Korean language, and his use of this form helped pave the way for others to do so. *Sassi namjong ki* also was influential on later novels, and remains a popular work of the classical period.

*HMMTS*, vol. 10.

**Science and Technology**

**Introduction**

Korea has been blessed with a profusion of traditions in science and technology throughout its long history. Unfortunately, however, they have seldom been noticed by scholars and laymen alike, for two reasons. The first and major one perhaps is that Korean science and technology are often seen as much less significant because of the giant civilization of China behind them. The other reason for the neglect is that the history of science and technology of Korea has been the most underdeveloped field of all the accepted historical studies.

A brief survey of Korea's scientific and technological traditions can be made with descriptions of several major topics in the traditional developments - astronomy in the ancient period; bronze tools and bell-making; Korea's influence for the rise of science and technology in early Japan; printing technology both in the wood-block method and in movable metal types; medicine; astronomy and calendrical developments, during King Sejong’s reign (r.1418-1450) in the early 15th c. This survey gives a descriptive introduction of Korea's absorption of modern Western science through China since the 17th c. with due emphasis on the different characteristics of the absorption among the three East Asian countries. It will be followed by a brief comment about science and technology after Korea's liberation from the Japanese yoke in 1945.

**Astronomy**

**Astronomy in Ancient Korea**

One of the best known artifacts of Korean history of science is Ch'ŏmsŏngdae, or the Star-Gazing Tower, an observatory built in 633 C.E. in the Three Kingdoms period. This stone-built observatory is one of the earliest of its kind in the world, and reputed to be the oldest remaining observatory in East Asia. It has been preserved in its original form for over 1
350 years. The bottle-shaped stone tower is full of symbolism, of which few contemporary explanations are preserved in history. The main body is constructed of about three hundred and sixty pieces of brick-shaped stone in twenty-seven courses, and the structure is just over nine metres high overall (actually 9.1 m.). It is situated near Panwŏlsŏng Fortress and Kyerim Grove in the ancient Shilla capital, Kyŏngju.

The tower was built at the command of Queen Sŏndŏk (r.632-647) the twenty-seventh monarch of the Shilla Kingdom. And that may explain why there are twenty-seven courses of stonework. The tower has a south-facing window in the middle, which divides it into twelve layers of stonework above and below, obviously symbolizing the twelve months of a year. When we add the square-shaped apex, the total layers of the tower become twenty-eight, denoting the twenty-eight basic constellations of traditional astronomy. Adding the base stretches this number to twenty-nine, even thirty with some licence, which corresponds to the number of days for a month in the lunisolar calendar.

From the symbolism of Ch'ŏmsŏngdae we can reach the conclusion that by the time of its construction the Shilla people had reached a full understanding of the Chinese astronomical system. Indeed, the Koreans’ knowledge of Chinese astronomy in the Three Kingdoms period is well-witnessed by the numerous astronomical records chronicled in the Samguk sagi (History of the Three Kingdoms). All the abnormal natural phenomena, including those in the heavens as well as the earthbound, are meticulously recorded in the history of the period, the records numbering about one thousand. The record includes sixty-six incidents of solar eclipse and other astronomical observation.

The tradition was handed down through Korean history, about 650 such records being preserved for the next period, the Koryŏ Dynasty - from early 10th c. to the end of the 14th c., in the official history for the period, the Koryŏsa (History of Koryŏ). For the next five hundred years of the Chosŏn Dynasty, we do not yet have a completely compiled list of the natural phenomena recorded in the Shillok (Annals) for succeeding reign periods. But a preliminary compilation shows that records for the first one hundred years exceed eighty thousand.

**Bronze tools, bell-making and ceramics**

Analysts have found that the bronze developed during the ancient period and the later years in the Three Kingdoms period was quite different in its chemical composition from that of China. With the development of metallurgical techniques the Koreans had developed their weapons and utensils from the prehistoric period. Furthermore, this Korean bronze was widely utilized in making bells as well as Buddha statues, particularly after Korea had been heavily influenced by the newly-introduced Buddhism in the mid-Three Kingdoms period.

One of the most beautiful bronze bells made was the King Songdŏk Bell, better known as the Emille Bell, which today is preserved at the National Museum of Kyŏngju, where it is hung in the front court. Measuring almost 4.0 metres high, with a diameter of 2.3 metres at its rim, this bronze bell shows the typically Korean bell shape, and the tonal tube on top is a Korean invention to control the accoustical effect of the bell, a method which is not found in the bronze bells of China. While information on the technical details of Korean bell-moulding is sparse, this same bronze technology was utilized in late Koryŏ (c. 1240) as the first example of metal type printing in the world.

High praise for Koryŏ ceramics is noted by Xu Jing, a member of the Chinese embassy in 1123, in his travelogue Gaoli dujing. He had seen Korean ceramics during his travels and was struck by their cobalt-blue colour as well as the exquisiteness of the pieces. Many examples of later Koryŏ and early Chosŏn ceramics are still being uncovered from old kiln sites in several areas of the Korean peninsula.
Korean science and technology in ancient Japan

Up to the 8th c. the Japanese had very close relations with Koreans. There was continuous open access across the East sea and Koreans were able to convey to the Japanese their superior knowledge of science and their advanced skills in various scientific techniques. The Korean version of Chinese civilization was gradually passed to the Japanese through the good offices of the Koreans over the extensive Three Kingdoms period. Particularly close were the Paekche people from the south-west of Korea who maintained brisk relations with their Japanese counterparts.

Japanese sources, including the Nihon shoki (Chronicles of Japan), indicate that Wangin (Jap. Wani) and Ajikki were the first Koreans from Paekche, who brought higher learning for the first time to Japan in the mid-4th c. Some 200 years later, in 554, the Paekche government dispatched scholars of medicine; calendrical science; divination; and herbal science. According to the Japanese record, this was done at the request of the Japanese government, and indicates that the flow of Korean science and technology into Japan had been a continuous enterprise existing over many centuries.

In 602, the Pakche monk Kwalliük was sent to teach the Japanese many areas of science and technology, including astronomy. According to the Japanese historiographer, Kwalliük had actually brought with him to Japan many books about calendrical science; astronomy; geography; and divination. In 690, Japan's imperial order announced its adoption of a calendrical system called Genkareki, which seems to be the one Kwallük had brought to Japan and in which he had trained the Japanese astronomers, in preparation for its adoption. The original form of the Genkareki was the Yuan jiali, which was adopted by the Chinese in 445. This particular calendrical system was in use in Paekche for some time before 500.

Japanese records show that the first water-clock was built in 660 and the first observatory in 675, followed by the establishment of a bureau for astronomical sciences in 718. These developments in astronomy and its related fields and the training of Japanese to specialize in them, were made possible through the assistance of Paekche astronomers then in exile following the unification of the Three Kingdoms in Korea.

In 610, the Koguryo monk/artist Tamjing (579-631) was dispatched to Japan to deliver paper, ink, colour paints, and stone mills. Records also show that many Korean technicians in the various areas of Buddhism were sent to Japan, including those specializing in temples and pagodas; Buddhist sculpture; tiles; etc. As late as 984, the Japanese book of medicine, Isinhto, quotes many Korean prescriptions, denoting the lingering influence from Korea.

Geomancy

Perhaps the most typically Korean development in the traditional knowledge of nature we can find today is the field of geomancy. Basically, this is a concern with the development of knowledge and decision on where one should live propitiously and where a deceased person should best be buried. It was said that a man could not develop to his full stature intellectually or emotionally without nature's help and that only nature could bestow on him good fortune. This area of natural knowledge is today considered more or less as a sort of pseudo-science. The legendary founder of Korean geomancy was the highly-esteemed Buddhist monk Tosôn (827-898), who was actively concerned with temple planning towards the end of the Greater Shilla period. Legend has it that it was Tosôn himself who had predicted the rise of a new dynasty, Koryô (918-1392), under the leadership of the rebel leader Wang Kôn. The official history of the Koryô period shows that Wang Kôn (T'aejo), the founder king of the new dynasty, relied heavily on Tôson's
prophesies in defining good sites for the temple buildings.

In practical terms, however, geomancy in Korea cannot be said to have started with Monk Tōson - for we can surely tell it existed in the early Three Kingdoms period. As with other areas of traditional science and technology, Korean geomancy came under the influence of China. But a distinguishing feature is that the geographical differences between the two countries were so great that the Koreans had to somehow develop their own system of divinations for their own land features in order to meet their geomantical interpretations.

The theoretical differences in geomancy in Korean history have not been sufficiently analysed to provide a reasonable understanding for us today. Nevertheless, the fact is that geomancy was a powerful element in politics in the Koryŏ period, and it held a similarly important role in the later Chosŏn period in the decisions of ancestors' burials for the Korean ruling class. Monk Myoch'ōng's Revolt in the 12th c. was under the great influence of geomantic ideas of a new capital and national prosperity. Similar debate about the relationship between a new national capital and national rejuvenation was continued throughout the later Koryŏ period.

**Printing**

It is widely known that Koreans made significant contributions to the development of printing. Particularly well known is that movable metal type printing was in use by the Koreans in the early 13th c., roughly about two hundred years before Johann Gutenberg had started a similar process of printing in Germany for the mass production of the Bible.

New evidence was discovered in 1966 when a scroll of Buddhist scripture from wood-block printing was found at the reconstruction of a pagoda in Pulguk Temple. The paper scroll is believed to be one produced in the early 8th c. and therefore significant as the earliest surviving piece of wood-block printing. However, this discovery *per se* does not mean that it was the Koreans who had started wood-block printing. But it is established that they were one of the earliest developers of the process, and this fact seems to be strongly reinforced by the 80,000 extant pieces of wood block used for printing the massive collection of Buddhist scriptures (*Koryŏ Tripitaka*) in the earlier Koryŏ period.

From the early years of the Koryŏ Dynasty, Koreans had diligently collected all kinds of Buddhist writings from China and Japan as well as within Korea. Craftsmen carved the collected items into wood-blocks to show the Korean people's profound dedication to Buddhism. The 80,000 plates of the *Koryŏ Tripitaka* are now preserved in the Haehin Temple. These surviving wood-block plates are those carved between 1236 and 1251 after the destruction of several previous collections.

It was through these series of efforts that Koreans finally reached the stage of having their movable metal-type ready at about the same time as the wood-blocks were being assembled in preparation for the printing of the *Tripitaka* in the mid-13th c. In exact terms, the first use of movable metal-type printing is recorded to have occurred in 1234. But the earliest surviving piece of metal-type printing in Korea is the *Pulcho chikchi shimch'e yojŏl*, another Buddhist scripture, printed in 1377. Metal-type printing was actively developed in the early Chosŏn period with the successive moulding of new type for characters. Though we have many samples of the printed books from those days, movable metal-type printing was never fully utilised thereafter in Korea. The main reasons were that Korea did not have a large enough market for books chiefly because of the small number of educated people, and because the Korean printing technique was never accompanied by the supportive development of the printing press.

**Medicine**
From the early Three Kingdoms period Koreans adopted Chinese medicine to develop their own healing arts. Their findings were also handed over to the Japanese. Also, during the Koryŏ period Korean medicine was widening its scope with the introduction of medical knowledge from the Middle East. Occasionally, Koryŏ practitioners were even invited by the Chinese court.

From the historical records on contemporary medicine, we can tell that Koreans from the late Koryŏ period had endeavoured to build their own system, particularly in the use of herbs for medicinal treatment. Partly because of the high cost of the imported herbs, Koreans had tried their best to identify similar trees, shrubs and herbs growing in Korea with those imported ones with established medicinal qualities. This kind of movement for indigenous medicine had continued on and off for generations until early Chosŏn times, when the massive collection of Korean medicine was successfully compiled as the Hyangyak chipsŏng Pang (Compilation of Native Korean Prescriptions) in 1433. Material for this work was gathered through a nation-wide search for all kinds of medical herbs, with the main goal to find easy and economic substitutes for expensive and hard-to-come-by imported herbs. Concurrently, another huge medical reference was compiled by King Sejong entitled Uibang yuch'wi (Classified Collection of Medical Prescriptions). The collection comprised 365 volumes, which had proved too big for immediate printing at the end of its compilation. It was only after thirty-two years, in the reign of King Sŏnjong (r.1469-94), that it was finally printed into book form, but limited to thirty sets.

A further landmark in the field of Korean medicine was the Tongŭi pogam (Examplar of Korean Medicine) by Hŏ Chun (1546-1615). The book, in preparation over twelve years by the court doctor, was completed in 1610 and is composed of five parts - 'the internals', 'the externals', 'the miscellaneous', 'medicine', and 'acupuncture-moxabustion'. Medical practitioners seem to have found this book invaluable and even today it is in constant use by Oriental doctors in Korea. Its contribution to traditional medicine is apparent from its many reprints, not only in Korea, but also in China and Japan.

The last significant contribution to Korean traditional medicine is the Tongŭi susebowŏn completed in 1894 by Yi Chema (1838-1900). In this ambitious venture the author uses the human physiology to classify people into four distinct physical types to meticulously distinguish them and thereby to satisfy diagnosis and prescription. It is unclear where this idea of dividing the human form into four types came from. Perhaps Yi Chema arrived at the idea under the influence of the Yiijing - there is even a slight possibility that he was agitated by the idea of the four humours theory of Hippocrates. In a nutshell, he propagated the importance of different cures for different types of patients in medical practice, a message which is loudly acclaimed by present-day Korean traditional doctors.

Astronomy and calendrical sciences in King Sejong's reign

The reign of King Sejong is widely recognized as the apex of the development of science and technology in Korean history. It is remembered today for many reasons, but astronomy and calendrical sciences had made a remarkable advance in the period, together with other notable developments in printing, agriculture, and medicine. Also, Korea's introduction (from the end of the Koryŏ period) of Chinese and Arabic astronomy from Yuan Dynasty China (1280-1368), had given Korean astronomers a sound platform from which to develop and refine their own findings.

Of all the astronomical and calendrical advances, most impressive were the scientific instruments, ranging from the simplified armillary sphere to rain gauge. Several kinds of armillary spheres were constructed at the northern bank area of the Kyŏnghoe-ru Lake in the Kyŏngbok Palace, the main royal palace. The large size star-observing instrument, the so-called 'simplified instrument', was built on a large platform to allow five royal
astronomers to make their nightly observation. A bronze gnomon almost ten metres high stood next to the platform, for the purpose of measuring the length of its shadow on the Winter Solstice. Next to that were two sets of self-propelled armillary spheres for demonstrating the stellar phenomena to visitors, even during the daytime.

A building opposite to the armillary spheres, in the south of the lake, was set-aside for the celebrated water-clock made by Chang Yongshil. This was a water-propelled self-striking device, and as a time-piece was used as the national standard clock. A similar device, the so-called Jade Clepsydra, also by Chang Yongshil, was placed on the eastern side of the lake, to demonstrate seasonal changes, stellar movements (diurnal and nocturnal), along with the usual time annunciation. However, none of them have survived the vicissitudes of time, except only through record.

Many of these instruments, often as smaller models, were also made and used by astronomers in the National Observatory outside the palace. This period of Korean history is also remembered for the invention of the rain gauge, the first of its kind in the world, and the scientific measurement of the seasonal level of flow-discharge in rivers. Actually, it was from this period on that the Koreans recorded the level of water both in the Han River and in the Ch'onggye Stream, the main creek which runs through central Seoul.

The painstaking efforts made in the period ultimately Koreanized the then well-established Chinese calendrical sciences. The final product of the first Korean system of astronomical calculations, or the calendrical system, was the Ch'ilchongsan, the Calculations of the Motions of the Seven Celestial Determinants. Completed in 1442 by Yi Sunji (?-1465), Kim Tam (1416-1464) et al, the book is made of two parts respectively on the traditional Chinese method and on the Arabic method. It was as a result of this endeavour that the Japanese astronomer Shibukawa Shunkai (Harumi) (1639-1715) perfected the Japanese system with his Jokyo Calendrical System, in 1682. Shibukawa acknowledged in his writing his indebtedness to a visiting Korean astronomer who helped him to develop the Japanese system.

Western Influence

Korea opened its doors to foreigners officially in 1876. However, for almost three centuries before this sanctioned intercourse with the West began, Koreans had been in intermittent contact with Western contemporary science. The resulting influence was particularly strong among the politically estranged scholars of the time, from whom Korean historiography coins its term, shirhak (Practical Learning) scholars. This new breed had started a search for new methods and many of the shirhak scholars became influenced by the intellectual trends in China.

One of the early shirhak scholars was Yi Ik (1682-1764), who had frankly confessed the superiority of Western science, especially astronomy. His philosophy was that as far as astronomy and calendrical science was concerned, Confucius would adopt the Western method over the traditional Chinese way. Yi Ik emphasized that all nations could proclaim themselves as the centre of the world, because every place could be a centre-point on a spherical body, such as the earth. Thus, he no longer allowed China prominence as the 'The Middle Kingdom'. The sphericity of the earth had definitely served as the agitaion for the Korean intellectuals toward cultural relativism, thus strongly denying time-honoured Sino-centrism.

Relativism concerning different countries of the globe was extended to the cosmos by Hong Taeyong (1731-1783), when he announced the denial of man's unique position in the universe. Not only had he denied the superiority of man over other living things, he professed the possibility of the existence of other intelligent beings on other stars in the
universe. Though the Catholic father-scientists active in China at the time had denied any motion of the earth in space, Hong Taeyong had no doubt about the correctness of his reasoning on the daily rotation of the earth. He can be considered as the first East Asian who, in the 1760s, had most clearly explained the diurnal rotation of the earth.

Towards the end of the 18th c. it was becoming fashionable for the younger Korean scholars to read more about the West. It followed, therefore, that a scholar such as Pak Chega (1750-1805) with his strong interest in Western commercial techniques, proposed to invite Western missionaries into Korea to learn more effectively from them about the advanced Western science and technology. Even Chŏng Yagyong (1762-1836), the celebrated scientist who had designed the fortifications of Hwasŏng as Korea's emergency capital, recalls that one of his elder brothers had successfully passed the government service examination with an answer based upon Western theory.

A pendulum swing in the political atmosphere at the beginning of the 19th c. resulted when King Sunjo (r.1800-1834) was enthroned. Violent persecution of the Christians had started with this shift of political power, and it was a sure sign for the shirhak scholars to distance themselves from the Western sciences, too. However, even within this closed-door period and in the gloomy suppressive atmosphere which prevailed in the first half of the 19th c., we can still discover some remarkable records of the Koreans' efforts to incorporate the new Western science. They include the immense work of Yi Kyugyong (1788-?), and Ch'oe Han'gi (1803-1879). From their writings we can tell also that some of the Japanese efforts were being absorbed by the Koreans in the early 19th c., and that many Chinese renditions of the Western sciences were close at hand to Ch'oe, even in this period.

Though impressive, the valiant efforts for the introduction of Western science and technology into Korea in the 17th c. and thereafter, they were only partially successful. The reason for this is easily explained. Unlike the Japanese and the Chinese, who had been having constant interaction with the visiting Westerners on their own soil, Koreans were denied any chance of meeting with Westerners in Korea to learn directly from them.

Due to the northward separation of Korea from the main route taken by Western navigators from the 16th c., missionaries and merchants seldom came to Korea. Of course, there were occasional visitors from the West when unfortunate sea-goers were blown off-course and shipwrecked during the seasonal typhoons. So it was very natural that the Korean scholars had to learn about Western science and technology through the importation of Chinese books about Western learning, which they had the opportunity to bring to Korea via the annual delegation to the embassy in China. Thus, Koreans' absorption of Western science was very slowly developing through these indirect contacts with the West, in contrast to its direct assimilation by Chinese and Japanese scholars in the same period.

This unhappy background meant that Koreans had to satisfy themselves only with piecemeal knowledge about Western science, whereas there were hundreds of books prepared in neighbouring countries. Matteo Ricci, a Jesuit father from Italy, had settled down for missionary work in Beijing in 1601, and dozens of Western missionaries followed. The missionaries learned Chinese, not least to allow them to translate or narrate about science and technology to the Chinese scholars. But none of the Chinese scholars had troubled themselves to learn any of the Western languages for the translation, although they gave editorial help. The result was that many books on Western science and technology were prepared or published in China, from the time of Ricci, but not a single one was prepared by a native Chinese.

In Japan, matters were totally different, with scholars willing to learn a Western language essential so as to actively absorb Western science and technology for themselves. The first successful translation of a Western science book by Japanese scholars was the Kaitai
shinsho (New Book of Anatomy), translated by Sugita Gempaku (1732-1817) et al from a Dutch text in 1774. In mid-18th c. there were dozens of so-called Dutch Learning scholars in Japan who held a commanding knowledge of Dutch, while there were no such scholars in China. Unlike China and Japan, there was no Western presence in Korea during the whole period. Korean scholars had the opportunity to learn a Western language only after the opening of Korea in 1876.

When the giant upheavals took place on the Korean peninsula from the turn of the 20th c. the difference in the levels of scientific and technological development between Japan and Korea was so vast that Korea was no match for its neighbour in the military sense, and the colonization of Korea was the inevitable result. During the colonial period from 1910 to 1945, the Japanese were especially suppressive in their science-technology policy in Korea, with all establishments being built in Japan. It was not until 1941 that Japan allowed Korea to have its first college of science and technology.

**Industrialisation**

Korea had to start to build its modern science and technology from the barren-land of learning left after the Liberation in 1945. The number of college graduates in natural science and technology amounted to only some dozens, while those with doctorates were a mere handful. Even this inadequate amount of manpower in science was placed in two camps, due to the immediate North-South division of Korea. Poorly-trained and under-qualified scientists and engineers suddenly became college professors and research leaders of the nation on both sides of the 38th Parallel.

When the bloody civil war ravaged Korea for three years from 1950, scientific research and technological advance came to a standstill. It was only after the Armistice Agreement in 1953 that the two Koreas managed to get under way with scientific and industrial training and research. This they did largely through their political affiliations with the superpowers - South Korea from the United States and North Korea from the Soviet Union.

Under the strong authoritarian political leadership of the Communist Party, in the 1960s the South seemed to be lagging behind the North. South Korea, on the other hand, had been plagued by serious social unrest under the less authoritarian leadership of its American-trained President, Rhee Syngman. It was during his term in office that Korea created a highly-placed government bureau in charge of the nation's science and technology program. Though it bore the name of the Office of Atomic Energy, (which had opened officially in 1959) it was meant to be the national hub for science and technology. External financial support was forthcoming from the Atoms-for-Peace program of the United States under President Eisenhower.

It was largely through this program that many young Koreans found their way to America and some European countries to study modern science and engineering, practically the first such venture in Korean history. The total number of Korean students participating (1956-63) under the government scholarship was 189. This was more ambitious than the earlier 'Minnesota Program', which had enabled some Seoul National University professors in the applied sciences to receive modern training at the University of Minnesota from 1954.

At the time of liberation Korea had only one formal university - Seoul National - with science and engineering departments. It was only after the end of the Korean War in 1953 that the many newly-created universities offered training in the natural science disciplines. The transition was slow and it was many years before Korean universities began to show a comparative level in science and technology with the West, even so, some are still below this level today.
In 1966 the Korean government established the Korea Institute of Science and Technology (KIST), a research institute oriented for industrial development. The next significant change affecting science and technology was the realignment of policy-making mechanisms and administrative machinery in the inauguration in 1967 of the Ministry of Science and Technology (MOST). It was from this time that many Korean scientists and engineers domiciled in America from the Korean War era decided to return to their homeland to seek new opportunities. The Korea Institute of Applied Science (KAIS), established in 1971, was originally meant to be an elite graduate school in the applied sciences, but which after some internal changes in recent years has developed an undergraduate structure, to make it another independent university in science and technology, under the auspices of the Ministry of Science and Technology.

The Korean Science and Engineering Foundation (KOSEF) from its inception in 1977, has played a major role in financing scientists, engineers and graduate students to complete research projects, both on the campuses of Korean universities and overseas. As well, KOSEF subsidises research projects jointly undertaken with foreign scientists and engineers. A mammoth 'Science City' has been under construction from the early 1970s in Taejŏn, where many national and private research centres are located today.

Science and technology in its many forms has become a most popular field of study among the Korean youngsters, who aspire to become the nation's scientists and engineers. Almost all the necessary infrastructure for modern science and technology seems now to be in place in Korea. However, except in some of the applied areas, the level of Korea's science and technology seems to lag behind in comparison to the advanced institutions elsewhere in the world.

Screens

In Korea, screens have been a popular piece of furniture in both palaces and private houses. Screens are used to prevent draughts, to create a separate space in a room, or solely for decorative purposes. To make a screen, a painting, calligraphy or embroidered pictures or designs are put on paper, silk or cloth, which is then applied to rectangular frames. The frames are joined together so that they can be folded up if necessary. Screens usually consist of two to twelve panels. Since twelve panel screens are difficult to manage, two six-panel screens are often used instead.

Screens are thought to date from the Chinese Zhou Dynasty (1122-249 B.C.). A Zhou emperor used a screen to decorate the palace’s back wall. Korean textual sources indicate that screens were in existence since Shilla times. The Samguk sagi (History of the Three Kingdoms) mentions prohibitions against the use of embroidered screens by those of true-bone (chingol) lineage or head-rank six. Screens are also mentioned in the Koryŏ togyŏng (Treatise on Koryŏ Paintings). Although few early examples remain, there are still many extant screens from late Chosŏn.

Screens are classified according to their content as follows:

1. Sun and Moon Motif: Besides a simple portrayal of the sun and moon, these screens often contain the ten symbols of longevity. These screens were used in the palace.

2. Pot or Bell Motif: On the black background of these screens, a bronze cauldron or bell is embroidered using gold or silver-coloured thread. These screens are usually used in
libraries or in the emperor’s bedroom.

3. Longevity Motifs: There were several longevity motifs used on screens. The ten symbols of long-life (deer, crane, mountain, turtle, water, clouds, pines, bamboo, the sun and the magic fungus of everlasting life) commonly appeared on screens in homes in order to promote the longevity of the parents. In addition, there were Daoist motifs showing Daoist hermits, deer or a “heavenly peach.” The peach symbolised the Daoist adept, whereas a deer, especially a white deer, symbolised long life. In the palace, these screens were used when a prince was born or for the prince’s first birthday. Lastly, creative variations of the characters for long life and good fortune were sometimes repeated on a screen.

4. Fertility Motifs: Screens showing pictures of children playing in the water, and such-like scenes, were put in the rooms of infertile women to encourage conception.

5. Famous Writings: Poetry, expert calligraphy or famous sayings were often used on screens. Since it was believed that constant exposure to classical wisdom from a young age was an important aspect of early education, these screens were placed around the living quarters of the royalty and the upper class.

6. Marital Harmony Motifs: Screens showing flowers or pairs of birds or fish were used in bedrooms in order to promote a happy married life.

Numerous other motifs were also used. Some screens showed the books and paraphernalia associated with the pursuits of the scholarly gentleman. On other screens, seals representing historical rulers were used as a design. Landscape paintings were also popular, and from the late eighteenth c., genre paintings often appeared on screens. These paintings, showing scenes from everyday life, were often rich in humour. There were also plain white, undecorated screens which were used in funerary rites. Screens are still used in Korea for decoration and in some Confucian and Buddhist rites.

HMMTS, vol. 9

Sculpture, Buddhist

Buddhist sculptures have existed from the days when Buddhism was first introduced to the Korean peninsula. From those times, Korean sculptors have used stone to produce a diverse range of works, including statues, stupas, stone lanterns, banner-pole supports, decorative panels for earthen tombs and stairs. In addition, sculptors have utilised Korea’s mountainous terrain to produce numerous sculptures, in intaglio or in relief, on rock faces. Although the models for these Buddhist art forms generally came from China, Korean artists quickly developed their own indigenous styles.

Koguryo

Situated on the border of China, Koguryo was the first of the Three Kingdoms to officially recognise Buddhism. In 372 when the former Qin sent an envoy to Koguryo, the envoy brought statues, Buddhist texts and monks. These represented the triple gem (the Buddha, Dharma and Sangha) respectively. It is believed that early Koguryo sculptures were modelled after statues brought from China, which in turn were closely modelled after Indian prototypes. Throughout Koguryo history, its sculpture continued to be influenced by that of China. In the early sixth c., this influence came from Northern Wei (386-533). During the late sixth c., on the other hand, sculptures became more ornate and refined due to influence from China’s Northern and Southern Dynasties. In the seventh c., as Koguryo
came into conflict with the Sui and then the Tang Dynasty, sculptures became more realistic.

**Paekche**

According to records, the monk Malananda introduced Buddhism to Paekche in 384. Early Paekche sculptures are thought to have been imports from China or sculptures based on Chinese works. Buddhism especially flourished in Paekche after the capital was moved to Sabi (modern-day Puyo). The sculptures from this period tend to be elegant and highly refined. A large number of statues were sculpted during the reign of King Wang Widok (554-598). Although these pieces show influence from China’s Northern Qi (550-577), Northern Zhou (557-588) and early Sui (581-617) Dynasties, a distinct Paekche style was already developing by this time. Representative works from this period include the Kunsu Village Buddha and Bodhisattva sculptures, the Shin Village Bodhisattva statue and the Buddha with attendant Bodhisattvas that was carved in relief (Treasure no. 84) in Sosan County, South Ch’ungch’ön Province. During Paekche’s final years, its sculpture came under the influence of China’s Sui and Tang (618-907) dynasties. The works from this period tend to be somewhat sensual and realistic. Even after the fall of Paekche, artisans living in the area of the former kingdom continued to develop the art. These artists thus exerted an influence on the artistic styles of the Greater Shilla Kingdom.

**Shilla**

Shilla did not officially recognise Buddhism until 527. In spite of its late introduction, Buddhism soon flourished in the Kingdom. Since Shilla was introduced to Buddhism at a relatively late period, its early sculpture was heavily influenced by that of Koguryŏ and Paekche. Pieces from early Shilla tend to have bold features rendered in a somewhat abstract style. Shilla Buddhist art underwent rapid development during the construction of the Hwangnyong Temple (begun in 553) - an extensive monastic complex in the Shilla capital (present-day Kyongju). Although few intact sculptures from this site have been recovered, it can be surmised that the images in the complex were of the same large dimensions as the buildings in which they were enshrined.

In the late sixth c., Shilla sculptors fully developed a unique style. By this time, Shilla no longer had to import or imitate foreign works. In fact, it was able to export Buddhist images to Japan. During this period, the bold features of the earlier works gave way to softer lines and idealised depictions of Buddhist figures. In the early seventh c., Shilla artisans came under the influence of the abstract style of China’s Northern Qi, Northern Zhou and early Sui Dynasties. However, this style was soon eclipsed by the semi-realistic style of the late Sui and early Tang dynasties. The Sonbang Temple Buddha and Bodhisattvas Triad and the Samhwa Ridge Maitreya and Bodhisattvas Triad are representative works from this period.

**Greater Shilla**

In the mid-seventh c., Shilla allied itself with Tang in its war with the Paekche and Koguryŏ kingdoms. The increase in diplomatic missions along with the large number of Shilla monks studying in China led to an increase in the influence of Tang artistic styles on Shilla. In particular, Shilla was influenced by both the Indian Gupta style and the realistic style that was then popular in Tang China. This highly refined and somewhat sensual style can be seen on works such as the twelve zodiacal figures surrounding Kim Yushin’s grave mound or the depiction of the Four Heavenly Kings on the sarira container from Kamun Temple.

Although the Greater Shilla period was characterised by the development of its own unique style, many conservative artists, especially those living outside of the capital, continued to
produce works in the previous abstract style. The Buddha figures carved in relief at Kahŭng Village in Yŏngju and on Kyŏngju’s Mt. Sŏndo are examples of this conservative trend. In addition, the artists from the former areas of Paekche and Koguryŏ continued to develop the styles of the two former kingdoms. By the eighth c., however, almost all works were done in the new realistic style.

The eighth c. is generally considered to be the golden age of Greater Shilla sculpture. During this time, a stable government, along with increasing contacts with India, Persia and Central Asia via China, created an ideal climate for artistic creativity. Stone sculptures from this period continued to be made in a realistic manner. Many of the figures, especially the Bodhisattvas and asparas, are portrayed in a very sensual way.

Sculptures from the early ninth c. were still characterised by realism, but there was an increased use of standardised designs. The situation worsened in 842 as Buddhism underwent a period of severe persecution in China, an event that naturally hindered contacts with Korea. Around this time, numerous Korean monks were at work introducing Chinese Chan (Kor. Sŏn) to Korea. Since Korean Sŏn was initially based on Hwaŏm (Chin. Huayan) thought, the Vairocana Buddha was enshrined as the main figure in most of the Sŏn temples. Many Vairocana figures from this period are extant. In addition, the Sŏn sect placed a great deal of importance in the personal attainment of Sŏn masters. As a result, stupas were increasingly constructed in order to commemorate the death of accomplished Sŏn masters. The master’s sarira (jewel-like remains after cremation) were often enshrined within these stupas. Buddhist sculptures from this period tend to be realistic and often ornate. In general, by the middle of the ninth c., Shilla sculpture had fallen into decline. Works from this period characteristically lack vitality.

Koryŏ

During Koryŏ Buddhism continued to serve as the leading ideology of the state. As a result, sculptors continued to receive generous government support for projects. There was a great diversity of sculptural styles during this period. In the kingdom’s central areas, artisans imbued the Greater Shilla style with a fresh naturalism. In the Yŏngnam area, on the other hand, artisans continued to produce works in the classical Shilla style, but as they were no longer able to imitate the technical dexterity of their predecessors, their work degenerated into a rigid, moribund style. Sculptors, influenced by Song and Yuan artisans, also started producing smaller statues. After the Mongol subjugation of the peninsula (early 13th c.), Koryŏ sculpture went into sharp decline. The style of this later period is extremely rigid.

Chosŏn

During the Chosŏn period, the Korean government instituted a policy of promoting neo-Confucianism while oppressing Buddhism. Even so, Buddhism survived through support from the common people and from intermittent support from pious Buddhists among the royalty. During the Hideyoshi Invasions, 1592-1598, and the Manchu Invasion of 1636, the country’s temples were ravaged. As temples were reconstructed throughout the nation in the years that followed, sculptors throughout the kingdom set to work on the monumental task of producing works to be enshrined in these temples. The sculptors from this period often did works based on those of the Koryŏ or Shilla periods. Their works also show some influence from the Chinese Qing Dynasty.

Sejo, King (r. 1455-1468)

King Sejo (1417-1468) was the seventh king of Chosŏn and reigned from 1455 to 1468. His given name was Yu and his courtesy name was Suji. He was the second son of King Sejong (r. 1418-1450) and the younger brother of King Munjong (r.1450-1452). In 1445 he was enfeoffed as Grand Prince Suyang and at this time was charged by his father with the establishment of a Buddhist shrine within the royal palace. Moreover he, along with two court retainers, was given the task of translating Buddhist texts, local songs and other lyrics into han’gul. In 1452, Sejo was appointed Controller (chejo) in the Bureau of Music (Kwansup togam). In the fifth month of the same year his brother Munjong died and the young King Tanjong (r. 1452-1455) acceded to the throne. From the seventh month of that year, Sejo (along with his loyal attendants Kwŏn Nam and Han Myŏnghoe) planned decisive action to consolidate his political position and in the tenth month of 1453 they commenced the Purge of 1453 (kyeyu chŏngnan). This was a violent affair and one that enabled Sejo to fully grasp political power in the kingdom. After this event, Sejo continued to consolidate his political power and finally with the backing of many disaffected elements among the literati, he disposed of his nephew Tanjong, eventually killing him, and took the throne for himself.

In the process of usurping the throne, Sejo carried out a bloody purge of all of those who stood in his way, including his own younger brother and the officials in the Hall of Worthies (Chiphyŏnjŏn). The scholars who were killed in this purge include the ‘six martyred ministers’ (sa yukshin) who refused to accept Sejo’s usurpation of the throne. After eliminating all of the elements that stood in his path, Sejo then began to enact revisions of the legal code that would strengthen and further define the government of Chosŏn. Among the major changes he made was the abolition of the Hall of Worthies and the transfer of its functions to the Office of Royal Decrees (Yemun’gwan). Symbolically he also strengthened the monarchy of Chosŏn by linking the current lineage of kings to ancient kings such as Tan’ gun and Kija. Moreover, it was in 1457 under Sejo’s rule that the offering of rites to the heavenly spirits at the Won’gudan Altar became incorporated into the events marking the lunar new year.

Sejo took other measures to strengthen and aggrandise the government and its control over the populace. In 1458 he re-enacted the Hop’ae pŏp (a law requiring all commoners to wear hop’ae, identification tags that recorded their place of residence, occupation, class status and other information), which was designed to tie commoners to their social position and prevent wandering. In the same year he ordered the compilation of Kukcho pogam (Precious Mirror for Succeeding Reigns) that was an unofficial history of the preceding reigns of Chosŏn, and later he also ordered the compilation of Tongguk t’onggam (Comprehensive Mirror of the Eastern Kingdom) a history of Korea. Sejo also directed his attention to the legal codes of Chosŏn and ordered the revision of Kyŏngje yukchŏn (Six Codes of Governance) and it was also under his rule that the compilation of the Kyŏngguk taejŏn (National Code), which would serve as the basis for the legal code for the duration of the Chosŏn period, was undertaken.

Other reforms of Sejo include the reorganisation of the military into the Five Military Command Headquarters (Owi Toch’ongbu) in 1464. This revision allowed the military command of the country to be divided into five regions and these in turn could be more easily controlled by the central government. Sejo also changed the mode for payment to officials. In 1466 he revoked the Rank Land Law (Kwajŏn pŏp) and implemented in its place the Office Land Law (chikchŏn pŏp), which stipulated that land only be provided to incumbent officeholders, unlike the prior law that also provided land to former officials. Sejo also contributed mightily to the encouragement of farming, irrigation projects and scholarship in agricultural methods that helped establish a foundation for his successors.
Sejo died in 1468, after an acute illness. Despite his scheming and purges, he can be thought of as contributing much to the consolidation of royal power in Chosŏn and to the strengthening of the overall ruling structure of the Chosŏn government.

Sejong Cultural Center

The Sejong Cultural Center (Sejong Munhwa Hoegwan) was established in 1978, six years after its predecessor the Seoul Citizens Hall was completely destroyed by fire. Situated on Sejong Street in the heart of Seoul, the centre is comprised of six stories and three basements with a floor space of 54,500 square metres. Major facilities include the main and secondary auditoriums, a stage set construction room, three exhibition halls, conference rooms, a banquet hall and rehearsal rooms for the nine performing art groups affiliated with the Seoul Metropolitan City Government (Seoul Philharmonic Orchestra, Seoul Metropolitan Choir, Seoul Metropolitan Dance Company, Seoul Metropolitan Korean Music Orchestra, Seoul Metropolitan Musical Company, Seoul Metropolitan Opera Company, Seoul Youth Philharmonic Orchestra, Seoul Metropolitan Boys & Girls Choir and Seoul Metropolitan Theater Company). In addition to serving as a performance hall for music, drama and dance, the hall is used for movies, exhibitions and international conventions.

Sejong Institute

Located in Seoul, the Sejong Institute (Sejong Yŏn'guso) is an independent, non-profit organisation devoted to research on South Korea's international and domestic affairs. The institute was originally founded as the Ilhae Foundation in December 1983, in the aftermath of the Rangoon Incident, in which seventeen members of the South Korean president's entourage were killed. After establishing a fund to assist the families of the victims, the institute's founders believed that a greater response to the tragedy was necessary and they envisioned the creation of a research institute dedicated to research on policies conducive to the promotion of lasting peace on the Korean peninsula. Renamed the Sejong Institute in May 1988, the organisation's research activities are focused on the Asia-Pacific region. Its research is divided into five areas: the Area Studies Program, the Foreign Policies and Security Studies Program, the International Political Economy Studies Program, the Inter-Korean Studies Program and the Policy Studies Program. Publications include the biannual Kukka chollyak (The Journal of National Strategy Studies). In 1998, the Institute had twenty-six researchers and fifty administrative staff.

Sejong shillok chiriji (Annals of King Sejong on Geographical Descriptions, 1454)

The Sejong shillok chiriji, in eight volumes in eight fascicles, is a geographical work to be found in Volumes 148 to 155 of the Annals of King Sejong. It can be described as a work on human geography for it is not limited to the physical features of Korea, but describes the politics, finance, economics and other social aspects of the eight provinces and two capitals, Kaesŏng (capital of Koryŏ) and Seoul (capital of Chosŏn).

The volumes on the provinces delineate the provincial administrative structure, the provincial government posts, mountains, rivers, ferries, boundaries, size of lands, number of households, soldiers, bodyguards, naval forces, persons of eminence, as well as listing the local products, tributes, fishing-grounds, salt fields, potteries, places of historical interest and other features.

The Sejong shillok chiriji provides a detailed insight into the condition of Korea at that time and marks the first appearance in the country of this type of geographical work.

The work was one of the noteworthy results of the cultural policy implemented by King Sejong of the Chosŏn dynasty. He had ordered the compilation of a geography of his
country and this resulted in the *Shinch’an p’alto chiriji*. (Newly Compiled Geographical Descriptions of the Eight Provinces). While only a part, the *Kyongsangdo chiriji*, of this early work is considered to be extant, nevertheless the *Sejong shillok chiriji* is closely connected with the *Shinch’an p’alto chiriji*.

It was re-published by the Central Council of the Government-General of Korea in 1937 and later by the Research Institute for Oriental Culture of Gakushuin University in Tokyo.

**Sejong, King** (r. 1458-1450)

King Sejong (1397-1450), often called ‘the Great’, is regarded as the most remarkable of the Chosön kings. He put the Chosön dynasty on such a firm foundation that it lasted for over five centuries. Most notable among his many achievements was the invention of the *han’gul* script, still in use in Korea today.

Sejong was the third son of Prince Chongan, the fifth son of King T’aejo, founder of the Chosön dynasty. His father became king on the abdication of his uncle, Prince Chongjong, and took the name T’aejong. Having observed his promising early development, Sejong’s father named him Crown Prince at the age of twenty-one, and less than a year later abdicated in his son’s favour.

Sejong was the first Chosón monarch to have been influenced in his early years by Neo-Confucianism, which was introduced by An Hyang (1243-1360) of the Koryo dynasty. Throughout this reign, King Sejong worked tirelessly to implement his Neo-Confucian vision of a world in which men lived in harmony with each other, and mankind in harmony with nature. Many of his accomplishments and innovations in the fields of science, technology, agriculture, medicine, law, literature and the arts, were the outcome of his philosopical values and assumptions. In his world view, the rules governing both natural phenomena and human society were manifestations of *lii* (Kor. *i*, sometimes translated as ‘principle’) which regulated interactions both within and between the human and natural worlds.

One of Sejong’s first significant acts as king was to establish the *Chiphyonjon* (Hall of Worthies), in the royal palace in 1420. An institution with this name had existed in Korea since the 12th century, but it did not come into prominence until the time of King Sejong, who greatly enhanced its effectiveness by supervising the selection of scholars and officials from the most talented men passing the state examinations and putting them to work on many different research projects. During the period of Sejong’s reign scholars working in the *Chiphyonlon* were responsible for the compilation of numerous works deemed important to the state, such as *Nongsa chiksol* (Straight Talk on Farming, 1429), *Hyangyak chipsongbang* (The Great Collection of Native Korean Prescriptions, 1433) and *Hunmin chôngüm haerye* (Explanations and examples of the Correct Sounds for the Instruction of the People, 1446)

The *Sejong Shillok* (Royal Annals), from which much of the information about King Sejong’s life and work is derived, states that the *Chiphyonjon* was the principal source of advice and expertise upon which he drew in undertaking his many projects and innovations aimed at the betterment of the state and the welfare of the people.

By the time Sejong had ascended to the throne in 1418, Confucianism was well established as the official ideology, and a number of reforms were carried out as a result. Mastery of the Confucian classics became mandatory for the official civil service examinations and they were taught at all levels of education. Confucian rites and ceremonies largely replaced those of Buddhism in virtually all aspects of society, including rituals for marriage, death and ancestor worship. King Sejong arranged for the publication and wide distribution of *Hyohaeng kyông* (The Classic of Filial Piety) and *Samgang haengsil to* (Illustrated Guide
to the Three Relationships) and fostered the gradual Confucianization of Korean society. Strict adherence to hierarchical and patrilineal relationships introduced in Sejong's time is thought to have contributed to centuries of political stability and cultural achievement.

The Korean alphabet, or han’gul as it is now known, is regarded as the crowning achievement of King Sejong. It is not known precisely when he invented the alphabet, but its completion was officially announced in 1443. The dynastic record states: ‘His Highness has personally created the twenty-eight letters of the Vernacular Script (ǒnmun)’. There is no evidence that others collaborated in the preparation of the alphabet and it is generally acknowledged that it was entirely Sejong’s work. In 1446, it was promulgated in the work Hunmin chǒngǔm, which was the original name given to the script by King Sejong, and it means literally ‘The Correct Sounds for the Instruction of the People’. This basic text was supplemented by a commentary entitled Hunmin chǒngǔm haerye compiled by a group of scholars commissioned by Sejong. In traditional times the script was usually called ǒnmun (vernacular/vulgar script), indicating the low esteem in which it was held by a Sinocentric world. In 1912 the term han’gul, with the ambiguous meanings ‘great writing’ and ‘Korean writing’, was coined by Chu Shigyong to give it a status it had not been accorded before. Modern linguists have recognized the unique features of the script and have acknowledged the sophisticated understanding of phonology it revealed which was not equalled in the West until recent times.

There has been much speculation about Sejong’s reasons for inventing the alphabet. One group of Korean scholars believes that he intended the alphabet to replace Chinese characters as the medium of literacy. Another group believes that it was intended as a means of teaching and reforming the pronunciation of Chinese characters. It seems likely that Sejong meant it to serve both as a simple method of writing which could be used by the common people and also as a vehicle for teaching Chinese characters. While Sejong’s achievements in other fields were numerous and impressive, it is the alphabet which is regarded as the most important by the Korean people. Its universal use by Koreans today is clear evidence of its enduring value.

Sejong realized that han’gul alone was not enough to achieve his goal of promoting scholarship and educating the people. More efficient printing techniques were needed, and he turned his attention to the improvement of movable metal type printing, which had been developed in Korea in the 12th and 13th centuries, but was still relatively inefficient. He encouraged his technicians to develop a better designed type which could be used to produce many more copies than had been possible previously, and improved the metallurgical methods used to produce type metal. Sejong enhanced the technology for producing high quality paper and experimented with the production of paper from rice straw, cotton, bamboo and hemp. He insisted on the highest standards in printing and proofreading. Both woodblock and movable metal type printing were used in Sejong’s reign, the former for long runs and the latter for shorter runs, usually between 100 and 300 copies.

Sejong’s contribution to the growth and development of Korean literature was considerable. In 1437 he ordered work to be commenced on the gathering of accounts of deeds in the veritable records and popular traditions relating to the four ancestors and the first and third kings of the Chosŏn dynasty. This was in preparation for the compilation of a monumental work entitled Yongbi och’on ka (Songs of Flying Dragons, 1445-1447) a cycle of 125 cantos comprising 248 poems. These were written by literary men in the Hall of Worthies and use mostly themes of praise found in the classics and histories focussing mainly on Yi Sŏnggye, founder of the Chosŏn dynasty. King Sejong ordered this work partly to test the use of the Korean alphabet in conjunction with Chinese.

Sejong had a keen interest in music and was responsible for significant changes in the music performed in court rites and ceremonies. He composed a number of sizeable pieces
of music himself, some of which are still performed today. During his reign the emphasis gradually shifted from music derived from China to a more nationalistic Korean music. One of the major cultural achievements of his reign was the composition of four complete musical settings to the Yongbi deco'n ka, which were appended to the Sejong shillok and which contain precise rhythmic information, something unprecedented in East Asia. The treatise Akhak kwebon (Guide to the Study of Music) of 1493 makes clear that its contents are largely the result of research undertaken at King Sejong's command. This treatise has been the standard work on Korean music for five centuries and is still consulted today.

Under the auspices of King Sejong painting achieved unparalleled status. Both court painters and scholar officials practised the arts of painting and calligraphy and their works testify to the diversity of styles which were evident as well as to the high levels of mastery achieved in the rich cultural atmosphere which prevailed at that time. The field of ceramics also reached a peak of development under King Sejong, particularly punch'dong ware and white porcelain. The most highly valued ceramics during the Choson period were the white porcelain items, some of which were ordered by a Chinese envoy for the Ming emperor Ren Zong.

King Sejong greatly influenced the development of agriculture in Korea, in particular by ordering the treatise on agricultural theories and practices, Nongsan chikseol (Straight Talk on Farming) to be written by Chong Ch'oo and Pyón Hyomun, published in 1429. The invention of the rain gauge was a significant development, as were certain astronomical instruments constructed in Sejong's time. He promoted the use of dykes, the water wheel and other irrigation equipment, and ordered the drawing up of an accurate agricultural calendar based on the improved astronomical instruments designed by his officials.

Growth in medical knowledge culminated in the compilation under King Sejong's direction of several major collections collating prescriptions from both Chinese and Korean sources, as well as other works on medical practice. King Sejong made it possible for everyone to obtain access to medical care through the establishment of clinics and a medical school and through sending government doctors to various parts of the country. He also appointed female physicians to care for female patients, thus overcoming the social taboos of a Confucian society, and arranged for proper health care of prison inmates. He contributed to the establishment of independent medical science in Korea by encouraging the study and use of Korean medicinal herbs and the eventual compilation of Hyang'yak chipsongbang (The Great Collection of Native Korean Prescriptions, 1433) in 56 volumes and S'ilbang yuch'ui (Classified Collection of Medical Prescriptions, 1445) in 365 volumes, both of which played an important role in the history of medical science in East Asia. Sejong also contributed to the development of forensic medicine and had guidelines prepared for the conduct of autopsies.

The first legal code in Korea had been proclaimed by T'aego, the founder of the Choson dynasty, in 1397, and revised by the third king, T'aegong, in 1413. When Sejong ascended to the throne, he assigned officials to work on further revision of the code. After several revisions and redrafts, they produced the code known as the second Sok Yukchon. It is generally acknowledged that no other king had such legal knowledge or did so much to implement the rule of law in Korea. He personally supervised and approved each article of the code and encouraged discussion of each draft. He was said to be concerned 'always to keep in mind the comfort and well-being of the people', and to guard against corruption by those making the laws. Sejong was responsible for reforming the criminal justice system by changing the kinds of penalties and punishments given as well as improving the appeal system. He also strengthened the Confucian family system by adopting the prescribed rules contained in Zhu Xi's book on family ritual. These customs, established firmly in Sejong's time, were to remain in place for many centuries.

King Sejong died at the age of 52. His thirty-two year reign is regarded as a kind of
‘golden age’ by Koreans today, which is not surprising in view of his remarkable record, not only in the history of Korea, but of the world.

Seo Jung-joo (1915-)

Seo Jung-joo (Sŏ Chŏngju) was born in Kojang, North Chŏlla Province. In 1929 he moved to Seoul and entered Chungang High School but was expelled soon after for taking part in a nationwide anti-Japanese movement. He transferred to Kojang High School in the following year but was also subsequently expelled. He then studied Buddhism and entered a Buddhist college but did not graduate.

Sŏ began his poetic endeavours in the mid-1930s and published his first collection of poems in 1941. *Hwasa chip* (Flower Snake) was an immediate critical success and Sŏ was hailed as one of the most talented young poets in Korea. His works were frequently mixed with Western literary ideals and for this reason many consider his literary origins to be Western. His poems also reject the traditional class structure of Korea and the concept of ‘low’ or ‘high’ births. This period of Sŏ, however, did not last for long as the turbulent days of World War II took him away from poetry. After Korea’s liberation in 1945, Sŏ’s poetry began to reveal a tendency towards an affirmation of the traditional way of life, while still being cognizant of the larger world. His poetry then began to address a myriad of subjects such as the Shilla Kingdom, folktales, and a Buddhist philosophy intermingled with traditional shamanistic beliefs.

Sŏ has a number of collections available including two collections that have been translated into English. *Unforgettable Things* (trans. David McCann, Si-sa Young-o-sa, 1986) and *Selected Poems of Seo Jung-joo* (trans. David McCann, Columbia University Press, 1989) provide non-speakers of Korean access to the works of Sŏ. Other Korean language collections include *Tŏdori ā shi* (Poems of a Wanderer) and *Sanshi* (Mountain Poems) are among his many poetry collections.

Seoul Arts Centre

Located in Sŏch’o District in southern Seoul, the Seoul Arts Centre (Yesurũi Chŏndang) is an extensive complex with 120 951 metres of floor space, located in a 234 385-square-metre area. Established in the late 1980s and early 1990s in order to promote art and multi-disciplinary cultural activities, the centre is comprised of the Seoul Opera House (established in 1993), the Concert Hall, the Calligraphy Hall, art galleries, an art library and a cultural theme park.

As the centre’s main venue, the Seoul Opera House includes, Towol Theatre, Chayu Theatre, an opera hall, and other facilities. Containing state-of-the-art technical equipment, the opera hall has the capacity to stage five-act operas. With 2 340 seats and three supplementary stages, it can hold simultaneous rehearsals, even during a ticketed-performance.

The Towol Theatre, with 710 seats, is used mainly for plays, but is also available for dances, musicals and operettas. Although of smaller-scale, its stage facilities almost equal those of the opera hall. Chayu Theatre, which has an adjustable seating capacity ranging from 300 to 600 seats, is primarily designed for the production of small-scale and experimental projects. Since there is no fixed separation between the stage and auditorium, the theatre can be easily reconfigured into an arena, proscenium, a typical apron or any other arrangement, in accordance with the director’s wishes.

The Concert Hall was opened in February 1988, with the aim of presenting a wide range of musical performances, including symphony orchestras, choral concerts and chamber music groups. Its main auditorium seats 2 600 people while its recital hall can seat 400. Its
practice rooms, instrument areas and dressing rooms can simultaneously accommodate two full-size orchestras.

With 15,642 square metres of total floor area, the art gallery area has three different types of galleries. Nearby, is the arts library. Consisting of 11,719 square metres of floor space, the library contains reference material, audio-visual facilities, a film archive and two small cinemas, as well as its books on art.

Seoul Broadcasting System (SBS) [Broadcasting companies]

Seoul City University

Seoul City University (Sŏul Shirip Taehakkyo) is situated in Tongdaemun Ward in Seoul. Founded in 1918 as the agricultural school Kyŏngsŏng Kongnip Nongŏp Hakkyo, the school became the two-year technical college Sŏul Nongŏp Ch'ŏgŭp Taehak in June 1950. In March 1956, its status was raised to the four-year Sŏul Nongŏp Taehak. In December 1973, the school was transformed from its agricultural role to an industrial college, and was renamed Sŏul Sanŏp Taehak. The college began its master's degree program in November 1980 and three years later, a doctoral program was instituted. In October 1981, further renaming took place and the college became Sŏul Shirip Taehak (Seoul City College). Following expansion, the college became gained university status in 1987.

Today, the university consists of five colleges (the Colleges of Economics and Business Administration; Engineering; Law and Public Administration; Liberal Arts and Natural Sciences; and Urban Studies), together with four graduate schools (the Graduate School, and the Graduate Schools of Business Administration; Engineering; and Urban Studies). The school’s motto is ‘Truth, Creativity and Service’.

Seoul Metropolitan Museum

Seoul National University

Seoul National University (Sŏul Taehakkyo) is located in Shillim-dong in Seoul. The university was founded by government order on 15 October 1946 as an amalgamation of Keijō (Kor. Kyŏngsŏng) Imperial University and nine public and private colleges. With H. B. Ansted as first president, the new university opened with 4,500 students and 491 faculty members.

Initially, there was a deal of controversy about the creation of a new university, with some dissenters claiming that the government had hastily set up the university without adequate consultation with affected colleges and institutions. However, by 1947, the argument had all but dissipated. In that October, Yi Chunho became the university's second president. Between 1950 and 1960, the university expanded rapidly, with the addition of six colleges, three professional graduate schools and eleven research institutes. Doctoral programs began in 1957. In 1975, the main campus was transferred from Tongsung-dong in Chongno Ward to the university’s present location in Kwanak Ward.

Today, Seoul National University consists of sixteen colleges, four graduate schools and seventy-one research institutes, together with support facilities. The Kwanak campus, at the foot of Mt. Kwanak, is the university’s main site, while the Yŏn’gŏn Campus in central Seoul contains the colleges and facilities concerned with medicine and health subjects. The colleges of Suwon Campus, in Kyŏnggi Province, are devoted to teaching and research in agriculture and associated subjects.

From its inception, the Seoul National University was coeducational. Today, the
university’s total enrolment is around 28,000 (20,000 undergraduates and 8,000 graduate students) with a 4:1 ratio of male to female students. There are about 1,400 members of faculty. Admission to the university favours strongly those who have performed exceptionally well in their high school studies. The university’s motto is *Veritas Lux Mea* (Truth is My Light).

Seoul National University has the following colleges: agriculture and life sciences; business administration; dentistry; education; engineering; fine arts; home economics; humanities; law; medicine; music; natural sciences; nursing; pharmacology; social science; and veterinary medicine. For postgraduate study and research there are dedicated schools, viz, the Graduate School of the University; the Graduate School of Public Health; the Graduate School of Public Administration; and the Graduate School of Environmental Studies.

The Seoul Metropolitan Museum of Art (Sŏul Shirip Misulgwan) is located in Kyŏnghŭi Palace in Seoul’s Chongno Ward. Established in 1988, the museum has an area of 992-sq. m., in which there are six exhibition halls and an outdoor area for sculpture exhibitions. In addition to its exhibitions, the museum offers general art courses to the public.

**Seoul Nori Madang**

Situated near Olympic Park in southeastern Seoul, Seoul Nori Madang is a traditional amphitheatre established in an effort to preserve and promote Korean folk plays. The amphitheatre consists of an arena and a traditional Korean-style pavilion for musicians, as well as dressing and rehearsal rooms. Performances include traditional music, dance, drama and martial arts.

**Seoul shinmun**

The *Seoul (Sŏul) shinmun* newspaper is a national daily, published in Seoul. It was founded directly after liberation in 1945 and took over the offices and printing facilities of the *Maeil shinbo*, the press organ of the Japanese Colonial Government. It ran its first copy on 23 November 1945, with issue no. 13,738, a number which represents the continuation of a long history of publication reaching back through the *Maeil shinbo* to the *Taehan maeil shinbo*. On the establishment of the *Seoul shinmun*, the president was O Sech’ang, the managing editor Yi Kwan’gu and the editor-in-chief Hong Kimun. Following Korea’s liberation, the *Maeil shinbo* had a decided left-wing orientation, but with the establishment of the American Military Government, an ideological conflict arose. Eventually, a compromise was achieved and the newspaper, renamed the *Seoul shinmun*, was allowed to begin publication with the 23 November edition. After some months, however, publication was temporarily suspended with the outbreak of the Korean War in June 1950. But by April of the following year, it was again being published as a ‘front-line’ newspaper. After the armistice, the *Seoul shinmun* continued to grow and its management experimented with publishing in a variety of formats, such as the vernacular han’gul script. By October 1958, its editions had increased in size to eight pages, and from 23 March 1959 the publication numbers were changed to reflect the independence of the *Seoul shinmun* from its predecessors. As a result, the issue number of the inaugural edition (23 November 1945) was given the number ‘1’. A fire at the time of the April 1960 students’ uprising caused the loss of many valuable materials in the newspaper’s offices, and in the rebuilding the *Seoul shinmun* was forced to suspend publication for about six months in late 1960. However, with the support of the military government which had seized power in May 1961, the newspaper was able to resume publication on 22 December 1961, with a thirty-six-page edition. The *Seoul shinmun* continued to undergo changes, such as the December 1980 move from an evening to a morning newspaper. Many changes in printing technology have
included the use of CTS (Cold Type System) in 1985, and the computerisation of the printing and editing processes.

Over the history of its publication, the Seoul shinmun has had various sister publications such as the magazine Shin ch’onji (New Heaven and Earth), which was published from 15 January 1946 to May 1951; the weekly magazine Sôndei sôul (Seoul Sunday) published from 22 September 1968; and the sports newspaper Chugan sîp’och’û (Weekly Sports), published every week since 30 March 1975. Other innovations included a weekly television guide and a daily sports coverage.

Today, the Seoul shinmun is involved in many community events and it also makes literary awards. It is an established, prominent, and well-liked newspaper, and one which plays a part in many facets of Korean society.

Seoul Special City

History

The origins of Seoul (Hansŏng, Hanyang) can be traced to the Three Kingdoms period of Koguryŏ (37 B.C.-668), Paekche (18 B.C.-660) and Shilla (57 B.C.-935). Originally, the small settlement located in a basin protected by mountains and bisected by the Han River settlement had been the capital of Paekche -- before it shifted its capital to Puyŏ. When Paekche fell to the Greater Shilla, the latter set up Hanyang county (Hansan-ju) there in 755 and secured Shilla a gateway through which it could communicate with China across the Yellow Sea. This move contributed greatly to the unification of the peninsula in the next c. Under King Sŏngjong (r.981-997) of Koryŏ (918-1392) its importance was increased when it was designated Yangju-mok, one of the dynasty’s twelve major provinces (983). In 1067 its status was upgraded when it became the Southern Capital (Namgyŏng) - Pyŏngyang being the Northern Capital (Pukkyŏng) and Kyŏngju the Eastern Capital (Tonggyŏng).

Yi Sŏnggye (King T’aejo) who founded Chosŏn in 1392, moved his capital from Kaesŏng to Hanyang (present Seoul) in 1394. Its site not only provided a central position but offered an easy river crossing and possessed auspicious geomantic characteristics. Following Chinese patterns of urban design, Seoul was transformed through King Taejo’s mobilisation of 197,000 men into an eighteen km. walled city encompassing sixteen sq. kms., which became the main site for the shrines of royal ancestors, royal palaces and government offices (Figure 1). When completed in 1394 King Taejo moved his capital to Seoul. In 1396 the administrative district included a circular 4 km. (10-li) no-development zone in and outside of the city walls from which lumber, construction and grave-digging were excluded. The entire area was designated into five districts (bu) — north, south, east, west and central. These were subdivided by King T’aejo into 52 subdistricts (bang). Later they were reduced to 49 districts by King Sejong.

Subsequent developments in the city between the mid-seventeenth c. and the mid-nineteenth c. occurred largely within the fortified area. In 1669 Seoul had a population of 200,000 inside and outside the walls. Most palaces and mansions of the ruling class were built north of a tributary of the Han River; residences of some professional and the working classes were built on the south side. In the central area lived the chungin (middle-class people), comprising translators-interpreters, astronomer-astrologers, accountants, statute law clerks, scribes, government artists or doctors, all of which positions became the virtually hereditary. Remnants of the city’s pre-industrial city are still evident in old palaces, alleys, narrow roads and dead-ends in the city centre.
Seoul’s growth in the late nineteenth c. was spurred by the opening of the treaty ports of Pusan (1877), Wŏnsan (1882), Inch’ŏn (1883) Mokp’o (1899), Yongamp’o (1904), Ch’ŏnjin (1908) and Sinŭiju (1910) and the completion of the railways with Inch’ŏn and Pusan. Under Japanese rule (1910-45) a small amount of light industry developed in the Seoul area which attracted migrants from impoverished rural areas. Seoul was one of twelve Korean cities recognised by the Japanese. Indiscriminate growth of Seoul and other Japanese cities led to urban planning regulations being promulgated in 1934.

When Seoul was liberated from the Japanese in 1945 it had a population of 900 000 and an area of almost 135 sq. km. Subsequently, Seoul’s population was inflated by Koreans returning from Japan, Manchukuo and Southeast Asia where they had been drafted by the Imperial power as soldiers, miners and prostitutes. In 1946 Seoul was re-designated as ‘Seoul Special City’ and separated from Kyŏnggi Province. By 1948 the newly-established government of the Republic of Korea had created Seoul Metropolitan city with a population of 1.42 million and an expanded jurisdiction of almost 270 sq. km. On 25 June 1950 the invading communists from the North reduced the city to rubble. After the 1953 ceasefire Seoul again grew rapidly as relief efforts (including food from the US) attracted 1.2 million people from the north including entrepreneurs, intellectuals and landlords. Without adequate controls over urban development the influx of population led to the development of squatter housing on public and private land. Much of Seoul’s workforce was engaged in tertiary activities.

Population

Between 1953 and 1966 Seoul’s population increased twofold to 3.6 million and by 1975 had reached 6.8 million. As the flow of displaced people to Seoul decreased after 1960 much of the increase stemmed from migrants from impoverished rural areas seeking work in the new factories. Mechanization of agriculture accelerated the flow. After the mid-1970s migration slowed but there was still an inflow of 3 million rural migrants during the 1970s attracted by Seoul’s bright lights and educational opportunities. This influx as accelerated by the growth in real income and development of and development of international trade.

Progressively, population and manufacturing activities have been dispersed to satellite cities within the Seoul Metropolitan Area, notably Anyang, Ŭijŏngbu, Inch’ŏn, Puch’ŏn, Sŏngnam and Suwŏn (Figure 2). These satellites are marked by the mass construction of residential housing. Workers employed in Seoul are able to commute from these dormitory areas by subway or bus. Within increased car ownership some of the upper and middle class have moved to the suburbs to take advantage of better living environments. By 1983 Seoul’s city population was 9.2 million, the Metropolitan Area was 12.1 million and the Capital Region (Seoul and Kyŏnggi province) 14.7 million. During the 1980s Seoul received a further 2.3 million rural migrants though there was also a net outflow of 120 000 to the neighbouring metropolitan areas of Inch’ŏn Metropolital Area and Kyŏnggi province. By 1995 Seoul city’s population was 11 million. Its daytime population is estimated at 14-15 million. Many Seoulites are still trying to adjust to city life as 50 per cent of the population came from rural areas and 90 per cent are migrants or their immediate descendants.

Economy

Seoul’s economy benefited from the switch in government policy in the mid-1960s from an emphasis on basic industries and the development of social overhead capital to export orientated manufacturing which promoted light manufacturing industries. After the mid-1980s the Capital region’s share of labour-intensive manufacturing (textiles, apparel,
Marked developments have occurred in producer services (including wholesaling, finance, insurance and real estate) and high-tech and R&D. Seoul city’s major functions are now international trade, finance, insurance and real estate, and telecommunications. The agglomeration economies offered by Seoul and the Capital Region have also attracted more than half of South Korea’s high-tech and information-oriented industries. The highest rate of growth in employment and number of services has been in business services. More than 80 per cent of technical and computer services are located in Seoul. Some business services have deconcentrated to the adjacent areas of northern Kyonggi and some R&D activities have moved to southern Kyonggi, especially along the Seoul-Pusan Expressway. This overall pattern correlates with the high number of higher educational and corporate research institutes in Seoul and the Capital Region.

Seoul and the Capital Region account for two-fifths of the nation’s population, 44 per cent of capital assets, 61 per cent of managerial personnel and 96 per cent of the top 50 corporate headquarters. Also Seoul and the Capital Region attract most of the international banks, consultants, media and diplomats and a disproportionate amount of foreign direct investment. Although Seoul is the world’s fourth largest urban agglomeration its level of globalization is not commensurate in terms of corporate headquarters, banks and international conferences compared with rival centres.

Much effort is being devoted by its planners to deconcentrating Central Business District activities into a multi-polar structure to provide the basis for Seoul’s status long-term internationalization. Great emphasis is placed on attracting the offices of UN-related activities and on Seoul becoming a major centre of regional cooperation in the Far East. Before Seoul can aspire to global city status improvements in transport, housing and other infrastructure is required.

Infrastructure

Since the 1960s Seoul has enjoyed a significant improvement in water supply, solid waste disposal and transport services. Water supply has kept pace with population; solid waste disposal has benefited from a plant at Inch’on; and traffic management has been good and an efficient bus, subway and commuter rail system has been established to create sub-centres within the Central Business District and to promote dispersion to satellite towns. Progress has been made in tackling the pollution of the Han River by relocating offending industries. Air pollution has been reduced by the change in household fuel from coal to natural gas and imposition of controls over automobile emissions. The collapse of the Sôngsu Bridge over the Han River, however, is a timely reminder of the poor quality of infrastructure built during the period of rapid growth during the 1960s and 1970s.

Rising levels of automobile ownership have reversed some of these benefits and created traffic and parking problems, particularly in narrow side roads. Seoul has 1.95 million vehicles and the number is increasing by 200,000 vehicles annually. The Seoul Metropolitan Government is investing heavily in constructing additional subways and urban
expressways to relieve traffic congestion. When completed the subway system will total 278 kms. Forty kms of inner beltways totalling and 186 kms. radial road system are also projected. The operation and management of existing facilities has also been improved through measures for facilitating traffic flow and bus-only lanes. Little attention has been paid to the needs of pedestrians.

The prime infrastructural problem has been the inability of housing construction to keep pace with rapid population growth. This situation has been aggravated by the emergence of the nuclear family, the demolition of older housing units and lower levels of construction than anticipated. About 50 per cent of the population do not own their homes. Often sub-standard houses are redeveloped to house poor migrants and squatting has become a social problem. Squatter housing conditions in Taltongnae (Moon Village) have become a serious political issue. Environmental improvement programs have been extended to include substandard housing projects located in hilly areas which have attracted low income earners.

Culture

Much emphasis is always afforded Seoul's economy and infrastructure but its political and cultural roles are often neglected. Previously, decisions on these matters were made by administrative elites. In 1995 the first democratically elected mayor was installed for a three-year term.

The city is divided into 25 autonomous districts (ku) which are subdivided into 527 sub-districts (dong) (Figure 3). Administration of Seoul, however, is no longer a local matter as its growth affects that of Korea as a whole and is inextricably linked with the fortunes of Northeast Asia.

(Bring in Figure 3)

The new sophisticated national government and financial centre has been located south of the Han River in Yōūi-do — the ‘Manhattan of Seoul’. It is home to the National Assembly, the Korea Stock Exchange, broadcasting stations and many corporate headquarters. The Daehan Life Insurance Building is 63 storeys high.

Old palaces and museums in central Seoul are important as repositories of Korean culture. Since the 1988 Olympics Seoul has been developed as an important international tourist centre. Its appeal has been broadened by the creation of theme parks including Seoul Dream Land.

Planning

Since the early 1960s the recurrent theme in the Capital Region's planning strategy has been to reduce its growth because Seoul's location was within artillery range of North Korea. A range of growth management strategies have been deployed in an attempt to disperse economic and activities and population from the Central Business District and the city as a whole. Prevention measures were also introduced to curb in-migration. Until the mid-1970s the policies were ineffective and the Capital Region's population was augmented by thousands of new migrants.

After the mid-1970s a raft of new policy instruments were introduced to control the growth of Seoul and the Capital Region. They involved the Population Dispersal Plan for Seoul (1975), the Population Redistribution Plan for the Capital Region (1977) and the Restriction on Construction of Large and Public Buildings in the Capital Region (1982) and the Capital Region Readjustment Plan (1984). Measures included: a green belt to encourage new economic activities to move to satellite cities; an industrial location policy offering both tax
incentives to movers and direct controls on stayers; the development of local industrial estates and Panwol new town; controls on the expansion of educational institutions; designation of a relocation promotion area, the development promotion area, the growth management area, the environment preservation area and the development reservation area; and the use of public transport investment (Figure 4).

(Bring in Figure 4)

These policies have enjoyed limited success because of the difficulties of controlling the movement of population and the persistence of agglomeration economies in Seoul. Given the panoply of measures used, it is difficult to determine if the changes have occurred spontaneously or have been induced by government policy. Direct regulatory measures, however, have been conspicuously unsuccessful. Government regulation and the idealism of planners have been outweighed by the Korean preference for face-to-face contact.

These changes during the 1970s were accompanied by a reorganisation of Seoul city's internal structure. There was a shift of population and functions from the Central Business District (Chongno-ku) south of the Han River. A polynuclear system has resulted. As noted, insurance and finance services have concentrated in Yōūido while corporate headquarters and producer services (e.g. technical and computer services) have been attracted to Kangnam. This polynuclear development has aggravated north-south traffic movement.

During the 1980s Seoul's development was focused on the 1988 Olympics which led to the construction of subways and projects for enhancing the Han River. Redevelopment occurred north of the Han River and the new urban districts of Mok-dong, Kaep'o and Kodōk were created. Land prices have skyrocketed and housing problems worsened. The pronounced housing shortage prompted the government to adopt a new strategy contrary to the long-standing policy of deconcentrating activities and exercising growth control in Seoul. Permission was given for the development of five new town developments with 20 km of Seoul's Central Business District — Ilsan and Jungdo'ng to the west and Pundang, Pyōngchon and Sanbōn to the south. Covering an area of 294 sq. km their collective population is expected to reach 1.2 million. All towns have been linked to Seoul by an electric commuter railway system. A criticism of this policy was that it did little to assist the poor and homeless.

Since 1990 this planning strategy has been pursued further. While the goal of regional balance in South Korea has been maintained direct economic measures will be employed to generate economic growth in provincial areas. The agglomeration economies of Seoul and the Capital Region will be maintained to support the international competitiveness of Korean industries. Rather than attempting to disperse economic activities from Seoul and the Capital Region to economically backward areas the thrust is to encourage the growth of Seoul and other large cities. This new policy offers tacit recognition of Seoul's role as an international gateway located two hours by air from Tokyo and Beijing. This symmetry has led to speculation that there could be a new urban corridor linking Beijing, Tokyo and Seoul known as BESOTO (Figure 5).

(Bring in Figure 5)

Shamanism

The term shamanism is widely used to refer to the native religion of the inhabitants of the Korean peninsula before Buddhism, Taoism and Confucianism were introduced, as well as to later forms of Korean religion in which the religious specialists commonly referred to as mudang play a pivotal role. The use of the terms shaman and shamanism for these phenomena is surrounded by contention. Part of the problem is the lack of a universally accepted definition of what is a shaman. If, as Mircea Eliade argued, the true shaman is one who has mastered a technique of ecstasy that allows his soul to ascend to heavenly realms, the mudang, who typically is possessed by gods and spirits, cannot be designated as such.

A less restrictive definition of the shaman, as a socially recognized religious specialist who has acquired the ability to enter into direct communication with gods and spirits through ecstasy or voluntary possession, and who employs this power for the benefit of others, may include the mudang. The problem remains that, as will be explained below, the term mudang may refer to different types of religious specialist, with different claims to be called a shaman. The term 'shamanism' is also problematic because it may suggest a greater continuity and unity than is warranted. It is questionable whether the oldest and more recent phenomena referred to as shamanism, in spite of fundamental changes in the social status of shamans and the functions of shamanic ritual, have enough in common to be classified within one and the same category. The word shamanism also suggests the existence of a well-defined and institutionalized system of thought, belief and practice, clearly differentiated from other religions. Although in the twentieth century certain associations of mudang have been created (mainly to defend common interests), there never has been a true ecclesiastical organization, nor has there been anything like explicit doctrines or a theology.

In fact, some scholars have argued that shamanism, rather than a religion, is a religious phenomenon, which does not necessarily manifest itself as a separate entity, but may exist within the context of another religion, such as Buddhism. In Korea, shamanic patterns may especially be observed in some of the New Religions. On the other hand, in shamanic rituals in Korea an abundance of Buddhist elements can be detected, while Confucian values, too, have influenced the rituals of the mudang. It cannot be denied, however, that in comparison with China and Japan Korean shamanic practices demonstrate a large measure of autonomy vis-à-vis the other religious traditions.

In Korean, shamanism is often referred to as musok, 'shamanic customs'. Alternatively, it is regarded as part of minsok shinang, 'popular beliefs', or called mugyo, 'shamanic religion', or shin'gyo ('religion of the gods'). In spite of these last two appellations, it is rarely regarded as a religion comparable to Buddhism or Christianity, and it is not included in official religious statistics. An exact count of the number of those who believe in shamanism would in any case be impossible, as shamanism is not institutionalized and does not have formally registered, and exclusive, adherents.

Premises

In spite of significant differences according to period, region and person, generally Korean shamanic rituals are based on a number of fundamental premises. Human life is thought to be influenced by gods, ancestral spirits and invisible forces, with whom one may enter into direct contact to improve one's lot. There is no great divide between man and the numinous powers which man may appeal to as a source of spiritual force. Although anyone can pray
to the gods or make simple offerings by him or herself, the shaman's special power to approach, or even incorporate, numinous powers, is for many purposes indispensable.

Metaphors of attaching and loosening structure ritual action: the clients are brought into physical contact with blessings (or their symbolic representations), while impure and harmful influences are dislodged and removed. The grudges of the spirits (a potential source of affliction) are 'untied'. Related are the concepts of 'inside' and 'clean' (positive) and 'outside' and 'unclean' (negative). What is good/clean is brought (or kept) 'inside' (e.g. inside the walls of the family home), what is bad/unclean has to be thrown out.

After death the soul of a person is supposed to live on, either as a potentially beneficent ancestor, or as a restless spirit whose unfulfilled desires and lingering resentments pose a threat to the living. Exceptional personalities after death may become gods.

Shamans

*Mudang* is a general appellation, but there is a great number of regionally determined terms. In Seoul, for female shamans *manshin* (which has a honorific connotation) is used, and *paksu* for male shamans. *Munyo* is another term for female shamans. In the South–West, hereditary shamans are called *tan'gol* (which also may refer to the collectivity of regular clients). On Cheju Island, where male shamans are much more numerous than on the mainland, the term *shimbang* is used. Recently the media have begun to use the term *musogin* 'shamanic customs people) to avoid the pejorative connotations traditionally attached to the word *mudang*.

Korean shamans, like their clients, are predominantly women. Men who act as shamans in central Korea symbolically change themselves into women before they perform a ritual, by putting on a woman's skirt over their own clothes (over which, in turn, the clothes of the deity worshipped are worn). Within her own household the female *mudang* tends to be the dominant figure, rather than her husband, contrary to the traditional Korean pattern. Until the twentieth century to become a *mudang* was one of the very few possibilities for a woman to have a professional career, and the only one that gave her real independence.

*Mudang* can roughly be divided in two types, the inspired shaman (*kangshin mu* or *naerim mudang*, literally 'shaman in whom the gods descend') and the hereditary shaman (*sesup mu*). The inspired shaman, who has the best claim to be called a true shaman, suffers an initiatory illness (*shinbyông* or *mubyông*), which is interpreted as a divine summons to become a *mudang*. As long as this calling is refused, the illness continues, while the gods even may cause relatives of the sufferer to die. Thus, the decision to become a shaman is not voluntary; the gods force someone to become a *mudang*, whether she wants or not. This pattern, which is very similar to the initiatory process of Siberian shamans, contributes to the personal charisma of the inspired *mudang*, because it implies that her actions represent the will of the gods. Once she accepts her vocation, the new *mudang* spontaneously begins to predict the fortunes of people she happens to meet, some of whom will come to belong to her circle of regular clients (*tan'gol*). At this stage of her career her divine inspiration is at its strongest, but she will not yet be able to sing shaman songs (*muga*) and dance as a full–fledged *mudang* should be able to do, nor does she possess the necessary knowledge of ritual minutiae. To make up for this, she seeks the help of an established *mudang*, who will preside over an initiation ritual (*naerim kut*), where the aspiring shaman has to demonstrate her newly acquired powers, and over a number of years will coach her in the various ritual skills she needs. The established shaman and the novice are called 'spirit mother' (*shin omóni*) and 'spirit daughter' (*shin ttal*). In recent years, this relationship is less frequently found, and numerous *mudang* learn their craft in different ways, for example in a newly established 'mudang school' in Seoul, or by reading books. Inspired *mudang* usually have one god acting as a special guardian deity, the *momju* ('master of the body'), but worship many more in a special room in their homes.
called *shindang*, which is adorned with pictures and other representations of the deities, such as brass mirrors and statues.

During the rituals the *momju* and other gods and spirits possess the *mudang*, but this possession is strictly controlled. When the right moment comes the *mudang* makes the gods descend into her body so that they may speak directly to her clients, who as long as she is possessed treat her with the reverence due to the deity. The *mudang* all the time remains conscious of what happens. Because she maintains control, one should not regard the *mudang* as a maladjusted, unstable, neurotic personality, as sometimes has been done. In fact, a successful *mudang*, apart from the ability to sing, dance and make music, needs more than average social skills.

Hereditary shamans do not experience *shinbyöng* and possession and consequently have a less immediate relationship with the gods, who do not speak directly through their mouths. A large part of their authority is drawn from their superior skills as performers (which they have learned from infancy). In fact, they may be regarded as priestesses rather than shamans, but the distinction is not always easy to make. Even among hereditary *mudang*, a particular personal disposition, comparable to the vocation of the inspired shaman, is often thought to be needed, and in practice one may observe that in certain regions (particularly along the East Coast) possessed and hereditary *mudang* perform rituals together. (For major rituals *mudang* work together in teams, in which each takes turns, making music, dancing and singing.) Although the hereditary shamans do not get possessed themselves, possession still is part of some of the rituals they perform. In rituals for the dead, relatives of the deceased may act as spirit mediums.

Hereditary *mudang* are typical of southern Korea, while inspired *mudang* are said to be dominant in the central and northern regions. All over the country, however, one finds a type of inspired shamans (*son mudang* (‘half-done/inexperienced *mudang*’)) without ritual skills, who perform very simple rituals or concentrate on fortune-telling. Among such shamans, those who are possessed by the ghost of a dead child are often called *myöngdu*.

Traditionally the social status of the *mudang* is extremely low, a factor inhibiting easy acceptance of the vocation of the possessed shamans. Because a *mudang* in the family lowers the status of the family as a whole, relatives often fiercely oppose one of their number becoming a shaman. Among hereditary shamans, social discrimination has encouraged intermarriage between families of shamans. The husbands of hereditary shamans often take part in the rituals as musicians. On the East Coast these are called *hwaraengi*.

**Gods, spirits and invisible influences**

Nearly all the gods worshipped by Korean shamans are represented as anthropomorphic and approached as if they were (very powerful) human beings, with a human predilection for good food, drink and beautiful clothes. When, during a ritual, the gods address the believers, they often adopt the tone of a human superior who upbraids his subordinates for their shortcomings, or in a fatherly tone tells them not to worry as long as he is on their side.

The shamanic pantheon is open and at any time may accommodate new additions. Thus, during the past hundred years, *mudang* have included Jesus Christ, General Douglas McArthur, and General Park Chung-Hee among the deities they worshipped. An exhaustive enumeration of the hundreds of gods is impossible, but certain major categories may be outlined, such as the gods related to the house and the family, and gods of certain localities. *Songju* is the guardian deity of the house and its master. *Samshin* (often referred to as 'Grandmother Samshin') is a deity related to childbirth and the raising of children. *Samshin* is often identified with Chesök, a deity of Indian origin (Sakra devanam Indra),
who came to Korea with Buddhism. Chishin is the deity of the earth, who is closely linked
to the mistress of the house. Also classified under the house gods are the Taegam ('Excellencies') who bestow wealth. Bringers of good luck are the ḍp, who appear in the
shape of certain animals. Individual families may also have particular ties with certain gods.

Mountain gods (Sanshin) take a prominent place among the local gods. They are often
represented as white-haired old men, accompanied by a tiger. According to some scholars,
originally the tiger itself was the mountain god. To the shamans mountains are numinous
places where, after thorough purification, they go to pray. Another type of local god,
Sŏng hwang (or Sŏnang), takes its name from the Chinese City God (Ch'enghuang), but in
Korea Sŏng hwang is associated with mountains rather than with cities. Most likely the
veneration of Sŏng hwang is a variation of the worship of mountain gods as local tutelary
deities. In the Chosŏn period the Confucian government also worshipped mountain gods
and Sŏng hwang, but such worship should not be regarded as shamanic, although in some
cases the distinction may have become somewhat blurred. The people would attach the
name of Sŏnang to village gods (often represented by an old tree or a heap of stones) who
had no place in the official ritual codes.

There are also numerous gods who do not fall in the two categories mentioned above.
Remarkable are the many martial deities, often deified heroes and generals from Korean or
Chinese history (Gunung, Shinjang). Most of them have extraordinary valour and a tragic,
untimely death in common. Examples are General Ch'oe Yŏng (1316–1388), who was
killed by the founders of the Yi dynasty, and the Chinese general Kuan Yu (?–219), who
also was widely venerated outside the context of shamanic rituals. Pyŏlsang are the spirits
of princesses who died of smallpox, or kings and princes who came to a tragic end.
Ch'il sŏng (literally 'Seven Stars', i.e. the constellation Ursa Major) is a deity with both
Taoist and Buddhist connections who grants (new) life and longevity. The Dragon King
(Yongwang) is a god of water (seas, rivers, ponds, wells etc.). Sŏnnim (literally, the
'Guest') is the deity of small-pox, who as long as the disease was common in Korea,
would be received with great courtesy in homes where children were ill with smallpox, in
the hope that he would leave without inflicting death. Grandmother Taeshin ('Great Spirit
Grandmother') is a deified mudang who leads the ancestors to the place of the ritual,
making possible the reunion of the living and the dead, as a the mudang who performs the
ritual does.

Ancestral spirits (chosang) play an important role in shaman rituals as well as in
Confucianism, but the concept of what makes achosang is different. Whereas
Confucianism only honours patrilineal ancestors who through marriage have produced
descendants, the shamanic concept of chosang includes matrilineal ancestors and the spirits
of unmarried relatives, and even of children who during their life were junior to those who
during the ritual treat them as 'ancestors'. In practice, the chosang who in rituals make an
appearance by possessing the shaman, mainly are those of persons whom the participants
knew personally.

There is also a multitude of smaller spirits and gods (chapkwi and chapshin) who, although
less significant, receive some attention in the opening and closing parts of rituals.

Shamans also recognize various kinds of noxious influences that may attach themselves to
humans, threatening their life and well-being. Examples are the pollution that arises from
death (sangmun), unexpected misfortune that happens to cross one's way (hoengsu/hongsu, hoengaek/hongaek), and baleful influences (sal) that strike when people
are polluted or in a dangerous transitional period.

Rituals and Other Activities of the Shamans

Divination may be called the most fundamental of the activities of the mudang, because it
allows her to diagnose the situation of her clients and prescribe appropriate action in the form of simple or elaborate rituals. The most important functions of the costly large-scale shamanic rituals (kut) are to obtain good luck (chaesu kut) in one form or another (success in business, a good catch for the fishermen, etc.), to heal (p’ung kut or uhwan kut), and to conduct the souls of the newly dead (especially of those who have died an unnatural, gruesome death) to 'a good place' (chinogwi kut or ogu kut).

_Kut_ for good luck may be held for a family, but also for larger communities, such as a group of fishermen, the inhabitants of a village, the shopkeepers of a particular market, or residents of an urban neighbourhood.

Healing _kut_ are based on the idea that disgruntled spirits, angry gods and noxious influences are the cause of ill-health. At present, the _mudang_ mainly conduct such rituals for patients whose complaints cannot satisfactorily be treated through western or Chinese medicine.

Rituals for the dead try to take away the grudges and frustrations that make them a danger for the living and make it possible for them to become proper ancestors, who help their relatives rather than harm them. Specific forms of such rituals are designed to bring back the souls of those who have died at sea, and to join the spirits of dead bachelors and girls in posthumous wedlock. When the spirits of the dead (chosang) appear during a ritual and, through the medium of the _mudang_, talk with their next of kin, very strong emotions (feelings of guilt, anger or grief) may be unleashed, making the ritual a cathartic experience.

Music, dancing and singing, intended to entertain the gods, are indispensable elements of all major rituals. The music marks the different parts of the ritual and, more generally, helps to create a sacred space in which the limitations of the normal, everyday world can be overcome and life changed for the better. For the possessed _mudang_, possession comes while she is dancing and is indicated by a change of rhythm and dance movements. Once she is possessed the _mudang_ begins to jump up and down to an insistent beating of the drum. At a certain point of the ritual, the clients, too, are invited to dance in the robes of one of the gods, a way to become one with the deity for a few moments and thus directly receive his blessing. Such dancing is called _mugam_.

Within a _kut_, separate sections (kori) are devoted to individual deities or groups of deities or spirits. The rituals generally begin outdoors for minor spirits, then move inside the house or shrine for the sections for the major deities, and finish outdoors again with a section for the lesser spirits. The sections, too, have a common structure: an invitation to descend to the site of the ritual, the offering of food, drinks and entertainment (music, dance and song), prayer and the relaying of the messages of the gods through the mouth of the _mudang_ (kongsu; not, however, with the hereditary shamans), and finally sending the gods on their way after these have promised protection and support. The possessed _mudang_ of central Korea for each _kori_ don the clothes that belong to the deity who is venerated, expressing the identification of the _mudang_ with the god that takes place during the ritual.

From a psychological point of view, too, there is a fixed pattern in the rituals. First the wishes and desires of the believers are made explicit and the circumstances specified that might stand in the way of their realization. Then, in the special atmosphere created by the ritual, where the oppressive restrictions of mundane daily existence recede in the distance, it is made plausible that the difficulties will be overcome with the help of the gods. In this respect, various kinds of divination during the ritual that aim to establish whether it has been successful also contribute to its psychological efficacy. A similar function have certain feats performed by the _mudang_, such as standing on razor-sharp knives or lifting heavy brass objects, holding them between the teeth, acts that the _mudang_ only is supposed to be capable of when possessed.
Mudang also may prescribe simpler and less expensive rituals (pisŏn, pinyŏm, sonbim or ch'isŏng) after they have established what is the cause of a client's problems. Together with the client the mudang will pray, —that a mother will have enough milk for her baby, or a husband cease his philandering, for instance—, or she will exorcize noxious influences. Furthermore, mudang determine lucky days for certain actions and manufacture talismans (pŭjŏk). Contacts of this kind, which are cheaper and much more frequent than the kut, are of great importance in maintaining the relationship between a shaman and her regular clientele. If the health of children is weak, clients may conclude a fictive adoption contract with the mudang, whereby the child becomes a 'grandchild' of the gods and receives divine protection. This practice (which has parallels in other Korean religions) is called myŏngdari (literally 'life-bridge').

For the musical accompaniment of shaman rituals, drums (usually the hourglass-shaped changgo, sometimes the cylindric puk), gongs and cymbals are the most basic instruments. The drum, in particular, is the shamanic instrument par excellence. The mudang who dances and sings sometimes holds a set of small bells in one hand. A peculiar instrument is the koritchak, a wicker basket that is rhythmically scratched. For more elaborate kut, the Korean shawm (p'iri), the transverse flute (taegŭm), the two-string fiddle (haegŭm) and the double-reed oboe (hojŏk) are also used, but they are usually played by shamans' husbands or professional musicians.

For many rituals the only clients present are women, they but usually act for the benefit of the whole family, the men included, assuming important ritual responsibilities. Even in village rituals households often are represented by the women. A rare example of a kind of ritual where male believers predominate are the rituals fishermen sponsor for a good catch and safety at sea.

**Historical Development**

According to records from the Koryŏ period, shamans were active at the courts of the Three Kingdoms of Koguryŏ, Paekche and Shilla. The second king of Shilla, Haenam, used a title (ch'ach'aung) that carried the meaning of 'shaman', but it is uncertain whether this implied that he actually performed shamanic tasks. There is no doubt that the governing elite often put trust in shamans. Surviving records suggest that shamans practiced divination, healed illnesses, and transmitted the words of gods and ancestral spirits who descended in their bodies. In the Koryŏ period, the government continued to employ shamans, to pray for rain for instance, but there were increasing signs of tension between the elite and shamans and of the social decline of the latter. The scholar–statesman Yi Kyubo (1168–1241) in a long poem ('The old mudang') mocked the ritual of a female shaman and expressed satisfaction that the government had ordered the expulsion of all shamans from the capital.

With the advent of Neo-Confucianism as the official orthodoxy in the Chosŏn period, shamanic rituals, together with other forms of popular religion and Buddhism, were even more strongly disavowed and suppressed by the government, although it took some time before even the elite accepted the new values. In the early 15th c., yangban would still entrust the tablets of their ancestors to mudang. Yet the hostility of Confucians towards the shamans grew, and sometimes they would violently disrupt rituals or destroy shrines. Socially, shamans were relegated to the lowest stratum of society, the so-called 'base people' (ch'ŏnmim). In spite of all repression, it was only in the 17th c., however, that the shamans completely lost their public function in rituals of the central government. They continued to serve the women of the elite (including the royal court), with private rituals. In this way they might gain an influence incongruous with their low formal status. For men, participation in shamanic ritual came to be seen as incompatible with yangban status. By the end of the 19th c. the clients of the shamans typically consisted of women of all classes and of non–elite men.
After the opening of Korea in 1876, shamans also became a target for scathing criticism from progressive reformers and Christian missionaries. After they gained power in Korea, the Japanese colonial overlords, too, attempted to suppress what they, together with many educated Koreans, regarded as 'superstition' (*mishin*). They commissioned studies of shamanism in order to devise the best policy to deal with it. At the same time, however, certain Korean intellectuals began to recognize shamanism (or some aspects of it) as part of their ethnic identity, and made it into an object of serious study. The two most prominent scholars of this kind were Yi Nung-hwa (1869–1945) and Son Chint'ae (1900–?). Elements of shamanism were also used as motifs or symbols in literary or artistic creations. The short story 'Portrait of a Shaman' (*Munyodo*) published by Kim Tongni in 1936 is a famous example.

After Liberation the fate of shamanism was different in the North and the South. In the North, it was uniformly regarded as reactionary superstition, and—as far as we know—completely eradicated. Many shamans from the northern part of the Korean peninsula managed to escape to the South, however, where they remained active, catering to the needs of other refugees from the North. In the South, rejection and more positive evaluations of shamanism continued to coexist. In the 1970s the New Village Movement targeted shamans as exponents of superstitious practices, but around the same time the government officially began to recognize certain shamans as keepers of authentic traditional Korean culture. Scholars had already provided an academic basis for this by tracing the origins of various forms of Korean music and literature back to shaman rituals. In the 1980s the dissident *minjung* movement emphasized the function of shamanism as a repository of the sensibilities and culture of the oppressed masses. Shamanic symbolism became part of student demonstrations. Certain shamans began to perform in urban theatres and at universities, or travelled abroad to confront foreign audiences. Some of them appeared on television and acquired 'superstar' status. In the 1990s, this trend continued, while a few shamans published books about their lives and their rituals, shattering the ancient, stereotypical image of the shaman as illiterate and totally uneducated.

South Korea's rapid urbanization as a consequence of economic development and great progress in the general level of education have not resulted in the disappearance of shamanism, which often had been considered as a rural phenomenon typical of backward, under-developed corners of the country. The shamans have successfully managed to adapt to the needs of a fast-changing society and are active in the metropolis of Seoul in sizeable numbers. One of the factors that seems to keep the shamans in business is the uncertainty due to the vagaries of the market in a capitalistic system. As a consequence of new life styles the form and functions of the rituals have changed. When private cars became more common, for instance, *mudang* began to perform blessing rituals for newly bought automobiles (*ch'a kosa*). Better transportation has made it possible for *mudang* to perform rituals far away from their home. Conversely, many shamans from the countryside have migrated to the big cities, where they sometimes cooperate with shamans from other areas. A blurring of regional differences has been the result. Increased mobility has also dealt a blow to the *tan'gol* system that linked a *mudang* and her successors to several generations of regular clients.

Modern rituals are usually much shorter than those of the past, which might last for several days. The number of people attending nowadays is often very small, in contrast to the rural rituals which all the neighbours would come to see. The exception to this are the rituals that take place outside their traditional setting, when *kut* are presented to large audiences in theatres or stadiums as folkloric performances.

Shaman Songs

The songs sung by the Korean shamans, the mudang (both of the possessed and of the hereditary type), are usually referred to as muga; mudang songs. Alternative appellations are mudang sori (same meaning) and shin'ga ('divine songs'). These terms cover a great variety of songs and chants used during rituals to invite down gods and spirits, to sing their praise, to ask them for blessings, to entertain them and, when they possess the shaman, to transmit their words (kongsu). Some of this is, in fact, spoken rather than sung. For each part of the ritual (kori) and for each of the deities to whom such a kori is devoted, there are separate muga. These may be very short, or they may take hours to sing in their entirety. There are simple invocations, descriptive passages, narrative songs explaining the origins of deities (ponp 'uri), and lyrical songs as well as comic dialogues and other pieces of a dramatic nature (nori). In the style of singing and content there is considerable regional differentiation, although certain motifs and plot types are found almost nation-wide. Singing is usually accompanied by percussion instruments (drum, cymbals, gong) or, in more elaborate rituals, by wind instruments like the p'iri (the Korean oboe) and the flute, or by the two-stringed fiddle (haegum).

There is no canonical version of the muga and the texts are not completely fixed. One and the same mudang may sing the same song in different ways on different occasions, adapting it to the demands of the audience and the circumstances. In this way, the retelling of an old tale may serve to express the concerns of the moment. Changes in the text may also occur when muga are handed down from one generation of mudang to another. Because the songs are part of the means for conducting a ritual rather than the explicit expression of dogma or doctrines, there is considerable leeway to introduce new motifs and tales, as long as these fit the general tenor of the ritual and enhance its performance. For these reasons the texts are in constant flux, but the mudang tend to use the same kind of formulaic phrasing in their continuous recreation of the songs.

The transmission of the songs has been mainly oral but, from at least the early part of the 20th c., written texts - manuscripts as well as printed books - have been used, too. Of late, the latter have increased in importance, while more modern means to learn the songs, such as tapes, have also become available. The effect of these recent developments seems to be a
greater standardization. Shamans of the East Coast, for instance, in their rendering of the Tale of Shim Ch'ông nowadays follow a commercially published version of the story word for word.

Although muga are assumed to have been in existence as long as there have been mudang, the texts at our disposal, but for a few exceptions, all were written down in the 20th c. One example of an older text by some regarded as a mugais a song from Shilla, the hyangga 'Ch'ôyong ka', but it remains uncertain whether it ever was really used in shaman rituals. With some of the songs in the Shiyon hyangakpo a ('Korean Musical Scores for Periodical Events,' presumably 16th.) one is on firmer ground. In the 19th c., fragments of muga were recorded in p'ansori libretti. The first modern collection of muga was published by Son Chin't'ae in 1930, and after the Japanese Akiba Takashi and Akamatsu Chijo put together a second volume in 1937, many other collections followed, most of them in the period between 1970 and the present, resulting in a voluminous corpus of songs from every region, including the North, from where, after 1945, many mudang fled to the South.

In spite of the fact that almost all of the muga known to us were recorded quite recently, they are often supposed to be one of the oldest forms of Korean literature, if not the oldest, and to have influenced various later genres. In the absence of a substantial body of older muga this is difficult to prove. The mugado, however, contain certain elements already present in the oldest historical writings of the peninsula. Thus in the muga of Cheju-do one finds many of the motifs found in the Koryôsa account of the origin of the three foremost families of the island, and the plot of the Cheju-do muga called Samgong ponp'uri is, in part, similar to that of the story about King Mu of Paekche as told in the Samguk yusa.

Yet it must be assumed that the muga have been subject to constant change. In fact, in their present form they show the influence of genres of vernacular literature that flourished during the later Chosôn period (shijo, kasa, ko-sosol, p'ansori), rather than the other way around.

Most of the interest in the muga has focussed on the ponp'uri, the narrative songs which explain the origin of a deity and may be regarded as a kind of myth. A review of the stories told in these songs reveals a great and varied number of correspondences with other genres. Some are of the same type as well-known folktales (from Korea and elsewhere), others contain Buddhist elements, or are based on Chinese or Korean traditional novels. Although predominantly an oral genre, there is ample evidence of influences from written literature on the muga, possibly mediated by the husbands of the mudang, who often were musicians in the service of the government and as such had opportunity for contact with upper-class culture.

The best known examples of ponp'uri, widely distributed and recorded in numerous variants, are devoted to Pari kongju or Paridegi, the Abandoned Princess (who was the first mudang and guides the spirits of the dead to Paradise), and to the deity of childbirth (often referred to as Chesôk). In the latter resemblances have been detected to the myth of the founder of the ancient state of Koguryô. Different from this and other ancient myths or tales, the muga put greater emphasis on the exploits of female protagonists, not surprising in view of the predominance of women among both mudang and their audiences. Other ponp'uri (e.g. Ch'angse ka) are unique in Korean tradition as myths describing the origin of the universe and mankind, and of suffering and evil. These songs belong to a type of tale that is distributed from Central Asia and Siberia to China and South-East Asia and has possible cognates even further afield. This alerts us to the fact that the muga, although undoubtedly highly typical of Korean culture, also deserve to be examined in a much wider context.

Bibliography
Shigup (tax villages) [Taxes]

Shihung

Situated to the south of Inch'on in Kyonggi Province, Shihung was designated a city in 1989. Except for Suam Peak on the southeastern border, most of the city is under 200 metres in elevation. The city’s topography is characterised by low hills and areas of heavy erosion.

As part of the Kyonggi industrial district that stretches from Seoul to Inch'on, the city has recently experienced a huge increase in population. Taking advantage of the city’s proximity to Inch’on’s port and the Seoul metropolitan area, factories in the area produce a wide range of goods including textiles, chemicals, metalwork, machinery, electrical appliances and electronics.

Agriculture is another important source of local revenue. Rice cultivation is common in the plains or on the reclaimed land along the coast. Dry field crops, such as turnips, Chinese cabbage, spinach and leeks, along with fruit crops such as peaches, grapes and pears are transported from here to nearby Seoul and Inch'on. Coastal products include crabs and shrimp. In addition, the area has the most extensive salt flats in Korea.

The city’s tourist industry is primarily centred around sports fishing along the coast and in the Kyeso, Toch’ang and Murwang Reservoirs. Visitors also come to see the city’s historical sites and relics. Comb-style pottery has been discovered in Chongwang-dong and eight dolmens have been found Mokkam-dong. Buddhist relics include a 14-metre high standing Bodhisavattva etched on to a rock face on the eastern side of Mt. Sorae. Believed to date from the late Koryo or early Choson period, this is one of the largest such engravings in all of Korea.

In Hwajong-dong, one finds Ojonggak. This shrine was built in honour of Kim Mun’gi (?-1456), who sought to restore the deposed King Tangjong (r. 1452-1455), and the following five generations of Kim’s male offspring. On nearby Mt. Maha (246m) is Mangwol (Gazing at Yongwol) Rock. Kim Mun’gi’s grandson Ch’ungju, lamenting Tanjong’s banishment to Yongwol, is said to have come up here every day and wept as he looked out in the direction of Yongwol. Legend has it that where his tears fell, a pine tree withered and died. Kosong-jong (Withered Pine Pavilion) was erected at the site to commemorate the event.

Shijo [Literature]

Shilla kolp’umche sahoe wa hwarang do (The Shilla Social Bone-Rank System and the Way of Hwarang)

Shilla kolp’umche sahoe wa hwarang do, written by Yi Kidong, discusses the political and social structures of the Shilla Kingdom. It was first published in 1980 by the Han’guk Yön’guwôn and then reissued in 1984 by Ilichogak Publishers. In this work the author examines the rise and decline of the kolp’um (bone-rank) system of Shilla, emphasising its...
political, social and cultural implications and developments. Moreover, the kolp’um system is examined in its relationship to the Hwarang to (The Way of Hwarang). This work is largely divided into three main sections. The first examines the formation of the kolp’um system and the structure of the ruling classes of Shilla, and the second analyses the social, political and cultural implications of the kolp’um system. In the third section the author explores the relationship between the kolp’um system and the hwarang to and the social implications of the hwarang to within kolp’um society. This work is valuable for understanding the structure and role of the kolp’um system and the hwarang to, the two most notable social institutions of Shilla.

Shimwŏn Temple [Architecture]

Shin Ch’aeho (1880-1936)

Shin Ch’aeho was a historian, public figure and an independence fighter. His family’s ancestral home is in Koryŏng and his many pen names included Ilp’yŏn tansaeng and Tanjae. Moreover, Shin was given names such as Muaesang and Kŏmshim and used aliases such as Yumyŏngwŏn. He was born in Sannae in South Ch’ungch’ŏng Province and raised in Ch’ŏngwŏn in North Ch’ungch’ŏng Province. Shin studied the classics under his grandfather’s tutelage until he was eighteen, at which time he entered the National Confucian Academy (Sŏnggyun’gwan) and began formal studies. While at the National Academy, Shin was fortunate to receive special attention from Yi Chongwŏn, who was director of the school, and he also studied under such renowned scholars as Yi Namgyu. Moreover, while at the Academy he became associated with such men as Kim Yŏnsŏng, Pyŏng Yŏngman, Yi Changshik and Yu Inshik among others. It was also at this time that Shin embarked upon his independence activities.

When Shin was twenty-two he returned to the area of his hometown and took a position as an instructor at the Mundong Academy and together with Shin Kyushik carried out educational enlightenment activities in the area. Three years later Shin, Shin Kyushik and Shin Paegu established the Sandong Academy in this same region, and it was here that they endeavoured to carry out the so-called ‘new education’ activities. In February 1905, Shin was appointed as an instructor at the National Academy and at this time also began his activities with the Hansŏng shinmun Newspaper. However, the authorities indefinitely suspended the paper in November of the same year. In the following year Shin was recommended for a position with the Taehan maeil shinbo (Korean Daioly News) and he then began to write articles in this newspaper for both the enlightenment of the common man and also to expound on various historical documents.

It was through Shin’s love of history that he was able to instil a sense of national pride in the Korean people. This was his way of countering the negative impact that the Japanese influence and domination of Korea was having on the national self-esteem of the Korean people. Therefore when he wrote works such as Yi Sunshin chŏn (Biography of Yi Sunshin) Ulji Mundŏk chŏn (Biography of Ulji Mundŏk), he did so not only for his love of history, but also as a means to create a sense of honour among the people for their past national heroes. However, after the Japanese annexation of Korea in 1910, Shin’s literary activities and flair for nationalism caused him a great deal of trouble with the Japanese authorities and eventually caused him to flee to China for his personal safety.
Shin participated in several of the anti-Japanese groups that sprang up during Japan’s encroachments on Korea. He participated in the New People’s Association (Shinmin Hoe) with such patriots as An Ch’angho, Yi Hoeyong, Yi Kap and Yi Sünghun, and also in a branch organisation of the New People’s Association, the Young Students Association (Ch’öngnyön hakhoe) with An Ch’angho, Yun Ch’iho and Ch’oe Namson. While in China, Shin continued to both participate in anti-Japanese groups and write for various publications. He wrote in the Pukkyöng ilbo (Beijing Daily News) and the Tongnip shinmun (The Independent) which was the organ of the Korean Provisional Government (Taehan Min’guk Imshi Chongbu). Shin also had his critiques and theses published in papers in Korea such as the Tonga ilbo and the Chosön ilbo. Accordingly, his fame as a writer grew while he was in exile. Shin’s writings also drew the attention of the Japanese and in 1928 he was arrested for a piece that called on Koreans to attack the Japanese and their establishments. He was sentenced to ten years in jail and sent to Lüshen Prison where he died from illness in 1936.

Shin is widely acclaimed as one of the finest historians of his day. His many works cast Korean history in a new light and popularised many Korean historical figures. Not only was he an excellent historian, but he also was a great patron of traditional Korean arts. This can be viewed in his encouragement of p’ansori (dramatic one-man storytelling) at a time when this art was looked down upon by many in the upper classes. However, Shin recorded p’ansori performances and even tried his hand at writing these. For this reason Shin’s works are highly valuable data in many fields including history, literature and musicology.

Shin ch’onji [Magazines]

Shin Hûm (1566-1628)

Shin Hûm was a scholar-official of the middle Chosön period. His family’s ancestral home is in P’yöngsan, his courtesy name was Kyöngsuk and his pen names included Hyönhôn, Sangch’on and Pangong. His father Shin Sûngsô was an Inspector (tosa) of Kaesön and his mother, of the Unjin Song family, was the daughter of the Sixth State Councillor, Song Insu. The young Shin studied under the tutelage of his mother’s father and Yi CheMin.

In 1585 he passed the Classics Licentiate Examination (saengwôn shi) and in 1586 he also passed the Special Examination (pyölsih). After passing the civil service examinations, Shin assumed a post at the National Confucian Academy (Sônggyun’gwan) as a Third Proctor (hagyu). From 1589 he held a variety of posts such as First Diarist (pongeo) at the Office of Royal Decrees (Yemun’gwan) and Bailiff (kamch’al) at the Office of the Inspector-General (Sahônbu). With the outbreak of the 1592 Japanese Invasion, Shin found himself ostracised by the Eastern faction that held power at the time, and was appointed as Superintendent of the Post Stations (ch’albang), but due to the war he was not able to take office. He continued carrying out official activities and as a result was promoted to Fourth Inspector (chip’yông) due to his service. In 1593 he was appointed as Assistant Section Chief (chwarang) of the Board of Personnel (Ijo) and after this time held a succession of government posts.

The times that Shin was active in the Chosön government were very turbulent with not only the Japanese invasion, but also the political infighting that eventually resulted in Kwanghae (r. 1608-1623) being deposed. Shin was not immune to these struggles and was exiled in 1616 due to his role in the degradation of the Queen Mother, but was pardoned in 1621. In 1623 at the same time that King Injo (r. 1623-1649) took the throne, he was appointed as Minister (p’ansô) of the Board of Personnel and he also served as Director (taeje hak) of the Office of Royal Decrees (Yemun’gwan) and the Office of Special Counsellors (Hongmun’gwan). In addition, later in the same year he was selected as Third State
Councillor (우이종). With the outbreak of the 1627 Manchu Invasion he was selected as Second State Councillor (確か종) and also fled the capital with the crown prince to Chŏnju for safety and in the next year he served as Chief State Councillor (영우이종) before his death.

Shin is also remembered for his literary accomplishments and is praised along with his contemporaries such as Yi Shik and Chang Yu for his contributions to the Sino-Korean literature of the day. Among the extant literary works by Shin, *Sangch'on chip* (Collected Works of Sangch'on) and *Yǒdn* are highly praised.

**Shin Ikhūi (1894-1956)**

Shin Ikhūi was an independence fighter and a politician. His pen name was Haegong and he was born in Kwangju, Kyŏnggi Province. When Shin was young he studied the Chinese classics before eventually attending Waseda University in Japan. When he returned to Korea in 1913 he took a position as an instructor at Chungdong School, but after learning of the doctrine of self-determination being espoused by the American president Woodrow Wilson, Shin joined the independence movement with vigour. He participated in the March First Independence Movement in 1919 and as a result led the life of a fugitive for the next twenty-six years.

While a refugee, Shin roamed through many parts of China. He joined the Korean Provisional Government (Taehan min'guk imshi chongbu) and helped draft the Constitution of this government in exile. He also served the provisional government in a variety of capacities including in the Office of Foreign Affairs and the Home Office. Shin’s approach to independence for Korea began as a peaceful one, but this soon changed to a philosophy that advocated the use of force to win back Korea's sovereignty. Accordingly, Shin travelled throughout China and tried to enlist Korean youth into a resistance army. Towards the end of the colonial period, Shin managed to combine his resistance army with the Chinese revolutionary army to form a united front against the Japanese. However, the impact of this army was not major.

After liberation in 1945 Shin returned to Korea and formed the Korean Citizens Independence Fostering Association (Taehan Tongnip Ch'oksŏng Kungmin Hoe) and acted as its vice-chairman. During this time he also served as dean of Kungmin College and as president of the Chayu Shinmun Company, which published the *Chayu shinmun* newspaper. In 1947 he formed the Korean People’s Party (Taehan Kungmin Tang) and in 1950 merged this party with the Korean Democratic Party (Han'guk Minju Tang), which created the Democratic Nationalist Party (Minju Kungmin Tang) of which he served as chairman. In 1956 he was selected as the opposition party presidential candidate to oppose Syngman Rhee (Yi Sŭngman) in the upcoming presidential elections. However, while campaigning in Chŏlla region, Shin suffered a heart attack and died. He is praised for both his independence and political activities that helped shape the early days of the Republic of Korea.

**Shin Kyŏngnim (1936- )**

Shin Kyŏngnim is a poet who was born in Chungwŏn of North Ch'ungch'ŏng Province. He graduated from the English Literature Department of Dongguk University in 1967. His literary career began in 1955 with the publication of his poem *Nattal* in the monthly magazine *Munhak yesul*. However, his work was sporadic at first and he did not begin to publish in earnest until the late 1960s. Shin has been honoured with several literary awards including the *Munhak yesul* Commendation in 1955, the Manhae Literary Prize in 1973, the Korean Literature Prize in 1981 and the Isan Literature Prize in 1990.

Shin’s main literary interest is found in rural lifestyles and is characterised by a deep
affection for those whose lives are rooted in the soil. The various rural scenes that are portrayed in his works reveal a consciousness of the farmer and his life that has been trampled by the processes of industrialisation. His poetry is written with an epic lyricism in which the personal emotions of the poetic subject are fused with the third-person narrative of the activities that are described in the work. Shin has incorporated many traditional forms of Korean lyricism into his work such as that found in traditional genres such as kasa, folksongs (minyo) and shaman songs (muga). This has expanded his poetic realm and also has tied his work closely to the culture of those whom he chiefly writes about. Moreover, the metre of his works is closely tied to that of traditional Korean oral literature, which adds authenticity to the works.

Shin has many publications including poetry collections such as Nongmu (Farmer’s Dance, 1973), Kananhan sarang norae (Love Songs of the Poor, 1988), Sshikkim kut (Cleansing Rite, 1987) and Yorum nal (Summer Day, 1991). He has also published literary criticism collections such as Urishi üi ihae (Understanding Our Poetry, 1986) and prose collections like Minyo kihacn 1, 2 (Journeys in Search of Folksongs 1, 2; 1985, 1989).

Shin Kyushik

Shin Saimdang (1504-1551)

Shin Saimdang is a representative female painter and poet of the mid Chosŏn period. Her family’s ancestral home is in P’yŏngsan, her father was Shin Myŏnghwŏ and her mother was the daughter of Yi Saon. In addition she was the mother of the famous scholar and statesman Yi I (1536-1584). Her pen names included Saimdang, Shiimdang and Imsajae. Shin was the second of five sisters and was educated during her early years by her parents. She displayed excellent talents in the arts from an early age and also was trained in the Confucian classics. When she was nineteen she married Yi Wŏnsu, but shortly after she married her father died so she observed the traditional three years of mourning period to mark his passing. She lived with her husband’s family in Yulgok Village but still travelled to visit her mother as often as possible. She had seven children, four sons and three daughters. Her son Yi I was the third son and she contributed much to his education by training him in the Confucian classics at an early age. In 1551 her husband was appointed as a tax official and had to travel to P’yŏngan Province. While he was away, Saimdang suddenly became ill and died at the age of forty-seven.

Saimdang’s extant literary works are limited to two complete works, and yet these do reveal her writing skill. Moreover, she is also known for her talent in calligraphy, but there are not many examples of her work extant. It is her paintings that have survived in the greatest number to the present day. Among her representative works, Ch’ŏch’ung to (Flowers and Insects) and Sansu to (Hills and Streams) are both praised for their excellence in artistic technique and the vivid images that they portray. She is sometimes overshadowed by her famous son Yi I, but her ability as an artist and poet demands praise in its own right. Many Koreans honour her as an exemplary woman as she is the model of a devoted daughter and mother in addition to her outstanding individual talents.

Shin Sukchu (1417-1475)

Shin Sukchu was an early Chosŏn period scholar-official. His family’s ancestral home is in Koryŏng, his courtesy name was Pŏmŏng and his pen names were Hŭihyŏndang and Pohanjae. His father, Shin Chang, was the Second Minister (ch’amp’an) of the Board of Works (Kongjo). In 1438 he passed the samayang government service examination and at this time became a classics licentiate (saengwŏn) and a literary licentiate (chinsa). In the following year he passed the ch’inshi mun’gwa (a civil service examination held on special order from the king) and began his life in Chosŏn officialdom. In 1441 he was appointed to the Hall of Worthies (Chiphyonjŏn) and in the following year he travelled to Japan as
Shin also contributed a great deal at the time of the creation of *Hunmin ch'ôngum* (Correct Sound for the Instruction of the People). This work explained the han'gûl script that had been invented in 1443. Shin also assisted in the writing of explanatory notes and a han'gûl translation of *Yongbi 'ôch'ôn ka* (Songs of Flying Dragons), which was the first poetical work using the new han'gûl script.

Shin's career as a diplomat is well documented as he played an important role in Chosŏn's relations with both Japan and China. His first trip to Japan was followed by later negotiations with Japan that resulted in a radical reworking of the trade practices between the two nations. His literary skills proved to be an important factor in his relations with the Japanese diplomats and many of the poems and other writings that he composed at the behest of the Japanese are contained in his *Pohanjae chip* (Collected Works of Pohanjae). Shin also was very important in the diplomatic relations with Ming China and in 1452 accompanied an official embassy to Ming that was led by Grand Prince Suyang (King Sejo, r. 1455-1468), who would soon usurp the throne as his own. After Sejo had seized the throne in 1455, Shin again travelled to Ming on the important mission of obtaining approval of the Ming for Sejo's reign. His work *Pohanjae chip* also contains many records concerning his travels to Ming China. Shin also contributed to the northern policies of Chosŏn. In 1460 he was charged with the command of the troops in Kangwŏn and Hamgil (present day Hamgyŏng) provinces and subjugated the northern tribes which had been pestering Chosŏn.

The literary legacy of Shin is rich and his works detail his many accomplishments and observations while serving in an official capacity. *Haedong chegukki* (International Records of Korea) details the geography, history and diplomatic relations between Korea, the Ryukyu Islands, Tsushima and other nations to the south and east of Korea. In this work Shin's observations of protocol and procedures for best handling the envoys from these nations served as a standard for subsequent generations. This work along with *Pohanjae chip* provide excellent documents for study of Shin.

Shin continued to serve in official capacities throughout his life and also was charged with supervision of the compilation of *Sejo shillok* (Veritable Records of King Sejo) and *Yejong shillok* (Veritable Records of King Yejong). Moreover, he held many official positions in his lengthy career including that of Chief State Councillor (yŏngŭijŏng) to which he was appointed in 1462. Shin died in 1475 and was honoured with the posthumous title of Munch'ong.

**Shin Wi (1769-1845)**

Shin Wi was a late Chosŏn period official, calligrapher and painter. His family's ancestral home is in P'yŏngsan, his courtesy name was Hansu and his pen names included Chaha and Kyŏngsudang. His father, Shin Taesŭng, was Inspector General (taesahŏn) at the Office of Inspector General (Sahŏnbu) and his mother was the daughter of Yi Yongnok. In 1799 he passed the Royal Visitation Examination (alsŏng mun'gwa) and was selected as ch'ogye munshin (lower third rank official). Shin travelled to Qing China as part of an embassy in 1812 and it was at this time that he increased the breadth of his appreciation for scholarship and literature. In 1799 he passed the Royal Visitation Examination (alsŏng mun'gwa) and was selected as ch'ogye munshin (lower third rank official). Shin travelled to Qing China as part of an embassy in 1812 and it was at this time that he increased the breadth of his appreciation for scholarship and literature. In 1814 he was appointed as Fourth Minister (ch'AMP'an) of the Board of War (Pyŏngjŏ) and in the following year he was appointed as Magistrate (pusa) of Koksan. At this time Shin saw the plight of the impoverished peasants and sought to remedy this situation by petitioning to have their tax debts written off. Shin's devotion to his duties was rewarded in 1818 with a promotion to Magistrate of Ch'unch'ŏn. It was here that Shin tried to subjugate the wealthy landowners but as a result was removed from office for opposing them. In 1822 he was appointed as Second Minister (ch'AMP'AN) of the Board of War. However as a result of factional strife within the government he was yet again dismissed from his post. In 1828 he was named as Commandant (yusu) of Kanghwa Island, but after only two years he grew weary of the factional politics that centred around
Yun Sangdo and retired to private life at Chaha Mountain in P'yŏngan Province. He returned to official life but was exiled for involvement in the presentation of a memorial to the king. After he was reinstated Shin served as Second Minister (ch'amp'an) of the Board of Personnel (Ijo) and also was again appointed as Second Minister of the Board of War.

There are many extant examples of Shin's writings, poetry and paintings that reveal his excellent talents. His poetry, although it is written in Sino-Korean characters, is characterised by the 'Korean-flavour' that abounds in it, and in particular, Shin is known for his skill in composing the akpu style poetry (ballads) and is considered one of the masters of this poetic style in Korea. Shin's poetry was expressed freely in his ch'ŏnjŏng mansang (one-thousand feelings, ten-thousand forms) style, and this resulted in his being proclaimed one of the greatest masters of Sino-Korean poetry of the Chosŏn period. Shin's influence also helped develop the masters of Sino-Korean literature in the late Chosŏn period, and such literary luminaries as Kim T'aegyong (1850-1927), Kang Wi (1820-1884) and Hwang Hyŏn (1855-1910) developed their styles while being heavily influenced by Shin. Extant literary collections of Shin's works include Kyŏngsudang chŏn'go (Literary Collection of Kyŏngsudang) and Chaha shijip (Collected Poems of Chaha).

Shin is also renowned for his talent in painting and is considered as one of the three great masters of ink bamboo paintings along with Yi Chŏng (1541-?) and Yu Tŏkch'ang (1694-1774). Shin learned painting from Kang Sehwang (1713-1791) and in tum influenced later painters such as his own sons Myŏnggiun and Myŏnggyŏn, as well as Cho Hŭryŏng (1757-1859). Representative paintings of Shin that have been transmitted to the present include Pangdae to and Mukchuk to. In addition to his paintings, Shin's calligraphy is also praised as being among the finest of the Chosŏn period.

Shin Yŏja

Shin Yŏsŏng

Shin Yunbok (1758-?)

Shin Yunbok was a painter of the late Chosŏn period. His family's ancestral home is in Koryŏng, his courtesy name was Ippu and his pen name was Hyewŏn. He was the son of the court painter (hwawŏn), Shin Hanpyŏn. It is known that the younger Shin entered officialdom as a court painter in the Office of Paintings (Tohwasa) and also served as an Associate Commander (ch'ŏmjŏlsasa), but little else is commonly accepted with certainty. It is thought that Shin's style in landscape paintings was fundamentally influenced by Kim Hongdo (1745-?). However, he is most famous for the paintings that centre on the relationships between men and kisaeng and include elements of Korean folk culture. His seizure of the subject, composition mode and way of expressing humanity express the objects that he selected for his folk paintings quite differently from Kim Hongdo. Shin's works effectively radiate a romantic ambience of sentiment that is expressed between a man and woman and this is visually displayed with elegant and delicate brush strokes and a beautiful use of colour. The overall effect of Shin's paintings leaves the viewer with an impression of refinement and elegance.

Shin and Kim Hongdo are considered as the two folk-painting representatives of late Chosŏn period. Moreover, both of these men had a tremendous influence on the painters of later generations. Many of Shin's paintings have been transmitted to the present time and are in the possession of both public and private galleries. His representative works include Tano to (Tano Festival), Mumu to (Dance of the Shaman) and Sŏnyu to (Boating Excursion).
Shinan County

Off the southwest coast of the Korean peninsula in South Cholla Province, Shinan County consists of 111 inhabited, and 719 uninhabited islands. The largest of these are the islands of Anjwa (44 sq. kms.); Aphae (44 sq. kms.); Toch’o (40 sq. kms.); Imja (38 sq. kms.); Amt’ae (35 sq. kms.); Chungi (25 sq. kms.); Changsan (25 sq. kms.); Haui (23 sq. kms.); and Taehūksan (22 sq. kms.). Administratively, Shinan County is comprised of the town of Chido; and the townships of Toch’o; Pigiim; Shiniii; Anjwa; Amt’ae; Amhae; Amja; Chaun; Changsan; Chungdo; P’algum; Haui; and Hūksan. The county covers a total area of 629 sq. kms. and has a population of about 110,000.

The islands’ terrain is mainly rocky and uneven, but there are also some level areas created through the reclamation of tidal land. The sea between the islands is mostly shallow, averaging eight fathoms, and the seabed is uneven; consequently, it is difficult for larger ships to navigate the area. Another problem for sea-going vessels is the heavy fog that occurs here from April to July. The area’s climate is mild with an average yearly temperature of 14 deg.c. and an annual rainfall of 1,126mm.

An estimated 211 sq. kms. (33.6 per cent) of the islands are cultivated. Of this, 91 sq. kms. are sown with rice and 130 sq. kms. are sown with dry field crops such as barley, sweet potato, rape, cotton, onion and garlic. Most of the county’s residents supplement their farming income with the sale of marine products. Boats operating out of local ports bring in catches of eel; hairtail; harvest fish, mackerel, shrimp; skate; and yellow corbina. In addition, there are oyster and cockle farms along the coast. Other marine products include laver (kim), brown seaweed (miyok) and salt. Mineral resources include clay which is mined on Chi Island and silica (for glass making) is found on the islands of Imja, Pigiim, Amt’ae, Chaun, Anjwa and Toch’o.

Hong Island (Hong-do) is the county’s most popular tourist destination. With steep cliffs and scenic forests, this 6-kms long, 2.5-kms wide island is a nature reserve. The ferry ride from Mokp’o to the island takes about 2 hours and 15 minutes. To the east of Hong lies a small group of islands known as the Hūksan Islands. Taehūksan Island, the largest of the group, is more populated than Hong Island. The residents use the island’s abundant stones to build walls and windbreaks enclosing their fields. By tradition, stone-weighted ropes are thrown over house roofs to prevent their dislodgement during stormy weather. Ye Village, the island’s largest population centre, has a good harbour which previously served as a whaling post. Nowadays, the village’s sheltered water is haven to a fleet of fishing vessels.

As well as its scenic splendour, the county has a number of historical sites. In Chi-do’s Taech’on Village, is Yŏn’gyesa, a small shrine commemorating Kim Yushin (595-673), the general who led Shilla’s forces in their victorious campaign against Paekche and Koguryo. Originally established in 1896, the shrine was rebuilt in 1933 by the Kimhae Kim clan. A ceremony in honour of Kim Yushin is held here every year on the 3rd day of the 3rd lunar month.

Shinbul Mountain

Situated in Ulsan in South Kyŏngsang Province, Mt. Shinbul (1,209 metres) is easily accessible via the Kyŏngbu Expressway which runs from Seoul to Pusan. In close proximity to the famous T’ongdo Temple, the mountain is a popular tourist destination. In particular, the Chakkwae Stream entrance to the mountain is famous for its scenic beauty. Here, cherry trees stand in front of broad, white pillars of granite. The area’s Confucian
scholars frequently came to this picturesque valley and rested in the pavilion that sits above the clear streams which flow down from the mountain. Half-way up the stream at Tüngök Village, there is the ancient Kanwol Temple site and a stone carving of a seated Buddha (Treasure no. 370). In addition to its scenic sites, the mountain has deposits of high-quality amethyst in its eastern foothills.

Shinhung Temple

Shinhung Temple, one of the main monasteries of the Chogye Order, is located in Kangwŏn Province at the main entrance to Sŏrak-san National Park. Originally called Hyangsong Temple, the monastery was founded by the monk Chajang in 652 along with Kyejo and Nüngin Hermitage. At this time, Chajang is said to have erected a nine-storey pagoda in which he deposited sarira from the Buddha. In 698, Hyangsong Temple and Nüngin Hermitage were destroyed in a fire. In 701, Uisang reconstructed the monastery at the Nüngin Hermitage site calling it Sŏnjōng Temple. The monastery grew and prospered for the next nine-hundred years until the Hideyoshi Invasions (1592-1598) during which the nine-storey pagoda was demolished. Fifty years later in 1642, the entire complex was destroyed in a fire.

Two years later, as Hyewŏn, Unso and Yŏnok set about reconstructing the temple, the three monks dreamt that a divine sage appeared and told them that if they built another temple, it would prosper for tens of thousands of years. Inspired by the dream, they selected a spot about four kilometres below the old Sŏnjōng Temple site, and called the new monastery Shinhung (Divine Arising) Temple. In 1647, the Main Buddha Hall was built, and in 1661, wooden printing blocks for the Lotus Sutra were enshrined in a newly-built sutra repository. In 1717, the Sŏlsŏn Hall, which had burnt down two years earlier, was reconstructed. Further construction projects took place in 1725, 1737, 1801, 1813, 1821, 1858 and 1909. In 1910, Ŭngjin Hall burnt down. Two years later, the monastery was designated a branch temple of Kŏnbong Temple. In 1924, the temple underwent further reconstruction.

In recent years, the monastic complex has been expanded. In addition, a giant bronze seated Buddha statue has been placed along the path leading to the temple. The temple houses many important old buildings and historical artefacts including a collection of wooden printing blocks (Kangwŏn Province Tangible Cultural Asset No. 15) which were carved in the 17th century. Situated at the main entrance to one of the nation’s most popular parks, the temple draws large crowds of tourists throughout the year.

Bibliography

Shinjung tongguk yŏji sŭngnam (Newly-Augmented Survey of the Geography of Korea)

Shinjung tongguk yŏji sŭngnam is the supplemented version of the Tongguk yŏji sŭngnam (Augmented Survey of the Geography of Korea) that had initially been undertaken during the reign of King Sŏnjong (r. 1469-1494). The team of scholars that contributed to this monumental undertaking after a royal decree by King Chungjong (r. 1506-1544) included Yi Haeng; Yun Ŭnpo; Shin Kongje; Hong Ŭnp’il; and Yi Sagyun. The work was completed in 1530 and consists of some fifty-five fascicles in twenty-five volumes. It is
considered the representative cultural geography of Chosŏn.

The first three fascicles of this work are devoted to the capital of Hansŏng (present Seoul) and its surroundings, with the fourth and fifth fascicles covering the former Koryŏ capital of Kaesŏng. The sixth to thirteenth cover Kyŏnggi Province; the fourteenth to twentieth discuss Ch'ungch'ŏng Province; and the twenty-first to thirty-second deal with Kyŏngsang Province. Chŏlla Province is analysed in the thirty-third to fortieth; Hwanghae in the forty-first to forty-third; Kangwŏn in the forty-fourth to the forty-seventh; Hamgyŏng in the forty-eighth to fiftieth; and P'yŏngan Province is examined in the last five fascicles. Each of the provinces is further subdivided into smaller administrative divisions such as prefecture (pu), county (kun) and regional military command (tohobu) et al. The discussion under each category includes a brief history, a listing of prominent families and individuals; mountains and rivers; pavilions; signal fire posts; castles; bridges; warehouses; royal tombs; Confucian shrines; Buddhist temples; and educational institutions et al. Maps show the location of given points of importance and interest.

The importance of this work during Chosŏn is evident in the attempts to revise it, which continued through the reign of King Yongjo (r. 1724-1776). There have also been modern-day efforts to preserve and further propagate this important work, the first of which was in 1906, when the Japanese scholar Fujigami printed it using movable type. Another edition using modern typesetting was published by the Chosŏn Kosŏ Kanhaeng Hoe in 1912. Subsequently, an edition was published by Tongguk Munhwasa in 1960, and in 1969 a han'gŭl edition was published by Minjok Munhwach'ujin Hoe. Shinjung tongguk yŏji sŏngnam is highly esteemed as a work that gives an insight into conditions during Chosŏn, and thus provides important data for scholars in a broad range of fields.

Shinmin

Shinmun'gwan

Shinmun'gwan, a publishing company, was founded by Ch’oe Namson (1890-1957) in 1912. Ch’oe, who had studied at Waseda University, purchased modern printing equipment before leaving Japan. Using this in Korea, his company became the first to publish new-style magazines, such as Sonyŏn (Youth) and Ch’ŏngch’un (Young Years). Shinmun’gwan also promoted awareness of Korea’s heritage with its modern versions of classical texts.
Shintonga

Shinŭiju

Shinŭiju is located in the southwestern part of North P’yŏngan Province. The Yalu River forms the city’s western border with China while Samgyo Stream is to the city’s south.

With the outbreak of the Russo-Japanese War on 10 October 1904, the Shinŭiju area assumed strategic importance. The Japanese, without approval from the Chosŏn government, urgently built the Kyŏngŭi Rail Line from Hansŏng (modern-day Seoul) to Uiju in order to send military supplies. The rail line construction was completed on 28 April 1905. The new city centre which developed at the Uiju end of the line came to be known as Shin (New) Uiju. Many Japanese came to live in the city, which was to be the base for Japan’s invasion of China. By November 1911, the Japanese had built a steel bridge from Shinŭiju across the Yalu River into China. From 1923 to 1929, the downtown area and port facilities were modernised. By 1930, Shinŭiju had expanded into a city of 45 000 people, and by 1940, 43 298 Koreans, 9 431 Japanese and 7 712 people of other nationalities lived there. By May 1943, the city’s population had more than doubled, reaching 127 535.

After Korea’s liberation in 1945, Shinŭiju became an important gateway for trade between China and North Korea. The city’s population continues to expand and is now well over 300 000. Locally manufactured goods include machinery, chemical products, textiles, shoes, leather goods, pharmaceuticals, foodstuffs, household goods and building materials. Approximately half of the city’s arable land grows rice, while the other half grows dry-field crops, such as sweet-corn and beans. Marine products include Spanish mackerel, gizzard shad, anchovy, grey mullet, perch, oyster and cuttlefish.

With Shinŭiju’s location at the northwestern tip of Korea, the weather pattern moves from a cold January average of minus 9.3 deg. C. to a hot August average of 24.2 deg. C. The influence of the Yellow Sea can and does moderate temperatures, however. Shinŭiju averages 1 049mm of rainfall each year.

Ship’a

[History of Korea]

Shirhak

The concept of Shirhak

The term Shirhak, most commonly translated into English as ‘practical learning’, was popularized in the 1930s by Korean historians such as Ch’ŏng Inbo (1892-?), Ch’oe Namsŏn (1890-1957) and Mun Ilp’yŏng (1888-1939), referring to an intellectual trend in the Late Chosŏn period, extending from the 17th to 19th centuries, that was regarded to be an important part of Chosŏn dynasty scholarship in general.

In recent years, and particularly the last decade, few introductory books on Korean history have been written without mention of the term Shirhak. The very popularity of the term has resulted in its application to the work of a wide variety of late Chosŏn thinkers. The main tendency that these figures are regarded to have shared was their interest in concrete affairs, evidenced by bold and detailed proposals for political, economic or social reform, in response to the prevailing inertia and apathy of government.

Nearly all the so-called Shirhak thinkers were literati who no longer had access to office due to the political dominance of rival factions. Nonetheless, it is clear that they did not share a particular doctrine or comprise a single lineage of scholars bound by master-disciple
relationships.

One problem presented by the usage of the term Shirhak to indicate a Korean intellectual trend is that the same term was previously used - in a more philosophical, ethical sense - by Zhu Xi and other orthodox Chinese Neo-Confucians, referring to the relevancy of their teachings for the daily task of self-cultivation, compared with what they saw as the speculative teachings of Buddhism and Daoism. Some Korean scholars such as Yun Chung (Myǒngjae, 1629-1714), who used the term Shirhak more often than most, saw the relevancy of their teachings in these terms rather than in an overtly political or utilitarian sense. Many Shirhak scholars placed emphasis on practical ethics, in response to what they saw as a lack of moral integrity among the ruling scholar bureaucrats, as well as on concrete reform.

The distinction between Shirhak thinkers and their predecessors is further obscured by the fact that the Neo-Confucian reformers of the late Koryŏ and early Chosŏn were also galvanised by dynastic decline and the need for a new order to involve themselves in practical affairs, including the cultivation of moral leadership as well as proposals for concrete institutional reform. Furthermore, the reform-minded Confucians of the late Chosŏn lived over a span of almost three centuries, and were inspired by a variety of contrasting schools of thought filtering in from China, from the orthodox cosmology of the Cheng brothers and Zhu Xi to the idealistic teachings of Wang Yangming and the kaozhengxue or ‘evidential learning’ of the Qing.

In recognition of the broad spectrum of interests and ideological inclinations exhibited by the Shirhak proponents, a number of efforts have been made to classify their diverse approaches into sub-categories. One of the most popular analyses, made by Yi Usŏng, subdivided Shirhak thought into three schools:

- School of Practical Administration and Practical Usage (Kyŏngse ch’iyong p’a), which was founded by Yi Ik, concentrated on institutional reform with particular emphasis on government administration and the land system;

- School of Profitable Usage and Popular Benefit (lyong husaeng p’a) centering on Pak Chiwŏn, which focussed on technological reform, advocated the expansion of commercial activities and improvement of the means of production;

- School of Verification based on Actual Facts (Shilsa kushi p’a), which became a fully-fledged movement through the influence of Kim Chŏnghŭi’s scholarship, used Qing evidential methodology in epigraphy and the study of the Classics.

A weakness of the above schema is that the first two categories are based on areas of study whereas the third is based on a mode of research, and it is precisely this philological methodology, derived from the kaozhengxue or evidential learning movement of the Qing, that thinkers in all three categories relied upon to various degrees in their studies.

Bearing in mind the above mentioned problems encountered by attempts to categorize Shirhak scholarship, it is still possible to discern two relatively distinct ‘schools’ of thought within Shirhak in terms of lineages of master-disciple relationships or closely-knit groups of scholars. These include the school of Yi Ik, whose members were all associated with the political faction knownas the Namin or Southerners, and the so-called Pukhak p’a or School of Northern Learning, whose thinkers were associated with a splinter group of the Noron or Old Doctrine faction. Yet even within the school of Yi Ik, for example, great disparities existed such as the contrasting attitudes towards orthodox Neo-Confucianism shown by An Chŏngbok and Chŏng Yagyong. This article will examine the work of the principal scholars who are usually included in treatments of the Shirhak p’a, including the key members of the two groups mentioned, the School of Yi Ik and the School of
Northern Learning. The work of most of these figures was encyclopaedic in scope, covering numerous fields in both the humanities and natural sciences. In this article we will focus on what is deemed to be their distinctive contributions to ‘practical learning’ and its philosophical foundations.

Yu Hyŏngwŏn

Yu Hyŏngwŏn (Pan’gye, 1622-1673), has been referred to as the ‘pioneer of a new intellectual trend’ and the ‘founder of Shirhak, particularly on account of the unprecedented emphasis he placed on the need for institutional reform. Pan’gye spent his youth preparing to follow in the footsteps of his father and serve as a government official, but in 1653, having failed the qualifying examinations, moved to Puan in Chŏlla province where he spent the rest of his days absorbed in scholarship. The encyclopaedic nature of his writings, which included such varied subjects as politics, economics, history, geography, phonetics, military strategy, literature, traditional Neo-Confucian metaphysics and Daoist magic, sets him off from most of his predecessors. Unfortunately nearly all of his writings were lost except for the Pan’gye surok, his magnum opus dealing with the land system, economy, commerce and industry, government structure and administration, national defence, and Confucian ritual, which took him over twenty years to complete. In this work he systematically proposed wide-scale reform of government institutions, appending to each chapter citations of historical sources to support his arguments. By the 18th c. the P’angye surok had already earned him a reputation as an unsurpassed master in the field of statecraft.

A large portion of the surok is devoted to the land system, a subject on which he placed great importance, considering it to be the basis of social order and harmony and consequently national policy. This emphasis on land reform as the basis of good government was inherited by many of Pan’gye’s Shirhak successors and especially Southerner faction thinkers such as Yi Ik and Chŏng Yagyong. The starting point of his reforms was the concept that ‘land is the great root of the world.’ If the nation’s independent farmers were weakened financially the whole nation was weakened, because as taxpayers they represented the source of its income. Pan’gye pointed to the weaknesses in the Rank Land System (Kwajŏn pŏp), resulting in the accumulation of land by the descendants of officials and consequently in a growing chasm between rich and poor. To remedy this he propounded a modified version of the ‘Uniform Land System’ (Kyunjŏn pŏp) of the Tang dynasty, itself an adaptation of the classic ‘Well-field’ system mentioned in the ancient Chinese classic on government, the Zhouli (Rites of Zhou). Pan’gye’s proposal for land reform was quite radical, being based on the principle of distributing land to those who tilled it and taking away the right of owners to levy taxes on their land. Designed to suit the conditions of the Chosŏn dynasty, it sought to prevent the monopolization of land by particular classes and enable a fairer distribution of farmland, the source of wealth.

Pan’gye’s practical inclinations did not deter him from taking an interest in Neo-Confucian philosophy, including the two concepts of li and ki, the building bricks of Zhu Xi’s metaphysics. He wrote several works on the relationship between li or principle, the ultimate source of order in the universe, and ki or material force, the cosmic ‘stuff’ with which the myriad things are made. Unlike Zhu Xi, and like a number of his successors in the Shirhak movement, including Chŏng Yagyong and Ch’oe Han’gi, he tended to regard principle simply as the pattern of material force, rather than treating it as a distinct metaphysical reality. The implication was that moral and natural principles could only be grasped through an appreciation of their reflection in concrete affairs. Yu clearly stood apart from many of his Neo-Confucian predecessors who assumed that practical affairs would sort themselves out if the moral order were treated as a separate priority.

The School of Yi Ik
Yi Ik (Songho, 1681-1763), widely recognised as another giant in the field of administrational reform, was greatly influenced by the work of Yu Hyöngwön.

Yi Ik was born in 1681 in Unsan, Pyöngan Province, where his father Yi Hajin, a leading member of the Southerner faction, had been exiled after his opponents in the Old Doctrine faction had seized power. Although Yi Ik spent his youth studying hard to enter public office, he failed to qualify for the civil service examinations, and retreated to Ansan in Kyönggi Province where he devoted himself to the study of the large collection of books left behind by his father. Among these, several thousand volumes had been acquired in Beijing in 1678, and provided Yi Ik with information on new developments in Qing scholarship and 'Western Learning', including western technology and Catholicism.

Yi Ik took a great interest in statecraft, as evidenced by his Kwagurok (Record of Concern for the Underprivileged) which spelt out the various social ills of his time and proposals for their resolution. In his pursuit of institutional reform he was influenced by Yi I (Yulgok, 1536-1584), the 16th c. philosopher and political reformer, and especially Yu Hyöngwön, claiming that from the foundation of the dynasty only Yi (Yulgok) and Yu Hyöngwön can be said to have understood practical affairs. Like Yu Hyöngwön he placed great emphasis on land reform, and considered this to be the foundation of a strong monarchy, without which the ideal of sagely government could not be realised. He proposed the so-called 'Limited Field System' (Hanjong pöp), which was designed to curb the steady accumulation of land by the families of wealthy scholar-bureaucrats. Recognising that it would be impossible to redistribute land already in the possession of politically powerful figures, the new system sought to prevent further monopolization of land. Yi encouraged the scholar-bureaucrats to engage themselves in productive activities, arguing that it was perfectly acceptable for them to support themselves through commercial pursuits such as agriculture, as long as they did not compromise their moral standards in doing so.

Another characteristic that Yi Ik's work shared with Yu Hyöngwön was its encyclopaedic nature. This covered an equally vast range of subjects, with the addition of a detailed treatment of western scientific developments and Catholicism, in which he took an unprecedented interest.

A remarkable aspect of Yi Ik's practical scholarship was his analysis of the cause of factional disputes primarily in terms of socio-economic circumstances rather than ideological affiliations. In a ground-breaking work entitled, 'A Study on Factionalism' (Pundang non) Yi attributed the prevalence of factional disputes in Chosön Korea to the competition between an increasing number of Civil Examination graduates for a very limited number of government positions.

In the field of philosophy, Yi Ik espoused orthodox Neo-Confucian thought and particularly the metaphysics of Yi Hwang (T'öegye, 1501-1570), the highly influential Korean thinker who was a devoted follower of Zhu Xi. Nonetheless, Yi Ik was also influenced by his Southerner faction predecessors Hô Mok (1595-1682) and Yun Hye (1617-1680), in the respect that he took a poor view of blind dependence on the interpretations of Zhu Xi. In this context he called his scholarship susahak or Classical Learning, and encouraged the direct study and reappraisal of the Six Confucian Classics as opposed to dependence on commentaries.

Yi Ik cultivated a considerable number of influential followers, whose opinions, especially regarding orthodox Neo-Confucianism and Catholicism, sharply contrasted. An Chöngbok (1712-1791), a key figure of the so-called 'anti-western faction' of Yi Ik's school, criticized Catholic teachings and strongly defended the orthodox teachings of Zhu Xi. Nonetheless he looked askance at the attitude of many Korean followers of Zhu Xi...
who developed a one-sided interest in his metaphysics of principle (ihak) at the expense of practical ethics. In his collection of writings (Sunamjip), he drew attention to Confucius' emphasis on 'Studying the mundane to attain the sublime,' claiming that the primary object of philosophy should be the study of human relationships rather than speculative metaphysics.

Another reason why An Ch'ongbok is regarded as a proponent of 'Practical Learning,' is that he did not limit himself to Neo-Confucian philosophy but gained repute in many other practical areas, and particularly the study of history. The Tongsa kangmok (An Annotated Account of Korean History) systematically dealt with history up to the end of the Koryô, and based on rigorous corroboration with sources, criticized existing historical and geographical studies, while the Yolcho t'onggi (Comprehensive Record of Reigns) provided a chronological account of the Chosôn dynasty.

On the other hand members of the 'pro-western' faction took a religious interest in Catholicism that contrasted with Yi Ik's purely intellectual, critical position. Kwôn Ch'olsin (Nogam, 1736-1801), one of Yi Ik's later followers, and Ch'ông Yagyong (Tasan, 1762-1836), a second generation member of Yi Ik's school and one of the most creative minds of the Chosôn dynasty, both belonged to this group. Although previous figures such as Yun Hyu (Paekho, 1617-1680) and Pak Sedang (Sôgye, 1629-1703) had questioned Zhu Xi's interpretations of certain philosophical concepts, Kwôn Ch'olsin and particularly Ch'ông Yagyong took such trends an important step further by challenging the relevance and orthodoxy of Zhu Xi's metaphysical system itself. Although Kwôn's works are no longer extant, the bulk of Ch'ông's voluminous work was handed down to posterity. These writings place him in the 'practical learning' category not only in terms of his extensive and detailed proposals for political and economic reform, but also in terms of his strong emphasis on practical ethics as the basis for self cultivation.

Quoting an expression coined by Zhu Xi, Tasan often referred to Confucianism as 'nothing but self cultivation and the ordering of society,' and indeed he tried to achieve a balance between these two goals in his voluminous work on both areas. He addressed the former goal in his extensive commentaries on the Confucian classics, where he used the evidential learning of the Qing to re-examine key philosophical concepts of Classical Confucianism and, on that basis, to challenge Zhu Xi's interpretations. Although Tasan praised Zhu Xi for having 'revived the Confucian way' by drawing attention to the central importance of self-cultivation, he strongly criticized him for developing what he regarded to be a speculative cosmology tainted by Buddhist metaphysics that encouraged introspection and obscured the practical ethics of Confucius and Mencius. In particular Tasan rejected Zhu Xi's ontological interpretation of human nature (insông) as Ii, a universal principle which linked man and the cosmos, and proposed a novel and dynamic interpretation of human nature as moral and physical inclinations.

Tasan addressed the other principal goal of Confucianism, 'ordering society' or good government, in his two celebrated works, the Mongmin shimsô (On Leading the People) and Kyôngse yap'yo (Treatise on Government), where he set out detailed proposals on central and local administrational reform. His vivid descriptions of the excesses of local administration and their impact on the general populace contained in the Mongmin shimsô make this valuable reference material in the study of Late Chosôn socio-economic history.

Tasan's emphasis on the concept of compassion as the foundation of good leadership, an emphasis evident in both his classical commentaries and his work on institutional reform, reflect the classical political humanism of Mencius. Nonetheless some of his writings, and particularly the T'angnon (Treatise on Ideal Government), which hinted at the need for radical structural change based on the principle of 'those below choosing those above' represent an important transition in the development of Korean political thought.
Aside from the school of Yi Ik, there is one other clearly definable group among the Shirhak thinkers worthy of the term 'school'; the Pukhak p'a or 'School of Northern Learning'. Whereas the members of Yi Ik's school were associated with the Southerner faction and mostly raised in Kyŏnggi province, the key figures of the Northern Learning School, including Hong Taeyong, Pak Chiwon and Pak Chega, belonged to a sub-faction of the 'Old Doctrine' faction that had been displaced from power, and were based in the capital. The school of Yi Ik gleaned its information on Qing civilization through literature, but members of the school of Northern Learning had direct contact with Chinese culture through consecutive visits to Beijing. Here they became acquainted with outstanding Qing scholars with whom they exchanged rare editions and new publications. Furthermore, whereas the followers of Yi Ik excelled in their analysis of philosophical questions as well as practical affairs, the scholars of Northern Learning showed great expertise in the use of new literary forms. Rather than using classical exegesis to challenge orthodox Neo-Confucian philosophy, the proponents of Northern Learning used allegory in skilfully woven satirical narratives to attack what they saw as the narrow-minded attitudes and nebulous thinking of orthodox Neo-Confucian scholars.

Hong Taeyong (Tamhŏn , 1731-1783), a pioneer of Northern Learning, was able to directly experience Qing civilization when he accompanied his uncle on an official visit to Beijing in 1765. This visit, during which he learnt about Western scientific thinking and technology introduced and developed in China, had an enormous impact on his intellectual outlook. The bulk of his masterwork Tamhŏnsŏ (writings of Hong Taeyong) was written during the ten year period following this visit. In addition to commentaries on the Chinese classics, poems and letters, these writings include Yŏng'i (Beijing Diary) a detailed account of his travels and personal encounters in the Qing capital, writings on mathematics and astronomy, correspondence with Chinese scholars, and his ground-breaking satirical account, 'Dialogue on Mount Iwulu' (Ulisan mundap ). In this humorous tale, which reflects the essence of his world view, a certain 'Mr. Void' (read 'Orthodox Neo-Confucian') is given a hard time fending off the challenge of 'Old Man Substance' (read 'practically-minded individual'), who has little patience for sophisticated metaphysical speculation that has no bearing on practical affairs. Hong was very much influenced by the scientific spirit of 'Western Learning' which he considered to be based on the exact science of mathematics as well as detailed observation. Scientific observation was more than a passing curiosity for him, as evidenced by the astronomical instruments he built and used. Furthermore, his knowledge of the achievements of Western scholarship and technology led him to reject facile distinctions between 'civilized' and 'barbarian' societies.

Hong Taeyong exerted great influence on Pak Chiwŏn (Yŏnam, 1737-1805), now known as a leading member of the Northern Learning School and a literary giant of the Chosŏn Dynasty. Through Hong, Pak Chiwŏn was introduced to new ideas from the West, including the startling discovery that the earth rotated on its own axis. In 1768 Pak moved to the same area as two younger scholars with similar interests, Pak Chega and Yi Tŏngmu (1741-1793), and the continuing exchanges between them led to the formation of the school of Northern Learning. In 1780 Pak was able to accompany a Korean embassy to China, and his famed work Yehe Diary (Yŏhā ilgi ) reveals how deeply impressed he was by the state of development of Qing civilization and the ideas that had given it momentum. In this work Pak set out detailed comparisons between his own country and the Qing, claiming, for example, that the lack of wheeled transportation in Korea was due more to the scholar bureaucrats' lack of interest in technology than environmental factors. Aside from the importation of Qing science and technology he argued for foreign trade with other countries in general, the reform of the social system, and a 'limited field system' to prevent the expropriation of land by the ruling class.
Pak's practical philosophy was symbolized by the expression iyong husaeng, or 'profitable usage and public benefit.' His Neo-Confucian predecessors had regarded the 'cultivation of virtue' to be the essence or root of good government, and the pursuit of practical benefits to be the 'branches.' Pak also regarded the 'cultivation of virtue' to be the goal of human endeavour, but he broke with convention by claiming that 'only after profitable usage is achieved can the people be benefited, and only after the people receive benefits can virtue be cultivated.' For many orthodox Neo-Confucians who refused to debase themselves in the pursuit of a better material environment, Pak's practical philosophy was revolutionary, and two generations later even Pak's grandson Kyusu (1807-1876), who became Third State Councillor, was not able to publish his grandfather's works.

Among Pak's ten or so pieces of fiction, two devastating satires, 'Tale of a Scholar-bureaucrat (Yangbanjon)' and Tiger's Rebuke (Hojil) stand out as landmarks among critiques of the Neo-Confucian ruling class. 'Tale of a Scholar-bureaucrat' represented a sharp criticism of the empty ritual of the scholar-bureaucrats, who are also portrayed as doing nothing much except defending their status. In addition to satirizing the hypocrisy of pseudo-Confucian scholars', Tiger's Rebuke' encourages the reader to see the world from the point of view of the animal kingdom and reflect on the misbehaviour of the human species in general.

A follower of Pak Chiwŏn, Pak Chega (Ch'ojong, 1750 - ?), had already begun to learn of Qing culture under his instruction at the age of eighteen. Together with three young fellow students of Northern Learning, Yi Tongmu, Yu Tükong (1749-?) and Yi Sŏgu (1754-1825), Pak Chega became known as one of the 'Four Literary Masters' on account of his skills at composition. In 1778 he had the opportunity to accompany an embassy to Beijing, where he established lasting ties with outstanding Qing scholars including the proponent of kaozhengxue or evidential learning, Ruan Yuan (1764-1849) and the bibliophile Huang Beilie (1763-1825). Soon after his initial visit to Beijing he set to work on his masterpiece Pukhagui (Treatise on Northern Learning), after which the Pukhak p'a or 'School of Northern Learning' was named. The so-called 'Inner Chapter' of this work dealt with such practical topics as housing construction, agricultural implements, stock farming, methods of transportation, roads and bridges, and pointed out how Qing developments in these areas could greatly improve the quality of life in Korea. The 'Outer Chapter' proposed broad institutional changes such as the development of international trade, the reform of the national economy, agricultural policies, civil examinations, and the social system, including the status of the children of concubines, a class to which Pak and other young members of the Northern Learning School belonged. A distinctive feature of Pak's work was its strong emphasis on commerce and trade. Whereas Pak's predecessors such as Yu Hyŏngwŏn, Chŏng Yagyong and to a certain extent Pak Chiwŏn, had encouraged commerce to the extent that it did not interfere with agricultural production, which they regarded as the foundation of national wealth, Pak Chega was unreserved in his encouragement of commercial activities, and strongly encouraged the development of means and routes of transportation for this purpose. He emphasised that all classes of society, including the unproductive scholar bureaucrats, could benefit through involvement in commerce and trade.

By 1801 Pak had visited China four times, and on the basis of these visits he claimed authority to strongly criticize his fellow countrymen for their narrow minded disdain of the Qing as barbarian Manchu culture, which prevented them from assimilating and using its advanced technology. Whereas Pak Chiwŏn emphasised the distinctive nature of Korean culture and had criticized the History of the Three Kingdoms (Samguk sagi) for obscuring this identity, Pak Chega argued for a more thorough emulation of Chinese culture, suggesting that the Chinese language itself could be adopted in place of Korean without many drawbacks.
Kim Chŏnghŭi (Wandang, 1786-1856), a follower of Pak Chega, became known as the greatest Korean exponent of Qing evidential learning, which he enthusiastically learnt in Beijing from several of its chief exponents, including Ruan Yuan and the renowned epigrapher Weng Fanggang. He made ‘Seeking the truth through actual facts’ (shilsa kushi), a slogan which epitomized the spirit of evidential scholarship, the foundation of his philosophy, and wrote an essay on its methodology. He applied this approach to the many fields of scholarship in which he excelled, including epigraphy, the study of Classical Confucian and Buddhist literature, calligraphy, black ink brush painting and Chinese script.

Whereas Qing proponents of Evidential Scholarship such as Dai Zhen had used the new methods of textual corroboration to strongly criticise the speculative philosophy of Song Neo-Confucians such as Zhu Xi and his followers, Kim Chŏnghŭi argued for an eclectic approach that combined the strong points of Han and Qing philology on the one hand, and Song Dynasty moral philosophy on the other. He thought that the rigorous philology of the Han and Late Qing served as an important means of clarifying the moral teachings of the early sages, but he frowned on the tendency of many Qing scholars to treat philology as an end in itself. On the other hand he respected the concern shown by Zhu Xi and other Song thinkers for moral self-cultivation, but implied that their scholarship had not been objective enough. Nonetheless, Kim and his predecessors in the School of Northern Learning were more reluctant than Southerner faction thinkers such as Chŏng Yagyong to directly question the authority of Zhu Xi’s speculative metaphysics based on the new philological methods, and like his Chinese acquaintance Weng Fanggang, he frowned on those that did so. In this context it is noteworthy that Kim and the Pukhak p’ap’ thinkers were all affiliated with the Old Doctrine, a faction that had strongly defended Zhu Xi’s doctrines as the exclusive ruling ideology of the dynasty.

Kim’s application of evidential learning to the field of epigraphy led to important discoveries. In a work entitled ‘An Examination of Two Stone Inscriptions’ (Kumsŏk kwaan nok), Kim analysed the inscriptions on steles erected by King Chinhu of the Shilla dynasty. On the basis of such detailed research he could prove that a stele on Pukhan mountain had been erected by King Chinhu, and not by the eminent monk Muhak on the foundation of the Chosŏn dynasty.

Ch’oe Han’gi

Ch’oe Han’gi (Hyegang, 1803-1879), who is regarded to be the last of the outstanding Shirhak thinkers, was hardly known by his Korean contemporaries, although curiously a collection of his philosophical writings was published in Beijing. Yi Kyugyŏng (1788-?), another outstanding Korean exponent of evidential learning, recorded that Ch’oe was a prolific writer, and that he owned a large number of recent publications imported from China. Of the eighty or so juan or volumes that remain of Ch’oe’s works, many are devoted to the study of the natural sciences, including treatises on agricultural technology, geography, mathematics, astronomy and medicine. Although his scientific works mainly serve to introduce new developments and discoveries originating in the West and described in Qing literature, the scientific reasoning underlying these developments stimulated other fields of his research. Ch’oe’s systematic philosophy, contained in two works, the ‘Record of Inferential Thinking’ (Ch’uchung nok) and the ‘Operations of Vital Force’ (Shin’git’ong) mark him as one of the most creative minds of the Late Chosŏn. Although he greatly respected Confucius, Ch’oe Han’gi’s innovative philosophy is characterised by a rigorous empiricism that would make it hard to define him as Confucian even in the loosest sense of the term. Although Ch’oe based his philosophy on the idea of ki or material force, a term borrowed from orthodox Neo-Confucian metaphysics, he endowed it with a very different significance. According to Ch’oe, the accumulation of knowledge is entirely based on a posteriori experience acquired through the sensory faculties. All beings including humans are endowed with
what he referred to as shin'gi or 'vital force', and the extent to which the human 'vital force' is revealed and comes into contact with the 'vital force' of other beings depends entirely on the extent and variety of sensory contact achieved. Once knowledge is accumulated in this way it can be extended by analogy, and more knowledge can be inferred through induction and deduction on the basis of the memories of prior experience. Ch’oe consequently argued that the four virtues of Classical Confucianism, humanity, integrity, propriety and wisdom, could only be obtained on the basis of prior sensory experience.

This practical philosophy formed the basis of another pillar of Ch’oe’s scholarship, a massive work which he wrote towards the end of his career entitled Injong or ‘Government’, which dealt with four areas of professional life - ‘assessing people’, ‘educating people’, selecting people’, and ‘employing people’, and where his principle of inference based on concrete experiences and observations played a major role.

Although Ch’oe Han’gi is generally treated as the last of the great Shirhak thinkers, there are significant links between Shirhak thought and a successive intellectual trend of the late 19th c., the Kaehwa or ‘Enlightenment movement’, whose proponents called for such measures as participation of all citizens in the political process, the end of autocratic government, expansion of trade with foreign countries, and the development of a modern economy. Consequently the impact of 18th c. Shirhak thinkers such as as Ch'ong Yagyong and Pak Chiwŏn on outstanding Enlightenment proponents such as Pak Kyusu, remains an important object of research for scholars of Late Chosŏn intellectual history.

Shiyong hyangak po (Collection of Current Native Musics)

Shiyong hyangak po is a music book of the middle Chosŏn period of which neither the compiler nor date of compilation are known. This work is a woodblock-print that consists of one volume and has been designated as Treasure number 551. There is some debate as to when it was actually compiled, but many scholars now believe that it was this work which was first published during the reign of King Sonjo (r. 1567-1608). However, there is still much controversy surrounding this. The various genres of literary styles that are present in this work include musical texts (akchang), lyrics, short songs (tan’ga), kasa, ch’angjak kasa, folk songs (minyo) and shaman songs (muga). It is notable in that it records Koryŏ kayo (Koryŏ songs) a genre that is not recorded in Akhak kwebŏm (Guide to the Study of Music) and Akchang kasa (Music Texts and Songs), the other two major music collections of the Chosŏn period.
This work contains a total of twenty-six songs with both lyrics and musical scores recorded for each work. The contents include the following: ‘Napssii ka’ written in 1394 by Chŏng Tojŏn, ‘Yurim ka’ from the early Chosŏn period of an unknown writer and ‘Hwoengsalmun’ of an unknown writer and period. There is also ‘Samogok’ (‘Maternal Love’), ‘Sŏgyŏng pyŏlgok’ (‘Song of the Western Capital’) and ‘Ssanghwajŏm’, popularly known as ‘Samgojŏn’ (‘Dumpling Shop’). The seventh work in the collection is ‘Narye ka’ (‘Song of Exorcism’), a song of an unknown date that was part of the palace narye ceremony that was performed to drive away noxious spirits at year’s end. Other notable works include ‘Ch’ŏngsan pyŏlgok’ (‘Song of Green Mountains’), a Koryŏ period sogak, and ‘Kwihogok’ which was popularly known as ‘Kashiri’ (‘Would you Go?’) and was another Koryŏ period sogak. This collection includes several works that were derived from muga including ‘Sŏnghwang pan’, ‘Naedang’, ‘Taewang pan’ and ‘Chap ch’ŏnyŏng’ among others. This is an important feature since the official policies of Chosŏn held shamanistic practices in disdain and therefore few muga from these periods were ever recorded.

Of the twenty-six works recorded in Shiyong hyangak po, sixteen are not recorded in any other collections. The collection holds songs recorded in Chinese characters and some that are written in han’gul. This work provides a valuable record of songs from the Koryŏ and early Chosŏn periods, in particular in the number of folk and shaman songs that are included in this collection. The fact that shaman songs are included bespeaks the ceremonial roles that these individuals must have played during the Koryŏ Kingdom. Thus, since their works were in some way preserved in this collection helps maintain this valuable cultural legacy.

Shufeldt, Commodore Robert W. [History of Korea]

Si-sa-yong-o-sa Incorporated

Located in Seoul’s Chongno Ward, the publishing house of Si-sa-yong-o-sa (Shisa Yongōsa) Inc. was established on 28 March 1964. The company’s main interest is in the publication of textbooks, dictionaries, periodicals and works for English language study. It also publishes English translations of Korean novels.

So akpu (Short Popular Lyrics) [Literature]

Sŏ Chaep’il (1864-1951)

Sŏ Chaep’il was a man of the age of enlightenment in Korea and also a politician and independence activist. His family’s ancestral home is in Taegu, his pen name was Songjae and his English name was Jason. Sŏ was born in Posŏng of South Cholla Province and was the second son of Sŏ Kwanghyo. From an early age he lived in Chinjam Township of Ch’ungch’ŏng Province with his father’s second cousin, Sŏ Kwangha, who adopted the young Sŏ. When he was seven he moved to his maternal uncle’s house in Seoul where he began his study of the Chinese classics. In 1882 he passed the Special Examination (pyŏlishi) and was appointed as Copyist (pujongja) in the Office of Editorial Review (Kyosogwan). At this time he became associated with such men as Kim Okkyun (1851-1894), Sŏ Kwangbŏm (1859-?), Hong Yongshik (1855-1884) and Pak Yonghyo (1861-1939). As a result, he became indoctrinated into the enlightenment ideology and began to participate in this movement.

After the unsuccessful Military Coup of 1882 (Imo kullan) the need for a better trained
national defense force became evident and Sŏ, upon the counsel of Kim Okkyun, travelled to Japan in the next year and entered Toyama Military Academy. At Toyama, Sŏ and fourteen others completed an officer’s training course. He then returned to Korea in the next year and assumed a position in the military training bureau. Sŏ also participated in the planning for the Coup d’État of 1884 (kapšin čôngbyŏn) which was led by Kim Okkyun. Sŏ was initially charged with the military aspects of the coup and commanded the troops that seized King Kojong (r. 1863-1907) and held him under guard while the new government tried to enact reforms. However, the coup was poorly planned and Sŏ’s small command was quickly overwhelmed by the superior Chinese forces thereby enabling the Chosŏn government to recover. As a result of this coup attempt, Sŏ was forced to flee to Japan to avoid persecution.

After a brief stay in Japan Sŏ travelled to America with Sŏ Kwangbŏm. Sŏ had many experiences in the United States that began in San Francisco with a job passing out handbills. While doing so, Sŏ met a man who helped him enter a boy’s school and take college preparatory classes. In September 1886 he entered the Harry Hilman Academy in Pennsylvania and began his studies. He graduated in June 1886 and three months later entered Lafayette College, but after he ran short of money for school expenses he went to Washington, DC, to find another solution. Eventually he entered Columbia Medical College (present day George Washington University) where he graduated in 1895. Sŏ was the first Korean to receive a medical degree from an American university. In 1894 He married an American woman, became an American citizen and began to practice medicine.

In the same period that Sŏ was obtaining his medical degree, Korea was slowly losing her sovereignty to Japan. By 1894 when Japan had defeated China in the Sino-Japanese War, Sŏ could return to Korea without fearing for his safety. When he returned in 1896 he was warmly received and soon began publication of the Tongnip shinmun (The Independent) newspaper which was printed entirely in han’gul to secure a broader readership. Shortly after beginning the Tongnip shinmun, Sŏ founded the Independence Club (Tongnip Hyŏphoe). This political group was initially composed of high government officials, but the composition of the organisation began to change radically, as the group became increasingly critical of the government and the lack of meaningful reforms. The Tongnip shinmun served as the media organ for the group and presented the ideals of the group that were designed to educate the public, encourage modernisation and spur reform of the government. However, many forces within Korea were not ready for the seemingly revolutionary reforms of Sŏ and the Independence Club and thus, in 1898 Sŏ again was forced to leave Korea for America.

After returning to America, he devoted himself to his medical practice until the time of the March First Independence Movement in 1919. Sŏ now felt that he needed to convey the cry for Korean independence to the world, and as a result began his publishing activities again. He began publishing The Evening Ledger that addressed issues concerning the plight of Korea and also formed the Friends of Korea (Hanin Ch’innue Hoe) that was designed to bring together the Koreans in America with Americans and stimulate cooperative independence activities. After Korea regained her independence in 1945, Sŏ returned to his homeland and participated in the founding of the new Korean government and further served as an advisor to the US Military Government. However, when Syngman Rhee (Yi Sungman) defeated him in the 1948 presidential elections he returned to America where he died in 1951.

Sŏ is remembered for the many contributions that he made to Korea and her independence movement and the enlightenment of the people. His statue is presently located next to Tongnip mun (Independence Gate) in Seoul.

Sŏ Chŏngju (see Seo Jung-joo)
Sŏ Köjong (1420-1488)

Sŏ Köjong was a literati official of the early Chosŏn period. His family’s ancestral home is in Talsŏng, his courtesy names included Kangjung and Chawŏn, and his pen names were Sagajong and Chongjongjong. His great-grandfather was the Minister (chŏnsŏ) of the Board of Taxation (Hojo), his father was a Magistrate (moksa) and his mother was the daughter of the Confucian scholar Kwŏn Kūn (1352-1409). In addition, his elder sister’s husband was Ch’oe Hang (1409-1474), one of the inventors of han’gul. Sŏ studied under Cho Su and Yu Pangsŏn and the areas that he mastered were quite diverse and covered astronomy, geography, medicine, divination and geomancy among other areas. As to literary talents, Sŏ was particularly adept at writing poetry.

In 1438 Sŏ passed various civil service examinations and in 1444 he was appointed to a position in the Office of Royal Household Provisions (Sajaegam). After this time, Sŏ served in the Hall of Worthies (Chiphyŏnjŏn) and also as First Secretary (sagyŏng) in the Office of the Royal Lecturers (Kyŏngyŏn). In 1447 he was appointed as Junior Sixth Counsellor (pusuch ‘an) in the Office of the Special Counsellors (Hongmun ‘gwan) and by 1451 had been promoted to Junior Fifth Counsellor (pugyori) in the same office. In the following year he accompanied Grand Prince Suyang (King Sejo, r. 1455-1468) on an embassy to Ming China and in 1455 he was designated as Fourth Tutor (up’ilson) for the Crown Prince. In the next year he served at the National Confucian Academy (Sŏnggyun’gwan) as the Second Assistant Master (saye). At this time he also gathered some works of the Yuan poet, Zhou Mengfu (1254-1322) and published these in the form of ch’irŏn chŏlgu (seven-character quatrains). The quality of these poems was said to have even been held in wonderment by King Sejo.

Sŏ continued his rise through officialdom in Chosŏn and aided by his successful passing of additional civil service examinations in 1457 and 1458 he was appointed as Third Minister (ch’amuli) of the Board of Rites (Yejo). At this time he was ordered by King Sejo to compile Ohaeng Ch’onggwal (Summary of the Five Elements) which provided a scientific explanation of the five elements, those being fire, water, soil, air and metal, that were thought to compose all matter of the universe. In 1460 he transferred to the Board of Personnel (Ijo) as the Third Minister and in the same year travelled to China on the Saünsa (embassy of gratitude) where his poetic genius was acknowledged and praised by Chinese scholars. In 1465 Sŏ was promoted to Second Minister (ch’amp’an) at the Board of Rites and in the next year he participated in the compilation of the Kyŏngguk taejon (National Code). In 1467 he held the posts of Minister (p’anso) of the Board of Punishments, Director (taejehak) of the Office of Royal Decrees and as Director (chisa) of the National Confucian Academy. In 1470 Sŏ was appointed as Second State Councillor (chwaŭijong) and in the following year he was bestowed with the title of Duke Talsŏng. In 1476 he again travelled to China on an official embassy and in the same year helped with the compilation of Samguksa chŏryo (Abridgement of the History of the Three Kingdoms).

In the last years of his life, Sŏ became quite prolific in his writings while continuing to hold high official positions. In 1478 he headed the team of scholars that compiled the 130-volumes of Tongmunsŏn (Anthology of Korean Literature), which was a record of Korean literature since the time of the Three Kingdoms. In 1480 he supplied annotations to Oja (Five Masters) and under royal order also compiled Yŏktae yŏnp’yo. In 1485 Sŏ compiled perhaps his best-known work, the 57-volume Tongguk t’onggam (Comprehensive Mirror of the Eastern Kingdom), which served as one of the main histories of Korea until the modern era. 1486 saw the publishing of Sŏ’s literary collection P’ilwŏn chapki (Writing Brush Garden Miscellany).

The many accomplishments of Sŏ bespeak his talents as both an official and a scholar. He served under six kings and obtained the highest posts in the Chosŏn government. He published, either individually or as a collaborative effort, a tremendous body of literature
that served as the basis for government reform and future scholarship for the remainder of the Chosŏn period. Many of his literary works have survived until the present day including his poetry collection, Sagā chip (Collected Works of Sagā), the aforementioned Tongguk tonggam, Tongmunsŏn and P'ilwŏn chapki among others, and other works of great historical value such as Tongguk yeji sŏngnam (Augmented Survey of the Geography of Korea).

Sŏ Kyŏngdŏk (1489-1546)

Sŏ Kyŏngdŏk was an early Chosŏn scholar. His family’s ancestral home is in Tangsŏng, his courtesy name was Kugu and his pen names were Pokchae and Hwadam. Sŏ is said to have had a very auspicious birth as his mother had a dream foretelling it after she had visited a sadang (ancestral shrine) dedicated to Confucius. As a young boy, Sŏ was noted for his intelligence and when he was fourteen he mastered Shujing (Book of Documents) and when he was eighteen he read Daxue (Great Learning), a work which caused him to ponder deeply about the forces of the universe. In 1531 to fulfil his mother’s wish he sat for the Classics Licentiate Examination (saengwon shi) and passed with the highest mark. However, he did not take an official position and instead resolved to devote greater effort to his continuing studies in neo-Confucianism. In 1544 he was recommended as an assistant curator (ch’ambong) yet he declined this appointment to devote his full attention to his pursuit of scholarship. In particular, he devoted the focus of his studies to questions of decorum and propriety.

Sŏ came to be at the van of the neo-Confucian school of thought that gave priority to the role of ki over the function of i in the order of the cosmic forces that governed the universe. His view of the universe was fundamentally opposed to that of men like Yi Hwang (1501-1570) who stressed the role of the formative nature of i that had a dominant influence over the stabilising element of ki. In neo-Confucian philosophy, all matter in the universe was thought to be regulated by these two inseparable components: i was the normative element that accounted for what things were and how they behaved while ki gave the objects the energy to exist. Sŏ was the pioneer of the ki primacy school and viewed i as no more than the laws of motion or activity inherent in ki. Thus, those who adhered to this philosophy were able objectively to grasp the laws that governed things in the material world.

After his death Sŏ was honoured with the posthumous title of Third State Councillor (uuijong) in 1575 and the name of Mun’gang. Additionally, the Sungyang Academy (sŏwŏn) was established to propagate his teachings. His literary collection Hwadam chip (Collected Works of Hwadam) is also extant.

Sŏae munjip (Collected Works of Sŏae)

Sŏae munjip is the literary collection of the middle Chosŏn period scholar-official Yu Sŏngnyong (1542-1607). This woodblock-printed work is composed of twenty-seven volumes in fourteen fascicles. Of the twenty-seven volumes, twenty are of the original edition, four are supplements and three serve as a chronology of Yu’s career. This work was compiled and published by Yu’s youngest son in 1633.

The contents are varied and include a large number of poems by the author, various essays, memorials to the throne, records of events and documents that the author compiled while carrying out his official duties. In particular, this work is valuable for the study of the 1592 Japanese Invasion along with Chingbi rok (Record of Timely Warning) also written by Yu. Sŏae munjip allows an examination of the diplomatic relations between Chosŏn and Ming during the time of the Japanese invasion since Yu drafted several memorials on behalf of the Korean King to the Ming Emperor. The work also contains many of the author’s proposals to the King on various military and administrative measures during this same
period.

This work has recently been reissued in an annotated version along with *Chingbi rok* by Sŏnggyun'gw'an University. Original copies are presently kept at the Kyujanggak and National Central libraries, in addition to a copy at the offices of the Kuksa P'yŏch'an Wiwŏnhoe (National History Compilation Committee).

**Soaron (Treatise of a Young Boy)**

*Soaron* is a text book for instruction in the Manchu language that was compiled for the training of Manchu language translators (*Ch'ŏnghak yŏkkwan*) in the early eighteenth c. This work, along with *P'alsea* (An Eight-Year Old Child), were the primary instructional books in Chosŏn for learning the Manchu language. Specifically, these works were most often utilised by those studying for the national examination for translators. *Soaron* was published along with *P'alsea* in a combined edition in 1777 by Kim Chinha and Chang Chaesŏng. There are many extant copies of this woodblock-printed work, including copies at Kyujanggak Library.

*Soaron* is notable in that it presented the Manchu Language with han'gul phonetic transcriptions for each entry. It is, therefore, quite valuable to linguists for the study of both the Manchurian and Korean languages. Moreover, since the two languages are said to belong to the same Altaic language family, *Soaron* is helpful in the study of the genealogical history of both languages.

**Sobaek Mountain**

Situated on the border of North Ch'ungch'ŏng and North Kyŏnsang Province, Mt. Sobaek (1,440 metres) is part of the rugged Sobaek Range that includes Kungmang Peak (1,421 metres) to the north-east and Yŏnhwa Peak to the south-west. The gentle terrain of the mountain's north-western area contrasts with the steeper slopes of the south-western sector.

In order to preserve the mountain's scenic beauty and historical heritage, the area was designated as Sobaek-san National Park in 1987. Huibang Temple is situated south-west of the mountain's peak. This famous temple, founded in 643, lies next to the 28-metre-high Huibang Waterfall. Besides Huibang Temple, the park contains many sites associated with Buddhism, including Poguk, Ch'oam, Kuin, Piro, Sŏnghŏl and Pusŏk Temples. Possessing a large number of artifacts, Pusŏk Temple is one of the most important Buddhist historical sites in Korea.

In ancient times, the mountain lay at the border of the Three Kingdoms. As a result, it was the site of numerous battles and historical incidents. Remains of numerous rock fortresses are evident. On the trail from Ch'oam Temple to Kungmang Peak, one can still see the walls of Ch'oam Fortress. There are also traces of a fortress on Mt. Ponghwang, the mountain behind Pusŏk Temple.

The Chinese characters making up the name Sobaek literally mean ‘small white.’ However, the syllable ‘paek’ may have come from the pure-Korean word (*park*), meaning ‘bright,’ ‘lofty,’ or ‘sacred.’ The syllable ‘so’ (small, lesser) in ‘Sobaek’ was probably used to distinguish the mountain from taller mountains of the same name. There are two other mountains called Mt. Sobaek on the borders of South Hamgyŏng Province.

Mt. Sobaek is traditionally famous for wild ginseng. Herb gatherers still frequent the mountain in order to gather the numerous medicinal plants that grow wild on the slopes. The mountain is also popular with hikers. In addition to its role as a tourist destination, the mountain also furthers scientific research with the national observatory that has been
constructed between Yŏnhwa Peak no. 2 and Chungnyŏng Ridge.

Soch’i shillok (Records of Soch’i)

Soch’i shillok is the literary collection of the late Chosŏn scholar and painter Hŏ Ryŏn (styled Soch’i, 1809-1892). The work was written while he was aged between fifty-eight and seventy-two. The accounts in the collection are in the form of stories told to his guests. The narratives contained in this collection cover a wide range of topics such as Hŏ’s experiences when growing up in the country, his relationship with his mentor Kim Chŏnghŭi (1786-1856), the process in which he successfully sat for the civil service examination through the good offices of King Hŏnjong (r. 1834-1849), and also why he decided not to enter Chosŏn officialdom but instead to choose the life of a rural painter. The work is also noted for providing the theory of art in Chosŏn society and how this transformed as the nineteenth century neared its end. Accordingly, this is a valuable work for the study of the ideology of the scholar-painters of the nineteenth century.

Sŏch’ŏn County

Situated on the southwestern tip of South Ch’ungch’ŏng Province, Sŏch’ŏn County consists of the towns of Sŏch’ŏn and Changhang, and the townships of Kisan; Masan; Masŏ; Munsan; Piin; Sŏ; Shich’o; Chongch’ŏn; P’an’gyo; Hansan; and Hwayang. The county covers a total area of 364 sq. kms. and a population of about 100 000 with the Yellow Sea to the west, Poryŏng County to the north, Puyo County to the east and the Kŭm River to the south. Sŏch’ŏn County’s topography is marked by hills and numerous reservoirs. Both a passenger vessel and Highway 29 link the county with Kunsan to the south. As a coastal area, the county has a relatively mild climate, with an average yearly temperature of 12.5 deg. c. and an annual rainfall of 1 113.2mm.

The area’s fertile soil and ample irrigation facilities make the county ideal for farming operations. Approximately 42 per cent is arable land, with 115 sq. kms. growing rice and 37 sq. kms. for dry field crops such as barley, beans, red pepper, ginger, garlic, ramie, hemp, apple and tobacco. There are numerous sericulture operations around Munsan. Although the county has a 72 kilometre-long coastline, it is not a major fishing centre. As for mineral resources, coal, gold, silver, copper, iron and lead are found here in small quantities. The county area has also undergone some industrial development.

The county is famous for its fine ramie cloth. Ramie weaving was a major cottage industry throughout the county until the late 1960s, but it fell into decline due to the introduction of cheaper synthetic fibres. However, as natural fibres regained popularity, the area’s ramie industry has revived and is now around Hansan Township. The Hansan Moshigwan (Ramie Museum) in Chihyon Village was established to preserve the tradition of high-quality ramie and to provide information about the fabric to tourists. The museum contains a ramie weaving education centre, a workroom, a folk-craft room, a traditional restaurant and a ramie shop. A weaver at the workroom explains to visitors the entire process of producing ramie cloth. Hansan is also home to Na Sangdŏk, a renowned ramie weaver who has been designated a human cultural asset.

The county has a number of scenic water attractions. In Sŏ Township’s Todun Village, is Ch’unjangdae Beach. With shallow water and a gentle slope, this quiet beach is ideal for families with young children. The beach stretches 1.5 kms. and is 200 or so metres wide. Other popular tourists attractions include Piin Beach to the north of Piin Bay and Hŭngnim Reservoir on the border of P’an’gyo and Chongch’o.

Sŏch’ŏn County also contains a number of important historical sites. The Confucian scholar Yi Saek (1328-1396, styled Mogŭn), was born in Hansan. Yi is renowned for both
his contribution to neo-Confucian thought and his unbending moral character. When Choson was founded, Yi chose to commit suicide rather than betray his loyalty to the fallen Koryo kingdom. Local artefacts associated with Yi include his grave and stele and his father’s grave and stele just to the northwest of Mt. Kōnji. Old Confucian schools located in the area include Piin Hyanggyo (established in 1398) just west of Mt. Wŏlmyŏng, Sŏch'ŏn Hyanggyo (established in 1414) in Kunsa Village, Hansan Hyanggyo (established in 1518) in Chiyŏn Village, Muhnŏn Sŏwŏn (established in 1594) in Kisan Township’s Yongmo Village and Kŏnŏm Sŏwŏn (established in 1662) in Munson Township next to Ch’angdŏk Temple.

In Hansan’s Chongji Village is the house where Yi Sangjae (1850-1927) was born. A theologian and a leader of the March First Independence Movement (1919), Yi served at various times as the chairman of the YMCA, as president of the Chosŏn Ilbo newspaper, and as chairman of the Shin’ganhoe (New Korea Society), a united nationalist organisation which included both nationalists and communists. The house is a thatched, wooden structure which contains separated women's and men’s quarters. The women’s quarters and fence were restored in 1981. In front of the house, there is a memorial where Yi’s personal effects are on display.

**Society**

**Pre-History**

Although there is little direct evidence of what form the earliest societies in Korea took when the peninsula Korea was first inhabited, from the fact that the dwellings unearthed are generally clustered in groups we can ascertain that some form of communal life was practised. Moreover, the fact that early man was communal can also be demonstrated in the agrarian lifestyle that was in place by the Neolithic period. Remains of decan grass, foxtail millet and sorghum have been excavated, and it is thought that these early Koreans relaxed in the winter season after the harvest. Thus, it is to be expected that the society in this age centred on agriculture and ritual activities concerning agriculture.

Neolithic man also is thought to have had animistic beliefs that permitted an explanation of the events that occurred in the world around him. All the objects of nature, animals, mountains and celestial bodies, were held to have influence on man’s life, and were thus venerated by ancient men. Accordingly, it was necessary for those in the ancient Korean societies to attempt to influence these forces through the use of incantatory rituals and actions. These rituals came to be somewhat standardised over time and formed the basis for the shamanistic practices that constituted the religious and societal customs of this age.

By the subsequent Bonze Age (BCE 1000-300) man had perfected the living skills necessary for the cultivation of more advanced crops such as rice, millet and barley, which was made possible through the development of metal culture. Resultant from the improved agrarian skills was the formation of the earliest states of Korea. In this age, Ko Chosŏn flourished and this state was succeeded by first Kija and then Wiman Chosŏn. These ancient Korean states are thought to have been headed by a ruler who was at not only the political apex of society, but also the religious centre. In examining the foundation myth of Ko Chosŏn, the Tan'gun shinwha, it is recorded that Hwanung descended from heaven bearing three heavenly regalia that permitted him to control the wind, rain and clouds. Clearly, the society of Ko Chosŏn centred on a ruler who was vested with political authority and further charged with the control of the natural phenomena that affected agriculture.

Metal technologies permitted ancient men to not only create farming implements and weapons, but also further to fashion ritual devices that were used in his religion. Thus from this age there are presently extant elaborately ornamented bronze mirrors, swords and
bell clusters among other items. These ancient religious implements are now seen as the predecessors of the metal implements such as mirrors, broadswords and bell-clusters that are used in the performance of present day shamanistic rituals. Moreover, the fact that the bronze religious implements are far more ornate than those for everyday usage in ancient society reveals the high status of the heads of these societies, who were charged with control of both political and theocratic society.

The earliest records of Korea are found in Chinese historiographies that contain many references to the small states of the Korean peninsula, and through these fragmentary accounts, we can ascertain some elements present in these ancient societies. One such example concerning Ko Chosôn is found in the *Hanshu* (History of the Former Han Dynasty) and reveals that there was a legal code in place during this time. This code, known as the Eight-Article Law (P’alcho pôp), exhibits the societal beliefs that were stressed by these people. Presently there are three of these laws preserved: ‘A person that kills another will be executed;’ ‘One who injures another will compensate him with grain;’ and ‘One who steals from another will be a servant of that house, or if he wishes a pardon will pay them 50,000 nyang as compensation.’ In examining these three articles, it becomes readily apparent that Ko Chosôn society respected human rights and property, and that the state guaranteed the well being of its people.

Another record of an early Korean state is found in the *Sanguo zhi* (History of the Three Kingdoms) and concerns the Puyo Kingdom. Here it is noted that these people would execute or otherwise replace their king if there was a poor harvest, thus revealing the paramount importance of agriculture in this society. Additionally, it is recorded that these people produced hemp cloth and also practised sericulture, which exhibits that this society had developed beyond providing mere necessities to the people, and further produced luxurious goods for the upper classes. This can be interpreted as a manifestation of the development of a rudimentary class system in this early kingdom. The *Sanguo zhi* further notes that the people of Puyo held a national annual festival known as the yônggu, which was held in the first lunar month. During this celebration all of the people of the country gathered and joined in food and drink. Even those who had been incarcerated were released in order for them to join in the festival. This festival clearly reveals that the people of Puyo highly valued social harmony that was fostered through this community ritual.

In these early Korean states, agriculture remained the most important activity of the people and all else was subordinate to it. The development of agrarian based rituals and customs during this period reveals the central role that agriculture played in the lives of these early people. A common feature of many of these states was the conducting of some type of harvest festival in the tenth lunar month. Some examples of this include the much’ón ceremony of Ye and the tongmaeng festival of the early Koguryó state. These harvest festivals are generally thought to be the ancient antecedents to modern day harvest festivals such as Ch’usók (Harvest Moon Festival) that still remain central in the lives of Korean people. Agrarian festivals not only serve as thanksgiving rituals to the deities that govern agriculture, but also foster community harmony and goodwill, thus facilitating co-operation among farmers.

As the early states of Korea developed into larger walled-town states and then into confederated kingdoms, legal, political and social institutions became more clearly defined and all encompassing. Moreover, it was at this time that monarchical authority began to be differentiated from religious authority, thus creating religious and political specialists. Hence the ruling elite concentrated on secular duties and in solidifying their political authority, while the religious leaders of these early kingdoms transformed from practitioners of magic and incantations to those that officiated over ritual ceremonies as a mode to supplicate the gods. In addition to the distinctions at the top of these societies, it is thought that during this period gradations among the ruled classes also developed resulting in the beginnings of hereditary occupations.
Three Kingdoms Period

After the development of confederated kingdoms, the early states of Korea underwent a continual process of forming alliances, conquering neighbouring states and increasing their territorial domains. As a result, by the early fourth century CE, there emerged the three dominant kingdoms of Koguryo, Paekche and Shilla on the Korean peninsula, and although these kingdoms would undergo periodic fluctuations in territory and relative strength, they would remain the principal powers on the Korean peninsula until the mid-seventh century. During this period the administrative and ruling hierarchies of these kingdoms became consolidated, and moreover, their respective cultures became heavily influenced by the increasing introduction and acceptance of Chinese culture.

1. Koguryo Kingdom

Of the three kingdoms, it was Koguryo that formed the earliest and quickly established the political and social systems that allowed the survival and rapid expansion of the state. The early culture of Koguryo was dominated by militaristic folk games that are thought to be a reflection of the warlike and warrior dominated character of the state. Records in the Chinese histories Suishu (History of the Sui Dynasty) and Beishi (History of the Northern Dynasties) provide accounts of group contests such as sŏkchŏnp'yŏn ssaum (stone fighting game) and ssirum (a type of wrestling) that were often the centre of communal activities. These games can be viewed as stemming from the precarious position that Koguryo existed in, as it occupied an area north of the Korean peninsula and was engaged in constant skirmishes with the Chinese, central Asian and Korean states that surrounded it.

Religious culture of the early Koguryo Kingdom remained dominated by various shamanistic practices that centred on fertility and agrarian rites. In Chinese documents such as the Beishi and Zhoushu (History of the Zhou Dynasty) there are accounts of a national ceremony held in the tenth lunar month named tongmaeng, which centred on rituals offered in supplication to a female deity that resided in a large cave. Such religious practices indicate beliefs based in earth-mother goddesses and are thought to have been primarily perpetuated as fertility rites. Moreover, Koguryo also conducted agrarian rituals to the spirits deemed responsible for the success of a crop at both the time of sowing seed and the harvest, which reveals the importance of agriculture to these people. It is most likely that ritual games such as the aforementioned ssirum and sŏkchŏnp'yŏn ssaum were held in conjunction with the agrarian rites and fulfilled not only a religious function but also a social capacity.

The political and governing structures of Koguryo were established fairly early as the right to ascend to the throne was permanently secured by the Ko clan during the reign of King T'aejo (r. 53-146), and the solidification of monarchical authority and the centralisation of political structures was well underway by the reign of King Kogukch'on (r. 179-196). The strengthening of the administrative and governing apparatuses of Koguryo was partly accomplished by restructuring the five tribal enclaves that had survived from earlier times into the five pu (provinces) that controlled the five directions. Secondly, succession to the throne ceased to be passed from elder brother to younger brother, and instead was handed from father to son; this orderly transmission of the throne is viewed as being resultant from the strengthening of the kingship. Additionally, queens began to be selected from a single house, which reveals that these two families, the royal family and the royal in-laws, came to be the dominant aristocratic families of Koguryo, and further had placed restraints on the ability of other clans to become to powerful within the upper classes of the Kingdom. The consolidation of political organisations as such allowed Koguryo to militarily oust the Chinese Lolang Commandery and seize its territory by 313. This enabled Koguryo to occupy a large area extending to the Liao River in the west and to the Taedong River in the south, and even rival the Chinese states for supremacy in the region.
Koguryo had various social institutions that were designed to both meet the needs of the state and to provide for the welfare of its people. Its need for warriors was filled by the kyöngdang, which was a training institution for unmarried males and developed the military and moral qualities of these youths. Farmers of Koguryo are thought to have often owned their own land, although there also appears to have been a landless class of tenant farmers. There was further a government sponsored grain-loan system (chindae pôp) that provided loans of grain during times of famine from state storehouses.

The greatest impact on Koguryo society was by the culture that entered the kingdom from China. Particularly, Buddhism is thought to have been accepted by the aristocracy of Koguryo in 372 and Confucianism was also well established by this time. The T’aehak (National Confucian Academy) was founded in 372, and this school for aristocratic children provided a Confucian education based upon a similar Chinese institution. These two belief systems certainly contributed to the growth of the Koguryo Kingdom, as Buddhism provided the nation with spiritual unity, and Confucianism reinforced social mores and supplied the bureaucrats necessary to manage the administrative apparatuses of the expanding Kingdom. However despite the acceptance of these belief systems from China, it is thought that the culture of the common people continued to be dominated by shamanistic-based cultural and religious systems.

2. Paekche Kingdom

The early history of Paekche has not been clearly transmitted to the present age, but it is thought that Paekche emerged as the dominant state among the Mahan confederation in central and southwestern regions of the Korean peninsula. The founder of Paekche is generally given as King Onjo (r. 18 BCE-28CE) who is further said to have been the son of the founding king of Koguryo, King Tongmyóng (r. 37-19BCE). Thus there was a shrine honouring Tongmyóng in Paekche where sacrificial rites were conducted according to records in the Chinese Xin Tang sou (New History of Tang). Additionally, this Chinese history further records that the people of Paekche enjoyed ch’ukkuk (a ball game) and paduk (a board game) in their leisure time. It is thought, however, that the culture of the upper classes of Paekche and that of the common people differed vastly since the upper class was not indigenous to the area. Therefore, in the customs of the common people beliefs based in shamanistic practices designed to bring about abundant harvests and prevent misfortune are thought to have been prevalent.

Paekche underwent much turmoil in her confrontations with Koguryo and Shilla, and accordingly her territorial domain also fluctuated. During the late fifth and early sixth centuries Paekche did reorganise her administrative systems into twenty-two districts (tamno) and place a member of the royal family in each one as a way to solidify her national unity. National cohesion was a problem throughout the history of Paekche as the conquering ruling class was not indigenous to the area of Paekche and thus was in constant conflict with the customs and practices of their indigenous subjects. An attempt to institute a national ideology can be seen in the efforts of King Sŏng (r. 523-554) to propagate Buddhism as a national religion, and thereby provide the nation with spiritual unity.

Paekche’s culture and society were furthered influenced by contacts with Chinese states. Although there are no extant records concerning the educational institutions of Paekche, the fact that a national history, Sŏgi (Documentary Records), was compiled in 375 reveals that Chinese ideology and writing systems were well established by this time. Moreover, the advanced metal culture of Paekche was transmitted to Japan along with the Chinese writing system and Confucian classics such as the Lunyu (Analects of Confucius). This demonstrates that the culture of Paekche was sufficiently advanced to transmit higher culture and civilisation to the Japanese at this time.

3. Shilla Kingdom

Shilla lagged behind Koguryo and Paekche in many aspects due to her relative weakness
when compared to her neighbours and her geographical location. The Kingdom itself was formed from the alliance of six clans into the confederation of Saro, which was one of the twelve walled-town states of Chinhan. As time passed, Shilla consolidated her power and began to first form alliances with neighbouring states, and then forcibly incorporate them into her domain. The first rulers of Shilla were almost certainly shaman-kings, and this can be viewed in the use of titles such as ch’ach’aung (shaman) to designate the monarch. By the time that Shilla had begun to rapidly expand, however, the duties of the king were political in nature and religious specialists were charged with control of the supernatural.

The social structure of Shilla is best viewed through the ‘bone-rank’ (kolp’um) system that was used to establish a hereditary hierarchy among the ruling classes of the Kingdom. The kolp’um system granted certain privileges, ranging from a prescribed manner of dress, housing or the official position one could obtain, based upon one’s hereditary bloodline. The highest rank was that of sŏnggol (sacred bone) and this was followed by chin’gol (true bone). Originally, only those of sŏnggol rank were entitled to occupy the position of king and were of the royal house of Kim; however, with the death of Queen Chindok (r. 647-654) the sŏnggol rank ceased to exist and from this point forward the kingship was held by members of the chin’gol rank. The chin’gol rank was originally used to designate those from the Kim royal house yet not qualified to ascend to the kingship, but were otherwise entitled to occupy the highest positions in the government. This rank also included members of the royal consort house and members of the aristocracy of states that had been incorporated into the Shilla Kingdom. Following these two ‘bone ranks’ were six grades of ‘head ranks’. Head ranks six, five and four composed the general aristocracy, and below these ranks three, two and one, are thought to have been composed of the general freeborn populace. Based upon one’s ‘bone rank’, certain privileges were either granted or withheld, most notably these ranks represented limitations on how high one could rise in the government bureaucracy.

The culture of early Shilla was dominated by agrarian-centred, shamanistic rituals such as the kaui festival recorded in the Samguk sagi (History of the Three Kingdoms). Kaui was a group-weaving contest that was held from the fifteenth day of the seventh lunar month until the fifteenth day of the following month. At the conclusion of the contest a large feast would be held with the women enjoying song and dance. This festival is understood to be the origin of the Han’gawi (Harvest Festival) presently held on the fifteenth day of the eighth lunar month.

The importance that shamanism held in early Shilla society is seen in the gold crowns of Shilla monarchs. These ornately fashioned gold plate crowns were certainly not suitable for daily use and are thus thought to have been reserved for state rituals at which the king acted as chief officiant. The shape of the crown is argued to be based upon a Siberian model, and its design includes the shapes of deer horns, trees and the feathers of an eagle. The relationship between the Shilla crown and its Siberian counterpart is much deeper and more fundamental than this, as the Shilla crown reflects the beliefs of Siberian shamanism concerning the composition of the universe. Hence, the presence of a tree-like shape on the crown is thought to represent the ‘World Tree,’ and the deer and eagle feathers are manifestations of beliefs in the ability of shamans to journey between the realms of the sacred and the profane.

Early Shilla society was by necessity quite war-like, and as a result of this need the hwarang (youth corps) was devised. This group is thought to have originated in the clan-based communal groups that were present in the formative stages of Shilla. The hwarang was composed of the sons of aristocratic families and they were trained in military skills, moral righteousness and the fine arts. Additionally, this group also had a religious function as they made pilgrimages to sacred mountains and rivers where they prayed for the nation’s prosperity. The most important function of the hwarang, however, was military skills and from this group came many of Shilla’s finest warriors such as the great general Kim Yushin.
As the higher Chinese culture began to reach Shilla, social systems such as Confucianism came to hold greater importance in the administration of the state, and Buddhism came to be promoted as the official state religion. Confucianism contributed positively to the creation of a code of conduct that fostered national unity, and this can be witnessed in the adoption of the 'five secular injunctions' (sesok ogye) by the hwarang in the early seventh century. Buddhism is thought to have been officially recognised by Shilla during the reign of King Pophung (r. 514-540), although forms of the religion had long been propagated among the common people. Buddhism was recognised as being better suited than indigenous shamanistic beliefs as a support system for the ruling classes, and thus this religion was officially promoted as the 'state' religion. The concept of a single body of believers devoted spiritually to serving Buddha, and at the same time serving the king in secular matters, surely played a major role in the adoption of this religious system.

Greater Shilla and Parhae

1. Greater Shilla Kingdom

After the unification of the Three Kingdoms by Shilla in the seventh century, the culture of Shilla came to be heavily influenced by Tang China. The cultural influence of Tang can be broadly characterised in the two areas of economic exchange and cultural borrowing. Economically, Shilla benefited from exchanges with Tang through tributary missions, and this is seen in the increased consumption of luxurious imported goods among the Shilla aristocracy. More important to the development of Shilla society, however, was the large-scale cultural borrowing from Tang. This borrowing was present in the importation of large numbers of Chinese books and artworks, and in travel to Tang for the study of Buddhism or Confucianism. In particular, scholars who travelled to China to study Buddhist or Confucian precepts had a major impact on Shilla society upon their return to Korea.

The fundamental structure of Shilla society was still founded in the kolp’um system, although without the sŏnggol rank there came to be more challenges to the throne, since the highest rank aristocrats were of the same class (chin’gol) as the monarch. Moreover, the period of Greater Shilla was marked by an increasing number of conflicts between the monarchy, which was attempting to strengthen the power of the kingship, and the chin’gol aristocrats who desired to protect their status and gain more power. Nonetheless, despite the struggles among the chin’gol for power among themselves, other classes were kept out of the higher echelons of Shilla society by the kolp’um system. This situation of conflict between the throne and the highest aristocrats, however, permitted those of the head-rank six (yuktup’um) to gain greater power. By aligning themselves with the throne they came to hold power as advisors and confidants to the monarch. Additionally, the head-rank six class represented those educated in Confucianism and thus their influence continued to increase, at the expense of the chin’gol aristocracy, throughout the Greater Shilla period.

In contrast to the opulent lives led by the chin’gol aristocracy, the common people of Shilla were impoverished. Certainly the years of warfare that led to the unification by Shilla resulted in many peasants losing their property, and many of these people who could not repay their debts were conscripted as slaves. It is thought that slavery was prevalent during this period, and that this represented a substantial portion of the Shilla population. Those commoners who had managed to escape enslavement did not necessarily fare much better as detailed government censuses were conducted every three years to ensure that taxes were levied on lands, livestock, mulberry and other trees, and human resources. In addition to their tax burdens, the peasants were further subject to corvee labour duties. There were also administrative units such as hyang, so and pugok that were inhabited by unfree people whose status was essentially that of slaves. These individuals represented either criminals or subjugated peoples who were assigned to one of these special settlements and then
required to labour at farming, stockbreeding or other manual work. These work units were widely spread throughout every region of Shilla, and therefore reveal the various forms of slavery as a distinguishing characteristic of Shilla society.

It was during the Greater Shilla period that Buddhism and Confucianism became firmly entrenched in Korean society. Buddhism, in particular the Pure Land Buddhism, spread rapidly throughout Shilla after its introduction and thousands of peasants are said to have walked away from their lives to join temples. Pure Land was a simplified Buddhist sect and only required the uttering of Buddha's name to gain salvation; thus, this religion was well suited for the uneducated peasants of Shilla. Certainly the chief attraction of this religion among the poor peasants of Shilla was the hope for release from the hardships they suffered under the increasingly unjust and authoritarian rule of the Shilla aristocracy.

Confucianism enjoyed a similar surge of popularity during this period, although this ideology was mainly adhered to by minor aristocracy such as the head-rank six. In 682 Shilla established the Kukhak (National Academy), which provided a Confucian education to members of the lower aristocracy. As an outgrowth of Confucianism, a type of state examination system (tôksô samp'umgwa) was inaugurated in 788, and this reveals the desire to emphasise Confucian scholarship instead of one's bone-rank lineage. Despite the implementation of an examination system and an educational institute to propagate the Confucian ideology, Shilla society would remain dominated by the chin'gol aristocracy until its demise. The men of the head-rank six would continue to be frustrated by the limitations placed on their rise in the Shilla officialdom, regardless of their qualifications. Many Shilla Confucianists successfully sat for the Tang civil service examination and even served in the Tang government; however, they were not allowed to rise to positions of true influence in the Shilla government due to the entrenched kolp'um system, and thus their talents were wasted. It is noteworthy that many highly regarded Shilla scholars, men such as Ch'oe Ch'iwon (857-?), simply retired from government service upon realisation that the system would not allow their skills to be used.

2. Parhae Kingdom

Parhae was founded by immigrants from the former Koguryô Kingdom and occupied the territory north of the Taedong River extending over most of the area of Manchuria. There were actually two components to Parhae society; the first was the ruling class that was composed of refugees from the former Koguryô Kingdom, and the second were the indigenous Malgal people who had been subjugated by the Koguryô refugees. The Kingdom was founded in the late seventh century and prevailed until being defeated by the Khitan in 926. The relationship between Parhae and Shilla was not always amicable, but these two states clearly viewed each other as being of the same people. This is evidenced in the fact that Shilla referred to Parhae as the ‘northern country’ and Parhae designated Shilla as the ‘southern country.’ Thus, it is apparent that the people of Parhae and Shilla viewed one another as being of the same ethnicity. Parhae is further notable in an historic sense in that it is the last Korean state to exercise political and cultural dominance over the Manchurian region.

Once Parhae had established peaceful diplomatic relations with Tang, she embarked on the rapid introduction of Chinese culture. Parhae sent many students to Tang for study and some of these students successfully sat for the Tang civil service examinations. The influence of Tang on Parhae culture was major and many governmental institutions were modelled after those in Tang. Additionally, Parhae also instituted diplomatic relations with Japan, Shilla, and the Khitan and Türkît peoples, indicating the wide spectrum of international contacts it enjoyed. It is clear in examining the documents that Parhae sent to Japan that this Kingdom considered itself to be the successor of the Koguryô Kingdom.

The former Koguryô people dominated the ruling structures of Parhae, although they were numerically inferior to their subjects. A Japanese history, Ruishu kokushi (Collection of
National History), notes that Parhae ‘had many Malgal people who composed the common classes, while there were few Koguryŏ people’ and further that ‘the Koguryŏ people were all village headman,’ thus indicating that positions of political power were dominated by the Koguryŏ refugees. The kingship was first held by the Tae house and then by the Ko house, both of which were of the nobility of Koguryŏ. There were some members of the Malgal, however, that succeeded in entering the ruling elite of Parhae and it is thought that these individuals were most likely among those who supported the first Koguryŏ immigrants in establishing political control of the area. Thus despite the fact that the Parhae upper classes had accepted and implemented Tang social institutions, the vast majority of the Malgal people did not realise benefit from this and were instead relegated to forced labour and unfree status in the service of their masters.

Although Parhae accepted many aspects of Tang culture and incorporated these into their cities and administrative structures, there were also many features that revealed their heritage in Koguryŏ. For example, the administrative structure was based upon the five-capital system that was used in Koguryŏ, the palace used an ondol (under floor) heating system, and the structure of the royal tombs was also quite similar to that in Koguryŏ. Despite the amount of remains of Parhae being numerically small, it is clear from examining those that are extant that the principle roots for Parhae culture are found in Koguryŏ.

The cultural level of Parhae at her zenith was quite advanced, and this was even acknowledged by Tang who referred to Parhae as the ‘flourishing land in the east.’ With the population of Parhae being composed of two disparate elements, however, this state was flawed with an inherent weakness that would eventually lead to its demise. This can certainly be viewed as a key to the collapse of Parhae when attacked by the Khitan in the early tenth century. The cultural legacy of Parhae was not continued for a variety of reasons, including the fact that the ruling classes of the Kingdom sought refugee in the newly found Koryŏ Kingdom after their defeat. Moreover, since the Parhae ruling culture was not indigenous to the subjugated people, they also did not preserve it. It should be noted, however, that when the Malgal people formed their own state in the early twelfth century (the Jurchen dynasty), much of the area of the former Parhae Kingdom fell under their domain.

The period of the Greater Shilla and Parhae kingdoms is often only viewed as being the period of the former kingdom, with Parhae overlooked. This is due in part to the dearth of records concerning Parhae and the limited role that the Parhae people had in the ensuing Koryŏ Kingdom. The Parhae Kingdom, however, existed for nearly the same length of time as Greater Shilla and certainly occupied a larger territory. Moreover, Parhae’s social and cultural systems were as advanced as Shilla’s, and thus the ‘northern country’ should be viewed favourably in this aspect.

Koryŏ Period

As Greater Shilla disintegrated towards the end of the ninth century, there was a resurgence of the former Paekche and Koguryŏ (T’aebong) kingdoms. For a period of nearly half a century the Shilla, Later Paekche and T’aebong states struggled for supremacy on the Korean peninsula, and this was a time of great social upheaval and the massive displacement of the common people. The peasantry of this period were subjected to not only taxation by the kingdom whose domain they fell under, but also by the powerful gentry families that dominated the outlying areas of the kingdoms. Thus, burdened with unmanageable tax and corvee labour encumbrances, many of the peasantry abandoned their land and joined roving brigand bands. Therefore, this period was not only marked by the conflicts for control of the peninsula by the later Three Kingdoms, but also by frequent peasant uprisings and attacks by rebel armies.

After Wang Kŏn (King T’aejo, r. 918-943) solidified his power base and founded the
Koryŏ Kingdom in the early tenth century, he took immediate measures to establish ties with the powerful local gentry families that had assisted him in his rise to power. He therefore instituted marriage bonds with over twenty such regional gentry families in a hope to create alliances that would prevent future uprisings and power struggles. Additionally, the Koryŏ founder took a wife from the Shilla royal family in a bid to legitimise his Kingdom as the successor of Shilla. Despite his connection with the Shilla royal family, however, Wang Kön did dismantle the kolp’um system of Shilla and attempt to bring a wider range of families into the ruling structure of Koryŏ.

A notable achievement of the Koryŏ period is the establishment of a civil service examination in 958 based on a Chinese model. This represents the desire of the ruling powers of Koryo to replace the military families who had participated in the founding of the Kingdom with a system that selected officials based upon their merit. Hence the enactment of a civil service examination system represents a rudimental effort on the part of the Koryo government to create a bureaucratic structure, staffed by qualified scholars, that would strengthen royal authority. A consequence of the implementation of the civil service examination was the increasing influence of the Confucian ideology on the Koryo State.

The Confucian ideology was disseminated in Koryo with the establishment of a multi-level educational system. At the apex of the system was the Kukchagam (National University), which was supported by other governmental educational institutions such as the capital academies (haktang) and the county public schools (hyanggyo). Additionally, there were a large number of private educational establishments during this period including the Twelve Assemblies (Shipbi to) and the primary level sŏdang, or private village schools. On the basis of the education provided by these Confucian-orientated institutions, Confucianism came to have widespread influence during the Koryo period.

The import of the Confucian ideology can also be seen in the popular culture of the people. While Buddhism continued to enjoy widespread governmental support and popularity during most of the Koryo period, the same cannot be said for the shamanistic religion of the people. In the rationalistic eyes of the Confucian scholar, shamanistic practices were no more than hollow superstitions, which were propagated to deceive the people. Thus, it is during the Koryo period that criticism directed at the official sanctioning of shamanistic rites at the palace began to appear. However, the Confucian disdain for shamanistic rituals and beliefs did not prevent many shamanistic ceremonies from being carried out at the highest levels of Koryo society. Some examples of these practices being sponsored by the central government include rain ceremonies (kiuje) and the narye (exorcism ceremonies) rites that were held at year’s end to purge the palace and nation of any baneful spirits. It is also notable that the chief agrarian ceremony of Koryo was not Ch’usŏk (Harvest Festival) that was the dominate Shilla agriculture ceremony, but instead the Tano Festival. This indicates that the chief cultural influence on Koryo society came from the cultures of the northern region of the Korean peninsula since the Tano Festival is primarily a festival of the northern region. Tano is held during the fifth lunar month a slack time in the northern area’s farming cycle, the fifth month, however, is a very busy farming season in the southern regions revealing the northern orientation of this holiday.

The Koryo period came to be dominated by the Buddhist religion to a greater extent than any other ideology, and this domination extended beyond religious significance and also encompassed many aspects of daily life. For example, in a bid to secure peace and prosperity King T’aejo built many temples, and this practice was followed by his successors. The belief in the power of Buddhism to protect the State can best be witnessed in the monumental task of carving some 81 000 woodblocks of the P’alman taejang kyŏng (Koryo Tripitaka) to ward off attacks from the Khitan. Even though this massive work was destroyed in a subsequent Mongol invasion in 1231, the Koryo government sponsored a second carving of this work in 1236 to petition Buddha for protection. In addition to building temples and reproducing the Buddhist cannon, the Koryo period is also noted for
the large Buddhist festivals that were sponsored by the State. Two prime examples of these are the Yongdung hoe (Lantern Lighting Ceremony) and the P'algwan hoe (Festival of the Eight Vows. The Yongdung hoe, which was originally performed on the first full moon of the new year but later moved to eight day of the fourth lunar month (Buddha’s birthday), was performed not only in the Koryŏ capital but also in villages throughout the country. The P'algwan hoe, on the other hand, was only performed in the two capitals of Sŏgyŏng (modern day P'yŏngyang) and Kaegyŏng (Kaesŏng). While the P'algwan hoe had many Buddhist elements, it can primarily be seen as a successor of ancient heaven-worship rituals. The importance of the P'algwan hoe can be witnessed in the fact that to mark this largest of the Koryŏ festivals, all public officials were given three days leave for the occasion.

Insofar as the lives of the people during the Koryŏ period, agriculture remained the foundation of the national economy of this period. The freeborn peasantry of Koryŏ was called the paekchŏng and they worked public land (minjŏn), paying some one fourth of their harvest to the State as tax. Additionally, some of the paekchŏng worked lands held by gentry families and in this instance paid even higher rents of up to one half of their harvest. Moreover, the peasantry was subjected to various tribute taxes and corvee labour duties that further increased their obligations to the government. The plight of the paekchŏng, however, was markedly better than that of the lowborn peoples who resided in special administrative districts such as hyang, pugok, so, and yŏk among others. The peoples in these areas were required to perform farming, mining, handicraft, transportation and lodging services for the government; however, this vestige from the Shilla period eventually disappeared as these peoples merged with the freeborn population. At the bottom of Koryŏ society were those in the slave class. Slaves were possessed by governmental institutions, members of the ruling classes, temples and the royal household. They performed tasks of every variety and were treated as any personal property in that they could be freely bought and sold. Slaves could, however, ‘buy’ their freedom and then rise in class to the status of a commoner. Those engaged in the hereditary lowborn occupations such as butchers or entertainers, although freeborn, were socially treated the same as slaves.

The tax and labour burdens placed upon the peasantry of Koryŏ resulted in, quite naturally, a large number of peasants fleeing their land and joining roving bands of thieves. Thus with the agricultural underpinnings of society threatened, the Koryŏ government was forced to implement various social welfare systems that would keep the people tied to the land. One such innovation were the so-called ‘righteous granaries’ (ŭich'ang) that provided grain loans to farmers in poor years. Additionally, there were public infirmaries that provided medical services to the sick, and even a few Buddhist temples that provided food for beggars. However, in times of extreme hardship such as invasions, even these meagre governmental relief agencies failed.

Towards the middle Koryŏ period problems arising from the discrimination against military personnel led to various military factions seizing control of the Koryŏ government. This change, while proving to be disastrous for many of the Confucian literati who were executed in the resultant purges, had little effect on the lives of the common people, who were still overburdened with taxes. The result of this was the increase in the frequency of popular uprisings in the twelfth century, and these revolts certainly contributed to the instability of the nation that permitted the Ch'ŏe house, led by Ch'oe Ch'ung-hŏn (1149-1219), to take firm control of the nation. The Ch'oe family would continue their grip on Koryŏ power until the Mongol Invasions of the next century forced them out.

The Mongol Invasions of the early and mid thirteenth century were certainly among the most devastating events in the long history of Korea. While the royal family and ruling classes avoided the Mongols by fleeing to Kanghwa Island, the common people faced the wrath of the Mongols as they pillaged, burned and ravaged Koryŏ. Initially, the peasantry
joined with the government forces to oppose the Mongols, but after a series of crushing defeats and the loss of property and lives, the spirit of resistance among the common people was bridled. Moreover, the actions of the central government did little more than provoke the anger of the Mongols, who in turn increased their attacks against the peasantry. Thus, by the time of the eventual surrender of Koryŏ to the Mongols, the ruling class had completely alienated the peasantry who had bore the brunt of the Mongol attack.

Ruling class society in Koryŏ after the Mongol Invasion came to be thoroughly dominated by Yüan influences. While some of the powerful families retained their influence to a certain degree during this hundred year period, their emerged a new class of family who owed their power to the Mongols. These families came to possess enormous economic, political and military power in the late Koryŏ period, and through their illegal and strong-armed methods of acquiring land, came to threaten the economic foundations of the Kingdom. Not only were peasants confronted with an even higher tax burden, but the government of Koryŏ was also jeopardised by lack of revenue. Hence, by the conclusion of the Yüan dominated period, Koryŏ society had been irreparably damaged by the corruption of the powerful, Yüan-allied families. Moreover, compounding the situation were the Buddhist temples that had also acquired massive landholdings at the expense of the state and people.

The period at the end of the Koryo Kingdom is further notable by the rise of a new class of literati, or sadaebu. In contrast to their predecessors in the Koryŏ government, these men were not only educated but also skilled in the administrative matters required for efficient management of the state. With the collapse of the military regime, the political influence of these men rose dramatically, and they further served as a balance to the power of the gentry families. The sadaebu tended to come from backgrounds of small landholding families and were generally men of high personal morals and honesty; these qualities were certainly in contrast to those in the gentry families where corruption was rampant. The sadaebu were key to the enacting the reforms of King Kongmin (r. 1351-1374) that sought to externally rid Koryŏ of the influence of the Yüan by establishing relations with the Ming, and internally to reduce the power of the gentry families. Domestically, land reforms were attempted that would have greatly changed the balance of power in Koryŏ. These reforms, however, were met with harsh opposition by the large landholders and eventually resulted in the assassination of King Kongmin. Shortly thereafter, the Koryŏ Kingdom itself was usurped by Yi Sŏnggye.

Chosŏn Period

1.) The Confucianisation of Chosŏn Yangban Society

The late Koryŏ and early Chosŏn periods mark a fundamental change in Korean social structure that was chiefly brought about by the rise to political power of the neo-Confucian literati. Although reforms were attempted under King Kongmin of the Koryŏ period, the unyielding opposition of the large landowners ultimately ensured the failure of these measures. Thus the royal authority of the Koryŏ crown was irreparably damaged, which was further compounded by the questionable succession practices by the last Koryŏ kings, and the military again emerged as the dominant force in Koryŏ society. Yi Sŏnggye (King T'aejo, r. 1392-1398), a military leader, formed an alliance with the neo-Confucian literati, and through this union was able to found the Chosŏn dynasty.

An important element in the reforms that enabled the new dynasty to make sweeping changes throughout Korean society were the land reforms carried out in 1390, even before the founding of Chosŏn. After destroying all existing land registers, the Rank Land Law (kwajŏn-pŏp) was enacted and this system stipulated a certain amount of stipend land be allocated to government officials depending upon their rank. Thus, the newly rising class of neo-Confucian literati were provided an economic underpinning, while at the same time the powerful landowners were stripped of their hegemony. Another group that was
adversely impacted by the land reforms were the Buddhist temples, which had amassed huge estates at the expense of both the people and the central government. Moreover, the land reforms of this period also secured the economic foundations of the new Chosŏn dynasty.

Members of the new class of literati included men such as Chŏng Tojŏn (1342-1398) and Cho Chun (1346-1405), and the neo-Confucian philosophy that they advocated would come to dominate Chosŏn society. They were fundamentally opposed to Buddhism not only for ideological reasons, but also due to the corrupt nature of Buddhism in the Koryó period. Consequently, these men advocated a suppression of Buddhism, which became increasingly pronounced as the Chosŏn period unfolded. Moreover, many aspects of society in the Koryó period came under attack such as marriage practices, Buddhist funerary rites, shamanistic practices and incorrect social mores. The resultant culture of the Chosŏn period is often referred to as the yangban society; the term ‘yangban’ (two classes) is broadly used to designate the status group in Chosŏn that was privileged to occupy either civil or military posts in the government bureaucracy.

The conduct of the king, according to the neo-Confucian philosophy, was crucial to the correct governing of the state. Therefore, the king had to be trained thoroughly in Confucian principles in order to become benevolent, righteous and morally capable of providing proper direction of the nation. The task of assisting the king with governing the people fell to the literati, whose primary role as morally superior men was to lead the ignorant masses.

The essence of the Confucian principles is found in the three cardinal human relationships (samgang) that provided society with a fundamental and immutable framework, and the five moral imperatives (oryun) that guided interpersonal relationships. The samgang were the relationships between ruler and subject, father and son, and husband and wife, and the oryun consisted of the righteousness between ruler and subject, proper rapport between father and son, separation of functions between husband and wife, proper recognition of order of birth between junior and senior, and faithfulness between friends. All of these relations were governed by the concept of ye, proper ritual behaviour, and it was this concept that was at the core of the educational process. Additionally, ye was fostered through the observance of the four rites (sarye): coming of age ceremonies, weddings, mourning practices, and ancestor worship. These four rites were instituted by the Confucian sage kings to properly control human passions and to permit the proper governance of the people. Hence, the four rites along with the samgang and oryun stabilised society and human relations while at the same time creating an orderly society.

Educational institutions in the early Chosŏn period for the most part succeeded those in place at the end of the Koryŏ period. The Sŏnggyun'gwan (National Confucian Academy) was the highest educational institution and located in the capital where it was joined by the Sahak (Four Schools) that provided a secondary level of education. In outlying areas the government-sponsored hyanggyo (county public schools) also provided a secondary education. In addition to the governmental institutions, private schools such as sŏwŏn (private academies) and sŏdang (private village schools) provided secondary and primary instruction respectively. The educational institutions were essential to the propagation of the neo-Confucian ideology that was offered at all of these schools. The focus of the secondary educational institutions was on successfully preparing their students to sit for the civil service examinations that provided entry into Chosŏn officialdom. For the most part these schools featured an education that was dominated by the study of the Chinese classics, although some Korean works such as the Kyŏngguk taejŏn (National Code) were also the focus of study. Additionally, schools were charged with providing an education to their students that would cultivate social and moral righteousness; thus works such as Kyŏngmong ᵐgayŏl (The Secret of Striking Out Ignorance), Tongmong sŏnsup (Children’s First Learning), Samgang haengshil-do (Conduct of the Three Bonds with
Pictures), and *Oryun haengshil-do* (Illustrations of Stories Exemplifying the Five Confucian Virtues) were presented to students in order to correctly imbue them with Confucian principles.

The Chosŏn government further sought to propagate the neo-Confucian ideology and its accompanying social mores by enacting legal codes that enforced compliance with this ideology. One such example is the legislation of the *obok*, or the five mourning clothes, system in the early fifteenth century to specifically designate required periods of mourning and mourning costume depending upon the degree of consanguinity. The mourning system put primary emphasis on agnatic kin and assigned non-agnatic relations, such as the mother’s kin and the wife’s kin, peripheral positions. Another example is the institution of a system to distinguish between primary and secondary wives (*chŏkkch'ŏp chi pun*) that came to have far-reaching impact on the social systems of Chosŏn. Not only did this system create a hierarchy between women in the same household, but it also created a distinction between the children born to the primary wife and those of the secondary wife. Naturally the only possible legitimate heirs and successor of a family line were born of the primary wife; sons born to secondary wives were thus ineligible to take higher official office and also could not offer ancestral rites to their ancestors, since they were considered as illegitimate sons (*sŏd’i*).

The standing of women during the Chosŏn period declined markedly when compared to the Koryŏ period. This can be seen in practices surrounding inheritance, marriage and social status. During the Koryŏ and early Chosŏn periods, there was no discrimination between sons and daughters concerning inheritance rights. The change in inheritance rights in the early Chosŏn period was focused on lowering the inheritance rights of the children of secondary wives, and this change was fully in place with promulgation of the *Kyŏngguk taejŏn* (National Code) in the late fifteenth century. However, even from the outset of the Chosŏn period legislative inroads were made on women’s economic independence, a strong feature of the Koryŏ period, and by the mid-sixteenth century a wife’s property came to be indivisible from that of her husband. Moreover, inheritance documents of the late Chosŏn period reveal that son-in-laws were designated as heirs in place of daughters and thus the male controlled the property. The end result of the change in woman being able to control their property was that they became increasingly dependent upon their husband’s estate, and were thereby no longer financially independent.

The regulations concerning marriage also underwent a major transformation in the transition from the Koryŏ to Chosŏn period. An early focus of Chosŏn neo-Confucians was the elimination of uxorial local residence that was a feature of the Koryŏ period, since this was viewed as both unnatural and being conducive to the formation of bonds with matrilineal relatives. The impact of the legislation aimed at the elimination of uxorial local residence was, in effect, to eliminate the inheritance rights of daughters in favour of sons. Since a daughter was now compelled to move to her husband’s house upon marriage, she could not take with her an inheritance of ancestral land; instead daughters were given a share of inheritance in slaves or other transferable property, which came to function as a dowry in the hands of her husband’s family and was no longer in her control. The consequence of the elimination of uxorial local residence was to make women dependent upon their husband and his family, and this is well illustrated by the enforcement of the *ch’ilch’ul*, or the seven grounds for expulsion of a wife, that came to be practised in the Chosŏn period: disobedience towards the parents-in-law, failure to produce a son, adultery, theft, excessive jealousy, chronic illness, and extreme talkativeness. For a woman whose only social standing was through her husband’s family, the *ch’ilch’ul* coupled with her lack of economic independence, proved to be an extremely effective means in making her obedient and submissive through the threat of expulsion.

One of the most distinguishing features of Chosŏn society was the creation of an ancestral worship cult. The principle of patrifiliation was offered by neo-Confucian society as the
most fundamental human bond, and ancestor worship provided a means to extend this to a generational concept. Ancestor worship clarified lines of descent, denoted kinship boundaries, and created solidarity among agnates. Ancestral rites helped bring forth an ideological corporateness that, separate from political or economic conditions, functioned as a chief impetus in the formation of patrilineal decent groups in Choson. Ancestor worship further defined an individual’s position in a family through his ritual role in the performance of ancestor rites, and correlated to ritual status were rights of inheritance and obligations of mourning. Moreover, since Confucian ideology viewed the public realm as a direct extension of the domestic sphere, one’s chances for success in public life often depended upon his status with in his family. The fact that ancestor worship functioned as a social ordering system is clearly illustrated in the fact that women and secondary sons, who had no role in the ancestral rituals, were not allowed to fully participate in the public domain of Choson society.

2.) Popular Culture of Choson
The early period of Choson represented a time of relative prosperity for the peasants who worked the land. Technological improvements such as use of improved fertilisers and irrigation systems resulted in improved crop yields, and thus permitted some members of the Choson peasantry to extend their landholdings and even employee hired hands to work their fields. Another improvement to the situation of farmers was the 1444 Tribute Tax Law (kongpôp) that lowered the tax rate from one-tenth to one-twentieth of their harvest. There were, however, other tax burdens on the peasantry of Choson including local tributes, military service and corvee labour service. At the same time peasants were tied to their land by the hop’ae (identification tag) system that required them to carry at all times a hop’ae recording their name, status, and county of residence along with other information that kept them from abandoning their land. Additionally, there was also legislation of the early Choson period that bound groups of five households together and made them mutually responsible for ensuring that members of the unit did not flee from their place of residence. Hence, while there were improvements in the lives of freeborn peasants in the early Choson period, there were also many restrictions on their freedom.

As in prior periods, Choson also had a significant proportion of her population that was either of the lowborn or slave classes. Slaves can be largely divided into government and private slaves, with these classes further divided by out-resident and in-resident slaves. Out-resident slaves formed separate households and paid a set fee to their owners, and thus their economic status was not greatly different from freeborn farmers. Slavery was hereditary, and by law a child was the same status as its mother; therefore, slaves could be bought and sold like livestock at government set prices. Similar in status to slaves were the lowborn of Choson who engaged in largely hereditary occupations such as butchering and tanning, and although they were legally commoners they were in no way treated as members of the freeborn peasantry. Additionally, travelling entertainers (kwangdae), shamans (mudang), and female entertainers (kisaeng) were classified as lowborn, and in general held in disdain by society.

In examining the folk customs of the Choson period, what must be presupposed are the atrophy of Buddhist events and the predominance of Confucian-orientated events. Hence, the major Buddhist festivals of the Koryô period such as the p’algwanhoe were abolished by the Choson government due to the official policy of suppressing Buddhism in favour of Confucianism. In place of Buddhist rituals, Confucian ancestor rites were promoted by the government as the principle rituals of society; however, this transformation of replacing rituals that had been conducted for generations was not a rapid one. The seasonal customs that were observed in the latter part of the Choson dynasty are recorded in the Tongguk seshigi (Seasonal Customs of Korea). However, this work reveals the neo-Confucian bias of its author and excludes many folk customs, such as shamanistic rituals like the tongje and pyëlschin kut, that were observed by the common people, and in place of these popular customs are records the customs of the yangban class.
The fundamental beliefs of the common people of the Choson period remained strongly tied to shamanistic and Buddhist practices, despite the government’s attempts to regulate or eliminate these practices. Thus, we can observe regulations in the *Kyōngguk taejon* (National Code) that call for women of *yangban* families who participate in shamanistic rituals to be flogged, and these ordinances were continued throughout the Choson period. Moreover, shamans and Buddhist monks were classified among the lowborn, and socially ostracised. Despite these official regulations against shamanistic and Buddhist practices, however, they continued to be perpetuated throughout the Choson period, and even by members of the royal family. Shamanistic rituals such as the *kiuje* (rain ceremony) continued to be sponsored throughout the Choson period, as did the *narye* (exorcism) ritual. Shamans were even employed by members of the royal family, and particularly the women of the palace often adhered to shamanistic beliefs. A notable example is Queen Min (1851-1895) who attempted to elevate the status of shamans at the end of the Choson period by creating a national shaman organisation. Ironically, however, the minimal role that women were permitted to perform in Confucian rites by Choson society resulted in their adherence to the shamanistic religion as it represented their only religious outlet.

As agriculture continued to be the chief occupation and focus of the common people of the Choson period, it is not unexpected to find that agrarian rites directed at securing a bountiful harvest were at the centre of their lives. Therefore during the Choson period, agrarian festivals such as the Tano Festival and *p'ut kut* continued to be observed by the common people and represented important festive occasions that not only petitioned supernatural forces for a successful crop, but further promoted solidarity and harmony among the people. After the fall harvest, *Ch’usŏk* (Harvest Festival) represented a chance to thank the spirits for an abundant harvest and to celebrate with members of one’s family and community. Thus, despite the importance placed upon Confucian ancestral rites by the *yangban* society and the eventual acceptance of these practices by members of the common class, they never fully supplanted the age-old agrarian rites and festivals that had been observed in Korea for millennia.

3.) Foreign Influence in Choson Society

The Choson dynasty began with the formation of strong ties with the Ming dynasty of China. Through this vinculum, much of the culture of this state was incorporated into the Choson government, society and ideology. In the realm of government, many of the basic structures were taken from Ming and adapted to Korea. For example the roots of the education system, structure of the governmental bureaucracy and even the basis for the Choson legal code were all adapted from Ming institutions. Choson society was thereby heavily influenced by Ming institutions, although these were often adapted substantially to the Choson situation. This is not to say, however, that Choson and Ming agreed on all matters and the former followed the latter blindly. In particular, the Choson government was long at odds with Ming over an erroneous entry in an official Ming history stating that Yi Sŏnggye, the founder of Choson, was the son of a notorious anti-Ming rebel, and it was nearly two hundred years before this error was rectified.

Cultural exchange between Ming and Choson most often took the form of embassies that were generally sent to China thrice yearly and marked occasions such as the New Year and the emperor’s birthday. These missions provided an opportunity for not only cultural and political exchange, but also for economic intercourse between the two nations. Given the official disdain for merchants and trade in general in Confucian ideology, the embassies provided a chance to obtain a wide range of Chinese goods such as furs, ginseng and horses.

The relations between Choson and Japan were quite different than with Ming, and although there was some economic activity between the two nations, for the most part, the relations were hostile. One of the events that had the most prolonged and devastating impacts upon
Chosón was the 1592 Japanese Invasion, from which Chosón never fully recovered. The affect of this seven-year war fought on Korean soil upon the Korean people and their society was one of complete ruin, pillage and tremendous loss of life. During the course of this extended conflict, nearly all of Korea's territory became the stage for battles with the southeastern Kyongsang Province most heavily damaged. The Invasion led to a decided population decrease, wholesale destruction of villages, widespread famine and epidemic disease throughout the nation. To compound matters, the peasantry in the face of starvation and extreme hardships rose up in rebellion in many areas causing further destruction of land and other resources. The ruin and turmoil resultant from the Invasion marked an end of the prosperity of the early Chosón period and ushered in a long period of decline and hardship for Korea.

Closely following the 1592 Japanese Invasion were the Manchu Invasions of 1627 and 1636. With dynastic change in China the Ming was supplanted by the Manchurian Qing dynasty, and due to the anti-Qing posture of the Western faction (sŏin) under King Injo (r. 1623-1649), the Manchu launched invasions to force Chosón to acknowledge their suzerainty. The damage to Chosón compared to the prior Japanese assault was minor, with most of the damage occurring in the northern areas of the peninsula. From a societal viewpoint, however, the impact of these two invasions was quite acute as the Koreans considered the Qing to be little more than 'northern barbarians' and thus, harboured hostile sentiments towards them after the forced capitulation.

Subsequent relations with Qing did result in a steady stream of new ideologies and belief systems being introduced to Korean scholars. Notable among the new ideological systems entering Korea is the shirhak (practical learning) ideology that was to have a profound influence on the development of Korean scholarship. Scholars such as Yu Hyŏngwŏn (1622-1673), Yi Ik (1681-1763) and Chŏng Yag'yong (1762-1836) helped develop the shirhak thought that advocated a course of study that originated in the actual manifestation of things and their reality. Unlike neo-Confucian scholars who focused on theoretical research based in paradoxical relations between the abstract primal forces of nature, the shirhak scholars focused on pragmatic learning centred on social science, natural science and technology. The shirhak scholars then put forth their models for societal change in Chosón; in a fundamental aspect, these changes essentially revolved around the reform of agriculture and the development of a national economy predicated in independent and self-employed farmers.

Closely linked to the shirhak ideology was Catholicism that also entered Korea at about the same time through China. However, while some shirhak scholars such as Yi Ik were intellectually curious about the Catholic doctrines and even wrote about it, they were not converts and even criticised the religion. The religion did find a number of converts among certain political factions such as the Sip'a faction of the Southerners (namin), who had long been out of power, and the technocrats of the middle class (chungin). The period of the mid-eighteenth century was beset by a wide array of social ills such as rampant corruption by government officials, factional politics, and the oppression of the people by wealthy merchants and farmers. Thus in this social milieu the doctrines of Catholicism offered new hope and the promise of a more righteous society on this earth and in the next world. The new religion was, however, brutally persecuted by the Chosón government, and in particular during the reign of King Sunjo (1800-1834) there were frequent persecutions of Catholics.

Western science and technology also entered Korea during this same period along with the shirhak ideology. Even as early as the seventeenth century Western books on astronomy and science entered Korea and stimulated interest in these areas. Moreover, members of the official embassies to Qing also brought implements from the West such as telescopes, firearms, and maps to Korea. It should be noted, however, that development in importing and understanding Western technologies was greatly impeded by the neo-Confucian literati
who sought to prevent the so-called Western heresies from entering Chosŏn. Thus, by the end of the Chosŏn period, Korea lagged behind China and Japan in the adoption and understanding of Western technology.

4. Social Institutions and New Religions of Chosŏn

In addition to the yangban culture of the ruling classes of Chosŏn that dominated society of the upper class, there were also those organisations that served Koreans of the common classes. On such group were the pobusang who were professional merchants that served as intermediaries for economic exchange between producers and consumers by selling their wares at markets, and further acted as go-betweens for commission agents of market brokers, coastal brokers, merchants and consumers. This group of merchants had long been organised in Chosŏn and is even credited with supporting Yi Sŏnggye in founding Chosŏn. By the end of the nineteenth century they had formed a national organisation and even published a national charter, the Hansŏng puwanmun, by 1879. The pobusang performed many services beyond mere trade, and in exchange for their special services to the government such as providing labour and military services, they were granted trade monopolies on certain commodities. This group continued to remain influential until the advent of the colonial period.

By the middle part of the Chosŏn period their came to be an increased awareness of the social limitations imposed by society on those not of yangban descent. Particularly cognate of their lack of social mobility and the discrimination that they were confronted with were those in the middle class (chungin), who were mostly technical specialists in the capital. These men represented the educated commoners of Chosŏn and they held occupations such as physicians, astronomers, and artists, and also filled the lower administrative positions of the Chosŏn government. As such they represented the technical elite of Chosŏn and by the nineteenth century came to posses considerable influence. Additionally, illegitimate sons of yangban families (sŏol) also began to be accepted somewhat in this period, and were appointed to minor governmental positions as a result. These two groups when coupled with the economic power of the rising merchant class, represented a challenge to the yangban-dominated society, and the first indication of the breakdown of traditional yangban society.

The development of the Tonghak Religion by Ch’oe Cheu (1824-1864) in the mid-nineteenth century was more than the founding of a new religion, but also represented a social movement concerned primarily with improving the lives of the peasants. The religion was explained by Ch’oe as possessing the best elements of Buddhism, Taoism and Confucianism, and additionally contained doctrines from Catholicism and indigenous shamanistic beliefs. This amalgamation of religious thought was particularly attractive to the peasant class of Chosŏn since it espoused a doctrine of equality among all men. Moreover, since Tonghak incorporated shamanistic incantatory practices, talismans, and worship of mountain deities, it was easily understood and accepted by the peasantry of Chosŏn.

Insofar as a social movement, Tonghak stressed the betterment of the lives of the people through the elimination of the corrupt governmental oppression that plagued the people. Tonghak rejected the increasing foreign intervention in the domestic affairs of Chosŏn and sought the establishment of a just society for all men. Thus in this aspect the Tonghak Movement was very much a millenarian movement, and for this reason caused great trepidation in the Chosŏn government when it began to spread. Ch’oe was arrested for inciting rebellion and executed in 1864, and at this time the Tonghak Religion was declared illegal. However, the religion did not disappear and continued to attract converts from the disaffected peasantry of Chosŏn.

By the 1890s the Tonghak Movement was fuelled to action again by the increasingly blatant exploitation of the peasantry. In 1892 several thousand Tonghak activists gathered at
Samnye in Cholla Province and demand that Ch'oe Cheu be exonerated and that the persecution of their religion be stopped. Although the local officials rejected the demands, the local functionaries did cease their efforts to persecute members of the Tonghak faith. The movement continued to attract disaffected members of the common class until 1894 when outright rebellion broke out in Kobu County of Cholla Province. The Tonghak armies swelled and towns throughout Cholla Province fell under their control. With the slogans of the eliminating the despot, salvation for the people, destruction of the Japanese, extinction for the aristocracy, they defeated the government troops, and Chônlju fell. Thereafter, the Tonghak executed various reforms and established local directorates (chipkangso) to carry out the changes that were designed to eliminate governmental and societal abuses. However, by the middle of July 1894, government forces supported by a Japanese contingent defeated the Tonghak and shortly after this in another battle captured or killed many of the Tonghak leaders, thus ending the uprising.

The Tonghak Movement can be interpreted as popular-based, widespread revolutionary movement that was chiefly directed at the oppressive and corrupt yangban society of Chosôn. The Tonghak religion provided the members of this movement with direction, and the collective experience of the peasantry that formed the greatest portion of the Tonghak ranks gave the group solidarity in intention in their struggles. Moreover, the Tonghak wished to expel the destructive influence of the Japanese who were also quite active in exploitation of the Chosôn peasantry. The movement, however, lacked the military sophistication to confront the combined Chosôn and Japanese troops, and in the end the Tonghak Movement indirectly led to the Sino-Japanese War in 1894 and the eventual increased Japanese presence in Korea.

**Enlightenment Period**

The enlightenment period, generally given as the interval from the opening of Korean ports in 1876 until the commencement of the colonial period in 1910, was one that witnessed tremendous changes to the fabric of Chosôn society and was heavily influenced by both foreign powers and foreigners in Korea. The desire for change among Koreans of this new age can be seen in the attempts to forcibly change the Chosôn ruling structure and implement sweeping reforms that were aimed at transforming Korea into a modern society. These changes, however, were opposed by many who held power and hence this period is marked with many confrontations and contradictory objectives for Chosôn society.

One of the initial changes in the aftermath of the 1876 Treaty of Kanghwa (Kanghwa-do Choyak) that opened Korean ports for international trade was the rapid increase in foreign trade and commerce strategies. The Korean merchants who responded with the most vigour to the new business environment were the kaekchu and yögak, wholesale commodity brokers, who aggressively collaborated with foreign merchants to expand their fortunes. Many of these wholesale brokers were able to accumulate vast fortunes, which enabled them to transcend class barriers and gain considerable economic power. These merchants also adapted many Western-style business practices that enabled them to compete successfully with the foreign traders. Additionally, modern industry in this period was generally owned and operated by private entrepreneurs.

On an intellectual front, the introduction of the so-called 'enlightenment thought' of this period was to have a profound influence on society. The focus of Korean intellectuals changed from the previous China-orientated outlook to one that sought knowledge and innovation from the West. There were many technological advances in Korea resultant from this new knowledge in varied spheres such as military armament production, Western medicine and farm management. The most radical changes, however, were in the political and institutional realms of society, and changes in these areas proved to have the greatest impact of the transformation of Chosôn society.
Koreans who travelled abroad returned to their homeland with their observations of Western society, which surely seemed greatly superior to that in Korea at the time. Most notable among those Koreans who visited Western nations is Yu Kilchun (1856-1914) who recorded his commentary on various Western cities, political systems and institutions in his work Sŏyu kyŏngmun (Observations on a Journey to the West). This 1889 work records Yu’s comments on many elements in Western society and advocated that Korea adopt a Western model for modernisation. Yu’s work proved to be important in introducing Western society to a large segment of the Korean intelligentsia. There were other works in a similar vein as Yu’s, and conspicuous among these is Kihwa kŭnsa (Contemporary Korea and Japan), written by Kim Okkyun (1851-1894), that compared development in Korea and Japan with the situation in Western nations.

Beginning in the 1870s there were many attempts to modernise the educational system in Korea, and many new Western-style schools were established. Particularly after the Reforms of 1894 (Kabo kyŏngjang) the desire to implement various reformations throughout Korean society was very strong, and moreover, the awareness of the crisis concerning national autonomy and the accompanying longing to increase national strength in the face of intensifying foreign encroachments was greatly heightened. Thus, movements to establish educational institutions of various levels were not just pursued by the government, but also by individuals and private organisations. Although the educational institutions that emerged from this chaotic situation can be characterised as unorganised, common features can be said the focus on a ‘modern’ education, and the inclusion of members of the commoner classes in these schools. Educational institutions became the fountainhead for many of the new ideologies and nationalist movement of this tumultuous period.

One social organisation that had considerable impact during this period was the Independence Club (Tongnip Hyŏphoe) that was founded in 1896 by Sŏ Chaep’il (1866-1951). Sŏ had spent time in the United States and he sought to bring about modernisation through education to Korea. He was joined in his endeavours by men such as Yun Ch‘iho (1865-1945) and Yi Sangjae (1850-1927) who represented the new intelligentsia that advocated the adoption of Western social and political institutions for Korea. The Club served as a public forum for debating social and political issues and in this way carried out a campaign of public education. Moreover, the Club published a newspaper, the Tongnip shinmun, which was written entirely in the native Korean script of han’gul in order for it to be read by greater segments of the Korean populace. Among the issues that the Club advocated for the strengthening of Korea were the establishment of a ‘modern’ school in each village, to develop textile, paper and iron plants to further Korea’s industrialisation, and to ensure the nation’s security by building a modern defence force.

Another aspect of Korean society that underwent great change during this period can be found in the literature that developed under the influence of modernisation. For example, new literary genres such as shin sosŏl (new novel), modern dramas and new forms of poetry were all introduced in this period and had tremendous impact in elevating the consciousness of the audience. Of note are the shin sosŏl, which broached topics of free love, nationalism, enlightened educational philosophies, and the international intrigue that surrounded Korea. The first novel designated as a shin sosŏl was Hyŏl ŭi nu (Tears of Blood) written by Yi Injik (1862-1916) in 1906. This novel brings subjects of enlightenment thought to its readers such as self-independence, new education and free marriage, and established a standard for the literature of this period. The literature of the enlightenment period was fundamental to introducing new ideas to the Korean reading public and represented a major change in the focus of literature in Korea, which heretofore had been centred on the upper classes and largely in the form of Chinese character literature.

Due to the massive influence from Western thought and religion in this period, traditional
Korean popular culture underwent massive changes. The significance of the shamanistic religion, which had survived five hundred years of persecution by the neo-Confucian Choson government, suffered greatly in this period, particularly due to the propagation of Western religions by missionaries and the introduction of Western medicine. The medical function of the shaman was greatly diminished with the appearance of Western ‘scientific’ medicine, and at the same time the religious capacity of the shaman was attacked by the missionaries as being primitive superstition. Moreover, with the influx of Western culture and education the role of various folk beliefs and community rituals also became greatly abated during the end of the nineteenth century.

Japanese Colonial Period

The colonial period was one of great change for Korean society, displacement of large sections of the population and of a concentrated effort by the Japanese authorities to obliterate Korean culture. This period also witnessed a great amount of technological and industrial development in Korea, which is seen as the beginnings of Korea’s transformation from an agrarian to an industrial society. A focal point of Koreans during this period was attempts to regain national sovereignty and to bring about a new political system. The changes sought by Koreans were not, however, agreed upon and there was much internal confusion between which political system was best for Korea and her circumstances. Hence, a major characteristic of this period was social and political turmoil, which did not always provide a unified effort against the Japanese colonialists.

A primary tool in the Japanese control of Korean society was the educational system that she implemented in her colony. The focus of the system was to create obedient and useful subjects for Japan, and thus the goal of the educational system was on vocational education and the propagation of Japanese culture in Korea. Indicative of the Japanese educational policies in Korea is the designation of the Japanese language as the ‘national’ language of the school system, and the degradation of the Korean language. Moreover, many private schools that had provided nationalistic education to their pupils were closed during this period under regulations imposed by the Japanese. Consequently, the number of Korean children who attended school was minuscule when compared to the Japanese children in Korea.

The Japanese Governor-General also carried out other measures to increase its control over Korean society such as land reform and the introduction of various restrictive policies in many spheres. The land reforms that the Japanese carried out had the end effect of reducing an increasing number of Korean farmers to tenant farmers living in poverty, and while the overall production of rice increased remarkably during the colonial period, most of the increase was earmarked for export to Japan and actual Korean per capita consumption declined. Japan also was interested in exploiting the natural resources of Korea and worked feverishly to develop mines and production facilities. These technological developments, however, were not realised by Koreans or Korean industries and only were directed at Japanese gain. The development of resources in Korea for Japanese use is characteristic of the Japanese development of Korea. The same can be said for other technological advances such as railways, communication networks and financial systems, as despite the fact that there were many advancements in Korea, few Korean realised any benefit from the changes.

The zenith of the independence movement against Japan was the March First Independence Movement of 1919. The impetus for the movement was in the doctrine of self-determination that the American president Woodrow Wilson put forth at the conclusion of World War I. A group of Korean patriots drew up a Declaration of Independence and publicly announced it, and over two million Koreans joined in peaceful demonstrations across the nation. This movement, however, was met by brutal force from the Japanese and thousands of Koreans lost their lives in the Japanese suppression. The Movement did
bring about change to Korea as the Japanese relaxed the harshness of their rule in what is known as the period of ‘enlightened rule.’ Hence although the Independence Movement ended in failure, it did bring the Korean people a time that was somewhat more relaxed in social liberties.

Foremost among the Japanese liberalisation of this period were the expanded freedoms of the press and the augmentation of the educational system. Han’gul newspapers such as the Tonga ilbo and the Choson ilbo were allowed to be published, but were at the same time subject to strict Japanese censorship. Nonetheless, these papers allowed the Korean public to read news, literature and other items in the Korean language. Moreover, the newspapers provided a needed outlet for the literary activities of a new generation of writers such as Ch’oe Namsŏn (1890-1957), Yi Kwangsu (1892-?) and Kim Tongin (1900-1951), and thus allowed the quality and scope of Korean literature to expand greatly during this period. The educational system was expanded and with a greater number of schools more Koreans than ever before were able to attend school. This change, however, was largely superficial as Koreans continued to receive an education that was focused on creating loyal and obedient Japanese subjects.

As the Japanese increased her territorial expansion activities and became involved in a full-scale war with first China and then the United States, her colonial policy transformed to reflect this change. The period of 1938 to 1945 was a period of forced Korean assimilation to Japanese culture, and the effect that this had on Korean society and culture was devastating. Under the slogan of ‘Naisen Ittai’ (Japan and Korea are One Entity), Japan embarked on the complete annihilation of Korean culture and the forced acceptance of Japanese culture by Koreans. The Japanese policies were thorough and touched every aspect of Korean society. First, all literature that could be considered even slightly nationalistic was banned and thus han’gul newspapers and magazines were banned. Writers were forced to produce their works in Japanese, and the Japanese language was used exclusively in schools and government offices. Second, all Koreans who wished to attend school, work for the government or even have dealings with public offices were forced to adopt a Japanese-style personal and family names. Third, worship at Japanese Shinto shrines was required, and many who refused to do so lost their lives. The policies of this period were designed to erase all traces of Korean culture and to completely transform Korean society into a Japanese model.

Also having tremendous impact on Korean society and culture was the forced mobilisation of millions of Koreans for labour, military service, or even as sex slaves for the Japanese army as in the case of the ‘comfort women.’ Many Koreans were conscripted for labour in munitions factories, mines or as support personnel in forward areas. By the time of liberation in 1945, it is estimated that some 1.2 million Koreans were working as labourers in Japan. Additionally, other Koreans were forcibly relocated from the southern to northern areas of the Korean peninsula in order to work in mines or for other Japanese enterprises. Conscription into the military service for Korean students and others was also common with nearly 250 000 Koreans serving in the Japanese armed forces by the conclusion of the Pacific War, and an additional 200 000 Korean women who were forced to serve the Japanese army as sex slaves. In all, by the time of liberation in 1945 it is estimated that some four million Koreans, about one fourth of the entire Korean population, were living outside of Korea. This massive population drain and relocation had tremendous impact on such institutions as family and community.

During the colonial period traditional popular culture was subjected to severe censorship and persecution by the Japanese authorities. The Japanese did not approve of large gatherings such as were common for the village tongje rituals in which an entire community would participate in, and thus these ceremonies were prohibited. Moreover, large shamanistic rituals such as the pyŏlshin kut were also the object of Japanese censorship and as a result declined greatly. Other changes of the traditional aspects of Korean society
include the adoption of a solar calendar in 1895, a prohibition against men wearing their hair in a traditional topknot, design of women's pants called 'momppe' that allowed for the mobilisation of a female workforce, and the wide-scale destruction of village shrines to tutelary deities. In all, by the conclusion of the colonial period in 1945 the very foundations of Korean folk culture and popular society were all but destroyed as a result of the Japanese policies.

Society in the Post-Liberation Period

Directly after liberation Korea was partitioned into a Soviet-dominated north and a south that was heavily influenced by the Americans, and accordingly the respective ideologies of these two nations came to the forefront in these divisions. The first few years after liberation were also marked by a tremendous influx of Koreans returning to their homeland from abroad, with some 3.3 million relocating to the southern part of Korea alone. Although many of these Koreans had returned from Japan, China and Manchuria after the defeat of the Japanese, there was also a large contingent, put at over 800,000 by some estimates, of Koreans from the northern areas of the peninsula who did not wish to live under the communist regime being established there. Korean society in the early period after liberation was characterised by general confusion and change, and particularly was a time when Koreans were seeking to establish their national identity despite the influences of the omnipresent foreign powers on Korean soil.

The period from 1945 to 1948 in the southern half of the Korean peninsula is the time of the United States Army Military Government in Korea (USAMGIK) and the initial establishment of many democratic institutions in the south. The governing of the USAMGIK was essentially carried out by American military personnel who had little experience in establishing a government and even a smaller degree of knowledge concerning Korea or her people. Thus, the focus of the military regime was on establishing American-style democratic institutions, and further in promoting an anti-Communist ideology in the south. Key to the policies of the USAMGIK were land reform and various labour reforms aimed at reducing child labour. The reforms, however, were not sweeping and did little to alleviate the source of many problems in the south. In the case of land reform, the American initiatives were strongly opposed by their Korean advisors in the Korean Democratic Party, many of whom were large landowners, and in the end only resulted in the lands held by Japanese interests being turned over to the tillers. Insofar as labour reforms, aside from the policies aimed at limiting the scope of child labour, the American policies were generally aimed towards business and discouraged activity by labour unions and strikes. Hence improving the situation of the workers in this period were not the focal point of the USAMGIK policy.

This early period was also one of great political turmoil as the sudden gain of political freedom led to an explosion of factional political parties and social organisations in the south. While the Soviet policies in the north led to the rapid rise of a communist party and the elimination of its competitors, the south allowed a wide range of political parties to compete for popular support. However, as the Soviet-backed regime began to take shape in the north, the Americans also made preparations for a rightist government in the south. After a call by the United Nations (UN) for all-Korea elections in 1948 was rejected by the Soviets, the south held their own elections and the Republic of Korea (ROK) was established with Syngman Rhee (Yi Siingman) as its first president. Shortly thereafter, the north held its own elections and the Democratic People's Republic of Korea (DPRK) emerged with Kim II Sung (Kim Ilsông) as the head of state. Therefore, from this point in 1948 separate societal transformations began in the south and north, shaped by their respective political ideologies and the foreign powers that supported them.

Society in the Republic of Korea, 1948-1961
The early years of the ROK are notable for reform of land, political and social policies, and moreover, for the widespread destruction caused by the fratricidal Korean War of 1950 to 1953. The government of Syngman Rhee was staunchly anti-communist in both its external and internal policies and quickly moved to eliminate the communist presence in the southern half of the Korean peninsula. It can certainly be argued that Rhee’s provocations against the communist regime in the north contributed to the outbreak of the Korean War in June 1950. Internally, the Rhee regime can be characterised as becoming increasingly authoritarian in its attempts to remain in power. A key tool in Rhee’s stranglehold on power was the National Security Law (NSL) passed by the National Assembly in 1949 that allowed Rhee to ruthlessly crackdown on any perceived threats to his rule.

Rhee did enact sweeping land, industrial and social reforms in the south that markedly improved the lives of the people. One such measure was the Farmland Reform Act (Nongji kaehyŏkprop) in 1949, which resulted in much of the land in the south being held by those who tilled it. The Rhee government also enacted other reforms aimed at improving the agricultural production of the south and the welfare of her farmers. The Korean War, however, brought attempts for agrarian reform to an end in the south. Rhee’s industrial policies also were brought to a halt by the Korean War and would not regain momentum until the 1960s. In the sphere of social reforms, most notable were the literacy campaigns and adult education programs that sought to bring educational enlightenment to large segments of the Korean population. These policies too, were halted by the Korean War, but upon the conclusion of hostilities continued and achieved a reasonable level of success.

The first decade of the ROK is one that was beset by tremendous poverty and hardship for the Korean people brought on by not only the outbreak of the Korean War, but also by the inconsistent and self-preserving policies of the Rhee regime. The face of Korean society was undergoing gradual change during this period and this is witnessed in the large increase in the number of Koreans living in urban areas (rising from 15 percent to almost 30 percent), and an explosion in the number of educational institutions. Moreover, during this same period the press expanded greatly and with the number of literate Koreans reaching nearly 70 percent by 1959 (from 12 percent in 1945), Koreans became a much better informed and educated people. Thus the Korean people, while realising their nation’s independence, did not gain a high degree of political and personal freedoms, and thus grew increasingly opposed to Rhee. It was in this situation that the Korean populace rose in protest to Rhee’s blatant rigging of the 1960 elections, and forced Rhee to resign as president.

The so-called April Revolution that brought down the Rhee government was a widespread movement led by disaffected college and university students. In the face of this huge popular uprising, Rhee had no choice but to resign, and this brought about the short-lived Second Republic led by Prime Minister Chang Myŏn (1899-1961). This period is characterised by the sudden profusion of political organisations, publications and social groups since all of the restrictive measures of the Rhee administration were removed. Resultant from the abrupt change to a very open political society was increased economic insecurity, leftist activities and radical student activities. To the majority of the Korean population, which still held vivid memories of the Korean War, these activities seemed to jeopardise their confidence that the government would ensure their well being. Also alienated in this process was the military that had grown into one of the world’s largest under the Rhee regime and the aid provided by the United States. Thus, in a relatively bloodless coup in May 1961, General Park Chung Hee (Pak Chŏnhŭi) seized control of the government of South Korea and shortly thereafter established the Third Republic.

Korean Society, 1961-1992

The rule of Park Chung Hee is the subject of much controversy among scholars and the Korean people today. On one hand, this nearly two-decade period brought about
tremendous improvements in the processes of Korea's economic growth, health care, educational systems, communications and foreign relations. On the other hand, Park's rule was authoritarian, and personal freedoms and other basic rights were denied to large sections of the Korean populace. It is this period, however, that fundamentally shaped modern Korea.

The rapid industrialisation of Korea brought about a correspondingly swift urbanisation of Korea, which resulted in the establishment of not only a large working middle class, but also an underclass that existed on the fringe of Korean society. Urbanisation in itself led to many changes in the structure of Korean society with the smaller nuclear family becoming more prevalent in place of the traditional extended family that often saw three, or even four, generations living under one roof. Furthermore, the exodus to the urban centres led to a disparity in the relative prosperity of those in urban areas compared to rural regions. The urban areas became not only the centres for economic activities, but also for educational, medical and cultural functions. Thus, it was in this period that the traditional agrarian-based society of Korea was displaced by an industrialised and urban-centred society.

The period of the 1960s and 1970s witnessed a near complete extinction of the agrarian-based rural society of traditional Korea. The popular culture that had survived for thousands of years was now replaced, almost overnight, with imported foreign culture that was viewed by the masses of Korea as being inherently superior to Korean indigenous practices. Compounding the decline of popular culture was the New Village Movement (Saemaul Undong) of the 1970s, which sought to bring about equality in the living conditions of the rural areas. The New Village Movement, while seeking to improve the lives of those in rural areas, greatly contributed to the destruction of popular culture under the guise of modernisation and beautification. Consequently, shrines to village tutelary deities were destroyed and age-old communal events such as the tongje ritual ceased to be perpetuated. Increasingly, the sense of community that had long dominated in farming society was replaced with individualistic pursuit of profit and personal gain, and as a result widespread social groups such as the communal labour pools like the ture have all but disappeared from rural communities.

The rapid growth of urban areas led to another series of social problems such as economic disparity, labour unrest, environmental pollution and over-population. Moreover, social movements such as those led by labour unions and groups seeking democratic reforms became increasingly pronounced as this period continued. After the assassination of Park and the subsequent military dictatorship of Chun Doo Hwan (Chon Tuhwan), labour and social unrest became increasingly violent as these groups sought to bring about justice. The bloody 1980 Kwangju uprising came to be symbolic of the brutality that the Chun regime would pursue to continue its rule. As the decade of the 1980s drew to an end, student demonstrations became commonplace, and were joined by members of the middle class, bringing about democratic elections in 1987. The inability of the opposition parties to field a single candidate, however, led to the election of yet another military strongman.

Korean society by the early 1990s had become economically prosperous, well educated and democratised. On a global level, Korea was recognised as an economic power and a rapidly advancing nation. The 1988 hosting of the Summer Olympics established Korea as an international destination with a modern infrastructure. Internally, Korean society continued to progress in an increasing individualistic mode with patterns of conspicuous consumption, social discrimination and hierarchical divisions becoming increasingly prevalent. Despite attempts to increase the standard of living in rural areas, these lagged behind urban centres and moreover, the rural population became increasingly aged as young people fled to the cities. Poverty in the urban areas continued to rise, as traditional social safety nets were not adequately replaced by the government's social welfare programs. Additionally, as the price of housing soared throughout the 1980s and early 1990s, housing shortages became acute and problems like overcrowding were widespread.
Traffic problems became epidemic in urban centres as personal automobiles became a status symbol for the increasingly affluent Korean middle class. Hence, despite the many gains of Korea the actual living conditions had begun to deteriorate due to environmental and social problems.

Present Day Korean Society

In 1992 Korea elected its first civilian president in over thirty years. Kim Young Sam (Kim Yŏngsam), a former opposition leader, promised to bring Korea to a new era of prosperity and to enable all members of society to join in the affluence that modernisation had brought to Korea. During this period the Korean economy continued to flourish with the GNP (gross national product) exceeding the US $10 000 per capita mark in 1996, making the Korean GNP the eleventh largest in the world. Koreans enjoyed modern and affluent lifestyles on a par with any society in the world. The major cites of Korea had modern mass transit systems, television and radio broadcast stations, sports facilities and parks that permitted the populace to enjoy their increasing leisure time. Korean society was, however, plagued by numerous problems that prevented many from realising a substantially better life. The widening gulf between the rich and poor, excessive and wasteful conspicuous consumption, financial mismanagement in both the public and private sectors, public and private corruption, pollution, and overcrowding are just some of the problems that came to the fore in the mid-1990s.

Particularly damaging to Korean society was the prevalent corruption in both government and business practices. Directly after Kim Young Sam took office allegations directed at former presidents Chun Doo Hwan and Roh Tae Woo (No T’aeu) revealed that the two had received hundreds of millions of dollars in illegal bribes from Korean business groups, and eventually resulted in their incarceration. Moreover, a series of disasters in the early 1990s, such as the collapse of the Sampoong Department Store that killed over one thousand people, revealed that the pursuit of profit had become paramount in the eyes of many Koreans. The 1995 failure of a major business group, Hanbo, was attributed not only to poor business practices but also to illegal payments to those closely linked to the government such as President Kim’s son, and this revealed the extent of the corruption that beset Korean society. Additionally, conspicuous consumption among Koreans reached new levels, as trips to foreign countries became commonplace, as did expensive imported foreign goods and extravagant wedding ceremonies. Coined the ‘Korean disease’ corruption, conspicuous consumption, greed, lack of concern for other members of society and other social evils became hallmarks of Korean society.

In the final few months of 1997, the Korean economy collapsed as inefficient and corrupt business and governmental practices finally caught up with the nation. At the same time Koreans went to the presidential polls and elected Kim Dae Jung (Kim Taejung) as their next president. Kim, the first true dissident to hold the presidency in Korea, began to implement a series of recovery measures even before officially taking office in February 1998. The reforms that Kim put forth included creating a more transparent business and governmental structure, and a return to the values that permitted the meteoric growth of the Korean economy in past times.

Koreans of the 1990s have also rediscovered their traditional culture and this has resulted in bringing about a revival of many traditional folk customs, at least in a performance aspect. Thus, there are classes held to teach arts such as traditional ceramics and calligraphy, and also those that teach nongak (farmer’s music) and t’alch’um (masked dance dramas). This has resulted in a surge of popularity in the traditional folk culture of Korea and a new appreciation for indigenous Korean practices. Moreover, other facets of Korean society of past times are being re-examined such as the need for harmonious communities, communal gatherings and community self-help programs. This is helping to imbue a new generation with the fundamental values that were perpetuated in Korea for thousands of years.

North Korean Society

Since the division of the Korean peninsula shortly after the conclusion of World War II, the political ideologies, social systems and lifestyles of the two Korean nations have diverged on many points. Initially, the societies of the two nations strongly mirrored that of their mentors. In South Korea, the USA had the greatest impact on society, while in North Korea the USSR influenced societal development. Accordingly, the Korean peninsula, which had largely shared a common culture since the unification of the Three Kingdoms by Shilla over thirteen hundred years ago, now became home to two distinct societies. Since the mid-1980s, with the waning of outside influences on Korean culture, particularly in the North, society has further evolved of its own accord.

In establishing a terminology to adequately describe the society and social systems in the People’s Democratic Republic of Korea (DPRK), a number of terms can be brought to mind. Those of ‘communist’ or ‘socialist’ may have been applicable to North Korean society at some point in the past, but today they do not seem to reflect the social situation present there, nor are they used by the North Korean government to describe its own society. Moreover, it has been argued that the form of USSR socialism introduced to the North in the 1940s was specifically ‘Stalinism’, which meant the complete integration of political organisations, social reforms and anti-imperialist nationalism, thus forming a new civilisation for the DPRK. From this basis of Stalinism, North Korean society has further evolved and through the process of a digestion of the principles of Stalinism, along with the creation of the personality cult that surrounded Kim Il Sung (Kim Ilsong) and perhaps his successor, Kim Jong Il (Kim Chŏngil), thereby developed a unique society. Additionally, such distinctly North Korean social systems as the Juche (chuch’ e; self-reliance) ideology and the ultra-nationalism espoused in the North, along with the tightly controlled access to outside information, have significantly influenced the development of North Korean society.

History

Formative Period

If North Korea is to be politically defined by the mass-membership base of its political parties, then from a social point of view it must be characterised as one of mass participation in various social organisations. Membership in social and political organisations, which cannot always be clearly differentiated, was a key feature in the many mass mobilisation projects that enabled the fledging North Korean State to complete its many reforms and the country’s industrialisation in the 1950s and 1960s.

Key among the social organisations was the North Korean Peasants League (NKPL; Pukchosŏn Nongmin Tongmaeng), which was established on 31 January 1946 and which

absorbed the various northern portions of extant peasant unions. Even before the establishment of the DPRK, the NKPL led efforts for the redistribution of lands held by Japanese and Korean landlords, as well as other reforms. The NKPL acted as a crucial link between the central government and the local peasant committees, and served the developing central government in the propagation of ideology among the people and the collection of taxes from the farmers. While in its early days the NKPL was semi-autonomous, by the formation of the DPRK in late 1948 it had become closely linked with the central government and supported its aims entirely. Although it is highly questionable whether the peasants of the North fully supported the desires of the ruling elite in the initial stages of the political consolidation of the state, it is clear that social organisations such as the NKPL assisted the state in organising and controlling the peasants. Therefore, when the state announced plans for the collectivisation of the North Korean economy, the mass-based organisations, such as the NKPL, were essential in ensuring compliance throughout the country.

Running parallel to the social organisations for the peasants were those that sought to organise North Korean workers. The situation of industrial workers in the north of the peninsula, at the end of the colonial period was quite different from that of Europe or even the USSR when socialist ideology was incorporated. The working population engaged in industrial occupations at the conclusion of the colonial period has been estimated to be about five per cent of the total population. Besides, these industrial workers were not far removed from the peasantry in that the creation of an industrial working class was a relatively recent phenomenon. As with the social organisations for the peasantry, North Korea utilised existing workers’ organisations, and subsequently reorganised these many groups into the North Korean Labour Council (NKLC; Pukchosŏn Chigŏp Tongmaeng). The NKLC played an essential role in the early reforms carried out in the industrial sector, such as those concerning the implementation of an eight-hour working day, equal pay for both sexes, and the creation of accident and health insurance, even before the formation of the DPRK.

Since the industrial working class was new to Korea and had very little opportunity to even think of diverse ideologies, yet alone adopt them, the North Korean state wholly controlled this sector of the population from the outset. The North Korean government established wage guidelines and acted as arbitrator in labour disputes. Furthermore, as the 1950s progressed, the government established department stores with excommodity prices at fixed levels, and built housing projects for the workers where rent, furnishings and utilities were all controlled by the government. The worker became the central theme of the DPRK and held the supreme role in North Korean society, insofar as literature and art were directed at workers, and their exploits were celebrated as being exemplary of patriots. North Korea proclaimed its society as a ‘Worker’s Paradise, where the good of the nation is put before that of the individual, and where all are equal and guaranteed the right to lead a happy and productive life.’

Kim Il Sung, and Juche Ideology

As Kim Il Sung tightened his grip on power and control in the North, cultural and political influence from the Soviet Union began to wane. While Kim proved adept at playing the People’s Republic of China (PRC) and Soviet Union against each other, as the 1960s progressed the DPRK became increasingly independent in its political outlook and social organisation. Compounding the situation were the political changes that occurred in the Soviet Union under the leadership of Nikita Khrushchev and the Cultural Revolution in the PRC in the late 1960s, both of which caused a distancing from the DPRK. Consequently, while the North still enjoyed generous economic aid from its chief benefactors, it began to develop a unique society. The most important factors at this time were the development of the personality cult surrounding Kim Il Sung and the expansion and elaboration of the Juche ideology.
The development of the personality cult founded in Kim Il Sung was first manifested in the early 1950s, as he was elevated to become the supreme ruler of North Korea. This was greatly expanded, however, throughout the 1960s and 1970s as histories were re-written to reflect the greater role and deeds of the leader of the state. Insofar as this impacted society, Kim Il Sung gradually supplanted all else as the focus of North Korea society. This is clearly instanced in the shift of state holidays from international events such as May Day, to those that clearly honoured Kim, including his birthday. Moreover, his title changed to ‘suryŏng’ (great leader), one formerly reserved for Stalin, and Kim became the main focus of current and past events. Not surprisingly, the nation’s top university was named after Kim Il Sung and many monuments and statues were erected in his honour. Additionally, his birthplace, former deeds, his mother, economic thought, and political ideology became the loci of North Korean society in a gradual process over the span of twenty years or thereabouts.

Along with the elaboration of the Kim personality cult, was the elevation of the accomplishments of the DPRK, which became an extension of its leader. Thus, the liberation of Korea from the Japanese was no longer a feat of the Soviet Union, but instead that of the Korean guerrilla movement. References to the Korean War either diminished or avoided mention of the role of the Soviet Union and the PRC, and instead praised the efforts of the North Korean troops in driving out the imperialist forces. The economic accomplishments of the North were attributed to the heroic efforts of its people and not to the generous amounts of aid received from the Soviet Union. Key to the aggrandisement of the State was the Juche ideology which came to dominate North Korean society.

The Juche ideology permeates every aspect of North Korean society, from the production of industrial goods to agriculture. North Koreans are imbued with the importance of self-reliance, and a person’s work is a reflection of his or her devotion to the state. The Juche ideology was bolstered by the ‘on-site’ inspections of Kim Il Sung, in which he provided instructions to workers and farmers on how to better perform their tasks. Other manifestations of Juche include the many slogans and programs designed to spur production, such as the Chollima (Ch’ŏllima) movement, which was aimed at increasing both industrial and agricultural output. Kim’s speeches carefully avoided the mechanical imitation of foreign cultures, and instead adapted technology, production, and agricultural methodology to the particular conditions of the North. Therefore, North Korean society became increasingly introverted during this period, as the state shifted from an external to an internal focus.

Another important aspect of Juche ideology that has permeated North Korean society is the concept of national self-defence. Defence of the nation is the mandatory task of every citizen and this has been promoted since the early 1960s in various programs designed to create an ‘all-people’s, all-state system of defence’ and to ‘arm the entire population’, thereby turning the country into a fortress. The role that all North Koreans play in the defence of their country is quite crucial as propaganda frequently features reports of the plots of the USA-led forces, just south of the border, which are allegedly aimed at toppling the DPRK government. Accordingly, the integration of the civilian and military sectors of North Korea is unqualified, and a militaristic outlook predominates in both social and political organisations.

**Contemporary Period**

In recent years, North Korea has become increasingly isolated from official foreign contacts as its one-time allies have discarded their previous political systems, and/or downgraded the importance of maintaining close diplomatic ties with the DPRK in a changing global environment. Accordingly, society in the North has developed an even greater degree of introversion, and the emphasis on its leaders has intensified. The ideology of the DPRK
continues to be based in Juche and on Kim Il Sung’s thoughts and sayings on a variety of topics that are quoted in the media with regularity.

The death of Kim Il Sung did little to tarnish his image in the eyes of the people and the succession to the head of state by his son served to perpetuate the personality cult surrounding the two leaders. The state funeral of Kim Il Sung, followed by a three-year mourning period, seemed to have put many aspects of North Korean society on hold, but in fact was most likely a time when Kim Jong Il consolidated his power base. North Korean society has not visibly changed from its stance under Kim Il Sung Kim, and even the hardships wrought by the years of natural disaster and consequent famine have not markedly altered the fabric of North Korean society. The DPRK is still an inward-focused society, and one which draws its main impetus from its leader. The potential for change, however, may well rest in the economic hardship that troubles the DPRK.

In mid-1997, the DPRK government implemented changes to its agricultural sector in the hope of bringing some relief from the famine which gripped the country. For the first time, peasants were granted small plots of land for private cropping. Up to five per cent of the holdings of state and collective lands have been so distributed, even though the government cautions that it is a measure of expediency and the allocated land may revert to the state. Nonetheless, individual land-holdings and the profits that these can bring are fundamental changes to North Korean society, in that the government has always stressed the need to put the welfare of the state before that of the individual. Therefore, peasants will now reap some personal reward, outside the state system, which is a substantial departure from the previous situation.

A manifestation of personal land-holdings is the appearance of ‘peasant markets’ throughout the country. Some of these are officially sanctioned, but for the most part the markets are simply tolerated by the government. At these markets, state and collective farms and individuals can buy and sell whatever commodities they wish. Moreover, people from towns and cities also support the markets, not only as consumers, but as vendors of manufactured goods. And so these markets have become ‘hubs’ of the DPRK economy, with almost any type of consumable or non-consumable goods available. While prices are theoretically set by the state, in actuality it is the market forces of supply and demand which govern prices. It is clear, therefore, that the seeds of capitalism, long condemned by the government, have been planted in the North, primarily as a means of overcoming economic hardship. As well, North Koreans resident close to the Chinese and Russian borders are permitted to engage in cross-border barter for foodstuffs. This has the effect of both opening the borders, albeit in a limited way, and in an increasing amount of foreign culture seeping into the long-sealed North Korean society.

The issues that now confront North Korean society seem to centre on the possible undermining of the foundations of the social system constructed by Kim II Sung, by the gradual introduction of foreign culture and economic systems. While the economic hardships have undoubtedly caused some in the North to question the leadership of their government, the fact remains that the majority of the population is ill-informed of the situation outside the DPRK borders and is therefore not positioned to bring about social change. Moreover, the authority and control of the military is still unchallenged and an insurrection would be quelled, quickly and decisively. Accordingly, it is possible that the gradual introduction of market reforms, along with the increase of information from foreign countries, will bring about change to the isolated and inwardly-focused North Korean society. Of course, the government of the DPRK realises that change will probably bring about its downfall and it has laboriously guarded against this. There are, however, an increasing number of foreign contacts with North Korea and their influence presages societal change.

Bibliography

**Society for Research in the Korean Language**

The Society for Research in the Korean Language (*Chosŏnŏ yŏn’guhoe*) was formed by the disciples of Chu Shigyŏng (1876-1914) shortly following the March 1919 movement. Responding to Japanese colonial efforts to replace the Korean language with Japanese, this dedicated group promoted the study and use of *han’gul* (the Korean alphabet). In 1926, the society designated the anniversary of the promulgation of *han’gul* as *Han’gul* Day (now celebrated on 9 October) and in 1927 began its publication of *Han’gul*, the first scholarly journal for the Korean language. By 1931, the society had changed its name to the Korean Language Society (*Chosŏnŏ hakhoe*). Accomplishments of the society include the standardisation of *han’gul* spelling in 1933; a dictionary of basic vocabulary in 1936; and the laying-down of rules for the spelling of foreign words in 1940. In 1942, the Japanese authorities, claiming that the association was a subversive organisation devoted to plotting Korea’s independence, arrested twenty-nine linguists of whom about a dozen were convicted and sentenced. In 1949, the organisation became the Han’gul Society (*Han’gul hakhoe*).

**Sogang University**

Sogang University (*Sŏgang taehakkyo*) is located in Shinsu-dong in Seoul. Founded as Sogang College in 1960 by the Society of Jesus (the Jesuit Order) with Kenneth E. Killoren, S.J., as president, the college comprised six departments: Economics; English Language and Literature; History, Mathematics; Philosophy; and Physics. In 1967, the Research Institute for Natural Sciences and the Research Institute for Humanities were added. A year later, the Mass Communications Department opened and Master’s degree programs were commenced. In 1970, the college became Sogang University, with Father J. P. Daly as president. Doctoral programs began in 1973.

Today, Sogang University consists of the Colleges of Liberal Arts; Social Sciences; Natural Sciences; and Engineering. In 1998, the enrolment was 7,277 students, made up of 5,257 male and 2,020 female.

School festivals are held in May and October of each year. University news publications include the *Sŏgang hakpo* (Sogang Gazette) published in Korean and the *Sogang Herald* published in English.

*Sŏgwang Temple* [Architecture]
Situated on Cheju Island’s southern coast, Sŏgwip’o is Korea’s southernmost city. Mt. Halla (1,950 metres) marks the city’s northern boundary. Numerous streams run down the mountain through the city and into the sea. With Mt. Halla blocking the wind, Sŏgwip’o is the warmest area in all of Korea.

With its mild climate, Sŏgwip’o is well suited for cultivation of warm weather crops, fruit and bananas. Sweet potatoes, barley, rape and beans are also grown here. Commercial fishing is another important part of the local economy. Boats operating out of Sŏgwip’o catch mackerel, Spanish mackerel, sea bream, jade bream, hairtail and anchovies. Fish farming is also common in the area. Except for several food processing plants, the city has few industries.

Due to the island’s undeveloped infrastructure, tourism did not begin to develop in Sŏgwip’o until the 1960s. At this time, regular boat and airline services were opened and a road was built linking Sŏgwip’o, in the south, with the port services of Cheju City to the north. At present, the city has more than a dozen large tourist hotels. Tourist boats operate out of Sŏgwip’o’s harbour, and there is even a 48-man mini-submarine that takes visitors on underwater tours. In Sangnye-dong, there is a hunting ground containing ten hunting courses. The area is stocked with pheasant, quail, pigeons and rabbits. In addition to the hunting ground, there is a shooting range and golf course. In Sanghyo-dong, there is the Tonnek’o Resort. The resort is located near a gorgeous valley, covered on both sides by subtropical evergreen trees, with a waterfall and a pond. The Halla Orchid and winter strawberries, both indigenous to Cheju Island, grow in this area.

The city has a number of waterfalls. Located just east of Sŏgwip’o harbour, Chŏngbang Waterfall is one of the city’s most popular tourist destinations. This picturesque 23-metre high waterfall, descends directly in the sea. Many unique animal and plant species are found in this area. Nearby Ch’ŏnjiyŏn Waterfall cascades through a valley full of many curious rock formations. The pools of water at the foot of the falls are home to the Mut’ae eel. Off the coast near Sammae Peak, there is the 20-metre high Oedolgoe Rock, a lone column jutting up out of the ocean. There are also several interesting islands nearby including Pŏm (Tiger) Island and Sae (Bird) Island.

There are several important historical sites and relics within the city limits. Relics dating from the Palaeolithic Age have been discovered near the Ch’ŏnjiyŏn Waterfall. In addition, several dolmen can be seen in the vicinity of Yerae-dong. As for Buddhist sites, there is Pŏphwa Temple, founded in the late Koryŏ period. The temple once housed a set of statues depicting Amitabha and attendant Bodhisattvas. This exquisite triad was famous as far away as Ming China. The present temple was reconstructed in 1961.

**Sŏjong ilgi**  
*Sŏjong ilgi* is a diary written by an army officer, Pang Ujong, at the time of the Hong Kyŏngnae Rebellion in 1811. There are two volumes in this hand written work. It is a record of the events that surrounded the subduing of the Hong Kyŏngnae Rebellion that broke out on the eighteenth day of the twelfth lunar month in 1811. This record actually starts four days later when Pang headed into battle against the rebel forces and ends early in the fifth month of 1812 when Pang returned triumphantly through Namdaemun Gate in Seoul.
This work details many of the battles that were waged between the government forces and the rebel army, including the defeat of the rebels at Songnim Village, which was the first time the government forces were victorious against the insurgents. It is vivid in its descriptions of the battlefield scenes and also in its portrayal of the bitter winter weather of the northern provinces of Korea where most of the events took place. *Sŏjong ilgi* is helpful in understanding the events that surrounded the actual conflicts in the Hong Kyŏngnae Rebellion and the military tactics employed by the government forces. It is now kept at the Kuksa P'yŏnch'an Wiwŏnhoe (National History Compilation Committee).

**Bibliography**

*HMMTS*, vol. 12.

*Sŏjong illok* is a diary of the 1592 Japanese Invasion written by the commander of the volunteer forces in Hwanghae Province, Yi Chŏngam. It covers the period from the twenty-eighth day of the fourth lunar month in 1592 until the seventh day of the tenth month in the same year. The beginning of the diary is an account of King Sŏnjo (r. 1567-1608) fleeing the oncoming Japanese army by escaping to P'yŏngan Province and the author records the reaction of the court and their conduct while taking refuge. The later half is an account of the activities of the volunteer forces under the command of Yi as they campaigned against the invading Japanese armies. Of note is the account of the volunteer army crushing the Japanese army under the command of the general Kuroda.

*Sŏjong illok* is one of many diaries that recount the events of the 1592 Japanese Invasion. It is praised for its accurate accounts of the events of the war and is valued for its precise record of the activities during the Invasion. The original hand-written copy of this work was translated and published in 1977 by T'amgudang Publishers.

**Soju**

[Food and eating]

*Sok changgyŏng* (see Buddhist canon, Korean)

*Sok mujŏng pogam* is the record of both the domestic and foreign troubles that occurred from the reign of King Sŏngjong (r. 1469-1494) to that of King Myŏngjong (r. 1545-1567). This work in five-volumes and two fascicle was compiled in 1548 by Hong Ŭnp'il, Yun Ingyŏng, Yi Ki, Chŏng Sunbung and others upon receiving a royal decree. The name was derived from the 1469 *Mujŏng pogam*.

The contents range from negotiations with the Japanese to the internal conflicts of Chosŏn. Notable among the domestic troubles are the Purge of 1545 (*Ŭlsa sahwa*) and the details that surrounded the dethronement of Prince Yŏnsan (r. 1494-1506). This work provides a supplemental history to the *Chosŏn wangjo shillok* (Veritable Records of the Chosŏn Dynasty) and therefore renders additional insight into this period of Chosŏn. Thus it is a valuable document for the study of both internal and external conflicts during this period.

*Sok taejŏn* (Supplement to the National Code)

*Sok taejŏn* is a set of revisions to the *Kyŏngguk taejŏn* (*National Code*), that was published in 1746. These two works are the most comprehensive sets of codes and regulations in
Chosön. The latter work is comprised of six volumes in four fascicles.

Since there had been many revisions and new codes issued since the Kyöngguk taejón was promulgated in 1471, King Yönjoo (r. 1724-1776) ordered this work compiled by selecting the relevant contents from existing legal codes. Therefore, Sok taejón is the product of the many legal codes that had been issued from the printing of the Kyöngguk taejón. Thus, the work is valuable for study of the legal systems of Chosön.

HMMTS, vol. 12.

Sokch’o

Situated on the east coast of Kangwŏn Province, Sokch’o borders Kosong County to the north, Inje County to the east and Yangyang County to the south. Sokch’o’s downtown area hugs the coast. The main business area is situated between Yongnang and Ch’ŏngch’o Lake; however, a great deal of new construction is taking place in the area south of Ch’ŏngch’o Lake. Two winding highways run westward over Mt. Sŏrak. The northern highway crosses Mishi Ridge, while the southern highway crosses Han’gye Ridge. Highway 7 runs north to south along the coast. The city receives heavy rainfall during the winter and autumn months and tends to be windy during the spring.

Due to the high passes of Mt. Sŏrak, Sokch’o’s location poses difficult transportation problems. The roads over Mishi and Han’gye Ridge become icy in winter and are sometimes covered with fallen rocks. Moreover, although the city’s small port is suitable for fishing vessels, it is not big enough to handle large amounts of cargo. A small airport has been built just south of the city, but the flights are frequently grounded because of the area’s heavy winds.

Due to these limitations, the city has had to rely on tourism as one of its main sources of income. The eastern section of Mt. Sŏrak National Park falls within the city limits (See Mt. Sŏrak). As one of the most popular tourist destinations in the nation, the park attracts a constant flow of visitors throughout the year. During the summer months when students are on vacation, the Sokch’o area is packed with tourists who come to enjoy both the mountains and beaches. Ferries also operate from the area, taking people on tours of nearby islands or even as far away as Ullung Island.

The fishing industry also provides work for many of the residents. During the summer months, boats with lights attached catch cuttlefish at night. In the winter, wall-eye pollacks are caught, while numerous other types of fish are caught year around. Some of the boats brings their catch directly into fish markets, such as the one at Taep’o Port. These markets are popular with both Japanese tourists and Koreans who especially come to eat fresh raw fish (hoe), the area’s specialty.

Sŏkkuram Grotto

[Sokpo sangjŏl (Details from the Life of Sakyamuni )]

Sŏkpo sangjŏl is a long prose biography of Sakyamuni written in han’gŭl by Prince Suyang in 1447-1448. Sakyamuni was a prince of King Suddhodana of the Kapilavastus Castle in India.

This Buddhist work was composed on the orders of King Sejong, as an act of mourning for the death of his Queen, Sŭlŏn. Prince Suyang was the second son of King Sejong. On
the basis of two earlier biographies by Chinese priests, Prince Suyang wrote the *Sökpo sangjŏl* in Chinese over a period of sixteen months, later translating it into Korean for wider dissemination. Kim Suon was a collaborator with the Prince on the work.

While it is known that it was written in 1447-1448, only 15 out of 24 volumes are still extant. They are volumes 1, 2, 6, 7, 8, 9, 10, 11, 13, 14, 17, 18, 19, 21 and 23.

The importance of the *Sökpo sangjŏl* lies in the fact that it is the first prose work written in Korean. As the first biographical work in Korean, it is also of rare significance. It is a rich source for the study of fifteenth c. Korean language, containing, as an extensive work of prose, a rich vocabulary and segments of dialogue revealing contemporary spoken Korean. It provides many examples of the use of the Korean characters soon after the invention of the *han'gul* system and it is useful for an understanding of the contemporary pronunciation of Chinese characters.

Furthermore, the *Sökpo sangjŏl* is an important source book for the study of Buddhism and Buddhist scriptures.

In the volumes of the first edition the *han'gul* was printed with the newly devised wooden type, while the Chinese characters were printed with copper type. The size of the one-lined frame of each page on which the text is printed is 22.2cm in length and 15.8cm in width, each consisting of eight lines of fifteen characters each.

The four original volumes were photographed and published serially in the journal *Han'gul* of the Korean Language Society (Chosŏn Hakhoe) and in July 1961 were published in book form.

*Soktam sajŏn* (Dictionary of Adages) [Literature]

**Sŏl Ch’ong (660-730)**

Sŏl Ch’ong was the son of Wŏnhyo, an eminent Buddhist monk, and Princess Yosŏk. After the birth of his son, Wŏnhyo returned to the laity, styling himself as *Sosŏng Kŏsa* (a small layman).

Sŏl Ch’ong received early training in the Buddhist classics but later became a Confucian scholar and played a major role in importing Chinese civilization to Korea. He is chiefly remembered for his work in codifying a system of writing known as *idu* (ancient Korean transcription system). With this system, Chinese characters were used to express Korean sounds as well as grammatical particles and inflections, thus enabling Chinese texts to be read as Korean. The system had been in use before Sŏl Ch’ong’s time, but his role in standardizing it was significant, as the development of *idu* was an important factor in disseminating Confucianism in Korea. Imperfect though the *idu* system was as a method of rendering Korean, it remained in use in the form devised by Sŏl Ch’ong until the fifteenth century, when the *han'gul* script was invented by King Sejong.

Sŏl Ch’ong was the first to be admitted to the Confucian Hall of Worthies at the National Academy. His contributions included drafting diplomatic papers and functioning as a political adviser, as well as transcribing Chinese texts. Traditional records such as *Samguk sagi* indicate that Sŏl Ch’ong was an accomplished writer, but that none of his works survives, other than certain inscriptions on monuments which are incomplete.

*Sŏllal* [Customs and Traditions]
Sömjin River

Flowing about 212 kms. from its origin on Mt. P’algong (in North Cholla Province’s Chinan County), to the South Sea, the Sömjin River is the ninth longest in Korea. After leaving Mt. P’algong, the Sömjin flows north to Kangjong Village where it unites with Chinan Stream. Known as Chowon Stream at this point, the river then winds sharply on its course to the southwest through the townships of Sôngsu and Shînp’yŏng. From Unam Township in Imshil County, it forms the extensive Okchóng Lake, a reservoir created in 1965 with the construction of Sömjin Dam. Below the dam, the Sömjin flows east of the town of Sunch’ang before turning east itself, where it joins Yo Stream. From its parallel course with Highway 17 towards Kurye, the river runs along the border between South Kyŏngsang and South Cholla Province before discharging into Kwangyang Bay.

Legend says that when Japanese pirates invaded the lower reaches of the river in 1385, thousands of toads cried out, thus causing the Japanese to flee to Kwangyang. After this time, the river is said to have been known as the Sömjin’gang (Toad Port River). The account of the river in the eighteenth c. work T’aëngni ji (Ecological Guide to Korea) indicates that the section between the present-day Kuryegu railway station and Kwangyang Bay was used for transport. Although this 40-km.-long stretch of river is still navigable, it has not been used since the development of modern roads and railways.

Son Pyŏnghŭi

[S history of Korea]

Sôn Sect

[Buddhism]

Sŏnam Temple

Sŏnam Temple is situated in South Cholla Province on Mt. Chogye. Although there is a legend that the monk Ado founded Piro Hermitage at the site in 542, most scholars now believe that the first temple built here was under the auspices of Toson in 875. In 1088, the famous monk Üich’ŏn led a reconstruction of the monastery. A picture of Üich’ŏn is still kept in the temple in commemoration of his efforts. During the second wave of the Hideyoshi invasions, some of the temple buildings were burnt down, but the temple was again reconstructed in 1660.

In the following years, Ch’imgwang and others continued to make repairs. When Ch’imgwang took charge of the monastery, he encouraged strict observance of the monastic precepts. Previously, the monks had celebrated New Year’s Eve by playing games and drinking. Disgusted with such wanton behaviour, Ch’imgwang had the monks do all-night chanting. Ch’imgwang’s disciples, Hoam and Ch’ihyŏn are particularly well-known. In 1699, new buildings were added to the temple complex. In 1819, the temple, ravished by fire, was rebuilt by Sangwŏl only to catch fire again in 1823. A few years later, a major reconstruction was undertaken. In 1911, the Japanese Governor-General proclaimed the ‘Temple Regulations’ according to which Sŏnam Temple was one of Korea’s thirty main temples (ponsa) in charge of the smaller temples within its district. However, the extensive Sŏnam Temple complex was burnt down during the Korean War. At present, only around twenty buildings remain.

The temple is famous for its beautiful setting and numerous artefacts. On the way to the temple, there is the picturesque Sŭngsŏn Bridge (Treasure No. 400). This 14-metre bridge is made up of stacked stones. The inner-section consists of rectangular cut stones that have been fit together without the use of mortar. In the P’alsang (Eight Scenes) Hall, also called the Kuksa Hall, there are pictures of the eight major scenes of Shakymuni’s life. In addition, there are pictures of various famous masters as well as thirty-three patriarchs of Korean Buddhism. In front of the temple, there is a 4.7-meter high stone pagoda (Treasure
No. 395). The temple also houses several old altar paintings, including a painting of the Vulture Peak Congregation (Yōngsanhoe) done in 1765, a painting of the Fifty-three Buddhas done in 1702, a painting based on the Hwaom Sutra done in 1780 and a painting of the Seven Stars done in 1895.

Bibliography

Sŏndŏk, Queen (r. 632-647)

Queen Sŏndŏk was the twenty-seventh ruler of Shilla. Her given name was Tŏngman, which, upon her ascension to the throne, became taboo in all speech. She was the eldest daughter of King Chinp'yŏng. Her Mother was a concubine of the king, Lady Maya of the Kim family. Under her reign, Buddhism enjoyed widespread propagation, and many magnificent Buddhist temples were constructed. The only remaining monument from her reign, and the only evidence of Shilla architecture from the Three Kingdoms period is a multi-story stone astronomical observatory, which still stands in Kyŏngju.

When King Chinp'yŏng died without a son, she became one of the few female leaders on the Korean peninsula by decision of a conference of the Council of Nobles (Hwabaek), the chief decision-making body in Shilla government. Her ascension to the throne marked the end of a line of kings of purely royal sŏnggol (hallowed-bone) lineage. Her first task upon ascending the throne in 632 was to conduct a survey of her country. She commissioned Úije to the task of observing the conditions of the people and administering relief. In 633, she implemented a series of administrative and economic policies, such as eliminating regional taxes for an entire year, which won her popular favor. In 634 she constructed the Punhwang Temple, and took the title of her reign Inp'yŏng, following her father. While taking such a name seemed to indicate that the queen was intent on maintaining the autonomy of the medieval royal household, she found herself increasingly dependent upon Tang China for protection from attacks by Paekche to the west and Koguryŏ to the north.

Hoping that strong ties with China would discourage encroachments from her neighbors, Queen Sŏndŏk sent annual tributary envoys to the Tang capitols. In 635, she was officially recognized by the Tang emperor as the ruling monarch of Shilla, and in the same year constructed the Yŏngmyo Buddhist Temple. During her short reign, the Queen encountered increasing friction with the ancient states of Paekche and Koguryŏ. Her forces were able to repel attacks by Koguryŏ in 638 and 642, but an attack by Paekche in 642 cost some forty cities deep inside Shilla's western border. When attempts at diplomacy with Paekche proved fruitless, Queen Sŏndŏk appointed Kim Yushin as military commander, and petitioned Tang China for assistance. At this time, the queen was advised by her envoy to construct the famed nine-story wooden pagoda at the Hwangnyong Temple. According to then popular State-protection Buddhism, devout adherence to the sutras would insure divine protection of the country.

In response to the queen's request for help, the Tang emperor offered his opinion that the attacks on Shilla came because the country was ruled by a queen. He sent envoys to Koguryŏ, but all efforts at a diplomatic solution were rejected. Under the leadership of Kim Yushin, Shilla was able to retake seven cities in 644 but, by the following year, seven other cities in the west were lost in subsequent attacks. In the meantime, aristocrats such as Pidam and Yŏmjŏng from the Council of Nobles took advantage of the Tang emperor's assessment of the situation in Shilla to instigate a revolt against the queen in the first month of 647. These high-ranking aristocrats claimed to be of partly royal lineage. Their revolt was quelled by Kim Yushin and Kim Ch'unch'u. Amid this whirlwind of insurrection,
Queen Sŏndŏk died in her sixteenth year of reign. She was given the posthumous title Sŏndŏk and was buried in a royal tomb in Nangsan. With the support of her appointees, including Kim Yushin, Kim Ch'unch'u, and Al Chŏn, Queen Sŏndŏk is said to have been a wise and fair monarch.

H Mabelona

**Sŏng Hyŏn (1439-1504)**

Sŏng Hyŏn was an early Chosŏn scholar-official. His family’s ancestral home is in Ch'angnyong, his courtesy name was Kyŏngsuk and his pen names included Yongjae, Hŏbaektang, Puhyuja and Kugo. His father, Sŏng Yŏnmjo, was a magistrate. After passing various civil service examinations, Sŏng, at twenty-seven, was appointed as Ninth Counsellor (ch'ŏngja) of the Office of the Special Counsellors (Hongmun’gwan) and continued his climb in the government hierarchy with subsequent appointments such as First Draftsman (kyogam) at the Office of Diplomatic Correspondence (Sŭngmunwŏn). When in his late twenties, Sŏng accompanied his older brother Sŏng Im to Beijing and during this journey kept a travel diary that was later published as *Kwang’wang nok* (Sightseeing Record). In 1474 he was appointed as Lecturer (chikkang) of the National Confucian Academy (Sŏnggyun’gwan) and in the following year again travelled to Beijing. In 1485 he was named as a part of the *ch'ŏnch'usa* (an embassy to China to celebrate the birth of a prince) and then after returning to Chosŏn held a variety of posts such as Sixth Royal Secretary (tongbusungji) of the Royal Secretariat (Sŭngjŏngwŏn), Second Minister (ch’amp’an) of the Board of Punishments (Hyŏngjo) and Governor (kwanch’alsa) of Kangwŏn Province.

Sŏng continued to gain fame both within Chosŏn and in Ming China to which he often travelled as part of official embassies. He is also known for his many literary works that have been transmitted to the present time. Sŏng, along with Yu Chagwang, compiled *Akhak kwebŏm* (Guide to the Study of Music) in 1493. This work is praised for containing many of the Koryŏ period kasa such as *Ssanghwajom* (Dumpling Shop) and *Isanggok* (Treading Frost) that provide valuable data for the study of this period. In addition, before his death in 1504 he completed *Yongjae ch’onghwa* (Assorted Writings of Yongjae) that contains a wide variety of materials such as historical narratives and various scholarly discourses on geography and customs. Accordingly, this work is also valuable for the study of early Chosŏn. Other extant works of Sŏng include *Hŏbaektang chip* (Collected Works of Hŏbaektang) and *Puhyuja tammnon* (Discourses of Puhyuja).

**Sŏng Sammun (1418-1456)**

Sŏng Sammun was a civil official of early Chosŏn and is known as one of the so-called six martyred ministers (*sa yukshin*). His family’s ancestral home is in Ch'angnyŏn, his courtesy name was Kŭnbo and his pen name was Maejukhŏn. His father, Sŏng Sŭng, was a Commander (toch'onggw'an) in the military forces and his mother was the daughter of Pak Ch’ŏm. Sŏng was born in Hongsŏng of Ch’ungch’ŏng Province and in 1438 passed the shingnyŏn shi (triennial examination). After this he also sat for the mun’gwa chungshi (special civil service examination held every ten years) in 1447 and passed with the highest score. Sŏng then entered officialdom and would stay there, holding a variety of positions, until the end of his life.
Song was a renowned scholar of his day and participated in many of the major events concerning the development of the native Korean script *han’gul*. He was among the team of scholars that King Sejong (r. 1418-1450) assembled to compile *Hunmin ch'ong'um* (Correct Sounds for the Instruction of the People, 1446), which expanded on the pronunciation and orthography of the new script. Song also participated in providing annotations to the first poetic work written in *han’gul*, *Yongbi och’ön ka* (Songs of Flying Dragons), thus further elucidating the usage of the new script. Moreover, his linguistic talents did not stop with *han’gul* as he also participated in the compilation of *Tongguk ch'ong’un* (Dictionary of Proper Korean Pronunciation, 1448) which is a six-volume dictionary of Chinese characters arranged by rhyme. Song’s participation in these monumental projects bespeaks his scholarly ability and reputation.

King Sejong had created the Hall of Worthies (Chiphyŏnjŏn) as an institution where the top scholars of Chosŏn would create a more efficient government through organisation and adaptation of various Chinese systems. Song was one of the leading scholars in the Hall of Worthies and this institution came to hold great political power by the end of Sejong’s rule. This, of course, created resentment among those members of the government who felt that they were losing political power to the Hall of Worthies. It was against this backdrop that King Sejo (r. 1455-1468) usurped the throne from his nephew King Tanjong (r. 1452-1455) and then carried out a bloody purge against all of those who opposed him. Therefore, when the scholars of the Hall of Worthies vehemently condemned the illegal seizure of the throne by Sejo, they also became the objects of his wrath. Song, and with his fellow Hall of Worthies scholars Pak P’aengnyŏn, Ha Wiji, Yi Kae, Yu Ùngbu and Yo Sŏngwŏn, were all executed by Sejo and subsequently became known as the six martyred ministers for their steadfast commitment to their principles even in the face of death. The punishment was not limited to these scholars, and Song’s father, three brothers and his sons were all also executed at this time. Sejo’s consolidation of power represents one of the bloodiest episodes in the history of the Chosŏn royal family.

Song is praised not only for his loyalty to his king, but also for his many contributions to the development of the *han’gul* script and linguistics in general. His literary collection, *Maejukhŏn chip* (Collected Works of Maejukhŏn) has been transmitted to the present.

**Song Shiyŏl** (1607-1689)

Song Shiyŏl was a late Chosŏn scholar-official. His family’s ancestral home is in Únjin, his childhood name was Sŏngnoe, his courtesy name Yŏngbo and his pen names Uam and Ujae. His father was a Curator (*ponsa*) in the Bureau for Overseeing Ceramic Production (*Saongwŏn*) and his mother was from the Sŏnsan Kwak family. Song was born in Kuryong Village of Ch’ungch’ŏng Province and remained there until he was twenty-six years of age. He trained under many scholars including his father, and then in 1625, studied Neo-Confucian philosophy under Kim Changsaeng (1548-1631). At twenty-seven, Song passed the Classics Licentiate Examination (*saengwŏn shi*) with high marks and two years later was appointed tutor of Grand Prince Pongnim (King Hyojong, r. 1649-1659). In the year or so that he tutored the future king, Song and his pupil developed a strong bond that would influence his future in government service. However, with the outbreak of the 1636 Manchu Invasion, Chosŏn was thrown into turmoil, with the Manchu seizing Grand Prince Pongnim and his brother Crown Prince Sohyŏn. They were taken to Manchuria as hostages to ensure Chosŏn’s submission to Qing. For the next ten years, Song refused any official appointment and concentrated on his scholarship.

In 1649, Hyojong assumed his father’s throne and this also marked the return to official life for Song. He served as First Tutor (*chinosŏn*) at the Crown Prince’s Tutorial Office (Seja Shigangwŏn) and as Third Inspector (*changnyŏng*) at the Office of the Inspector-General (Saŭhŏnhu). The politics of Chosŏn at the time were laden with factional strife and Song was at the centre of this. His close relationship with Hyojong permitted his faction, the
Westerners, to gain the political upper-hand against both Northerners and Southerners. Hyojong’s reign served as a period in which the Westerners consolidated their power base. Song continued to advance in the government hierarchy and in 1654 held the position of Second Inspector (chibŭi) at the Office of the Inspector-General. In the following year, his mother died and he spent several years in mourning. On his return to official duties he served as Minister (p’ansŏ) of the Board of Personnel (Ijo) in 1658, and was then involved in Hyojong’s plan to mount an attack against the Manchu. However, after Hyojong’s sudden death in 1659, a controversy arose about the length of the mourning period to be observed by the dowager queen Cho. As a result of this dispute, the Westerners lost their grip on political power. Song then resigned from public life and returned to his birthplace.

King Hyŏnjong reigned from 1659 to 1674, and for some years his polite offers of official appointments to Song were all rejected. However, in 1668 Song became Third State Councillor (uuijong), and in 1673 was appointed Second State Councillor (chwauijong). Shortly after accepting the latter position, Song decided to leave the court, but even so did not stay out of office for long. In 1674, with the death of Hyŏnjong, arose the matter of the proper period of mourning for his queen. The result of this struggle over propriety was the removal of the Westerner faction from power, and the exile of Song. Nevertheless, as a result of another political disturbance, the Westerners resumed power in 1680 and this resulted in the termination of Song’s exile and his return to the government. This time, his stay was also quite short as he found himself once more embroiled in controversy concerning decorum. When King Sukchong (r. 1674-1720), who had long been without an heir, desired to have the first-born son (the future King Kyŏnjong, r. 1720-1724) of his concubine Lady Chang installed as crown prince, the Westerner faction, led by Song, vehemently protested this breach of protocol. As a result, the Southerner faction was again able to wrest political power from the Westerners and Song was exiled to Cheju Island in the first month of 1698. Later that year he was sentenced to death and forced to drink a lethal dose of poison.

Song is remembered as a neo-Confucian scholar who strongly advocated his own interpretation of Confucian philosophy. After his death, he was honoured by having his particular form of neo-Confucianism continued through the Hwayangdong Academy (sŏwŏn), which was established for him. Song was of the Westerner faction, but in this were included the subdivision of the Noron (Old Doctrine) and Soron (Young Doctrine), that further divided the ideology of its members. It was under Song’s leadership that the Noron became the principal sub-faction which garnered most of the political power. From this aspect, Song can be viewed as an extraordinary political strategist who consolidated the power of his faction. However, his power struggles typify the factional politics that gripped late Choson and where the blame can be attached for many of the social ills and turmoil that plagued the period. The neo-Confucian literati had lost their ability to understand the plight of the common people and instead were immersed in their own personal power struggles.

Many of the literary works of Song are extant, including his Uam chip (Collected Works of Uam), which in its first publication (1717) totalled 167 volumes. This work was revised and published again in 1787, in a total of 215 volumes in 102 fascicles.

Sŏngbul Temple [Architecture]

Sŏngch’ŏl (1912-1993)

Sŏngch’ŏl was born in 1912 in Kyŏngsang Province. From an early age, he had a precocious mind and an avid interest in books. After mastering the classics of East Asian thought, he went on to read a great number of Western-language works. In his early youth, he had a weak constitution -- a fact that probably led him to reflect on the transient character of human existence. As a young man, Sŏngch’ŏl married and the couple had a daughter. By this time, Sŏngch’ŏl was already regularly listening to sermons at Buddhist temples and
learning meditation from the monks. At the age of twenty-four, he made the difficult
decision to leave his wife and daughter to become a monk.

Thus in 1936, Sŏngch’ŏl went to Haein Temple and ordained under Hadongsan. After he
received his precepts, he went to Pŏmŏ Temple where he joined the summer retreat. This
was to be the first of a continuous series of meditation retreats for this young monk who
single-mindedly devoted himself to intense meditation practice. During this time, Sŏngch’ŏl
resolutely broke off all ties with the world, refusing to see even his previous family when
they visited the temple. After three years of arduous training, Sŏngch’ŏl achieved
awakening.

With his personal practice complete, Sŏngch’ŏl turned his attention to the general
conditions of the monastic community. During the Japanese annexation and occupation of
Korea, there had been a concerted effort to wipe out all vestiges of Korean culture and
institutions. As part of this effort, Japan had attempted to replace Korea’s tradition of
 celibate monks with its system of married monks (taech’ŏsŭng). Consequently, after
unification, the married monks monopolised control of many of Korea’s temples.
Sŏngch’ŏl worked with other monks at this time to rid the Buddhist order of what he felt to
be decadent influences. In 1947, he and other monks formed a purification movement
based at Pongam Temple. The movement temporarily lost momentum during the Korean
War, but was active again after the armistice.

Among his peers, Sŏngch’ŏl became famous as an exemplary Sŏn (Zen) monk. In 1955,
he was nominated as abbot of Haein Temple, one of Korea’s leading training monasteries;
yet, he refused the appointment so that he could continue leading the life of a recluse.
However, when he was nominated as the temple’s resident Sŏn Master (Pangjang) in 1967,
he accepted. During his first winter retreat, he held a ‘hundred-day dharma lecture.’ In
these early lectures, which were later published, Sŏngch’ŏl propounded his vision of a
revivified Buddhism - a practice-oriented tradition based on the Sŏn patriarchs.

In 1976, Sŏngch’ŏl published a definitive study of Korean Sŏn lineages. Three years later,
he published his famous book Sŏmnun chŏngno (Correct Path of the Sŏn Approach), in
which he systematically set forth his theory of sudden-enlightenment sudden-cultivation
(tono tonsu) and vehemently criticised Chinul’s sudden-enlightenment gradual-cultivation
(tono chŏmsu) theory. Since the modern Chogyo Order considered Chinul to be its
founder, this denunciation by Sŏngch’ŏl stirred up an intense debate in both monastic and
scholarly circles. The controversy became even more heated after Sŏngch’ŏl became
Supreme Patriarch (Chongjong) of the Chogyo Order in 1981. In the following years,
Sŏngch’ŏl did a series of Korean translations and commentaries of the seminal works that
embodied, in his opinion, the essential teachings of Sŏn.Sŏngch’ŏl died in 1993 as one of
the most celebrated yet controversial Korean figures in modern times.

Songgang chip (Collected Works of Songgang)

Songgang chip is the literary collection of the middle Chosŏn period scholar-official Chŏng
Ch’ŏl (1536-1593, styled Songgang). This woodblock-printed work consists of eleven
volumes in seven fascicles was first published by Chŏng’s son between 1633 and 1635.
There are, however, several different editions of this work extant.
The contents are quite varied and range from many works of poetry written by the author to essays, memorials to the king, memorial addresses, funeral dirges and other writings that had been included in other works. All of the works in this collection are composed in Chinese characters. Chŏng Ch’ŏl is renowned as one of the excellent literary men of the Chosŏn period and his writing skill is evident in this work. He is perhaps better known for his kasa poetry that is chiefly included in his collection Songgang kasa (Kasa of Songgang). Nonetheless, Songgang chip includes many documents that reveal much historical information of the Chosŏn period, including the factional infighting that marred Chŏng’s lifetime. In 1964 Sŏnggyun’gwan University published a combined version of Songgang chip and Songgang kasa under the title of Songgang chŏnji (Complete Works of Songgang).

**Songgang kasa** (Kasa of Songgang)

*Songgang kasa* is the kasa and shijo collection of the mid-Chosŏn period scholar-poet Chŏng Ch’ŏl (1563-1593), styled Songgang. There were at least five editions of this work including the ‘Hwangju-pon’, ‘Uisŏng-pon’, ‘Kwanbuk-pon’, ‘Sŏngju-pon’ and the ‘Kwansŏ-pon’ editions, all named after their place of publication. The ‘Hwangju-pon’ is the oldest among these works, having been published between 1690 and 1696 by Yi Kyesang. This version contains twenty-six pages in which five kasa and fifty-one short songs are listed. The kasa in this work include Kwandong pyŏlɡok (Song of Kwandong), Samiin kok (Song of Longing), Sok samiin kok (A Sequel to Song of Longing), Sŏngsan pyŏlɡok (Odes to Sŏngsan) and Changjinju sa (A Time to Drink). This edition is also known as the ‘Isŏn-pon’ edition. The ‘Uisŏng-pon’ and ‘Kwanbuk-pon’ editions were published between 1696 and 1705, but these two versions are no longer extant. The ‘Sŏngju-pon’ is a two-volume work that holds the same kasa as the ‘Hwangju-pon’ edition in its twenty-four page first volume and seventy-nine shijo in the twenty-page second volume. This work was published in 1747 by a fifth generation descendant of the author. The final edition is the ‘Kwansŏ-pon’ which holds much the same content as the ‘Hwangju-pon’ and was published in 1768.

This work is praised as one of the best kasa collections in Korean literary history. Chŏng is regarded by Korean scholars as one of the most highly skilled poets in the history of Korea. In particular, works such as Samiin kok and Sok samiin kok display gracefully written descriptions of natural beauty that are seldom rivalled in Korean literary history. Therefore, Songgang kasa provides a wealth of literary resources for the study of the literature of the middle Chosŏn period. This work was combined with Songgang chip (Collected Works of Songgang) and published under the title of Songgang chŏnji (Pine River Anthology) by Sŏnggyun’gwan University in 1974.

**Sŏnggyun’gwan (National Confucian Academy)**

*Songgyun’gwan* (National Confucian Academy) [Architecture, Education]

**Sŏngho saesŏl**

*Sŏngho saesŏl* is a work of the late Chosŏn period shirhak scholar Yi Ik (1681-1763). It was the end result of forty years of scholarship by Yi who would jot notes or essays about books that he had read or other matters that he had encountered in his studies. There were many different hand written copies of this work extant in the Chosŏn period, but despite this it was never printed. In 1915 An Chŏngbok consolidated this work into two volumes and published it through the Chosŏn Kosŏ Kanhaenghoe under the title of Sŏngho saesŏl yusŏn. Again in 1929 it was revised by Chŏng Inbo and published through Mun’gwang Sŏrim Publishers under the same title as the 1915 edition. Other editions of this work
been subsequently published in various forms and with supplements.

The contents of *Sôngho saesöl* are quite broad and cover an extensive range of subjects. The original work was divided into five main sections: the first covering matters of heaven and earth (*Ch’önji mun*), the second all creation (*Manmul mun*), the third human affairs (*Insa mun*), the fourth the classics and history books (*Kyōngsa mun*) and the fifth poetry and literature (*Shimun mun*). Under these five broad headings, the work broached some three thousand topics. However, the topics under the various headings were not strictly adhered to. In the first section of ‘Ch’önji mun’, there are 223 topics covering matters such as astronomy, geography, various meteorological phenomena and the calendar. In ‘Manmul mun’, the second section, there are 368 topics that discuss items that are both directly and indirectly related to daily life such as dress, food, family and cultivation techniques for various plants. The third section, ‘Insa mun’, introduces 990 issues that concern politics, social institutions, society and economic matters. ‘Kyōngsa mun’ contains over one thousand entries that discuss the Confucian Classics and both Chinese and Korean historical documents. In the fifth and final section of ‘Shimun mun’, there are 378 entries that evaluate the merits of the works of both Chinese and Korean literary men.

*Sôngho saesöl* is highly valued as being a representative work of one of the foremost *shirhak* scholars in the late Chosŏn period. Yi’s manner of thinking breaks from the traditional bounds of the Chosŏn period that interpreted all matters from a neo-Confucian perspective, and instead approaches the human world and society from a fresh standpoint of objective inquiry. Since this work also introduced various Western scientific theories in fields such as astronomy and geography, it can also be viewed as the precursor to the introduction of much Western scientific thought into Korea. This work is often associated with Yi’s *Kwaqu rok* (Record of Concern for the Underprivileged) which outlined the author’s proposals for social reform. Together these works established Yi at the forefront of the *shirhak* movement that sought to fundamentally alter Korean society. Therefore, *Sôngho saesöl* is an essential work for the understanding of *shirhak* ideology.

**Songin**

[Literature]

**Sŏngjong, King** (r.1469-1494)

King Sŏngjong (1457-1494) was the ninth king of Chosŏn and reigned from 1469 to 1494. His personal name was Hyŏl and he was the grandson of King Ŝejo (r. 1455-1468). His queen, Konghye, was the daughter of the Chief State Councillor (*yŏngūijŏng*) Han Myŏnghoe. Following her death, he married Chŏnghyŏn, his second queen, who was the daughter of Yun Ho, the Third State Councillor (*uŭijŏng*). Sŏngjong enjoyed a close relationship with his grandfather and thus was favoured for various positions. Upon the death of Yejong (r. 1468-1469) who had no heir, Sŏngjong became king. Since he was only thirteen years old, the dowager queen Chŏnghŭi acted as regent for the next seven years.

During King Sŏngjong’s reign, many noteworthy accomplishments enabled Chosŏn’s foundations to be cemented. In 1485, the *Kyōngguk taejŏn* (National Code) was completed, and thus the basic foundations for the legal code of Chosŏn were established. Also, in 1492, the *Taejŏn songnok* (Supplement to the National Code) was promulgated and this further strengthened the political authority and control of the top echelon. Sŏngjong was a great patron of the scholars at the Hall of Worthies (Chiphyon Chŏn), and during his reign there were many compilations of historical and scientific data. Those publications that sought to raise the levels of agricultural knowledge and skills are prominent. Other works
published under Sŏngjong’s patronage include Tongguk yŏji sŭngnam (Augmented Survey of the Geography of Korea), Tongguk t'onggam (Comprehensive Mirror of the Eastern Kingdom), and Samguksa chŏryo (Abridgement of the History of the Three Kingdoms), all of which have contributed greatly to historical and cultural studies in Korea. Moreover, works such as Tongmunsŏn (Anthology of Korean Literature) and Akhak kwebŏm (Guide to the Study of Korean Music) provide valuable data for modern-day scholars for the study of Korean literature and music.

Sŏngjong also concentrated his energies on the suppression of Buddhism, which had been first advocated by early Chosŏn literati, such as Chŏng Tojon (1342-1398). In Sŏngjong’s reign, a strong policy of suppression was adopted, including abolition of the registration system for monks that was heretofore in use, and a complete prohibition on entering the priesthood. This was further strengthened under the reign of his son, Prince Yŏnsan (r. 1496-1506), which led, in 1507, to the abolition of the examination system that had been used to fill positions in the administrative hierarchy of the Buddhist church. Hence, the official relationship between Buddhism and the Chosŏn government was severed during the reign of Sŏngjong, and this was further consolidated by his successors.

Sŏngjong married a third time, and his three queens and eight official concubines produced, between them, a total of nineteen sons and eleven daughters. Two of his nineteen sons later ascended the throne -- Prince Yŏnsan, who was the tenth king of Chosŏn, and King Chungjong (r. 1506-1544) who took the throne after Yŏnsan was deposed.

Sŏngjong, King (r.981-997)

King Sŏngjong (960-997) was the sixth king of Koryŏ. His personal name was Ch’i and his courtesy name On’go. He was the grandson of the founder of Koryŏ, King T’aejo (r. 918-943). In 981, when King Kyongjong (r. 945-981) abdicated, Sŏngjong became king of Koryŏ at the age of twenty-one.

Sŏngjong’s reign was marked by many reforms that were directed at consolidating the central governing apparat of early Koryŏ. The views of the young king were greatly influenced by the Confucian scholar Ch’oe Sŏngno (927-989), who sought to establish an aristocratic society with a strong central government. Ch’oe did not favor an overly-powerful monarchy that ruled without the consensus of the aristocracy, but aimed at a strong central government, that ruled through consensus. He submitted his views in a twenty-eight point memorial to the king in 989. Sŏngjong relied heavily on the views of the Confucian scholars in formulating his policies. He is said to have been quite well versed in the Confucian classics, and consequently was receptive to the opinions of his officials. He, for the first time, despatched officials from the capital to head provincial administrative units, and this revision of the local government structure had the effect of diminishing the power of the local gentry families. Yet at the same time, he also sought to bring the youth of the local gentry families into the central government and thus stressed education in his policies.

One of the first tasks for Sŏngjong was to enact land reforms that would help the central government increase its authority over the outlying areas. In 983, the twelve provinces (mok) were established, and at this time officials from the capital were sent to head the provincial governments. Sŏngjong was also determined to create an educational system based upon the Chinese model and in 992, he established the National University (Kukchagam), which functioned as the highest educational institution in the kingdom. The National University was composed of six colleges, and while the entrance requirements for each college differed, this Confucian institution offered the opportunity of education for both aristocracy and commoners. Sŏngjong sought also to increase educational opportunities in the countryside, but when his plan to bring young men to the capital for training failed, he ordered scholars go to the provinces. To each of the twelve provinces a
Classics scholar (*kyônghak paksâ*) and a medical scholar (*uihak paksâ*) were assigned, in an attempt to improve the level of education in the outlying areas.

Sŏngjong also led vital reforms to the military structure, which had remained largely unaltered since the reign of T'aejo. Under Sŏngjong, however, the organisation changed greatly and was focused on the Two Guards and Six Divisions. The Six Divisions were the first-formed and consisted of the Division of the Left and Right (Chwauwi), Divine Tiger Division (Shinhowi), Elite Striking Division (Hûngwiwi), Internal Security Division (Kûmowi), Thousand Bull Division (Ch'ônùwi), and the Capital Guard Division (Kammunwi). These divisions are thought to have been in service by 995, with the first three divisions charged with both the defence of the capital and the border regions. The Internal Security Division held major responsibility for police duties in the capital; the Thousand Bull Division was used for ceremonials and the Capital Guard Division carried out guard functions at the palace, city gates and government buildings. The Two Guards were formed later and acted as the king's personal bodyguard.

Sŏngjong’s reign also marked a shift in the orientation of Korean society and represented a clean break from the previous hierarchical society transmitted from Shilla. While in Shilla, a man’s political and social mobility were directly linked to the class in which he was born, in Koryŏ, from the reign of Sŏngjong, the individual was part of a more merit-orientated society. Further, Confucian philosophy now came to the fore in the political and educational spheres. Hence, the status of Confucian literati in Koryŏ was dramatically improved from that of their predecessors -- the scholars of the Shilla head-rank six (*yuktup'um*). The increased emphasis on a Confucian education is a clear manifestation of a shift from a hierarchical society to one that was based on merit and scholarship to a greater degree.

During Sŏngjong’s reign, the northern expansion policies continued and these, naturally, led to conflict with the peoples in the areas north of Koryŏ. In particular, it was the Khitan people who felt the most threatened and this eventually led to their invasion of Koryŏ in 993. Sŏngjong sent his general, Sŏ Hŭi (942-998), as truce-maker to the Khitan in the hope of avoiding a costly conflict. Sŏ proved to be quite adept, as he not only convinced the Khitan to withdraw from Koryŏ, but to concede hegemony over all land south of the Yalu River to Koryŏ. Thus, it was during the reign of Sŏngjong that the essentially-modern territorial dimensions of Korea were defined.

In the tenth month of 997, Sŏngjong became critically ill and abdicated in favour of his nephew, King Mokjong (r. 997-1009), dying shortly thereafter. Sŏngjong is highly praised as an enlightened monarch who understood the need for social, political and educational reforms in the fledging Koryŏ kingdom. The reform process that began during his reign continued after his death and led directly to the zenith of Koryŏ.

**Sŏngju County**

Situated in the southwest part of North Kyongsang Province, Sŏngju County is comprised of the town of Sŏngju and the townships of Kach’ŏn, Kŭmsu, Taega, Pyŏkchin, Sŏnnam, Suryun, Yongam, Wŏrhang and Ch’ojŏn. Mt. Kaya (1,430m) and other high peaks rise up in the southwest area of the county, while Mt. Paengma (716m) and Mt. Yŏngam (782m) stand in the north. The Naktong River flows past the county's eastern border.

The county’s agriculture is primarily devoted to rice cultivation, which is centred around the lowland areas abutting the Taega and Paek streams. In the mountainous northwestern area, dry field crops such as barley, wheat, red peppers, garlic, peanuts and lettuce are grown, as well as fruit crops such as pears, grapes and apples. In addition, during the winter months, local farmers use green houses to produce water melons and cucumbers. In Suryun Township, there are both clay mining and sericulture operations.
As one of the county’s key tourist attractions, the Mt. Kaya area was made into a national park in 1972. In the summer, tourists from nearby Taegu flock to the picturesque Yongsa Valley which runs north from the peak. Mt. Sojin (742m) in Worhang Township is another popular tourist attraction. Made up of gneiss rock formations, the mountain contains lovely valleys and clear streams. At the southwest base of the mountain, one finds Sônsôk Temple which was founded by Grand Master Naong during the Koryô period.

In ancient times, this area was home to the Kaya federation which was eventually absorbed into the Shilla kingdom. As a result, the area’s artefacts and historical sites are important for the light they shed on Kaya and Shilla history. Over 270 old tombs from the Three Kingdoms period can be seen scattered throughout the county.

In Sôngju’s Yesan Village, there is a seven-storey pagoda (North Kyôngsang Province Tangible Cultural Asset No. 61). This stone structure is located at the old site of Tongbang Temple, a monastery said to have been founded during the reign of Shilla’s King Aejang (r. 800-809). The pagoda, which originally consisted of nine-storeys, is said to have been built here in order to protect the vital force (ki) of the earth (chi) in the Sôngju area. For this reason, the structure is known as the Chigi Pagoda. In Suryun Township’s Paegun Village at the foot of Mt. Kaya, one finds the old site of Pôpsu Temple, an old monastery from the Greater Shilla period. Relics at the site include a large three-storey pagoda and stone banner pole supports (North Kyôngsang Province Tangible Cultural Asset No. 61 and 62 respectively). On Mt. Yongch’uk, one finds Kamûng Temple which was founded during the Shilla period.

In addition to Buddhist temples, there are a number of old Confucian schools in the area, such as Mun’gye Sôwôn in Ch’ojôn Township, Ansan Sôwôn and Ch’on’gok Sôwôn in Pyôkchin Township, Tosan Sôwôn in Sônnam Township, Sôngju Hyanggyo in Sôngju and Hoeyôn Sôwôn (North Kyôngsang Province Tangible Cultural Asset No. 165) in Suryun Township.

In Worhang Township next to Sônsôk Temple, stands T’aee Peak. During the Chosôn period, the peak was thought to possess the features of a myôngdang, an auspicious site according to the laws of geomancy. As a result, the peak was used to enshrine the placenta from the sons of King Sejong (r. 1418-1450) as well as that of Tanjong (r. 1452-1455). On the peak, there are two rows of small stone chambers and stone markers. The site has been designated North Kyôngsang Province Tangible Cultural Asset No. 88.

Sôngnam

Sôngnam is situated in Kyônggi Province on the southeast border of Seoul. Located between the rugged Mt. Kômân (535m) and Mt. Ch’ônggye, the city’s topography is characterised by undulating hills. There is a strip of flat land along T’an Stream which flows through the city on its way to the Han River. There are two reservoirs in the area: Taewang in Sujông ward and Pundang in Pundang ward.

In the 1960s, the area was a sprawling shanty town. In 1968, Seoul Mayor Kim Hyônok, in an effort to do away with the numerous slum dwellings in Seoul, demolished 50 000 dwellings and relocated the inhabitants to settlements in Kwangju County’s Chungbu Township. A massive protest by residents on August 10, 1971, pressured the government to improve the living and working conditions in the area. As a result, a long-term development plan for the settlement was formed and incentives were offered to encourage industries to set up here. In 1973, as the area became Sôngnam City, numerous factories were set up as the population rapidly expanded. In 1989, the city was divided into the wards (ku) of Sujông and Chungwôn, and Pundang ward was added in 1991.
Previously a farming area, most of the present agriculture is limited to vegetable crops in ShihHung-dong and Kodong-dong. The city is linked to Seoul and the surrounding area by the Kyongbu Expressway, P’an’gyo-Kuri Expressway and two new subway lines. These transportation networks along with the large work force have made the city an ideal location for industries. Centred in Shinhung-dong and Sangdaewon-dong, the city’s factories produce a wide range of goods including electronics, chemicals, precision machinery, pharmaceuticals, textiles and furniture.

In order to meet the needs of the large population, the city has a well-developed service sector, including large department stores and markets. The Moran marketplace in Sujindong opens as a lively traditional market once every five days. Since most of the vendors are either producers or wholesale dealers, the prices of goods here are relatively low.

A large number of schools have been set up in the area in order to accommodate the city’s rapidly expanding population. In addition, Shin’gu Junior College, Kyungwon University and the Academy of Korean Studies have been established here. Set up in 1978, the Academy of Korean Studies promotes in-depth research into Korean culture and heritage. In order to facilitate research, the academy has an extensive library of over 322,000 books.

The city is named after its location south (nam) of Namhan Fortress (song). In addition to Namhan Fortress (See Namhan Mountain) on the city’s northeastern border, there are several historical sites in the area. In T’ap’yong-dong, one finds Pongguk Temple. The monastery’s Taegwangmyoing Hall has been designated Kyonggi Province Tangible Cultural Asset No. 101. At Manggyoing Hermitage in Pokchong-dong, there is a rock-carving of a seated Buddha. Carved out of a natural stone face on the western side of Namhan Fortress, this 1.2-metre high Buddha is surrounded by a number of old inscriptions. The carving, designated Kyonggi Province Tangible Cultural Asset No. 102, is thought to date from the late Koryo period. Near the carving, two steles provide records of the hermitage’s reconstruction. Other sites of historical interest include the tombs of Yi Myongwon and Yi Kyongsok (1595-1671).

**Songnam Island**

Lying between the islands of Chin and Sangjo, Songnam Island is administered by Chodo Township in South Cholla Province’s Chindo County. The island occupies a total area of 1.33 sq. kms. and has a coastline of 4.5 kms. With an average January temperature of 2.0c. and an August temperature of 26.0c., the island’s climate is relatively mild. The rainfall average is 927.5mm and the island has only a light snowfall.

Songnam’s population, as given by 1987 statistics, is 112. Most of the islanders make their living both by farming and fishing. With fifteen per cent of the island arable, farmers grow dry-field crops such as beans, rape and garlic. Local marine products include anchovy and laver (kim). The islanders live mostly close to the southern coast, where there are docking facilities and an elementary school branch. In order to preserve the island’s scenic value, Songnam has been included in Tado National Marine Park.

**Songni Mountain**

Situated east of Ch’ongju on the borders of North Ch’ungch’ong and North Kyongsang Province, Mt. Songni is part of the Sobaek Mountain Range. The mountain consists of granite bedrock interspersed with areas of metamorphic sedimentary rock. The latter has suffered heavy erosion, leaving behind sharp granite pinnacles and deep gorges. The mountain has eight famous peaks. Ch’onhwang Peak, the highest at 1,058 metres, is surrounded by Piro, Kilsang, Munsu, Pohyon, Kwanum, Myo and Sujong Peaks.

The mountain has had a number of names, including Kwangmyoong-san (Mt. Bright
Illumination), Chimyŏng-san (Mt. Wisdom Illumination), Miji-san (Mt. Extensive Wisdom), Hyŏngje-san (Brothers Mountain), Mt. Sogūngang (the Lesser Diamond Mountains), Kubong-san (Mt. Nine Peaks) and the picturesque Chaha-san (Mt. Purple Twilight). The present name, Songni, literally means ‘Departing from the Secular’. A Buddhist term for forsaking the busy mundane realm in order to search for truth in solitude, the name has been in use since Shilla times.

As its name suggests, the mountain has strong connections with Buddhism. The large Popchu Temple is found here along with numerous hermitages. The temple is famous for its historical artifacts and beautiful setting. With numerous hiking trails, the mountain is popular with both hikers and herb gatherers who come to pick the moru (wild grapes) and songi mushrooms (Armillaria edodes) native to the area. In order to preserve the area’s natural environment and historical heritage, the area was designated Songni-san National Park in 1970.

Songp’yŏn

Sŏngūp Folk Village

Sŏnjo, King (r. 1567-1608)

King Sŏnjo (1552-1608) was the fourteenth king of Chosŏn and ruled from 1567 to 1608. His given name was Kyun and later he was called Kong. He was born in 1552 on the eleventh day of the eleventh lunar month in Hansŏng (present day Seoul). The grandson of King Chungjong (r. 1506-1544), his father was the Tŏkhung Taewŏn’ gun and his mother came from the Chŏng family. His first wife, Queen Ùiin, was the daughter of Pak Ungsun, and his second, Queen Inmok, was the daughter of Kim Chenam. Sŏnjo assumed the throne in 1567 when King Myŏngjong (r. 1545-1567) died without an heir. Even after his accession, he continued his learning in Confucian classics and was tutored by the most renowned scholars of the time.

Sŏnjo is credited with being the monarch of Chosŏn when the factional strife that would continually plague the kingdom made its appearance. This was in 1575, when a confrontation between two segments of the literati occurred. Shim Ûigyŏm and Kim Hyowŏn had a personal quarrel over the appointment of officials to a powerful post on the Board of Personnel (Ijo). The two officials carried on an antagonistic relationship that soon split the court into two opposing camps known as the Easterners (Tongin) and the Westerners (Sŏin).

A further calamity during the reign of Sŏnjo was the 1592 Japanese Invasion that continued until 1598. Although there had been sporadic attacks by Japanese marauders since Koryŏ, the government of Chosŏn did not take decisive action and the situation worsened. When Toyotomi Hideyoshi succeeded in unifying Japan, after a bloody civil war, he directed his energies towards the conquest of Chosŏn as the first step of his grand plan to subjugate the Ming. In the spring of 1592, Japanese forces landed in Pusan and quickly overwhelmed the Chosŏn defences. The invaders then launched a three-pronged attack northwards towards the capital. Sŏnjo saw his forces crushed and took flight accompanied by most of his court. The populace was rightly outraged by the incompetence of the government and its lack of concern for the people’s welfare. As Sŏnjo fled north, his passage was blocked by bands of people, who cast insults at him. Moreover, after the king had fled the city, slaves in Seoul set fire to the office where the slave registers were kept and also razed some government offices. Meanwhile, the Japanese marched northward with little opposition, since the Chosŏn government was unable to raise an army to oppose them.

Chosŏn, however, was saved by several factors. One was the naval force under the command of Yi Sunshin (1545-1598), the naval commander of Chŏlla Province, which
proved immensely superior to the Japanese and cut their supply lines. Another was the emergence of volunteer units throughout the country, which used guerrilla tactics to harass the Japanese army. These fighting units often had the combination of yangban, commoners and slaves and they played a major role in wearing down the Japanese forces. Finally, through the diplomatic appeals of Chosŏn to Ming, fifty-thousand Chinese troops entered the conflict and this served to tilt the scales in Chosŏn’s favour. Thus, in 1598, the Japanese withdrew from Korea and peace returned to the peninsula.

Sŏnjo’s rule during the invasion is denoted by inaction and poor command of the Chosŏn forces. The country was devastated by the Japanese and throughout the invasion the activities of the monarch and his advisers still revolved around self-preservation and personal power. The victorious naval commander, Yi Sunshin, was even removed as head of the Chosŏn naval forces temporarily because of the factional politics of the government. Although he was eventually reinstated, the fact that Sŏnjo’s court would even consider removing such a competent admiral who commanded a naval force so clearly superior to anything Japan could throw against it, is indicative of the incompetence of the Chosŏn ruling hierarchy.

Sŏnjo’s died in 1608, after almost forty-one years as king. The period towards the end of his reign is witnessed by an increase in the intensity of factional politics in the court, including problems in the succession to the throne by Prince Kwanghae (r. 1608-1623). Sŏnjo’s burial mound is located in Kuri of Kyŏnggi Province and has been designated as Historical Site no. 193.

Sŏnu Temple

Sŏnun Temple, a monastery of the Chogye Sect, is located in North Cholla Province on the northern slope of Mt. Tosol. According to one legend, the temple was founded by the Shilla King Chinhuung (r. 540-576), while another legend states that it was founded by the Paekche monk Kŏndan. The temple was repaired in 1354 and underwent major restorations that took over ten years in 1472. As a result, Sŏnun Temple was restored to its ancient glory with approximately 189 buildings and 53 altar paintings. This glory was, however, short lived. In 1597, with the second wave of the Hideyoshi Invasion, virtually all the buildings were burnt down. From 1608 to 1619, beginning with the meditation halls, the buildings were gradually restored. In the 17th century, the temple once more functioned as a major monastic center. By 1698 there were over 260 monks living at the temple. In addition, in the vicinity of the temple, there were over fifty affiliated hermitages up until the first half of the nineteenth century.

Nowadays, the temple houses numerous important artefacts, including the Main Buddha Hall (Treasure No. 290), two gilt-bronze statues of Chijang (Ksitigarbha) Bodhisattva (Treasure No. 279 and 280), two large bronze bells (North Cholla Province Tangible Cultural Asset No. 31 and 32), two altar paintings painted in 1840 - one of Vairocana and one of Amitabha’s Pure Land, and a six-storey stone pagoda (North Cholla Province Tangible Cultural Asset No. 29). Near the temple lies Tosol Hermitage, and outside of the hermitage, there is a carving of a seated Buddha figure on the face of a rock. The carving dates from the Koryŏ Period.

Sonyŏn Hanbando

Sonyu Island

Sonyu Island is located in Kunsan’s Okto Township in North Chŏlla Province, about forty-three kilometres from central Kunsan. It is one of the twenty islands of the Kogunsan Archipelago. Famous as one of Kunsan’s key scenic attractions, the island is home to the picturesque Sonyu Beach. Near the beach one finds Mangju Peak and the Mangju Waterfall (a series of ten cascades). Bridges link the island to nearby Munyo Island and Changja Island. In addition to a thriving tourist industry, the island has a fleet of commercial fishing vessels which bring in catches of yellow corbina and anchovy.

Sookmyung Women’s University

Sookmyung Women’s University (Sungmyŏng Yŏja Taehakkyo) is a private university situated in Ch’ŏngp’a-dong in Seoul. Founded at its present location as Sungmyŏng Yŏja Chŏnmun Hakkyo in December 1938 it was reorganised in May 1948 as a college, with the divisions of literature and science, the former containing the Departments of Korean Literature, English Literature, Art and Music, and the latter the Departments of Science and Home Economics. In March 1955, the college gained university status, with four colleges and a graduate school. Im Sukchae served as the university’s first president. In March 1963, a doctoral program was established.

Since the 1960’s, the university has expanded considerably both its undergraduate and post-graduate curriculum. Today, it contains eight colleges -- the Colleges of Economics and Commerce; Fine Arts; Home Economics; Liberal Arts; Music; Pharmacology; Political Science and Law; and Science. For postgraduate students, Sookmyung has the Graduate School; and the Graduate Schools of Clinical Pharmacology; Design; Education; International Relations; Management; Music Therapy; and Public Policy. The university’s museum was established in 1971, and contains an extensive collection of objet d’art, women’s garments and accessories, as well as items of furniture from the Chosŏn period. University publications include the Suktae shinbo and Sungmyŏng T’aimsŭi.

Soong Sil University

Soong Sil University (Sungshil Taehakkyo) is a private university situated in Sangdo-dong in Seoul. The school was founded in October 1887 in a private residence in P’yŏngyang by the American Presbyterian missionary, W. M. Baird. In 1901, funds were provided for the construction of a traditional two-storey building for the school, which on completion was named Shungshil Haktang. In 1912, accreditation was received from the Japanese colonial government, making Soong Sil College the first college in Korea. However, educational regulations enforced in 1925 led to the restructuring of the college as Sungshil Chŏnmun Taehak, with a four-year curriculum limited to the Department of Liberal Arts. In 1938, Soong Sil College, as well as the Soong Sil Middle School and High School were closed. Korea’s liberation from the Japanese in 1945 saw Soong Sil graduates working to re-establish their college. The college finally received official accreditation in 1954 and opened a year later in the Yŏngnak Church complex. In 1957, a campus was built at the school’s present location in Tongjak Ward in Seoul. With Han Kyŏngjik as its first president, the college consisted of five departments. In September 1970, it merged with Taegŏn Taehak, and in 1971, the new school’s name was changed to Sungjŏn Taehak. In December of that year, Sungjŏn Taehak became a university, with Kim Hyŏngnam as president. A year later, a master’s program was installed, followed by a doctoral program in 1974. In 1983, the Taegŏn campus separated, becoming Hannam University, and three years later, the Seoul
Throughout the 1980s and 1990s, the university's undergraduate and post-graduate curriculum continued to expand. Today, the university consists of seven colleges (the Colleges of Economics and Commerce; Engineering; Humanities; Information Science; Law; Natural Sciences; and Social Science); and eight graduate schools (the Graduate School; and the Graduate Schools of Education; Industry; Information Science; International and Regional Studies; Labor & Industrial Relations; Small & Medium Enterprises; and Unification Policy). The university has a number of attached facilities, including a museum housing artefacts related to the history of Christianity in Korea. The museum was founded in 1967 after receiving an extensive collection from the archaeologist and minister Kim Yangsŏn. University publications include the Sungshil Taehak Shinmun in Korean and The Soong Sil Times in English.

Sŏp’o manp’il (Jottings of Sŏp’o)

Sŏp’o manp’il is a collection of essays and social criticism written by Kim Manjung (1637-1692, styled Sŏp’o). This hand written work is composed of two volumes in one fascicle, and the exact date when it was written is not known. However, it is thought that it was after Kim’s exile to Sŏnch’ŏn in 1687. The first volume contains 102 items and the second 161. The greater part of this work is devoted to criticism of Korean literary works. In the second volume there are many instances where Kim’s Buddhist beliefs are manifested and this is the reason why it was not published during the Chosŏn period. Kim was highly critical of the neo-Confucianists who did not, in his view, understand Buddhist thought yet still condemned it. This work is also notable in that Kim advocated the use of han’gul for Korean literature. He felt that Korean thoughts and sentiments should be addressed in their native tongue, not the Chinese language. These sentiments of Kim’s were far ahead of their time.

This work is highly valued for Kim’s opinions on Buddhism, Confucianism, Taoism, his literary criticism and views advocating the use of han’gul. Therefore, for research into the thought of Kim Manjung, this work is an essential document. In 1971 it was combined with Kim’s Sop’o chip and published by T’ongmun’gwan Publishers.

Sŏrak Mountain

Situated between Sokch’o and Inje in Kangwŏn Province, Mt. Sŏrak is famous for its fabulous rock formations, clear streams and awe-inspiring vistas. Mt. Sŏrak is actually a series of majestic peaks that lie along the mid-section of the T’aebaek Mountain Range. Taech‘ong Peak, Mt. Sŏrak’s highest point, is the third highest in South Korea, after Mt. Halla (1 950 metres) and Chiri (1 915 metres). Running north of the peak lies Madŭng Ridge and Mishi Ridge, and running south, Han’gye Ridge. The eastern section of the park, which receives more tourists, is called ‘Outer Sŏrak’ (Oesŏrak), whereas the less-frequented western section is known as ‘Inner Sŏrak’ (Naesŏrak).

With high levels of precipitation, the area supports numerous varieties of rare plant specimens. The area around the peak, in particular, supports high elevation plants such as the windflower (Anemone narcissiflora). The area also harbours around 500 animal species including several species of cold-water fish. For this reason, the area was designated as a natural preservation area in 1965. In 1982, UNESCO followed suit, designating Sŏrak as an area for the protection of world plant and animal life.

It is said that one must see Sŏraksan National Park in each of the four seasons to fully appreciate its beauty. In autumn, as the maple trees change colour, the forest is on fire with deep reds and yellows. In winter, heavy snowfall covers the craggy peaks and twisted pines while intricate ice formations line the brooks. With some of the coldest temperatures...
in South Korea, the area is known for its heavy snow. In fact, the name Sŏrak literally means ‘snowy peaks.’ Seen from the coast near Sokch’o in winter, the mountain’s snow-capped peaks form a majestic backdrop to the East Sea’s deep-blue waters. Azalea, chrysanthemum and cherry blossoms announce early spring. In late spring and summer, bright green foliage reappears on the trees.

Near Sokch’o, on the eastern side of the park lies Sŏrak Village, the most popular entrance to the park. Since it is possible to view the jagged Dinosaur Ridge (thought to resemble the spikes on a dinosaur’s back) from this side, this entrance is a favourite among those who do not have the time or ambition to venture up the mountain’s rugged trails. From here, there are several short walks, such as the one leading up to the Piryong and T’owangsong waterfalls. If one goes past the giant bronze seated-Buddha figure and then turns right, one comes to Shinhūng Temple. Originally founded in 652 C.E., the temple houses a number of ancient Buddhist artifacts. Past the temple lies Kyejo Hermitage, which sits in front of the Rocking Rock (Hündül Pawi) - a gigantic boulder that moves back and forth when pushed. Further up the trail, one comes to the spectacular granite formation known as Ulsan Pawi. This large white column of rocky pinnacles can be seen best from the winding road connecting Mishiryyŏng Pass with Sokch’o.

Turning left on the main trail, leads to Pisǒndae, a giant rock pillar that juts up from cliffs that line a picturesque gorge. From here, a trail leads up to Kŭmgang Cave. Perched on the face of a granite cliff, the cave contains a small Buddhist shrine. From Pisǒndae, another popular trail leads up through the gorgeous Ch’ŏnbul-dong (Valley of a Thousand Buddhhas) to the peak. For those who do not wish to make the climb, a cable car runs from Sŏrak Village to a nearby peak.

On the south side of the park, there is the popular Osaek Spa. The mineral water from this spring here is thought to have medicinal qualities. In the local bath-houses and saunas, one can bathe in the bubbly water, and at local restaurants, one can even have rice that has been cooked with the water. The steep trail from Osaek is the most direct route to Mt. Sŏrak’s peak. There are also countless waterfalls in the southern section of the park, such as Paegam, Sŏrak, Tokchu, Ongnyŏ, Mumyŏng, Onch’ŏn and Shibi (Twelve) waterfalls.

On the park’s western end, numerous creeks and streams flow down into Puk (North) Stream. A trail follows the T’angsu-dong Valley past the Twelwe Fairy-maiden Pools (Shibi sŏnnyŏ t’ang). To the south, from Changsu-daet, tourists hike up to the lovely Taesŭng Waterfall. A 1430 metere peak called Mt. An (An-san) rises up between the T’angsu-dong Valley and Changsu-dae. Between Inner-Sŏrak and the park’s relatively undeveloped northern sector, lies Paektam Temple. During the Japanese occupation, the monk Han Yongun went into retreat at this temple in order to plan his program of reform for Buddhism and the nation. This small Buddhist monastery rose to national prominence when President Chun Doo Hwan and his wife retreated to the temple in 1988 amid allegations of improprieties during his administration.

Due to its spectacular beauty, Mt. Sŏrak is a favourite tourist destination throughout the year. During the summer break, countless students come to the mountain to hike and camp out in the lodges near the peak. With its jagged peaks, the mountain is often called ‘a second Diamond Mountains.’

Sŏsan

Formerly known as Sŏsan County, Sŏsan is located in northwest corner of South Ch’ungch’ŏng Province. The city consists of the town of Taesan, and the townships of Kobuk; Pušok; Sŏngyŏn; Ûnsan; Ûnam; Inji; Chigok; P’albong; and Haemi. Sŏsan covers an area of 1 071 sq. kms. and as of 1986, had a population of 231 407. Topographically, the area is made up of low hills, the highest point being Mt. Kaya (678m) on the eastern
border. Located on the Yellow Sea, the city’s coastline is broken up into numerous peninsulas and narrow inlets. There are also 26 inhabited, and 137 uninhabited islands within the city’s boundary. Colder winds from the northwest make for an annual average temperature of 11.8 deg. C., and an average January temperature of minus 2.7 deg. C. The annual rainfall is 1 155mm.

The area’s fertile soil, ample water supply and mild climate make it ideal for agriculture. About 36 000 hectares are arable, with half of this growing rice cultivation and the other half crops such as sweet potato, bean, sesame, ginseng and garlic. There is an active fishing fleet, and boats operating out of local ports brings in catches of perch, hairtail and croaker. Oyster and other shellfish are harvested here and there are also numerous salt flats on reclaimed areas along the coast. Since 1969, large areas of pasture land have been established on hilly areas, for two large-scale cattle farms.

Local tourism is centred around the city’s scenic coastline. Ten or more popular beaches are now part of Sōsan National Marine Park, which runs along the city’s west coast. Hagamp’o Beach in Wŏn’buk’s Panggal Village is particularly well known for its clear water and fine white sand. Behind this six-km.-long beach is an acacia woodland, and nearby there are spectacular rock formations such as Hak (Crane) Rock and Yongam (Dragon Rock) Cave.

Buddhist sites in the Sōsan area include the Powŏn Temple site, Munju Temple in Unsan and Illak Temple in Haemi. Located in Yonghyŏn Village, the Powŏn Temple site contains an exquisitely-carved Buddha triad in relief (National Treasure No. 84). In this intriguing carving, the central Buddha figure is standing while the Bodhisattva to his right is seated with his right leg resting upon his left knee in the ‘contemplative’ posture. Along the valley from the temple site can be seen a 4.7-metre-high pagoda (Treasure No. 105) and a 9-metre-high five-storey pagoda (Treasure No. 104), both dating from Koryŏ. Other artefacts include a pair of banner-pole supports (Treasure No. 103) from Greater Shilla, a stele (Treasure No. 106) carved in 978 in honour of National Master Pŏbin and a giant stone water basin (Treasure No. 102) built during Koryŏ.

Aside from its Buddhist sites, the city contains a number of Chosŏn Confucian relics and buildings. Confucian schools found here include Sŏsan Hyanggyo (established in 1412) just east of Highway 29; Haemi Hyanggyo in Ohak Village; T’aean Hyanggyo just south of Highway 32; Sŏngam Sŏwŏn (established in 1719) in Sŏsan’s Umnae Village; and Songgok Sŏwŏn. Modern educational institutions include Hanseo University located in Haemi.

Sourcebook of Korean Civilization

The Sourcebook of Korean Civilization is a two-volume, 1324-page work, which provides translations of primary source materials on Korean social, literary, religious and intellectual traditions. It was compiled and edited by Peter H. Lee; with Donald Baker; Yongho Ch’oe; Hugh H. W. Kang; and Han-Kyo Kim. Volume one extends to the sixteenth c. and the second volume from the seventeenth c. to the modern period. The first volume was published in 1993 and the second in 1996, both by Columbia University Press.

The first volume is divided into nineteen chapters that trace the origins of Korean society to mid-Choson. Chapter One explores various foundation myths of the ancient Korean states and the view of the early Korean states as formed by Chinese dynastic histories. The second chapter presents materials on the development of the Three Kingdoms; the third on ancient customs and rituals, the fourth on the consolidation of the state; the fifth on the rise of Buddhism; the sixth chapter covers literary developments and the seventh intellectual occurrences. The second part of the first volume focuses on Koryo and includes chapters on the political structure of the kingdom; its society; developments in Buddhist thought; the period of military rule; popular beliefs; and the rise of the class of Confucian literati. The third section of the volume includes chapters on the founding of Choson; political thought in early Choson; its culture; society; economy; ideology; and the transformation of Buddhism in this period.

Part four, in the second volume, covers late Choson issues, with chapters on politics; reform proposals; the introduction of Western culture and thought; society; national identity; and Confucianism. The fifth part covers the modern period and includes chapters on the internal reforms of late Choson; the rejection of Western thought; enlightenment thought; the Tonghak Uprising; the Independence Club; patriotic movements; the nationalist movement; the communist movement; and national culture during the colonial period. In all, the second volume contains fifteen chapters.

Each chapter of the work is introduced with commentary to explain the historical situation at that particular time, and this is followed by translations of various representative writings, including a small introduction of the historical significance of the writer. The work provides a vast quantity of material in English, and is a valuable reference for scholars in the various fields of Korean studies.

Southerners (Namin) [History of Korea]

Sŏwŏn (Private Academy) [Architecture; Confucianism; Society]

Sŏyu kyŏnmun (Observations on a Journey to the West)

Sŏyu kyŏnmun is a travel diary written by Yu Kiljun (1856-1914) about his experiences while travelling to the West. Kyosunsa Publishers published this 556-page work in Tokyo in 1895. Yu initially left Korea in 1881 as a part of the Shinsa Yuram Tan (Gentlemen’s Sightseeing Group) that visited Japan on a fact-finding mission. Yu felt that the success that Japan had had in modernising was due to their imitation of Western culture, and thus decided to record what he had seen and learned in the West as a means of enlightening his fellow countrymen. After returning from Japan, Yu left for study in America in 1883 as part of the mission of Min Yŏngik, the ambassador to the United States. Yu also travelled to Europe in 1885.
The contents of this travel diary are divided into twenty parts. The first two sections include descriptions of the geography of Europe and America, including the major rivers, mountains and boundaries of the nations. The next sixteen chapters cover various social institutions of the Western nations including such matters as governmental institutions, political systems, social systems and educational matters. The author also relays information concerning Western technology, religion and customs. The final two chapters of Sŏyu kyŏnmun introduce the major cities of America and Europe in detail.

This work is noteworthy in that it reveals the West from the eyes of a Korean at the time of Korea’s opening to Western culture. It is also a highly praised work from the aspect that it served to introduce a generation of Koreans to various concepts of Western society. It therefore had a great impact upon the acceptance of Western culture during the Enlightenment period in Korea.

Ssanggye Temple

Ssanggye Temple, situated at the southern base of Mt. Chiri in South Kyŏngsang Province, is one of the main temples of the Chogye Sect. The temple was founded in 723 by Sambŏp, a disciple of Ŭisang. When studying in China, Sambŏp had a dream in which Hui-neng, the famous sixth patriarch of the Zen sect, instructed him to take his portrait to the spot where flowers bloom above snow-covered valleys. Returning to Korea, Sambŏp wandered the country looking for such a place. Eventually, he came to Mt. Chiri where a tiger led him to the site mentioned in the dream. Sambŏp founded a monastery there, calling it Okch’ŏn Temple. In 840, National Master Chin’gam brought back tea seeds from China and planted them throughout the area. Chin’gam also led a major reconstruction project. During the reign of King Chŏnggang (r. 886-887), the name of the monastery was changed to Ssanggye Temple.

Burnt down during the Hideyoshi Invasions (1592-1598), the temple complex was reconstructed by Pyŏgam in 1632. Many of the buildings erected at this time are still standing. The temple houses several important cultural artefacts, including the Main Buddha Hall (Treasure No. 500), Hall of the Arahants (Nahanjon), the Vajra Gate (South Kyŏngsang Province Tangible Cultural Asset No. 127), a stone reliquary from the Greater Shilla Period (Treasure No. 380), a 2.4-meter high stone lamp (South Kyŏngsang Province Tangible Cultural Asset No. 28), a stèle honouring Zen Master Chin’gam inscribed in 887 C.E. and wood-blocks for printing sutras and Buddhist texts (South Kyŏngsang Province Tangible Cultural Asset No. 185). There are also numerous old altar paintings, including the Vulture Peak Congregation done in 1687, King Kamno (Amrta-raja) done in 1728, congregation in Amitabha’s Pure Land done in 1781 and Eight Scenes of the Buddha’s life done in 1728. In addition, there is a stèle inscribed by the famous scholar Ch’oe Ch’iwŏn (857-?). In the vicinity of the temple lie Kuksa Hermitage and Puril Hermitage. The latter is famous as a place where both Wŏnhyo and Ŭisang underwent spiritual practice. The hermitage is named after Chinul, styled Puril, who is also believed to have resided there.

Ssangyong (industrial organisation) [Industry]
Ssirŭm [Customs and Traditions]
Sudŏk Temple

Situated on Mt. Tŏksung (580 metres) in South Ch'ungch'ŏng Province, Sudŏk Temple is one of the main temples of the Chogye Order. According to the *Sagi (Temple Records)*, the temple was originally founded during the later years of the Paekche Kingdom. Some sources claim that it was constructed by Chimyŏng in 599 and later repaired by Wŏnhyo (617-686). The temple is also said to have been repaired by Naong (1320-1376); however, the exact chronology of the temple's history is not clear.

In recent times, a number of famous monks have resided at Sudŏk Temple and nearby Chŏnghye Temple, including Kyŏnghŏ (1875-1939) and his disciple Man'gong (1872-1946). Renowned for their eccentric and irreverent behaviour, these two masters maintained the tradition of Korean Zen during the Japanese occupation. Man'gong, in particular, flagrantly ignored the monastic precepts, taking pleasure in both wine and women. Outside the temple, there is Man'gong's stupa and a rock carving of Maitreya Buddha that dates from the time Man'gong resided here. Chŏnghye Temple still serves as a monastic retreat centre, and in recent years, it has also been a meeting place for younger monks who are seeking to reform the Chogye Buddhist Order to make it more responsive to the needs of the people.

Kyŏnsŏng Hermitage, situated within walking distance of the temple, is well-known as one of the country's leading meditation centres for Buddhist nuns. In recent times, many famous meditation masters have resided at the hermitage. The famous poet Kim Iryŏp (1896-1971) also stayed here. As the daughter of a Christian pastor, Kim went to study in Japan where she became active in the feminist movement. Later, after her marriage failed, she entered the Buddhist monastic order. Her reflections on her experiences can be found in her essay collections *Ch'ŏngch'un ŭl pulsarūgo (Having Cast Youth to the Flames)* and *ŏnū sudoin ŭi hoesang (Reflections of an Ascetic)*.

In spite of its recent history, Sudŏk Temple's role as a leading training centre has been eclipsed by larger monasteries such as Songgwang and Haein Temple in the south. The temple has lately undergone a major reconstruction in which a long stone staircase leading up to the temple has been built. With the exception of the Main Buddha Hall (National Treasure No. 49), which was built in 1308, and a stone pagoda (South Ch'ungch'ŏng Province Tangible Cultural Asset No. 103), which dates from the Greater Shilla Period, the temple does not have a large number of ancient artefacts.

[Ssic] [Music]

Sui chŏn (Tales of the Extraordinary)

The *Sui chŏn* is a collection of traditional Buddhist tales which is thought to be the first and oldest of its kind, but no copy of it is now extant. It is not known exactly what tales it contained, but thirteen of them are included in other books which are available. They were compiled by a scholar or writer of the late Greater Shilla and early Koryŏ period and had a profound influence on future Korean literature. There are differing opinions as to who was the compiler and as to the date of compilation, but Ch'oe Chiwŏn (857-?), Pak Illyang (1047-1096) and Kim Chŏngmyŏng have all been mentioned as possible compilers.

The tales include myths and legends concerning temples, folklore and forefathers, biographies of high priests and kings, historical episodes and parables from Buddhist scripture. The thirteen tales now extant are as follows: 1. 'Ado chŏn' in the *Haedŏng kosiung chŏn*. 2. 'Wŏngwang pŏpsa chŏn', in the *Haedŏng kosiung chŏn* and the *Samguk yusa*. 3. 'Pogae' in the *Taepyŏng tongjae*. 4. 'Ch'oe Chiwŏn chŏn' in the *Taepyŏng tongjae*. 5. 'Yŏnorang seonyŏ' in the *P'ilwŏn chapki* and the *Samguk yusa*. 6. 'T'alhaewang' in the *Samguksa ch'oryo* and the *Samguk yusa*. 7. Tang T'aejong moranja.
pyŏnghwahwa' in the *Samguksa chŏryo*, *Samguk sagi* and *Samguk yusa*. 8. 'Susap sŏngnam', 9. 'Chukt'ong kangnyŏ' and 10. 'Noong Hwagu' in the *Taedong unbu kunok*. 11. 'Sŏnyŏ Hongdae' in the *Taedong unbu kunok* and the *T'aep'yŏng tongjae*. 12. 'Howon' in the *Taedong unbu kunok* and the *Samguk yusa*. 13. 'Shimhwa yot'ap' in the *Taedong unbu kunok*.

**Sukchong, King (r. 1674-1720)**

Sukchong (1661-1720), was the nineteenth king of Chosŏn and reigned from 1674 to 1720. While his reign was one of intense political infighting between rival factions, it was also characterised by steady economic progress, and fresh ideological and philosophical trends.

Sukchong was the only son and heir of King Hyonjong (r. 1659-1674), and he ascended the throne at the age of thirteen. Such an early access to almost unfettered power seems to have contributed to his often reckless and capricious behaviour. His unsettled disposition and frequent changes of mind were almost unpredictable, even to his closest advisers. These detracting features of the young king's personality undoubtedly contributed to the development of feuds between political factions in the first decades of his reign, although later, Sukchong did attempt to control such intensive rivalries.

Sukchong ruled at a time when antagonism between the factions was reaching its zenith. The main task of every faction was to have as many members as possible in official positions, the ideal being a virtual monopoly, especially in the upper echelon. This was often accomplished by persuading the king that the other factions and/or their prominent leaders were either plotting against the crown, or alternatively were responsible for serious irregularities.

Therefore, the factional strife led to mutual accusations, slander and intense intrigue. Consequently, there were frequent arrests, exiles and occasional executions of prominent officials. While the traditional term is ‘The Four Factions’ (Sasaek), the actual number and names of the various factions were not constant through the many decades of their existence. In the 1660s three factions were of special importance: the Westerners (Sŏin), the Southerners (Namin) and the Northerners (Pugin), with the last-named being of only marginal importance. These factions had existed for decades, and were coercive and mutually hostile.

In 1674, the Southerners pushed aside their Westerner rivals and until 1680 enjoyed almost complete representation in official positions. In 1680, the Westerners, led by the charismatic and inflexible Song Si-yŏl (1607-1689) turned the tables, but in 1689, the Southerners again took power, only to lose it in 1694. From this point forward, Sukchong relied chiefly on the Westerners, which had by this time split into the two mutually-hostile sub-factions of the Soron (Young Doctrine) and Noron (Old Doctrine). These sub-factions later transformed into independent factions. All of these changes were facilitated by the fact that the young king was easily influenced and could change his opinions and convictions on impulse. Moreover, the situation was further compounded with the queen and the king’s concubines being participants in this intense rivalry. The most noteworthy and often recounted anecdote (and later often fictionalised) is the fierce and deadly competition between Queen Inhyŏn and the king’s favourite concubine, Lady Chang (who was also briefly queen). In 1689, when Sukchong proposed to make the son of Lady Chang his heir (since Queen Inhyŏn was childless), there was great opposition by the Westerner faction who supported Queen Inhyŏn. The will of Sukchong prevailed in this instance, as the son of Lady Chang was named crown prince and the Westerners were ousted, with their leader, Song Shiyŏl, being executed. This strife was fuelled not only by the personal jealousy of both women, but also by the deliberate actions of Westerner and Southerner factions, which backed Queen Inhyŏn and Lady Chang respectively, and hoped to use their influence
to strengthen their faction’s standing.

In the ensuing period, the king himself obviously became uneasy with the outcome of factional strife, which eventually claimed the lives of Song Si-yŏl, Lady Chang amongst many others. After 1705, Sukchong made some half-hearted attempts to relieve the tensions, but he achieved only limited success. In the second half of Sukchong’s reign, from 1705 onwards, court politics proved less turbulent than before, but the structure of the factions remained unchanged and their existence still posed a constant and grave danger to political stability.

In spite of all the fierce and deadly intrigues in the Court, however, the economic and international policy of Sukchong was sound, reasonable and moderately successful. Internationally, he recognised the supremacy of the new Qing dynasty in China (it was the only sensible choice) and this provided a peaceful environment for his country’s development. Sukchong enjoys a reputation as a promoter of Confucian education, and he vigorously supported the establishment of private Confucian academies (*sŏwŏn* — nearly three hundred were established during his reign). He also presided over a period of considerable economic success, in both agriculture and industry, which enabled Chosŏn to recover partially from the disastrous results of Japanese and Manchu invasions of the late sixteenth and early seventeenth c. Under Sukchong, the newly-introduced copper coin gradually replaced barter in kind, and with official encouragement, coins were increasingly used for payment and taxation instead of the traditional rice and cloth. Hence, Sukchong’s reign coincided with the dawn of a money-based economy in Korea. Insofar as changes in ideology are concerned, the reign of Sukchong was a time when, in spite of official adherence to the neo-Confucianist ideology, the *shirak* (Practical Learning) movement came to have an increasingly important role among Chosŏn intellectuals. While Sukchong did not directly contribute to all of these developments, they enabled his reign to be a period of moderate success and laid the foundation for the ambitious reforms later launched by his son Yongjo (r.1724-1776).

**Sunch’ang County**

Sited in the southern part of North Cholla Province, Sunch’ang County includes the town of Sunch’ang and the townships of Kurim, Kūmga, Tonghye, Pokhŭmng, Ssangch’i, Chŏksŏng, In’gye, P’aldŏk and P’ungsan. The county covers a total area of 494.66 square kilometres, and as of 1989, its population stood at 491 077. The area’s topography is characterised by sharp contrasts, from the Noryŏng Mountain Range rising in the northwest to the plains along the tributaries of the Sŏmjin River in the southeast. The area has an average annual temperature of 12.5c and an annual rainfall of 1300mm. Approximately 87 per cent of the area’s residents are employed in agriculture. Rice is the main crop, but other crops such as barley, red peppers, nutmeg, chestnuts, persimmons and mushrooms are also grown. In the mountainous northwestern region, alpine vegetables, grapes, tobacco and medicinal herbs are also cultivated. Other sources of income include cattle raising and sericulture. The county is praised for its *koch’ujang* (red peppered soy paste), which was a local item of tribute to the royal house during Chosŏn. Mt. Kangch’ŏn honey and sweet fish are other well-known products of the region. The area’s industrial sector is relatively undeveloped, but there are a number of cottage industries that produce silk embroidery.

Sunch’ang County offers a variety of tourist attractions. Mt. Kangch’ŏn (584m), situated in the western part of P’aldŏk Township, is one of the country’s most scenic areas. The mountain contains deep ravines, picturesque waterfalls and dense forests. Here one also finds Kangch’ŏn Temple, which is said to have been established in 887 C.E by National Master Tosŏn, and in the temple grounds, there is a five-storey pagoda. In order to preserve the mountain’s natural setting and historical heritage, the area has been designated
Other ancient Buddhist monasteries in the area include Manil Temple which was founded during the reign of Paekche’s King Mu (600-641), and Kuam Temple, founded in 634 by the monk Sungje. At one time, Kuam Temple contained twelve hermitages and housed one-thousand monks, but most of the buildings were burned down during the Hideyoshi Invasion of 1592. During the Korean War, the temple was again destroyed, but was rebuilt in 1959. The monastery is famous as a place where Sŏlp’a (1701-1791), a leader of the Hwaom sect, resided.

In addition to Buddhist sites, there are a number of old Confucian sites in the area. Sunch’ang Hyanggyo, situated in Okch’ŏn-dong, was founded as the area’s first school during the reign of Koryŏ’s King Kongyang (r. 1389-1392). Other old Confucian schools found here include Hwasan Sŏwŏn (established in 1607), Mui Sŏwŏn (established in 1788), Namsan Sŏwŏn (established in 1800) and Ŭam Sŏwŏn (established in 1827).

Assisting preservation of the county’s cultural heritage, festivals and rituals are held throughout the year. On 15 October, the Okch’ŏn Festival is held to ensure the good fortune of residents and an abundant harvest. Village rituals are also still common here. On the 13th day of the first lunar month, the residents of Ssangam Village in In’gye Township perform rituals to the ‘grandfather’ tree behind the village and to the ‘grandmother’ tree to the west of the village. During the first lunar month, the residents of In’gye Township’s T’ap Village perform a tokkaebi (goblin) ritual in front of the guardian tree at the entrance to the village and in front of a cairn to the south of the village. The T’ap Village ceremonies are unique in that only women are allowed to participate.

**Sunch’ŏn**

Situated in South Cholla Province, Sunch’ŏn includes the town of Sŏngju, and the townships of Nagan, Pyŏllyang, Sangsa, Sŏ, Songgwang, Oesŏ, Wŏldŭng, Chuam, Hwangjŏn and Haeryong. Recently expanded to include the area formerly known as Sŏngju County, the city now covers an area of 904.79 square kilometres. The Noryŏng Mountain Range branches off to the south from the Sobae Mountain Range which runs from east to west through the area. On the city’s western side, Sŏngju Lake was created with the construction of Chuam Dam, and in the centre of the city lies Sŏngp’yŏng Lake. Sunch’ŏn Bay lies to the southeast.

Because of the rugged terrain, only a small portion of the city area is arable. Of this, about thirteen hectares is used for rice cultivation and about six hectares for dry-field crops. Speciality crops grown here include tobacco, cotton, hemp, tea, ginseng and cut-flowers. There is a fleet of fishing boats that operate out of Sunch’ŏn Bay. The boats bring in catches of anchovy, filefish, gizzard shad and octopus. Along the coast, there are shellfish farming operations. Local industry is limited to rice mills, breweries and sawmills. Tertiary education needs of the residents are met by the Sunchon National University in Maegok-dong.

Mt. Chogyе Provincial Park is one of the city’s most important tourist attractions (See Chogyе Mountain). Here one finds Songgwang Temple, one of the main monastic training centres in Korea, and Sŏnami Temple, which is famous for its gingko trees and for its 300-year-old Japanese apricot tree. There is a popular hike over the peak that separates the two temples. Other important temples in the area include Chŏnghye Temple in Sŏ Township and Tonghwa Temple in Pyŏllyang Township.

Tourists also come to the area to see the various historical sites. Nagan Fortress, built during Chosŏn, is a popular attraction. This 4-metre-high, 1,385-metre-long stone fortification was built as a defence against Japanese invasions. Within the fortress, there is...
a traditional village with pottery workshops. Another popular site is Dolmen Park. Prehistoric relics which would have been submerged with the construction of Chuam Dam have been relocated here. Opened in 1993, the park contains more than 140 dolmens. The park also provides information on how dolmens were made as well as information on ancient graves and Paleolithic and Neolithic dwellings.

On Mt. Kūmjōn, one finds the Nagan Fortress Folk Village which contains 108 households living a traditional lifestyle. A number of interesting artefacts are found here, including dolmens and a town wall, which was reconstructed in 1424. In order to preserve the village's traditional atmosphere, the government has designated the village an historical site.

A number of festivals and celebrations are held in Such‘ŏn throughout the year. In April, the city has a Cherry Blossom Festival and in October there is the Namdo Food Festival. During the latter, cultural events are held and about 300 kinds of Korean food are on display.

**Sung Kyun Kwan University**

Sung Kyun Kwan (Sŏnggyun‘gwan) University is a private university located in Seoul’s Myongnyun-dong. The university descends from Sŏnggyun‘gwan (National Confucian Academy), which was a school of higher education founded at the beginning of Chosŏn. Students who passed examinations given at the hyanggyo (county public schools) or Sahak (the Four Schools in Seoul) became Classics Licentiates (saengwŏn) or Literary Licentiates (chinsa) and were eligible to enter Sŏnggyun‘gwan, the highest educational body in Korea. Students were required to live within the confines of the academy, and their tuition and lodging fees were paid by the government. Throughout Chosŏn, the academy produced many statesmen and other leading figures. Myongnyun-dang, a traditional wooden structure which can still be seen today in the centre of the campus, was the classroom building where most of the lectures and classroom activities took place. Chonggyŏng-gak, the hall at the rear of the building, served as the library. Four gingko trees, which were reputedly planted by the students of the first class in 1398, are still growing in the university grounds.

In 1895 Sŏnggyun‘gwan radically reformed its administrative and educational system, introducing many aspects of modern education, such as terms and final examinations. Confucian textual studies still accounted for the core curriculum, but history, geography and mathematics were added in order to provide a comprehensive education. However, with the annexation of Korea by Japan in 1910, the school’s elite status came under attack. Aware of Sŏnggyun‘gwan’s symbolic importance as an important cultural institution, the Japanese degraded it to a junior college for studies of the Chinese classics, in 1911. In 1944, its status was further reduced to a school offering refresher courses in Confucian studies.

After liberation in 1945, Sŏnggyun‘gwan re-emerged as the technical school, Myongnyun Chŏnmun Hakkyo. In 1946, a national convention of Confucian scholars recommended the re-establishment of Sŏnggyun‘gwan as a centre for Confucian studies. As a result, in that September, Myongnyun Chŏnmun Hakkyo was incorporated into the newly-formed Sung Kyun Kwan College, with Kim Ch’angsu as president. In 1953, the college became a university consisting of three colleges and a graduate school. Rapid expansion during the late 1960s and early 1970s led to the establishment of the Natural Sciences Campus in Suwŏn (1978). In 1996, the university obtained the approval of the Ministry of Education to set up a medical school on the Natural Sciences area, and the Samsung Medical Centre was designated as an affiliated training hospital.

At present, Sung Kyun Kwan University has twenty-thousand full-time students who
attend thirteen colleges and ten postgraduate schools. On the Seoul campus, are located the Colleges of Confucian Studies; Economics & Business; Education; Humanities; Law; Physical Education; and Social Sciences; as well as the Graduate School; and the Graduate Schools of Business Administration; Confucian Studies; Education; Foreign Trade; Information & Communication; International Cooperation; Mass Communication and Journalism; and Public Administration. At the Suwon campus in Kyonggi Province, are the Colleges of Engineering; Euthenics; Life Sciences and Natural Resources; Medicine; Pharmacology and Science; as well as the Graduate School of Industrial Science. In the tradition of Choson’s Songgyun’gwan, the university continues to be a leading centre for Confucian studies.

Other facilities include thirty research institutes, two affiliated educational facilities, a botanical garden and a museum. Founded in 1964, the museum has in its collection over ten-thousand pieces, stone; pottery; bronze and iron artefacts; porcelain and celadon ware; paintings; and books. It specialises in materials related to Confucianism and traditional music. University publications include the vernacular Sungdae Shinmun (Sung Kyun Kwan University Newspaper) and The Sung Kyun Times in English.

Sungjong’wön ilgi (Diary of the Royal Secretariat)

Sungjong’wön ilgi is a compilation of a wide variety of daily events and documents that were handled in the Sungjong’wön, or the Royal Secretariat, during the Choson period. The documents in this collection cover a period from the third lunar month of 1623 to the end of the Choson Kingdom in 1910. There are a total of 3,245 fascicles in this hand-written collection. Originally this collection was composed of 3,047 fascicles that ended in 1894, but after the Reforms of 1894 (Kabo kyōngjang) additional works were added to the collection that brought the total up to 3,245.

The Sungjong’wön was the office that recorded all of the official affairs of the Kingdom and delivered the orders of the king to his ministers. The office was staffed by six Royal Secretaries (sungji) and two Recorders (chuso) who were responsible for duty at all hours. In theory each month of the year would constitute one volume of this work. However, depending upon the volume of material covered in a given month, there were often two volumes for a single month. This record was compiled throughout the Choson period, but the records prior to 1623 were destroyed in the invasions and uprisings of those turbulent years. The works before 1592 were destroyed in the Japanese Invasion of the same year, and the records that were compiled between 1592 and 1623 were destroyed in the Yi Kwal Uprising of 1623. There were various attempts during the reigns of King Yongjo (r. 1724-1776) and King Kojong (r. 1863-1907) to either repair damaged volumes or replace those that had been lost or destroyed by fire over the centuries. However, the earliest volumes were never replaced.

The contents of this work include items such as royal decrees, various reports to the king from his ministers and their Boards, and records of any conversations or discussions in the King’s presence. During the Choson period, all matters conveyed to the King by the Boards or through memorial were required to pass through the Sungjong’wön. In addition, members of this Office recorded any discussions held in the presence of the king. Therefore, this collection from the Choson period contains an immense amount of valuable data concerning the affairs of the Choson court. However, the original works in this collection are written in cursive Chinese characters, which makes reading quite difficult. To make these works more accessible, the National History Compilation Committee (Kuksa P’yŏnch’ang Wiwŏnhoe) published them in standard ‘block’ Chinese characters. The original copies of Sungjong’wön ilgi are presently stored at the Kyujanggak Library at Seoul National University.
Sungshin Women’s University

Sungshin (Sŏngshin) Women’s University is a private university situated in Tongsŏn-dong in Seoul. Founded as the women’s school Sŏngshin Yŏhakkyo by Yi Sukchong in 1936. It was moved to its present location in 1944. In March 1945, it became the commercial school Sŏngshin Yŏja Sāngŏp Hakkyo, but reverted to its former name and status after liberation. In 1963, the school became a two-year junior college, and in 1965, it developed into Sŏngshin Yŏja Sābŏm Taehak, an educational college for women. In 1972, a post-graduate program was launched and from 1979 the school was known as Sungshin (Sŏngshin) Women’s College. Four years later, it was afforded university status.

Today, the university consists of seven colleges (Education; Fine Arts; Human Ecology; Humanities; Music; Natural Science; and Social Sciences) and four graduate schools (the Graduate School; and the Graduate Schools of Education; Management & Information Science; and Plastic Arts).

University publications include the vernacular Sŏngshin Hakpo and The Sungshin Mirror in English. The university’s motto is ‘embrace sincerity and faith, strive for new knowledge and act autonomously.’

Sunjo, King (r. 1800-1834)

King Sunjo (1790-1834) was the twenty-third king of Chosŏn and ruled from 1800 to 1834. His given name was Kong, his courtesy name was Kongbo and his pen name was Sunjae. He was the second son of King Chŏngjo (r. 1776-1800) and took the throne in 1800 upon the death of his father when he was but ten years old. Initially, the power behind the throne was the Queen Dowager Chŏngsun, but after his marriage in 1802 to the daughter of Kim Chosun, the boy king was completely dominated by his father-in-law’s family. Thus, the reign of Sunjo is known as the beginning of the so-called in-law government (sedo chŏngch’i), which would continue until the latter half of the nineteenth century.

Sunjo had little real power during his reign, and this is particularly true in the earliest days of his reign when he was under the regency of Queen Dowager Chŏngsun. Hence, the political aims of the Queen Dowager were foremost at the beginning of his reign. The Queen Dowager saw this an opportunity to increase the political power of her faction, the Pyŏkp’a clique of the Noron (Old Doctrine) faction over their chief rivals the Sip’a clique of the Namin (Southerners) faction. Thus ensued the Catholic Persecution of 1801 in which over two hundred Catholics were killed, including many who were also of the Sip’a clique of the Namin faction. Subsequently, there were further persecutions of Catholics under the reign of Sunjo, although these diminished once the in-laws of the king took control of the court.

Sunjo’s reign, however, can largely be defined by the complete domination of the monarchy by his father-in-law’s clan, the Andong Kim family. Kim Chosun was a moderate member of the Sip’a clique of the Namin faction, and thus had little interest in persecuting Catholics. Instead, he endeavoured to concentrate as much political power as possible for his clan and faction. Thus, members of the Andong clan, such as Kim Iik, Kim Ido, Kim Talsun, and Kim Myŏngsun, all quickly secured powerful positions in the Chosŏn government that allowed the family to further solidify its power base and to increase their economic strength as well through corrupt governing practices. Not surprisingly, the blatant corruption of the Andong Kim family in their quest for economic and political gain led to social unrest among the people and uprisings. Most notably is the 1811 rebellion in P’yŏngan Province led by Hong Kyŏngnae, which at one point had
successfully liberated all the territory north of the Ch‘ongch‘on River before finally being subdued by government forces. Even after this rebellion was put down, popular discontent deepened as the exploitation of the people became even more pronounced. Sunjo had no means to prevent the corruption of the Andong Kim clan, as he was little more than a figurehead on the throne.

During the reign of Sunjo, there were notable accomplishments in literary and scientific fields, but these should be viewed as being achieved despite the inept rule of the monarch. Sunjo’s reign marked the onset of an over sixty-year period in which the kings of Choson were simply powerless titular monarchs, and the nation was being plundered by the powerful royal in-law families such as the Andong Kim clan. Thus, at this crucial point in Korean history when enlightened rule was necessary, the monarchs of Choson were powerless puppets under the control of their in-laws who were only concerned with personal wealth and power accumulation. Sunjo died at the age of forty-five and passed the throne on to the equally incompetent King Hŏnjong (1834-1849).

**Sunjong, King** (r.1907-1910)

King Sunjong (1874-1926) was the twenty-seventh and last king of Choson, reigning from 1907 to 1910. His given name was Ch‘ok, his courtesy name Kunbang and his pen name Chŏnghŏn. He was the second son of King Kojong (r. 1863-1907) and Queen Myŏngsŏng, and was born in Ch’angdŏk Palace in Seoul. When his father was tricked into relinquishing the throne by the Japanese in July 1907, Sunjong became king. It should be noted that Sunjong was technically Emperor of the Great Han Empire as this new state had been proclaimed in 1897, as a means to show the independence of Korea from China.

Sunjong was not an effective monarch as by the time of his accession to the throne all real political power was in the hands of the Japanese who by this time, had all but colonised Korea. The Protectorate Treaty of 1905 between Japan and Korea had essentially given Japan hegemony over Korea in all matters, and thus by the time of Sunjong’s enthronement he was a monarch in name only. Subsequent treaties with Japan resulted in a further disintegration of Korean sovereignty, and by the formal annexation in 1910 little true power remained in the hands of the Korean royal family. This loss of sovereignty was hastened by the perfidious actions of men like Yi Wanyong, who sought to increase their personal positions through collaboration with the Japanese. However, even after Yi had worked out an arrangement to make Korea a Japanese colony, it was not directly announced to the Korean public out of the Japanese fear of large-scale uprisings. First, sweeping arrests were made of Korean nationalistic groups and then on 29 August 1910, Sunjong was forced to issue a proclamation yielding the throne and his country to Japan. So, after a period of more than five hundred years the Choson dynasty ended.

Sunjong then lived in Ch‘angdŏk Palace and bitterly lamented the loss of the kingdom to the Japanese. Upon his death in April 1926, plans were made by members of the nationalist movement to use the opportunity of Sunjong’s state funeral for an uprising against the Japanese, similar to the one that had accompanied the funeral of King Kojong in March 1919. The Japanese had learned the extent of Korean feelings from the 1919 Independence Movement and they reacted accordingly in making sweeping arrests in the days leading up to the June ceremony, to quell possible insurrection. Nonetheless, on 10 June many demonstrations took place. Two hundred or so students were arrested by the authorities in an incident known as the 10 June Independence Demonstration (Yukship Manse Undong).

Sunjong was a powerless and ineffectual monarch, although he was never given the opportunity to rule on his own. As a youth he was dominated by his mother, who feared that he would be removed as crown prince in favour of other sons of Kojong. Historical accounts of Sunjong in the writings of Western travellers to Korea relay stories of an awkward child who was not allowed to wear spectacles, although badly in need of them,
and who was probably mildly intellectually-handicapped.

Bibliography

Suno chi (Fortnight’s Record)

Suno chi is the literary miscellany of the middle Chosŏn period scholar Hong Manjong (1643-1725). This hand-written work is comprised of two volumes in one fascicle. The title is taken from the fact that it was completed in just two weeks, and it is thought to have been published in 1678.

The first volume contains historical anecdotes, myths and techniques for preserving one’s health. The second contains essays concerning the Confucian, Taoist and Buddhist sages along with the author’s syncretic views of the three belief systems of Confucianism, Buddhism and Sŏn (Zen) Buddhism merged together. Also in the second volume are comments on literary figures, literary collections and even a list of proverbs and their interpretations. Given the breadth of material that is covered in Suno chi, its value as both a historical and literary document is widely acclaimed. It also provides a unique view of Korea at the time of writing. In 1971 Eul Yoo Publishing Company issued a translated version of this work, and in 1980 it was included in Hong Manjong chŏnsŏ (The Complete Works of Hong Manjong) published by T’aehaksa Publishers.

Susŏng (see Ch’adae, King)

Susŏng Stream

With its sources on Mt. Ch’ayu, Samji Peak and Minsa Peak in the Hamgyŏng Mountain Range, the 67.4 km.-long Susŏng Stream flows east to Ch’angp’yon and then turns south to pass through Ch’ŏngjin before entering Ch’ŏngjin Bay. In the vicinity of Puryŏng, the stream forms the Puryŏng P’aldam (Eight Pools), a celebrated scenic attraction. The mid-section of the stream runs through a long, narrow plain which expands into a broad delta along the stream’s lower section. The latter, known as Susŏng Plain, is one of the region’s key rice-producing areas. The Hamgyŏng Railway Line runs next to the stream from Mt. Komu to Susŏng. The area near Ch’ŏngjin is industrial.

Suwŏn

Suwŏn is situated just southeast of Seoul in Kyŏnggi Province. Mt. Paegun (567 metres), Mt. Kwanggyo (582 metres) and Hyŏngje Peak (448 metres) mark the northern edge of the city. In the central area, there are several hills, including Mt. P’altal (143 metres), Mt. Yŏgi (105 metres) and Mt. Sukchi (123 metres).

The city contains a large number of historical artefacts. In the area around Mt. Yŏgi, various relics from the early iron age have been excavated. Since the area is situated on the old route to the Chosŏn capital of Hanyang (present-day Seoul), there are also numerous historical sites related to the Chosŏn period. In 1789, King Ch’ongjo (r. 1776-1800) moved his father’s grave from Yangju’s Mt. Paebong to Mt. Hwa. The town of Suwŏn was then moved from Mt. Hwa to the foot of present-day Mt. P’altal.

A 5.4-kilometre long fortified wall, along with various buildings and gates, was built around the new town. The walls were made of cut stone and brick, while the buildings
were made of pine. At the fortress, there were also signal-fire posts which were used to send flames or smoke signals to warn of invasions. The present posts are reconstructions based on the originals. In Changan District, stands P'altal Gate (Treasure No. 42). King Chôngjo originally undertook this costly project both as expression of filial piety and as a means of reasserting royal authority. The Suwôn Fortress has been designated Historical Site No. 3.

The city also has a number of sites associated with Buddhism. In Maehyang-dong, there is a stele (Treasure No. 14) commemorating National Master Chin'gak, the personal instructor of King Chongjong (r.1034-1046). There are also a number of Buddhist temples in the city, including Pongnyôn, P'al, Myosu, Tosôn, Pophung and Sônbul temples. To the east of Mt. Yogi, there is the picturesque Hangmi Pavilion. The city has, in addition to these historical sites and temples, a number of important tourist areas. On the eastern side of the city next to Wônch'on reservoir lies the Wônch'on Resort. There are also P'al Park and Changan Park.

During Chosôn, there were several Confucian academies in the area. In modern times, Kyonggi University, Ajou University and Dongnam Nursing College as well as branches of Seoul National University and Sung Kyun Kwan University have been established in the city. Suwôn's train line is connected with the Seoul subway system, making it possible for a large number of students and workers to commute to and from the capital.

Since goods can easily be transported to Seoul, the role of agriculture in the local economy has been eclipsed by that of industry. In particular, the city contains a great number of factories that produce a diverse range of products, including electronics, textiles, manufactured items, metalwork and machinery.

Suyang, Prince (see Sejo, King)

Suyang Mountain

Mt. Suyang (899 metres) is situated in Hwanghae Province at the juncture of the Myŏrak and Mashingnyông mountain ranges. The mountain links up with Mt. Undal (581 metres) and Mt. Myŏrak (816 metres) in the north-east and Kŭm Peak (513 metres) to the south. With numerous temples and historical sites, the area is popular with tourists from nearby Haeju. In the valley on the western side of the mountain, one finds Pokhò Waterfall, Anyang Temple, Unsu Hermitage and Shin'gwang Temple. To the south, there is the historically important Chônggak Temple, while on Mt. Puksung (675 metres), to the north-west, one finds the famous Chanyang Waterfall. The mountain is characterised by exposed granite and steep drops in elevation. As a result, there is relatively little plant or wildlife; however, orchards have been planted on some of the gentler slopes.

Swaemirok

Swaemirok is a diary of a refugee during the 1592 Japanese Invasion written by O Huimun (1539-1613). This hand-written work consists of seven volumes. The diary begins on the twenty-seventh day of the eleventh lunar month in 1591, shortly before the Invasion, when the author left the capital to return to his hometown. The final entry is the twenty-seventh day of the second lunar month in 1601. The first volume of this work is not a daily diary, but instead records just the important events of the Japanese Invasion up to the sixth month of 1592, and the second volume has no entries for the nearly three months that the author was ill. Aside from these two cases, this work is a daily diary up to the author’s return to Seoul in 1601.

Swaemirok contains both official records of this time, such as letters and decrees, in addition to the author’s personal observations of the havoc brought on by the war. This
work is particularly notable in its treatment of the hardships inflicted upon the common people by this devastating event. O recounts scenes of fathers abandoning their children and fleeing, mothers forsaking their children for their own safety, children wailing at the breasts of their dead mothers, and the destruction of entire communities by the savagery of the war and plagues that swept the countryside. Therefore, the true value of this work lies in the treatment given to the plight of the common people during this tumultuous period.

This work is also of much merit for its details on the economy of Korea during this period. In particular, items concerning the lives of slaves (nobī) such as their taxation and sale are well represented. Other economic matters concern the tributary system and the local systems of government. Also covered here are the customs and special products available in the various regions of Korea. In 1962 the National History Compilation Committee (Kuksa P'yŏnch' an Wiwŏnhoe) included this work in the fourteenth volume of Han'guk saryo ch'ongso.

Syngman Rhee (Yi Sungman, see Rhee Syngman)

T'aean County

Located in the northwest of South Ch'ungch'ŏng Province, T'aean County includes the towns of Anmyŏn and T'aean, and the townships of Konam, Kŭnhŭng, Nam, Sowŏn, Wŏnbuk and Iwŏn. The county covers a total area of 467 sq. kms. and as shown by 1989 statistics, had a population of 84,929. Bordering Sŏsan to the east, the county has a jagged coastline with numerous indentations.

About seventy per cent of the county's workforce is engaged in the agricultural sector. Crops include rice, barley, garlic and ginger. The amount of arable land is constantly expanding as coastal land is reclaimed. With the longest coastline in South Ch'ungch'ŏng Province, the marine products industry also makes an important contribution to the local economy. Commercial fishing vessels operating in the Yellow Sea bring in catches of yellow corbina, hairtail, anchovy, Spanish mackerel, blowfish and blue crab. Part of the crab yield is exported to Japan. There are also numerous salt flats along the coast, particularly in Anmyŏn.

Tourism centres on the numerous beaches. Most of these beaches, along with several nearby islands, have been included in T'aean National Marine Park. From Mt. Paekhwa, at 284m one of the area's highest peaks, there is a panoramic view of the coastline and the hinterland. On the peak are remains of an old fire signal station, and below this are remains of the Paekhwa Fortress, as well as a five-storey pagoda, T'aean Hyanggyo (county public school), T'aeteil Hermitage and a Buddha triad in relief (Treasure No. 432). Carved during Paekche, the Buddha triad consists of a 1.3-metre-high seated figure in the centre, a 2.07-metre-high standing figure on the left and a 2.09-metre-high figure on the right. Unlike typical triads, the two outer figures are Buddhas whereas the central figure is a Bodhisattva. The artistic style of the work is believed to have been directly influenced by the late period of China's Northern Wei (386-533).

T'aebaek

T'aebaek is situated in the south-eastern part of Kangwŏn Province. The city was created in 1981 by combining the towns of Changsŏng and Hwangji. The newly designated city took its name from the 1,567-metre-high Mt. T'aebaek, which is situated on the south-western corner of the city. With a yearly average temperature of 11.2 degrees C., the area is characterised by a cool climate and long winters.

Several Buddhist temples are located in the city, including the Changmyŏng, Hŭngbok, Yuil and Kwanŭm temples. As for Buddhist artefacts, there is an earthen Buddha statue at
Shimwon Temple, a Vairocana Buddha figure at Paektan Temple and a Maitreya figure on Mt. T’aebaek. In Sodo-dong, there is a pavilion housing the stele of Tanjong (r. 1452-1455). Both the front and back of the stele bear an inscription written by the monk T’anho. In 1457, Tanjong, who had ascended the throne at a young age, was banished to Yŏngwŏl and then assassinated. According to tradition, after he died his spirit rode a white horse to Mt. T’aebaek where he became the T’aebaek mountain spirit. The present stele was erected in 1965 after the previous one was destroyed during the Korean War. On Mt. T’aebaek, there is also an altar dedicated to Tan’gun, the legendary founder of Korea.

Since T’aebaek City is located in a mountainous region, the area’s agricultural activities are limited. However, the area is suitable for some dry field crops, such as potatoes and corn. Livestock, including dairy cattle and pigs, are also raised here. In addition, there are large deposits of high grade coal in the area. The numerous mines around the city provide an important source of employment for city residents. Local tourism is centred around Mt. T’aebaek.

**T’aebaek Mountain**

**Modern-day Mt. T’aebaek**

Situated on the border of T’aebaek in Kangwŏn Province and Ponghwa County in North Kyŏngsang Province, this 1,567-metre high mountain gives its name to the famous T’aebaek Mountain Range which begins at Mt. Hwangnyong, south of Wŏnsan, and passes through Mt. Kūmgang, Mt. Sŏrk, Mt. Odae and Mt. Tut’a. The mountain is surrounded by other high mountains including Mt. Hambaek (1,573 metres) to the north, Mt. Chang (1,409 metres) to the west, Mt. Kuun (1,346 metres) to the south-west, Mt. Ch’ŏngok (1,277 metres) to the south-east and Yŏnhwa Peak (1,053 metres) to the east. In spite of its high elevation, the mountain is characterised by relatively gentle terrain.

The area is important as a nature preserve. Mt. T’aebaek is home to around 90 bird species, about 50 of which are varieties of sparrows. The average yearly temperature of the area is around 10°C and the area receives about 1,000mm of rainfall yearly. These conditions support a forest of primarily deciduous, broad-leaved trees. The mountain is also important for its mineral wealth. Mt. T’aebaek and the neighbouring Mt. Hambaek contain the largest coal deposits in South Korea. As a result, most of the area’s population centres have been built around mines. In order to preserve the mountain’s natural habitat, the area was designated T’aebaek-san Provincial Park in 1989.

Due to its name, the mountain presently known as Mt. T’aebaek is sometimes associated with the ‘Mt. T’aebaek’ mentioned in the early Tan’gun myths (vide infra). On Mt. T’aebaek, there is even a stele and shrine hall commemorating Tan’gun.

**Mythological Mt. T’aebaek**

In early times, high mountain peaks throughout Korea were considered as the sacred sites where heaven met earth. Thus, many of the high mountains in Korea, such as Mt. Paektu, Mt. Sobaek and Mt. Paek, contain the word paek which means ‘bright’ or ‘sacred.’ Thus, the term T’aebaek may have once been a generic term for sacred mountains throughout Korea.

In addition, early accounts of the Tan’gun story, Korea’s chief foundation myth, claim that Tan’gun’s father, Hwanung, descended from heaven to a mountain called T’aebaek. Evidence indicates that Mt. Paektu was the prominent sacred mountain of the people living in Manchuria and Korea in ancient times; therefore, it is clearly the Mt. T’aebaek referred to in the early Tan’gun story. However, the location of the mythological ‘Mt. T’aebaek’ of the Tan’gun story has changed throughout Korean history. As Korea’s borders shifted...
southward, the location was moved to more central locations. The Koryŏ monk Ïryŏn (1206-1289), in his *History of the Three Kingdoms* (*Samguk sagi*), claims that the Mt. T'aeback of the earlier records is actually Mt. Myohyang. By Ïryŏn's time, the Mt. Paektu area had been lost, so it was only natural that the site of Korea's mythological foundations should be moved to a mountain closer to the Koryŏ dynasty's capital. Other high mountains have also been linked to the Tan'gun story, including Mt. Kuwŏl, Mt. Mani, and even modern-day Mt. T'aeback.

**T'aehehwa River**

The T'aehehwa River flows 41.5 kms. from Mt. Kohŏn (1 033m) in Ulsan’s Sangbuk Township to Ulsan Bay on the East Sea. Ulsan Plain lies on the lower reaches of the river where it joins with Tong Stream. Sayŏn Dam, Taeam Dam and Sŏnam Dam, constructed on the upper section of the river, provide irrigation water to the region, while the Ulsan Industrial Area has formed along river’s lower section. Scenic and cultural attractions along the river include Mt. Kaji Provincial Park, Sŏngnam Temple and the engraved rock at Ch'ŏnjŏn Village. The famous T'aehwaru (Great Harmony Pavilion) which once overlooked the mouth of the river, no longer exists.

**T'aejo, King** (Wang Kŏn, 877-943))

Wang Kŏn, also known by his posthumous title, T'aejo, meaning 'Great Progenitor', was the founder and first king of the Koryŏ dynasty. He is chiefly remembered for having unified the southern part of the peninsula and established the basis for central government of the dynasty, which lasted for 475 years.

Wang Kŏn came from a prominent family in the Kaesŏng area of central Korea. In the declining days of the Shilla dynasty, he became a rebel leader and joined forces with Kim Kungye. Together they gained control of the central part of the peninsula and formed the Kingdom of Later Koguryŏ in 901 with Kungye as its leader. As one of Kungye's leading military commanders, Wang Kŏn had had some great successes, particularly against the Later Paekche Kingdom, and Kungye recognised his ability by making him the chief minister in his government. When Kungye proved to be a despotic and abusive leader, however, Wang Kŏn led disgruntled followers in a revolt, resulting in the defeat of Kungye and the founding of Koryŏ in 918, with Wang Kŏn as its leader. He then established his capital at Kaesong, his home area, with the aim of enlisting support among the local gentry to further his plans for reunifying the Korean peninsula. To do this, he needed to gain supremacy over the areas still controlled by Shilla and also the Later Paekche Kingdom under Kyŏnhwŏn. Shilla surrendered to Koryŏ in 935, and the Later Paekche forces were finally defeated in 936.

Following unification, Wang Kŏn still needed to consolidate his right to succession. He recognised the importance of gaining the support of his conquered subjects and made a
grant of large land holdings to the former Shilla king as well as appointing him to a high government position. He also married a woman from the Shilla royal clan and gave land grants to former Shilla and Later Paekche officials who pledged loyalty to him. He was successful in quelling incursions from Jurchen and Khitan tribesmen and in maintaining peace in the border areas. When Parhae had been defeated by the Khitan, many people from its ruling class fled to Koryŏ and were warmly welcomed by Wang Kŏn, who generously gave them land. However, the castle lords still retained power in their regions, and the military commanders of local gentry background remained a powerful force. To obtain their cooperation and support, Wang Kŏn established marriage ties with more than twenty local gentry families. He also endeavoured to strengthen his position as leader by careful selection of officials and by such humane policies as the freeing of slaves and providing tax relief for farmers.

Wang Kŏn recognised the importance of respecting widely-held native beliefs, geomancy and Taoism, as well as Buddhism and Confucianism in formulating his approach to government. His choice of Kaesŏng as the central capital of Koryŏ was partly for geomantic reasons, as were the other capitals of Pyŏngyang, Seoul and Kyŏngju. He regarded Buddhism as essential to the life of the people, but took steps against abuses of power in temples and monasteries and warned subsequent kings and ministers against privately establishing temples.

At the same time, he was convinced of the need to foster Confucian social values and promote the study of the Chinese classics. He was strongly attracted to the idea of state examinations to select officials of varying backgrounds on the basis of skills and ability rather than the existing 'bone-rank' system, but was not able to introduce reform of this system during his short reign. One of his most important legacies was the document entitled 'Ten Injunctions', in which he attempted to set out for his descendants and successors clear instructions aimed at ensuring the prosperity and continuation of the dynasty. It dealt with the position of Buddhism, royal succession, native beliefs and customs, the need for benevolence towards loyal subjects and vigilance against other elements, proper rewards for labour, and the need for the study of history and the classics as a guide to good government. This document exerted a strong influence throughout the Koryŏ period as well as providing an insight into the intellectual climate of early Koryŏ.

Wang Kŏn was an able leader who achieved much in unifying the state, and he treated his conquered subjects with compassion and generosity. He enlarged his territory toward the north and initiated many military and public works projects, as well as attempting to introduce reforms of various kinds, but did not live long enough to see the completion of much of what he had begun.

**T'aejong, King** (r. 1400 to 1418)

King T'aejong (1367-1422) was the third king of Chosŏn and reigned from 1400 to 1418. His given name was Pangwŏn, his courtesy name Yudŏk. He was the son of the founding king of Chosŏn, King T'aejo (r. 1392-1398) and Queen Shinŭi, and the brother of King Chongjong (r. 1398-1400). Towards the end of Koryŏ, T'aejong studied at the Sŏnggyun'gwan (National Academy), and after finishing there, furthered his scholarship under the tutelage of the renowned Confucian scholar Kil Chae (1353-1419), who lived in the same village. In 1383, T'aejong successfully sat for the civil service examination (mun'gwa) and for the next few years served the Koryŏ kingdom in various capacities, even as a member of the official embassy to Ming China, under the leadership of Yi Saek (1328-1396).

In 1392 when Yi Sŏnggye (King T'aejo) had seized control of Koryŏ and was taking the first steps towards the establishment of Chosŏn, T'aejong became heavily involved in the
current political turmoil. His father had taken military control of Koryo and was in effect already the real power, but his desire to establish a new kingdom was opposed by powerful opponents. Of these, the most formidable was the revered Neo-Confucian scholar-official Chong Mongju (1337-1392), who was assassinated by Taejong, thereby removing the final obstacle to his father’s establishment of Choson. With the elimination of his last powerful opponent, the faction that supported T’aejо forced King Kongyang (r. 1389-1392) to abdicate the throne and then placed their leader on the throne of the new Choson state. T’aejо’s power in the new kingdom was supported by the Dynastic Foundation Merit Subjects (DFMS) (Kaeguk Kongshin) who had supported him, and thus shared hegemony with him. The DFMS ruled through the Privy Council (Top’yonguissasa), and T’aejо simply sanctioned the decrees of this council. Hence, it is clear that in the early years of Choson the power of the monarchy was quite weak and the power wielded by the Privy Council had estranged many of the literati.

A major problem of the new dynasty was that of accession to the throne. King T’aеjо had designated his youngest son, Pangsok, as his heir, and this was supported by Chong Tojоn (1342-1398) who was a powerful member of the Privy Council. T’aejong was not only ambitious, however, he was also extremely resourceful, as he first assassinated Chоng Tojоn and then Pangsok, at which point he placed his brother, King Chоngjong, on the throne. While Chоngjong was in name king, T’aejong was the real power in Choson and began to implement measures designed to strengthen the monarchy, even before taking the throne for himself in 1400.

Among the initial actions that T’aejong took to strengthen the monarchy was the abolition of private armies and the institution of a centralised military control. Also, in a move designed to greatly weaken the power of DFМS, he reorganised the Privy Council into the State Council (Uijongbu), which was endowed with less authority than its predecessor. Along with the State Council, he established the Six Ministries (Yukcho), which managed most of the day-to-day business of the government and which had the right to directly approach the throne. Other measures taken by T’aejong include the promulgation of various legal codes such as the Won yukchоn (Basic Six Codes) and the Sok yukchоn (Supplemental Six Codes), both of which consolidated the power of the monarchy.

Under the reign of T’aejong, Choson underwent changes in regional and land administration, as well as the military, tax, and slave systems, in addition to other policies that promoted agriculture and education. The changes implemented were of tremendous importance to the development of Choson society, and they had a major influence on the dynasty to its conclusion. The development of regional military commands, under the direct control of the central government, enabled the protection of border areas during early Choson and the changes in the land, tax and slave systems ensured that the young dynasty would have a solid economic foundation. Particularly notable are the sweeping changes that T’aejong implemented in regards to Buddhism, the results of which provided a major economic boost to the kingdom. In 1406, even while his father was still alive, T’aejong began the severe oppression of Buddhism that is such a strong characteristic of Choson. He closed temples throughout the country and confiscated their lands and slaves for the state, leaving a relatively small number (232 temples) untouched. The forcibly-removed lands provided an important means of revenue for Choson in its early stages.

T’aejong abdicated in 1418 in favour of his second son, Sejong (r. 1418-1450). Taejong had realised that the turbulence surrounding the succession to his father’s throne was detrimental to the well-being of the kingdom, and thus hoped to avoid a repetition by allowing his son to assume the monarchy while he was still alive. Sejong proved his father’s faith in his ability and is claimed by many as the most able king throughout Choson. T’aejong himself, however, provided many of the foundational changes that would be undertaken during Sejong’s and subsequent reigns. T’aejong implemented major changes in the social, governmental, military and administrative apparatus that would remain
as powerful forces until the end of Chosŏn. His reign saw the new Chosŏn dynasty consolidated and his capabilities enabled it to flourish under King Sejong.

*T’aengni chi* (Ecological Guide to Korea)

*T’aengni chi* is a descriptive geography of Korea written by the late-Chosŏn *shirhak* scholar Yi Chungwan (1690-?). This one volume, hand written work was published in 1751. This work has been known by several different titles over the years including ‘P’allyŏk chi’, ‘P’allyŏk kagŏchi’, and ‘Tongguk sansu rok’ among others. The work had been transmitted as a manuscript until 1912 when the Chosŏn Kwangmunhoe printed it using movable type.

The contents of *T’aengni chi* are divided into the four broad headings of ‘Samin ch’ongnon’, ‘P’alto ch’ongnon’, ‘Pokko ch’ongnon’ and ‘Ch’ongnon’. ‘Samin ch’ongnon’ describes the history of the four different professions such as the development of class-consciousness and different classes of people such as military and civil officials, farmers, artisans and merchants ‘P’alto ch’ongnon’ outlines the geography of the eight provinces of Korea. In this section the author discusses not only geography but also the history and administration of the provinces. In ‘Pokko ch’ongnon’, Yi describes geomantic practices in Korea in regards to geography, locations, human nature and the natural features of the topography. In the final section ‘Ch’ongnon’ the author lists the family names in Korea and then provides his views on the then contemporary state of Korea.

*T’aengni chi* is a valuable document for the study of late Chosŏn *shirhak* thought. It also provides considerable data for geographical research and social customs of the period. The work is further notable for the extensive discussions of geomancy and its effect on the lives of the people and ultimately, the nation.

*T’akchu* [Food and eating]

*T’al nori* [Literature]

*T’al ch’um üi yoksa wa wŏlli* (The History and Principles of the Masked Dance)

*T’al ch’um üi yoksa wa wŏlli* is a 406-page study on the history and principles of t’al ch’um (masked dance) written by Cho Tongil. This work systematically explains the traditional masked dances, which had been transmitted from ancient times and have gradually disappeared due to the recent infatuation with foreign culture. The work also explains the psychological import of the mask danced dramas and their role in the traditional discharging of conflict through comedy. Kirinwŏn Publishers issued this work in 1991.

T’amjin River

With its source on Kuksa Peak (613m) in South Chŏlla Province, the T’amjin River flows through the Yongpan, Pusan, Changhung and Kangjin plains on its way to Toam Bay on the South Sea. Much of the river consists of sharp bends and rapid descents. As a result, it carries large amounts of sediment down to its mouth during floods. This causes the lower stretches of the river to rise in elevation, leading to further flooding. Much of the river’s lower section has been restructured through land reclamation projects. Legend has it that during the reign of Shilla’s King Munmu (r. 661-681), envoys from the T’amna state (modern-day Cheju Island) landed in the area on their way to the Shilla court. In memory of their visit, the first syllable of T’amna was combined with the second syllable of Kangjin to form the name of the river.

*T’oegye chŏnsŏ* (Collected Writings of T’oegye)
"T'oegye chŏnsŏ" is the literary collection of the mid-Chosŏn period scholar-official Yi Hwang (1501-1570), styled T'oegye. This work contains many separate works by Yi and was published as a single collection in 1958 by Songgyun'gwan University. It includes the fifty-one volumes of "T'oegye sŏnsaeng munjip" (The Collected Works of Master T'oegye) which was originally published in 1600 and "T'oegye sŏnsaeng sok chip" (Supplementary Collection of Master T'oegye) that consists of eight volumes published by Yi Suyŏn in 1746. Also included in this collection are the eleven volumes of "T'oegye chosan sŏnsaeng chasŏngnok, Sasŏ sŏgūi, Kyemong chŏnuui and Songgye Wŏn Myŏng ihak tongnok ponji". In addition to the above works, six other collections are included. The entire work was published as a two-volume set.

Yi is regarded as one of the great scholars of Chosŏn and his Tosan School produced many noteworthy disciples. This collection is only a part of the many works written by Yi, but no longer extant. This work includes many of the lectures that Yi delivered while training his disciples and theoretical discussions on matters such as i and ki. Yi followed the writings of the Chinese neo-Confucian scholar Zhu Xi who saw the world as divided by two forces that constitute the universe. Yi took a dualistic view of these inseparable forces, but he stressed the formative or normative element of i that he saw as the regulating force for ki. Thus, he determined that i was clearly the dominant of the two forces, and in this framework Yi stressed that an understanding of i as the determining pattern of the universe was more important than being cognisant of the principles that govern individual substantive manifestations. Applied to human nature, Yi emphasised that through the cultivation of one's i, spiritual essence and personal righteousness would be realised.

The works of Yi continue to be studied for an understanding of the neo-Confucian philosophy that dominated Korea during the Chosŏn period. Yi was the foremost neo-Confucian scholar in the Chosŏn period and heavily influenced the ideology of later generations. Therefore, "T'oegye chŏnsŏ" is highly praised as a window to understanding the social and ideological institutions of the Chosŏn period.

"T'okki chŏn" (The Tale of a Rabbit)

"T'okki chŏn" is a classical novel of which neither the composer nor the date of composition are known. This is an allegorical work that uses personified animals as its characters and is considered to be a novel in the 'p'an' sorıi genre that was orally transmitted among 'p'an' sorıi singers until the late Chosŏn period when it was finally put to paper. Presently there are over fifty versions of this work which can be largely divided into those of the 'p'an' sorıi style and those of the novel style. Of the novel versions, there are han'gŭl, Chinese-character and mixed script editions when analysed by script usage. It has also been transmitted under many titles including Topyŏl ka and Sungung ka, both of which are of the 'p'an' sorıi style, and Pyŏljubu chŏn, T'ogong chŏn and T'osaeng chŏn which are of the novel style. This work has also been printed with woodblocks and movable metal type, in addition to hand written versions.

The content of the work is as follows: When the Dragon King of the seas became ill a Taoist appeared and told him that if he ate the liver of the rabbit that lived on the land he would be cured. The Dragon King gathered all of his ministers in his underwater palace and ordered that one go ashore and find the rabbit's liver that would cure him. However, the ministers simply bickered among themselves and could not decide who would go on this mission. At about this time a terrapin appeared and volunteered for this mission. The terrapin brought a picture of a rabbit with him since he had never seen one and went ashore to where all the animals were gathered. The terrapin boasted to the gathering of animals of the splendor and wealth of the Dragon King's underwater castle, and he tricked the rabbit to follow him there by offering him a high position and a beautiful woman. The gullible rabbit eagerly followed the terrapin to the underwater palace, but upon hearing the Dragon King's order to
remove his liver realized that he had been deceived. However, even in the heat of the moment the rabbit kept his wits and cleverly told the Dragon King that he had left his liver on land. The Dragon King was fooled by the rabbit's scheme and treated him to great hospitality and told him to go ashore and bring back his liver. The rabbit returned to land with the terrapin and then asked him 'how can anybody live without their liver?' cursed him and bound off into the forest. The terrapin, depending upon the version, either dies on the shore or returns to the palace empty handed.

*T'okki chŏn* has its roots in a Buddhist legend that can be traced to an Indian legend. It would seem that this tale was transmitted to Korea through China where it eventually became settled as first a folktale and then a novel. The path from India to Korea can be divided into four steps. First, the Indian tale is *Jataka*, a Buddhist tale of Buddha's previous incarnations. There are different versions of this tale including *Jataka 57*, *Jataka 208* and *Jataka 342*. In addition, this tale also appears in other Indian literary works. The second step is the translation of the Indian tale into Chinese. In China this tale can be seen in literary works such as *Liuda jijing*, *Shengjing* and *Fobenhang jijing*. The third stage of the transmission process is the tale entering Korea either orally or in the written form. Of course, there are no extant records of an oral transmission of this work into Korea. However, as a written transmission there is the *Kut'o sŏrhwa* (Legend of Kut'o) transmitted in the *Samguk sagi* (History of the Three Kingdoms). The final stage of this work's transmission to its present form was its adaptation as a *p'ansori* work in the seventeenth and eighteenth centuries. It is at this stage that the work was further embellished and expanded, after which it was recorded as a novel.

There have been many changes in the story of *T'okki chŏn* in its transformation from an Indian legend to the present story in Korea. The monkey and crocodile of the original tale were transformed into the rabbit and terrapin in the Korean story, which can be seen as manifestations of the story gaining Korean indigenous qualities. Moreover, the original didactic nature of the Indian tale passed through a stage of holding religious import in the Buddhist tale to holding a satirical gist in the Korean tale.

In analysing the content of *T'okki chŏn*, the fact that this work uses animals in an allegory reveals the intent of the composer group to reflect critically upon social issues. In this work there are two worlds represented: that beneath the sea of the Dragon King, and the world on land which the rabbit and other animals inhabit. These two worlds can be viewed as respectively being metaphors for the ruling class and the governed. The foolish Dragon King who gave himself to wine and pleasures of the flesh and became ill as a result before being deceived by the rabbit, along with his ministers who could do little more than quairel, can be seen as representative of the composer groups' perception of the corrupt and incompetent political leaders of Chosŏn society. On the other hand, the rabbit who sought the ease and wealth of life in the palace can be said to represent the powerless and poverty stricken farming class of the Chosŏn period. The rabbit desired to escape the harsh realities of his life on land through the lure of easy riches and was thereby easily fooled by the terrapin. The peasantry of seventeenth and eighteenth century Chosŏn, when this work was formed, were subject to the whims of the corrupt and hypocritical ruling class that exploited and oppressed them. During this period the hardships of the peasantry grew worse, and they are well represented by the rabbit of the story. By examining the conclusion of *T'okki chŏn*, it is clear that the composer group of this work was of the peasantry since the victory of the rabbit over the Dragon King can be viewed as an extension of their desire to escape the oppressive heel of the Chosŏn ruling class. Accordingly, this work can be viewed as an expression of the resistant social consciousness of the peasantry of this period. The work serves as a satire of the corruption and social realities of its formation period and by doing so reveals the sanctimony and incongruities of the Confucian based morality that dominated the Chosŏn period.

T'ongdo Temple

[Architecture]
Situated in the southern area of South Kyongsang Province, T'onyeong comprises the town of Sanyang and the townships of Kwando, Tosan, Saryang, Yokchi, Yongnam and Hansan. The city was recently created when Ch'ungmu City and T'onyeong County were amalgamated. Geographically, T'onyeong is made up of a peninsula, an irregular piece of land connected to the peninsula by an isthmus, and over 140 islands. Highway 14 crosses a narrow strait to link the city with Koje Island to the east. Because of its location on the southern coast, T'onyeong has a mild climate with an average temperature of 14.1°C. The city receives an average annual rainfall of 1358mm.

About twenty-four per cent of T'onyeong’s land is agricultural. The area’s rugged terrain requires that most farming activities are devoted to dry-field crops such as garlic and sweet potato. In 1961, however, an experimental tropical fruit farming operation was started in Kwando Township. Taking advantage of the temperate climate, farmers now use greenhouse cultivation for fruits pineapple, banana, papaya and avocado. With over thirty-three varieties of tropical fruit trees in its orchards, the former experimental farm is now one of Korea’s key producers of tropical fruit.

The waters off the coast of T’onyeong are, in most places, only five to fifteen metres deep, which makes for good fishing. Local fishermen catch mackerel, sea bream, cod, yellowtail and anchovy. In particular, dried anchovy from Sanyang Township and the Hansan and Yokchi islands are acclaimed for their excellent flavour. Protected by islands which serve as breakwaters, the sea is usually placid and the water is unpolluted. As a result, the area is also suitable for marine-product farming. Eels, sea squirt and laver are all cultivated here, and there are also a number of cultured-pearl farms. Oysters grown here meet eighty per cent of the country’s table-oyster demand. The city’s industrial sector is small, with a few factories producing machinery, chemical products and textiles.

With its clear blue waters and numerous picturesque islands, T’onyeong is one of Korea’s top seaside vacation spots. In summer, visitors flock to the city to swim off the beaches or to go sailing, boating and windsurfing. In order to protect the area’s scenic wonders, T’onyeong’s islands have been designated Hallyo National Marine Park.

The city is famous as the place where Admiral Yi Sunshin (1542-1598) defeated the Japanese during the Hideyoshi Invasions (1592-1598). Yi invented the kōbuksōn (turtle ship), the world’s first ironclad warship, and in a classic naval battle, defeated a much larger Japanese armada. Yi’s naval base was on Hansan Island. In fact, ‘T’onyeong’ is an abbreviation of samdo sugun t’ongje yöng -- the naval headquarter of the three southern provinces. Ch’ungmu, the former name of the town of T’onyeong, comes from ‘Ch’ungmugong’ (Lord of Loyalty and Valour), a posthumous title conferred on the admiral by the king. Northwest of City Hall, one finds Ch’ungnyolsa, a shrine commemorating Yi’s naval exploits. The shrine houses eight objects that Yi received as gifts from the Ming royal house. Every October, a festival is held celebrating the victory of Hansan Island. The event includes a parade of men dressed in Choson naval uniform. At night, regional folk performances such as the Ogwangdae dance drama and sword dance are held.

Other historical sites in the area include Yonghwa Temple just north of Mt. Yonghwa (461m), Anjông Temple in Kwando Township and T’onyeong Hyanggyo, a Confucian school founded in 1901 in Kwando Township’s Chungnim Village,
Tae Choyong (?-719)

Tae Choyong, also known as King Ko, was the founder of Parhae, and ruled from 699 to 719. Parhae’s people were immigrants from the fallen Koguryo kingdom and they settled in the northern part of the Korean peninsula and in Manchuria. Tae had been a general in Koguryo, and was among those taken prisoner and forcibly removed to the Yingzhou area of Manchuria. However, on an insurrection by the Khitan people, Tae formed an alliance with the Malgal leader Kolsabiu and led a band of followers to Dongmou-shan, where he founded the Chin kingdom, declaring himself king. The name Parhae was not adopted until 713. In addition to refugees from the former Koguryo, Parhae included a large number of the Malgal people.

Parhae was in a difficult international situation from its inception as it had both the Shilla and Tang states to contend with, and thus its relations with the peoples to the north of China were quite important. With its territorial foundations established during the reign of Tae, Parhae came eventually to occupy large portions of the former Koguryo domain, extending as far as the Liaodong Peninsula. The power structure of Parhae was dominated by a numerically small group of Koguryo emigrants, and the ruled class was largely composed of the Malgal people. Parhae considered itself the successor of the Koguryo tradition, and this can be seen in the official correspondence with Japan, which includes reference to this. Also, Parhae did not see its people as being a separate people from Shilla, and the two kingdoms often referred to each other as the Northern and Southern nations. Hence, it is clear that Parhae was a Korean kingdom and moreover, a continuation of Koguryo.

King Ko was succeeded by his son, King Mu (r. 720-738), who largely consolidated the territorial extent of the kingdom that his father had founded. He also expanded Parhae’s international contacts to include Japan and the Tujue (Eastern Turk) people, thus countering the Tang-Shilla alliance.

Tae Myongyul chikhae

Taebong Library

Taebong Library is located in Taebong-dong in Taegu’s Chung Ward. This library was originally named Kyongsang Puktog Tosogwan and was opened in May 1971. It acquired its present name on 25 March 1991. Today, the library consists of six reading rooms, a room for general works (first floor), a children’s collection (second floor), a room for reference materials and periodicals (third floor), a public lecture hall and multi-media facility (fourth floor), and a cafeteria. In 1998, the library’s collection comprised approximately 121,000 general works, 81,000 works of reference, 8,000 children’s books and nearly 5,000 theses. The Taebong library also offers classes for the general public on diverse subjects, such as oriental philosophy and calligraphy.

Taeborum

Taedong pŏp (Uniform Land Tax Law)

Taedong River

The Taedong River flows from the western part of the Nangnim Mountain Range to the Yellow Sea. About 438 kms. long, the river is the fifth largest in Korea. During Koguryo, it was known as both the P’ae River and the Wangsong River, while its present name has been used since Koryo. With its source on Mt. Tongbaek and Mt. Sobaek, the river’s main
flow is to the southwest, where it joins the Mat’an River near Tŏkch’ŏn. In the vicinity of Pukch’ang, the Taedong turns south, and after combining with the Changsŏn River near Sunch’ŏn and the Piryu River near Sŏngch’ŏn, it changes direction again to the southwest, where it is joined by the Nam River. From this point, it widens and expands in volume as it passes through extensive plains in the area around P’yŏngyang. It is then joined by Hwangju Stream and Chaeryŏng River before entering the Yellow Sea at Kwangnyang Bay near Namp’o.

Humans have lived near the river since Neolithic times. On Mt. Sŭngni in Tŏkch’ŏn County, the skull of a young girl with both Homo erectus and Homo sapiens neanderthal features has been discovered. Neolithic era pottery has been found in Onch’ŏn County’s Kungsan Village and Ch’ŏngho Village. Fishing-net sinkers from the late Neolithic period have been found at P’yŏngyang’s Kŭmt’an Village, indicating the importance of fishing at this time. Also, the indication of square and rectangular huts has been noted in this area. As evidence of early agriculture, carbonised millet has been discovered in P’yŏngyang’s Namgyŏng Village. Artefacts from the early Iron Age found near the river, include bronze daggars, decorative mirrors, iron weapons, farming implements and other tools.

Throughout history, the river’s depth along with its gradual decline has made it important as a means of transportation. The lower reaches, from Kwangnyang Bay to Songnim are navigable by large seagoing vessels (4-5 000 ton), while ships of about half this size can navigate the extra sixty-three kms. upstream to Posanp’o. Much smaller ships, limited to about thirty tons displacement can reach P’yŏngyang, while smaller boats still can safely go on to Tŏkch’ŏn, some two-hundred and sixty kms. from the mouth of the river at Kwangnyang Bay. Thus, sixty per cent of the river is navigable, depending on the size of the craft. Before railways and roads were built, the Taedong was the primary means of transport of goods for barter and trade. Nowadays, the river is particularly useful as a way of transporting timber from the upper section of the river to P’yŏngyang and Namp’o.

The riverain of the Taedong is well-suited to the growing of dry-field crops such as barley, wheat, corn and sweet potato. In addition, the fertile Chaeryŏng Plain has, since ancient times, been famous as a producer of high quality rice. In the hilly areas found along some stretches of the river, apples and chestnuts are grown, and in the mountainous regions there are cattle farms and sericulture is common. Tobacco and cotton are also grown. The riverain contains more than ninety per cent of North Korea’s total coal deposits. Iron, tungsten, gold, silver, clay, lime, apatite, lead, zinc, molybdenum, asbestos and copper are also mined or quarried.

**Taedong Sŏgwan**

*Taedong unbu kunok* (Encyclopedia of Korea, Arranged by Rhyme)

*Taedong unbu kunok* is an encyclopaedia of Korea that was compiled by Kwŏn Munhae (1534-1591) during the reign of King Sŏnjo (r. 1567-1608). This woodblock-printed work consists of twenty volumes in twenty fascicles. The compiler used Chinese and Korean historical documents to record items concerning Korea from the time of Tan’gun Chosŏn up until the reign of Sŏnjo. The work encompasses areas such as history, geography, personages, literature, flora and fauna and is arranged according to rhyme. Kwŏn began the compilation work on this encyclopaedia when he was magistrate of Taegu in 1589. It was modelled after the *Yunfu chunyu* compiled during the Chinese Yuan dynasty.

The contents of this voluminous work are quite varied and contain descriptions of many different natural objects such as the names and descriptions of trees, grasses and flowers, geographical features of various regions and country names. The accounts of historical personages include filial sons, virtuous women and loyal retainers. Other entries of note
include the history of the Korean states, and linguistic aspects such as proverbs, colloquial language and slang of the common people. This work is also valuable in that it includes references to many books that predate the 1592 Japanese Invasion and were destroyed in the conflict. Therefore, the legends that it preserves from the Sui chŏn (Tales of the Bizarre) are also highly valued.

A photocopy of Taedong unbu kunok was reissued in the 1950s by Chŏn'g'yang Sa Publishing Company. The original wooden printing blocks for this work are presently preserved at the home of the author’s descendants.

Taegak Kuksa (see Ûich'on)

**Taegu Metropolitan City**

Situated in the southern part of North Kyŏngsang Province, Taegu covers an area of 885.57 square kilometres. With a population of 2,479,000 (as of Dec. 31, 1996), it is Korea’s third largest city. Although Taegu was previously a major city, most of the city’s population growth occurred after the Korean War. Mt. P’algong (1,193m) rises in the northwest and Mt. Shinsŏng (653m) stands in the south of Taegu. The built-up area of the city is located in a flat basin between these mountains. Local weather is characterised by sharp seasonal fluctuations. Since radiated heat rising from the city cannot easily escape the basin, summers here are especially hot. On August 1, 1942, a temperature of 40°C was recorded, this being the highest temperature ever recorded in Korea.

Due to the city’s rapid urbanisation, only about 1.5 per cent of the population is employed in the agricultural sector. The city is traditionally famous for its apples, but most of the area’s apples are now grown in nearby Kunwi or Ùisŏng counties. About half of the city’s factories produce textiles, and there are also a large number of factories producing machinery and metal goods. Small and medium-sized factories in the city produce food stuffs, machine parts and prefabricated metal. As a regional transportation hub, the city has six bus termini, a subway, a railway line and an airport. With its extensive transportation network, the city serves as an important commercial centre for the area. There are a number of wholesale markets here. Sŏmŭn Market is particularly important as a major outlet for textiles. About one kilometre south of the Taegu train station lies the Herbal Medicine Market, one of the largest such markets in the nation.

There are a number of parks and resorts in the city. At Taegu’s southern end is Mt. Ap Park. A cable car runs 800m to the summit of Mt. Ap. Near the cable car base, one finds the Memorial Museum of Victory of the Naktong River, which commemorates a victorious battle in this area during the Korean War. The Taesŏng and Taeđŏk temples are also found here. Taegu Tower rises in the southwest part of the city. Here one finds Turyu Park and various recreational facilities including a swimming pool, roller skating rink, Cultural and Arts Hall, and a baseball field. In Talsŏng-dong lies Talsŏng Park. Residents come here to enjoy the thick forest, see the zoo and attend cultural exhibitions and lectures in the park’s cultural hall. In Susŏng ward (ku), there is a children’s park and Susŏng Resort. At the resort is Susŏng Reservoir which serves as a giant ice-skating rink in the winter.

In addition to its parks, the city also boasts a large number of historical sites. Historically, the most important Buddhist temples in the area are Tonghwŏ Temple and P’agye Temple at the foot of Mt. P’algong (See P’algong Mountain and Tonghwŏ Temple), and also Pukchijang Temple. In addition, there are a number of old pavilions in the area. Kwan’ungnu, in Talsŏng Park, was first built in 1601 and was moved to its present location in 1906. Hwansŏngjŏng, in Sobyŏn-dog in Puk ward, was built in honour of Yi Chu, a leader of irregular forces fighting against the Japanese during the Hideyoshi Invasions (1592-1598). The characters on the pavilion’s plaque were written by Hŭngsŏn Taewŏn’gun (1820-1898). There are also a number of old Confucian schools in the area,
such as Ch’ilgok Hyanggyo in Puk ward, Taegu Hyanggyo in Chung ward, Kuam Sŏwŏn in Chung ward, Och’ŏn Sŏwŏn near Mt. Yongji (629m) and Yŏngyŏng Sŏwŏn to the west of Mt. Munam (431m). Modern schools of higher education include Kyungpook National University in Puk ward, Keimyung University in Shindang-dong, Shinil Junior College in Susŏng ward, Taegu Nursing College and Taegu Junior College in Puk ward, Taegu National University of Education in Nam ward and a branch of Taegu University in Nam ward.

**Taegwan Ridge (Taegwallyŏng)**

The Taegwan Ridge (832 metres) is situated in Kangwŏn Province, south-west of Kangnung. The ridge connects the T’aebaek Mountain Range with the Coastal Range. Streams on the east of the mountain flow down into Oship Stream, then past Kangnung and into the East Sea. On the western side, run-off forms Song Stream which flows into the southern branch of the Han River. The area’s weather is characterised by cold temperatures, high precipitation and heavy snowfall during the winter. The area is now accessible via the Yŏngdong Expressway which runs from Seoul to Kangnung.

**Taehan Chaganghoe (see Korean Association for Self-Strengthening)**

**Taehan kyenyŏnsa (The Last Years of Chosŏn)**

*Taehan kyenyŏnsa* is a history of the last forty-seven years of the Chosŏn period written by Chŏng Kyo (1856-1925). This work covers the period from 1864 until the Japanese annexation in 1910 and is composed of a total of nine volumes. *Taehan kyenyŏnsa* chronicles the major events of the last years of the Chosŏn period, and in particular gives much attention to the activities of the Tongnip hyŏphoe (Independence Club), of which the author was a member. Other notable records in this work include the intrigues of the foreign powers that were vying for supremacy in Korea and the corruption of the Korean government.

This work is of particular value in understanding the activities of the Tongnip hyŏphoe, which played a major role in the politics of Korea during the waning days of Chosŏn. The original manuscript is presently in the possession of Seoul National University Library.

**Taehan maeil shinbo**

The *Taehan maeil shinbo* was a newspaper published at the end of the Great Han Empire by Ernest T. Bethell. Published in both Korean and English, it was launched on 18 July 1904, in Seoul. Others on the early staff of the newspaper include Yang Kit’ak who directed business affairs; chief editor Pak Ŭnshik; Shin Ch’aeho; Ch’oe Ik; and Chang Talsŏn. The *Taehan maeil shinbo* initially had six pages, two in Korean and four in English. The staff sought to create a newspaper to embrace the entry of modernisation and reform to Korea, and one which upheld the rights of the Korean people. The newspaper was also published entirely in English, not only to inform the English-speaking public of news and events, but also to present the plight of the Korean nation to an international audience. It was called the *The Korea Daily News*.

The *Taehan maeil shinbo* was borne of turbulent times and as Korean sovereignty was gradually usurped by Japan, the Japanese authorities were wary of the power of the Korean press. Hence, a law regulating the publication of newspapers was enacted in 1907 by the Residency-General, and the Korean press was soon brought under strict control by the Japanese. Nevertheless, to keep the newspaper away from Japanese censorship, editorial control was transferred to foreigners in Korea who were beyond the grasp of the Japanese. While Bethell’s action helped his newspaper remain out of Japanese reach, such was the
combative nature of the newspaper’s staff, that they posted a sign over the entrance to the newspaper’s office proclaiming, ‘No Entry to Japanese’. Their action soon resulted in Bethell eventually having to relinquish his post. Not discouraged, though, the staff sought a succession of other foreigners to nominally act as publishers, beginning in October 1907 with the British Consul General, Cockburn. After annexation, however, such technicalities became pointless and the Japanese seized control of the newspaper, renaming it the *Maeil shinbo*.

The *Maeil shinbo* was published continually throughout the colonial period and served as the official mouthpiece for the Japanese Government-General. After Korea’s liberation in 1945, it was renamed the *Seoul shinmun* and it is still being published today.

*Taehan munjŏn* (Korean Grammar)

*Taehan munjŏn* is a grammar of Korean written by Yun Kilchun in 1909. It is of one volume and printed with movable type. Through the introductory remarks in this book, we are told that the contents represent some thirty years of research and many revisions by the author. It is thought that this work was written during the time of Yun’s exile in Japan from 1896 to 1907 and represents a revision and reworking of the author’s *Chosŏn munjŏn* (Choson Grammar) that was written in 1895. Additionally, it is thought that the *Taehan munjŏn* published by Ch’oe Kwangok in January 1908, is also the work of Yun as it is essentially the same as *Chosŏn munjŏn*. On the other hand, the 1909 *Taehan munjŏn* represents a new work that is much larger and more detailed than the earlier works.

The contents of *Taehan munjŏn* are divided into three main sections of an introduction, speech and syntax, and the book itself is designed as a textbook of the Korean language. Moreover, the 1909 work corrects some errors made in the classification of parts of speech made in *Chosŏn munjŏn* and the 1908 *Taehan munjŏn*. Yun’s work is still of rich value to scholars of the Korean language, for its concise explanation of grammar, and is still useful for an historic examination of the Korean language and its systematisation.

*Taehan pulgyo ch’ŏnghwa-jong*

Taehan pulgyo ch’ŏnghwa-jong is a Korean Buddhist order. Its beginnings can be traced to the dispute, which intensified after the Korean War, between those who advocated a married Buddhist clergy and those who insisted that the clergy be celibate. In 1966 monks from Paegyang Temple and other monasteries attempted to reach a comprehensive accord (ch’ŏngghwa) between the feuding factions. Ideologically, the Paegyang monks et al based their position on the syncretic thought of Wŏnhyo (617-686), the patriotic ideals of Hyujŏng (1520-1604) and the Buddhist reforms advocated by Han Yongun (1879-1944). Unable to bring its mediation to a successful conclusion, the group, headed by Ch’oe Tügyŏn, became a separate organisation known as the Ch’ŏnghwahoe, on 15 May 1969. Ten years later it was officially registered as Taehan Pulgyo Ch’ŏnghwa-jong.

At present, the order has its headquarters in Chongno District in Seoul. It pays homage to Sakyamuni Buddha, regards Pou (1301-1382, styled T’aego) as its founding patriarch (chongjo) and accepts the *Heart Sutra* (Kor. *Panya shim gyŏng*) as its fundamental scripture. In the mid-1990s, the order had 885 monks and about 670 temples.

*Taehan pulgyo ch’ŏnt’ae-jong*

Taehan pulgyo ch’ŏnt’ae-jong is a Buddhist order founded by Pak Sangwŏl on 24 January 1967. The order’s headquarter is at Kuin Temple, a large monastic complex built in 1945 along a narrow valley in North Ch’ungch’ŏng Province’s Tanyang County. Basing itself on the Ch’ŏnt’ae (Ch. Tiantai) teachings, the sect regards the *Saddharma-pundarika sutra* (Kor. *Pophwa kyŏng*) as its chief scripture and Úich’ŏn (Grand Master Taegak, 1055-
Taehan pulgyo chin’gak-chong

Taehan pulgyo chin’gak-chong is a Korean Buddhist order founded on 14 June 1947 by Son Kyusang in Sōngsŏ, North Kyŏngsang Province. In December 1949, the organisation was named Shimin Pulgyo and in the years that followed, centres called Shinindang were set up in Kyŏngju, P’ohang and Taegu. In August 1953, the order acquired its present name, with Son assuming formal leadership under the title Taejongsa. With the death of Son Kyusang in October 1963, Son Taeryŏn became head of the order and in 1966, the order’s headquarters transferred to Hawŏlgok-dong in Seoul’s Sŏngbuk Ward.

The Taehan Pulgyo Chin’gak-chong is based on the Shininjong (Divine Seal Sect) which was founded by Myŏngnang during the reign of the Shilla Queen Sŏndŏk (632-647). As a Tantric sect, members of the order pay homage to Vairocana Buddha (Kor. Pirojanabul). In mid-1992, the order had 103 temples, 161 monks and 600,000 lay members. As well as its religious activities, the order operates middle and high schools in Seoul and Taegu.

Taehan pulgyo chinŏn-jong

Taehan pulgyo chinŏn-jong is a Korean Buddhist order which began as a group of Buddhist centres established in P’ohang by Son Haebong in 1948. With the setting-up of a centre in Ulsan in 1954, the organisation was officially registered as the Taehan Pulgyo Ch’amhoedang Kyodohoe. After several more name changes, it was registered under its present name in 1972.

The order regards the Shilla monk Hyet’ong as its patriarch (chongjo). Hyet’ong studied esoteric Buddhism in Tang China and founded the Ch’ongjijong (Dharani Sect) when he returned to Korea in 665. Doctrinally, the order mainly pays homage to the Buddha Taeil (Mahavairocana). Members are encouraged to undertake religious practices for both personal development and the betterment of the nation. A principal practice involves recitation of a Sanskrit mantra (e.g., ‘Om mane padme hum’) in order to purify the karma of body, speech and mind, and develop the virtues known as the six perfections (Kor. yu尽可能). The order considers Mahayana tantric texts such as the Dapiluzhena chengfo jing (Kor. Taebiroch’ana songbul kyŏng) to be the most authoritative Buddhist scriptures. As of 1992, the order consisted of some twenty temples and twenty-three monks.

Taehan pulgyo chŏngt’o-jong

Founded in Seoul in 1965 by Shin Tonghwan, Taehan pulgyo chŏngt’o-jong is a Korean Buddhist order based on the Pure Land (Kor. Chŏngt’o) Buddhist tradition which originated in India and China and was introduced into Korea during the Three Kingdoms. Doctrinally, the order regards the Wuliangshou jing (Kor. Muryangsu kyŏng) as its basic scripture. It officially registered its present name in 1972. Today, its headquarters is located at Pulsŏng Temple in Seoul’s Pulgwang-dong.

Taehan pulgyo hwaŏm-jong

Taehan pulgyo hwaŏm-jong is a Buddhist order founded in 1920 at Yaksa Temple on Inch’ŏn’s Mt. Manwŏl with Han Chunhae as its first leader. The order was revived in the 1960s, when Han Yŏngsŏk took possession of a former Japanese monastery in Inch’ŏn’s Shinhŭng-dong, calling it Haegwang Temple. In 1973, the order was officially registered under its present name. By 1988, it had 74 temples, 96 monks and 56,000 followers.
Doctrinally, the order is based on the Avatamsaka Sutra (Kor. Hwaom kyŏng) and the Bodhisattva ideal. As to spiritual practice, it advocates the dual cultivation of calmness and insight (Kor. chigwan; the two fundamental aspects of Buddhist meditation). But it also recognises yŏmbul (recollecting the Buddha) as an equally valid approach.

Taehan pulgyo ilsŭng-jong

Taehan pulgyo ilsŭng-jong is a Buddhist order founded at Seoul’s Wŏn’gu Temple (present Ilsŭng Temple) by Ch’oe Hyejong on 10 February 1968. The order is based on the ‘one-vehicle’ (Kor. ilsŭng) teachings of the Saddharma-pundarika Sutra (Kor. Pŏphwa kyŏng). Its present name, which was adopted in 1973, comes from a line in the Sutra: ‘Within the hundred-thousand realms of the Buddhas, there is only one vehicle [leading to awakening], not two or three.’ In the early 1990s, the order had 380 temples and nearly 700 monks.

Taehan pulgyo mirŭk-chong

The Taehan pulgyo mirŭk-chong is a Korean Buddhist order devoted to Maitreya (Kor. Mirŭk), the future Buddha. The order has an oecumenical outlook, adopting elements of Confucianism and Daoism. Founded by Kim Kyęju in South Chŏlla Province on 9 September 1942, the sect was initially called Mugyo, but was renamed MuUlgyo in 1946. On Kim’s death in 1959, Kim Honghyŏn assumed leadership. Some five years later, the order was officially registered under its present name. Its headquarter is in Koch’ang County in North Chŏlla Province. At the end of the 1980s, there were 107 temples, 119 monks and more than 150 000 followers.

Taehan pulgyo pomun-jong

Taehan pulgyo pomun-jong is a Korean Buddhist sect founded by the Bhikkhuni (Buddhist nun) Yi Kungt’an on 20 April 1972, at Pomun Temple in Seoul. The sect is unique as the only Buddhist order in the world with an exclusively female clergy. The order bases itself on the fundamental teachings of Sakyamuni Buddha and the soteriological ideals of Avalokitesvara Bodhisattva (Kor. Kwanseum Posal) In practical terms, the order emphasises both personal cultivation leading to awakening and social welfare projects such as schools and nursing homes. The Pomunjong considers Mahaprajapati (the Buddha’s aunt and step-mother who became the first Buddhist nun) as its founding patriarch (chongjo); the Qin (221-207 B.C.E.) Chinese Bhikkhuni Jingjian as the patriarch who transmitted the Dharma (chonbopcho); and the Shilla Bhikkhuni Pŏnnyu as the patriarch who revived the order (chunghŭngjo). With the arrival of the 1990s, the order had 33 temples, 172 nuns and 46 743 lay members. The order’s clergy, like those of the Chogye order, are strictly celibate and abstain from eating meat.

Taehan pulgyo pópsang-jong

Taehan pulgyo pópsang-jong is a Korean Buddhist order founded on 15 March 1969 with Chŏn Yongdong as its first Grand Patriarch (Chongjong). The order was modeled on the Maitreya Buddhism of Kim Hyŏngnyŏl, the chief disciple of Kang Ilsun (styled Chungsan). Regarding the Shilla vinaya master Chinpyo as its founding patriarch (chongjo), the order worships Maitreya, the future Buddha, and advocates a lay form of Buddhism based on compassion, the ‘ten benevolent forms of conduct’ (shipsŏn) and service to society. Through these teachings, the order aims to manifest paradise on earth. Pópsang-jong temples generally have a world map enshrined on the altar. The Taehan Pulgyo Pópsang-jong has its headquarters in P’yŏngch’ang-dong in Seoul. In the early 1990s, the order had of 242 temples, 390 monks and 147 721 lay members.

Taehan pulgyo purip-chong
Taehan pulgyo purip-chong is a Korean Buddhist order founded by Yi Yongi (styled Hongson) on 8 December 1965. The order regards Uich’ŏn (Grand Master Taegak, 1055-1101) as its patriarch (chongjo). Its headquarters is at Myogak Temple in Sungin-dong in Seoul. Ideologically, the sect is based on the philosophy of the Lotus Sutra (Kor. Pŏphwa kyŏng). For religious practice, it advocates the dual cultivation of calmness and wisdom. In the mid-1980s, the order consisted of 48 temples, 76 monks and 18 000 lay members.

**Taehan pulgyo wŏnhyo-jong**

Taehan pulgyo wŏnhyo-jong was founded by Kim Kyŏngt’aek on 10 July 1963 in Kyŏngju. In 1967, the order adopted Mangwŏl Temple in Kyŏngju’s Pae-dong as its headquarters and ten years later, it acquired its present name. Today, its headquarters is located at Anyang Hermitage in Seoul’s Ch’angshin-dong.

With the Korean monk Wŏnhyo (617-686) as its patriarch, the order advocates a practical lay form of Buddhism based on Sakyamuni Buddha’s teachings and Wŏnhyo’s doctrine of the harmonisation of disputes (hwajaeng). Through these teachings, the order aims to transform society, so as to manifest the Buddhist Pure Land (Kor. chongt’o) on earth. The order’s key scriptures are Wŏnhyo’s works: Kūmgang sammae kyŏng non (Treatise on the Diamond Samadhi Sutra) Kishin non haedong so (Kor. commentary on the Treatise on the Sraddhotpada Sastra); Awakening Faith) Pŏphwa kyŏng chongyo, (Essentials of the Lotus Sutra); Yŏrban kyŏng chongyo (Essence of Nirvana Sutra); Muryangsu kyŏng chongyo (The Essentials on the Infinite Life Sutra); and Palshim suhaeng chang (Treatise on Awakening Faith and Practice).

Wŏnhyo’s work Posal kyebon chibôm yogi (Essentials Concerning the Maintaining and Violating of the Bodhisattva Precepts) sets the ethical standards of conduct for members of the order; but some of the tenets have been reinterpreted so as to accord with more modern forms of lay Buddhist practice. As of 1992, the order had some 300 temples and about 320 monks.

**Taehan pulgyo yonghwa-jong**

Taehan pulgyo yonghwa-jong is a Korean Buddhist order founded in 1931 by Sŏ Paegil and Cho Chesŭng. The order regards the Indian monk Asanga (Kor. Much’ak) and the Chinese monk Xuanzang (600-664) as its founding patriarchs (chongjo); and the Shilla monk Chinpy’o as the founder of the order in Korea. Initially established at Kusŏng Temple in Kurye (South Cholla Province), the order expanded with the creation of a mission in Hadong (South Kyŏngsang Province) in 1935, followed by the construction of Sangbul Temple, the order’s training headquarters. In 1947, the temple facilities were transferred to Wibong Temple in Wanju. At the new site, the monks practised a regimen combining formal sitting meditation with farming. In 1955, Yonghwa Temple was founded in Kimje, and in December 1963, the order was registered as Taehan Pulgyo Yonghwa-jong. Today, the order’s centre is at Wŏn’gak Temple in the city of Chŏnju in North Cholla Province.

According to the order, each devotee should strive for enlightenment, so as to bring forth the enlightened epoch of Maitreya, the future Buddha. Although nominally Buddhist, the sect is ideologically related to Chungsan Taedogyo, an indigenous religion founded by Kang Ilsun. In the early 1990s, Taehan Pulgyo Yonghwa-jong consisted of 23 temples, 61 monks and 26 185 lay members.

**Taehŭksan Island**

For its administration, Taehŭksan Island is part of Hüksan Township in South Cholla
Province's Shinan County. The island covers an area of 19.7 sq. kms. and as of 1985, had a population of 5,138. Most live in the villages of Chin and Ye. With Kittae Peak (378m) in the west, Sonyu Peak (300m) in the south and Sangna Peak (227m) in the north, the entire island consists of rugged mountainous terrain. Taehüksan has an average annual temperature of 13.9 deg. C. and an annual rainfall of 843 mm.

Ye, the largest village, has a safe harbour which earlier served as a whaling post. Nowadays, it berths a fleet of fishing vessels. Fish catches and other marine products include harvest fish, yellow corbina, abalone, scallops, brown seaweed and underwater stone moss. Skate from the island's waters are considered especially good. Cultivated land is generally limited to small household plots. On the 1.71 sq. kms. of arable land on the island, sweet potato; barley; varieties of bean; garlic; and sesame are the usual crops.

The island was first settled in 828 C.E. when Chang Pogo (?-846) established Ch'onghaejin on Wan Island as a base for trade with Tang China. The 2,300-metre-long Panwöl (Half Moon) Fortress in Chin Village was purportedly built by Chang Pogo to repel Japanese pirates. Although less of a tourist destination than nearby Hong Island, Taehüksan offers many scenic attractions. Mt. Ch'illak's summit affords an excellent vantage point. There is also the fifty metre-high Ch'ottae (Candlestick Rock), which has a large cave at its base. The rock is also called Tottae (Sail Boat Rock) because of its triangular shape. The island is included in the Tadohae National Marine Park.

Taehüksan Island has a number of interesting customs. As on Cheju Island, the residents use the island's numerous stones to build walls enclosing their fields. Traditionally, stones are also attached to ropes placed over house roofs to prevent damage from the strong winds. The villages have shrines where the local tutelary deity is worshipped. On each lunar New Year in Chin Village, an elaborate three-day ceremony is held to ensure the safety of fishermen and a bountiful catch.

Taehung Temple

[Architecture]

_Taejanggyöng_ (see Buddhist canon, Korean)

_Taejön hoet’ong_ (Comprehensive Collection of the National Code)

_Taejön hoet’ong_ which was compiled and promulgated in 1865, is a collection of legal codes from the beginning of the Chosön period. This woodblock-printed work is composed of six volumes in five fascicles. It was designed to simplify all of the various legal codes of the Chosön period by placing them all into one comprehensive work. The text was classified into the six codes (yukchön) beginning with _ijön_, which defines the regulations for the government bureaucracy, _hojön_, which covers items relating to the national economy and finance and _yejön_, which dealt with matters concerning marriage and death. The other codes are the _pyöngjön_, which outlined military regulations, _hyöngjön_, which presented regulations concerning the justice system and the _kongjön_, which covered matters concerning roads, measurement, handicraft industries and mining.

_Taejön hoet’ong_ covers many aspects of Chosön society in a comprehensive manner. The various codes contained in this work permit understanding of the diverse systems that regulated different spheres of life in this period. To denote which legal code that laws had originally been established under, this work uses the Chinese character _won_ (original) to indicate those regulations that originated in _Kyöngguk taejön_ (National Code) of 1471 and _sok_ (continuance) to indicate the regulations first put forth in _Sok taejön_ (Supplement to the National Code) of 1746. In addition, the character _chüng_ (supplement) is used to mark the regulations that
first appeared in this work. Therefore, *Taejŏn hoet'ong* is quite valuable for studying the changes and progression of the legal code in the Chosŏn period.

**Taejŏn Metropolitan City**

Situated in the border of South and North Ch’ungch’ŏng Provinces, Taejŏn is comprised of the wards (ku) of Taedŏk, Tong, Sŏ, Yusŏng and Chung. Having recently been expanded to include the areas previously known as Taedŏk County, the city covers an area of 539.87 square kilometres and has a population of 1,298,000 (as of Dec. 31, 1996). Taejŏn sits in a basin surrounded by Mt. Kyeryong to the west, the Noryang Mountain Range to the east, Mt. Kŭmbyŏng (364m) to the north and Mt. Anp’yŏng (470m) and Mt. Manin (537m) to the south. In the northeast lies Taech’ŏng Lake, a large reservoir that was created with the building of Taech’ŏng Dam.

Most of the city’s farms are located in the outlying areas previously known as Taedŏk County. Rice is the area’s main crop, but barley, wheat, green vegetables, tobacco, ginseng and fruit crops are also common. Taejŏn is best known as a key industrial and commercial centre. Located in the centre of South Korea, the city has excellent road and railway links to other major cities. About 18 large companies have set up here, but the city’s industrial sector is dominated by medium and small-sized enterprises. Factories here primarily produce textiles, machinery, chemical goods and food stuffs.

Due to its central location, the city attracts visitors from around the nation. Typical tourist destinations within the city include Wŏndong Market in Tong ward, Taejŏn Tower, Yusŏng Hot Spring in Sŏ ward, and Mt. Pomun Park. Located in the southern part of the city, Mt. Pomun Park contains fifteen Buddhist temples as well as an amusement park for children. On the northern border of the city just east of the Kyŏngbu Expressway, one finds the Shint’anjin Swimming Resort. Situated on the Kŭm River, this picturesque spot boasts clear water and about half a kilometre of sandy beach.

Tourists also come to see the city’s historical relics and sites. Buddhist artefacts include a stone carving of a standing Bodhisattva figure (South Ch’ungsŏng Province Tangible Cultural Asset No. 59) at Pongso Temple and a stupa at Chungam Temple. There are also a number of old Confucian schools in the area, such as Chinjam Hyanggyo in the southwest corner of the city, Hoedŏk Hyanggyo next to the Kyŏngbu Expressway, Sunghyŏn Sŏwŏn to the west of Kam Stream and Tosan Sŏwŏn to the west of Yudong Stream. Namgan Chŏngsa in Kayang-dong, was a lecture hall built by the neo-Confucian scholar Song Shiyŏl (1607-1689). It is also where Song’s disciples published his work *Songja Taejŏn*.

There are a large number of colleges and universities in the area, to including Ch’unsŏng Electronics College in Yusŏng ward, Ch’ungnam Medical College in Chung ward, Ch’ungnam National University in Yusŏng ward, Chungyung Industrial College in Tong ward, Hannam University in Taedŏk ward, Korea Baptist Theological University Seminary in Yusŏng ward, Mok Won University in Chung ward, Pai Chai University in Sŏ ward, Taejon University in Tong ward and Ulji Medical College in Chung ward.

**Taejonggyo (see New Religion)**

**Taenanji Island**

Situated at the mouth of Sŏsan Bay, Taenanji Island is part of Sŏnmun Township in South Ch’ungch’ŏng Province’s Tangjin County. Almost one km. southeast of the island lies the smaller Sonanji Island. Taenanji is 3.05 sq. kms. in area and has a 9-km.-long coastline. The island’s topography is mainly low hills, the highest point being 119 metres. Due
mainly to cold winds from the northwest, Taenanji experiences severe winters. The island has an average yearly temperature of 11.4°C and an average rainfall of 1180mm.

Most of Taenanji’s residents live in the centre of the island and work the land. Local crops include rice, barley, beans and sweet potato. Marine products include sea-salt and shellfish. Visitors are attracted to the beautiful beaches on the island’s west coast. There is a twice-daily ferry service between the island and the mainland.

The island’s name is said to come from a local legend. According to this, a man with the surname of Ha lived was shipwrecked on the island. In a dream, an enlightened man (a Daoist sage) appeared and said, ‘I am the yellow dragon that protects this island. Tomorrow I will fight a blue dragon. At this time, you must take the arrow I give you and slay the blue dragon.’ Ha did as he was told, but when he shot the arrow he missed and killed the yellow dragon instead. Orchids (nan) grew where the dragon died and after Ha passed away, a strange grass (chich’o) grew from his tomb. As a result, the island came to be known as Taenanji (Greater Orchid Grass) Island.

Taeryŏng River

As a tributary of the Ch’ŏngch’ŏn River, the Taeryŏng River flows 150 kms. through North P’yŏngan Province. The river’s main branch begins at Kyeban Ridge in Sakchu County and flows south through the Chŏgyuryŏng Mountain Range to merge with Kamun Stream, Honggyŏngnae Stream and Illi River. In Sakchu County’s Oenam Township, the river turns to the southeast where it joins the Ch’ŏngch’ŏn River and flows then flows into Sŏthan Bay. On the lower reaches of the river, there is an extensive plain. Totalling nearly 6,000 hectares, the plain is an important grain-producing region. Although the river’s lower section contains a high volume of water, its decent is too gradual for efficient hydro-electric power generation. As a result, the river is chiefly used for irrigation. The river is navigable up to Pakch’ŏn County. During the area’s harsh winters, the river freezes over making it possible for both humans and farm animals to cross. In ancient times, the river was known as Chin River, Kaeja River and Pakch’ŏn River. According to legend, when Chumong (King Tongmyŏng, r. 37 to 19 B.C.E.) fled south from Puyo, the fish in the river formed a bridge so that he could walk across on their backs.

Taewŏn’gun (see Yi Haŭng)

Taft-Katsura Agreement (1895) [History of Korea]

Talsŏng County

Administratively part of Taegu, Talsŏng County is comprised of the townships of Kach’ang, Kuji, Non’gong, Tasan, Okp’o, Yuga, Habin, Hoewŏn and Hyŏnp’ung. Mt. Pisŭl (1,084m) rises in the east and the Naktong River snakes along the county’s eastern border.

Approximately three quarters of the county’s arable land is used for rice farming. In addition, the area produces a number of specialty crops for sale in nearby Taegu. In Kuji Township’s Taeam Village, Chinese cabbage is grown, while radishes are grown in Hwawŏn, watermelons in Non’gong, mushrooms in Okp’o, peanuts in Habin and onions in Kuji and Yugi townships. In recent times, pig and poultry breeding operations have been set up here, and the townships of Kach’ang and Okp’o have a large number of dairy farms. As for industry, in Yuga Township’s Kŭm Village there is the Hyŏnp’ung Industrial Park which produces farming implements, and other industrial areas are now being set up.

Located next to Taegu, the area attracts large numbers of local visitors. Mt. Pisŭl has
numerous natural attractions, as well as the Yuga, Sojae, Yongch’ón, Yongmun and Yongyŏn Temples. The latter is particularly famous as an ancient monastic complex originally founded in 912 by National Master Poyang. On the temple grounds, one finds the Hongdung mineral spring. There are also a number of old Confucian schools in the area such as Todong Sŏwŏn in Kuji Township, Inhŭng Sŏwŏn in Hwawŏn, Noktong Sŏwŏn in Kach’ang and Nakpin Sŏwŏn in Habin. Other historical sites include Sŏngmun Fortress in Kuji Township’s Todong Village. This stone fortification was built by Kwak Cheu during the Hideyoshi Invasions (1592-1598). In addition, in Hyŏn’p’ung Township, there is an old stone chamber (Treasure No. 673) which was used for ice storage.

On Mt. Pisül, there is a cave known as Sahyogul (Cave of the Four Filial Sons). Legend has it that during the Hideyoshi Invasions, an old man named Kwak fled to the cave with his four sons. Unfortunately, the old man had a chronic cough. Japanese soldiers, hearing the coughing as they passed by, ordered the person in the cave to come out. To save his father, one of the sons stepped out, only to be killed. When the old man uncontrollably coughed again, the soldiers repeated the order. This was repeated until only the old man remained. When he finally came out and told the soldiers about how his sons had intentionally sacrificed themselves to save him, even the hardened Japanese soldiers were deeply impressed with the children’s filial devotion. Instead of killing the old man, they wrote the words ‘father of filial sons’ on his back so that wherever he went he would be spared, and the cave became known as Sahyogul from this time on.

Tamhŏnsŏ (Writings of Tambŏn)

Tamhŏnsŏ is the literary collection of the late Chosŏn shirhak scholar Hong Taeyong (1731-1783). This work consists of fifteen volumes and is a hand-written manuscript. The title is taken from the pen name of the author. The collection consists of an analysis of the Confucian Classics, historical accounts of Korea and China, writings by the author that appeared in other works and his poetry.

Tamhŏnsŏ is also a notable work for the shirhak ideology of the author that is revealed in the section entitled ‘uisan mundap’ (‘Dialogue at Ûisan’). This section contains a debate between two imaginary scholars of this time: Hŏja who represented the conservative Confucian scholar of the day, and Shirung who embodies the writer’s ideology. The two scholars debate matters concerning the formation of the cosmos, in which Shirung rejects the orthodox view of the universe and reveals his vision of a heliocentric universe. Another noteworthy section of this collection is ‘Yŏngi’ which is a travel diary of the author’s trip to Beijing. In this section the author recounts many of the features of the Chinese capital including famous locales, folk customs, governmental institutions and the state of industry. This section is valuable for an understanding of Chinese society of this period.

In 1939 this work was published using movable type by a fifth generation descendant of the author. It included four volumes in the ‘inner’ section and ten volumes in the ‘outer’ section. There was also a supplement to the work. In 1970 it was published in two fascicles by Kyŏngin Munhwasa Publishers. Again in 1974 it was published, as an annotated work by Minjok Munhwa Ch’ujinhoe.

Tamyang County

Situated in South Chŏlla Province, Tamyang includes of the town of Tamyang, and the townships of Kosŏ, Kŭmsŏng, Nam, Taedŏk, Taejŏn, Mujŏng, Pongsan, Šubuk, Yong, Wŏlsan and Ch’angp’yŏng. The county covers a total area of 456 sq. kms. and population of 84 417 (1988 statistics). In the 1990s, the population has steadily declined by several thousand residents per year. The area is surrounded by Mt. Ch’uwŏl (731m) in the north, Mt. Pyŏngp’ung (822m) in the west, Mt. Sŏam (450m) in the east and Mt. Tŏkpong in the south. Being an inland region, the county’s weather is subject to sharp seasonal variation,
with a yearly average temperature of 12.7°C and an annual rainfall of 1295mm.

Rice cultivation flourishes in the area’s fertile plains. Of the county’s 12,517 hectares of arable land, three-quarters is used for rice growing and one-quarter for dry-field crops. Greenhouse cultivation is well established in Pongsan and Wolsan, and this produces strawberries, tomatoes, roses and chrysanthemums. The county also enjoys the distinction of being the nation’s leading grower of bamboo and this employs almost two-thousand people, growing the plants and manufacturing bamboo baskets and other commodities. In the town of Tamyang, is the Bamboo Crafts Museum, which contains three floors of exhibits. Founded in 1981, the museum displays a diverse range of products including trays, cosmetic accessories, mourning hats, looms and rice wine strainers. In addition, a bamboo products market opens in Tamyang on the 2nd, 7th, 12th, 22nd and 27th day of each month. Over two-hundred vendors come to the market to sell winnows, baskets and trays. In recent years, the local bamboo product market has been in decline as a result of cheaper imports from Vietnam and Taiwan. Other manufacturing industries in the county include a leather-goods factory and a knitwear factory in Tongun Village in Kumsong.

With picturesque scenery, Tamyang County attracts visitors from the surrounding areas, especially from nearby Kwangju. Mt. Ch’uwŏl in Yong Township is one of the most beautiful mountains in the province. Spectacular rock formations encircle the mountain, and the highest peak offers a panoramic view of Tamyang Lake. As one of the four man-made lakes built in the Yongsan River Project, the massive Tamyang Lake can store up to 66,700,000 tonnes of water. The lake’s clear water and tranquil surroundings attract anglers who come to fish for smelt, catfish, mullet and carp.

In addition to its scenic attractions, there are many historical sites scattered around the county. On the border of Kumsong and Yong townships, is a two to seven metre-high stone fortification that may date from the Three Kingdoms period. This was rebuilt in 1409, destroyed during the Hideyoshi Invasions (1592-1598) and rebuilt on numerous occasions since. The wooden buildings and gates which once stood here were burned down in 1894 during the Tonghak Uprising.

Important Buddhist relics found in the county include a stone lantern (Treasure No. 111) on the Kaeson Temple site in Haksŏn Village; a pair of stone banner pole supports (Treasure No. 505) in Kaeksa Village; a five-storey pagoda (Treasure No. 506) in Chich’im Village; a large bronze bell at Yonghŭng Temple; a stupa containing sarira at Yongch’u Temple; a stone pagoda at the Ŭn’gok Temple site in Pongan Village; a Buddha image at the Hyangjŏk Temple site in Haksŏn Village; a stone Buddha at Haengjŏng Village; and a Maitreya image in Punhyang Village.

Confucian schools in the county include Ch’ang’pyŏng Hyanggyo in Kosŏ and Tamyang Hyanggyo in Hyanggyo Village. The area also has a large number of pavilions such as Sŏnggangjŏng in Kosŏ’s Wŏn’gang Village and Myŏnangjŏng in Pongsan’s Chewŏl Village. The former is famous as the place where the poet Ch’ŏng Ch’ol, styled Songgang, spent his last days. The latter was founded by Song Sun in 1533 after his retirement from government service.

Several rituals are still performed in the area. A Tangsanje (Shaman ritual to worship the mountain spirit) takes place here in front of a guardian tree. Held on the 15th day of the first lunar month, it is performed much like a Confucian family ritual. It is said that local residents have consistently held the ritual ever since a local tutelary deity appeared in a dream of a lady with the surname of Nam during the reign of King Sukchong (r. 1674-1720). The deity told her that the villagers would prosper as long as they continued to hold the ritual. After the ritual is over, people share the rice cake offerings as it is believed that partaking of this food brings good fortune.
Tan'gun (?- c.190 B.C.E.)

As the first king of Ancient Chosón (Ko Chosón), Tan'gun is considered to be the mythological progenitor of Korean civilisation. The earliest references to Tan'gun are in the Chinese *Weishu* (Book of Wei) and the *Old Record* (*Kogi*), both quoted by Iryŏn (1206-1289) in the *Memorabilia of the Three Kingdoms* (*Sangguk Yusa*). The Tan'gun story is also mentioned in the *Rhymed Records of Emperors and Kings* (*Chewang Un'gi*) by Yi Sŏnghyu (1224-1300).

According to Iryŏn's quotation from the *Old Record*, Hwanin's son Hwanung wanted to descend from heaven and live in the human world. Hwanin sent his son to Mt. T'aebaek and Hwanung descended to earth with 3 000 loyal subjects. Along with his ministers of wind, rain and clouds, he taught the people a number of useful arts, including agriculture, medicine and moral laws. At that time, there was a bear and a tiger who wished to transform into human beings. Hwanung gave them each a bunch of mugwort and twenty corms of garlic and told them to remain in a dark place for a hundred days. However, only the bear faithfully observed the instructions and was transformed into a woman. Hwanung and the woman married, and she gave birth to a son which they called Tan'gun Wanggŏm. Tan'gun went to P'yŏngyang and established the Ancient Chosŏn Kingdom. Later, Tan'gun moved his capital to Asadal on Mt. T'aebaek, where he ruled for 1 500 years after which he became a mountain god.

In the *Rhymed Record of Emperors and Kings*, Yi quotes a work referred to as the 'Pon'gi.' The *Pon'gi* account is essentially identifiable to the *Memorabilia of the Three Kingdoms*, but does have some important differences. The *Memorabilia* records the 'tan' in Tan'gun with the Chinese character for 'altar,' whereas the *Rhymed Records* uses the character for 'birch.' In the *Rhymed Records* Tanung Ch'ŏnwang gives his grand-daughter a magical potion that transforms her into a human being. She is then married to the birch-tree spirit (*tansushin*), and the couple give birth to Tan'gun. Moreover, Yi, in the *Rhymed Records* claims that Mt. Asadal, where Tan'gun retired to become a mountain spirit, is Mt. Kuwŏl, while Iryŏn associated Mt. T'aebaek with Mt. Myohyang.

In addition to these early references to Tan'gun, scholars have analysed a number of data in an attempt to understand the Tan'gun myth. It has been pointed out that many of the ancient peoples living throughout East Asia have associated 'brightness' (Kor. *park*) with the sacred. Other scholars have pointed out how an ancient stone carving at the Wu Clan's shrine in Shantung Province seems to depict elements from the Tan'gun myth. However, other scholars have recently claimed that the carving is unrelated to the Tan'gun story. Others see the Tan'gun myth as a fusion of a sun-worshipping and a totemistic mythology. It is believed that the myth thus served to bring together the mythological orientations of two diverse societies. In addition, some scholars have looked at Shamanistic elements such as the descent of spirits, bear worship and the cosmic tree, as evidence that the myth comes from a Paleo-Asiatic culture. Similar elements are found in the Shamanism of Siberia and other parts of East Asia.

In modern times, Tan'gun is associated with a number of mountains in Korea, including Mt. Paektu, Mt. Myohyang, Mt. Kuwŏl, Mt. Mani and modern-day Mt. T'aebaek. At most of these mountain sites, ceremonies in honour of Tan'gun are still held. In addition, many of Korea's new religious movements, such as Taejonggyo, have been based on the Tan'gun myth. Taejonggyo celebrates Tan'gun's accession as National Foundation Day (*Kaech'onjol*). After liberation, the government officially designated the day (3 October) as a national holiday.

Tang'gun'gyo (see New religions)

Tanch'ông [Design]

Tangak [Music]

Tanggūm aegi [Literature]

Tangjin County

Situated in the northern part of South Ch'ungch'ŏng Province, Tangjin County comprises the towns of Tangjin and Haptŏk, and the townships of Kodae, Taehoji, Myŏnch'ŏn, Sŏngmumun, Songsan, Songak, Sunsŏng, Shinp'yŏng, Chŏngmi and Ugang. With the Yellow Sea to the north, Asan Bay to the east and the smaller Taehoji Bay to the west, the county covers an area of 589.11 sq. kms, and as indicated by 1988 statistics, had a population of 136,064. As part of an ongoing land reclamation project, a dyke has been built along the northwest border of Sŏngmum. Exposed to winds from the northwest, the area is relatively cool with an average yearly temperature of 11.4°c. and a yearly rainfall of 1,180.6mm.

Three-quarters of the county’s workforce is engaged in agriculture. With a reasonable amount of level terrain, about two-fifths of is arable land and over two-thirds of this area grows rice. As land reclamation goes ahead, the amount of land available for agricultural purposes is expected to increase. Dry-field crops such as turnip, Chinese cabbage are grown, and apple and chestnuts are produced commercially. In addition, hemp is grown in Kodae and ginseng in Shimp'yŏn. Sericulture is an industry in Chŏngmi and Songak. Cattle and pig breeding are other sources of farm income. Commercial fishing brings catches mainly of of hairtail and grey mullet. Minerals found in the area include lime in Chŏngmi and Songak, pagodite in Sŏngmum and felspar in Kodae and Songak. In Haptŏk there are several burlap and farm machinery factories.

The county’s leading tourist attraction is Nanji Island Beach in Sŏngmum. Located in the northwest part of the county, this crescent-shaped beach is favoured for its clear water and scenic beauty. Due to its difficult access, however, the beach is relatively less crowded than many other Korean beaches.

The county has a number of historical sites. In Chŏngmi’s Sudang Village lies the site of An’guk Temple, which is thought to date from Koryŏ. At the site is a stone pagoda (Treasure No. 101) and three interesting standing figures (Treasure No. 100) which were carved during Koryŏ. The tallest (4.9 m.) of these clumsy figures wears a large square ‘hat’ which sheds off rain. In Myŏnch’ŏn to the southeast of Mt. Ung (254m) stands Yongt’ap Temple, a monastery that underwent restoration by the famous monk Chinul (National Master Pojo, 1158-1210). Here is a gilt-bronze Buddha triad (Treasure No. 409); a Yaksa Yŏrae (Bhaisajyaguru) statue (South Ch’ungs’ŏng Province Tangible Cultural Asset No. 111); a seven-storey pagoda and a large bronze bell. In Kodae’s Chin’gwan Village is Yŏngnang Temple. It is said that this monastery’s main Buddha hall was constructed by Ado in 648.

In addition to Buddhist sites, the county has Confucian schools, such as Tangjin
Hyanggyo (established in 1407), Myŏnch’ŏn Hyanggyo in the northeast part of Myŏnch’ŏn Township; and Tongak Sŏwŏn just north of National Road 630 near Songak Fortress. The last-named was founded in 1706 in honour of the scholar Yi An'ul (styled Tongak, 1571-1637). There are also several old Confucian shrines in the area. In Taeho’ji’s Chŏksŏ Village, one finds Osan Sadang built in honour of the scholar Ch’a Ch’ŏl’o who was styled Osan. Southeast of the shrine in Tora Village lies Ch’ungjang-sa, a shrine commemorating Nam Yihŭng, a revered official during the reign of King Injo (r. 1623-1649). Hanwŏn-sa, a shrine built in honour of Yi Manyu, a famous general of late Chosŏn, is in Shinp’yŏng’s Kŏsan Village.

**Tangūi**

**Tangūi t’ongnyak**

*Tangūi t’ongnyak* is a political exposition written by the late Chosŏn period scholar Yi Kŏnch’ang (1852-1898). This hand-written manuscript consists of two volumes in one fascicle. In 1910 this work was published using the new movable type by the Kwangmunhoe, a society for publishing classical works headed by Ch’oe Namŏn. It covers the period from 1575 until 1755 and traces the history of the leading political factions of this period.

*Tangūi t’ongnyak* provides an accurate portrayal of the political factionalism that gripped the Chosŏn Kingdom from its middle period onward. The author presents in a fair and impartial manner the turmoil among the various factions who were contesting for power. There are numerous accounts of the political strife and the resultant chaos and purges that marred the Chosŏn period.

The author’s impartial presentation of the political anarchy of the middle and late Chosŏn period is valuable in that it offers one of the few non-partisan records of this period. Most other writings concerning the political factionalism of Chosŏn are biased by the ideology of the writer. *Tangūi t’ongnyak*, however, provides an objective appraisal of the political strife, which is the greatest value of this work.

**Tano**

**Tano sŏkchŏn** (Rockfight on Tano Day, A)

**Tanyang County**

Situated in the northeast corner of North Ch’ungch’ŏng Province, Tanyang County is comprises the towns of Tanyang and Maep’o, and the townships of Kagok, Taegang, Osangch’ŏn, Yŏngch’un and Chŏksŏng. The county covers a total area of 770 sq. kms. and a population of 54,969 (1988 statistics). The present town of Tanyang is often called Shin (New) Tanyang while the original town, most of which was submerged when the Ch’ungju Dam was built in 1985, is known as Ku (Old) Tanyang. As a planned city, Tanyang’s streets are straight and wide. The Namhan River flows through the county from the northeast to the southwest. To the east of the river, is Shinsŏn Peak (1,389m), Kungmang Peak (1,421m), Mt. Sobaek (1,440m), Tosol Peak (1,314m) and other peaks of the Sobaek Mountain Range. As part of an inland basin, local weather is characterised by sharp variations of summer and winter temperatures. The area has an average yearly temperature of 11.6c. and an average annual rainfall of 1,072.5mm.

The preponderance of mountainous terrain means that there is relatively little arable land (approx. 8,600 hectares). Of this, about one-quarter grows rice, and over 6,000 hectares
devoted to dry-field crops, including grains, legumes, ginseng, peanuts, sesame, medicinal herbs and cotton. In addition, the county is a leading producer of garlic and red pepper. Tanyang garlic is famous for its tangy flavour and its keeping qualities. Mineral resources found in the area include limestone, coal, mica, fluorite and talc. Many cement plants have been established in the region, taking advantage of the county’s considerable limestone deposits. Hanil Cement, Hyundai Cement and Songshin Chemicals together produce around 6 million tons of cement annually. As for specialty products, the area produces inkstones which are renowned for their quality and fine craftsmanship. The red stone that is found in the area is ideally suited for this purpose, with its fine grain and its highly-impervious quality.

Surrounded by the ridges of the Sobaek Mountain Range, Tanyang County is widely acknowledged for its scenic beauty. Throughout the year, tourists flock to Mt. Sobaek National Park to hike the numerous trails and visit scenic spots such as Yongdam Waterfall or the mountain’s many caves. Ch’ungju Lake is another popular destination which offers a wide range of sightseeing activities including both power-boat and open-deck cruises. On the lake’s eastern shore is Kosu Cave, one of Korea’s best-known limestone caves. Formed about 500 million years ago, this cave was designated as a Natural Monument following the government’s speleological survey in 1973. With its dramatic stalactites, stalagmites and limestone formations, the cave attracts large crowds of visitors. Unfortunately, the sites have suffered from both heavy tourist traffic and vandalism. About four kms. from Kosu Cave is the smaller Ch’ongdong Cave. Discovered in 1977, this 300-metre-long cave consists of a vertical gallery. Not far from here lies Nodong Cave, a recently discovered cave of about one km. in length. Notwithstanding its awesome beauty, Nodong is less frequented by tourists than the famous Kosu Cave.

In addition to its numerous scenic attractions, the county has a number of historical sites. The Koryŏ scholar U T’ak is said to have gone into retreat near Sain Rock (one of the area’s eight scenic wonders) in order to restore his flagging health, and Yi Hwang (T’oegye, 1501-1570), Korea’s leading Confucian scholar, was once posted here as magistrate. Confucian schools found in the area include Yongch’un Hyanggyo in Yongch’un’s Sang Village; Tanyang Hyanggyo just south of Chungmyŏng Stream in Tanyang; and nearby Togye Sŏwŏn in Tanyang’s Pukha Village. The first-named was founded in 1399 and was moved to its present location near the Namhan River in 1791. Tanyang Hyanggyo was founded by the Tanyang county magistrate Yi Chak in 1415 and was moved to its present location by Yi Hwang. Togye Sŏwŏn, on the other hand, was reconstructed in 1971 from Top’o Sŏwŏn which stood on the banks of Soyang River in Ch’unch’ŏn and Tan’gye Sŏwŏn which was located in Chiha Village. The new sŏwŏn took its new name from the first syllable of the former, and the second syllable of the latter school.

The county also has a number of important Buddhist sites. Within Mt. Sobaek National Park in Yongch’un Township’s Paekcha Village lies the picturesque Kuin Temple. Sangwŏl Wŏn’gak, who revived the Korean Ch’ont’ae (Ch. Tian-tai) sect, founded the temple here in 1945. In 1966, the temple was expanded to become the large monastic complex found at the site today, and a year later, the Ch’ont’ae Order was officially registered, with Sangwŏl as its leader. As the main monastery of the order, the temple serves as the administrative centre for one-hundred and eight branch temples. Whereas most Korean monasteries are situated in broad valleys at the foot of mountains, the Kuin Temple complex stretches out along a narrow valley. The complex contains over fifty buildings, including the thirty-three-metre-high, five-storey Great Dharma Hall and at the temple entrance, giant bronze figures of the Four Heavenly Kings. Resident monks are engaged in agriculture, making the temple self-sufficient in terms of food. Unlike the Chogye Order which insists that its monks remain celibate, the Ch’ont’ae Order allows its monks to marry.

Theatre

The history of the theatrical arts in Korea may be said to have begun with the mask dance-dramas and puppet plays, known variously as t'alch'um, t'alnorŭm, or kamyŏn kŭk, whose roots reach far back in time to village shrine ceremonials, called sŏnang je and to a form of Buddhist ceremonial mime dance-drama that was didactic in nature called Kiak which was imported from Central Asia through China during the Three Kingdoms.
More than ten genres of mask dance-drama are known throughout the Korean peninsula today. Though differences can be found in costumes, masks, dance movements, songs, musical accompaniment and dialogue, in accordance with regional characteristics. The dance movements of the masques from the north, for example, are, generally speaking, wide and gruff in movement. Whereas those from the central and southern regions are more petite and gentle by comparison. The northern masks are more grotesque in appearance than their central and southern counterparts, which tend to be more realistic in nature. The majority of the mask dramas are fairly homogeneous in content. That is, they almost all consist of a string of unrelated acts, an omnibus type of drama, that forms a humorous satire on the malpractices of Chosŏn upper classes, along with that of apostate Buddhist monks and the triangular relationship between husband, wife, and concubine prevalent in the society of the time.

This cycle of folk plays, which also includes the puppet drama (called "kkoktu kakshi") that was performed by roving, itinerant minstrels call namsadang, found throughout Korea during Chosŏn, is referred to by folklorists as the "Sandae Togam" tradition.

The "Sandae" is believed by some to be the descendant of the "Kiak," mentioned previously, which was introduced into Paekche from China and continued to be performed throughout Koryŏ (918-1392). Other scholars assert, however, that it was derived from a mask play called the "Narye" which originated in China and was introduced into Korea at least by early Koryŏ. Featuring grotesque masks it was given on the last night of the year to exorcise evil spirits so that the new year would remain free of trouble and misfortune. By mid-Koryŏ this form had developed into the "Sandae," which was sometimes presented in combination with the "Ch'ŏ'yong mu" (Dance of the Son of the Dragon King of the East Sea), a mask dance-drama derived from a ninth century lyric poem, (The Song of Ch'ŏ'yong) called a "hyangga" that is recorded in the "Sanguk yusa" (Memorabilia of the Three Kingdoms), which was employed as an exorcismal to ward off disease. The "Ch'ŏ'yong mu" remains as the only court mask dance in existence in Korea today.

The "Sandae," along with the "Ch'ŏ'yong," was to have been performed at court until about 1634, when the players suffered extreme hardships because the Neo-Confucianists disdained the traditional art that used the native language instead of the refined Chinese classics. It was then that the king withdrew it from the official functions, and the players were banished from the court. And so the "Sandae" and the "Ch'ŏ'yong" parted ways, the former to journey from the court in Seoul to the countryside of Kyŏnggi and other outlying provincial areas, thereby becoming the domain of the common folk, while the latter was to continue within the confines of the palace walls until the last days of Chosŏn. It is small wonder then that this once highly formal and religious dance-drama was to become a bitter satire against the Confucian-dominated ruling class and the Buddhist monks, a grotesque comedy that gave vent to the grievances borne by the subjected masses in an oppressive feudal society.

Henceforth, the "Sandae" players were to become entertainers who performed at village festivals on such occasions as the birth of Buddha, held on the 8th day of the 4th lunar month, and Tano (the 5th day of the 5th lunar month). The Tano festival was held at a relatively slack period in the busy agricultural calendar, just before the arduous work of summer rice-planting began. As part of the festival, a performance of mask dance-drama would be held to expel evil and invoke blessings for a good harvest in the coming year.

The colours of the masks -- made of gourd, paper, or wood according to region -- used in the drama are symbolic of the four points of the compass: blue-East, red-South, white-West, black-North and the pivot, the yellow-Centre. Thus, as is seen in some of the "Sandae"-type dramas such as the Yangju pyŏl sandae of Kyŏnggi Province, the Pongsan t'alch'um of Hwanghae Province, and the Tongyŏng ogwangdae and Suyŏng yayu, both of South Kyŏngsang Province, when the old monk (nojang), who wears a black mask, is
defeated by the young prodigal (*ch'wibari*), who wears a red mask, and also when the old woman (*halmi*), who wears a black mask, is defeated by the young concubine, it is symbolic of the 'Battle of Winter and Summer' held at seasonal festivities.

Aside from the Sandae Togam tradition, there were two categories of Korean mask dance-drama; one which originated at the village shrine ceremonies, called the *sonang je*, and the other the Lion Dance-Drama of Pukch'ong in Hamgyŏng Province. The masque of the *sonang je*, which can still be seen today at the Kangnŭng (Kangwŏn Province) Tano Festival and the *Pyŏlshin* ritual drama of Hahoe (North Kyŏngsang Province), possesses characteristics of a seasonal ritual drama and suggests a prototype of the original masque. The Lion Dance-Drama, which originated from Central Asia, is a folk play that was performed as part of lunar new year festivities. The dance of the lion takes up the greater part of this masque.

The puppet drama, which was already known in the Three Kingdoms through the *Koguryŏ ak* (Music of Koguryŏ), is believed to have been either introduced into Korea through China or brought directly, via the northern route, from the west Asian continent together with the music and dances. Thus it is thought that the mask dance-drama and music of Koguryŏ, which also originated in west-central Asia, probably have some connection with that of the puppet drama.

Theatrical arts in Korea may also have originated in part from the *p'ansori*, a long form of vocal music in which a *kwangdae* (singer of tales) sings a work of narrative literature to the accompaniment of only a single drum. The subject material of the narrative is usually taken from time-honoured folktales, though recent times have seen the creation of new works based on both historical and religious elements as well.

Sources differ somewhat as to the etymology of the word *p'ansori*, but it is generally thought that the prefix *p'an* indicates a place or area where various types of folk arts were once performed, often referred to as 'a norip'an (performance area). The suffix *sori* means sound, but a sound that can either be spoken or sung. In the case of the *p'ansori* it is both, the singer alternating sung passages (*ch'ang*) with recitative (*aniri*). Therefore, when the two parts of the word are combined, it can be translated roughly into a 'song sung at a place of entertainment'.

In the past, this 'place of entertainment' was more often than not to be found at the village square on market days and traditional festive holidays, at wedding ceremonies, the gardens of wealthy aristocrats, or, on rarer occasions, even the royal court itself. Today, however, *p'ansori* is almost always performed on the stage of a modern, Western-style theatre and occasionally for television audiences.

Whether it be at a village market-place or on a theatrical stage, the performance style is essentially the same. The singer stands on a straw mat, called the *sorip'an* (singing place), while the drummer sits to the singer's left. A fan and handkerchief are employed as props - and in summer as cooling devices too - as the performer sings and speaks, often acting out the story with gestures (*norum sae*) and an impromptu dance (*pallim*) as well.

Though sources vary also on the origin of the *p'ansori*, the general consensus is that its melodic roots lie largely in the shamanist ritual songs of the south-western part of the peninsula, the resemblance of which may be borne out even today. In this area, the religious practitioners are always female, the role of the males being solely to provide the musical accompaniment. It is believed that some of these male musicians abandoned their religious function to become what is known in Korea as *kwangdae* which accounts roughly to wandering minstrels, bards, troubadours, or *jongleurs*, gradually evolving into the role of professional entertainers. Their repertoire came to include not only instrumental and dance performances, but also tightrope-walking, tumbling, and juggling. In between their acts,
they engaged in a kind of story-telling employing both song and recitative, the story material being drawn from well-known folktales with the melodic structure of the songs stemming from shamanistic ritual music and regional folksongs. Having no formal education, their repertoire was simple and told entirely by rote. Here then, lie the beginnings of the p'ansori, which scholars estimate to be somewhere during early period (c. 15th -16th c.). A vestige of the primordial style of p'ansori can still be found at some village ritual ceremonies, although it is gradually disappearing.

By mid-Choson (18th c.), p'ansori had developed as an art-form, both in quality and quantity, to the point of sophistication, wherein its proponents dissociated themselves from the acrobatic-type repertoires of which it once was a part. Eventually, p'ansori text and music came to appeal to the aristocratic class, who, in earlier times, found it repugnant and regarded it as being fit only for the lower classes. From the 19th c. a great number of famous p'ansori singers were patronized by the nobility, and, because of the wide variety of social audiences, a greater breadth of linguistic expression was inevitably needed. Accordingly, many vulgarities of the original texts were dropped in favour of quotations from Chinese classics, the standard literary media of the gentry and scholarly class, although folk proverbs were still included.

During King Sunjo's reign (r. 1800-1834), the p'ansori, which then consisted of a total of twelve songs, was put into written form by a man named Shin Chaehyo (1812-84) He became the most notable patron of the p'ansori. Shin was also a specialist, educator, and compiler of p'ansori texts. His talent was not limited to the work of researcher and compiler alone, however. He also refined and polished the p'ansori texts, sometimes re-writing whole sections, and influenced the way in which it was performed by arranging the texts with proper rhythmic and melodic patterns. In addition, he improved singing techniques and placed particular emphasis on the norūmsae and dialogue technique, thus attempting to establish a stronger unity in the work as a drama in the modern sense. Also, before his time there were no known female p'ansori singers, and he was the first to break with this tradition by himself training a woman. His greatest accomplishment, however, was the reorganization and codification of five of the twelve original songs into the so-called Five Great P'ansori as they are known today.

Shin Chaehyo was thus, in addition to everything else, a reformer who turned the p'ansori toward the path of becoming a stage art - an opera in the Western sense of the word - which it eventually did, around the turn of the 20th century, in the form of what is known today as ch'ang'gük (a sing-spiel or 'singing play', so to speak), a kind of Korean traditional folk opera.

In ch'ang'gük, the dramatic roles are performed by different singers in costume and make-up along with theatrical trappings such as stage props, scenery, lighting, and sound effects as in Western and Chinese opera, and Japanese kabuki theatre. It is accompanied by a full instrumental ensemble.

As annexation, war, and the introduction of modern forms of entertainment spelled the near death of mask and puppet drama, as well as the p'ansori and ch'ang'gük until about the early 1970s when the Korean government, at the urging of concerned scholars and folklorists, decided to designate these art-forms as Intangible Cultural Treasures, to be protected and preserved for posterity. Also their living exponents as Human Cultural Treasures, who were able to receive government subsidies so that they might pass on their knowledge to future performers.

Though the history of modern theatre in Korea is officially recognized as beginning on 26 July 1908 with the opening of the Wŏn'gak-sa Theatre in Seoul by the novelist-playwright Yi Injik (1861-1916), the first modern theatre was actually built in 1902 as part of the ceremonies marking the 40th anniversary of King Kojong's coronation. This was a small
amphitheatre with a capacity of 500 to 600 and in which kisaeng (female entertainers), pansori singers, and kwangdae held stage rehearsals. The first performance at the Wŏn'gak-sa theatre in July 1908 was given by renowned kisaeng and male singers of the capital. Modern drama was actually not performed until November of that year when Yi Injik dramatized his novel 'The Silver World' and performed it on the Wŏn'gak-sa stage on 15 November 1908. It became the first 'new (modern) drama' (shin'guk) performance in Korea, and laid the foundation for drama performances in the modern sense that have continued up until the present time.

A C Heyman

Thomas, Robert J. [United Kingdom and Korea]

Three Kingdoms, The (see History of Korea)

Tobong Mountain

Situated at the north-eastern edge of Seoul, Mt. Tobong is part of Pukhan-san National Park. The mountain is characterised by jagged granite peaks and rugged terrain. To the south of Chaun Peak, the mountain's highest point (710 metres), lie Manjang and Sŏnin Peak, and to the west lies the Obong (Five Peaks) area. Many temples are here, including Ch'ŏnch'uk, Wŏnt'ong, Mangwŏl, Sasangnyong, Hüiryong Temples and Kwanum Hermitage. In addition, the Tobong Academy, founded by King Sŏnjo (1567-1608) in
Commemoration of the Confucian scholar Cho Kwangjo (1482-1519), is located on the mountain. Mt. Tobong is frequented by Seoul residents who picnic in the valleys or hike the mountain’s trails.

Tögyu Mountain

Situated south of Muju and east of Chinan, Mt. Tögyu is part of the Sobaek Mountain Range. The mountain has two prominent peaks, the 1,614-meter high Sang (Upper) Peak, also called Hyangjök Peak, and the 1,594-metre high Chung (Intermediary) Peak, also known as South Tögyu Mountain. The ridge connecting these two peaks forms part of the boundary between North Cholla and South Kyongsang Province. To the north-west of the main peak lies Mt. Tumun (1,051 metres), to the north-east, Ch’il Peak (1,161 metres) and Köch’il Peak (1,178 metres), to the east, Ch’i Peak (1,248 metres), and to the south-west on the ridge connecting the two peaks, Mt. Muryong (1,492 metres) and Satkat Peak (1,386 metres). These high peaks, all exceeding 1000 metres, are sometimes referred to collectively as the Tögyu Mountain Range.

With its high peaks, the Tögyu Mountain Range formed a natural barrier between Paekche and Shilla during the Three Kingdoms Period. The value of the range as a natural barricade was also appreciated during the Koryó Period. In 1374, Ch’oe Yong (1316-1388) is said to have built the stone fortifications that can still be seen on Choksan Mountain. In addition to these historical sites, several Buddhist temples are located in the Mt. Tögyu area. Paengnyöön Hermitage, founded during the Shilla Period, was burnt down during both the Hideyoshi Invasion and the Korean War, but has now been rebuilt. An’guk Temple, situated inside the Choksan fortifications, was founded during the Koryó Period.

The lower elevations of Mt. Tögyu and South Tögyu Mountain are characterised by relatively gentle terrain; however, the peak area of Mt. Tögyu is made up of spectacular rock outcroppings. Since both peaks have few trees at the higher elevations, it is possible to see the entire area from almost any vantage point; however, the true beauty of the mountain lies hidden in the small valleys which snake up toward the summit. In particular, the Kuch’ondong Valley is famous for its splendid scenery. In order to better preserve the mountain’s natural and historical heritage, the area was designated Tögyu-san National Park in 1975.

Towhasō

Tok Island

Situated 92 kms. east of Ullüng Island in the East Sea, Tok Island is the easternmost part of Korean territory. Administratively, the island belongs to the town of Ullüng in North Kyongsang Province’s Ullüng County. Formerly known as Sambong Island, Usan Island and Kaji Island, the island acquired its present name in 1881. In Japan, the island is called Takeshima (Bamboo Island) and Matsushima (Pine Island). In the West, it was named after the ships that discovered it. The French called it Liancourt and the British, Hornet.

Tok actually consists of two small islands, known as Tong and Sö, that stand 110 to 160 metres apart, along with about 36 small rocks and islets jutting out of the sea. Tong (East) has an area of 0.060 sq.kms, and Sö (West) 0.110 sq.kms. These rugged islands, along with Ullüng Island, rose out of the East Sea as a result of volcanic eruption. Too small to support permanent settlements, the islands are occupied by an army contingent.

During the Russo-Japanese War, Tok was annexed by Japan. Almost a half-century later, on 18 January 1952 Korea reasserted its ownership in the ‘Injöp haeyangûi chugwôn e kwanhan tae’ongnyöng sônôn’ (The Presidential Declaration on the Sovereignty of the Adjacent Seas). In the proclamation, Tok Island was included within the ‘p’yönghwason’

(Peace Line) demarcating Korean territory. Ten days later, the Japanese government issued a statement claiming that the so-called ‘Peace Line’ violated principles of international law. Since 1952, the island has often been the site of bitter dispute between Korea and Japan.

Tōksu Palace (Kyōngun Palace)  [Architecture]

**Tong Paengnyŏn Mountain**

Situated on the border of Munch’ŏn County in South Hamgyŏng Province and Koksan County in Hwanghae Province, East Paengnyŏn Mountain (1,246 metres) marks the juncture of the Mashingnyŏng Mountain Range and the Ōnjin Mountain Range. The entire area is characterised by steep, rugged terrain that gives way to almost perpendicular slopes on the north-east side. In contrast with the broad-leaved forest of the southern side, the mountain’s northern side is covered with dense stands of conifers.

*Tonga ilbo* (see Newspapers)

*Tonga kyosŏpsa ūi yŏn’gu* (A Study of the History of International Relations in East Asia)

*Tonga kyosŏpsa ūi yŏn’gu* is a 557-page work written by Ko Pyŏngik and was published by Seoul National University in 1970. This work centres on Korea but also covers China, Mongolia, other East Asian nations and India. The work covers matters ranging from historical times to the present and includes topics such as political systems, foreign relations, social structure, legal systems and ideology among other topics. It is divided into the three broad sections of ‘History and Cultural Exchange’, ‘The Relationship between China and Koryŏ’ and ‘Interaction Between Korea and Western Nations’.

This work outlines the problems and facts in the relationship between the Orient and the West in a straightforward manner. However, the author does not adequately deal with the issue of the Japanese problem in Asia. Despite this, the work contains a great deal of material for research into the relationship between the West and East Asia.

*Tongbang munhwa kyoryusa non’go* (Studies of the History of Cultural Exchange in East Asia)

*Tongbang munhwa kyoryusa non’go* is a 243-page work written by Kim Sanggi and published by Eul Yoo Publishing Company in 1984. This work examines the cultural interchange between China and Korea. In the first part of the work the rise and fall of sea power, particularly that of Chang Pogo, (d. 846) is discussed. In the second section the maritime activities of Koreans during the times of military rule and of the Mongolian Invasion of Koryŏ are examined.

Tongdaemun (Great East Gate)  [Architecture]

*Tongdong* (Tongdong Refrain)  [Akhak koebŏm]

**Tongduch’ŏn**

Tongduch’ŏn is situated in Kyŏnggi Province to the north of Seoul. Mt. Mach’a (588 metres) rises to the west of the city while Mt. Soyo (536 metres), Kuksa Peak (754 metres), Mt. Wangbang (737 metres) and Mt. Haeryong (661 metres) mark the eastern border. Kanghwa Stream runs north through the city before entering the Hant’an River.
The city is a commercial centre for northern Kyŏnggi Province. There are a number of military bases here including Camp Casey, an important military installation of the United States army. In order to serve the needs of the soldiers, the city has a large service industry. Less than 10 per cent of the population is engaged in agriculture. Most of the farming is devoted to dry field crops and fruits such as apples, pears and grapes. Dairy farming also forms an important part of the local economy. Taking advantage of the road and railway connections to Seoul, there are a number of factories in the area, but most of these are only medium-sized operations. There are also several silica mines in the city.

For the most part, the town’s tourism is centred around Mt. Soyo, which has been called ‘the Diamond Mountains of Kyŏnggi Province.’ At the most popular entrance to the mountain, there are war memorials dedicated to soldiers from Belgium and Luxembourg who fought in the Korean War. The trail up the mountain takes one past numerous waterfalls and several Buddhist hermitages. Mt. Soyo is particularly popular in the autumn when the leaves change colour.

In addition to picturesque mountain scenery, there are several important historical sites in the area. On Mt. Soyo, one finds Chajae Hermitage which was founded by Wŏnhyo in 645, and in T’ap-dong there is a stone Buddha from the late Koryŏ period. In Sang’ae-dong, there is the Samch’ungdan (Altar of the Three Loyal Ministers). This small shrine commemorates Min Shin, Kim Mun’gi and Cho Kwan who opposed Sejo’s usurpation of the throne that was held by the child King Tanjong (1452-1455).

Tonggak chapki (East Tower Miscellany)

*Tonggak chapki* is an unofficial history written by the middle Chosŏn period scholar-official Yi Chŏnghyŏng (1548-1607). This calligraphed work consists of two volumes. In this work, Yi begins by tracing the lineage of Yi Sŏnggye (the founder of the Chosŏn Kingdom) and then details the history of Chosŏn through the reign of King Sonjo (r. 1567-1608). In this unofficial history, Yi devotes much attention to political affairs and the individuals who were involved in the various political incidents in the first half of the Chosŏn period. Some of the matters that are covered include the rise to power by Yi Sŏnggye, the political activities of Chŏng Tojon (1342-1398), the Purge of the 1519 (Kimyo sahwa), the Purge of 1545 (ilsa sahwa) and the 1592 Japanese Invasion among other major events.

Since this work is in the form of an unofficial history it does not cover all of the events that occurred in the first half of the Chosŏn period. However, it does touch upon the major events of the period and serves as a valuable supplement to the official histories contained in the Chosŏn wangjo shillok (*The Veritable Records of the Chosŏn Dynasty*). Therefore, this work is useful for the study of the first half of the Chosŏn period.

Tonggang munjip (Collected Works of Tonggang)

*Tonggang munjip* is the literary collection of mid-Chosŏn scholar and meritorious retainer, Kim Uong (1540-1603). The original work consists of seventeen fascicles in eight volumes, with a supplement of four fascicles in two volumes. The work is a woodblock print. The work was compiled and published by the author’s disciples in 1661. The original woodblock version was used as the basis for an 1846 republication of the work.

*Tonggang munjip* contains a preface written by Hŏ Mok and poems, funeral odes, memorials to the throne, lectures to the throne and other official documents among its varied contents. The lectures to the throne on the Chinese classics, reveal the great breadth of knowledge of the author, and moreover, display the understanding that Kim had of the importance of the proper interpretation of neo-Confucian doctrines to the monarch’s governance of the nation. *Tonggang munjip* is considered as being of great value for
understanding the political, economic and social situation of Chosŏn at about the time of the 1592 Japanese Invasion. Additionally, since the author was deeply involved in the factional politics that dominated the court at this time, it is also useful for an examination of the causes behind this divisional strife. This work is preserved at the Kyujanggak Library and Koryŏ University Library.

**Tongguk chŏngun** (Dictionary of Proper Korean Pronunciations, 1448)

The *Tongguk chŏngun*, in six volumes, is a dictionary of Chinese characters arranged by rhyme. The work was compiled on the order of King Sejong in 1447 by Shin Suk-chu, Ch'oe Hang, Sŏng Sammun, Pak P'aengnyŏn, Yi Kae, Kang Hŭihan, Cho Pyŏn'an, Kim Ch'ung and Yi Hyŏnro, and published in 1448.

Even after han'gŭl was invented in 1443, Chinese characters were still widely used in Korea. Consequently, a dictionary arranged by rhyme (one of two ways used to arrange Chinese dictionaries) was in great demand at that time. The *Tongguk chŏngun* is a dictionary of this kind, but it was compiled with Koreans in mind.

The dictionaries arranged by rhyme (*unsŏ*) published in China showed pronunciation quite different from the actual pronunciation of Chinese characters practised in Korea. This difference was probably a consequence of natural linguistic changes in the vocal sounds. These differences were recognised at the time and it was felt there was a need to standardize the pronunciations.

While the original work consisted of six volumes, only volumes 1 and 6 are extant.

The work is important as the first dictionary by rhyme in Korea, as a guide to the pronunciation of Chinese characters in Korean in the 15th c., and for its pioneering use of han'gŭl to explain the pronunciation of Chinese characters. As an official work initiated by royal decree, it stands as an early example of national language reform.

The extant two volumes were discovered in North Kyŏngsang Province. They are printed in Kapin type and are considered so valuable that they have been designated as National Treasure Nos. 71 and 142. The size of each volume is 20.5cm in length and 33.8cm in width.

**Tongguk seshigi**

*[Agricultural rites]*

**Tongguk shinsok samgang haengshil to** (New Supplement to the Illustrated Guide to Three Relationships)

*Tongguk shinsok samgang haengshil to* is a record of the deeds of filial sons and daughters, loyal retainers and virtuous women compiled by order of Prince Kwanghae (1608-1623) in 1617. This work consists of eighteen volumes in a like number of fascicles and is a woodblock-printed work. Publication was delayed by two years as the huge expense involved was spread to all of the provinces by printing certain volumes of the book in each province. This work is the successor to *Samgang haengshil to* (Illustrated Guide to the Three Relationships) compiled in 1431 and *Sok Samgang haengshil to* (Supplement to the Illustrated Guide to Three Relationship) published in 1515.

This work was compiled in the aftermath of the 1592 Japanese Invasion in an attempt to bolster the national spirit and pride of the Korean people in the wake of the devastating War. It includes the biographies of many Korean men and women who performed heroic deeds during the conflict. The first eight volumes of this enormous work are dedicated to filial sons, the ninth volume to loyal retainers and the last eight volumes to virtuous women. The
format is to present an illustration of an individual and then his or her biography. This work was written in it was accessible to the common people.

*Tongguk shinsok samgang haengshil to* is also highly valued by linguists studying the Korean language of the early seventeenth century since it is mostly written in *han'gul*. It contains much data concerning the various linguistic phenomena that were present in the Korean language at this time. This work is presently stored at the Kyujanggak Library and has also been republished in recent years first by the National Central Library in 1959 and more recently in 1978 by Taejegak.

*Tongguk t'onggam* (Comprehensive Mirror of the Eastern Kingdom)

*Tongguk t'onggam* is a history of Korea reaching from the time before Shilla to the end of the Koryŏ Kingdom. This massive work was compiled by a team of scholars headed by Sŏ Kŏjong (1420-1488) during the reign of King Sŏngjong (r. 1469-1494) in 1485. It consists of fifty-six volumes in twenty-eight fascicles. Work on this comprehensive history began in 1458 and the section on ancient history was completed and published as *Samguk sa ch'ŏl*yo in 1476. By 1484 the entire work was completed and published in the following year. *Tongguk t'onggam* marks the first attempt in Korean history to create a chronological history of Korea from ancient times to the end of the Koryŏ Kingdom. Prior to this work *Samguk sagi* (History of the Three Kingdoms) compiled by Kim Pushik (1074-1151) which covered the Three Kingdoms and earlier periods, and *Koryŏ sa* (History of Koryŏ) compiled by Chŏng Inji (1396-1478) that covered the Koryŏ period were the major historical records of Korea. However, both of these works presented their data according to category rather than by a linear, chronological method. Therefore, a need for a complete and sequential history was seen by the scholars of the Chosŏn period.

For the compilation of the *Tongguk t'onggam* data from the *Samguk sagi* and *Koryŏ sa* along with other works was used, so this work cannot be viewed as original research. Other works that supplied information for this compilation include the myths and legends in the *Samguk yusa* (Memorabilia of the Three Kingdoms), *Tongguk Yisangguk chip* (Collected Works of Minister Yi of Korea) and *Sui chŏn* (Tales of the Bizarre). The work also drew upon Chinese sources for the early historical accounts of the ancient Korean states.

This work is notable in that it served not only to elevate an awareness of Korean history among the literati of the Chosŏn period, but also in that it served as the basis for most historical discussion among the Chosŏn period scholars after the time of its publication. This work is also characterized by its strict adherence to Confucian ideology that is noticeable in the viewpoints expressed in the work concerning matters such as Buddhism and other ideological details. This work is valuable for the study of Korean history and the scholarship of Korean history in the Chosŏn period. *Tongguk t'onggam* is now kept at the National Central Library.

*Tongguk Yi sangguk chip* (Collected Works of Korean Minister Yi)

This is a collection of poems and essays by Yi Kyubo (1168-1241), comprising fifty-three volumes. It is a rich source for the study of old Korean literature and contains much historical information not found elsewhere.

Forty-one volumes of the *Tongguk Yi sang-guk chip* known as the Early Collection were compiled before, and the remainder known as the Later Collection after, the death of Yi Kyubo in 1240. The earlier volumes contain invaluable historical information, some derived from the Old History of the Three Kingdoms (*Ku Samguk sagi*). In particular, the version of the *Tongmyŏng wang* legends appearing in the third volume provide a useful comparison to the version contained in the *Samguk sagi* (History of the Three Kingdoms).
The twenty-fifth volume relates the story of the printing of the Korean *Tripitaka* now stored in Haein Temple, including the fact that twenty-eight volumes of *Sangjông yemun palmi* were printed with copper blocks. A further reference to these volumes is to be found in *Koryôsa* (History of the Koryô) where they are said to have been printed in 1234 during the reign of King Kojong (r.1213-1259). These references are convincing evidence that movable metal-type printing in Korea preceded Gutenberg by almost two centuries.

Ten years after the death of the author, in 1215, the *Tongguk Yi sangguk chip* was recompiled at Chinju, Kyôngsang Province. It has been assumed that there was at least one edition of Yi Kyubo’s works published in the Chosôn dynasty before the Hideyoshi invasions of 1592-1598, but the only copies in existence today are a few of a post-invasion edition. Kosô kanhaenghoe reprinted this edition during the Japanese (1910-45), but few copies remain. A photostatic reproduction by Tongguk Munhwasa, Seoul, of the post-invasion edition is held by Seoul National University.

*Tongguk yôji pigo* (Remarks on the Geography of Korea)

*Tongguk yôji pigo* is a topographical compilation on the capital of Chosôn of which neither the writer nor the date of compilation is known. However, judging from the content included in this work, it is thought to have been compiled during the early part of the nineteenth century. It is comprised of two volumes in two fascicles and is hand written.

The two volumes of this work are entitled ‘Kyôngdo’ and ‘Hansôngbu’. The first volume contains fourteen topics including information regarding the name of Chosôn, the territory of the capital, why the capital was chosen as such, the divisions within the capital, construction of the palaces in the capital, location and function of the government offices in the capital and other items. The second volume contains a total of forty-six items including the history of the capital, government positions, population figures, family names of the people, market locations and also the locations of famous rivers and mountains among other entries.

This work contains a great deal of data on the historical conditions and environment of Seoul and is therefore valuable for the study of this city, and by extension the Chosôn period. This work is further noteworthy in that it does more than just provide raw data as the commentaries contained in it provide insight into the customs and history of Seoul. This work is now stored at the Kyujanggak Library.

*Tongguk yôji sŏngnam* (see *Shinjûng Tongguk yôji sŏngnam*)

*Tonggyông chapki* (Eastern Capital Miscellany)

*Tonggyông chapki* is a descriptive geography of Tonggyông (present day Kyôngju) that was last revised and enlarged in 1845 by Sông Wônmok. This woodblock-printed work consists of three volumes in three fascicles. It is an enlarged edition of previous works published in 1669 and 1711. In 1910 the Chosôn Kosô Kanhaenghoe reprinted this book and in 1913 Chosôn Kwangmunhoe again published it using movable type technology.

The three volumes of this work cover many different aspects of Tonggyông, and although many of the items in it are also included in *Tongguk yôji sŏngnam* (Augmented Survey of the Geography of Korea), this work provides detailed commentary and supplementary descriptions that are absent in its larger counterpart. The first volume includes such items as the history of Shilla, the territory and a descriptive topography of Tonggyông, official posts, town walls, scenic locales and descriptions of the royal palaces and tombs among many other items. In the second volume topics such as populations, location and history of Buddhist temples, farm sizes, tax rates and distinguished officials are among those covered.
In the third volume various personages are discussed including those who had passed the government service examination, been appointed as officials, performed meritorious deeds, demonstrated exemplary filial piety and proved themselves loyal retainers. The third volume also includes miscellaneous items such as arts and crafts and strange phenomena.

This work holds a wealth of historical data for the study of the ‘Eastern Capital’ of the Chosŏn period. It is also useful to study the population trends and administrative structures of the late Chosŏn period. The 1845 edition is presently kept at the National Central Library and Dongguk University among other places. The subsequent 1910 and 1913 editions are also presently extant.

*Tonggyŏng taejŏn* [New religions]

**Tonghae**

Tonghae is situated on the east coast of Kangwŏn Province, between Kangnung and Samch’ŏk. The city’s current name dates from 1980 when Pukp’yŏng and Mukho were combined to form the new city of Tonghae. The port, located in Mukho-dong, is still known as Mukho. With peaks of the T’aebaek Mountain Range rising up along the city’s western border, the central area is limited to a narrow coastal strip only a couple of kilometres wide. The Tonghae Expressway and Highway 5 run through the city, providing access to other coastal cities.

In addition to grains and vegetables, fruits such as grapes and peaches are grown in the area. Fishing boats, operating out of Mukho Port and the smaller ports of Ch’ŏn’gok, Ŏdal and Taejin, catch mackerel pike and cuttle fish, and gather seaweed. Most of the commercial fishing boats are small, and some of the fishermen must supplement their income with farming. Taking advantage of the area’s extensive limestone deposits, the nation’s largest cement plant operates in Samhung-dong. At Pukp’yŏng port, a special pier has been built solely for transporting the cement produced here. In Songjŏng-dong, there are many other factories, that produce metalwork, machinery, chemicals and foodstuffs.

With beautiful beaches and spectacular mountain scenery, the city has an abundance of tourist destinations. The picturesque Murŭng Valley and Yongch’u Waterfall on Mt. Tut’a (See Tut’a Mountain) draw crowds of visitors throughout the year. During the summer, the Mangsang, Ŭdal and Haegŭmgang Beaches are crowded with tourists trying to escape the summer’s heat. In addition, there are several old pavilions in the area, such as Aeyŏn-jŏng in Songjŏng-dong, and Man’gyŏng-dae (founded in 1613) and Haeam-jŏng (Kangwon Province Tangible Cultural Asset No. 63) in Pukp’yŏng-dong. In Samun-dong, one finds Mun’gan-sa, a shrine erected in 1824 in honour of Han Sanggyŏng, a loyal minister who helped found the Chosŏn kingdom.

**Tonghak**

A new religion founded by Ch’oe Cheu (1824-1864) after he experienced a revelation on 25th May 1860. Used until 1905 when the name was changed to Ch’ŏndogyo, Tonghak (Eastern Learning) was selected in a fruitless attempt to distinguish it from *Sŏhak* (Western Learning), that is, Catholicism, which was proscribed as heretical because it placed a power above the king and undermined Confucian hierarchy. As Tonghak texts in Chinese used *Ch’ŏnjia* (Lord of Heaven) for the Korean *Hanullim* (God), a translation Catholics adopted for *Deus*, Tonghak from its inception was suspected by the authorities of being the Christian heresy. Ch’oe Cheu was aware of the strength of the Western nations who were threatening the overthrow of China in the 1850s. He assumed that power had a religious source, and concluded that the only way to oppose it was through the magical or creative powers of *Hanullim* who revealed himself in Korea.
Koreans eagerly received new teachings, for the government officials, who were indoctrinated in a sterile Neo-Confucianism enervated by endless doctrinal disputes inflamed by the struggle for office, had violated all of its principles in enriching themselves by squeezing and oppressing common people. Buddhism, isolated in the mountains by government decrees and Confucian jealousy, held out to commoners hope only for the afterlife. Monks had been reduced in social status; many were beggars or manufactured paper; and catered mainly to the superstitions of women. Daoism promised long life, but was available only to those with income and leisure. Infectious diseases such as cholera and Western incursions heightened the sense of impending doom. People desperately sought solutions in folk superstitions such as faith-healing talismans, fortune-telling and the propitiation of spirits and demons. They readily believed in omens and predictions of the impending collapse of the Choson Dynasty.

Ch'oe Cheson changed his name to Cheu (Save the ignorant) in 1859. A son by a concubine to whom official posts were closed, he shared the frustrations of many marginalised intellectuals. His elderly father, a locally respected teacher of Neo-Confucianism, was unable to pass the civil service examination. Cheu's mother died when he was five, his father when he was sixteen, and he was unable or unwilling to provide for his family through farming, angering his relatives. Dissatisfied with the Confucianism learnt from his father, he journeyed on a quest for the truth to Buddhist monasteries, studied the Yijing (Book of Changes), experimented with Daoism and investigated Catholicism, all to no avail. Seeking the will of Heaven (ch'onmyöng), after strenuous meditations on Catholicism and the powers of the West, he experienced a shamanistic possession in which he heard the voice of a mysterious god called Sangje (Supreme Emperor of Heaven) with whom he held a dialogue. The speaker proclaimed he had given (re)birth to Cheu so that Cheu could convert people with a sacred talisman, called the "medicine of the immortal", which was shaped like the t'aeguk (circular yin-yang symbol) or kung-kung, a term appearing in the Chonggamnok that predicted the overthrow of the ruling dynasty. The talisman could cure and convert people. Cheu later drew the talisman out on paper, burnt it and drank the ashes in water, curing himself and then others. Later it was asserted that only sincere believers could be cured.

Ch'oe Cheu (religious style Suun) related that the voice told him, "My mind is your mind....(People) know the world but do not know the Spirit (kwishin). I am the Spirit. I will give you the unlimited Way....Practice and refine it, write down the text with which to teach people, and establish a method of propagating virtue". A year later Cheu comprehended and wrote out the incantation as a means of inducing the descent of the spirit or the mindfulness of God within. The incantation was to be chanted aloud, repeated through twenty-one rounds of a one-hundred-and-five bead rosary. The chant read, in one interpretation: "The supreme ki (matter/energy or pneuma) now imminent, I pray for its great descent [into me]. I will serve/worship the Lord of Heaven (shich'onju) and creation will be established. I will never forget [God], and all things will be known". Cheu explained that "supreme ki a formless numen so vast it affects and orders everything and yet is difficult to describe...is the unitary ki of primal chaos (the energy/matter that is the building block of the universe). Now imminent means one realises contact with that ki by embarking on this Way....The great descent is the prayer of the transformation of the ki...Serve means that internally there is a divine spirit and externally a transformation of the ki...Creation means [God] does not act and yet transforms. To establish means to unite with [God's] virtue and establish [God's] mind [in oneself....To know means to know His Way and receive His knowledge"

The obscurity of the incantation and problems of transmission, especially of the explanation, given that Cheu's heir, Ch'oe Shihyöng (1827-1898) was illiterate, has produced variant incantations and invited differing explications, such as "Worship God and creation will be established, remember God and all things will be realised", i.e. all one's hopes will come true via devotion.
Fundamental divergences in explanations of Tonghak motives and doctrines abound. Some detect its early origins in shamanism and folk magic which were later rationalised under the influence of the communist Neo-Confucianism of Sŏ Kyŏngdŏk (1489–1546) as a means of attracting the educated. Others suggest an origin in Confucianism (especially the Yijing) and that the incantation and talisman were only expedients to seduce the credulous masses who desired miracle cures. One school describes the Hanullim Cheu worshipped as a personal, volitional God who was later made more abstract under Neo-Confucian influence, while another thinks Hanullim was an immanent, pantheistic God from the start. Tonghak has also been interpreted less as a religion and more as a social movement to remove societal inequities via doctrines of egalitarian morality and as a nationalist teaching instituted to preserve Korea. Some even consider Cheu attempted to reinstate Confucian ethics.

Ch'oe Cheu, while denying that his teachings were those of the exhausted Confucianism, Buddhism and Daoism, synthesised elements from each of them. Although he acknowledged his teachings seemed similar to Christianity, he asserted they were more rational, natural and effective. Of prime importance was to worship God by maintaining mental awareness of God within and to correct one's Ki or physical behaviour and the world, thereby curing all ills. People, as the most spiritual beings, can realise God's creation, which is a magical power crystallised in the chant and talisman. Faith in these teachings and the subsequent total sincerity and reverence, awakens the mind of God within one and makes one's actions coincide with God's creation, transforming the believer into a kunja (gentleman) or a sŏn (divinity) and the world into a utopia in which state and people are salved. Thus one should serve people like the Lord of Heaven (sa in yŏ ch'ŏn). Worshipping God (shi ch'ŏn) places humans into a direct, immediate relationship with God, whereas other religions need a mediator. By eliminating ego, contact with our true mind, which is the immanent God, is made possible. This is the descent of supreme keynote believers occasioned by the incantation that makes the believers mindful of this. The immanent mind of God performs miracles, as were expected of Ch'oe Cheu by the faithful, for it is the foundation of the universe. Followers believed that through its power they could attain indestructible souls or become immortals living in a utopia. Hence, the Spirit (in both a Neo-Confucian sense as Ki, and as an object of folk belief) is an absolute, monastic god within people who was revealed to Ch'oe Cheu because the universe was in a transition period between a past age of 50,000 years duration and a new age of regeneration, a phase that would be ravaged by major catastrophes from which the faithful alone would be saved.

To be saved, followers were advised to set out a bowl of clear water, symbolising the origins of the universe, in front of which they vowed to keep the Way and chanted the incantation. They were to practice a mental announcement (shin'go) of all their actions, as a prayer, confession or saying of grace, giving thanks to God, in order to maintain firmness or awareness of mind and to rectify the Ki. This was an expression of faith and the basis of the reverence of the God within who was to be venerated like the ancestors, and was an encouragement of moral conduct.

Ch'oe Cheu, after initial difficulties in spreading his message from 1861, cured diseases with his talisman, chanted the incantation to ward off evil spirits, performed a sword dance and song, and made offerings. The authorities charged him with deluding the people. He was captured in December 1863, and taken to Taegu where he was interrogated and executed as a heretic in 1864, becoming a willing martyr.

His scriptures, the Tonggyŏng taejŏn in Classical Chinese prose and verse, and the Yongdam yusa in Korean verse, were written down by an amanuensis or translator from the memory of the illiterate Ch'oe Shihyŏng (religious style Haewŏl), his successor, and were published in 1880 and 1881. Ch'oe Shihyŏng further organised believers into parishes and the movement spread among the peasants and the marginalised in the southern half of
Korea. Although illiterate and operating in secret, Ch'oe Shihyŏng successfully systematised the doctrine, according to some reinterpreting the folk-belief elements of his master's teaching, making it more egalitarian and pantheistic. He formulated the practice of venerating oneself or the God within, unlike the Confucians who worshipped their ancestors in an external ancestral tablet. The mind of God in people he compared to a seed that must be nurtured by worshipping Heaven (shi ch'ŏn). Respect for God/Heavene is respect to one's own mind and is not worship of a God in Heaven. This respect was extended to all humans, which enables one to unite with the transformations of the ki of the entire universe or merge with God's will. Further, the voice of God is that of all beings, not just humans, for all bear God/Heaven (shi ch'ŏn). As all things are raised by Heaven, they must assist each other. They differ merely in their transformation of the ki, are interdependent, and so "Heaven feeds on Heaven" (ch'on shik ch'on). This also implies that one must worship through ki or physically also.

These teachings were further developed by the next leader, Son Pyŏnghŭi (1861-1922; religious style Ûiam), who succeeded after Ch'oe Shihyŏng was executed in 1898, but this phase belongs rather with the doctrines of Ch'ŏndogyo such as "humans are God" (in nae ch'on), "nature (propagation of the teaching) and body (or welfare of the people) are perfected together" in supreme ki, "the religious teaching and morality and governance or politics should be in agreement", "oneness of the spirits (of Tonghak leaders and believers)" and "exchange of the physical world for the Truth" etc..

Despite Ch'oe Shihyŏng's warnings, an abortive petition movement to exonerate Ch'oe Cheu of heresy in 1892 and 1893, grew into a rebellion, even though Tonghak expressed loyalty to the king. Regarded as treacherous because it threatened the status quo, Tonghaks were increasingly persecuted, especially by rapacious officials who used their "heresy" as a pretext. In 1894, a Tonghak-led peasant erupted in Cholla Province, Korea's granary, where official avarice was at its worst. The rebels hoped for an earthly utopia, and although their forces defeated the government army, Ch'oe Shihyŏng refused to support this rebellion led by Chŏn Pongjun because it used violence and was not exclusively Tonghak. However, tarred with the same brush as the rebels and not wishing to be accused of betrayal, Ch'oe Shihyŏng eventually cooperated. However, it was too late for the rebellion was soon crushed with the aid of foreign military intervention. Later, Son Pyŏnghŭi began to rebuild the Tonghak religion, retreated to Japan from 1901 to 1906, and proclaimed Ch'ŏndogyo in 1905.

The Tonghak religion and rebellion has attracted many interpretations because it was vital to modern Korean history, having played a part in the eventual overthrow of the Chosŏn Dynasty, provided a faith that championed egalitarianism and the value of all humans, promoted patriotism, and formed the foundation stone for most of the new indigenous religions of Korea. Leftists view Tonghak as part of a revolutionary tradition and romanticised Tonghaks as democratic rebels. Nationalists considered the Tonghaks pioneer patriots, especially since later Ch'ŏndogyo led the 1919 Independence Movement.

Situated on the edge of Taegu at the base of Mt. P'algong, Tonghwa Temple is one of the main temples of the Chogyo Order. According to legend, the monastery, then called Yuga Temple, was first founded by Kuktal in 493. Since Shilla had not yet officially sanctioned Buddhism at this time, this early date is suspect. Although records state that Shimji 'reconstructed' the temple in 832, many scholars believe that the monastery was actually founded at this time. Legend has it that when Shimji built the temple, the paulownia trees were in full bloom in spite of the cold winter weather. Shimji is said to have therefore called the temple 'Tonghwa' (Paulownia Flowers) in order to commemorate the miraculous event. The temple was reconstructed by Yongjo in 934, by Chinul in 1190 and by Hongjin in 1298. In the Choson Period, it was reconstructed by Yujong in 1606, by Sangsung in 1677, and by Ch'ongwol, Kwanho, Nakpin and Un'gu in 1732. Most of the present buildings date from Yongjo's restoration.

The temple houses a great number of important artefacts. At the entrance, there are two stone banner-holders thought to date from the Greater Shilla Period. In ancient times, the holders supported poles which, in turn, supported large banners painted with Buddhist motifs. Near the entrance, there is also a line-drawing of a seated Buddhist figure (Treasure No. 243) on a stone face. Due to its general lack of vitality, the figure is thought to date from the late Greater Shilla. Outside the temple, there is a three-storey stone pagoda (Treasure No. 831) that is believed to date from later Greater Shilla or early Koryo, and in Sumaje Hall, there is a seated Buddha figure cast in 1702. The figure is made of gilt-bronze or gilt-iron.

In the vicinity of the temple, there are a number of affiliated hermitages, including Kumdang, Naewon, Piro, Pudo, Yangji and Yombul Hermitages. Many of these also contain important historical artefacts. At Piro Hermitage, there is a stone Vairocana statue (Treasure No. 244). Carved in 863, the statue is said to have been erected by Shimji in order to pray for the well-being of his deceased cousin, King Minae (r. 838-839). In front of the hermitage, there is a three-storey stone pagoda (Treasure No. 247) dating from Greater Shilla. A sarira reliquary was discovered inside this pagoda. On the outer section of the reliquary, there were four gilt-bronze panels inscribed with images of Buddhist triads. The panels are now kept in the national museum. Another three-storey stone pagoda (Treasure No. 248) from the same period can be seen in the grounds of Kumdang Hermitage. At Yombul Hermitage there are line-drawings of a buddha and bodhisattva figure on two rock faces. The buddha figure is a representation of Amitabha Buddha, while the bodhisattva figure is the Goddess of Mercy (Kwaseum Posal). Both date from early Koryo. With such
a rich historical heritage, Tonghwa Temple and its affiliated hermitages are popular destinations for tourists from across the nation.

Tongji Munyegwan  [Libraries]

**Tongjin River**

Tongjin River flows some 45 kms. from the western slopes of the Noryŏng Mountain Range through the central part of North Ch'olla Province before discharging into the Yellow Sea. The source of the river is largely by run-off from Mt. Sangdu (575m) in Chŏngūp’s Shinoe Township. This forms Towŏn Stream which widens to about fifty metres in Ch’ilbo Township to become the Tongjin River. Just west of the town of Shint’aein, the river joins Chŏngūp Stream, which flows from the south.

The Tongjin is associated with the Kobu Peasant Uprising, a key event in the Tonghak Rebellion. In 1893, Cho Pyŏnggap, the unpopular magistrate of Kobu County, conscripted local peasants to build a new reservoir just below the site of the old Mansŏk Reservoir. After the project was completed, he charged the same peasants an exorbitant tax for use of the reservoir’s water. On 16 February 1894, the peasants gathered under the leadership of Chŏn Pongjun, occupied the county office, seized weapons and destroyed the reservoir.

*Tongmaeng*  [Agricultural rites]

**Tongmunsŏn** (Anthology of Korean Writing)

*Tongmunsŏn* is a massive literary compilation of Korean literature from Shilla to the middle Chosŏn period that was compiled by a team of scholars headed by Sŏ Kŏjong (1420-1488). This work is composed of 130 volumes and three volumes of catalogues in a total of forty-five fascicles. There are both woodblock print and movable metal type versions of this work. In this collection there are works ranging from the Shilla literary men such as Kim Inmun (629-694), Sŏl Ch’ŏng (660-730) and Ch’oe Ch’iwŏn (857-?) to those of the early Chosŏn period. In all, the work contains over five-hundred different authors with some 4,300 works recorded in chronological order.

This work is an extensive record of hanmun (Sino-Korean) literature to the early Chosŏn period, and the work naturally contains some of the greatest literary men in Korean history. Aside from the three Shilla era literati mentioned above, the works of Yi Kyubo (1168-1241), Kim Pushik (1074-1151), Yi Chehyŏn (1287-1367), Yi Kok (1289-1351), Yi Saek (1328-1396), Yi Ch’ŏm (1345-1405) and Kwŏn Kŭn (1354-1409) are well represented in this work. Of the five-hundred writers represented, some 220 have but one work in this collection. Through this it is clear that the compilers of this anthology concentrated their efforts on the luminaries in Korean literary history.

Many editions and reprints of this work have survived to the present. The 1478 version, which was printed with ŭlhae cha type print, is extant as is a 1482 reprint using kabin
Tongmyöng, King

King Tongmyöng (58-19 BCE) was the founding king of Koguryö and reigned from 37 to 19 BCE. Various other names by which Tongmyöng was known can be found in historical records, including Chumong (most commonly used); Ch’umo; Chungmo; Sanghae; Ch’umong; and Tomo. It is also recorded in histories, such as in the section relating to Koguryö in the Chinese Guoshi (National History), the Samguk yusa (Memorabilia of the Three Kingdoms) and the Samguk sagi (History of the Three Kingdoms) that his family name was Ko and that his given name was Chumong. The Samguk sagi does, however, refer to Tongmyöng by the names of Ch’umo and Sanghae, and the inscription on the Stele of King Kwanggaet’o names him as King Ch’umo.

An examination of various Chinese historical documents on Koguryö reveals two basic lines: histories such as the Puyö section of the Weilue (Chronicles of the Wei Kingdom) and Hou hanshu (History of the Latter Han Dynasty), and the Koguryö section of the Liangshu (History of Liang) name the founder of Puyö as Tongmyöng, while the Koguryö sections of the Weilue (History of the Wei Kingdom), Zhoushu (History of the Zhou Dynasty), Nanshi (History of the Southern Dynasties), Suishu (History of the Sui) and the Beishi (History of the Northern Dynasties) all record that the founder of Koguryö was Chumong. It is commonly accepted that Tongmyöng came from Puyö and then founded Koguryö. However, the reality is that King Tongmyöng and the founder of Koguryö, Chumong, are different personages. Nonetheless, the framework of the Tongmyöng and Chumong legend is identical, and in this aspect is remarkably similar to the Tan’ gun shinhwa (Tan’ gun Myth). The common base of these legendary happenings is the descent of a heavenly-being which assumes political control of an early kingdom, and which also has the divine authority to direct the forces that control agriculture. Thus, it is evident that these myths were perpetuated by a new ruling power as a means to legitimize its political domination, and to mark the coming of a new stage of social development.

The Samguk yusa and Samguk sagi relate that the father of Chumong, Haemosu, was the son of the heavenly emperor, and the king of Puyö. Chumong’s mother was Yuhwa, the daughter of Habaek, who threw his daughter out when she became pregnant. The Samguk yusa records the following story.

King Kûmwa of the Eastern Puyö Kingdom was out hunting when he encountered a beautiful woman on the banks of the Ubalsu Stream. She told him that she was the daughter of Habaek and that while she had been out with her two sisters, a strong man named Haemosu had introduced himself and then enjoyed her before leaving. After her father learned of this incident, he exiled her to the banks of the Ubalsu. King Kûmwa did not know what to make of the woman’s story, so he brought her back to his kingdom and confined her in a darkened room. However, the strong light of the sun entered the room and caressed the body of Yuhwa and she became pregnant, eventually delivering a large egg. King Kûmwa did not know what to think of the egg and threw it into the animal compound, but the animals there would not eat it. Next, he ordered the egg to be put on the roadway, but the passing horses and oxen would not tread on it. Finally, he had the egg thrown into a field, but there the birds and beasts protected it. Only after the king himself tried to break the egg did he return it to its mother, and shortly afterwards the shell cracked and a handsome and noble boy emerged.

By the time the youth had reached the age of seven he held a man’s strength and was highly
skilled in marksmanship; thus he was called ‘Chumong,’ a name given to a skilled archer. King Kûmwa had seven sons, but none the equal of Chumong. The eldest son, Taeso, told his father that since Chumong was not the son of a mortal, the sooner he was killed the better the kingdom would be. The king, however, did not heed his son and instead charged Chumong with caring for the horses in the royal stable. Chumong, knowing much about horses, selected a fast steed for himself and fed it only lightly, thereby making it gaunt, but he overfed the packhorses, making them plump. The King selected the well-fed horses for himself and his sons, and gave Chumong the lean mount. This strategy enabled the youth to be an even more effective hunter on his lightning-fast horse.

Chumong’s mother had learned of a plot to kill her son, and told him to flee far from King Kûmwa. He and three trusted friends, Oi, Mari and Hyŏppo, mounted their horses and fled from the kingdom, until they reached the formidable Omch’esu River. Chumong reached the river-bank and cried: “I am the son of the Heavenly Emperor and the grandson of the Dragon King Habaek. My enemies now draw near, what shall I do?” At once the fish and turtles in the river formed a bridge that enabled Chumong and his friends to cross, and then swam away, leaving the pursuing soldiers without passage. The group than continued on to Cholbu, where they stayed, and where a city grew on the banks of the Piryusu Stream. Thus, in the year 37 BCE, the kingdom of Koguryŏ was established.

While there are variations of this legend in different records, the basic narrative is consistent. Tongmyŏng is said to have consolidated Koguryŏ’s position among its neighbours and his son, King Yuri (r. 19 BCE-18 CE), was his successor. The legend surrounding King Tongmyŏng represents the attempt of the ruling-class of Koguryŏ to establish a lineage with divine origins, and thereby elevate their position and right to rule the common people. Moreover, the fact that Chumong is vested with qualities such as equestrian and archery skills further reveals that these attainments, so necessary for hunters and warriors in this period, were held to be indispensable also to the ruling-class of early Koguryŏ.

**Tongnip hyŏphoe yŏn’gu** (A Study of the Independence Club)

_Tongnip hyŏphoe yŏn’gu_ is a 690-page work written by Shin Yongha that explores the history and development of the Tongnip Hyŏphoe, or the Independence Club of the late nineteenth century. This work was first published by Ilchogak Publishers in 1976 and then again in 1981. The author explores eight areas of the Tongnip Hyŏphoe including the foundation of the organisation, its structure, its social ideology, enlightenment activities and many other aspects of this organisation. Of particular note in this work is the author’s treatment of the ideology of the Tongnip Hyŏphoe insofar as it influenced the social and nationalistic enlightenment of the Korean people in the late nineteenth century.

**Tongsa kangmok** (Annotated Account of Korean History)

_Tongsa kangmok_ is a comprehensive history written by An Ch’ŏngbok (1712-1791). This twenty-volume work in a like number of fascicles covers Korean history from the time of...
Tan’gun Chosŏn to the end of the Koryŏ Kingdom in the late fourteenth century. This hand-written work was completed in 1778 after an over twenty-year effort on the part of the author.

This history is modelled after the Chinese historical work *Tongjian gangmu* written by Zhu Xi (1130-1200) of Sung China. It is heavily influenced by the neo-Confucian ideology of Zhu Xi and this can be witnessed in many of the interpretations of history that An Ch'ŏngbok makes. One contention of the author that is highly controversial today is his assertion that the history of Korea began with the formation of Kija Chosŏn by Kija, a refugee from the Chinese Yin nation, in 1122 BCE. An dismisses the Tan’gun Chosŏn state as little more than a Buddhist fabrication; this aspect of his work is contradictory to the other great historical work of the Chosŏn period, *Tongguk tonggam* (Comprehensive Mirror of the Eastern Kingdom), which supported the existence of Tan’gun Chosŏn.

*Tongsa kangmok* is notable in several aspects including many modern methods used in the compilation of the work. One such aspect is the inclusion of a list of reference books in a supplemental volume of this work. In this precursor to a modern bibliography, the author lists over fifty works that he used in the assembling of this work. The author also included a supplemental volume of maps of the various periods throughout Korean history, and other supplemental items that detailed the structure of the government of the different periods. This presents the modern researcher a wealth of valuable material for gaining a greater understanding of the governmental institutions of the ages covered in this work. Other noteworthy features of this historical work include the inclusion of the genealogies of the various royal families for each of the Three Kingdoms, and Puyŏ, Parhae and Koryŏ. The author also is conspicuous in his harsh criticism of usurpers and traitors, and clearly denotes what he views as just and unjust activities. Moreover, the author praises loyal actions highly. Finally, An closely scrutinizes the particulars of the legal systems of each period, which provides further insight into the structure of the government and social systems of the different periods.

*Tongsa kangmok* presents a new interpretation of Korean history that is more than just a regurgitation of past works. The author’s opinions and interpretation of Korean history are heavily biased by his neo-Confucian ideological viewpoint, but nonetheless are well argued. This work was also greatly affected by the *shirhak* ideology that was prevalent during this period of Chosŏn. These attributes all add to its scholastic value.

**Tosŏn** (827-898)

Tosŏn, whose family name was Kim, entered the monastic order around the age of fourteen. He spent his early years at Mt. Wŏryu’s Hwaŏm Temple where he studied sutras. In 850, he received higher ordination at Ch’ondo Temple. After residing at several other temples, Tosŏn went to Mt. Chiri where he set to work building a hermitage. According to legend, one day a visitor told him, ‘I have special knowledge that I would like to pass on to you tomorrow on the southern coast.’ When Tosŏn went to the designated spot, the visitor appeared and started to make miniature diagrams in the sand, showing Tosŏn how some landscapes blocked, while others enhanced, the beneficial influences of nature.
Although this philosophy, called geomancy, had previously existed in Korea, Tosôn strengthened its appeal by combining it with Buddhist ideas of karmic reward, as well as Taoist yin-yang and Five Elements theory. According to Tosôn, the layout of terrain features deeply affected those who resided in the area. The selection of a propitious site for a building or a tomb could thus bring good fortune to a person’s descendants, or in some cases, to the entire nation. On the other hand, one could repair inauspicious sites by setting up stupas or temples in the area.

Tosôn wrote a work known as *Tosôn pigi* (*Esoteric Record of Tosôn*), but the original is no longer extant. He is also credited with writing *Songak myŏngdang ki*, *Tosôn tapsan ka*, *Samgaksan myŏngdang ki* and other works. According to one source, Tosôn travelled to China where he learned geomancy. However, since the dates given are inconsistent with other sources, this source is thought to be unreliable. Tosôn was styled Sŏn (Jap. Zen) Master Yŏgong; yet, his ideas show little influence from the Korean Sŏn School. Indeed, it is his geomancy theories that were to be his lasting legacy. These theories were not only popular with the local gentry, who used them to enhance the status of their particular region, but even influenced Wang Kŏn’s choice of Kaesŏng as the capital of the new Koryŏ dynasty. Since Tosôn’s ideas could be used to justify the founding of the new dynasty, the early Koryŏ kings were especially attracted to his theories.

**Bibliography**

**Toŭn chip**

Toŭn was the pen name of Yi Sungin (1349-1392), the author of this collection of poems and other writings. The original size of the collection is not known, but it is believed to have been first published before the author’s death. A new edition, known to have been in two volumes, was published in 1406 by order of King T’aejong. Later an expanded collection of three volumes of poems and two volumes of other writings was published. These five volumes are reproduced in the *Yŏgye myŏnghyŏn chip* (*Collection of noted Koryŏ scholars*) published by the Taedong Cultural Research Institute of Sŏnggyun’gwan University in 1961.

**Tourism**

**History**

Tourism has a long history in Korea and records of travel and associated activities can be traced to the Three Kingdoms (BCE 18th-CE 7th c.). The *Samguk yusa* (*Memorabilia of the Three Kingdoms*) and *Samguk sagi* (*History of the Three Kingdoms*) give accounts of travel to famous mountains and rivers throughout the country by officials and members of the aristocracy. The *hwarang* (youth corps) of Shilla underwent periodic pilgrimages to famous locales to cultivate their minds and bodies. Travellers in these early periods stayed at *yŏkkham* (post stations) and inns that were built along main roads throughout the peninsula. In addition to travel inside the country, Koreans of this period also travelled to neighbouring countries, such as China and Japan. For the most part, travel can be viewed as being of a religious nature and was generally aimed at either gaining knowledge of certain religious systems, in the case of China, or in propagating religion, in the instance of Japan. This sort of religiously inspired travel resulted in the founding of Buddhism and its
propagation in Korea. Many monks travelled to China, including Wŏngwang (542-640) and some like Hyech’o (704-787) journeyed to distant India. Hyech’o’s record of his travels, Wang Och’ŏnch’uk kǒn (Memoirs of the pilgrimage to the five regions of India), is the oldest extant travel record of a Korean writer.

By the time of Greater Shilla and the subsequent Koryŏ Kingdom, the people travelled more frequently. One common motive for undertaking a journey was the quest for knowledge and a great number of Koreans during late Shilla travelled to Tang China in order to study Confucianism. Perhaps the best known of the Shilla scholars who studied in China is Ch’oe Ch’iwŏn (857-?) who became famous (even in China) for his literary abilities. Ch’oe’s Kyewŏn p’ilgyŏng (Ploughing the Cassia Grove with a Writing Brush) records his impressions on social, political and cultural aspects of the Tang court. The many Koreans who studied in China helped to establish Confucianism as the dominant ideology of the intellectual class of this time. By late Koryŏ, travel to and from Mongolia and China was very common, necessitated by the subservient relationship with the Mongols.

During Chosŏn, travel had the capital as its hub, but also reached outwards into the provinces. There were yearly scheduled events in the provinces that enabled government officials to travel to the regions. Key features of the regional events were folk games such as ssirīm (a type of wrestling) and tug-of-war. In addition, there were seasonal activities such as boating, fishing and sightseeing among the autumn foliage in the mountains that were very popular among the upper class. The travel of those of the commoner classes generally focused on seasonal activities such as folk games and regional festivals. Travel during Chosŏn formed the foundation for present-day travel, with many of the customs having been handed down.

Literary works having travel as their theme include Pak Chiwŏn’s Yŏrha ilgi (Jehol Diary) which provides a detailed account of his journey to China as a part of an official entourage in 1780; Kim In’gyŏm’s Iltong changyu ka (Grand Trip to Japan) which was written about Kim’s experiences in Japan as a member of a diplomatic mission; and P’yŏhae rok (Record of Drifting Across the Sea) written by Ch’oe Pu while adrift in the southern seas. They gave Korean readers a fascinating glimpse of the outside world in their record of different places and customs, and their popularity bespeaks the increased interest of the people to learn about places and customs outside their own land.

In the latter part of the nineteenth century, Korea began to emerge from the isolationist policies that had dominated Chosŏn for nearly five hundred years. As Koreans sought to learn more about the West through Japan, sightseeing tours were organised. Most notable among these is the 1881 ‘gentlemen’s sightseeing group’ (shinsa yuratan) which spent over two months travelling in Japan on a mission to observe political, social and technical transformations. A similar mission to China at about the same time also sought to gain knowledge of Western institutions through Korea’s traditional conduit for culture. Almost concurrently, accounts of those who had travelled to America and Europe generated further interest in the West. Representative of these works is Yu Kilchun’s Sŏyu kyŏnmun (Observations on a Journey to the West) which describes many of the institutions of America and Europe.

After the advent of Japanese colonial rule over Korea, travel for Koreans was greatly restricted, as were all other liberties. Many Koreans did travel to Japan or Manchuria, but not for pleasure, as they went to these locations as labourers or as conscripts for military service. A considerable number of Koreans travelled to Japan for study in this period and some of the more notable individuals include Sŏ Chaep’il, Ch’oe Namsŏn, Yi Injik and Yi Kwangsu, each making his mark on the development of modern Korean society.

The Japanese established the foundations of modern tourism during their rule in Korea, although the benefits of these improvements were largely directed at Japanese living in
Korea. Among the improvements were the railways, facilitating easier and faster travel throughout Korea and the hotels. The first of the hotels was opened in Pusan in 1912, then the Choson Hotel in 1914 and the Kumdangsan Hotel a year later. The Pando Hotel, which opened in 1930, is generally acknowledged as the first truly Western-style hotel in Korea. These new travel destinations were, however, principally for the Japanese.

Modern Tourism

After liberation in 1945, travel in Korea became more accessible through the construction of new railways and highways which made for faster travel throughout the country. However, the confusion of the times directly after liberation, the outbreak of the Korean War in 1950 and the economic plight of Korea prevented most Koreans from travelling any distance. This period did, however, see the establishment of government organisations designed to promote tourism, such as the Ministry of Transportation (Kyot'ongbu) and Korean National Airlines (Taehan min'guk hanggong). In addition, many modern hotels were opened, including some in popular tourist destinations such as Onyang, Sogwip'o, Mt. Sŏrak and Haeundae Beach. At this time, the former railway hotels were renamed as tourist hotels.

After the armistice that brought the hostilities of the Korean War to an end in 1953, other measures were taken that helped the tourism industry. Chief among these is the Labour Standards Law (Nodong kijun pŏp) in 1953 that required twelve paid holidays annually for all workers. Other measures taken include the establishment of a Tourism Department within the Ministry of Transportation in 1954; the Tourism Industry Law (Kwangwang saop pŏp) in 1961; the Cultural Properties Protection Law (Munhwa chaepoho pŏp) in 1962; and in the same year the International Tourism Company Law (Kukche kwangwang kongsa pŏp). Along with these legislative measures that aided tourism, the government also established national parks throughout the ROK, beginning with Mount Chiri National Park in December 1967.

Throughout the 1970s and 1980s, the Korean government continued to establish national parks and develop other tourist attractions. The tourism industry continued to grow as it reflected the demands of Korean consumers. Korea promoted travel by joining international tourism organisations such as the Asia Travel Association and the East Asia Travel Association. As the Korean economy expanded so did the ability of Koreans to devote more of their time to travel. The number of foreign travellers to Korea soared, as did the number of Koreans who travelled abroad. The liberalisation of travel laws, visa requirements, and other measures greatly facilitated the number of tourists both to and from Korea.

The dramatic growth of tourism in Korea, from a low 84,216 foreign visitors in 1967 to 3.2 million in 1992, was matched by a proportional increase in revenues from tourism, to almost US $3.3 billion in 1992. In 1969, tourists accounted for 30.2 per cent of all visitors to Korea, but by 1992 over 57 per cent were tourists. Of those visiting Korea, the Japanese form the single largest group. Overall, in 1992 visitors from Asian countries accounted for 70.7 per cent of the total, followed by those from North and South America at 11.2 per cent. The mix of tourists has changed markedly over the past twenty-five years, when tourists from the USA composed the largest number of visitors to Korea.
Historically, three significant Korean states can be recognized: (a) the Early Monarchies (to 1910); the Japanese Colonial Period (1910-1945); and (c) the Post-Korean War Period (to 1990).

Early Monarchies (1392-1910)

The self-sufficient agrarian economy of Chosŏn was served by a thousand-year-old systems of roads and waterways. The network of arterial roads radiated from the royal capital of Seoul. Transport was critical for administration as reflected in procedures for road maintenance, postal services (yŏk), and public inns (wŏn). The yoks and wons were concentrated in the populated central and southern provinces — a reflection of the quantity of agricultural production which provided tax grain and tribute. These roads were complemented by a relatively sparse network of rivers which provided connections to Seoul and, in turn, to the ports of China and Japan. This settlement pattern did not survive the introduction of modern transport systems by the Japanese.

Japanese Colonial Period (1910-1945)

The basic features of the contemporary rail and road networks and associated urban structure were established during Japanese control. The first railway lines between Seoul and Inch'ŏn, the capital's port-of-entry, (1889) and Seoul and Pusan (1905) pre-dated formal Japanese occupation. After Japan's suzerainty was recognized, a cross-shaped rail network pivoted on Seoul was constructed (Figure 1). The Pusan-Sinju axis linked Japan and China, and the Mokp'o-Ch'ŏngjin axis connected the agricultural southwest and the mining areas of the northeast. Subsequent infilling of the network underlined the importance of Seoul as the national hub — its imposing terminal providing a counter-magnet to the old downtown administrative centre. The railway also generated a new set of cities, including the junction towns of Taejon and Iri, and linked inland centres with major ports, notably Pusan, Masan, and Kunsan in the south and Namp'o and Wŏnsan in the north. After 1907 a set of new roads built by the Japanese matched railway developments. Although unpaved, the roads provided the base for the contemporary national system. In 1929 an air cargo service was established between Taegu and Tokyo — seven years before the first domestic passenger service between Seoul and Kwangju was opened.

Post-war Period (1953-2000):

1960s. During the early 1960s the provision of transport infrastructure under the military government of Park Chung Hee was conditioned by the need for South Korea to protect its borders against incursions from the north, and to shrug off the imprint of colonial rule and poor resource base. Korean National Railways (nationalized 1948) was rehabilitated and
expanded, particularly into the Taebaek Mountain region bordering North Korea. As the economy changed from a wet rice agriculture to agribusiness and an industrial base the workload of the railways increased. Much of its business came from: enterprises on the main trunk line between Seoul and Pusan; a string of embryonic port-industrial bases located conveniently for interaction with Japan, notably Ulsan (1962), Yosu (1967) and Pohang (1968); and local industrial estates. Road transport was relatively undeveloped and played a complementary role in providing short-haul feeder services to the long-distance rail network. In 1968 the four-lane, limited access, 35 km Kyōngin Expressway was completed between Seoul and its port at Inch'ŏn. Then in 1969 the Korean Highway Corporation was established to construct and maintain an 'Expressway' system, linking key urban centres and industrial areas, and the secondary arterials referred to as 'National Roads'.

1970s. In the 1970s transport improvements proceeded apace with the rapid development of expressways and the electrification of the railways. In 1972 railway electrification was commenced on the Chungang Line between Seoul and the Taebaek Mountain Ranges. While this boosted railway capacity, spectacular expansion of the expressway network was occurring (Figure 2). In 1970 the 450 km Kyōngbu Expressway between Seoul and Pusan was completed using Japanese-aid money. Three years later the Honam Expressway (Chŏnju-Sunch'ŏn) and the Namhae Expressway (Pusan-Sunch'ŏn) routes were opened. In 1977 the Yŏngdong (Suwŏn-Kangnung) and Tonghae (Kangnung-Tonghae) Expressways were finished. In the process, the road transport industry — truck and bus — had changed from being complementary to the railway system to being a long-distance competitor.

Since 1970 Pusan has been developed as the major container port. Its purpose-built terminal (Busan Container Terminal Operation Co.) was opened in 1978 — four years after a specialized container berth had been built at Inch'ŏn. These developments at Pusan resulted in the replacement of Korea's feeder links with Kobe and Hong Kong by the mainline container services of major liner shipping companies. Inch'ŏn's dock facilities lacked the convenience afforded by the Port of Pusan as they were located one day's steaming time from the main shipping routes.

1980s. During the early 1980s further improvements were made to inter-city transport connections. As most investment was directed to road transport, the railways position in long-distance road transport was eroded (only 14 per cent of the railway track had been electrified). By 1981 the length of expressway was 1225 km. It was not until 1984 that the 88 Olympic Expressway was completed between Taegŏn and Kwangju. Traffic was still concentrated between Seoul and Pusan.

In 1987 congestion between Seoul and Taegŏn was so severe that the parallel Chungbu Expressway was completed via Inch'ŏn and Ch'ŏngju. National Roads were expanded to complement the expressway networks. These expressways permitted the government to pursue a multi-centred development plan based on twenty-eight service delivery areas. One of them included the expanding Port of Pusan, which accounted for over 90 per cent of the containers handled in Korea.

During the late 1980s attention was also focused on overcoming the West Coast's poor infrastructure. A West Coast Expressway from Inch'ŏn to Kwangyang was developed and the railways double tracked. Other capital works included a promised international airport at Kwangju and a domestic airport at Mokp'o. These projects were part of a concerted effort to improve accessibility between the West Coast and other parts of South Korea and the East Asia region.
On the eve of the 1990s South Korea's domestic transport system still had inherent weaknesses in its infrastructure. Despite heavy investment since 1960, inadequacies were apparent in both its slow-speed transport network designed for moving resources and goods, and its high-speed transport network for effecting face-to-face contact between business people.

During the 1990s road transport dominated domestic transport in South Korea by rail and sea in tonnes moved. These positions are reversed in tonne-kilometres with sea leading rail and road. On both counts air transport makes a negligible contribution. These raw statistics highlight the manifest difficulties in moving goods and people.

An examination of container transport highlights the inadequacies of moving goods inland, the problems of road-rail competition and the low-priority afforded port development by government. Over 90 per cent of containers are handled by Pusan but more than 40 per cent originated or terminated in Seoul. Problems of handling containers stem from the shortfall of port capacity and consequent distribution from off-port container yards around Pusan and the inadequacy of the railways. Although the main Seoul intermodal container terminal at Pugok is connected by rail, most containers arrive by road. This aggravates congestion on the Seoul-Pusan Expressway and within the City of Pusan. In 1995 the throughput of containers at Pusan was 2 million TEUs and was expected to increase to over 7 million by 2001 (container movements are measured in terms of twenty-foot equivalent units). As Pusan had limited space for expansion a new port has been built at Kwangyang Bay (Figure 3). By year 2001 it should be handling 1 million TEUs. The reluctance of major shipowners to move their traffic to Kwangyang Bay has led to further expansion at Pusan.

The rationale for improving high-speed transport is prompted by congested highways and limited domestic airports to facilitate face-to-face business contacts. Producers have difficulty in taking overseas business people to dispersed industrial sites. Most attention has been focused on providing high-speed rail but plans are in-hand for a new international airport.

Progress on the proposed 409 km high-speed railway between Seoul and Pusan is behind its original schedule (Figure 4). When completed during the early twenty-first c. the return trip by the 200 kph train between Seoul and Pusan would be possible within one day. Meanwhile, there is continued reliance on the existing saturated railway system and the congested road network. Seoul's subways (commenced 1971) and electrified commuter railways have been expanded and a subway completed in Pusan (1985). Other subways are planned for Inch'on, Kwangju, Taej'on, and Taegu.

There are three international airports in Korea — Kimp'o (Seoul), Kimhae (Pusan) and Cheju Island (the promised additional one at Kwangju has yet to materialise). Kimp'o is the dominant airport. Opened in 1953, Kimp'o was expanded between 1976 and 1980, and between 1983 and 1987 (prior to the 1986 Asian Games and 1988 Summer Olympic Games). The number of landings and take-offs at Kim'po are restricted because the distance between runways is 400m not the recommended 1300m and a curfew is in force between 2200 and 0600 hours because it is close to built-up areas. Further problems stem from its closeness to military facilities and the mountains.

Consequently, a new international airport is being constructed at Yǒngjong Island, 50 km west of Seoul. New airport facilities are vital to accommodate South Korea's passenger and air freight growth. With a new airport South Korea would be a major hub in the inter
continental passenger and air express market between Asia, Europe and North America. Already Seoul serves as a hub for some passengers from China and Japan. The first phase of Yongjong-do Airport will be completed in year 2002. Looking ahead, there is a need to tie Korea’s slow-speed and high-speed transport networks into regional East Asian and trans-continental networks.

International networks

South Korea is in a pivotal position with respect to the heavily populated East Asia region (Figure 5). Within two hours flying time of Seoul there are 400 million people. During the Cold War political and ideological differences had prevented economic cooperation between South Korea and its neighbours. Following the thaw, South Korea has entered into economic relations with both China and Russia.

(Bring in Figure 5)

Within East Asia international shipping and air agreements have been established with both Russia and China. Much emphasis has been placed on trade with China, particularly as South Korean businesses have established joint ventures using local raw materials and labour, and South Korean technology, capital and management expertise. Already South Korean transport interests have targeted Shandong and other provinces bordering the Gulf of Bohai. An accommodation between the two Koreas and the reunification of the rail and road networks would produce a transport pattern not unreminiscent of late Chosŏn when Korea provided a bridge from Japan to China (see Fig. 5 inset).

Looking further afield, there has been renewed interest in Eurasian routes, particularly following the opening-up of Eastern Europe (Figure 6). In the past the Trans-Siberian Railway has been seen as an alternative to sea transport. Now attention has been given to connections to the Trans-Siberian Railway through North Korea or the Trans-China Railway from Lianyungang. Studies have also been made to remove missing links in the Eurasian road network. Much will depend on the unification of North and South Korea.

(Bring in Figure 6)

Korea’s mainstream route is to North America. Leading South Korean shipping companies, notably Hanjin (the country’s largest container carrier), Hyundai Merchant Marine and Cho Yang, are engaged in offering minimum cost, port-to-port or round-the-world services between Asia and North America, and between Asia and Europe. In North America the Korean companies have been active in the double-stack rail transfer of containers from the West Coast to the Mid-West. As Seoul is located on a Great Circle route to the United States (i.e. the shortest route possible) it has great potential as a hub for Korea’s two privately-owned international airlines — Korean Air and Asiana.

(North Korea has 4 250 km standard gauge railway track of which 78 per cent is electrified; 4 500 km of paved highway and 25 500 km, unpaved; 2 253 km, waterways navigable only by small craft; twelve ports; forty-nine airports; 88 ships over 1 000 gross tonnage under its own flag; and the state-run Koryŏ Airline operates five routes.)

Marine transportation

Inland waterways and coastal shipping routes played an important role in both passenger and freight transportation in Korea until the end of the 19th century. The Han River was particularly heavily used for the transportation of marine products and agricultural produce to Seoul, however use of this waterway became severely restricted after the Korean War due to the proximity of its estuary to the demilitarized zone (DMZ). The growth of road transportation has led to a decline in marine transportation during the postwar years,
however routes linking the country's numerous islands to each other and the mainland remain important, particularly in the case of Chejudo in the far south, Ullungdo in the East Sea (Sea of Japan) and the archipelagoes in the south and southwest of the nation.

At the end of 1994, South Korea had a total of 49 ports with a combined annual loading and unloading capacity of 275.59 million tonnes. Port facilities at Pusan, Inch'on, Pohang and other centers have been expanded to handle increased import and export volumes, and are home to 4,965 vessels with a combined weight of 6.5 million tonnes.

Air transportation

Full-scale development of air transportation began with the establishment of Korean National Airlines, later renamed Korea Air Lines (KAL), in 1962. The national carrier recorded an average of 12% growth in passenger volume in the two decades to 1989, carrying 8.9 million domestic passengers and 8.2 million international passengers during that year. KAL has been joined on both domestic and international routes by Asiana Airlines, and both operate networks based in Seoul. By the end of 1994, South Korea had concluded aviation agreements with 63 nations, and had air links with 63 cities in 26 countries. There are regular scheduled flights from Seoul's Kimp'o Airport to major cities in South East Asia, the Middle East, the United States, Europe and Australia, and international flights also leave from the nation's two other international airports at Pusan and Cheju. Domestic flights also depart from these three airports, and Kimp'o operates as the hub of the domestic air network. Other domestic airports include those at Kwangju, Taegu, Ulsan, Pohang, Sach'on, Yech'on, Mokp'o, Yosu, Kangnung and Sokch'o. Domestic air passenger volume in 1994 reached 18.2 million persons, or 5.7% of the total annual domestic passenger volume. 3.15 million South Koreans traveled overseas during 1994, an increase of 30.3% from the previous year, while the nation was visited by 3.58 million foreigners, a 7.5% increase on the previous year's figure.

Ugō, King (? - 108 BCE)

King Ugō was a king of Wiman Chosŏn and the grandson of Wiman (194 BCE -?), the founder the state. His grandfather founded Wiman Chosŏn and shortly began to subjugate the neighbouring states to the north, east and south. The scale of Wiman grew to such an extent that it prohibited the small states to its south, including Chin, from direct contact with the Chinese Han dynasty. Wiman acted as an intermediary in all trade with Han and extracted a fee for every transaction. This was not well received by Han, as it also felt threatened by the Wiman expansion and the possibility of an alliance between the Korean state and Han’s northern enemies.

The long-standing contentions between Han and Wiman Chosŏn reached their zenith in 109 BCE when Han launched an attack against the Wiman capital, Wanggŏm Castle (modern day P’yŏngyang). The outnumbered Wiman forces, led by King Ugō, struggled valiantly and held the fortress for a year before finally succumbing to a combination of the Han army and internal dissension. Ugō was assassinated by a faction within Wiman that sought peace with Han, but his loyal vassal Sŏnggi continued the struggle against the Han for some time. However, Wanggŏm Castle fell in 108 BCE and this marked the end of the Wiman Chosŏn state.

Ugye chip (Collected Works of Ugye)

Ugye chip is the anthology of the scholar-official Sŏng Hon (1535-1598) of the middle Chosŏn period. This woodblock-print work consists of six original volumes and six supplemental volumes in a total of six fascicles. It was first published in 1621 and was republished by a seventh generation descendant of the writer in 1809. The original six volumes contain poems, memorials to the throne and other various writings, while the supplementary collection contains a wide variety of prose and poetry.

This work is acclaimed for the literary excellence of Sŏng’s writings. He is acknowledged as one of the most prominent scholars of his day as revealed in his theoretical writings commenting on the nature of man, the manifestations of ki (life force) and how to cultivate this property. Also notable in this collection is the official correspondence that Sŏng sent to the throne in answer to political, economic and social problems that arose during the 1592 Japanese Invasion. Therefore, this work is valuable not only from a literary standpoint, but also as a means to understand philosophical questions arising in neo-Confucian discourse and for the historical conditions present in Korea during the author’s life. Copies of this work are presently stored at the Kyujanggak Library, the National Central Library and Korea University.

Üibang yuch’wi (Classified Collection of Medical Prescriptions, 1464)

Üibangg yuch’wi is one of the two medical prescription books compiled in the early years of the Chosŏn Dynasty, the other being the Hyangyak chipsŏng pang (Compilation of Native Korean Prescriptions).

It consists of a massive 365 volumes, each with 100 leaves and as a consequence, in terms of size, no other medical textbook can be compared to it.

The editors of Üibangg yuch’wi were Kim Yemong, Yu Sŏngwŏn, Min Pohwa, Kim Mun, Shin Sŏkcho, Yi Ye, Kim Suon and three medical doctors, Chŏn Sunŭi, Ch’oe Yun and Kim Yuji. The editing of the work during the final five years fell to Yang Sŏngji.

The work is an extensive compilation of the Chinese medical prescriptions in use at the time of King Sejong. References are made to the original Chinese works, which include 153 medical books used in the Tang, Song, Yuan and Ming dynasties. (About 40 of these
works are no longer extant). Thus, without recourse to the Chinese books, it is still possible to compare all the theories and prescriptions of the originals at a glance.

Following an introduction, the arrangement is according to ailment. Ninety of these are listed, such as diseases of the visceral organs, palsy, colds, diseases of the eye, etc. In the entry for each disease a general theory is provided, followed by prescriptions. The theories are listed in chronological order, showing changes from earlier theories.

A part of this voluminous work was carried to Japan during the Japanese invasion of 1592 and is currently kept at the Imperial Household Agency of Japan. In 1861, towards the end of the Tokugawa regime, the compilation was reprinted in reduced size. At this time, while the Uibangg yuch'wi was highly valued in Japan, not a single copy could be found in Korea itself as the volumes had been scattered and lost. The Japanese reprint was brought to Korea by a Japanese delegation at the time of King Kojong when the Korea-Japan Amity Treaty was signed in 1876. This copy was at first retained in the royal court, but it too has now disappeared.

Together with the Hyangyak chipsŏng pang, that other monumental medical book of the era of King Sejong, the Úibang yuch'wi stands as proof of the high standard of Korean civilization at that time.

Úibyŏng (Righteous Armies) [History of Korea]

Úich'ŏn (1055-1101)

Úich'ŏn, also known as National Master Taegak, is famous as the monk who founded the Korean Ch'ont'ae (Chin. Tiantai) Order. As the fourth son of King Munjong (r. 1046-1083), he responded to his father's request that one of his sons join the Buddhist clergy. He was ordained in 1065 under National Master Kyŏngdŏk. After studying at Yongt'ong Temple, he received full ordination at Puril Temple. From this time, he dedicated himself to extensive study of Mahayana and Hinayana sutras and treatises, and even non-Buddhist texts. Having thoroughly mastered Buddhist thought, he took over his teacher's lessons after his teacher's death. His insightful lectures soon became famous throughout the nation.

With a desire to further his studies, Úich'ŏn expressed a desire to go to Song China but was continually refused permission. However, he maintained a correspondence with Dharma Master Jingyuan, one of the most famous Song Buddhist masters of the time. In 1085, after the death of King Munjong, Úich'ŏn finally left for China accompanied by two of his disciples. After his arrival in China, Úich'ŏn travelled extensively, meeting leading thinkers of the Huayan, Tiantai, Vinaya, Pure Land and Chan sects. At this time, he even studied Sanskrit. However, the Koryŏ court soon requested that he return. Thus, in 1086, he came back to Korea with over 3,000 volumes of Buddhist texts.

Back in Korea, he became the abbot of Hŭngwang Temple where he set to work systematising Ch'ont'ae theory and training disciples. Later, after brief stays at other temples, he became the abbot of the newly constructed Kukch'ŏng Temple in 1097. In the next few years, a series of conferences were held and the Ch'ont'ae Sect was formally founded. The new order was tremendously popular, drawing many of the leading monks from the Nine Mountains Sŏn sects as well as from the Hwaom sect.

Although the Ch'ont'ae teachings had previously been studied in Korea, a formal Ch'ont'ae school had never existed. Úich'ŏn believed that Ch'ont'ae thought provided an ideal theoretical basis for the unification of Korean Buddhist schools. Basing himself on Wŏnhyo (617-686), Úich'ŏn claimed that original nature (sŏng) and characteristics (sang) were essentially a unity. By resurrecting some of Wŏnhyo's ideas, Úich'ŏn helped establish Wŏnhyo's position as the most fundamental Korean Buddhist thinker. Just as
Wonhyo had created a theoretic basis for a syncretic approach, Úich’ón attempted to show that the rival approaches of the Kyo (Doctrinal) and Sŏn (Meditation) sects actually worked better in combination. According to Úich’ón, a conceptual understanding of the Buddhist path complemented the practical approach advocated by Sŏn. However, Úich’ón felt that Sŏn had grown excessively bibliophobic. He believed that meditation must be based on scriptural teachings.

In addition to his efforts to harmonise the Korean Buddhist schools, Úich’ón worked to preserve East Asian Buddhist texts for posterity. Unlike many Chinese Buddhist cataloguers who generally felt that only translated texts from Indian authors should be included in the canon, Úich’ón felt it important to include East Asian works so that these would not drop from circulation and be lost. Úich’ón therefore sent agents throughout East Asia to China, Japan, and the realm of the Khitan Liao dynasty in search of texts by native authors. In 1090, he published his catalogue, the Shinpyŏn che chonggyo chang ch’ongnok, which lists 1,010 titles in 4,740 rolls. Woodblocks of the texts were then carved and the collection was called Sok changgyöng (Supplement to the Canon). Unfortunately, the supplement, along with the first Koryŏ Canon, was burned during the Mongol invasion in 1231-1232. When the canon was re-carved between 1236 and 1251, the supplement was omitted, and was therefore lost to posterity.

With his profound erudition and close ties to the monarchy, Úich’ón was able to bring together many of Korean Buddhism’s rival factions. However, his low appraisal of Sŏn and his early death at the age of forty-seven ultimately doomed his efforts to failure. Yet, his attempt to find a theoretical rapprochement between Kyo and Sŏn induced later thinkers such as Chinul to search for ways to integrate the two sects’ theoretical and practical approaches.

Úijong, King (r. 1146-1170)

King Úijong (1127-1173) was the eighteenth king of Koryŏ and ruled from 1146 to 1170. His name was Hyŏn, his childhood appellation was Ch’ŏl and his courtesy name was Ilsung. He was the eldest son of King Injong (r. 1122-1146) and Queen Kyŏngye. His consorts were Queen Changgyöng and Queen Changsŏn. Úijong was named as crown prince when he was seven years old and when his father died in 1146 he assumed the throne.

The period in which Úijong ascended to the throne was a very turbulent one in Koryŏ history. Several years before Úijong had come into power, the strength of the monarchy in Koryŏ was greatly jeopardised by the Yi Chagom (?-1126) Rebellion which exploited the weakness of the Koryŏ monarch. Although this attempt to overthrow the monarchy was thwarted, it was closely followed by another plot to topple the Koryŏ throne. This second attempt was led by the Monk Myoch’ŏng and actually was successful to the extent that a kingdom was briefly set up in P’yŏngyang before government forces led by Kim Pushik (1074-1151) crushed the rebellion in 1135. To further add to the complicated situation that Úijong found himself in was the disdain that the civil officials and royal family held for the military forces. Koryŏ’s aristocratic rule was based on the principle of civil supremacy that relegated the military to a second class status. The military officials found themselves treated as subordinate members of society insofar as both their political and economic power was concerned. The foremost military commanders, such as Kim Pushik and Kang Kamch’an (948-1031), who were men with backgrounds as civil officials, were greatly concerned by this treatment. Therefore, the possibility of rebellion in the military forces was strong in this period.

Úijong’s basic personality traits were given to the pursuit of a luxurious and comfortable lifestyle and a lack of decisiveness in his rule of the country. He enjoyed poetic and artistic pursuits and built a number of pavilions and gardens for the pleasure of himself and his
court. It is said that Uijong so enjoyed his life as an aesthete that he rarely set foot in his palace. Naturally, he was joined in his leisurely life by his officials, but the military commanders and soldiers who were forced to serve as guards for his entourage only saw their plight worsen. It seemed a foregone conclusion that the military would revolt; it was only a matter of what would serve as the spark.

In 1170 Uijong was taking a journey to Pohyon Temple when the commanders Chong Chonbu, Yi Ui-bang and Yi Ko and others who had been assigned as escorts to the Uijong's retinue rebelled against his ineffectual rule and their mistreatment. With a rapid unified effort, the military forces quickly took control of the nation and replaced Uijong with his younger brother Myongjong (r. 1170-1197). Three years after this coup, the civil official Kim Podang attempted to restore Uijong to the throne but his attempt failed and set off another wide-scale purge of the literati by the military. The end of Uijong's reign marked the onset of a period of military domination of Koryŏ in which the kings were little more than figureheads.

Uijŏngbu

Uijŏngbu is situated just north of Seoul in Kyŏnggi Province. The Kyŏngwŏn Railway Line and Highway 3 link the area with Seoul and Tongduch'ŏn. Mt. Tobong (717m) rises on the city's southwestern border and Mt. Surak (638m) stands in the south. However, most of the city consists of low elevations. The city's major agricultural products are rice, green vegetables and fruit, and in Shin'gok-dong and Changam-dong, there are a number of dairy and stock-breeding operations. Primarily located in Howŏn-dong and Changgok-dong, the city's industries are centred on textile and chemical production.

Easily accessible from the capital, Uijŏngbu is frequented by Seoul residents who come to enjoy the area's natural scenery. In particular, mountains such as Mt. Tobong, Mt. Surak, Mt. Yongam, Mt. Ch'ŏnbo and Kittae Peak are famous for their spectacular granite crags and pinnacles of rock. There are also a number of ancient temples in the city.

Most of the area's Buddhist artefacts are found at the Hŭryŏng and Mangwŏl temples, both located within Mt. Pukhan National Park. Founded by Muhak in 1395, Hŭryŏng Temple contains a five-storey stone pagoda and a stone water basin. Mangwŏl Temple, founded by Haeho in 639, contains National Master Hyego's stupa and a pagoda and stele commemorating T'ae-hŭl (Sŏn Master Ch'ŏnbourg, 1710-1793).

There are several Confucian sites in the area. In Changam-dong, there is Nogang Sŏwŏn (private school). In addition, there are several shrines here, such as Hyomin-sa in Kŭmŏdong, Paekpŏm-sa in Howŏn-dong, and the Songsan-sa site in Minnak-dong. Paekpŏm-sa was built in honour of Kim Ku (1876-1949, styled Paekpŏm), one of the key figures in the independence movement during the Japanese occupation. When Kim was wanted by the Japanese authorities, he is said to have occasionally come here to rest in the shrine's natural setting.

Uiryŏng County

Situated in the centre of South Kyŏngsang Province, Uiryŏng County has the town of Uiryŏng and the townships of Karye, Kungnyu, Naksŏ, Taeŭi, Pongsu, Purim, Yongdŏk, Yugok, Chŏnggok, Chijŏng, Ch'ilgok and Hwajŏng. The county is surrounded by Hapch'ŏn County to the north; Haman County to the southeast; Chinju to the southwest; Ch'angnyong County to the east; and Sanch'ŏng County to the west. Uiryŏng County has a total area of 481.32 square kilometres and as shown by 1989 statistics, a population of 51,446. Located on the flood plain of the Naktong River and its tributary the Nam River, the county consists primarily of level terrain with great stretches of fertile soil. Mt. Chagul (897m) and Mt. Hyŏnu (835m) rise in the western part of the county and Kuksa Peak
(669m) and Mt. Mit’a (662m) stand along the northern border.

About twenty per cent of the county is arable land, of which some sixty sq. kms. grows rice. The remainder is used for mixed farming, including dry-field crops, cotton, chestnut, stock breeding, sericulture and apiculture. Most of the area’s farms tend to be small operations. The county also has active timber products and its mines/quarries excavate gold, silver, copper, clay and silica. The tradition of hanji (Korean paper) manufacture has been kept alive in hanji factories in Purim Township’s Shinban Village, Pongsu Township’s Chukchôn Village and in Yugok Township.

The area has a number of tourist attractions. In Kungnyu Township’s P’yöngch’on Village is a spectacular set of cliffs and exposed rock known as Ponghwangdae (Phoenix Heights). When viewed from a distance, the cliffs are said to resemble the head of a phoenix. Several caves and mineral springs are also found here.

In addition to its scenic attractions, the county has a number of important historical sites. Northwest of Mt. Pyökhwa (521m) in Ùiryöng’s Ha Village lies the old site of Poch’ón Temple. Here, a three-storey pagoda (Treasure No. 373) can be seen, and a stone stupa (Treasure No. 472). The two Buddha statues near Chönggok Primary School in Chönggok Township’s Chunggyo Village originally stood at this temple site.

Confucian schools in the area include T’aeam Sòwón in Yongdök Township’s Chukchôn Village; Naksan Sòwón in Purim Township’s Kyöngsan Village; Ògag Sòwón in Yongdök Township’s Un’gok Village; Miyöng Sòwón in Taëui Township’s Shinjön Village; Togye Sòwón in Chönggok Township’s Chungsyo Village; Ùiryöng Sòwón in Yugok Township’s Ch’ölgok Village; Shin’gye Sòwón in Purim Township’s Shinban Village; Tökkok Sòwón (founded in 1660) located just south of Highway 20 in Ùiryöng; and Ùiryöng Hyanggyo in Ùiryöng just north of Highway 20. Founded in 1617, Ùiryöng Hyanggyo was repaired by Chu Chiyöng in 1772. Suffering damage at the beginning of the Korean War, the school was repaired by Yi Ung-su and other local Confucian scholars in 1975.

The area’s cultural traditions are preserved by a number of festivals and rituals held throughout the year. Beginning on 21 April, the Ùibyöng (Righteous Soldiers) Cultural Festival is held in commemoration of Kwak Chaeu. Kwak was a famous guerrilla leader during the Hideyoshi Invasions (1592-1598). The three to four-day festival features a number of programs, including a preliminary ceremony on the eve of the celebration, a memorial service, traditional entertainment, cultural and arts events, and athletic competitions.

Village rituals common in this region include the Tangsanje (Shaman ritual to worship the deity of the mountains) and the Tongshinje (Shaman ritual to worship the guardian spirit of the village). Most of these rituals are held at midnight on the 31st of the twelfth lunar twelfth month or on the 15th of the first lunar month. The Tangsanje held in Ch’ilgok Township’s Oedo Village is said to have a particularly long history. The village’s residents consider a tree on Ant’ae Peak to be sacred.

Úisang (625-702)

Úisang was renowned as the founder of the Flower Garland (Huayan, Kor.Hwaöm) School of Buddhism in Korea. He was the son of Kim Hanshin, and he became a monk at the age of twenty-nine. Shortly afterwards, he attempted to travel to China to study the progress of Buddhism there, and travelled with Wônhyo (617-687) to Liaodong, but was detained by the Koguryô guard as a spy. After some time in detention he was allowed to return home.
A short time later he was able to sail on the ship of the returning Tang envoy and this time he achieved his goal, stopping first at Yangzhou, where he was entertained by the governor of the prefecture. He then went to Zhixiang Monastery on Mount Zhongnan and had an audience with Zhiyan (602-668), who was believed to have received an omen of his coming in a dream. Úisang became his disciple at the same time as Fazang (643-712) with whom he enjoyed an enduring friendship. While he was in China, Úisang was informed by Shilla officials in the Tang capital that the emperor Tang Gaozong was planning to invade Shilla, and he was told to return home. He did so in 670 and informed the Shilla court of the danger. As a result the invasion was averted.

King Munmu later ordered Úisang to build Pusŏk Monastery as the major place of worship for the Flower Garland School. There Úisang expounded the school's philosophy and trained disciples, stressing practice and monastic life. His exegesis of the scripture differed from that of his colleague Fazang, who systematised Flower Garland metaphysics, but it is clear from a letter he wrote to Úisang that Fazang held him in great respect and affection, and that they had a mutual regard for each other's views.

Úisang’s best known work was the Pŏpkye tosŏin (Diagram Seal of the Dharmadhatu, 668) and the Yakso (Abridged Commentary) which reflected his emphasis on practice. Many later works by other authors were based on his Diagram. Wayne visited him at the Avalokitesvara Cave on Mount Nak to discuss this work with him, indicating that they maintained close ties after Úisang’s return from China.

In his own time, Úisang was thought by many to be a reincarnation of the Buddha. He was certainly one of the most important figures in the development of Buddhism in Korea and at times he had as many as three thousand disciples. They included a number of eminent monks whose efforts, combined with those of their master, helped to develop the Flower Garland School as the most influential in Shilla.

**Úisŏng County**

Situated in the centre of North Kyŏngsang Province, Úisŏng County is comprised of the town of Úisŏng and the townships of Kuch’ŏn, Kŭmsŏng, Tain, Tanmil, Tanbuk, Tanch’ŏn, Pongyang, Sagok, Shinp’yŏng, An’gye, Ansa, Anp’yŏng, Oksan, Chŏnggok, Chūm and Ch’unsan. Except for Shinp’yŏng Township in the northwest, the area is relatively flat. The T’aebaek Mountain Range runs along the county’s eastern border, forming a high plateau. As an inland area of high elevation, the county’s weather is characterised by sharp seasonal fluctuations and a relatively meagre annual rainfall that rarely exceeds 900mm.

With about 71 per cent of the county covered by forests, only 19 per cent is tillable. Even so, three quarters of the county’s working population are employed in agriculture. Although some rice is grown, the farmed land is devoted mostly to dry field crops such as garlic, red pepper, yellow-leaf lotus and leaf vegetables. In the northwest, there are numerous mulberry plantations and silk larvae breeding centres, as well as raw silk factories.

Although the area is mountainous and has a considerable amount of forest, it is not a sought-after destination for tourists. In Ch’unsan Township’s Pinggye Village, one finds Pinggye Valley which is considered to be one of the ‘eight wonders’ of North Kyŏngsang Province. Within the valley, there is a small gorge famous for its bizarre weather patterns. It is said that ice can be found here in summer; yet warm gusts of wind come from the gorge in winter. Nearby lies Kaeil mineral springs, whose water is claimed to cure stomach ailments and skin disease. Kaŭm Reservoir and the Susan and Puram temples are also found here. In order to preserve the valley’s natural environment, the area has been designated Pinggye Valley County Park.
Koun Temple, in Tanch’on Township’s Kugye Village, is another popular tourist destination. Founded by Grand Master Üisang (625-702), the monastery was later reconstructed by Ch’oe Ch’iwôn (857-?). At the temple, a stone walkway leads under Kaunnu, a pavilion-gate that have been designated North Kyongsang Province Tangible Cultural Asset No. 151. The temple also houses a well-preserved seated Buddha statue (Treasure No. 246). Unlike many other ancient stone statues, both the pedestal and aura piece which stands behind the statue, are extant.

Other ancient temples in the county include Sujong Temple (said to have also been founded by Üisang), Unnam Temple, Chijang Temple, and Tain Township’s Taegok Temple which was founded by Sôn Master Chîgong and Naong. In Üisong’s T’ap Village, there is an interesting five-storey pagoda (National Treasure No. 77) from Greater Shilla. In some respects, the pagoda has been built in imitation of a brick pagoda, yet in others, it resembles a wooden structure.

In addition to these Buddhist relics, there are a number of Confucian schools in the area, including Soksu Sŏwŏn, Pian Hyanggyo in An’gye Township’s Kyoch’on Village, Tŏgyang Sŏwŏn in Tanmil Township, Changdae Sŏwŏn in Pongyang Township, Myŏnggok Sŏwŏn in Kaum Township, Pingye Sŏwŏn in Ch’unsan Township’s Taesa Village and Üisŏng Hyanggyo, which was founded in 1394 in Todong Village.

Üisun Ch’o’óû (625-702)

Üisun was most often called by his pen name, Ch’o’ûû; but known also as Chongbu and Iljiam. His family name was Chang; and he was born in Samhyang township, Chŏnnam). Üisun was a Sôn (Zen) master and a distinguished poet. His life coincided with the most crucial years of the shirak (practical learning) movement, and he became close friends with two of its leading figures, Chŏng Yagyong (styled Tasan; 1762-1836) and Kim Chŏnghŭi (styled Ch’usa; 1786-1856), whom he first met in 1815. It is said that Chŏng Yagyong secretly entrusted to him his Kyŏngse yup’yo (Recomendations on Governance Submitted to the Sovereign) before dying. This revolutionary text was secretly passed around until it made its way into the hands of the leaders of Kaehwadang (Enlightenment Party) during the late 1870’s and the leaders of the peasant uprisings in 1894. Like Chŏng and Kim, Üisun was also an enthusiastic advocate of tea and is now credited with restoring the aesthetic relationship between tado (the tea ceremony) and Sôn during the final years of Chosŏn. In addition, he criticised the theory of Sôn forwarded by Kŭngsŏn Paek’pa (1767-1852), and while Kim too criticised Paek’pa, Üisun’s status as a priest gave his views greater weight. Moreover, he provided an alternative position.

It is said that Üisun’s mother became pregnant after dreaming that a large star entered her bosom, and this invention befits the unique acclaim he ultimately enjoyed as a priest. As a young boy he was playing next to a swiftly flowing river, when he tumbled down the bank. He would have drowned had it not been for a priest from a nearby temple, who rescued him and then suggested that he might consider becoming a priest. And so, at the age of fifteen he went to Unhûng Temple where he took the Buddhist vows. There he remained for the next three years, but at the age of eighteen his life came to a turning point. While gazing at the sunset, Üisun had an experience of spiritual awakening, and this marked the start of his acute interest in Sôn. He travelled throughout Korea searching for great Sôn masters and undertaking extensive studies in the Buddhist scriptures. He was also deeply interested in Confucianism and Daoism, and it is said that he even became proficient in reading Sanskrit, the original language of the Buddhist sutras. If true, Üisun appears to have been among the very few who possessed this ability.

During the course of these journeys Üisun eventually met the great master Wanho Yunu (1758-1826), who had been a student of the famous Yŏndam Yuil (1720-1799). Üisun ultimately succeeded Wanho, and while he engaged in formal Buddhist activities and
oversaw the training of many students, he was most eager to practice meditation in solitude. Accordingly, in 1824, he built Iljiam (Ilji hermitage) precisely for this purpose, and became so strongly associated with it that he himself came to be called Iljiam. Although he journeyed to other temples throughout Korea during the remainder of his life, most of his time was spent at Iljiam hermitage, where he engaged in intensive Sŏn meditation. It was here that he died forty-two years later.

Ŭisun’s most important writings can be placed into three broad categories: texts on tea, metaphysical tracts on Sŏn, and a massive corpus of poetry. During his life, great attention was paid to his poetry and some commentators have even speculated that he had learned the art under the tutelage of the literary master Chŏng Yagyong, whom he had first met in 1809. In 1831, the civil minister Hong Sŏkchu (1774-1842) and Shinŭi (1769-1847), a scholar, poet, and calligrapher of high distinction, collected his poetry manuscripts and each wrote an introduction. It is significant that this was done not only during his lifetime, but, moreover, while he was still relatively young. Most interestingly, however, he was a priest, and Buddhism was generally scorned by the Neo-Confucian ruling elite. In spite of this, ŭisun’s fame even reached the royal court, and in 1840 King Hŏnjong (r. 1834-49) bestowed upon him the title, ‘Sŏn Master Ch’ŏui: His Great Enlightenment Reaches Far and Ascends the Highest’. This exceptional honour came at a time when Buddhist priests would still have to endure for another fifty-five years legal prohibition from entering the capital.

Ŭisun’s deep interest in tea seems to have begun in earnest around 1828 when he began making an outline of extant Chinese materials relating to tea, and in 1830 his results were made available in the Tashinjon (An Account of the Spirit of Tea). This text was divided into twenty-two sections expressing both his scientific and aesthetic concerns. Beginning with general observations on the best times to plant tea, he went on to note the many varieties of tea, the proper methods for boiling the water, the way tea ought to be mixed with water, as well as the implements to use and the proper ways of cleaning those implements.

Then, in 1837, ŭisun’s passion for tea and poetry were united in a short collection of verse entitled Tongdasong (Eulogies for Korean Tea). Written at the request of a friend, the text consisted of seventeen poems celebrating various aspects of tea. The poetry itself was beautiful though dense with tea lore, literary allusions to classical Chinese texts on tea, and the views on tea as expressed by previous poets. In one poem he draws upon the Tang Chinese poet Li Po (701-762) and in another, the book about tea written by his friend and fellow tea enthusiast Chŏng Yagyong. Recognising these difficulties, Ch’ŏui himself noted his sources in the manuscript, thereby allowing his readers deeper insight into the ideas underlying the mellifluous poetry.

Nonetheless, ŭisun’s greatest importance within Buddhism derives from his critical response to Kûngsŏn Paek’pa’s Sŏmnun sugyŏng (Hand Mirror of Sŏn Literature). It is unknown exactly when he wrote his retort, Sŏmnun sabyŏn manŏ (Informal Remarks on the Four Divisions of Sŏn Practice), but it was most likely in the late 1830’s.

Paek’pa had formulated three categories of Sŏn consisting of chosa sŏn (patrimonial Zen), yŏrae sŏn (Zen of the Tathāgata or Buddha), and ŭiri sŏn (Zen of principle and reasoning). In addition, Paek’pa used the concept of kyogoe sŏn, meaning truth, that can be apprehended through neither writing nor speech, but only by meditation. Within this framework chosa sŏn was deemed the highest form of Zen because it alone was completely devoid of thought. Accordingly, it represented the mind to mind transmission of the Zen patriarchs and was considered by him to be kyogoe sŏn. Whereas yŏrae sŏn was also defined as kyogoe sŏn, it was inferior to chosa sŏn because it relied, in part, on thinking about the words and teachings of the Buddha. Within Paek’pa’s system, this weak aspect of yŏrae sŏn was the sole component of ŭiri sŏn which was suitable for those of the lowest
capability. However, through this system Paek’ a suggested that those who relied upon ūiri sŏn were incapable of attaining salvation, and this appears to have been the sticking-point from Űisun’s point of view.

Ŭisun borrowed Paek’ a’s four main categories but arranged them differently. He proposed two types of Zen differentiated by their reliance upon words and thought, and he argued that the dichotomy of chosa sŏn and yŏræ sŏn was mirrored by that of kyŏgŏe sŏn and ūiri sŏn. Thus, chosa sŏn and kyŏgŏe sŏn were two synonymous terms for the direct apprehension of truth without reliance on words; yŏræ sŏn and ūiri sŏn both stood for Zen practice using words and thought in attempting to gain enlightenment. While Êisun acknowledged the superiority of the direct apprehension of truth, he stressed that one could indeed attain enlightenment through thinking about the principles and reasoning (ūiri sŏn) of the teachings of Buddha (yŏræ sŏn). In this fashion, he emphasised the fundamental Mahāyana tenet that salvation is attainable by all.

Ŭisun’s position was clearer, and his views generally enjoyed greater support during the following century. A notable exception was the priest Pak Hanyŏng (1870-1948), who wrote Paek’ aesa yakchon (A Biographical Sketch of Great Master Paek’ a) in which he explained Paek’ a’s life and thought. While Pak stood in Paek’ a’s line of transmission, he shared with Êisun a deep appreciation of the aesthetic relationship between Sŏn and poetry. They were men of similar taste, and it is thus appropriate, if ironic, that in 1941 Pak contributed one of two inscriptions for the memorial dedicated to Êisun Ch’ŏu at Taedun Temple.

Bibliography

Im, Chonguk, Ch’oŭi sŏnjip, Seoul, Tongmunsŏn, 1993.

Ŭit’ŏng (927-988)

Ŭit’ŏng is famous as the Korean monk who revitalised the Tiantai sect at the beginning of the Song dynasty. Born as Yun Yuwŏn, Êit’ŏng entered the Buddhist order at a young age where he studied under the guidance of Sŏkchong. After receiving full ordination, he had a realisation while reading the Avatamsaka Sutra and the Dasheng qishin lun (Awakening to Faith in the Mahayana). After this, he went to China’s Mt. Tiantai where he studied under various Tiantai masters. Famous in China for his thorough understanding of Tiantai theory and practice, Êit’ŏng was recognised as the Sixteenth Patriarch of the Chinese Tiantai sect. He wrote several treatises, including the Kwan’gyŏng sogi and the Kwangmyŏng hyŏn ch’an sŏk, but these works are no longer extant. In 1203, his Dharma-heir Zongxiao (1151-1214) wrote the Baoyun zhenzu ji, an account of Êit’ŏng’s life.

Ŭiwang

Ŭiwang is located to the south of Seoul in Kyŏnggi Province. Kuksa Peak (540m), Mt. Paegun (567m) and other peaks of the Kwangju Mountain Range run along the city’s eastern border while Mt. Morak (385m) rises in the west. Water sources include Paegun Lake in the north and Wangsong Reservoir in the south.

With relatively level terrain, the city was traditionally a rice-farming area, but nowadays, vegetable and fruit crops are grown for sale in the nearby metropolitan areas. Stock
breeding and dairy farming are other important sources of income. However, the mainstay of the local economy is light industry. Factories here produce a wide range of goods including chemicals, metal goods, machinery, electrical appliances, electronics and textiles.

Local tourism is centred around the city’s lakes, mountains and cultural sites. In the northeast corner of the city, one finds Ch’ŏnggye Temple. This ancient monastery houses a large bronze bell and a set of wooden printing blocks (Kyŏnggi Province Province Tangible Cultural Assets No. 96 and 135). In addition to its cultural sites, the area has preserved some of its ancient traditions. In the tenth lunar month of each year, a mountain spirit ceremony is held at 5.00 a.m. near Mt. Paegun in Ojŏn-dong. At the rite, a cow is sacrificed to the spirits. Similar ceremonies are performed in Koch’ŏn-dong and Wanggok-dong.

Ŭiyŏltan (Righteous Fighters’ Corps) [History of Korea]

Ulchi Mundŏk, General (fl. c. 545-559)

Ulchi Mundŏk was a general of Koguryŏ during the reign of King Yang’wŏn (r. 545-559). There is very little known about the background of Ulchi Mundŏk beyond his military accomplishments. He is generally credited with saving Koguryŏ from the Chinese Sui’s massive attack on the Korean kingdom in the early seventh c. According to records in Haedong myŏngjiang chŏn (Records of Famous Korean Generals) he was born in the area of Sŏkt’a Mountain on the outskirts of present-day P’yŏngyang.

Conflicts between Koguryŏ and the various Chinese states with which it shared borders were common throughout the history of the kingdom. However, in 612 the Sui dynasty, which had just succeeded in unifying China for the first time in over three centuries, launched a massive attack on Koguryŏ that was designed to crush the Korean state. The Sui emperor, Yangdi, raised an army of over a million men and proceeded to launch an attack on the northern-most fortress of Koguryŏ, Yodong (modern day Liaoyung). However, when this assault failed, the Chinese emperor sent about one-third of his forces for a direct attack on P’yŏngyang, the Koguryŏ capital. At this time Ulchi Mundŏk lured the Sui army into a trap on the outskirts of P’yŏngyang. The Koguryŏ general knew that the supply lines of the Chinese were overstretched and that he could defeat them by luring them deep into Koguryŏ territory. As the Chinese forces drew closer to P’yŏngyang, the Koguryŏ general waited until he had drawn them completely into his ambush and then attacked from all sides. The carnage of the Sui army was so complete that historical records note that less than three-thousand of the Chinese troops survived this attack. After this crushing defeat the Sui army was forced to retreat from Koguryŏ with the onset of winter. The Sui forces again tried to attack Koguryŏ the following year, but these attacks were also repulsed. Shortly thereafter, the battle-weary Sui dynasty was replaced by the Tang dynasty.

Ulchi Mundŏk is remembered as one of Korea’s greatest generals and has been honoured with monuments erected in his memory, among other items. Additionally, one of the major thoroughfares in Seoul, Ulchi-ro Street, is named after him.

Ulchin County

Ulchin County is situated on the east coast in the northeast corner of North Kyŏngsang Province. The county comprises the towns of Ulchin and P’yŏnghae and the townships of Kŭnnam, Kisŏng, Puk, Sŏ, Onjong, Wŏnnam, Chukpyŏn and Hup’o. Mt. Ungbong (999m), Mt. Omi (1071m), Mt. T’onggo (1067m), Mt. Paegam (1004m) and other peaks of the Taebaek Mountain Range run along the county’s western boundary.
Except for the coastal towns of Ulchin and P’yŏnggae, Ulchin County has a relatively low population density. This qualifies it as the least populated county in North Kyŏngsang Province. Most of the area’s residents are employed in either agriculture or fishing. Due to the rugged terrain, only 8.3 per cent arable land. Over half of the cultivated land grows rice, and the remainder dry-field crops. Persimmons are grown and dried here, while sericulture and cattle breeding are other sources of rural income. Marine products are the county’s leading export. The edible seaweed harvested near Kop’o Village is particularly liked. Boats operating out of Hu’po and Chukpyŏn catch mackerel pike, cuttlefish, and filefish. The area also has significant mineral resources. Local mines and quarries produce gold, silver, copper, lead, zinc, coal, lime and clay.

The region offers a large number of tourist attractions. In Onjong Township, there is Paegam hot spring (46c.), which is frequented by tourists who come to enjoy the rural setting and nearby Mt. Paegam. Containing radon, natrium, calcium, potassium, magnesium, iron, sulphur, chlorine and fluorine, the spring is said to possess great curative power. Compared to the Paegam spring, Tŏkku hot spring (43c.), located in Puk Township near Mt. Yongbong (999m), is relatively undeveloped. The Tŏkku spring purportedly alleviates skin diseases, nervous disorders and anaemia. Visitors to the spring often hike in the Tŏkku Valley. Another popular tourist destination is Sŏngnyu Cave in Kŭnnam Township’s Kusan Village. This 479 metre-long cave contains a large number of stalagmitic and stalactitic formations, as well as some interesting rock formations.

South of Highway 36 near Mt. Ch’ŏnch’uk, lies Puryŏng Valley, one of the county’s most scenic areas. Kwang Stream winds through this 15-km.-long valley, which contains numerous white granite cliffs and picturesque waterfalls. In order to preserve the valley’s scenic wonders, the area has been designated as a national park. On the valley’s floor stands Puryŏng Temple. Founded by Ŭisang in 651, this temple houses a number of important artefacts. In addition to the old Ŭngjinjŏn (Hall of the Sixteen Arahants), the monastery contains an ancient stupa and a three-storey pagoda. Confucian schools in the area include, Ulchin Hyanggyo (founded in 1484), P’yŏnggae Hyanggyo, Asan Sŏwŏn, Myŏnggye Sŏwŏn, Nodong Sŏwŏn, Okkye Sŏwŏn, Shin’gye Sŏwŏn, Unam Sŏwŏn and Wŏlgye Sŏwŏn.

Ullŭng County

Ullŭng County is situated on Ullŭng Island. The island, located about 135 kilometres east of the Korean peninsula, is the remnant of an extinct volcano. The county is comprised of the town of Ullŭng and the townships of Puk and Sŏ.

The island’s early history is unclear. In the Chinese Sanguo shi (History of the Three Kingdoms), there is a report from fishermen who were shipwrecked on the island. It was said that the fishermen could not understand the language of the islanders, and that the islanders had unique customs involving the sacrifice of a virgin to the sea during the seventh lunar month. In 512, the island, known as Usang, was captured by the military commander Yisabu in order to protect the east coast from attack. The area served primarily as a military outpost until 1884 when the government officially allowed migration to the island.

Ullŭng Island’s topography is characterised by rugged mountains and steep cliffs along the coast. Due to the island’s rugged terrain and isolated location, there are only about 20 000 residents, about half of whom live in Todong. Most of the residents earn their living by fishing, supplemented by summer tourism. Boats operating out of the island catch cuttlefish and octopus and harvest seaweed. The area is also known for its pumpkin toffee and wood carvings from Chinese juniper.

Transportation links to the island are limited to ferries from P’ohang, Hup’o, Sokch’o and
Tonghae and helicopters from Kangnung. Ferries, however, are unable to make the trip when the sea gets rough. On the island itself, there are few roads, and only several buses and taxis.

Sŏngin Peak (984m), the summit of a dormant volcano, is the island’s highest point. To the north of the peak lies Nari Basin, the only level area conducive to farming. About five kilometres from Todong one finds Pongnae Waterfall. At Todong Yaksut’ŏ (mineral springs) Park, there are monuments dedicated to General An Yongbok and Kim Hau and a small history museum with artefacts from early residents of the island. As for Buddhist sites, there are the Taewŏn and Haedo temples. In order to promote the island’s cultural traditions, the Usan Cultural Festival is held here every October.

Ulmi Incident, 1895 [Japan and Korea]

Ulmi sabyŏn (see Ulmi Incident, 1895)

Ulşa choyak (see Protectorate Treaty, 1905) [Japan and Korea]

Ulsan Metropolitan City

Situated in South Kyŏngsang Province, Ulsan comprises the town of Nongso and the townships of Kangdong, T'udong, Tusŏ, Pŏmsŏ, Samnam, Samdong, Sambuk, Sŏsaeeng, Ŝ'nang, Onsan, Ŝ'yang, Ungch’ŏn and Ch’ŏngnyang. The city has been expanded to include the areas formerly known as Ulchu County, bringing its total area to 1051.81 sq. kms. Mt. Kaji (1 240m), Mt. Ch’ŏnhwang (1 189m) and other mountains of the Tongdae Mountain Range run along the city’s western border. The T’aehwa River flows through the city into Ulsan Bay on the East Sea.

Because of the city’s rugged terrain and increasing urbanisation, there is relatively little arable land. Rice, the main crop, is cultivated in the level areas next to the rivers and numerous streams, and pears are grown in the more remote areas. For over thirty years, high quality amethyst has been mined in Ŝ'yang Township, but most of the mines are now worked out. The amethyst from Ŝ'yang is rated as amongst the best in the world for its colour and hardness. Ul'san is well-known for its brown seaweed (miyŏk), but production is under threat by industrial pollution from the many local factories.

As the city has industrialised, the population has grown rapidly. 1987 statistics indicate a population of 590 401, a seven-fold increase from 1962. Most of the early migrants were men in their late twenties who had come to look for work in the city’s factories. Responding to government incentives, numerous industries moved into the area in the late 1960s. In 1968, an industrial park was built around Maeam-dong for petroleum and chemical products, and in the early 1970s, Hyundai Heavy Industries Co. shipyard was established here. Now the largest single shipyard in the world, the Hyundai factory builds ships of all kinds and sizes, as well as semi-submersible offshore drilling rigs.

With its clear coastal waters and high mountains, the city can boast numerous scenic attractions. In Samnam Township just south of Mt. Hwajang (265m) lies the Chakch'ŏnjŏng Valley. Stretching along Chakk'wae Stream, the valley is home to Chakch'ŏnjŏng, a pavilion established by local scholars in honour of King Sejong. In a setting of crystal-clear water and white granite rock, the pavilion has become a popular tourist destination. On Mt. Haksong near the T’aehwa River, is Haksong Park. The park, covered with a mix of cherry and pine trees, contains Haksong Fortress (Historical Site No. 9). At the T’aehwasa Temple site near the fortress, twelve zodiacal animal figures have been sculptured in relief (Treasure No. 441).
In Pōmsō Township’s Ibam Village, just north of the Ulsan Expressway, there are picturesque cliffs along the T’aehwa River. Ibam (Standing Rock), an eroded pillar of granite, stands in the middle of the river. This lovely spot has often been eulogised by Korean poets and literati. Chinha Beach, another tourist destination located twenty-four kms. southeast of central Ulsan City, is especially popular in the summer months. Surrounded by a pine forest, the beach is one km. long and 300 metres wide.

The city also contains many important historical sites. In Tudong Township’s Ch’önjŏn Village, sits a large rock, its face inscribed with drawings and Chinese characters. These inscriptions were made by Shilla hwarang, an elite class of young warriors during Shilla. Similar carvings are also to be seen at Ōnyang Township’s Taegok Village. The latter depict hunting and whaling scenes.

The area’s unique cultural heritage is maintained by festivals held throughout the year. During the Citizens’ Day celebration, held annually on 1 June, visitors can see performances of local dances and parades together with various contests.

**Umch’ŏngsa**

*Umch’ŏngsa* is a diary written by Kim Yunshik (1835-1922) and consists of two volumes. In 1938 a descendant of Kim’s compiled this work in manuscript form and this was reproduced by the Chosŏnsa P’yŏnsuhoe (Korean History Compilation Committee). It has since been republished in 1958 by the Kuksa P’yŏch’ăn Wiwŏnhoe (National History Compilation Committee) and in 1971 by T’anggudang publishers.

This work covers the period from September 1, 1881 through August 25, 1883 when Kim was serving at the Yŏngsŏnsa (Architect’s Office). Kim, along with other members of this office, was sent to Tianjin in China on a fact-finding mission to learn about new technology concerning weaponry and machinery. In this diary the author also discusses the problems of concluding commercial treaties with China, the United States, Britain and other Western nations. Therefore, it is valuable in the study of the changes that were brought into late Chosŏn through foreign nations and the attempts by the Chosŏn government to assimilate and adapt these changes into their existing governmental organizations.

**Umŏng County**

Situated in the northern part of North Ch’ungch’ŏng Province, Umŏng County consists of the towns of Kŭmwang and Umŏng, and the townships of Kamgok, Taeso, Maengdong, Samsŏng, Soi, Saenggŭk and Wŏnmam. The county covers an area of 518 sq. kms and as shown by 1989 statistics, had a population of 78,607. At Mt. Ogap (609m) in the north, the Ch’aryŏng and Noryŏng mountain ranges divide, with the Ch’aryŏng range lying to the southwest, and descending to a pattern of low hills, with the Noryŏng Range extending south, with its Mt. Wŏnt’ong (645m), Mt. Puyong (644m) and Mt. Kasŏp (710m). The western part of the county is comprised of relatively level terrain. With the influence of the surrounding mountains, the local weather pattern is characterised by sharp seasonal variations with an average January temperature of -3.1c., an average August temperature of 25.8c. giving an overall average of 10c. The average annual rainfall is 1192mm.

In spite of the area’s rugged topography, almost 18 000 hectares of the county are farmed. Of this over 10 000 hectares grows rice and almost 8 000 hectares dry-field crops such as barley, red pepper, turnip and Chinese cabbage. There is also apple and pear growing on a commercial scale. Apple production in particular has boomed to meet national demand, caused by the decline in apple orchards in Taegu. In addition, high-quality tobacco is produced in the county for export to foreign markets. Mineral resources are limited to small amounts of fluorspar and granite. The area’s hard granite has a low iron content and thus is not prone to colour change, making it admirably suited for use in sculptural work and in
some structural presentations.

The county contains a number of historical sites. On the summit of Mt. Kasŏp, there are remains of a fire-signal lookout and at the foot of the mountain is Kasŏp Temple, which contains a stone Buddha statue. To the southeast at Mit’a Temple, there is a rock carving of a Buddha. Confucian schools consist of Ŭmsŏng Hyanggyo (founded in 1560) in Ŭmsŏng’s Shinch’ŏn Village, Un’gok Sŏwŏn (founded in 1661) in Samsŏng’s Yongsŏng Village, and Chich’ŏn Sŏwŏn in Saenggŭk’s P’alsŏng Village. Famous shrines in the area include Munch’unggong Sau in Saenggŭk’s Pangch’uk Village and Ch’unghyangsa in Ŭmsŏng’s Yongsan Village. The former commemorates Kwŏn Kŭk while the latter honours Pak Sehwa, who became a martyr during the early years of the Japanese occupation.

Local traditions are promoted by the Sŏlsŏng Cultural Festival, held since 1982. The three-day festival features parades, traditional food fairs, music and dance performances, games, poetry and folk music contests, athletic events and a beauty pageant. Besides this festival, various folk rituals can be seen at different times of the year throughout the county. Of these, the Shaman rituals to worship mountain deities (sanshinje) that are held in Ŭmsŏng’s P’yŏnggok and Soyŏ villages and in Saenggŭk’s Pyŏngam Village are particularly well known.

Underwood, Horace G. [Education]

Ūnhae Temple

Situated on Mt. P’algŏng in North Kyŏngsang Province, Ŭnhae Temple is one of the main temples of the Chogye Order. When first built by National Master Hyech’ŏl in 809, the monastery was called Haean Temple. After its reconstruction in 1270 by National Master Hongjin, it became an important administrative centre for the combined Sŏn (Jap. Zen) and Kyo (Doctrinal) Orders. The monastery underwent additional restoration work by Wŏnch’am in 1275 and was repaired in 1543. Three years later, Ch’ŏn’gyo moved the Main Buddha Hall to its present location and rebuilt the monastery, calling in Ŭnhae Temple. The temple burnt down in 1563. A year later, Myojin led a reconstruction project, followed by further reconstruction in 1589 and 1651. During the next two-hundred years, the temple complex was expanded and numerous hermitages were built in the area.

In 1847 a fire broke out, razing the entire complex. P’albong and other monks immediately set to work reconstructing the monastery. In the ensuing years, the temple became an important monastic complex with extensive land-holdings. During late Chosŏn it became an important centre for Hwaom thought. Today, Ŭnhae Temple administers thirty-nine branch temples, five Buddhist centres and eight hermitages. The temple houses a number of important artefacts. In the various shrine halls, there are several old altar paintings, including a depiction of Chijang (Ksitigarbha) painted in 1747, a depiction of King Kamno (Amrta) painted in 1762 and a depiction of Amitabha with attendant bodhisattvas painted in 1897.

Unification, Ministry of [Government and Legislature]

Unification of Korea (see also History of Korea)

The Division

The division of the Korean peninsula is a result of both international and domestic forces. Surrounded by major powers like China, Japan and Russia, the geopolitical significance of the Korean peninsula has attracted frequent foreign interventions in Korea’s modern
At the turn of the century world powers competed for dominance in Korea. The simmering pot of rivalry boiled over in the Sino-Japanese War (1894-1895) and the Russo-Japanese War (1904-1905), in both of which Japan was victorious. These victories facilitated the Japanese annexation of Korea in 1910. Thirty-five years later, the power vacuum caused by the Allied victory over Japan again provided a chance for foreign intervention on the peninsula. In 1945, at the end of World War II, the USSR and the USA entered Korea to accept the surrender and disarming of the Japanese troops. In so doing, the two powers agreed to divide the Korean peninsula temporarily at the 38th Parallel.

The Allies, by decisions reached at several major conferences -- Cairo (1943), Yalta (1945), and Potsdam (1945), had reached an understanding that Korea should be granted independence after a period of trusteeship. Nevertheless, as the military forces of the United States and the Soviet Union each occupied separate halves of the peninsula, their conflicting interests did not allow them to agree on how to provide Koreans their independence. Both major powers had substantial self-interest in the peninsula because of its geopolitical importance, and each was suspicious of the other's ambitions in the region. Thus, the two dominant world powers began to build their own power bases on each side of the 38th Parallel by supporting the political factions favourable to them. In the south, the US Military Government (USAMGIK) supported Syngman Rhee (Yi Sŭngman), an American-educated nationalist leader whose political power was based on the support of the conservative landlord-class and colonial bureaucrats. At the same time, the USAMGIK suppressed communist leaders and their sympathizers who held substantial power and were well organized from the time of Korea's liberation. Concurrently, in the north of Korea, the USSR supported the communists, especially Kim II Sung (Kim Ilsŏng) and the Korean Labor Party, while suppressing other political factions opposed to communism. This development eventually led to the establishment of separate governments on opposite sides of the 38th Parallel, in 1948.

Once established, the ideologically-conflicting governments of North and South each claimed to be the only legitimate government for the entire Korean nation. At the same time, as the world was reordered into political blocs, the Korean peninsula became the front line of the Cold War, and hostilities between the two Koreas intensified. These hostilities exploded into the devastating Korean War of 1950-1953, when Northern forces waged total war against the South, with the aim of unifying the peninsula. Within three months, the North Korean troops, well supplied with Soviet weaponry, had overrun most of the southern parts of the peninsula. Soon, however, a United Nations (UN) force was organized under US leadership, and it and South Korean troops took the offensive and penetrated deep into North Korea until they were confronted with a Chinese counter-invasion. At the time of the Armistice in 1953, the border was almost the same as before the war. With more than five million casualties, the war left a deep and unmitigated wound in the psyche of the Korean people. The hostilities and resentment between the peoples of North and South grew even stronger and the frantic competition between them led the two societies to become extremely distrustful and intolerant of each other.

Discussions on inter-Korean affairs have not been free of political, ideological, and emotional bias. These discussions have been hindered by dogmatic nationalism and the ideological rigidity of both regimes. Stressing the homogeneity and the long history of independence of the nation, neither the North nor the South fully admitted to internal causes of the division. Though not the direct cause of the territorial division of the country in 1945, some divisive forces in Korean society and in its history are worthy of mention.

First, ideological cleavages among Korean people have contributed substantially to the division of the nation. Since the early 1920s, the nationalist movement was split into rightist and leftist factions in regard to the methods of achieving independence and modernization. Such an ideological split in the anti-imperialist front was common in many Asian countries including China and Vietnam, but in Korea it was reinforced at the end of World War II by
the actual territorial division of the peninsula. The Korean elite were ideologically divided among themselves, and each faction sought power and domination over the other with support from the occupying forces. This ideological division at the political level reflected the contradictory class structure of Korean society, which consolidated the establishment of the two different regimes.

Secondly, in Korea there has long been a tradition of regional identities based on historical memories and regional cultures. While Korea is an old society with a highly homogeneous culture, Koreans have kept a tradition of regional identities since the Three Kingdoms of Koguryo, Paekche, and Shilla. (circa, first cent. BCE to seventh cent.CE.) Though this period ended with the unification of the larger part of the peninsula by Shilla (today's Kyongsang region), the identities of the conquered peoples of Koguryo (today's North Korea) and Paekche (today's Cholla region) remained with their discernible regional cultures and dialects. Although these weakened gradually over time, the tradition of regional identities is still seen today in the dialects, cultures, bonds, and discriminative practices against people of other regions. This is especially salient both in North Korea's depiction of itself as the legitimate inheritor of Koguryo culture and in South Korea's regionally divided (between the two rival regions of Kyongsang and Cholla) voting patterns.

The experience of the Korean War further divided the peoples of North and South emotionally. During the war, each side committed incalculable atrocities against each other. In addition, as each Korea has claimed absolute and exclusive legitimacy and sovereignty, the half-century of division has been marked with hostile confrontations, slanderous accusations, and misconceptions, which have further consolidated the North-South division, and retarded the unification process.

Inter-Korean Dialogue on Unification

Although the governments of North and South Korea have affirmed their desire for national unification, the reality is that the continuing hostility and rigidity of the two sides hinder positive steps towards the unification goal. Notwithstanding, there are a few agreements between the protagonists which have, at least, kept the doors of negotiation ajar. Until 1971 the two Koreas did not hold unification talks, but a breakthrough came with a thawing of the Cold War in the early 1970s: at the time the US and China improved their relations, when the US and USSR promoted détente, and when the US decided to reduce its troop numbers in South Korea. In August 1971, North and South agreed to open talks through the Red Cross organization to aid the reunion of separated families. Starting with these talks, the two sides exchanged high-level emissaries, and reached a landmark on three principles of unification. These were: a) both sides would work for unification without relying on foreign forces; b) their regimes would transcend ideological and political differences; and c) the peninsula would be unified without reliance on the force of arms. The two sides also created the North-South Coordinating Committee for continuing negotiations.

Nevertheless, the North and South had fundamentally different interests and goals on inter-Korean affairs, and the negotiations came to a halt in 1973. On the one hand, North Korea contended that the two sides should first solve military questions such as arms reduction and total withdrawal of US troops from South Korea. On the other, South Korea stressed the need for the recognition of the political systems of the two Koreas and the promotion of economic cooperation.

Though there were contacts between the Red Cross organizations of both Koreas, there was no progress in terms of the unification question and inter-Korean relationship. In 1980, talks reopened briefly, but no significant meetings were held until 1984 when South Korea accepted the North's proposal to help South Korean flood victims. North Korea sent rice, cement, cloth, and medicine for flood relief purposes, and in 1985, the two sides
exchanged hometown visitors and art troupes. However, further talks were halted with North Korea's demand for abolition of the annual US and South Korea's large-scale Team Spirit Joint Military Exercises.

An important breakthrough in inter-Korean relations came in the early 1990s, with the collapse of the Eastern European communist bloc; the effects of North Korea's dwindling economy; and South Korea's active diplomatic policies toward China and the Soviet Union. After a series of high-level talks, the North and South became members of the United Nations concurrently, in September 1991, and signed the North-South Agreement on Reconciliation, Non-aggression, and Exchanges and Cooperation. In this historic agreement, the two sides agreed to cooperate in many areas such as economic affairs, cultural exchanges, and even military matters. In 1992, they also agreed to organize the North-South Joint Nuclear Control Commission to ensure nuclear transparency on the Korean peninsula. However, suspicions over North Korea's nuclear development plans and its rejection of the International Atomic Energy Agency's inspections of its nuclear facilities brought a new crisis to the peninsula and hostilities between the two sides intensified during the mid-1990s.

Looking over the half-century of division and the many hundreds of inter-Korean talks that have taken place so far, the observer may perhaps be excused for saying that very little in the way of unification has taken place. Nonetheless, in recent years some positive changes in the relationship of the two sides have occurred. In the mid-1990s, North Korea's sagging economy and crop failures forced its leaders to seek help from the outside world. Importantly, the South Korean government of Kim Dae Jung (Kim Taejung) actively pursues an appeasement policy towards the North, which is something of a departure from the more conservative policies of previous governments. Kim's government has made grain shipments to North Korea, allowed more South Koreans to visit the North, and eased investment and export policies towards the North. As of mid-1998, the two parties are engaging in more frequent contacts with each other in the areas of trade, cultural exchange, and economic cooperation.

Forces and Rhetoric for Unification

Three forces are evident that urge the North and South to work towards national unification: a) the nationalist zeal of the Korean people; b) the satisfaction of economic and social needs; and c) the aspirations of families with members on opposite sides of the border. Nationalism, a principle that the political and the national unit should be congruent (Gellner 1983:1), is the fundamental force behind the popular desire for unification. In general, Koreans show great national consciousness, believing in the ethnic and cultural homogeneity of their nation. Both governments have emphasised the inviolability of unification, in insisting that Koreans are of one nation with a unique culture and ethnicity. Nationalism may be fiction-based, stemming from industrialization and improved communications, but nevertheless, it is a real enough force which functions as the supreme moral value in Korean culture today. (Anderson 1983; Gellner 1983).

Ironically, nationalism also functions as a barrier to unification, because each side claims its own absolute nationalist legitimacy. Such intolerance has been efficiently appropriated by each regime to antagonize the other and to consolidate internal unity, while suppressing any components acting against the regime. In addition, the popular nationalist belief that unification would make for a stronger and wealthier nation has been an encouragement for the two governments to unify the peninsula. However, many South Koreans have noted the vast financial outlay and social costs of unification from the fairly-recent example of Germany, and their zeal for unification has markedly diminished, especially that of the younger generation.

Aside from nationalist passion, unification is a highly practical matter. For those who are
members of separated families, unification is urgently needed to enable them to be reunited with their loved ones. (It is thought that as many as twenty million people have family members on opposite sides of the Demilitarized Zone.) For these Koreans the aloofness of the two sides has denied them a single meeting or even correspondence with relatives. This is heart-rending for Koreans, who have always placed such a heavy emphasis on the value of family. The two governments have held several unproductive talks on family reunion, and of course, their failure to bring results has left the many distressed families still yearning for such a reunion. But, as time passes, the number of first-generation separated families is rapidly declining, and the present generation may not share the same aspirations for unification as their parents. Moreover, family reunion can now be achieved in other ways, such as meeting family members in a third country, say in neighbouring China, without the two Koreas having to take the ultimate step of unification.

For many Koreans today, unification remains as a prerequisite for reducing the threat of war and the enormous defence expenditure of the two sides. They believe that the money and manpower for defence could be diverted to something more constructive once the country is unified. There are also people who see a national community as an organism, which cannot survive 'normally' if divided. Hence, they believe that the division has been the cause of all the political, social, and cultural ills of both societies, such as their authoritarian political systems, dependency on foreign powers, and oppressive social practices. They suggest that the division of the nation and the hostile relationship between the two Koreas has resulted in their respective cultures being violent and oppressive (Tongil Somoim 1996:18). Some even insist that the regional conflicts in South Korea are also the result of the national division (Paek 1994:81). In their rhetoric, therefore, unification is the panacea to the problems of both South and North Korean societies.

As competition over trade has intensified in the global market, economic needs have emerged as another powerful and persuasive force for unification. For example, the South Korean business community is interested in unification for entrepreneurial opportunities: the prospect of a cheap and disciplined labour force of North Korea; the land's abundant natural resources; and a land route to China, Russia, and Europe. Business leaders of South Korea thus have shown keen interest in the opening of North Korea and the development of an (eased) inter-Korea trade relationship. The volume of inter-Korea trade has steadily grown since the early 1990s and several South Korean corporations have invested in the North.

Prospects for Unification

The commonly-held prediction that North Korea would collapse either on the death of its leader Kim II Sung or its economic failures, has thus far proven untrue. More Koreans, at the end of the 1990s, express their belief that unification is possible. With this new expectation, at least in South Korea, there is now a more open forum on unification -- a discourse formerly the prerogative of the state. The new discussions are based on more practical and democratic perspectives, which displace the ideological and militant ones. At the same time, unification discussions are beginning to deal with the cultural and social problems of a unified Korean society rather than concentrating purely on political and military issues. Koreans realize only too well that five decades of division have created two very different Koreas, and for this reason, social and cultural conflicts would be a serious problem to be overcome when the two peoples form one society.

The unification cause will be helped immensely when Koreans have grasped the nettle of the two (aforementioned) forces that brought about the division of their country, viz., the intervention of foreign powers, and the ideological and regional cleavages in Korean society. From the vantage point of the late 1990s, the countries of the region seem unopposed to unification of the peninsula. Each of Korea's neighbours is seeking its own stability and prosperity, and looks to Korea's unification as a stabilising force for the region. As far as Korea can assure its neighbours that unification would not be a threat in
any way, it is unlikely that any country would actively oppose it.

Two issues have to be resolved over the conference table and by political debate, if not by the people themselves, as vital to the unification issue. These are, a) by what means can the two Koreas reduce the military tensions on the peninsula, and b) how can Korean people reach agreement to form a community in which they, regardless of their ideological, political, or regional backgrounds, can live together harmoniously. Both issues require the fostering of a more respectful, tolerant and democratic society, since ideological rigidity or regional bigotry would not result in a previously divided people forming a single community. Most South Koreans would insist on North Korean society becoming democratized and opened to the outside world, a move which they would view as also helping to boost the North’s troubled economy. At the same time, the ‘colonialist’ attitude of South Koreans towards the North does nothing to persuade North Koreans to live alongside them, perhaps under a single government. The North often portrays the South as being somewhat inferior, and romanticizes its land and culture as ‘untainted’ from the effects of industrialization and capitalism (Grinker 1996). A more tolerant culture based on democratic and pluralistic value systems would not only reduce the social cost of unification but also ease the possible concern of neighbouring states on the prospects of a unified Korea.

The late 1990s economic depression in South Korea introduced a new factor to the unification equation. The circumstance not only diminishes South Korea’s capacity to aid the North; at the same time it may also force the South to cooperate with North Korea on a more equal footing. Moreover, the active and flexible policy of South Korean president Kim Dae Jung towards the North creates a positive atmosphere that just might facilitate meaningful progress towards unification. If North Korea chooses an open-door policy to the outside world, then there will certainly be additional opportunities for the two nations to move closer to a unified Korea.

United Kingdom and Korea

Early contacts.

There was some British interest in Korea at the end of the sixteenth c., but it was not until the development of the China trade around 1800 that it revived. Survey work and hopes of trade then brought the British to the shores of Korea. From the 1840s, Royal Navy ships called regularly at Komun-do (Port Hamilton in English), including HMS Samarang in 1845. There was also missionary interest. Korea’s first Protestant martyr was a Welshman, Robert Thomas, killed on board the American merchant ship, ‘General Sherman’ in the Taedong river in 1866. During the 1870s Scottish Presbyterians in Manchuria made contact with Koreans and the Rev. John Ross began translating the bible into Korean.

Britain watched as Japan concluded the Kangwha treaty with Korea in 1876. British diplomats in Japan were studying Korean in anticipation of British relations, but pre-
occupations elsewhere in East Asia left the British government content for others to take the lead. A treaty was signed in 1882 by the Commander in Chief of the China Station, Admiral Willis, but it found little favour either with the London government or with British traders in Asia. A new treaty was therefore negotiated in 1883 by Sir Harry Parkes, British representative in China.

The British government did not open a diplomatic post in Seoul, partly for reasons of expense. Instead, the British minister in Beijing was accredited to the Korean court. In Seoul itself, a consulate-general was established with William G. Aston as the first consul-general. It was Aston who purchased the land which is still the site of the British Embassy today. Sites for several consular posts were identified, but only that at Chemulp'o (Inch'on) was ever used.

Britain's main interest in Korea was trade but the treaty brought little benefit. Korea was too poor to provide much of a market and British companies such as Jardine Matheson quickly withdrew. British goods filtered in from China but trade remained on a small-scale. By 1900, however, a number of small and medium British businesses were operating in Seoul and Chemulp'o. Britons were prominent in the Korean mining industry, while British experts were employed on a wide range of tasks, including teaching, military training and the establishment of a telegraph system. A British engineer installed electric lighting in the Kyŏngbok palace in the late 1880s. The most important group were in the Customs Service, where John McLeavy Brown organised an efficient team of revenue collectors and began a programme of urban renewal in Seoul, including the construction of Pagoda Park.

From 1885 to 1887, fear of a possible Russian advance into Korea was used to justify the occupation of Komun-do/Port Hamilton by the British Navy, despite Korean and Chinese protests. The islands proved to be unsuitable for a naval base and the Russian threat was also elusive. The occupation therefore ended in February 1887, although Royal Navy ships continued to visit the islands.

A more abiding British presence began in 1890 with the establishment of the Anglican mission under Bishop C. J. Corfe. The mission had centres in Seoul, Chemulp'o and on Kangwha island, running small hospitals, schools and orphanages as well as churches. A group of Anglican nuns from London played a major role in these activities. An imaginative feature of the mission was its use of Korean architecture for its churches. St Peter and St Paul, in Kangwha city, erected in 1900, is the best example, but others survive. The Anglican mission also produced several Korean scholars.

In 1900, the consulate-general became a full diplomatic mission, with the last consul general, J N Jordan, as minister resident. A Korean legation opened in London about the same time. But the signing of the Anglo-Japanese treaty in 1902 paved the way for the end of Korean independence. The legation reverted to a consulate-general in 1906, while the Japanese worked hard to remove British officials, including McLeavy Brown, from Korean employment. One British journalist, Ernest Bethell, fought the Japanese through his newspaper, the Taehan Maeil Shinbo, until silenced in 1908. His tombstone in Seoul remains a place of pilgrimage for Korean journalists.

British influence dwindled after 1910 but did not disappear. Numbers dropped as the Japanese pursued an aggressive 'Japan first' policy. Yet some businessmen managed to survive and mining remained important until the 1930s. The Anglican mission continued its slow growth. Its first Korean priests were ordained in 1915, and the mission spread out from Seoul to other areas. In 1926, the Anglican cathedral of St Mary and St Nicholas was dedicated in Seoul. The Salvation Army arrived in 1908, and gained a popular following.

By the 1920s, typically Salvationist establishments such as Boys' Homes functioned in Seoul and elsewhere. The British and Foreign Bible Society also flourished. During the
1930s, pressure intensified on the remaining foreigners in Korea as war approached. The missionaries withdrew early in 1941, and the consular staff were repatriated in 1942.

After the war, a British liaison office opened in 1946, and by the end of that year, the Anglicans and the Salvation Army were again functioning, though under great financial difficulties. A handful of British businessmen also returned.

**The Korean War period 1950-1953**

Britain quickly moved to establish diplomatic relations with the Republic of Korea in 1948, and a minister, Vyvyan Holt, was accredited to Seoul in 1949. A Republic of Korea (ROK) legation opened in London that same year. When the Korean war began in June 1950, Holt decided to stay. Within a few days, he and two members of his staff, together with the Anglican Bishop, the Salvation Army commissioner and a number of other missionaries, were detained by North Korean forces. They were eventually taken to detention camps in the far north. Some died either on the 'Death March' to the north or in captivity. The survivors, including Holt and his vice-consul, George Blake, (later convicted of spying for the Soviet Union), were released in April 1953.

Although Britain had many other commitments in 1950, the British government accepted the need to help the Republic of Korea. At first it was hoped that support could be limited to naval assistance, but under American pressure and in the face of early North Korean successes, Britain agreed to commit ground forces. British infantry landed at Pusan on 29 August 1950 and were soon in action. The British took part in all the major campaigns of the conflict, but the most famous action was the stand by the First Battalion The Gloucestershire Regiment - 'The Glorious Glosters' - during the battle of the Imjin river in April 1951. British casualties in the war were 1109 killed and 2674 wounded.

**Post Korean War relations**

British forces remained in Korea as part of the Commonwealth Division until 1957. Thereafter, a small contingent acted as an Honour Guard with the United Nations Command, while from the early 1960s, the British defence attache was also the commanding officer of a residual Commonwealth Liaison Mission. Britain played a major role in post war reconstruction during the 1950s and British firms were closely associated with the ROK's subsequent rapid economic development in the 1960s and 1970s. British equipment and technical knowledge were especially important in the ship-building and automobile industries. British companies have also been involved in the textile, petro-chemical, iron and steel, power generating and mining industries. British banks and other financial organisations are well represented in Korea. A number of South Korean companies, including Daewoo, Samsung and LG, have invested in Britain.

Diplomatic relations were raised to ambassadorial level in 1957. Over the years, many prominent South Koreans have visited Britain, including Presidents Chun Doo Hwan (Chôn Tuhwan) in 1986, Rho Tae Woo (No T'aeu) in 1989, and Kim Young Sam in 1995. Newly elected President Kim Dae Jung (Kim Taejung) attended the Asia-Europe Meeting in London in April 1998. (Former President Yun Posôn studied at Edinburgh University in the 1930s.) The then British Prime Minister, Mrs Thatcher, visited South Korea in 1986, and her successor, Mr John Major made a brief visit in 1991. There have been a number of informal royal visits over the years, and the Prince and Princess of Wales made an official visit in 1992. The Koreans have long been interested in English literature, with well-established traditions of scholarship on Shakespeare and D. H. Lawrence. Other aspects of Britain are less well studied, although there has been more interest in British politics since the 'Thatcher years'. Korean studies in Britain took off in the 1980s and there are now centres of Korean studies in London and Sheffield, with individual scholars working elsewhere.
Britain and the Democratic People's Republic of Korea (DPRK)

Britain long maintained a policy of not recognising the DPRK as a state or the authorities there as a government, a policy derived from the 1948 United Nations' resolution establishing the Republic of Korea. There are only limited contacts between Britain and the DPRK, and trade is minimal. In 1991, the first British officials to visit DPRK since the Korean War accompanied a British delegation to the International Parliamentary Union meeting in Pyongyang. A political dialogue at official level began in 1992, and a number of meetings have been held in London, Geneva and Pyongyang. In May 1998, Britain, as the then presidency of the European Union (EU) led an EU fact-finding humanitarian delegation to the DPRK.

United States and Korea

In 1982, the United States (U.S.) and Korea celebrated the centennial of the treaty that established relations in 1882, and some people even commemorated 'a century of cooperation' between the two countries. In fact, official relations between Korea and the U.S. were non-existent for nearly a half century, starting in 1905 when the U.S. abandoned Korea to Japan.

In 1948, the U.S. re-established relations with Korea, but unfortunately only with South Korea (the Republic of Korea [ROK]). Relations between the U.S. and North Korea (the Democratic People's Republic of Korea [DPRK]) are yet to be achieved.

Establishment of Relations.

Some Americans advocated the opening of Korea for trade as early as 1834, and several contacts were made between the Koreans and the U.S. in the 1850s and 1860s when many shipwrecked Americans were rescued and given help by the Koreans. But, at that time the
The 'General Sherman' incident of July 1866, however, led the U.S. government to a confrontational encounter with Korea. The 'General Sherman' was an American schooner which was engaged in trade in the Far East, and it went to Korea from China without any authorization from the host government to navigate in Korean waters. Sailing up the Taedong River, it ran around on a sandbar near P'yŏngyang, and when its crew members (mostly Malayans and Chinese) provoked both officials and inhabitants of P'yŏngyang and the neighbouring villages, angry Koreans burned the ship and killed all its crew members.

Although the commander of the Asiatic fleet of the U.S. who investigated the case of the 'General Sherman' concluded that the ship was burned and its crew killed because of their own misconduct and not on the orders of the Korean government, officials in Washington were angry. Meanwhile, the Korean government, which usually maintained a policy of non-involvement, fearing that Korea would be contaminated by 'evil Western barbarians', became annoyed by increasing visits of foreign vessels, including the French naval invasion of 1866.

At this juncture, the American consul-general in Shanghai proposed to Secretary of State William H. Seward the possible linkage between a settling of the case of the 'General Sherman' and a commercial treaty with Korea. But it was new Secretary of State Hamilton Fish who, in April 1870, instructed the American Minister to China, Frederick F. Low, to negotiate a treaty to protect shipwrecked American seamen, and if possible, to open Korea to American trade.

Unfortunately, Minister Low went to Korea not as a diplomat to settle the issues pending between the U.S. and Korea by peaceful means, but as head of a punitive military expedition whose aim was to bring the Korean government forcibly, if necessary, to sign a treaty. Low's action led, in May 1871, to what the New York 'Herald Tribune' called, 'Our little War with the Heathen' - a series of military clashes in May and June 1871 between American Marines and Korean coastal defence units on Kanghwado and other nearby islands off Chemulp'o (now Inch'on), as well as the lower Han River regions.

The American expedition accomplished nothing in terms of revising the policy of isolation of the Koreans, or changing their attitudes toward the West. It only antagonized the Koreans more and hardened their resistance to the opening of the country to Western barbarians. Shortly after the American invasion, Prince Yi Haulung, better known as the Taewongun or Prince Regent, father of the young King Kojong (r.1863-1907), made the policy of isolation official. As Commodore Robert W. Shufeldt said later, "The attempt, however gallant, was fruitless, except in embittering Koreans and deferring the prospect of a friendly treaty."

No further actions were taken by the U.S. government until after Korea signed a diplomatic and commercial treaty with Japan in 1876. As the American government became more interested in expanding its diplomatic relations, the Secretary of State and Secretary of the Navy dispatched Commodore Shufeldt in October 1878 on a global mission that included seeking out treaties.

After a journey to Africa, Shufeldt arrived in Japan in April 1880 and made efforts to open Korea to American commerce and secure better treatment for shipwrecked American seamen. Shufeldt was aided by the American minister to Japan and by the Japanese government. However, the journey to Korea in May was not fruitful. Other attempts Shufeldt made after that date also were unsuccessful. At this juncture, Li Hongzhang, an influential Chinese statesman, invited Shufeldt to Tianjin in August, and after talking with the American, Li offered his assistance. Li's motive was said to have been to induce the American government to acknowledge China's suzerainty over Korea in a forthcoming
treaty between the U.S. and Korea, thereby challenging the Japanese contention that Korea was a sovereign and independent nation as stated in the treaty which Korea and Japan recently signed.

The changes in domestic and foreign policies of Korea and Chinese assistance enabled Shufeldt to conclude the treaty with Korea. While moderate Korean officials were able to persuade their king to abandon the policy of isolation, Li convinced the Koreans that it was better for Korea to allow the treaty with the U.S. to set the pattern of Korea's relations with the Western powers. As a result, the Treaty of Amity and Commerce between the U.S. and Korea was concluded on 22 May 1882 and signed on 6 June 1882 at Chemulp'o. This treaty, which is commonly called the Chemulp'o or Shufeldt treaty, refused to recognize Chinese suzerainty over Korea.

Amicable relations between the U.S. and Korea developed after the arrival of the first American minister, Lucius H. Foote, in May 1883, and the Korean government sent its first goodwill mission to the U.S. in September of the same year. Soon, other Americans, including Protestant missionaries, began to arrive in Korea. Among them was Dr. Horace N. Allen, who provided critical medical treatment to a nephew of Queen Min (assassinated 8 October 1895) who was badly wounded during the coup d'état of the Progressives in December 1884. While Dr. Allen, who later became U.S. minister to Korea, established the first modern medical clinic in Korea, other American missionaries built churches as well as modern schools for boys and girls, contributing much toward the modernization of education as well as Korean society. Meanwhile, the Korean government established its permanent mission in Washington in 1877, despite strong Chinese objections.

**Break in Relations**

The relationship between Korea and the United States may be viewed as a one-sided affair between an ardent Korea with a reluctant America, fostering what one writer called "the diplomacy of asymmetry". By and large, Korean leaders had misconstrued Korean-American relations and were expecting much more than the U.S. was either willing or able to provide. Some Korean officials apparently viewed the Shufeldt treaty as a wedge to free Korea from Chinese domination, and when Minister Foote arrived the Korean king was said to have 'danced with joy', for he, along with others, regarded the U.S. as the symbol of a beneficent power that would indisputably guarantee the integrity of the Korean nation. Undoubtedly, such an attitude was due to Korea's misreading of certain diplomatic language in the 1882 treaty, as well as the expressed opinions of American diplomats and missionaries in Korea regarding American intentions and disposition. Be that as it may, the Korean king took positive steps to promote close ties with the U.S.: he established cordial relations with American ministers; secured American drill masters for his modern army and imported American weapons; employed American teachers for the school for children of the nobility and American advisers in the government; and he granted various concessions to the Americans.

On the other hand, the U.S. government showed only casual interest in Korea at best, despite the fact that Minister Foote strongly felt that the influence of the U.S. should become a permanent factor in the progress of Korea. The primary interest of the U.S. government was to protect its treaty rights and other privileges gained after 1882. Modernization of the ancient Korean ways and the safety of the kingdom were not American concerns. The lack of interest in promoting deeper relations with Korea was clearly shown when, in July 1884, the government reduced the rank of its representative in Korea from Envoy Extraordinary and Minister Plenipotentiary (modern day ambassador) to that of Minister Resident and Consul General.

The U.S. maintained a position of impartial neutrality when international disputes between Korea and its neighbouring countries developed. At the same time, it avoided antagonizing
either China or Japan even when they mistreated Korea. In reality, the role the U.S. played was, as some observed, 'little more than a sympathetic and detached onlooker'.

On the eve of the Sino-Japanese War (1894-95), the Korean king solicited American assistance in order to avert the conflict over Korea, remove Japanese pressure, and safeguard his kingdom. After receiving repeated appeals from Seoul, in July 1894 the U.S. government merely expressed its hope that the Japanese would withdraw their troops from Korea to avoid war and not pressure the Korean government to implement Japanese designed domestic reform programs. The American note added that, 'The President will be painfully disappointed should Japan visit upon her feeble defenceless neighbour (Korea) the horror of an unjust war'. But when England and China proposed that the U.S. participate in joint action to prevent the war and remove Japanese pressure on Korea, the American government refused to cooperate, maintaining its policy of strict neutrality and non-involvement.

Neither Minister Allen (July 1897-June 1905), nor William Sands, an American adviser to the Korean monarch, had any love for the Koreans or concerns for Korean independence. Sands saw the Korean monarch as a man who was 'confused politically and weak in personality'. As for Allen, although he thought highly of the 'docile, good natured, patient, and hardworking' common people in Korea, he had no respect for the ruling class, including the monarch. It was his opinion that the Koreans would be better off under foreign domination.

Allen secured various concessions, including mining, railway and fishing concessions, from the Korean government for American firms after helping the king to flee from his palace to the Russian legation in February 1896. However, when the King in 1899 solicited American help in promoting Korea's permanent neutrality, the American government refused because policy makers in Washington preferred Japanese control in Korea over that of Russia, or a 'state of misrule and disrule' under the Koreans themselves.

Many had been led to believe that the Taft-Katsura Memorandum of July 1905 was in fact a 'secret pact' between the U.S. and Japan under which Japan was allowed to take over Korea. Such a mistaken notion still persists among the Koreans. However, a careful examination of the circumstances in which the talks between U.S. Secretary of War William H. Taft and Japanese Prime Minister Katsura Taro took place in Tokyo, and the contents of the memorandum applied to Korea show that this was not the case.

President Theodore Roosevelt favoured Japanese control over Korea, and when, in 1903, Minister Allen expressed his view that the U.S. should help Russia against Japan, William W. Rockhill (author of American 'Open Door' policy and adviser to Roosevelt) told Allen that the Japanese should not only be supported, but also 'be allowed to swallow Korea to check the Tsarist drive in Manchuria.' Witnessing the gathering war clouds over Korea, the Korean monarch in 1904 sought American assistance (protection) in preserving the independence of his kingdom. Allen wrote to his government, 'The emperor always turns to me and the more they (Japan and Russia) scare him the more eager he is to turn everything over to the Americans.' However, Roosevelt, who had encouraged the Japanese to increase their control in Korea, refused to provide any assistance to Korea, justifying his policy on non-interference, in saying that, 'The Koreans could not strike one blow in their own defence.' It was the opinion of Rockhill that the annexation of Korea by Japan was inevitable, and that Japanese control would be better for the Korean people and also for peace in the Far East. Meanwhile, Secretary of State John Hay held that American interests (in Korea) were rather commercial than political.

The Japanese took advantage of the position of the American government, calling the Taft-Katsura Memorandum a 'secret agreement' regarding Korea and proceeded to make Korea their colony. When the Russo-Japanese War (1904-05) ended with a Japanese victory, the
Japanese forced the Korean government to conclude a treaty on 17 November 1905, making Korea a Japanese protectorate, and in August 1910 they annexed it.

When the treaty of 1905 was signed between Korea and Japan, the U.S. was the first Western power to withdraw its legation from Korea, without making any protest, expressing any sympathy, or even waiting 'until the funeral was over'. 'Without saying goodbye'...we were the first to desert her', wrote Dr. Homer B. Hulbert, an American missionary/educator in Korea since 1884. Thus, the first phase of U.S. Korean relations came to an end as Korea became a Japanese colony. Meanwhile, the emigration of Koreans to Hawaii was brought to an end by the Japanese in 1905. In the three years from 1902, some 7222 Koreans had moved to Hawaii - with about 2000 of these relocating to the U.S. mainland after 1903.

Re-establishment of Relations

After terminating its relations with Korea, the U.S. government steadfastly refused to interfere with Japanese colonial rule. It failed to provide any assistance to the Koreans who were engaged in their independence movement in 1919 (the March First Movement) and when Korean nationalists established the Provisional Government of Korea in exile in Shanghai in April 1919, the U.S. refused to recognize its legitimacy, or give any help whatsoever to the struggle for Korean independence.

Ironically, however, the U.S. was destined to fight a costly war to liberate Korea from its colonial masters. Be that as it may, even after the outbreak of the Pacific War, the U.S. government refused to recognize the Provisional Government of Korea relocated at Chongqing, a regime which declared war on Japan in 1941. In November 1943, however, President Franklin D. Roosevelt met British Prime Minister Winston Churchill and Chinese Generalissimo Chiang Kai-shek at Cairo and they agreed to free Korea from Japan and restore its national independence 'in due course'.

The re-establishment of relations between the U.S. and Korea was preceded by Allied occupation of the country at the end of World War II. Under a proposal made by the U.S. government to the Soviet Union in August 1945, Korea was divided into two military occupation zones along the 38th parallel, the north as the Soviet zone and the south as the American zone. American occupation forces arrived in Korea in early September, a month after Soviet troops entered Korea from the north in accordance with the Yalta Agreement which the Soviets had concluded with the U.S. and Great Britain in February 1943. The Russians quickly occupied the northern half of the Korean peninsula. Soon after the arrival of U.S. forces, Japanese troops were disarmed and repatriated, as were other Japanese who were in Korea at that time. At this juncture, American missionaries returned to Korea to resume work which had been suspended in 1940.

The U.S. government refused to acknowledge either the legitimacy of the Provisional Government of Korea (waiting in China to make a triumphant homecoming), or the People's Republic which was established in Korea shortly before the arrival of American troops. As a result, during the occupation period that lasted until 15 August 1948, South Korea was governed by the U.S. Army Military Government in Korea (USAMGIK). Understandably, the Koreans, who had just been liberated from the Japanese, resented another military rule, and they were disappointed when the troops they had welcomed as allies and liberators turned out to be conquerors and overlords. As a result, relations between Americans and Koreans soured.

The Moscow Agreement that the foreign ministers of the U.S., Great Britain and the Soviet Union adopted in late December 1945 further antagonized the Koreans. It mandated the Allied occupation authorities in Korea to form a joint commission and establish a government of an independent and sovereign nation of Korea in consultation with the
Korean people. However, it also called for a four power (U.S., U.S.S.R., Britain and China) trusteeship over Korea for a period of up to five years. Needless to say, the Koreans regarded the Moscow agreement as an insult and vehemently opposed the trusteeship plan of the Allies.

Although some agreements were reached between the occupation authorities who formed the U.S.-U.S.S.R. Joint Commission in March 1946, the Commission failed to fulfill the terms of the Moscow Agreement before its role was terminated in July 1947, mainly because of U.S.-U.S.S.R. opposing political and military interests. Meanwhile, American occupation authorities made efforts to 'Koreanize' the American Military Government, promote democracy, and prevent mass starvation and total collapse of economic and social order. In doing so they established (in October 1946) an advisory South Korean Interim Legislative Assembly (SKILA), and in February 1947 the South Korean Interim Government (SKIG) to assist the American military rule. Concurrently, in order to lay the foundation for self defence, in January 1946 the USAMGIK established the Constabulary, the Coast Guard, and the Military English Language School for officers.

When it became clear that the two contending parties in the rapidly developing Cold War situation could not settle the Korean question, in 1947 the U.S. government requested the United Nations to take over the Korean issue. The U.N. General Assembly adopted in November a resolution regarding Korea, and created the U.N. Temporary Commission on Korea (UNTCOK), instructing it to conduct general elections and establish a government of independent Korea. When North Korea rejected the U.N. plan, elections were held only in South Korea in May 1948 and members of the Constituent Assembly were elected. Inaugurated on 31 May, the Constituent Assembly adopted a constitution, establishing the Republic of Korea (ROK), and electing Dr. Syngman Rhee as president of the Republic. On 12 August, the U.S. extended de facto recognition and designated John J. Muccio as special envoy to Korea. Announcement of the new Republic of Korea was made on 15 August 1948 and American military rule came to an end.

Although the fully-fledged Treaty of Amity, Commerce, and Navigation between the U.S. and the ROK was not signed until 28 November 1956 (effective December 1957), the two governments moved quickly to cement a relationship. With the signing of a series of agreements between the Korean government and the Commander of the U.S. Armed Forces in Korea in August and September 1948, and with the de jure recognition of the ROK by the U.S. on 1 January 1949, new relations developed. The ROK sent Chang Myŏn as its ambassador to the U.S. and the U.S. named John J. Muccio as its ambassador to Seoul.

The Forging of the U.S.-ROK Alliance

At the beginning of the new U.S.-ROK relationship, the U.S. seemed to have no particular concerns for South Korea. As early as September 1947, George Kennan, an influential adviser on foreign policy for President Harry S. Truman, suggested that the U.S. should get out of Korea, and Secretary of State George Marshall indicated that he was making a careful study of the matter.

The American policy-makers saw little strategic or economic value in Korea, and they constantly viewed the Korean problem as an 'unhappy burden and a needless liability to the free world'. While the Joint Chiefs of Staff had indicated in 1949 that under no circumstances would the U.S. engage in the military defence of the Korean peninsula, General Douglas MacArthur expressed his opinion that the U.S. would have to give up active military support for the ROK forces in the event of a military threat developing in Korea.

Consistent with such views, the U.S. withdrew all its troops from South Korea by June 1949, despite strong reservations expressed by the R.O.K. government, as well as some
At that time, some 500 American military personnel remained in South Korea as a group called the Korean Military Advisory Group (KMAG). While the KMAG repeatedly warned that South Korea was threatened with the same disaster that befell China in 1948, the young republic faced Communist inspired rebellion, strikes and other problems. Secretary of State Dean Acheson told a Congressional committee that the American line of defence in the Pacific region extended from Alaska through the Aleutians to Japan and to the Philippines, excluding South Korea. He repeated this strategy before the National Press Club on 12 January 1950.

In the rapidly growing tensions of the Cold War, however, the U.S. signed the Mutual Defence Assistance Agreement with the ROK in 1950, and the U.S. Congress appropriated $10.2 million for military aid to South Korea. This aid was used mostly for the upkeep of military equipment of early World War II vintage left behind when U.S. troops withdrew. Only a small amount of new military hardware had been delivered prior to the DPRK attack in June 1950. Meanwhile, Congress appropriated $US60 million in economic aid for South Korea for 1950 compared with an appropriation of $US110 million for Taiwan.

When the Korean War came on 25 June 1950, the American government, which had ignored repeated warnings from Seoul and Tokyo regarding the impending threats from the north, was taken completely by surprise. As American military advisers in Korea predicted, the nation's defences collapsed and Seoul, capital of the Republic, fell only three days after North Korea's invasion. Within a month the government was forced to relocate three times. The U.S. dispatched troops stationed in Japan to Korea to assist South Korea's fight for survival, but they too were unable to check the tide of the war. Calling North Korean aggression a challenge to the whole system of collective security, President Truman sent troop reinforcements to Korea. The U.S. led the U.N. Security Council to condemn the DPRK as the aggressor and to form the United Nations Force to help the ROK. After establishment of a U.N. Force with troops of sixteen member nations, General Douglas MacArthur was named commander. The ROK government placed its armed forces under U.N. Command, and in July 1950 exchanged a memorandum with the U.S. regarding the status of U.S. troops in South Korea.

The U.S. played a significant role during the Korean War to preserve the existence of the ROK, but to do that some 35 000 American soldiers died, over 120 000 were wounded, and 8 710 were listed as missing in action. However, the U.S. did not wish to expand the Korean conflict into the third world war, although it knew that both Chinese and Soviet military personnel were committed in Korea. It was the opinion of General Omar Bradley, Chairman of the Joint Chiefs of Staff, that if the U.S. expanded the Korean War as some Americans wished to do it would be 'the wrong war, the wrong place, and the wrong time'. Such views were widely held in Washington. Thus, on 3 July 1951, the U.S. took steps to bring about a ceasefire. So troublesome was President Rhee, who was against ending the war without a complete victory over the DPRK, that the U.S. government at one time considered removing him from power by a military coup d'etat led by Korean military leaders. However, when President Dwight Eisenhower took office, any such notional plan was discarded.

Rhee still insisted on fighting on to a complete victory. Because of the uncompromising opposition of this fiercely patriotic but recalcitrant old man to a ceasefire, coupled with the desire of the U.S. to end the war, the American government made various offers to bring him to accept the U.S. plan. They included: (1) the promise of a U.S. South Korean security pact; (2) a loan of $US200 million, and (3) aid to expand the ROK's military capacity. President Eisenhower also assured Rhee that the U.S. would make all peaceful efforts to unify Korea. The armistice was signed on 27 July 1953 by the U.N. Command, the DPRK and China. The ROK government refused to sign but it pledged to honour the truce agreement.
The Mutual Defence Treaty signed by the U.S. and the ROK on 1 October 1953 (effective 18 January 1954) forged a new alliance between the two countries, enhancing South Korea's defence posture. However, unlike the North Atlantic Treaty or the Mutual Defence Treaty between the U.S. and Japan, the South Korean pact did not obligate either party to come to the other’s aid without having gone through necessary constitutional processes. Notwithstanding this qualification, by fighting together as allies in the Korean War and with the signing of the mutual defence treaty, the U.S. and the ROK opened an important new chapter in their relations.

The U.S. and North Korea

Any rapprochement between the U.S. and the DPRK after the signing of the armistice in 1953 was made more difficult by the North Koreans when they rejected proposals presented by the ROK and U.S. at the Geneva Conference of April 1954. These proposals were designed to bring about a peaceful political solution for the Korean issue (unification). The ROK saw itself under constant threat from the North and demonstrated hostilities by the North antagonized the U.S. On 21 January 1968, a DPRK commando team attempted to storm the presidential mansion in Seoul in order to assassinate the ROK president. Two days later North Korean ships seized an American intelligence ship, the U.S.S. Pueblo, and in April 1969 a U.S. reconnaissance plane (EC121) was shot down over the Sea of Japan.

Only when economic assistance from the Soviet Union and China decreased and South Korea's economic progress surpassed their own did the DPRK leaders realize the need for improved relations with the U.S. Thus, in 1972, a DPRK spokesman in Japan indicated North Korea's desire to normalize relations with the U.S. and Japan, and shortly after that Kim Il Sung, its president, disclosed similar interests to Harrison Salisbury, an American journalist who visited P'yongyang in May 1972. Then in March 1974, the Supreme People's Assembly of North Korea sent a message to the U.S. Congress, expressing its desire to replace the Korean armistice with a peace treaty between the DPRK and the U.S.

These signals from P'yongyang notwithstanding, the DPRK did not make any earnest efforts to improve the conditions for rapprochement between the two countries. Instead, it exacerbated the situation when, in August 1976, North Korean soldiers killed two U.S. Army officers and wounded several others at Panmunjom, and in July 1977 the North Koreans shot down an American helicopter which flew over North Korean territory by a navigational error, killing its entire crew.

Only after the fall of the Communists in Eastern Europe and in the Soviet Union in the 1980s and early 1990s did the DPRK show serious intent in establishing normal relations with the U.S. Meanwhile, the U.S. relaxed its travel restrictions to the DPRK as well as its anti-North Korean stand, initiating unofficial contacts between the two countries. As a result, an increasing number of Americans, including congressmen, scholars, journalists and home-town visitors travelled to North Korea. At the same time, some North Korean scholars were allowed to visit the U.S. as invitees at academic and professional conferences.

In December 1987, the American government initiated official dialogue with the DPRK in Beijing. After former Assistant Secretary of State for Asian and Pacific Affairs Gaston Sigur visited P'yongyang in late October 1989, contacts between American and North Korean officials became more frequent. Meanwhile, the amount of wheat exported to North Korea from the U.S. through a third country increased.

Following the meeting in October 1991 between the DPRK's Foreign Minister and a high ranking State Department official in New York, the North Koreans in the spring of 1992 returned the remains of 46 American soldiers who had been posted as missing in action during the Korean War, thereby significantly improving conditions for further negotiations.
Despite these developments, the DPRK's refusal to open all its nuclear and chemical weapons plants to international inspection and its insistence on total withdrawal of U.S. troops from South Korea inhibited further progress in the talks for establishment of normal relations. At least one favourable observable sign was the decline of anti-Americanism in North Korea.

**Partners in Discord**

The U.S. saw new strategic value in South Korea during the growing Cold War of the 1950s and 1960s. It provided $US2 059 million economic and $US1425 million military aid, in addition to $US28 million commercial loans to South Korea. This aid enabled the ROK to rehabilitate its war-ruined economic structure and make modest progress as it strengthened its national defences.

Acting against such progress, however, was President Rhee's autocratic rule and the corrupt and irregular ways in which his administration and his Liberal Party conducted politics and managed financial affairs. This antagonized not only the South Koreans themselves, but also the U.S. The way in which the constitutional amendments were made in 1950 and 1954 and the liberal application of the National Security Law of 1948 by the Rhee administration against its opponents strained the relationship between Seoul and Washington. Tactics used by the Rhee regime to elect its vice-presidential candidate in the March 1960 presidential elections completely alienated the U.S., and with the April 1960 Student Uprising, the U.S. not only refused to come to Rhee's aid, but also pressured him to resign.

The Second Republic that emerged in July 1960 changed the nature of politics and won the support of the U.S. However, when the Military Revolution of 16 May 1961 overthrew the Second Republic and established junta rule, U.S.-South Korean relations once again became strained. Although the revolutionaries made it clear that they were not anti-U.S. an their aim was to save the ROK from Communist subversion and establish a clean civil rule that would promote democracy, it did not reduce antagonism of the U.S. government. In the end, General Park Chung Hee, who led the military revolution, himself made a trip to Washington to make peace with the U.S. government. Having no other choice, President John F. Kennedy gave his grudging approval to the revolutionaries and relations between Seoul and Washington began to improve.

During the period of the Lyndon Johnson administration (November 1963 - January 1969), the U.S.-Korean relationship greatly improved. While the U.S. government reaffirmed its commitment to the ROK's security and economic aid, South Korea's dispatch of a large number of medical and combat troops to assist the U.S. forces in the war in Vietnam strengthened the ties between the two countries.

The cordial relationship that was carefully cultivated by Seoul and Washington during the Johnson administration began to deteriorate in 1969 when President Park's ruling party engineered the constitutional amendment that allowed a third term of office to the incumbent president. While American critics increased their attack on Park's autocratic rule and other measures, the Seoul government promoted its hostile attitudes toward the U.S. when President Richard M. Nixon announced his new Asian policy (the so-called Nixon or Guam Doctrine) in 1969 and his unilateral withdrawal of some 11 000 troops from South Korea.

President Park's application of the *Yushin* (Revitalizing Reform) rule in 1972 further damaged U.S.-ROK relations. Criticism against his rule by emergency decrees grew strong in South Korea as well as in the U.S. President Jimmy Carter's announcement in 1976 of a plan to withdraw all ground troops from South Korea without prior consultation with the Seoul government and the Congressional investigation of the so-called 'Koreagate' scandal in and after 1977 only embittered the Korean government, bringing further deterioration of
relations between the two allies. Meanwhile, in 1976 the U.S. terminated its economic aid to South Korea after providing a total of $US2621 million between 1962 and 1976. Likewise, U.S. military assistance diminished after $US299 million had been received over a similar period. However, while this military assistance decreased (from $US296.7 million in 1973 to $US1.2 million in 1977), the ROK's military hardware purchases from the U.S. increased from a mere $US295 million in 1967 to $US1.5 billion in 1968 and $US100 million in 1974. Purchases further escalated and in 1977 reached $US653 million.

Following the assassination of President Park in October 1979, which ended the Yushin rule, the Fourth Republic emerged in March 1981. However, the way in which President Chun Doo Hwan came to power in a coup d'état in December 1979, as well as his human rights violations and suppression of democratic trends, maintained the critical approach of the U.S. to Korean matters. Even so, the administration of President Ronald Reagan was less troubled about the authoritarian rule of President Chun than Jimmy Carter had been about that of the late President Park.

General democratic trends which developed in South Korea following the emergence of the Sixth Republic in February 1988 with Roh Tae Woo as president nurtured favourable attitudes of the U.S. toward the ROK. At the same time, various concessions that the ROK had made to American demands on economic matters, including the opening of South Korean markets to American business and products (including tobacco) removed from the agenda some items which had created disputes between Seoul and Washington. However, the U.S. government was displeased by the ROK's refusal to import American rice.

ROK leaders expressed their views that the U.S. mistakenly regarded South Korea as an economically mature country. They contended that South Korea was still a developing nation with some $US42.6 billion in foreign debts and a $5.3 billion trade deficit as of August 1992. Therefore, it should not be treated on the same basis as such economic giants as Japan and Germany. They were critical of the policy and tactics of the U.S. to sell more tobacco in South Korea while conducting anti-smoking campaigns at home. They became concerned with the shifting balance of trade with the U.S. In 1987, the ROK’s trade surplus vis-a-vis the U.S. was $US9.5 billion, but it first decreased to $2.4 billion in 1990 and then to a $335 million deficit in 1991 with the widening of Korean markets to U.S. products and corresponding shrinkage of the U.S. markets for Korean goods.

American pressure to widen Korean markets for U.S. business and products and growing expectation of more democratization in South Korea are potential sources of friction and dispute. Notwithstanding, the ROK and the U.S. signed a new Status of Forces Agreement in 1991 and created in 1992 the new Marine Combined Command in order to strengthen the U.S.-ROK Combined Forces Command system. The parties also agreed to delay the implementation of the plan to reduce the number of U.S. troops in South Korea. At the same time, they agreed to renew the joint annual military exercise called Team Spirit (which had begun in 1976) in 1993. This military exercise had been suspended in 1992 in order to foster the DPRK's cooperative attitude. With these actions, the two partners strengthened their political and military alliance. Meanwhile, as an expression of the importance of Korea to the U.S., the Library of Congress in 1991 separated the Korean section from the Chinese section, making it a new independent unit in the Asia Division.

Conclusion

After nearly a half century of the absence of any dialogue between the U.S. and Korea following the termination of relations in 1905, new relations between the U.S. and the southern half of the divided Korea were established in 1948. Unlike the previous periods (1882-1905 and 1945-50) during which the U.S. saw no economic or political importance in Korea; in the years after 1950 the U.S., realizing both the political and strategic importance of the peninsula, cultivated close ties with the ROK. Their armed forces had
fought side by side in two wars (Korea and Vietnam) and with U.S. economic aid, the ROK had achieved remarkable economic growth, as it strengthened its national defences with American assistance.

Altering its status from a client state of the U.S. to that of partner, the ROK has become a nation imbued with confidence, pride, and hope. Moreover, the U.S. now regards the ROK as a valuable ally, stemming from its remarkable achievement, democratic development, and cultural progress.

The establishment of any relations between Washington and P'yŏngyang is likely be delayed further so long as the DPRK refuses to adopt a more flexible policy towards international inspection of its nuclear facilities; cancel its biological and chemical weapons programs; abandon its demand for complete withdrawal of U.S. troops from the ROK; and its bellicosity towards the latter country (and its schemes to overthrow the government).

Today, U.S.-ROK relations appear very resilient despite some misunderstandings and unresolved issues. Although some South Koreans continue to express anti-American sentiments, the majority of the people hold a positive image of the U.S. and remain friendly towards it. At present, the two nations are making joint efforts to promote mutually beneficial relations and seek the improvement of stability in north-east Asia.

University of Ulsan

The University of Ulsan (Ulsan Taehakkyo) is located in the city of Ulsan in South Kyongsang Province. It was founded in 1969 by the Ulsan Industrial Education Foundation (Ulsan Kongp Hagwön) and named the Ulsan Institute of Technology (Ulsan Konggwa Taehak). Yi Kwan was the first president. In the 1970s, the institute expanded, leading to the establishment of a graduate school in March 1980. In 1985, the establishment became a university, consisting of four colleges -- Humanities; Engineering; Social Sciences; and Natural Sciences. In 1988, Dr. Lee Sang-Joo took office as president and in the same year, the College of Design was established. The Graduate School of Industrial Studies and Business Administration came into being a year later. This was followed by the College of Medicine and the Graduate School of Education in 1990; and the College of Business Administration in 1993.

Today, the university consists of seven colleges -- Business Management; Design; Engineering; Humanities; Medicine; Natural Sciences; and Social Science; and six graduate schools (the Graduate School and the Graduate Schools of Business Administration; Education; Industrial Technology; Information and Communication; and Regional Development). Facilities include the Computer Centre; Language Education Centre; University Press; Educational Media Centre; Athletics Program Department; Student Guidance Centre; and the Adult Education Centre. The last-named was opened in 1993 to administer various adult education programs, such as educational courses for nursery school teachers; courses on information processing for office workers; and engineering and foreign language courses for the employees of local industries and businesses.

Unyang chip (Collected Works of Unyang)

Unyang chip is the literary collection of the noted late Chosön period scholar-poet Kim Yunshik (1835-1922). This lithographic edition consists of sixteen volumes in eight fascicles, and was titled after the pen name of the author. The first edition of this work was edited by Hwang Pyönguk and others, who also published it in 1914. The work was again published in 1917.

The first six volumes of this collection contain 1,564 poems of the author, and the other volumes contain various official writings of the author such as private and official letters. This collection also contains various discourses by the author commenting on what he saw as the pressing problems of his day. Some of the more notable examples include his
discussion of the problems with the Samjong (The Three Administrations) tax system and his views on the opening of Korea to trade with foreign nations.

This work provides a glimpse into the affairs of the Choson government during the late nineteenth and early twentieth centuries from the view of one of the foremost scholars of the day. Kim's writings divulge the process of diplomacy during this period and also reveal the process of the intellectuals of Choson trying to come to terms with the onslaught of foreign culture and technology. Moreover, this work is widely acclaimed for the excellence of the author's literary talents displayed in the poetry of the first six volumes. In 1980 Asea Munhwasa published an annotated version of this work.

**Uri malbon** (Korean Grammar)

*Uri malbon* is a work on Korean grammar that was written by Ch'oe Hyŏnbae (1894-1970) and was first published in 1937. After numerous revisions, a revised edition was published in 1955. Ch'oe received training from Chu Shigyŏng (1876-1914) and therefore adhered to the nationalistic approach of his teacher. This work begins with an analysis of the previous research on the Korean language and then traces the development of the Korean language. It is notable in that it was the first to systematically outline Korean grammar. *Uri malbon* is divided into the three broad sections of phonology, etymology and syntax.

This work is widely acclaimed for its modern approach to the organization of Korean etymology and syntax, which had not been undertaken before this work. Moreover, the original approach that this work took during the Japanese colonial period when the Korean language was being suppressed grants it a monumental place in the history of Korean linguistic studies.

**Uri yenmalbon** (Grammar of the Old Korean Language)

*Uri yenmalbon* is a 994-page work that explores the grammar of fifteenth century Korean. It was written by Hŏ Ung and published by Saem Munhwa Publishers in 1975. Hŏ's work is an extensive morphological study of fifteenth century Korean, and begins with a general overview that covers morphology, phonology, orthography and issues concerning various particles in the Korean language. The main focus of the work is placed on various morphological phenomena, including grammatical forms and irregular parts of speech.

*Uri yenmalbon* covers fifteenth century Korean extensively, particularly from the aspect of grammar and various structural forms. For these reasons this work is praised a having significance for historical research on the Korean language.

**Wall Paintings**

In Korea, there are two types of wall paintings: murals in buildings and paintings in tombs. Examples of the former are primarily found on Buddhist temple buildings, but records suggest that murals and designs were also used on private houses as early as the Three Kingdoms period. The Samguk sagi (History of the Three Kingdoms) mentions Shilla prohibitions against the use of 'five-colour' decorations on houses of those of the true-bone (chingol) lineage. This would suggest that palaces, occupied by those of the higher
hallowed-bone (*sǒnggol*) lineage, had murals, as well as some members of the true-bone lineage.

In Koryŏ times, wall painting in tombs was a strong tradition, which gradually weakened with each successive dynasty. These tombs were usually large mounds of dirt covering a stone structure that entombed the body of deceased royalty or member of the upper class. The stone chamber inside the tomb was sometimes filled with objects for use by the deceased spirit in the next world, and the walls were covered with murals showing plants, animals, people or geometrical designs.

**Early Koguryŏ**

Koguryŏ tomb painting has been in existence since the middle of the fourth century C.E. Due to the rapid expansion of Koguryŏ territory around the reign of King Kwanggaet’o (391-413), Korea came into closer contact with Chinese culture and thus became familiar with the Chinese style stone-chamber tumuli. Murals on early Koguryŏ tombs, following the Chinese style, are often painted along long passageways, and the figures are made to overlap so as to show depth. Examples from this period include the Tŏkhŭng Village Tumulus (408 C.E.), Kamshin Tumulus and Susan Village Tumulus. On the Maesan Village Four Deities Tumulus, from the same period, one can see the rudimentary elements of a unique Koguryŏ style. The seated figures look directly forward with grave expressions and the figures are in juxtaposition. A further development can be seen on the Ssangyŏng Tumulus, where the figures have heads turned exchanging glances, giving an impression of movement. Early Koguryŏ tumuli are characterized by stylized depictions of clouds, a motif that originated in Han China. These early Koguryŏ tomb paintings are done in fresco using greenish-blue and sea-blue pigments and yellow and red clay with ink.

**Mid-Koguryŏ Period**

Around the end of the fifth c., Koguryŏ mural artists began to develop a distinct style. In the T’ung-kou region, tomb paintings continued to show people and scenes from everyday life, but a new style of scattered lotuses or concentric circles also emerged at this time. In P’yŏngyang, murals showing the deities of the four directions began to occupy the entire wall of tombs. These four deities are the blue dragon, white tiger, tortoise and red phoenix, which represent the east, west, north and south respectively. During this period, there were numerous depictions of people participating in cultural events - such as dancing, hunting, and the like. The figures from this period are less rigid, but the depiction of leaves remains awkward. On the large tombs, cloud patterns gave way to arabesques.

**Late Koguryŏ Period**

During late Koguryŏ, pictures of cultural events and abstract designs completely disappear. Almost all tombs of this period are decorated with ornate depictions of the deities of the four directions. The murals are filled with clouds, lotuses, arabesques, and floral patterns. In addition, mountains, trees and rock outcroppings are portrayed in a realistic manner. When looking at painting styles on tombs of this period, there is clear evidence of influence from China’s Six Dynasties (220-589).

**Koguryŏ Murals in Japan**

Japanese records tell of several Koguryŏ artists, such as Kasŏil and Tamjing (579-631), who crossed over to Japan. Unfortunately, the mural that Tamjing painted at Hŏrū Temple was destroyed by fire in 1949. The Japanese murals by Koguryŏ painters demonstrate an international style with Chinese and Japanese influence.

Paekche
Paekche tomb painting was influenced by that of Koguryo, but as Paekche moved its capital further and further south, Koguryo influence decreased. Paekche transmitted Koguryo style wall painting to Kaya, which in turn passed it on to Japan. The only two extant examples of Paekche tumuli contain pictures of the four direction deities. The Tomb of Songsan Village is built of tiles. On the ceiling of the Nungsan Village Tumulus, lotus and cloud designs are scattered across the ceiling. Although the Koguryo influence on these murals is clear, Paekche murals have several distinguishing features such as thin, soft lines and more radiant colours. At the Sóbok Temple site near Puyó, Paekche's third capital, excavated mural fragments indicate that murals were also used on temples at this time.

Old Shilla, Kaya, and Greater Shilla

Two wall paintings from Old Shilla have been found: the Osuksul Grave and the Ŭmnae Village Tumulus, both in Yŏng'ung. The Osuksul Grave has lotus designs on the ceiling and guardian deities on the outside of the stone entrance. The Ŭmnae Tumulus, on the other hand, has a great number of motifs and shows heavy Koguryo influence. There is only one Kaya wall painting, located in Koryŏng. There are lotuses on the ceiling and on the walls there seems to have been a picture of the deities of the four directions. The Kaya murals seem to be a variation on the Koguryo style.

Although there are indications of wall paintings in some tombs of the Greater Shilla Period, the murals are not in good condition. There is some coloured paint on the walls of the tomb purported to belong to King Shindōk (r. 912-917). Traces of dark red paint have been found on a tomb in Yangch'on Village in Kümŭng County. In addition to these tomb paintings, there are several references to murals in the Samguk yusa (Memorabilia of the Three Kingdoms). Although the famous Heavenly Horse Tomb (Ch'onmach'ong) in Kyŏngju did not house any wall paintings, it did contain some excellent paintings on saddle flaps. The paintings show, inter alia, a flying horse, horsemen and phoenix.

Koryo

During Koryo, tombs of kings and the upper class were often decorated with the twelve zodiacal figures. This zodiac motif probably originated in Shilla. Instead of lotuses, the walls tended to be decorated with stars. There is also evidence that pictures were painted on cloth and then hung on walls. The oldest extant Koryo painting is a wall painting (National Treasure No. 46) in the Chosa (Patriarchs) Hall at Pusŏk Temple. The painting shows guardian deities and bodhisattvas. Although there is slight flaking, the colours are still visible. At Sudŏk Temple, there is a mural from 1308. Although much flaking has occurred, the objects in the painting are still discernible. In addition, the Koryo togyŏng (Treatise on Koryo Pictures) mentions the use of multicoloured designs called tanch'ŏng on the palace. Several written works also mention an excellent mural at Kaesŏng's Ssangguk Temple that was modelled after a mural at China's Xiang-guo Temple.

Chosŏn

There has been virtually no excavation of Chosŏn tombs, but written sources say the ceilings of tombs from this era were decorated with pictures of the sun, moon and stars, and the deities of the four directions were painted on the walls. In Buddhist temples, the Chosŏn Period saw an increase in the use of framed paintings instead of murals; nevertheless, murals continued to be used on the outside walls and panels of buildings. Although framed paintings have become the rule, an altar mural can still be seen at Muwi Temple. The mural, painted in 1476, includes an Amitabha triad, a 'water-moon' Goddess of Mercy figure, etc. Other examples of extant murals from the Chosŏn Period include those at Wibong, Munsu, Hāngguk, T'ongdo and Sŏn'un Temples. At Yongju Temple, there is a unique mural in which the figures have been modelled with chiaroscuro to suggest
depth. This painting, which shows Western influence, was probably painted in the eighteenth c..

Bibliography

_HMMTS_, vol. 9.

Wan Island

Situated off the coast of Haenam County, Wan Island is part of the town of Wando in South Choll'a Province’s Wando County. The island covers a total area of 50.2 sq. kms. and as shown by 1985 statistics, a population of 23 891. As part of a submerged chain of mountains, Wan island has Sanghwang (644m), Paegun (462m) and Suksung (432m) as its highest peaks. The southern part of the island is covered by low hills and plains.

The island’s temperature range is influenced by ocean currents which regulate both winter and summer extremes. Thus, the average temperature in January is kept above freezing point at 0.1c and the average August temperature is a bearable 23.5c. The island’s average rainfall is quite high with 1 699mm annually. With a picturesque coastline and thick forest, the island is renowned for its scenic splendour. Beaches in the area include the sandy Myongsashimni Beach and an attractive pebble beach at Ch’ôngdo Village.

Most of the working population engage both in agriculture and fishing. Crops grown include rice, barley, sweet potato, garlic, wheat, persimmon and rape seed. The island’s fishing boats bring in catches of sea bream, Spanish mackerel, hairtail, anchovy and eel. There are some salt flats and the island is a major producer of laver (kim), brown seaweed (_Undaria pinnatifida_ and oyster.

A bridge was built linking the island to the mainland, in 1965 and twenty years later, in December 1985, a second bridge was opened to facilitate heavy transport access and the increasing flow of tourists.

The island has four elementary, two junior high and two high schools.

Wando County

Situated in South Choll’a Province, Wando County includes the towns of Kūmil, Nohwa and Wando, and the townships of Kogūm, Kunoe, Kǔmdang, Pogil, Soan, Shinji, Saengil, Yaksan and Ch’ongsan. Consisting of over 60 occupied and 143 unoccupied islands, the county covers 387.11 sq. kms. and as 1989 statistics indicate, had a population of 96 444. As part of a submerged mountain range, the islands contain numerous peaks, including Sanghwang Peak (644m), Paegun Peak (462m) and Suksung Peak (432m) on Wan Island, Ch’ıkcha Peak (425m) on Pogil Island, Mae Peak (385m) on Ch’ongsan Island and Paegun Peak (483m) on Saengil Island. The southern shores of the outer islands have, to a large extent, been eroded by the action of the sea, whereas the northern shores tend to have shallow coast lines. Consequently, extensive areas along the islands’ northern coastlines, especially of those situated closer to the mainland, have been reclaimed. Influenced by the warm currents of nearby seas, the area has an average yearly temperature of 13.9c., a January temperature of 2.2c. and an August temperature of 26.3c. The area receives an average yearly rainfall of 1 200mm.

About two thirds of the county’s workers are in agriculture. Except for the reclaimed areas along the coast, most of the county consists of rugged terrain. The county has
approximately 95 sq. kms of arable land. Of this, about 36 sq. kms grows rice and about 59 sq. kms. dry-field crops, mostly grains and sweet potato. Fruit crops in the area include persimmon and tangerine. In the area’s placid seas, fishermen bring in catches of yellow corbina, mackerel, sea bream, Spanish mackerel, hairtail, anchovy and eel. The county accounts for one quarter of the nation’s total laver production. In Nohwa, clay and pagodite are quarried, with all of the pagodite produced here being exported to Japan. In the towns of Kūmīl, Wando and Nohwa, there are food-product and marine-product processing plants.

The preservation of the area’s scenic splendour is safeguarded by most of the county’s inclusion in the Tadohae National Marine Park. Some of the most popular tourist destinations are the beaches on Wan Island (See Wan Island), and sites associated with Yu Sŏndó on Pogil Island (See Pogil Island). Buddhist sites in the area include Shin’hŭng Temple in Wando’s Kunnae Village, Yŏngju Hermitage in Shinji Township’s Songgŏk Village, Okch’ŏn Hermitage in Kŏgŭm Township’s Tŏktong Village, Hangnu Hermitage in Saengil Township’s Yusŏ Village and Paengnyŏn Hermitage in Ch’ŏngsang Township’s Puhŭng Village.

Confucian sites include Wando Hyanggyo (Confucian school) in Wando’s Chukch’ŏng Village, Changgun Sadang (Ancestral Shrine) in Wando’s Changja Village and Changjŏng-dang, a shrine in Kŏgŭm Township’s Sangjŏng Village. Built by Kim Kwangson in 1897, Wando Hyanggyo was the area’s first educational institution.

Wan Island, previously known as Ch’ŏnghae, also served as a base for Chang Pogo’s forces. During the reign of King Hŭngdŏk (r.826-836), Chang and his army directed maritime trade in the region while protecting the important Yellow Sea trade lanes from pirates. In 851, following the assassination of Chang, the Wan Island garrisons were shut down, bringing to an end Chang’s short-lived maritime ‘Kingdom’.

Wanggŏm [History of Korea]

Wang Mang [History of Korea: The Earliest Korean States]

Wang Och’ŏnch’ukkuk chŏn (Memoirs of the Pilgrimages to the Five Regions of India)

The author of this work was Hyech’o (704-787), a Buddhist monk of the Greater Shilla period. As a youth Hyech’o went to southern China and studied under the Buddhist priest Amoghavajra, and was encouraged to visit India. In 723 he went there by sea and travelled extensively, visiting many significant sites associated with Buddhism, and eventually returning overland to China through Western Turkestan and the Pamir plateau. This work is the record of his journey and includes descriptions of the climate, customs, products, politics, legal systems and the status of Buddhism in the various areas he visited.

In 1908, the French scholar Paul Pelliot discovered a roll of papers containing the text of this work in the Tunhuang caves in China. It is now held in the National Museum in Paris, and is one of the oldest extant Korean works. According to a Chinese record of the Tang period, it was originally in three volumes, but only one has survived. It is, nevertheless, a comprehensive record and a valuable source for the study of India and Central Asia in the eighth c.

In 1928 German scholar, W. Fuchs translated it into German, and in 1943 Ch’oe Namsŏn's commentary to the text was published.
Wanju County

Situated in the centre of North Cholla Province, Wanju County has the main towns of Pongdong and Samnye, and the townships of Hwasan, Isŏ, Kui, Kosan, Kyŏngch’ŏn, Pibong, Sanggwan, Soyang, Tongsang, Unju and Yongjin. In the south, Chŏnju City separates Isŏ Township from the rest of the county. Mt. Taeđun (878m) rises in the north, Mt. Yŏnsŏk (920m) is to the west and Mt. Moak (794m) to the south. Notwithstanding the proximity of these mountains, the county’s western sector is relatively flat. The county covers a total area of 828.34 sq. kms. and as indicated by 1989 statistics, it had a population of 99 162.

Some twenty per cent of the county is arable land. Of this, about two-thirds is used for rice cultivation, and the remainder for dry field crops such as barley, beans, radishes, Chinese cabbage, spinach, lettuce, cucumbers, onions, garlic and hot peppers. The area’s fruit crops include pears, apples, peaches, persimmons and grapes. Speciality crops, include Pongdong ginger and dried persimmons from Tongsang Township which are especially liked. Mines around Mt. Moak produce gold, silver and copper, while others in Pibong Township produce coal. Talc is mined in Soyang Township. The county also manufactures textiles, plastic, chemical products, leather, hanji (Korean paper), oiled paper for floors and hwasonji (paper for calligraphy).

Surrounded by peaks of the Noryŏng Mountain Range, Wanju County affords a number of scenic attractions. For hikers, there is Mt. Taeđun Provincial Park at the northwestern tip of the county and Mt. Moak Provincial Park to the south. In Soyang Township’s Taehŭng Village is the picturesque Wibong Waterfall. Situated near the east gate of Wibong Fortress, this sixty-metre, two-tier waterfall is considered to be one of the ‘eight scenic wonders’ of Wanju County. Here, water descends into a deep ravine between rugged pinnacles of eroded granite. Within walking distance stands the Ungch’i Monument, which commemorates the Korean soldiers who fought here during the Hideyoshi Invasion of 1592. Both the Korean and the Japanese armies suffered heavy casualties in the battle that raged here, leading the invaders to call off the attack.

Within walking distance of Wibong Waterfall on the southern slope of Mt. Chuch’wal stands Wibong (Dignified Phoenix) Temple. This ancient monastery is said to have been founded by Grand Master Soam in 604; however, maintenance records of Kungnakchon (Paradise Hall) state that a peasant of the late Shilla Dynasty built the temple after he saw three phoenix playing in the nearby woods. The famous monk Naong led a major reconstruction of the temple in 1359. This large monastic complex was once one of the 31 main temples of the combined Sŏn (Meditation) and Kyo (Doctrine) sect, but the temple has gradually decreased in size as a result of repeated fire damage. Other famous temples in the area include Taewŏn Temple, Tanam Temple, Songgwang Temple and Hwaam Temple. Founded during the reign of Shilla’s King Munmu (r. 661-681), Hwaam Temple is famous as a place where both Grand Master Wŏnhyo and Grand Master Ġisang engaged in religious practices.

Songgwang Temple was founded by Sŏn Master Toŭi in 867 and was later restored under the guidance of Chinul (National Master Pojo). When Toŭi was travelling south in search of a good site for a monastery, he came to a place where water gushed from the ground. He decided to build a temple on this auspicious site, calling it Chŏnamsa. The monastery has a number of old buildings and halls. The Main Buddha Hall has been designated North Cholla Tangible Cultural Asset No. 70. The hall is built in the typical multi-clustered bracket style of late Chosŏn. Its roof is both hipped and gabled, and the ceiling is chequered. Tourists frequent the temple, especially in late April when the cherry blossoms are in bloom.
In addition to Buddhist sites, there are a number of old Confucian schools in the area, such as Kosan Hyanggyo (founded in 1407 and rebuilt on the north bank of Kosan Stream in 1601), Kuho Sŏwŏn in Pongdong, Hosan Sŏwŏn in Samnye next to the Honam Expressway, Paekch’i Sŏwŏn in Kosan Township, Pongyang Sŏwŏn in Pibong Township and Yanggok Sŏwŏn in Pibong Township just east of Mt. Sŏngmoe (393m). Modern institutions of higher education include Hanil Theological Seminary University in Sanggwan Township and Woosuk University in Samnye.

There are a number of unique village rituals (tongje) in this area. Foremost are the Sanshinje (Shaman ritual to worship the deity of the mountain) in Pongdong’s Yulso Village and the Kiuje (ritual of praying for rain) in Kosan Township. The Yulso Village rite was originally performed to ward off tigers, disease and famine. The ritual is normally held on the 6th day of the first lunar month, but the date can be changed to another auspicious day in the event of an unclean occasion such as a death or birth. The Kosan Kiuje was held up until the end of the Japanese occupation (1945). This ritual was different from that of other regions, as it was performed by Buddhist monks who recited a sutra in front of a Buddhist scroll painting at Hwaam Temple. The ritual did not end at any set time, but instead continued until enough rain fell to make the scroll painting wet.

War Memorial

The War Memorial (Chŏnjaeng Kinyŏmgwan) opened on 10 June 1994 on It’aewŏn Street next to the Yongsan Army Base in Seoul. The memorial displays artefacts and memorabilia associated with Korean wars. Exhibition halls at the memorial include the War History Room; Korean-War Room; Expeditionary Forces Room; Korean Forces Development Room; and Large-scale Equipment Room, as well as a room specially dedicated to the memory of Koreans who died defending their country. Items on display include ancient armour and swords; cannons; weapons from World War II, the Korean War and the Vietnam War; as well as large items such as tanks and a B-52 bomber. There is also a model of the tombstone of King Kwanggaet’o (r. 391-413) the great ruler of Koguryŏ.

Wi Island

Wi Island is part of Wido Township in North Cholla Province’s Puan County. Situated about 10 kms. from the Pyônsan Peninsula in the Yellow Sea, the island covers a total area of 11.14 sq. kms. and as 1985 statistics show., had a population of 2 883. Mangwŏl Peak (255m) and Manggûm Peak (242m), are the island’s highest peaks and these contrast with the flat areas of reclaimed land along the coast.

The island receives 1 093mm of rain and 196.3mm of snow annually. The average temperature is -1.5c in January and 27c in August. Only 14. per cent of the island is arable. Of this, 0.19 sq. kms. is used for rice cultivation and 1.38 sq. kms. for dry field crops such as sweet potato, barley and garlic. Local fishermen catch anchovy, hairtail and yellow corbina, and harvest laver.

There are two elementary schools and one junior high school on the island.
During Chosŏn, Wi Island was used as a place of exile.

Willis, Admiral G.O. [United Kingdom and Korea]

Wiman (fl. ? -c.194 B.C.E.)

Wiman (Wei Man) was the founder of Wiman Chosŏn, an early Korean State. Due to civil wars in China after the fall of the Qin dynasty and the rise of the Han there were a great many refugees from northern China and Manchurian areas. In particular, one group of refugees, numbering over a thousand strong, was led by a man named Wiman who sought shelter from the continuing wars of China. Initially, Wiman was entrusted by King Chun (? -194 BCE) of Ko Chosŏn to defend the northwestern border of the kingdom. However, as Wiman consolidated his power base among the refugees he drove King Chun from his throne and took the kingship for himself. King Chun is said to have fled to the south to the state of Chin at this time. The year that Wiman (194 BCE) is said to have founded his own state is derived from records in the Shizhi (Records of the Historian).

Records in the Shizhi, Hanshu (History of the Former Han Dynasty) and Sangauzhi (History of the Three Kingdoms) all state that Wiman was of the Chinese Yan State. However, although Wiman came from Chinese territory it is quite likely that he was of Korean ethnicity. This can be confirmed from records stating that he wore his hair and dressed in the style of the Chosŏn people when he led his band of followers to Ko Chosŏn, and moreover that he continued to use ‘Chosŏn’ in the title of his new kingdom. Another feature of Wiman Chosŏn was the continued use of men of the former Ko Chosŏn kingdom to staff high positions in its government. All of these facts together support the view that Wiman Chosŏn was not a Chinese colonial outpost, despite the fact that Wiman did rely on Chinese migrants and their sophisticated knowledge of the iron culture to help him in founding his state. Wiman Chosŏn most certainly took the form of a confederated kingdom that used the extant power structures of its predecessor Ko Chosŏn, and then took this society through a series of rapid developments.

It is not known for certain when Wiman died or for how long he ruled. However, from the fact that his grandson King Ûgŏ served as the last king of Wiman in 108 BCE it can be determined that Wiman did consolidate his power and pass that throne on to his heir. It is known that Wiman Chosŏn extended the size of its domain to a considerable degree and controlled much of the northern part of the Korean peninsula. Moreover, the fact that Wiman Chosŏn and the Chinese Han dynasty had diplomatic exchanges also indicates that Wiman Chosŏn represented a considerable force in the northern Korea and eastern Manchurian regions. It is thought that the advanced metal culture of Wiman Chosŏn, that rivalled that of the Han, allowed the Korean kingdom to maintain its territory against its larger counterpart.

Wiman (Ch. Wei Man) Chosŏn [History of Korea]

Wölch’ul Mountain

Situated in South Cholla Province just south of Yŏngam, Mt. Wölch’ul is a rugged mountain characterised by steep rock outcroppings and sparse vegetation. According to the Tongguk yŏji sŏngnam (Augmented Survey of the Geography of Korea), the mountain was known as Mt. Wŏlla during the Shilla Period and Mt. Wŏlsaeng during the Koryŏ Period. The present name means ‘moon-rise mountain.’

Ch’ŏnhwang Peak (809 metres), the mountain’s highest point, is connected by a ridge to Kujŏng Peak (743 metres) to the south-west. On the north-west face of Kujŏng Peak, there
is a seated, 8.6-metre high Buddha figure carved in relief (National Treasure no. 144). The figure is believed to date from the end of the Greater Shilla Period or the beginning of the Koryô Period. To the south-west of Kujjong Peak, next to the Togap Reservoir, there is Togap Temple, which was founded in the Koryô Period. Several ancient artifacts can be seen at the temple, including a seated Buddha in relief and a stele commemorating National Master Tosôn. South-east of Togap Temple, next to the Sôngjôn Reservoir, there is Muwi Temple, which was founded by Wônhyo during the Shilla Period. East of Ch'ônhwang Peak lies the Ch'ônhwang Temple and Kujol Waterfall. North-west of the peak lies the Onch'ôn, Yongch'u and Taedong Waterfall.

Due to its spectacular landscape, Mt. Wólch'ul has been eulogised by a number of famous poets including the Koryô poet Kim Kûkki and the Chosôn poet Kim Shisup. Nowadays, the area is popular with tourists who hike the mountain trails and visit the numerous historical sites. From Ch'ônhwang Peak, the sunrise and sunset are said to be particularly lovely. In order to preserve the mountain's beauty and historical heritage, Mt. Wólch'ul and the Togap Temple area were designated Wólch'ul-san Provincial Park in 1973. The area's status was upgraded to National Park in 1988.

Wólchóng Temple  [Architecture]

Women

Each succeeding dynasty in the two-thousand years of recorded history of Korean civilisation has brought about profound change to the status of women. From the earliest Korean societies, where women were considered as equal to men in many respects, to Chosôn (1392-1910), where women were systematically discriminated against by the constrictive neo-Confucian ideology that had permeated society, and which came to dominate every thought and action of the people. The twentieth-century and its release from the shackles of neo-Confucianism saw a continuing struggle between, on one hand, the desires of many women to be treated as equals with men and, on the other, the vestiges of the former ideological beliefs that still depressed woman's position in society. It should not be assumed, however, that the advent of Japanese colonisation brought about the emancipation of Korean women; for history has recorded the harsh treatment of the Korean people, men, women, and children, at the hands of the Japanese throughout the period of colonial rule (1910-1945).

Early Korean societies

While it is difficult to determine with certitude the role of women in the earliest societies on the Korean peninsula, it is believed that a division of labour existed between males and females. From around 3000 BCE, Neolithic man was present on the Korean peninsula and these early Koreans lived in small groupings of dugout dwellings, most often along rivers or on the coastline. They were hunters and gatherers of food, but came to maintain the elements of an agrarian society, in which cereals such as millet, barley, rice, and buckwheat were grown. It is thought that the womenfolk confined their activities in or close to the dwellings, thus enabling them to function as primary care-givers for their children, while the men ranged further from the dwellings in their hunting expeditions and search for game.

The structure of the dwellings in the late Neolithic and early Bronze periods also indicates a separation of duties between males and females. While the shelters of this period were largely dugout dwellings, living quarters separated into an area in which a hearth was located and an outer area. The inner part of the dugout held the implements needed for the preparation of food, while the outer areas of the dwelling served also as storage for farming tools and weapons. It is reasonable to assume that women were chiefly responsible for child-rearing and food preparation, while the men kept to farming and hunting activities. This, however, is not to say that there was any hierarchical pattern attached to the functions
conducted by either sex. The people were heavily dependent upon joint efforts for survival of the family, clan, and community.

Extant records from the pre-Three Kingdoms period are few, but some Chinese documents provide glimpses into the lives of the early Koreans. Some of these records are concerned with marriage customs. For example, from records in the Sanguo zhi (History of the Three Kingdoms), the Eastern Ye Kingdom had laws enforcing exogamous marriage practices. Moreover, from the Koguryo custom of a 'son-in-law chamber' (sŏok), we can ascertain that the groom went to live with his wife's family for a period of time. Only after the children of the couple had reached a certain age did the bride and groom leave her natal home for that of her groom. This practice is thought to be a vestige of an older custom, thus prompting some historians to suggest that there may have been a matrilineal descent system in Neolithic Korea. This theory, however, is the subject of much debate.

Other records of this period in early Korean history reveal various legal practices that allow for some understanding of the lives of women. The Hanshu (History of the Former Han Dynasty) shows that a legal code was in place in Puyo, which indicates the beginnings of societal restrictions being imposed on women. This legal code had two provisions concerning women, which were capital offences. These were (a) adultery, and (b) jealousy. These inhuman penalties could have functioned to protect a fledgling patriarchal family system. Moreover, the punitive provision concerning female jealousy indicates the prevalence of polygamy among the upper classes of Puyo society. It is thought that other early kingdoms, such as Ko Chosŏn, Ye and the Samhan, had similar legal codes in place. Accordingly, it can be reasoned that the status of women was becoming subordinate to that of men from this time.

Women in the Three Kingdoms

As Korean society became more advanced and hierarchical, so too, did the ascribed roles for males and females. The Three Kingdoms and Greater Shilla which followed were eras that saw the consolidation of monarchical authority; the stratification of society into the ruling and lower classes, and the importation of higher Chinese religious and cultural systems, such as Buddhism and Confucianism. These cultural changes affected the relationship between the sexes in Shilla, Koguryo and Paekche. Moreover, shamanistic taboos concerning women, particularly the 'impurities' associated with the natural female processes of menstruation and giving birth, also became more rigid. Hence, there arose clear societal discriminations against women.

In early Shilla, monarchs (both kings and queens) were required to be from the royal Pak family, in addition to being of sŏnggol (true-bone) rank. Thus, while women may have had a rather subordinate position to males, they were still allowed to occupy the kingdom's highest position. This is seen in the reigns of successive female monarchs, Queen Sŏndŏk (r. 632-647) and Queen Chindŏk (r. 647-654), just before the unification of the Three Kingdoms. Their reigns, however, marked the end of both the sŏnggol rank and system, and the domination of the throne by the Pak family. As well, since Sŏndŏk and Chindŏk represented the last two members of the sŏnggol class, it is clear that there was a definite preference for kings and not queens to rule the kingdom. It is after the extinction of the sŏnggol class, however, that monarchical authority underwent a gradual process of consolidation, when social and official roles became more established. This process resulted in a fundamental weakening of the position of women in official society. It should be mentioned, though, that in the final years of Shilla, the kingdom was ruled by Queen Chinsŏng (r. 887-897) held the throne.

While neither Paekche or Koguryo record an instance of having a woman on the throne, it is thought that the role of females in these kingdoms was nevertheless important. Marriage served to link powerful aristocratic families with the throne, and this, naturally, was done
through the daughters of the aristocratic families. This, in itself is evidence of a clear limitation on the positions, at least insofar as official rank is concerned, that women could secure and hold.

The role of women in the commoner class during the Three Kingdoms is not as clear as it is with the the ruling classes. Some scholars have proposed that the structure of the family during these early Korean kingdoms was based largely on matrilineal descent groups, and that women enjoyed economic independence from their husbands and moreover, that they played important roles in the major agrarian rituals of this age. In shamanistic rituals, which were designed to bring about collective prosperity, women participated in both sacrificial rites and folk games. Women also contributed to the economic prosperity of the family and community through such activities as farming and weaving.

**Women in Koryŏ**

Koryŏ is characterised by the widespread adoption of the Buddhist religion at all levels of society. This represented a change from the rigid hereditary bone rank system (kolp'um) which had determined a person’s position in Shilla.

The women of Koryŏ enjoyed equality with with their male counterparts. This is witnessed in the fact that uxorilocal marriage was commonplace, and even in those instances when a woman left her natal home for a separate household, she was always welcome at her birth home. Both sons and daughters received equal shares of the family inheritance, and daughters often succeeded to the position as family head, thus carrying on the family line. While women did not serve in the bureaucracy, they did have economic independence within the family. This allowed them to participate as equals as they could not so easily be threatened with expulsion by their husbands. Not only did they have economic freedom, but they were free to return to the home of their parents at any time. Therefore, the strength of woman’s position in Koryŏ can be said to lie in her freedom of choice to return to her natal home and the equal inheritance rights she shared with her male siblings.

During Koryŏ, laws concerning marriage became formalised. One major reason for the adoption of formal rules was the invasion of Koryŏ by the Mongols in the mid-thirteenth century and the subsequent subjugation of the kingdom. As part of their terms for the surrender of Koryŏ, the Mongols demanded a ransom of large numbers of young women. However, in order to prevent their daughters from being abducted by the Mongols, the statesmen of Koryŏ adopted official marriage ceremonies. Also, other regulations concerning marriage were initiated during this period. Specifically, during the reign of King Ch'ungsŏn (r. 1308-1313) laws were enacted that prohibited marriage among those with the same surnames as well as with matrilateral cousins. The impact of the latter regulation was to undermine both the importance and strength of a woman’s kin group in regard to that of the male.

In the final years of Koryŏ, the introduction of neo-Confucian ideology began to make its mark in the upper echelons of society. Thus began the widespread introduction of such Confucian tenets as ancestral rites, the predominance of males over females, and the establishment of a strong patriarchal descent line. It was during this century’s long process of transformation into a Confucian society that the social position of women began to gradually deteriorate.

**Women in Chosŏn**

If Koryŏ can be viewed as Buddhist-oriented, the subsequent half-millenium long Chosŏn dynasty was certainly the age of neo-Confucian ideology. While the process in which this philosophy thoroughly permeated and dominated Chosŏn society took some centuries to mature, by the end of the dynasty it had influenced and reconstructed life at every level.
There is perhaps no area in which the complete domination of neo-Confucianism can be seen clearer than in the transformation of women's status during Choson.

The introduction of ancestral rites may have acted as the chief agent for change during Choson. The principle of patrilocal residence was offered by neo-Confucian society as the most fundamental human bond, and ancestor worship provided a means to extend this to a generational concept. Ancestor worship clarified lines of descent, denoted kinship boundaries, and created solidarity among agnates. The conducting of ancestral rites was often cited as the most filial act a son could perform for his parents, and served as an extension of the son's service to the parents while they were still alive. The fact that women were not allowed to participate in ancestral rites bespeaks their marginalized social position.

The lives of women were strongly affected by the rise of neo-Confucianism, and this can be seen in practices surrounding inheritance, marriage and social status. While in Koryo and early Choson there was no discrimination between sons and daughters concerning inheritance rights, this had changed by mid-Choson. Initially, this shift focused on reducing the inheritance rights of the children of secondary wives, and was fully in place with the promulgation of the Kyongguk taejon (National Code) in the late fifteenth century. Other legislative inroads in early Choson were made on the economic independence of women, a strong feature of Koryo, and by the mid-sixteenth century a wife's property came to be indivisible from that of her husband. Moreover, inheritance documents of late Choson show that son-in-laws were designated as heirs in place of daughters, and thus males controlled all family property. The result of this change in a woman being able to control her own affairs was that she became increasingly dependent upon her husband's estate, and was thereby no longer financially independent.

The regulations concerning marriage also underwent major change from Koryo to Choson. An early focus of Choson neo-Confucianists was the elimination of uxorilocal residence, a feature of Koryo, since this was viewed as both unnatural and as being conducive to the formation of bonds with matrilineal kin. The impact of this legislation was, in effect, to eliminate the inheritance rights of daughters in favour of sons. Hence, women were now compelled to move to their husband's house upon marriage and they could not take with them an inheritance of ancestral land. Instead of this, daughters were now given a share of the inheritance in the form of slaves or other transferable property. This functioned as a dowry in the hands of her husband's family, and was no longer under her control.

The consequence of the elimination of uxorilocal residence was to make a woman dependent upon her husband and his family, and this is well illustrated by the enforcement of the ch'ilgō chi ak, or the seven grounds for expulsion of a wife, that came to be practised in Choson. The ch'ilgō chi ak were: disobedience towards one's parents-in-law; failure to produce a son; adultery; theft; excessive jealousy; chronic illness; and extreme talkativeness. For a woman whose only social standing was through her husband's family, the ch'ilgō chi ak coupled with her lack of economic independence, proved to be an extremely effective means in making her obedient and submissive through the ever-present threat of expulsion.

The importance of marriage during Choson can be seen in this institution functioning as the basis for Choson society. Marriage with a primary wife was a transaction between two kin groups that held strong legal, economic and political connotations. Since society was organised around patrilineal descent groups, which marriage functioned to perpetuate, the institution of marriage allowed society to survive. A woman's role within the marriage was to serve both her parents-in-law and husband, and perhaps most importantly, to bear sons who would continue the lineage of her husband's family.

Remarriage was discouraged and greatly discriminated against by the elite yangban class of Choson. Those yangban women who chose to remarry condemned their offspring to a life outside mainstream society, as the sons and even grandsons of remarried women were
prohibited from sitting for the government service examinations that would qualify them for
government posts. The underlying reasons for the sanction of remarriage are found in the
Confucian belief that the greatest of the womanly virtues was the wife's devotion to her
husband, and as a logical extension, to her husband's ancestors. Remarriage would only
contaminate the purity of her husband's lineage.

Opposed to the legitimate roles occupied by primary wives, secondary wives or concubines
were afforded existences filled with far greater hardships. The position of a secondary wife
and her offspring was always subordinate, in a legal aspect, to that of a primary wife. Moreover, the sons born to secondary wives were viewed as illegitimate in the eyes of
Chosôn law and were barred from sitting the government service examinations which
represented the path to success during Chosôn. Notwithstanding, many women entered into
roles as secondary wives or concubines due to decisions by their fathers, who used their
daughters as a means to create bonds with upper-class families and thereby elevate their
own social standing.

The circumstances surrounding a primary wife and a secondary wife were filled with the
need to capture the husband's attention and favour. Secondary wives were, by and large,
younger than the primary wife, and as such, often more physically attractive than them.
Unlike the primary wives, however, secondary wives were without legal status. Therefore,
the secondary wife's situation inside the family circle was tenuous and depended on both
the support of her husband and his staying alive. While some secondary wives and their
children were provided for in the wills of their men, generally they were turned out of the
legitimate family home upon the death of the husband.

A primary wife had no option beyond acceptance if her husband chose to take a secondary
wife or concubine. It will be recalled that the ch'ilgô chi ak allowed the husband to expel an
excessively jealous wife. Therefore, all a wife could do was to accept her husband's new
partner and hope he did not squander the family's fortune on her. The inclusion of a
provision against jealousy in the code of conduct for women was a means of allowing men
to pursue their own enjoyment without regard to and repercussions from the primary
spouse.

The position of women in Chosôn is patent in the Confucian axiom of namjon yôbi, or
'man is exalted and woman is lowly'. While the basic tenets of Confucian philosophy regard
the union between a man and woman as the root of all human relations, it accords the
female an essentially inferior position. Just as the yang (heaven, positive, male) force
dominates yin (earth, negative, female) in cosmological terms, there is a clear hierarchical
order between the sexes that is likewise cosmologically sanctioned. Accordingly, the
fundamentally subordinate position of women to men was reinforced by both formal and
informal education.

The female child was socialised during Chosôn in such a manner that she soon
acknowledged her own inferiority to the male sex. Debate seems to favour the argument that
from their earliest days, girls were taught, directly and indirectly, to understand the
elements of their subserviency to males. By the age of three or four, therefore, a correctly-
trained girl would know, if only intuitively, that women are inferior to men; and
progressively would come to realise that that she could not reasonably expect to appeal to,
or be treated by, the same legal system as males. In a situation of conflict between the
sexes, men were right by virtue of their sex while women were wrong by virtue of their
gender. Moreover, a woman was peripheral to her social environment and tangential to
men. Thus, social education in Chosôn society ensured that females, from their formative
years, were fully cognizant of their inferior social position.

Formal education of women was heavily influenced by works such as the fifteenth century
Naehun (Instructions for Women), which was compiled by Queen-Consort Sohye (1437-
1504). The gist of this work focuses on establishing bounds for acceptable behaviour for women. There are guidelines for the four basic pillars of womanly behaviour: moral conduct, proper speech, proper appearance, and womanly tasks. Moreover, the work explains other roles a woman is expected to perform such as service to her in-laws, being an obedient and dutiful wife, and a caring mother.

The institutions that tied women to conformance with neo-Confucian principles were also perpetuated by women. Since the only way in which women could advance their already marginalized social positions was to live their lives within the standards upheld by society, i.e., as a virtuous wife and mother. They became active components in sustaining the system that oppressed them, and so a mother would train her daughter to conform to the very standards which had stifled her own advancement and development.

Women and the modernisation Movement

With the encroachment of foreign powers, particularly Western nations, and the fall of Choson, the structure of Korean society underwent drastic transformation. Among the many changes were those that affected the social status of women. However, despite the goals of women to bring about equality and advancement of their positions, vestiges of neo-Confucian ideology remained which acted to hinder the emancipation. More importantly, the end of Choson marked the beginning of Japanese occupation, which counteracted moves for social and political change in Korea.

Women in Late Choson and the Colonial Period

The end of Choson was a period of tremendous change, and one significant area was through the influx of foreign culture. The traditional position of women also underwent many changes during this time. Principal among the new opportunities for women was the possibility of receiving a formal education and the first school to offer them a modern-style education was Ewha (Ilwa) Girls School, which was founded by Mr M. F. Scranton of the United States North Presbyterian Church in 1886. The school survived the colonial period and became the first women's college in Korea. One woman educated here was Kim Hwallan (1899-1970), who was the first Korean woman to receive a doctoral degree (Columbia University, 1931).

Closely following the opening of Ehwa, many other educational institutions for females were established. In 1890, Chōngshin Girls' School opened and this was followed by Paehwa Girls' School in 1898, and Sunghū Girls' School in 1903. Also at this time, Hosudon Girls' School (1904); Posŏng Girls' School (1906); Chinmyŏng Girls' School (1906); Sungmyŏng Girls' School (1906); and Yanggyu School (1906), were founded. These schools, largely operated by Western missionary interests, played a major role in helping to bring about enlightenment to Korean women. Western-style education kindled the desire for equality of opportunity and the release from the subservient position of women in neo-Confucian society.

The introduction of foreign culture towards the end of Chosŏn and during the colonial period, also introduced new concepts of equality between the sexes and freedom of choice. Ideas were propagated through the so-called new novels (shin sosol) which appeared during the early years of the twentieth century. While the authors were mostly men, such as Yi Kwangsu (1892-?) and Yi Injik (1862-1916), their works gave women the incentive to seek roles in society beyond those which traditional society offered them. Moreover, since these novels were written in the vernacular han’gul script, they were easily accessed by women readers.

Another notable transformation in Korean society during the colonial period was the advent of a capitalist economy. This represented a marked change from the feudality of Chosŏn,
and industrial development demanded a greatly-increased workforce, which was met by women's labour. Korean women entered the labour force in large numbers as the Japanese sought to develop various industrial interests, such as light-manufacturing and textiles. Notwithstanding such changes, with women now given the opportunity to work outside the confines of their homes, chances for economic enrichment and advancement were extremely small. Thus, we can characterise the intensification of the workforce as being highly exploitive and prejudiced against women.

The development of industry in Korea by the Japanese also required that males, heretofore largely engaged in farming activities, be relocated from rural areas to industrial centres. Therefore, women who remained in the countryside were compelled to take over the farming responsibilities themselves in order to support their families. By 1930, nearly eighty per cent of those engaged in farming were tenant farmers, which greatly depressed their earnings from the land. As a result, throughout the colonial period the participation of women engaged in non-farming occupations continued to rise. By 1930, Korean women represented almost a third of the total labour force (estimated at over one million) engaged in work other than agriculture.

The participation of Koreans, both male and female, in the workforce during the colonial period was part of the Japanese grand-plan aimed at thoroughly assimilating Korea into the Japanese war effort. Accordingly, while Koreans performed many of the same tasks as their Japanese counterparts, they received significantly lower wages. At the bottom of the wages structure were Korean women, who were paid slightly over half of what Japanese women received. So, while Korean women held roles other than those permitted to them during Choson, their participation was enforced and was far from being on an equal footing with that of Japanese women employees.

Women figured prominently in the various independence activities conducted both within and outside Korea during the colonial period. They took part in considerable numbers in the March First 1919 Independence Movement and some, such as Yu Kwansun (1904-1920), paid for their convictions with their lives. Another woman who played a direct role in the struggle for Korean independence was Kim Maria, (1891-1944) who was imprisoned by the Japanese authorities on several occasions for her unceasing independence activities. Other women, such as Pak Maria (1906-1960), concentrated their activities on women's rights and social enlightenment. In sum, colonial-period women played major roles in both the struggle against the Japanese and in the modernisation of Korean society.

An example of the coercive and oppressive Japanese rule was the sexual bondage of schoolgirls and young women to serve the Japanese armed forces. An incalculable number of these 'comfort women' (but estimated by George Hicks, The Comfort Women, Sydney, 1995, to have been 139 000 at most) were procured by the Japanese authorities and Korean collaborators through various means and measures, which included abduction, deception, duress, enticement, entrapment, even kidnapping. South Korean women's groups have estimated (1992) that eighty per cent of the 'comfort women' were aged between fourteen and eighteen and it is thought (from other sources) that of the total number, four-fifths were Korean. These girls and women were assigned mostly to frontline and reserve-area detachments of the Japanese forces during the campaigns in China, Manchuria, South-east Asia and the Pacific theatres, before and during World War II (Pacific War). This tragic episode remains as a matter of much controversy with women's groups in Korea, the Korean government and Japan's unwillingness to fully attempt to right past wrongdoings.

Women in contemporary Korea

After Korea's liberation in 1945, Korean society underwent many changes. Aside from the obvious political issues which resulted in the eventual partition of the peninsula,
fundamental changes to the social fabric put women in a position to envisage major changes to their status. Specifically, as Korean society as a whole had escaped from the bonds of Japanese colonialism, women, too, sought to gain equality in matters of employment and labour relations, in politics, and in the elimination of discriminatory practices. These attempts at equality were met, however, with opposition by some sectors of society, both male and female, who wished to maintain the traditional roles of Korean womanhood.

The women's movement of the 1950s was only partly successful in its aims. In the aftermath of a fratricidal war, the ROK was not well-placed to consider drastic changes to the status of women. Those women who attained higher office usually did so by virtue of their higher education. One, Kim Hwallan, served as president of Ewha (Ihwa) Women's University until 1961 and another, Pak Maria, was director of the English Literature Department of that university. These two women, however, were exceptional.

Women in the workforce

The industrialisation of Korea began in earnest in the early 1960s when the government launched the first five-year plan. This plan and its practical application demanded a greatly increased workforce. Perhaps the most visible aspect of this increase is the participation of women. In 1960, 28.4 per cent of women were in employment of one kind or another. In a span of ten years the number of women workers had risen to 37.6 per cent. It is clear that such a program of industrialisation could not have occurred without the resource of women's labour.

Many young women from the countryside entered the workforce of the 1960s. Migration to the expanding urban centres was often motivated by poverty and so the jobs these young women took were invariably base positions in industrial production, mostly in the textile industry. They were usually single women who worked only until they married. The wages they were paid were forty to forty-six per cent of what their male counterparts received, thus revealing their exploitation at the hands of the business sphere, and not quite so directly perhaps, by the governments of the period. In sum, the women who joined the labour force and contributed so greatly to the economic growth and fortune of South Korea can be characterised as being young and unmarried, mostly drawn from impoverished families in the rural areas, and paid much lower wages than their male counterparts.

The typical female worker image has undergone dramatic change from the young, unmarried and poorly educated woman of the 1960s, to one that is both older and better educated. The proportion of Koreans engaged in primary industries, in contrast to secondary and tertiary industries, has steadily declined since the 1960s. This is also seen in the percentage of women engaged in primary industry, which has declined largely in favour of employment in the secondary and tertiary sectors, as shown by Table 1.

Women have become increasingly involved in occupations that require advanced technical knowledge. This can be attributed both to the higher educational attainments of women, and their capabilities in meeting the challenge faced by firms competing in aggressive worldwide

markets for their products. An increasing number of women now follow a career path and this often continues after marriage. Table 2 gives the August 1998 statistics for women by occupation (New Occupational Classification of the National Statistical Office).

From this information it is evident that women have begun to contribute significantly to occupations that require both technical expertise and higher educational levels. Nevertheless, the total number of women employed in the top echelons of the workforce, the first three categories of Table 2, represents only 39.4 per cent of the top posts held by men. Of course, it can be argued that men outnumber women in the workforce, and by this fact alone, should hold many more of the executive and professional positions than women. But even in conceding that men (59.63 per cent) outnumber women (40.37 per cent), it surely follows that women are grossly under-represented in the key positions of the professions, commerce and the

In the civil service sector, the government increased the mandatory employment rate for women to thirteen per cent in 1998, up from the ten per cent of 1996.

Discriminatory hiring practices are still in place in many sectors of Korean commerce and industry. One minor example is seen in the banking sector, where male applicants have been awarded points over female applicants for having completed their compulsory military training, thus handicapping women at the application stage. Another is that women applicants are often subject to ‘appearance standards’, where, for instance, a minimum height of 160 cms. and a weight of not more than 50 kgs. is a prerequisite for a position. This standard is not usually applied to male applicants. Moreover, wage inequality between
men and women doing identical work is still widespread throughout the workforce. While the official statistics show that earnings overall (all industries) have increased from 39,478 won per diem in 1993 to 57,508 won by July 1998, the National Statistical Office, in its monthly publication, does not distinguish between male and female earnings in any of the professions and industries to which its statistical information relates. However, other information on this point, given in the Korea Annual 1998 (page 183), gives the average monthly earnings for males as 1,607,114 won per month (up 8.2 per cent), and those for females as 998,888 won (up 9.7 per cent), which is a monthly difference of 608,226 won between the sexes. In other words, female workers were paid 37.8 per cent less than male workers.

With the strong competition that exists, bias and penalties by employers give men a strong edge over women in the job market. Although greater equality of recruitment in some sectors was being observed by the early 1990s, the 1998 statistics confirm that women are still lagging far behind men when it comes to securing a position in many of the professions, and in other sectors, too

The gains that women have made in the workforce result from an ongoing and arduous struggle against a system which has denied them equality to a great extent. Particularly in the textile industry, those women who have sought to unionise their fellow workers have often been subjected to harsh and swift retaliation by both company policy and management, and implicitly by successive Korean governments. A representative example of this refusal by a company to negotiate over equal rights is seen in the attempts to organise female workers at the YH Trading Company, in the late 1970s. The company refused to negotiate with the elected union officials and instigated physical force against the women employees who dared to strike. The strike-breakers sought and were given police assistance. Although the use of force was common in the labour struggles of the 1970s, the YH instance is cited for its particular brutality against women employees.

With the end of the twentieth-century, South Korean women look to the advancement and equal employment policies which the provisions of the Equal Employment Act 1987 require. In basic terms, these provisions inter alia prohibit gender discrimination at all levels of employment, promote female employment opportunities, enhance the social status of women workers, as well as instituting welfare and cultural programs. But as shown above, women in South Korea have still a way to go before they can claim such a high degree of equality in employment and in society generally.

Political Participation

While Korean women are guaranteed equal right to hold public office, since the inception of the ROK in 1948 opportunities for their election to federal representation of the people have remained consistently low. From the first National Assembly in 1948 to the thirteenth in 1992, women have held an average of only two per cent of the seats in the Assembly. Moreover, of the women who have served a term in the National Assembly, over seventy per cent have been elected as 'at large' representatives. Consequently, they have lacked a proper constituency from which to build a political base.

A fundamental reason for the low political participation of South Korean women is the lack of political consciousness of the female electorate. Hypothetically, it follows that women voters could fill fifty per cent or more of the Assembly seats if they voted as a block. The female voting base, however, lacks unity of cause and purpose and by reason of this does not vote as a single entity on those issues from which they could benefit, with strong representation in the Assembly. This has been claimed to result from women being excluded from the essential structures of Korean politics.

Perhaps attributable to the socialisation aspect of women's lives, political issues do not hold
the importance with women as they do with men. On the other hand, many South Korean women show far more interest in economic and societal issues than do men. The issues women are most concerned with are those affecting their daily lives, perhaps as a result of their upbringing. Younger women, however, are now interested more in political issues than are the older generation. Therefore, the level of female participation in the political sphere can be expected to increase, as well-educated younger women come to comprise the largest portion of the voting bloc.

The social status of women

In 1998, the ROK government implemented a five-year basic plan to raise the status of women. Sweeping measures, including legal reform and an education system designed to increase women's competitiveness, as well as social and cultural measures, with both new and improved welfare provisions are being put in place. While former federal laws have guaranteed women equal status, in reality many social barriers obstructed such laws. Women are still perceived largely as having their proper place in the home, by many Koreans. The remnants of neo-Confucian ideology still influence the lives of Koreans, particularly those who were at school and college in the 1970s and before. Moreover, the socialisation process often results in both genders considering females as being intrinsically subordinate to males. Thus, issues such as women pursuing a career path after marriage, choosing not to have children, and holding positions traditionally within male-dominated territory, are the subject of much controversy as society undergoes the slow process of change.

Notwithstanding this traditional rigidity, structural change in the typical South Korean family has resulted in more freedom for women. From the extended family, which often held three generations under the same roof, the Korean family has dramatically changed. By 1990, the average family size was 3.7, representing a substantial drop from the 6.0 persons of 1960. Today's Korean family, then, is largely nuclear. Hence, a woman has more freedom to pursue personal interests and is unencumbered by the restrictions that traditionally might have inhibited her from being active outside the home.

Combined with the decrease in family size is the increasing importance of a second income to many Korean families, which, conversely, inhibits personal freedom. The desires of young married couples to have their own home, a car and other expensive consumer goods are often only attainable through the combined incomes of husband and wife. Thus, the career of a woman, while still secondary, by and large, to that of her spouse, becomes a vital means for the family to achieve a higher standard of living. Additionally, this allows women to have more fulfilling lives outside of the home.

Korean women have now made their mark in the sporting arena. Beginning, perhaps, with the success of ROK women during the 1988 Seoul Olympics, women athletes have been taken to heart by Korean society. Team events, such as basketball and field hockey are especially popular with live and television audiences. Individual achievements, like those of Pak Seri, a professional golfer on the American Ladies Professional Golf Association Tour, bring wide acclaim from the Korean people. Thus, sport is one area in which Korean women have made tremendous progress in achieving a high degree of equality with their male counterparts.

Women and citizen rights

The Constitution of the Republic of Korea is specific in guaranteeing citizen rights, and if not specifically, then implicitly, in the rights of women. Article 11 of the Constitution guarantees all citizens, regardless of gender, equality before the law. Article 15 stipulates that all citizens shall enjoy freedom to pursue the occupation of their choice, while Articles 24 and 25, respectively, extend suffrage to all citizens over a defined age and give them the
right to hold public office. Article 31 states that all citizens have a right to an education based upon their abilities. Specific to women, Article 34 requires the State's endeavours to promote the welfare and rights of women, and Article 36 stipulates that the State shall essay to protect mothers. Thus, it is clear that women are guaranteed a number of constitutional rights.

Constitutional law per se, however, does not ensure that women will receive the equality to which they are legally entitled. Efforts by women's groups in the 1990s focused on affirmative action in both the Korean public and private sectors. Accordingly, some significant measures concerning women's rights in such areas as family law, domestic abuse, property ownership rights, labour laws and social welfare, have been or are being implemented.

In July 1997, the Constitutional Court handed down its decision on one of Korea's oldest prohibitions. The law banning the marriage of couples of the same family name and clan name was considered unconstitutional. This decision saw the divestment of an antiquated law and the resolution of a matter of great importance to the sixty-thousand couples who are affected by the change, allowing them to report their marriages as now being within the law.

In regard to family law, the major target for change has been the family register system (hojok chedo). This system has been the subject of much criticism from women's groups since it perpetuates a patrilineal based society, in that the head of the family is always the eldest male member. Upon marriage, daughters are removed from their father's register and transferred to the register of their husbands. Moreover, all children of a union must take their father's surname, which also helps to perpetuate the notion of male superiority. Women's groups have pushed for a thorough revision or elimination of the family register system, but legislators have so far dismissed such attempts at radical change.

Some significant changes to the family law took place during the 1990s. The legal rights of women who are divorcing, in regard to the custody and care of their children are contained in Civil Code, articles 837, 909 [1990]). In divorce issues, the welfare of minors is now decided by a Family Court, thereby ensuring women an equal right of hearing in custody and parental support matters. Other recent legislation concerns equality in the legal context of both paternal and maternal bloodlines -- previously held at eight generations for agnates and four generations for uxorial kin.

The concentrated efforts of women's groups over three years resulted, in 1997, in the passing of federal legislation denoting domestic violence to be a misdemeanour. Persons found guilty of spouse and child abuse may lose parental rights, be required to do up to 200 hours of community work, and face financial penalties in regard to a victim's medical expenses and compensation. Under the new law, members of the public witnessing acts of domestic violence are required to report to the police what they have seen or heard.

Property ownership rights legislation also underwent significant change in the 1990s, giving women equal rights status. Article 830 of the Civil Code states that a marriage partner retains ownership of property she or he brought into the marriage and Article 831 requires that profit gained from personal property also belongs solely to the one who brought it into the marriage. Furthermore, in a marriage dissolution, both wife and husband have a legal right to a share of property held jointly. The actual division of property (and presumably this extends, ipso facto, to goods and major chattels) is to be done either by privately agreed arrangement, or in the absence of this, by a Family Court.

Social welfare provisions improved and widened in the 1990s In the housing field, for instance, of a total of 596 000 homes built (four-fifths of which were apartment dwellings) during 1997, 219 000 units were financed from a national housing fund to aid those on low
Welfare programs aimed at assisting female household heads; women who abandon their families; unmarried mothers; exploited women; and destitute women have been implemented. In 1998, the government operated ninety-eight welfare centres, offering counselling and shelter to abused women, and women who could not maintain themselves. Further, the facilities designed to assist with maternal and child welfare were consolidated, as well as support for vocational programs for girls who have run away from home, single mothers and needy women. Therefore, recent legislation is focused mainly on women and girls who are without the traditional family support, and it is designed both to help them survive and, given time, to re-enter the mainstream of society.

Women's organisations

The many positive changes realised in the 1990s would not have been possible without the political and social activities of the various women's organisations. While there are now many women's organisations which pursue the advancement of women's rights, two can be cited for their substantial impact on the quality of women's lives in the closing years of the twentieth century. One, the Korean Women's Development Institute (KWDI) has been in the vanguard of women's social issues. The other, the National Committee on Women's Policies is at the fore in pleading and lobbying for the promotion of women's rights through government policy and legislation.

The KWDI was established in 1983 with strong government support. The organisation concentrates on the promotion of women's welfare issues through a research program. The KWDI also sponsors and has in operation a number of training and vocational programs designed to help women learn new skills so as to improve their prospects in the job market and their well-being in the workplace.

Closely linked to the KWDI is the National Committee on Women's Policies. This government organisation is responsible for its work to the Prime Minister's Office and is charged with comprehensively reviewing government policies that affect women. Both organisations played essential roles in the passing of affirmative action legislation in the late 1980s and early 1990s.

Some other women's organisations that function to promote and protect women's rights in Korea are: The Young Women's Christian Association (YWCA) which has been involved in the women's labour movement since the 1950s. The Women Workers' Organisation of South Korea which has also been involved in many of the labour issues of recent years. Agriculture workers have the National Committee of Women Agricultural Workers to advance the rights of women in this sector.

In 1987, most of the women's groups joined the United Women's Association of South Korea, which is a united-front organisation for women's rights with some twenty-five-member organisations. There are many other women's groups that have diverse interests in various matters surrounding the status of Korean women. The presence and activities of these groups bespeaks the increasing political awareness of Korean women, and the changes they hope to bring about. The fact that the Presidential Office has instituted (1998) a Presidential Commission on Women's Affairs is indicative of the importance of women's issues to the Executive and the ROK government.

Won Buddhism (see also New religions)

Won Buddhism (Won Pulgyo) was founded by Pak Chungbin (1891-1943). The son of a farmer in Yŏnggwang County in South Cholla Province, Pak is said to have had a keen interest in religion from an early age. On 28 April 1916, Pak had a profound religious awakening. After this experience, he studied world religions and concluded that Buddhism was the teaching that most closely agreed with his religious insights. In the years that followed, Pak and nine chief disciples established a religious order with the aim of leading all human beings from the state of suffering to paradise on earth. As leader of the new order, Pak assumed the name Sot’aesan and the title of Taejongsa (Grand Preceptor).

Sot’aesan established the headquarters of the new order, which he called the Pulbop Yŏn’guhoe (Society for Studying the Teachings of Buddhism) in Iri (modern-day Iksan) in South Cholla Province. He then wrote and edited the Chŏng chŏn, which came to serve as an outline of the order’s basic teaching. From its inception, the order had a practical orientation, undertaking projects such as land reclamation and the founding of a school (which later became Wonkwang University) in 1946. Sot’aesan was succeeded by Kyu Song (styled Chongsan, 1900-1962). After 1945, Chongsan performed relief work for returning independence fighters and Korean war refugees. His successor was Kim Taegŏ (styled Taesan, 1916-?).

The sect gets its name from the Korean word wŏn (circle). Sot’aesan based his teachings on the Buddhist ideals of a truth which is both without birth and death (pulsaeng pulmyol) and moral cause and effect (in’gwa po’ung). He used the circle to symbolise the ultimate source, which is both the fundamental mind of all sentient beings and the enlightened mind of all Buddhas and saints. Won Buddhism advocates two approaches to these eternal truths: the Gate of Faith (Shinangmun) and the Gate of Discipline (Suhaengmun). The former consists of the Fourfold Beneficence (Satun): the beneficence of Heaven and Earth (Ch’onjiju), parents (pumo’oun), brethren (tongp’oun) and law (pömyunjun). Repayment of one’s moral debt to these four benefactors is seen as an offering to the Buddha. The Gate of Discipline is comprised of the threefold training (samhak): cultivation of spirit (chŏngshin suyang), and inquiry into facts and principles (sari yŏn’gu) and careful karma production (chagop ch’wisa).

The Won Buddhist canon consists of nine works: the Chŏng chŏn; Taejong kyŏng; Pulcho yogyŏng; Wŏn pulgyo yejŏn; Sŏngga; Chŏngsan chongsa pŏbŏ; Se chŏn; Wŏn pulgyo kyosa; and Wŏn pulgyo kyohŏn. The Pulcho yogyŏng is a collection of scriptures from the general Buddhist tradition. It includes the Kŭngang kyŏng (Diamond Sutra); Panyu shimgyŏng (Heart Sutra); and other Mahayana and Sŏn (Jap. Zen) works.

Won Buddhism has a number of distinguishing characteristics. First, the order has an oecumenical outlook toward other religions. According to Won Buddhist doctrine, there are three principles of identity (samdong yulli), the first of which is tongwŏn tori (the common origin of all religious doctrines). Secondly, the order combines a modern outlook with elements from Confucianism and other Korean religious traditions. The importance of repaying the kindness of one’s parents (pumo’oun) is also stressed in Confucianism. Last, in terms of format, Won religious services have adopted many elements from Christianity. In
Won Buddhist temples, devotees sit in pews and religious observance often includes choirs. Also, the followers of Won Buddhism, unlike other Buddhists, typically place a circle above the altar instead of an image of the Buddha.

The order has twenty districts, about four-hundred temples in Korea and thirty or so overseas. The order has, in addition to its missionary activities, actively promoted charity work, including the construction of hospitals, orphanages and nursing homes.

**Wŏn Sect**  
[Buddhism]

**Wŏn’gwang (c. 555-638)**

Wŏn’gwang’s family name was either Sŏl or Pak, and he was of the sixth head-rank (yuktup’um). While growing up in Kŭmsŏng (modern-day Kyŏngju), he had ample opportunity to witness the splendid achievements of Shilla culture. At the same time, he probably experienced the tension between Korean shamanism and the newly imported Buddhist religion. Wŏn’gwang is said to have entered the Buddhist order at the age of twelve. As a young man, he travelled to China’s Zhuangyan Monastery in Jinling, the capital of the Chen Dynasty, where he studied the Satyasiddhi Sastra and the Nirvana Sutra under the tutelage of a disciple of Sengmin. Later, he studied the Agamas at Hujiu Monastery in Suzhou. In 589 the Chen Dynasty fell, prompting Wŏn’gwang to move to Changan, the capital of the new Sui Dynasty. In Changan, he studied the important Shedasheng lun. By this time, Wŏn’gwang was a well-known figure, even in China. King Chinp’yo, hearing of the famous monk, asked him to return to Korea.

In 600, when Wŏn’gwang returned to Shilla, he wrote the Yŏraejang sagi (Personal Notes on the Tathagatagarbha) and the Yŏraejang kyŏng so (Commentary on the Tathagatagarbhasutra). In addition to writing important treatises on Mahayana thought, Wŏn’gwang sought to create a Buddhist code of ethics suitable for Shilla laymen. According to his Five Precepts for the Laity (Sesok ogye), one should: 1) serve the king with loyalty, 2) serve one’s parents with filial piety, 3) be faithful to friends, (4) not retreat from battle, and 5) refrain from the indiscriminate taking of life. The first three precepts reflect Confucian influence and the last two seek to combine the Buddhist ideal of compassion with the need for bravery on the battlefield. This ethical code was fervently adopted by the Hwarang (Youth Corps), a group of young warriors of aristocratic lineage. Notably, although Wŏn’gwang urged lay people to serve their sovereign, he felt that monks should not pay homage to the king. In this, he evidently objected to the idea, prevalent in the Chinese Northern Kingdoms, that the King was a Buddha.

Wŏn’gwang officiated at important Buddhist rituals such as the Paekchwa-Pŏphoe held in 613. He also held the first Chŏmch’al Pŏphoe, a divination ceremony in which devotees would throw 189 sticks in the air and divine the relative merit or demerit of their past actions according to how the sticks fell. This Buddhist divination system was later used by Chinp’yo (fl. 742-780) as a means of conversion. In addition to his role as a spiritual master, Wŏn’gwang served as an important civic leader. The king even sent him on important diplomatic missions, such as the mission to Emperor Yangdi of Sui in 608. Throughout his life, Wŏn’gwang seems to have been on warm terms with King Chinp’yong (r. 597-632). In the Haedong kosung chŏn (Lives of Eminent Korean Monks), he is even credited with curing the king’s illness. Later, when Wŏn’gwang was on his deathbed, the king is said to have tended him personally. When Wŏn’gwang died at Hwangnyong Temple, he was either eighty-four or ninety-nine, depending on which source is consulted.

Won'gyo kuksa (see Úisang)

Wŏnhyo (617-686)

Preeminent Buddhist monk of the Greater Shilla Period. Wŏnhyo, Grand Master is considered as having systematized different schools of Buddhism and established a basis for the popularization of the religion among the ordinary people. Born in a small village in Kyŏngsang Province, little is known of his early life, although it is believed that he became acquainted with Buddhism at an early age. The religion had been introduced to Korea during the fourth century, but had not reached Shilla until 528, almost ninety years before Wŏnhyo's birth. Buddhism quickly gained popularity in Shilla following its legalization by the government, priests were invited to help propagate the religion, and Buddhist ceremonies substituted various traditional rituals.

Wŏnhyo spent much of his youth as a wandering monk, and received his education through informal contact with monks and scholars. At this time, it was standard practice for monks to travel to China to be educated, and Wŏnhyo made two unsuccessful attempts to travel there. One such attempt was made at the age of 31, with his lifelong friend Úisang, however he turned back upon being accused of spying by officials while crossing the Liaotung Peninsula, then part of Koguryŏ territory. Following a difficult journey home, he abandoned hope of visiting China, although Úisang was later successful in making the journey by sea (in 661), spending nine years in T'ang China before returning with the Avatamsaka Sutra.

Wŏnhyo was known for his irreverent and independent behavior, and was the subject of derision and censure among those who advocated strict obedience to Buddhist doctrine. He broke his vows by fathering a son to the widowed Princess of the Yosok Palace during the reign of King Muyol (654-661); this son, Ch'ong, was to become one of the ten great Shilla sages. Subsequently donning lay clothes and styling himself as Sosŏng Kôsa (a small layman), he traveled the country, seeking shelter in the homes of the common people, visiting taverns and brothels and indulging in various forms of irreverent behavior. Traveling to thousands of villages, he is known to have been highly successful in popularizing what came to be known as Pure Land Buddhism. Using song and dance, he claimed that all people could be born again in heaven, a concept which proved extremely popular among the common people. His non-sectarian approach to Buddhism is also sometimes referred to as all-inclusive Buddhism or Whole Buddhism, and his lifetime dedication to its propagation has led him to be known as the founder of this form of the religion.

Although having received no formal Buddhist teaching, Wŏnhyo is also considered to have exceeded in scholarship all of the wise men of his time, and was responsible for approximately seventy books (140 kwŏn), very few of which now remain. The scope of his prolific reading is evident in his work, which shows his clear comprehension of such Mahayana texts as the "Flower Garland" and the "Awakening of Faith". Concentrating on these two texts in particular, he is credited with having harmonized the Buddha's teachings and established their essential equality and unity. His works were transmitted to China and Japan, where they were exerted considerable influence.

Unlike Úisang, who established his own Hwaŏm sect upon his return from China, Wŏnhyo had no desire to found a school or train disciples, and he had fewer disciples than
Uisang and was accorded less respect in his native Shilla than in China. However, he contributed greatly to the development of a uniquely Korean style of Buddhist philosophy and practice. Deriving much of his beliefs from actual experience, he claimed that time should not be spent in analyzing and interpreting the words of the scriptures, but rather in grasping their basic spirit. All of his essays were based on confessions, among which were confessions of his profound joy deriving from his meditation on reality, this joy representing for him the climax of belief. This reality is known as the pongak (Original Enlightenment), which Wonhyo believed to be represented by the Pōbshin (Dharmakaya or Essential Body of Buddha) which was accessible to all people through the purification of mind. Wonhyo was also greatly interested in the chigak (enlightenment a posteriori), which he viewed as the active manifestation of Enlightenment. Chigak represented movement towards the Source, and was therefore imperfect until its final stage, Pongak. In this sense, pongak is both a beginning and end, a reality which is beyond our consciousness yet able to be reached through the mind. Wonhyo claimed that the common people could attain Enlightenment through crossing four stages: non-enlightenment, apparent enlightenment, advanced enlightenment, and the ultimate enlightenment. Wonhyo was also known to place his inkstone and brush on the two horns of his ox as he rode between villages, and soon became known as "Horn Rider". The horns were thought to symbolize the balance between the two forms of enlightenment, pongak and chigak.

Wonhyo died in 686 during the reign of King Shinmun. Legends about him abound in Korea, and he is widely considered to have personified the form of Buddhism which he spent his life so fervently advocating.

Wŏnil (see sŏl) [Buddhism]

Wŏnju

Situated in southwestern Kangwŏn Province, Wŏnju is comprised of the town of Munmak, and the townships of Kwiraе, Puron, Soch’ŏ, Shillim, Chijŏng, P’anbu, Hojŏ and Hŭngŏp. Mt. Ch’iak’s Hyangno Peak (1 043 metres) marks the city’s southeastern border, while Mt. Ponghwa (334 metres) and Mt. P’obok rise up to the west. Situated in an inland basin, the area is characterised by sharp fluctuations in weather. The area’s average annual temperature is 10.8 degrees centigrade.

There are several important historical artefacts in the area. In Haenggu-dong, there is the picturesque Kukhyang Temple, which was founded by Grand Master Much’ak during the reign of King Kyongsun (927-935). At the Pimagara Temple site in Pongsan-dong, there is a pair of stone banner-pole supports (Kangwŏn Province Tangible Cultural Asset No. 49). Nearby, there are several stone carvings, including a standing Buddha figure and a standing Bodhisattva figure (Kangwŏn Province Tangible Cultural Asset No. 68 and 67 respectively). There is another standing Bodhisattva figure at the Ch’ŏnwang Temple site. There used to be a sarira reliquary (Treasure No. 358) at the Yŏngjŏn Temple site in T’aegjang-dong, but it was moved to Kyŏngbuk Palace in Seoul. There are also several ancient stone stupas in the area. The stupa (Kangwŏn Province Tangible Cultural Asset No. 103) at Pomun Temple in Haenggu-dong is interesting since it bears a Sanskrit inscription. In addition, there are several old buildings including the Kangwŏn kamyŏng (governor’s building, Kangwŏn Province Tangible Cultural Asset No. 3).

In the early twentieth c., the city’s industrial development was impeded due to the area’s geographical isolation. In 1910, however, a road linking Wŏnju with the coastal city of Kangnung was constructed. In 1975, with the opening of the Yŏngdong Expressway, the travel time to Seoul was reduced. At present, there are many number of light industries in the city, producing items such as textiles, machinery, chemical products and processed foods. In addition, there are many export-oriented factories that produce a wide range of items, including toys, towels, wigs and ko-hemp wallpaper. Due to the large number of sumac
trees in the area, Wŏnju has traditionally been a centre for lacquerware crafts. The area is particularly famous for its lacquerware using mother-of-pearl inlay. Wŏnju has a number of schools, both ancient and modern. In Myŏngnyun-dong, there is the Wŏnju Hyanggyo (county public School), Kangwŏn Province Cultural Site No. 98. Built during the reign of King Injong (r. 1122-1146), the academy was later reconstructed in 1422. After being completely burnt down during the Hideyoshi Invasions (1592-1598), it was slowly rebuilt only to once more suffer damage during the Korean War. During the Chosŏn period, the school received government funding in the form of land allotments and servants, but with the advent of the Kabo Reforms (1894), the school ceased to function as an educational institution. In modern times, several schools of higher learning have been set up in the area, including a branch of Yonsei University, Halla Institute of Technology, Sang Ji University and Wŏnju Technical College.

Wonkwang University

Situated in Iksan in North Cholla Province, Wonkwang University (Wŏn'gwang Taehakkyo) was established in September 1946 as Yuil Hangnim. In September 1951, during the Korean War, the Ministry of Education authorised the reorganisation of the school as Wonkwang Junior College (Wŏn'gwang Ch'ogup Taehak). With Dr. Park Kil-Chin (Pak Kilchin) as its first dean, the college, which consisted solely of the department of Won Buddhism, had an enrolment of a hundred students. In 1953, Wonkwang became a four-year college with the opening of the Department of Korean Literature. The Department of Law was opened in 1954; the Wonkwang University Press in 1956; the Evening College in Kunsan in 1959; and the Graduate School in 1967.

In December 1971, the college gained university status, and by that time had four colleges: the Colleges of Liberal Arts and Science; Law and Politics; Pharmacology; and Education. A year later, a doctoral program was introduced. During the 1970s and 1980s, the university’s undergraduate and post-graduate curriculum continued to expand. At the same time, affiliations were formed with Korean industrial firms and numerous overseas universities.

Today, the university consists of sixteen colleges: Business & Economics; Dentistry; Education; Engineering; Fine Art; Home Economics; Humanities; Law; Life Sciences and Natural Resources; Medicine; Natural Sciences; Oriental Medicine; Pharmacology; Social Sciences; Won Buddhism; and the Night School. For post-graduate studies, the university has, in addition to the Graduate School, the Graduate Schools of Education; Industry; Information Science; Kyohak; Public Administration; and Public Health and Environment.

Other facilities include the Wonkwang Medical Centre and the Wonkwang University Museum. Established in March 1985, the medical centre is composed of the university hospitals in association with the Colleges of Medicine, Oriental Medicine and Dentistry. The museum was established in 1968, and was moved to a 6 054 square metre four-storey building in 1987. It has a collection of 8 581 pieces, including ancient earthenware; bronzeware; green and white celadon; paintings; calligraphy; folk crafts; Buddhist paintings; calligraphy; and embroidery, as well as an extensive collection of items related to Korean shamanism. Many of the archaeological items come from the Wanggung Village royal palace site; the Chesŏk Temple site; the nearby royal tomb complex; and the Miruk Temple site, which dates from Paekche.

Wŏnp’yo (fl. 742-756)

A monk of Greater Shilla, Wŏnp’yo is famous for his journey to India. Some time between 742 and 756, Wŏnp’yo travelled through China to India. While on a pilgrimage to Buddhist sacred sites, he is said to have met the Bodhisattva Shimwang (Mind King), who told him
to go to Mt. Chije where he could meet Ch’ŏn’gwan Bodhisattva. While residing in a nearby stone grotto, he paid his respects to Ch’ŏn’gwan, carrying an eighty-volume rendition of the Avatamsaka Sutra on his head. During the Hoech’ang Persecution (841-846) during which the Chinese emperor ordered the destruction of Buddhist temples and literature, Wŏnp’yo placed the sutra deep within a grotto, secure inside a wooden box. According to legend, when the sutra was later recovered, the ink was still wet.

**Wŏnsan**

According to South Korean cartographers, Wŏnsan is situated in the southern part of South Hamgyŏng Province, but North Korea has redrawn the provincial borders, making Wŏnsan part of Kangwŏn Province. Mt. Paek (1 012m), Sŏngch’i (1 103m) and other peaks of the Mashingnyong Mountain Range are to the west of the city, while the Kalma Peninsula and Yŏnghŭng Bay are to the northwest. The city covers a total area of 126 sq. kms. Due to the warm currents in the nearby East Sea and the barrier of the Mashingnyong Range, which inhibit the cool winds from the northwest, the Wŏnsan has a relatively mild climate by Korean standards with an average yearly temperature of 11 deg. c.. January’s average is minus 13.5 deg. c. and August’s 22 deg. c. The area has a heavy rainfall, averaging 1 400mm per year.

Historical relics have been found in the city area. In the 1950s, excavations in Chungp’yŏng-dong revealed artefacts believed to date from the Neolithic and Bronze Ages. In Yongju-dong, there is a stele enshrined in a small pavilion. The stele was built under royal orders by the Hamgyŏng Provincial governor, Chŏng Minshi, to commemorate the birthplace of the great-grandfather of King T’aejo (r. 1392-1398). There are remnants of old military sites, at Chimnyŏng Fortress on the lower reaches of Namdae Stream in Sŏngna-dong. The fortress was constructed during the reign of King Hyŏnjong (r. 1009-1031). On the summit of Mt. Wangnyŏ (335m), are remnants of fire-signal platforms.

For most of its history, Wŏnsan was a small fishing port. In the late-nineteenth, Russian military vessels anchored off-shore demanding that the Chosŏn government grant them trading privileges, as well as an area for residences. The boats eventually left after Korea’s *de facto* ruler Hŭngsŏn Taewŏn gun (1820-1898) refused to accede to their demands. In 1878, Japanese military vessels entered Yŏnghŭng Bay and a year later an agreement was reached, leading to the formal opening of the port in 1880, as well as the establishment of a Japanese consulate. From then, the Japanese presence in the city grew. The Kyŏngwŏn Railway Line was completed in August 1914, and the city’s role as a transportation hub expanded further with the completion of the Tonghae Pukpu Line on the east coast in 1927; the completion of the Hamgyŏng Line in 1928 and the P’yŏngwŏn Line in 1941. Most of the city’s residents work in agriculture, fishing and a number of industries, including ship building.

**Wŏnsan Island**

Wŏnsan Island is part of Och’on Township in South Ch’ungch’ŏng Province’s Poryŏng County. The island covers a total area of 7.074 sq.kms. and has a 28.5km.-long coastline. The island consists of low hills, the highest elevation being Oro Peak (118m) in the west. Average temperatures on the island range from a low of -2.7c. in January, to 25.6c. in August. Annual rainfall averages 1 063mm.

Approximately 70 per cent of the island area is arable, with 3.0 sq.kms. used for rice cultivation and 2.0 sq.kms. for dry-field crops such as barley, sweet potato, garlic and red pepper. Fisherman bring in catches of anchovy, cod, lance, shrimp, cockle and seaweed.

There are two primary schools and one junior high school on the island. Ferries run twice daily between the island and the mainland. Wŏnsan’s tourists centre around the clean
beaches on the southern end of the island.

At Chinch'on Village in the centre, there is a shell mound from the early Three Kingdoms period. As well as shells, pieces of lattice-pattern pottery and plain pottery have been found at the site, the latter being more common. Unfortunately, much of the site has been destroyed by farming activities. There are also a number of Koryŏ-era tombs scattered throughout the island.

Woëarak Mountain

Mt. Woërak (1,093 metres) is situated to the south of Ch'ungju Lake, on the border of North Ch'ungch'ŏng and North Kyŏngsang Province. In Shilla times, the mountain was known as Mt. Wŏlhyŏng. Kwang Stream flows down to the east of the mountain, and Tai Stream flows from the west side. The two streams meet at T'anji Village. The enlarged Tal Stream used to continue north-west where it joined the Han River. However, the Ch'ungho Dam, completed in 1984, created the Ch'ungho Lake where the two streams meet.

Upstream, beginning on Mt. P'oam, Tal Stream wends its way through oddly shaped rocks outcroppings to form the picturesque Woërak (or Songgye) Valley. Numerous old temple sites can be found along this 7-kilometre long valley. The Mirük Temple site is found here along with several extant artifacts, including a rock carving of a standing Buddha figure (Treasure no. 95), a stone lantern, a three-story pagoda and a large stone turtle. In the middle of the Woërak Valley, one can still see the remains of the Tŏkchu Fortress. Along with the fortress on Mt. Choryŏng, this was once a strategic military fortification that guarded the Sobaek Mountain Range. At the southern base of the mountain, there is Tŏkchu Temple, with its rock engraving of a Buddha (Treasure no. 406). In order to protect the mountain's natural beauty and historical heritage, the area was designated Woërak-san National Park in 1984.

Woën ch'ŏn'gang chi kok (Song of the Moon Reflected in the Waters)

'Song of the Moon Reflected in the Waters' was composed by King Sejong upon the death of his wife, Queen Sohn, who died in 1446. The King based the poem upon a life of Sakyamuni, Sŏkpo sangjŏl, prepared at his command by his son, Prince Suyang. Both works were completed in 1447. Only 194 stanzas, comprising Book One, are extant.

Though references to the work existed in other works, it was only in 1960 that a complete version of Volume One of the Woënch'ŏn'gang chi kok came to light. It is assumed that the original work was complete in three volumes.

It is not known whether the Woën ch'ŏn'gang chi kok was ever re-published in full or not, but parts appear in the Woën sŏkpo. This latter work is presumed to be complete in twenty-four volumes. From the material contained in the extant Volume One of Woën ch'ŏn'gang chi kok together with the parts which are to be found in the Woën sŏkpo and a revised edition of the Sŏkpo sangjŏl, it has been established that there now exist 328 stanzas of the Woënch'ŏn'gang chi kok out of the 582 estimated to have been written originally.

The work is important as a mark, together with the Sŏkpo sangjŏl, of the second attempt at han'gul writing after the publication of the Yongbi ŏch'ŏn ka.

The rediscovered original Volume One was re-published in 1961 in the same size as the original. The Korean Language Society also carried the entire text in a reduced photographic edition in its Kugohak (Studies in the Korean Language), No.1. The size of the book is 20.5cm in width and 31cm in length. It consists of seventy-one leaves (142 pages).

Woën sŏkpo (The Buddha's Genealogy)
The *Wŏrin sŏkpo* was compiled in 1459 by King Sejo of Chosŏn. It combines two biographical works on the life of Sakyamuni: the *Sŏkpo sangjŏl* written in 1447 by Suyang Taegun (1417-1468, who later became King Sejo), and the *Wŏrin ch’ŏn’gangj chi kok*, composed by King Sejong in 1448.

According to the preface of the *Wŏrin sŏkpo*, numerous revisions and supplements were made to the combined texts, such as the addition of footnotes and the correction of words and phrases. Many scholars are known to have collaborated with King Sejo in producing the *Wŏrin sŏkpo*, and it was regarded as the definitive edition on the life of Sakyamuni at that time.

Thirteen volumes remain today, some being held by individuals and some by institutions. It is not known how many volumes were included in the first edition, but from existing evidence it seems that it might have originally consisted of twenty-four.

Of the thirteen extant volumes: the eight first edition vols (kwŏn 1, 2, 7, 8, 9, 10, 13, 14, 17, 18); and the three vols. of the second edition ( kwŏn 21, 22) are designated as Treasure no. 745. The two other vols. ( kwŏn 11, 12.) are Treasure no. 935.

The value of *Wŏrin sŏkpo* lies in the opportunity it offers for comparative studies in respect of language development, and as a final version of a biography of Sakyamuni. The *Sŏkpo sangjŏl* was the first prose work written in Korean, having been published immediately after the invention of *han’gul*. It was also important for the study of the pronunciation of Chinese characters. The *Wŏrin ch’ŏn’gangj chi kok* was the second work of poetry written in Korean, and again is important for the pronunciation of Chinese characters. Both works are useful as reference books for the study of Buddhist sutras.

Annotated editions of these two works which are considered helpful in understanding the contents of the *Wŏrin sŏkpo* are *Chuhae sŏkpo sangjŏl*, by Yi Tongnim (Seoul, Tongguk University Press, 1959) and *Chuhae Wŏrin ch’ŏn’gangj chi kok*, by Hŏ Ung and Yi Kangno (Seoul, Munhwasa, 1962).
Yalu River (see Amnok River)

Yang Kwija

Yang T'aesa

Yangban Culture

*yangban*, which refers to the two orders of government service -- civil and military, is the term used to designate the ruling classes of Koryŏ and Coosŏn. The two components of the *yangban* are clearly illustrated in the morning audience which took place before the king. The south-facing monarch would be flanked on the east by the civil officials (eastern class) and on the west by the military officials (western class). It is from these two classes of government officials that the term ‘*yangban*’ originated. Beginning in early Koryŏ, this meaning came to be attached to the official class which staffed the bureaucracy. The creation of a class of government officials was a marked departure from the earlier Shilla, in which a man’s birthright determined his standing in life. Therefore, from early Koryŏ, the *yangban* class was created and functioned as the one which provided the manpower for the bureaucracy.

The distinction between civil and military officials was first established in 976 with the enactment of the Stipend Land Law (Chŏnsikwa). From that time, officials were awarded a stipend based on their official position, which was further divided into four grades that dictated the colour of official garments. In descending order, the highest officials wore purple garments (*chasam*) followed by those wearing scarlet (*tansam*), dark red (*pisam*) and green (*noksam*) court robes. Excluding the highest rank of *chasam*, the lower ranks were further subdivided into civil, military, and miscellaneous officials and then provided a stipend based on their official rank, which was broken down into five to ten grades. It is thought that the highest rank of *chasam* was reserved for aristocratic families and meritorious retainers, in the early years of Koryŏ. So, after the reign of King Kwangjong (r. 949-975) a new bureaucratic structure was created, and this was staffed by civil, military and miscellaneous officials of the *tansam* rank and below.

Initially, in Koryŏ, the civil and military officials were treated without distinction, but as the principle of civil supremacy became more pronounced, the position of the military officials declined *vis-à-vis* the civil officials. Not only did they hold subordinate rank to the civil officials politically, but were relegated to lower economic status as well. Indicative of the situation is the fact that the highest military posts were occupied by civil officials. Predictably, the systematic discrimination against the military officials led to military rebellion in mid-Koryŏ, which resulted in purges and executions of civil officials.

At the end of Koryŏ and the beginning of Chosŏn, attempts were made to correct this imbalance. Particularly in early Chosŏn, legislation such as the *Kyŏngguk taejŏn* (National Code) consolidated the two ranks of civil and military and thus cemented the foundations for a strong consciousness of the *yangban* structure within society. The major difference between the Koryŏ and Chosŏn *yangban* classes is that the latter were far larger, and this persuaded the Chosŏn government to place increased emphasis on government service examinations (*kwago*).

The purpose of the government service examinations was to protect the entire *yangban* class by limiting access to government positions. Special appointments to the bureaucracy were strictly limited, thus making it difficult to advance solely on the basis of a man’s pedigree. The examination systems were linked to a Confucian education and a number of educational institutions, ranging from private academies (*sŏwŏn*) to the National Confucian Academy (Sŏnggyun’gwan) in the capital, existed to train the *yangban* for these tests, Therefore,
members of the *yangban* class who were successful in sitting for the government examinations were well indoctrinated in Confucian ideology, which became the fundamental philosophy of this class.

In theory, the *yangban* were not exempt from service obligations to the state such as corvee labour and military duties. In practice, however, they often were released from these obligations in order to devote themselves entirely to their scholarship. The strong ties between the *yangban* class and the Confucian doctrines is seen in this aspect since Confucianism holds that the cultivation of the self must be complete before one can govern others. Thus, the *yangban* fulfilled their obligations to the state in the pursuit of a thorough understanding of the tenets of Confucianism, which enabled them to (theoretically) better govern the nation.

Other terms used for the *yangban* include, *sadaebu*, *sajok*, *saryu*, and *sarim*. The term *sadaebu* originated in the position titles of high-ranking officials, such as *taebu*, which was an honorary title given to officials of the fourth rank or higher. The term *sadaebu* came to be used for both high-ranking civil and military officials. The designation *yangban* was not used in early Choson and instead *sajok* (scholar-group) was used for this class. Similarly, *saryu* (scholar-class) and *sarim* (neo-Confucian literati) were also in use at various times to describe the class of *yangban* scholars. From the sixteenth c., the shape of the *yangban* class was consolidated, and this form would continue to the end of Choson.

The *yangban* class was truly the elite of Choson and in order to protect its status many restrictions were imposed both upon it and the lower classes in Korean society. *Yangban* only married their own, thus making their status a hereditary one. Other restrictions limiting persons who could otherwise enter the *yangban* class are the exclusion (for much of Choson) of the illegitimate sons of *yangban* from sitting the government service examination, a measure which effectively blocked their entry into Choson officialdom, as well as a complete prohibition of the sons and grandsons of *yangban* widows who had remarried, from serving in the government. Moreover, there was regional discrimination against those from the northern provinces such as P'yongan and Hamgyong, and this resulted in men from these areas rarely being appointed to higher office. The status of civil *yangban* continued to be higher than that of those in the military, creating another level of distinction in the *yangban* class. Therefore, this mix of limitations served to obstruct entry into the *yangban* class and positions of power, since the *yangban* feared that an increase in their numbers would naturally serve to erode their privileged position in Choson society.

While the sole profession of the *yangban* was the holding of public office, they did not serve in technical positions or as lower government functionaries, which were reserved for other classes of Choson society. Additionally, *yangban* did not participate in farming, manufacturing or commerce, as these occupations were also the reserve of special classes. The *yangban* were clearly demarcated from other segments of Choson society as they pursued their own ideals in scholarship. Even the houses of the *yangban* were generally segregated from those of the lower classes. Of course, the *yangban* held the loftiest social position in Choson, and so the lower classes were forced to treat them deferentially and use honorific language when speaking to them. Even to the present day, there are manifestations of *yangban* culture in South Korea in the use of honorific language and the emphasis on family lineage by some individuals. However, the present widespread manifestations of *yangban* lineage are highly questionable, given the narrow segment of Choson society that was initially occupied by this class.

*Yangch'on munjip* (Collected Works of Yangch'on)

The *Yangch'on munjip*, consisting of forty volumes in nine fascicles, is a collection of works by Kwŏn Kŭn (styled Yangch'on, 1352-1409), one of the most outstanding scholars and finest writers of the late Koryŏ and early Choson Dynasties. Included in the collection
are poems, records, prefaces, texts of diplomatic documents sent to the Ming Court, memorials to the Throne, Royal Messages drafted by the author, historical comments, inscriptions on monuments built to honour important people and epitaphs. Therefore, through the collection, it is possible to gauge the author’s considerable literary achievements as well as consult valuable historical material for the study of the diplomacy and the internal affairs of this transitional period from the Koryŏ to the Chosŏn dynasties.

The collection commences with the lineage of the Yŏngga (former clan-name of Andong) Kwŏn, the author’s personal history, the contents and three poems by King T’aejo. The three poems were composed by the King in appreciation of the meritorious deeds of Kwŏn in clearing up a misunderstanding with the Ming Court.

Volumes 1 to 10 contain about nine hundred poems describing the author’s daily contacts with men of distinction, as well as his experiences on an official trip to Ŭiju in 1387. There are thirty-five poems in Volume 6, composed during his trip to Ming China in 1389. The poems contained in volume 7 are those composed in exile following his return from China at the end of the same year.

Volumes 11 to 15 contain writings on buildings, while Volumes 16 to 20 are the introductions to various books. Volume 21 consists of articles and biographies by the author; Volume 22, various postscripts; Volume 23, inscriptions, comments and memorial addresses; Volumes 24 to 26, sovereign’s messages sent to the Ming Court and messages presented to the Throne on the occasion of national festivals; Volumes 27 to 29, Buddhist invocations; Volume 30, Royal messages drafted by the author; Volumes 31 and 32, petitions to the Throne; and Volumes 33 to 40, miscellaneous writings.

The Yangch’ŏn munjip is highly valued for the way it illuminates the social conditions at that time. The poems in the work come with notes and the author’s prefaces and these provide many valuable historical facts.

One example of the valuable historical material in the collection is that in Volume 22 where Kwŏn Kŭn explains the origins of the so-called Kyemi movable type in Chosŏn Korea.

There are three extant editions of the work, published in 1421-1426, 1637 and 1718 respectively. The woodblocks of the oldest of these editions are similar to those of Sung China and Yuan China.

Yangdong Village  

Yanggu County

Situated in the mountainous region of central Kangwŏn Province, Yanggu County is comprised of the town of Yanggu and the townships of Nam, Tong, Pangsan and Haean. The town of Yanggu is surrounded by P’aro Lake to the north and Soyang Lake to the south. The northern third of the province is in North Korea. As an inland mountainous area, the region’s weather is characterised by cold winters and relatively little rainfall.

Although the county contains only a meagre amount of arable land, the region’s scant population is primarily employed in the agricultural sector. Due to the mountainous terrain and relatively low precipitation, predominantly dry field crops such as beans, leafy vegetable and medicinal herbs are grown here.

The area possesses great natural beauty; yet, the local tourist trade has been slow to develop as a result of the area’s poor transportation networks. P’aro and Soyang lake attract sports fishermen throughout the year. The two lakes are famous for their pond smelt and large carp. The two lakes also have ferries that bring in visitors from Hwach’ŏn and Ch’unch’ŏn.
There are a number of historical relics in the area. Comb pattern pottery from the Neolithic period has been discovered on the shores of Soyang River. Scattered throughout dolmen from the Bronze Age. As for Buddhist sites, there is Shimgok Temple in Yanggu Town. Founded by Tosŏn in 879, the temple was burnt down during the Korean War. However, three wooden statues survived the blaze, and are now enshrined in the Main Buddha Hall. In Yangu Town, one also finds the Yanggu Hyanggyo (county public school) which was originally founded in 1405.

**Yangin class**

The *yangin* were the freeborn commoners and together with the *ch'ŏnin* (lowborn commoners) comprised the vast majority of the Korean people. While the term *yangch'ŏn* may have been used at various times to describe all commoners, the actual usage and groups encompassed by this term varied significantly depending upon the period. The use of terms for either the *yangin* or *ch'ŏnin* was quite rare in the Three Kingdoms and earlier times, and while usage increased during Koryŏ, it was not until early Chosŏn that they described specific classes of people and began to carry well-defined rights and obligations insofar as the legal codes were concerned. While there were distinctions between the *yangin* as freeborn commoners and the *ch'ŏnin* as slaves (or mostly so), the *yangch'ŏn* designation was often used in a broader sense to indicate the entire class of people who were not eligible to enter Chosŏn officialdom.

The formation of the *yangch'ŏn* class was brought about with the consolidation of the central governing apparatus headed by a monarch, which resulted in the emergence of a ruling class. Stratified societies in Asia commenced during the Chinese Qin and Han dynasties, and by the Tang dynasty this stratification was complete. The process was further strengthened by the acceptance of Confucian ideology, which advocated a class-based society. This same consciousness of class appeared also in Korea, Vietnam and Japan, each of which was in the Chinese cultural sphere. However, in each country and period the interpretation of class differed and the three should be examined individually. In Korea, however, the separation of the people by class existed since the earliest states. For example, it is known that in the first Korean kingdom, Kochosŏn, a slave-class existed, and furthermore, that it was defined as such in the state’s legal code. The first record of the term *yangin* is found in the *Samguk sagi* (History of the Three Kingdoms) during the reign of King Chinhilng (r. 540-576) of Shilla. At this time, a class of freeborn commoners was in being, that had a subordinate class below it, and the aristocracy above. By the advent of Koryŏ, the hereditary nobility that had occupied the upper echelons of government diminished, and so it was still possible for freeborn commoners to enter government service, and thereby achieve social class mobility. Hence, it is clear that the social classes of the early period of Koryŏ were somewhat fluid, and not yet rigorously defined.

In Koryŏ, however, matters concerning the *yangin* and *ch'ŏnin* were formalised through the legal code. For example, regulations concerning the prohibition of marriage for members of these classes appeared. The generic name for the freeborn population (in Koryŏ) was *paekchŏng*, which reflected the fact that these commoners had no fixed role in the service of the state. While the *paekchŏng* were ineligible to receive stipends from the state, they were ascribed specific duties and obligations, such as military and corvée labour service. Additionally, they cultivated either state land (*minjŏn*), which required a tax payment of one-fourth of the harvest as rent, or else, the land of aristocratic families -- in which case the rent tax was substantially higher. There were also other tax liabilities placed upon the peasantry such as tribute taxes. While the freeborn peasantry of Koryŏ led much better lives than the *ch'ŏnin* or slaves, they still experienced a degree of poverty, even though the state did have a number of relief agencies to assist them in times of famine.

By late Koryŏ and early Chosŏn, the features of the *yangin* class became more pronounced.
and less subject to change. The freeborn peasants of early Chosŏn were chiefly tenant farmers. Their economic situation was somewhat improved from that pertaining during Koryŏ, because husbandry and technology had improved significantly by the early sixteenth c. Also, the tax burden had been lessened by the implementation of the Tribute Tax Law (*kongpŏp* -- promulgated during the reign of King Sejong (r. 1418-1450). Nevertheless, taxes still had to be met, and the obligation of military and corvée labour service remained. The peasants were effectively tied to the land though the introduction of the hop'ae (identification tag) system which commenced in the early fifteenth c., whereby they had no choice but to farm the same land, generation after generation.

During Chosŏn, the upward social mobility of the *yangin* became decidedly less fluid than it had been in early Koryŏ. In principle, a person's status was determined by that of his mother, and this prevented those born of the union of a *yangban* father and a commoner or slave mother from being able to aspire to any kind of government position. Accordingly, the social classes came to be well-defined. The social status of the *yangin* was clearly distinguished from the *ch'ŏnin* and the slave classes. While the *yangin*, as freeborn citizens, were guaranteed specific rights by law, the slave class had no rights, but were subject to the conditions placed upon them by their owners. Furthermore, legal penalties handed out to slaves were much heavier than those imposed on the freeborn commoners. In comparing the *yangin* with members of the *ch'ŏnin* class, the greatest difference concerning social rights was that the *yangin* were legally entitled to enter government service, whereas the *ch'ŏnin* were denied such access. While in practice, not many *yangin* gained entry to government service because of discriminatory factors, at least they held the legal right to do so. Therefore, the status of the *yangin* class was legally higher than the *ch'ŏnin* or slave classes, but in practical terms, its situation may not have been substantially better.

The strengthening of all social classes, and the distinctions between them, is a characteristic of Chosŏn society from the late fifteenth c. onwards. Perhaps as a result of the *yangban* class limiting the entry of others into their privileged social class, the classes below also sought to preserve the distinctions which kept them above their social inferiors. The *chungin* (middle people) class directly below the *yangban* served in technical positions within the Chosŏn government, and their occupations, such as medicine, law, astronomy and translation, became largely hereditary and so remained their exclusive domain. The *yangin*, while not having appreciably better living standards than the *ch'ŏnin* below them, were guaranteed higher status and certain rights by law. By the end of Chosŏn, however, the situation of the *yangin* and other low classes was quite similar. This was particularly the case after the government set free all of its slaves in 1801, thereby giving them attachment to the *yangin* class. Therefore, by the nineteenth c., the fortunes of the *yangin* class remained closely tied to the land, and the economic and social problems that emerged resulted in lives of hardship for the entire Chosŏn peasantry.

**Yangju County**

Situated to the north of Seoul in Kyŏnggi Province, Yangju County is comprised of the town of Hwach'ŏn and the townships of Nam, Kwangjŏk, Paeksŏk, Ŭnhyŏn, Changhŭng and Chunae. The southern part of the county contains Mt. Pukhan National Park and Aengmu Peak (622m), while Mt. Kamak (675m) rises in the north. Mt. Pulguk, near the centre of the county, is famous for the spring at its base. It is said that the volume of water from the spring is the same year around and is totally unaffected by droughts or floods.

Most of the county's residents are employed in agriculture. Rice, grains and vegetables are grown here along with various specialty crops such as chestnuts and house plants. Dairy farming and stock breeding is another important source of income. Traditionally, pottery was produced in the region, and even today, several ceramic factories are in operation here. The Kangwŏn Railway Line and Highway 3 Link the eastern portion of the county with Tongduch'ŏn to the north and Ùijŏngbu and Seoul to the south. Due to the county's close
proximity to Seoul, most of the local residents go to Seoul to buy more expensive items. As a result, the area’s markets tend to be small.

The local tourist industry is centred around the county’s picturesque mountains and valleys. Near Mt. Pukhan in the south, there are the Songch’u, Changhŭng, Shinhŭng and Iryŏng resorts. Easily accessible from Seoul, these resorts offer natural beauty in a rural setting. Other attractions include the stone caves at Kwangjŏk Township’s Kanap Village and Un’gye Waterfall in Nam Township’s Shinam Village.

There are a number of important historical sites in the area. Most of the Buddhist artefacts are found at the Hwaam Temple site in Hwach’ŏn’s Hwaam Village. Foundation stones from the complex that once stood here can still be seen in situ throughout the area. In addition, there is a stele commemorating Royal Preceptor Sŏn’gak, a stupa, a stone lantern with two lions motif (Treasures No. 387-389 respectively), a mill stone, the stupa of Sŏn Master Naong (1320-1376), a stone lamp, a stele commemorating Grand Master Muhak (1327-?) and the stupa and stone lamp of Dhyanabhadra (Sŏn Master Chigong, ?-1363), an Indian monk who came to Korea via China in 1328. Other ancient temples in the area include Sŏkkul Hermitage in Changhŭng Township’s Kyohyon Village and Paekhwa Hermitage in Chunae Township’s Yuyang Village.

There are several old Confucian sites in the area. In Chunae Township’s Yuyang Village, one finds Yangju Hyanggyo. Founded during the reign of King Injo (r. 1623-1649), this Confucian school was destroyed during the Korean War, but was reconstructed in 1959. In addition, there is the Songjil Sadang (ancestral shrine) in Unhyŏn Township’s Sŏnam Village.

Yangp’yŏng County

Situated in eastern Kyŏnggi Province, Yangp’yŏng County is comprised of the town of Yangp’yŏng and the townships of Kangsang, Kangha, Kaegun, Tanwŏl, Sŏjong, Yangdong, Yangsŏ, Okch’ŏn, Yongmun, Chije and Ch’ŏngun. With Mt. Yongmun (1,157m) rising in its centre, the county’s topography is characterised by rugged terrain. The Pukhan and Namhan rivers meet on the county’s eastern border.

Only 16.4 per cent of the county’s land is arable. The area’s main crop is rice, but dry-field crops are also common. Sericulture, stock breeding and bee keeping are other important sources of income. Although a railway line links the town of Yangp’yŏng with Seoul and Wŏnju, the county’s transportation networks lag behind those of other areas in the Seoul vicinity. As a result, there has been little industrial development in the area.

With peaks of the Kwangju Mountain Range and the northern and southern branch of the Han River, the county boasts a large number of scenic attractions. The Mt. Yongmun area was designated a tourist area in 1971. Since then, camping sites and lodgings have been built at the mountain in order to accommodate the large influx of tourists from Seoul. Hiking trails here take one past important historical sites such as Sangwŏn Hermitage, Yunp’il Hermitage, Sana Temple, the remnants of the Hamwang Fortress and Yongmun Temple. The ginkgo tree at Yongmun Temple is said to be the biggest in east Asia. Mt. Yongmun’s natural sites include Changgun Spring, Chungwŏn Waterfall, Yonggak Rock and Madang Rock.

There are a number of old Confucian schools in the county, including Un’gye Sŏwŏn (private school) in Yongmun Township’s Tŏkch’ŏn Village, Sugok Sŏwŏn in Chije Township’s Sugok Village and Chip’yŏng Hyanggyo (county public school) in Chije Township’s Chip’yŏng Village. In Okch’ŏn Township’s Okch’ŏn Village, there is the Yanggŭn Hyanggyo, which was founded during the reign of King Chungjong (r. 1506-1544). In addition, there are several old residences in the area. In Sŏjong Township’s
Nomun Village, one finds the home of Yi Hangno (1792-1868), a famous Confucian scholar and official from the Chosŏn period. The residences of Kim Pyŏngho and Kim Chŏngshik can be seen in Yongmun Township’s Och’on Village and Yangp’yŏng’s Ch’angdae Village respectively.

Yangsan

Yangsan is situated to the north of Pusan, in the most mountainous area of South Kyŏngsang Province. Mt. Saeak (1108 metres) and Mt. Ch’wisŏ (1092 metres) mark the city’s northern borders, while Mt. Ch’ŏnsŏng (812 metres) and Mt. Wŏnhyo (922 metres) rise up to the northeast of Yangsan Town. In addition to Yangsang Town, the city is comprised of the Tong, Mulgum, Sangbuk, Ungsang, Wŏndong and Habuk Townships (myŏn).

Due to its close proximity to Pusan, the nation’s second largest city, the industrial and service sectors of Yangsan’s economy are particularly well developed. The area produces some agricultural products, but the amount of cultivated land has been constantly reduced as a result of the area’s rapid urbanisation. On the east side of the city, there are a number of dairy and cattle breeding operations. Habuk Township’s wide-rimmed bamboo hats (nongnim) are one of Yangsan’s specialty products. The hats are used by farmers for protection against both the sun and rain.

Yangsan has several important historical sites. In Yangsan Town, there are several large tumuli from the Shilla period. As for Buddhist sites, T’ongdo Temple, at Mt. Ch’wisŏ, is one of the nation’s most important Buddhist monasteries. Originally founded in 646 C.E., this temple houses a large number of important historical buildings and artefacts. Next to the Naktong River in Wŏndong Township, there is an extensive complex of old buildings known as Kayajinsa (Kaya Ford Shrine). During the Three Kingdoms period, the site of the shrine was an important thoroughfare between Shilla and Kaya. Rites dedicated to the protective deity of the Naktong River were performed here during Shilla times, and the tradition was maintained during the subsequent Koryŏ and Chosŏn periods. The present buildings were built in 1959 after a typhoon destroyed the old complex.

Yangyang County

Situated on the east coast of Kangwŏn Province, Yangyang County is comprised of the town of Yangyang, and the townships of Kanghyŏn, Sŏ, Sonyang, Hyŏnnam and Hyŏnbuk. The county is surrounded by Sokch’ŏ to the north, Inje County to the west, Hongch’ŏn County to the southwest and Kangnung to the south. Mt. Sŏrk, Mt. Yaksu (1306 metres), Mt. Maebok (1300 metres), and other peaks of the T’aebak Mountain Range run along the county’s western border. Almost all of the county’s population lives on the 2-4 kilometre long coastal plain.

The county has a diverse economy centred on agriculture, fishing and tourism. In addition to rice, dry-field crops such as potatoes and corn are grown in the region. The area is also the nation’s largest producer of songi mushrooms (armillaria edodes)-an expensive delicacy used in soups and stews. Operating out of the county’s small ports, commercial fishermen catch walleye pollack, cuttle fish, anchovies and mackerel. In addition, the large iron mine in Sŏ Township supplies steel to the P’ohang Steel Company via Sokch’ŏ Port.

Much of the area’s tourist industry is centred around the southern portion of Mt. Sŏrk National Park (See Mt. Sŏrkak). The county also has numerous beaches. Just south of Sŏrkak Beach, one finds Naksan Temple. Situated on a bluff overlooking the ocean, this picturesque monastery houses a number of important historical relics, including a large bronze bell (Treasure No. 479) and the Uisangdae Pavilion (Kangwŏn Province Tangible Cultural Asset No. 48). A giant statue of Avalokitesvara overlooks the monastery. Not far
from the temple, one can see the Yangyang Hyanggyo (county public school). Originally founded during the reign of Koryo’s King Ch’ungsuk (r. 1313-1330, 1332-1339), the school has been designated Kangwŏn Province Cultural Asset No. 105.

Yaun onhaeng sŏbyu

This is a supplementary collection of the sayings and deeds of Kil Chae (styled, Yaun, 1353-1419). He was a famous loyal retainer at the end of the Koryo dynasty.

A collection of his words and deeds was compiled before his death, and his disciple Pak Sosaeng edited a new collection and for the first time called it Yaun onhaengnok (Collection of Yaun’s Words and Deeds) at the time of King T’aejong. In 1573, Yun Chi hyŏng, Governor of Sŏnsan, a descendant of Yaun, collected and published his poems and the records of his deeds, together with various eulogies. These woodblocks were all burned during the Japanese invasion. In 1615 his descendants published a Supplementary Collection of Yaun’s Words and Deeds in three volumes which include messages from the King and records about the establishment of a school in Yaun’s memory.

In 1858, one of Yaun’s descendants collected other related materials and published 'Continued Collection of Yaun' in three volumes together with the three volumes of 'Supplementary Collection of Yaun’s Words and Deeds.'

These six volumes of the words and deeds of Yaun were published in the Yŏgge myeonghyŏn chip, ('A Collection of Noted Koryo Scholars') by the Taedong Cultural Research Institute of Sŏnggyun’gwan University in 1961.

Yech’ŏn County

Situated in the northern part of North Kyongsang Province, Yech’ŏn is comprised of the town of Yech’ŏn and the townships of Kamch’ŏn, Kaep’o, Pomun, Sangni, Yonggung, Yongmun, Yuch’ŏn, Chibo, P’ungyang, Hari and Hoo. Ongnyŏ Peak (890m), Kuksa Peak (728m) and other peaks of the Sobaek Mountain Range rise up in the north, while Naesŏng Stream and the Naktong River flow through the county’s southern area.

With fertile land and an ample waters supply, the county is well-suited for rice cultivation. Of the county’s total area, 31.5 per cent is arable, and 60 per cent of this land is used for rice while 40 per cent is used for dry-field crops such as barley, beans, radishes and Chinese cabbage. In the hilly areas, apples are grown, and in the mountainous north, ginseng and tobacco are cultivated. Historically, the county’s crops were frequently damaged by Naktong River floods, but the problem has been alleviated with the construction of Andong Dam in 1975. Local industry is limited to several small factories that produce food-stuffs, chemical products and textiles. As for transportation, there is a network of small roads linking the county with nearby Andong, and a major expressway connecting the area with Wŏnju and Taegu is now under construction. The county also has a domestic airport offering regular flights to Seoul.

Yech’ŏn County’s tourism is centred around the picturesque mountains in the north and the streams and rivers flowing through the south. Visitors also come to experience the area’s unique customs. The county is particularly famous for archery and for ch’ŏngdan norŭm, a pantomimed mask dance. This is also one of the few areas where tongshinje (agrarian festivals during which tutelary deities are propitiated) are still commonly held.

Tourists also come to visit the historical sites scattered throughout the area. Dolmens are found in Yongmun Township, and in Yech’ŏn’s Paekchŏn Village, there is a stone chamber grave dating from the Three Kingdoms period. Buddhist sites include a five-storey pagoda
(Treasure No. 53) built in 1010, at the Kaeshim Temple site and a three-storey pagoda (Treasure No. 426) thought to date from the Greater Shilla period in Yech’on’s Tongbong-dong. At Hanch’on Temple, there is a three-storey pagoda (North Kyongsang Province Tangible Cultural Asset No. 5) from the late Greater Shilla period and an iron Buddha (Treasure No. 667) from the middle of the ninth century. This is thought to be the oldest extant iron Buddha statue in east Asia. In addition, there are several important relics at Yongmun Temple, including Korea’s oldest altar piece carved of wood (Treasure No. 145).

There are also a number of old Confucian schools in the area, including Nobong Sŏwŏn, Shinch’on Sŏwŏn, Misan Haks’a, Yonggun Hyanggyo and Yech’on Hyanggyo, which was founded in 1407. In Yongmun Township’s Chungnim Village stands Ch’oganjŏng, a pavilion built by Kwon Munhae in 1582, and in Chibo Township’s Manhwa Village, one finds the Manh study. This small building was built by Chŏn Sesam during his final years. In this study, Chŏn, forgetting about all worldly concerns, devoted the rest of his life to educating his son. In order to commemorate this exemplary model of paternal devotion, the Yonggung Chŏn clan renovated the house in 1972.

Yenan Faction

Yesan County

Located in central South Ch’ungch’ŏng Province, Yesan County consists of the towns of Sapkyo and Yesan, and the townships of Kodŏk, Kwangs’a, Tŏksan, Taesul, Taehŭng, Pongsan, Shinam, Shinyang and Ungbong. The county has a total area of 541 sq. km. and a population of about 133,000. The Kaya Mountain Range runs down the western half of the county and the Ch’aryong Mountain Range runs to the eastern border. Between these mountains lie extensive plains. The area’s proximity to the coast, the weather pattern, with sharp variations between summer and winter temperatures is characteristic of an inland region. The county has an average yearly temperature of 11.8 deg. c. and an annual rainfall of 1,133 mm.

With an immense amount of level ground and ample water resources, the county is well-suited for agriculture. Approximately 22,000 hectares are farmed. Of this, 16,000 grow rice and 6,000 grow dry field crops, such as grains, vegetables, tobacco and apples. The hilly terrain in the west and east grows mulberry trees for use in sericulture. Minerals include coal and talcum, while the area’s industry is limited to several textile factories and hulling mills.

A number of important historical sites are located in the county. In Taehŭng’s Sangjung Village stands Imjon Fortress which served as a base for Later Paekche, a rebel movement during the end of the Greater Shilla period. On Mt. Suam in Sapkyo, one finds a 5.3-metre standing Bodhisattva figure (Treasure No. 508) which was sculpted during Koryŏ. The lean body and rather simple style are typical of Koryŏ-era Buddhist statues from the Ch’ungch’ŏng region.

In Pongsan’s Hwajŏn village, there is a four-sided carving on a cube-shaped rock (Treasure No. 794). The Buddha figures which project from the rock have unfortunately suffered much damage. The main figure appears to have been the seated Buddha on the southern face. The standing figures on the northern, eastern and western side of the carving become progressively smaller. Thought to be Korea’s first such carving of the Buddhas of the Four Directions, this Paekche artefact is invaluable for the light it sheds on early Korean sculpture.

Other significant Buddhist relics include a nine-storey pagoda, a stupa and an old Ch’ŏnbuljong (Thousand Buddha Hall) at Hyangch’ŏn Temple in Yesan’s Hyangch’ŏn Village, as well as an interesting Buddha in relief (South Ch’ungch’ŏng Province Tangible
Cultural Asset No. 69) carved upon an oval rock in Taehŭng's Sangjung Village. The most famous monastery in the area is Sudŏk Temple in Tŏksan.

In addition to Buddhist sites, the county is home to a number of Confucian schools. In Yesan's Hyangch'ŏn Village is Yesan Hyanggyo which was established in 1413 and which underwent major repair in 1785. Just north of Highway 45 near the Tŏksan Hot Springs is Tŏksan Hyanggyo, which was built during the reign of King Injo (1623-1649).

Yesŏng River

The Yesŏng River, with its source around Mt. Taegak (1,277m) in North Hwanghae Province's Koksan County, flows through P'yŏngsan and Kŭmch'ŏn to the Yellow Sea to the immediate north of Kanghwa Island. On the river's 174-km.-long course, it is joined by seven streams -- Ōnjin, Odong, Wira, Chisŏk, Kuyŏn, Ojo and Handari. The Yŏnbaek Plain lies along the lower section of the river. The Yesŏng is navigable from its mouth to Hanp'o.

From 108 to 313 C.E., the river was initially part of the Lolang Commandery (one of the four Han commanderies) but later became part of the Taebang Commandery. It was later incorporated into Paekche territory, and then became part of Koguryŏ territory during the reign of King Kwanggaet'o (r. 391-413). After the fall of Koguryŏ, it was briefly held by Tang China but was soon annexed by the Greater Shilla Kingdom. During the wars preceding Koryŏ, Wang Kŏn used the river as a naval base for his campaign against Kyŏnhwŏn. After Wang Kŏn's victory, the river became an important centre for trade between Korea and China.

Yeungnam University

Yeungnam University (Yŏngnam Taehakkyo) is situated in the city of Kyŏngsan in North Kyŏngsang Province. Founded in December 1967 with the merger of Taegu and Chunggu colleges (which were established in 1947 and 1950 respectively), Yeungnam University initially consisted of five colleges with thirty-five departments, a night school and a graduate school. The university began to relocate to the Kyŏngsan campus in 1970. In 1983, the Yeungnam University Hospital was opened.

With two campuses (one in Tae-dong in the city of Kyŏngsan and one in Taemyŏng-dong in Taegu), today the university consists of thirteen colleges, eighty-two departments, a night school, a graduate school and five professional graduate schools. The graduate school offers sixty-seven master degree programs and forty-four doctoral programs. There is also on campus a museum, Civil Service Training Centre, the Computer Information Institute and the Foreign Language Training Centre. The University is affiliated with eighteen institutes, including the Institute of Korean Culture.

Yi Ch'ungmugong chŏnsŏ (The Collected Works of Admiral Yi)

Yi Ch'ungmugong chŏnsŏ is the posthumous collection of the middle Chosŏn period military commander Yi Sunshin (1545-1598). It consists of fourteen volumes in eight fascicles and was printed with movable metal type. The original work consisted of eight volumes and to this were added six volumes of supplements. It was compiled in 1795 by royal decree, and Yu Tŏkkong headed the task of putting it together. There have been quite a number of subsequent printings such as that done by Ch'oe Namson in 1918 and published by Shinnungwan, a six-volume set published by Sŏ Changoŏk in 1931, and most recently in a collection on the 1592 Japanese Invasion issued by Asea Munhwasa in 1984.
The first volume of this collection includes poems and miscellaneous writings of Yi’s and the second to fourth volumes contain reports by local officials to the throne. The fifth to eighth volumes hold the ‘Nanjung ilgi’, a diary of the admiral’s activities during the 1592 Japanese Invasion. In the ninth to twelfth volumes there are records of various recommendations to the throne on behalf of Yi for his posthumous recognition. The last two volumes hold various Korean and Chinese writings concerning Yi and his activities.

Given the status of Yi Sunshin as one of the greatest war heroes in Korean history and the pivotal role that he played in the opposition to the Japanese Invasion, it is not surprising that this work is highly praised for the study of this period. In particular, ‘Nanjung ilgi’ is acclaimed for the insight that it offers into the actions of the Korean forces under Yi and his recommendations to the throne for purging the Japanese from Korea. This work remains the centre of much research concerning both the 1592 Japanese Invasion and the study of Yi’s life.

**Yi Chagyŏm (? –1126)**

Yi Chagyŏm was a royal relative by marriage of the Koryŏ period who attempted to overthrow the Koryŏ kingdom. His family’s ancestral home is in Inju (present day Inch’ŏn) and he was the son of Yi Ho who was the Secretary (sangso) of the Board of Taxation (Hobu). The Inju Yi family had long enjoyed a close relationship with the royal family of Koryŏ and this power was consolidated by Yi Hŏgyŏm giving his granddaughter to King Hyŏnjong (r. 1009-1031) for his queen. Yi Chagyŏm brought the power of the Inju Yi family to its pinnacle by giving his daughter to King Yejong (r. 1105-1122) for his queen and then seeing his grandson take the throne.

Yi consolidated his power during the time of Yejong and then with the death of the monarch in 1122, he schemed to see his grandson take the throne. Yi’s attempt to put his thirteen year-old grandson on the throne was challenged by Mun Kongin and Han Anin among others who sought to increase their strength by installing another king. Yi, however, was able to purge the elements that opposed the accession of his grandson to the throne, and thus King Injong (r. 1122-1146) began his rule. When Xu Jing of Song China travelled to Koryŏ and wrote his account of the kingdom in *Gaoli tujing* (Illustrated Account of Koryŏ) he described Yi thus: ‘He has a dignified and mild bearing, and welcomed those who were mild and kind hearted.’ But the *Koryŏ sa* (History of Koryŏ) describes him as one who plunders the land and possessions of others. Other historical documents also comment on the distasteful nature of Yi.

Nonetheless, he continued to accumulate power at the expense of his grandson Injong. He provided two of his daughters to Injong as queens and thus further strengthened his own status as royal relative by marriage and grandfather of the king. His relatives and those who supported him all garnered official positions and were rapidly promoted while those who opposed him were driven from office. Moreover, Yi was supported by the military hero Ch’ŏk Chungyŏng who had distinguished himself in the campaigns against the Jurchen. Thus Yi had the military backing to act as he wished and accordingly he, along with those in his faction, seized land and other property and secured the dominant economic position in Koryŏ society as well as a virtual monopoly on political power. Eventually, Yi was not satisfied with being the power behind the throne and conspired to depose Injong and assume the throne himself. Injong discovered this plot and made his own plans with his officials to eliminate Yi. However, with the military intervention of Ch’ŏk, Injong was confined and the officials who had collaborated with him were put to death in 1126. Yi then attempted to poison Injong on several occasions and became even more blatant in his disregard for the throne and ruling hierarchy of Koryŏ. It was at this point, however, that the opportunistic Ch’ŏk drove Yi from power and restored Injong to the throne. Yi was banished to the wilderness of the Koryŏ frontier, thus ending the so-called Yi Chagyŏm Rebellion.
Yi Chehyôn (1287-1367)

Yi Chehyôn was a scholar and statesman of the late Koryô period. His family’s ancestral home is in Kyôngju, his childhood name was Chigong, his courtesy name Chungsa, and his pen names included Ikchae and Yôgong. From an early age, Yi studied writing and reading skills, and in 1301 he passed the Sônggyun shi examination and then subsequently successfully sat for the civil service examination. After this Yi entered the Koryô officialdom and served in various capacities and by 1314 he had received the charge of King Ch’unghôhn, who had abdicated his throne, to come to the capital of the Yuan dynasty, Yanching. The King desired that Yi join the Wanjuantang (Hall of Ten Thousand Volumes), an association created by the King for scholars, and study with the knowledgeable men of China. Yi association with the Wanjuantang had a major impact on his later propagation of the neo-Confucian ideology in Koryô, which would become very important among the literati in the late Koryô period. Yi was also able to make use of his time in China to improve his knowledge and writing abilities, and to visit many places in China while accompanying the former king.

Yi served in the Koryô government under five different kings and particularly played an important role in the changes that occurred in the governmental structure under the reign of King Kongmin (r. 1351-1374). Yi had a major role in the complicated political situation that existed between the fading Yuan dynasty and Koryô, and served as an envoy to the Yuan on many occasions during this period. Moreover, while Yi served in the highest positions while carrying out his duties, he was never the object of censure or exile, which bespeaks of his excellency in diplomacy.

Yi is praised as being one of a number of scholars during the late Koryô period that significantly influenced the philosophical standpoint of the later Koryô and subsequent Chosôn periods by propagating the neo-Confucian ideology. Yi’s teacher was Paek Ijong (1275-1325), who had also studied in Yuan China. The ideology was then passed from Yi to other literati in the late Koryô period such as Yi Sungin (1349-1392) and Yi Saek (1328-1396), and then to those who even served in the early years of Chosôn such as Chông Tojon (1337?-1398) and Kwôn Kûn (1352-1409). Thus the ideology became an important factor in the foundation of Chosôn and would continue to dominate Chosôn thought for the next half of a millennium.

In the field of literature, Yi’s Yôgong p’aesol (Scribblings of Old Man Oak) is noted for being one of a number of literary miscellany collections that appeared during the late Koryô period. This work is a collection of essays and comments on historical subjects and represents valuable historical data of the late Koryô period. Ikchae nan’go (Scattered Works of Ikchae) contains many of Yi’s opinions on life in Yuan China, and additionally, records of his travels in China with King Ch’unghôhn that are historically quite useful. Yi also compiled a national history, Saryak (Concise History), that unfortunately has not been transmitted to the present age.

Yi Cheshin

Yi Chong

Yi Chongch’ul

Yi Chônggu (1564-1635)
Yi Chŏnggu is considered one of the great scholars of Sino-Korean literature of his time. His family’s ancestral home is in Yŏnan, his courtesy name was Sŏngjing and his pen names included Wŏlsa, Pomandang, Ch’iam, Ch’uae and Sūpchŏng. He was the descendant of the noted scholar Yi Sŏkh'yŏng (1415-1477), the son of the civil official Yi Kye and the disciple of Yun Kŭnsu (1537-1616). After passing various civil service examinations, Yi entered Chosŏn officialdom. In the midst of the 1592 Japanese Invasion, Yi was sent to Ming China as part of an official mission. While in China he met the Ming scholar Song Yingchang and had discussions with him concerning the Taehak (Great Learning), and for this received high praise. Subsequently, Yi published Taehak kango (Lecture on the Great Learning).

Yi continued to make many official trips to Ming China as part of various official missions. His literary fame grew among the Chinese scholars and in response to their demands he published a collection of over one hundred poems entitled Choch'on khaeng rok. It was due to his skills in Sino-Korean character literature that Yi, along with Chang Yu (1587-1647) and Shin Hŭm (1566-1628), became known as one of the ‘Four Great Men of Sino-Korean Literature’ (hanmun sadaega). Aside from his literary accomplishments, he also became a trusted adviser to the king and served in such official capacities as Minister (p’anso) of the Board of War (Pyŏngjo), Minister of the Board of Rites (Yejo), Third State Councillor (uujjong) and Second State Councillor (chwauijong).

Yi is further praised for being among the group of seventeenth c. literati who cast off the fetters of excessively moralistic literature and vested their works with emotion and feeling. This marked a vivid contrast to the literature of the previous two centuries that was dominated by the staid neo-Confucian ideology. Yi’s literary collection Wŏlsa chip (Collected Works of Wŏlsa) has been transmitted to the present age.

Yi Haŭng (1820-1898)

Yi Haŭng (Hŭngsŏn Taewŏn’gun) was a late Chosŏn politician and the father of King Kojong (r. 1863-1907). His courtesy name was Shibaek and his pen name was Sŏkp’a. He served as de facto ruler of Chosŏn for ten years after the appointment of his son, Kojong to the throne at the age of twelve. Yi was not powerfully connected in the royal family and was in actuality a member through adoption. He did occupy several government posts such as Commander (toch’onggwon) in the Five Military Command Headquarters (Owi Toch’ongbu), but these were not important positions and his political ambitions were thwarted by the power of the Andong Kim family which actually controlled the throne in this age of ‘in-law’ governments (sedo chŏnch’i). However, with the death of King Ch’ŏlch’ong (r. 1849-1863), who had not left an heir or designated a successor, the fortunes of Yi Haŭng were about to be transformed.

Upon the death of Ch’ŏlch’ong, the right to determine the next king fell to the Queen Dowager Cho (1808-1890) who wasted little time in naming Yi’s son, Kojong, as the next king. Since Kojong was only twelve at the time, he was not ready to rule the Kingdom so the Queen Dowager and Yi were to serve as regents until he was old enough to assume power. Yi had his own agenda with the accession of his son to the throne. He sought to break the power of the royal ‘in-law’ families and reassert the authority of the crown. Therefore, to this end he appointed an equal proportion of officials from each of the sasaek (four factions) and was not greatly concerned with the background of government appointees, but rather examined their abilities. Thus, through appointments by merit, Yi strove to break the powerful families and deprive the royal ‘in-laws’ of their grip on power.

Chosŏn was confronted with many problems at the time when Yi came into power. The kingdom was plagued by increasing of unrest and rebellion by the populace, corruption
among government officials, the disarray of the tax systems, and perhaps most pressing of all, the increased infringements upon Chosŏn territory by foreign powers. Yi’s reforms to the government were sweeping as he sought to regenerate the structures of the central government and to reassert the authority of the kingship. He converted the military cloth tax (kunp’oje) that heretofore had only been levied on commoners to a household tax (hop’oje) that all households, yangban or commoner, were liable for. Moreover, Yi reorganised the grain loan system by establishing a nationwide network of village granaries (sach’ang) that were designed to provide relief to the peasants in times of need. In addition, the actual stores of grains were investigated and those officials who were proven corrupt were dealt with by banishment or execution.

Perhaps the greatest impact of Yi’s reforms is seen in the matters centring on the strengthening of the monarchy. To this end, Yi sought to restore the image of the royal family and this was accomplished with the rebuilding of Kyŏngbok Palace, which had been in ruins since the 1592 Japanese Invasion. Yi began this project in 1865 and financed it through a special land tax (kyoltujon) that was levied on all landowners and a gate tax (munse) that was a tariff on all goods that entered the capital. These taxes served to alienate both the yangban and commoner classes and also to bring about considerable economic disorder. Nevertheless, the restoration of Kyŏngbok Palace was complete in 1867.

Another target of Yi’s reforms were the sowŏn (private academies), which by this period in Chosŏn had come to possess large land and slave holdings that were exempt from taxation. Moreover, these academies were also considerable political forces in the rural areas and often operated outside of the authority of the central government. Thus, in 1864 Yi banned the repair or building of unauthorised sowŏn and in 1868 he levied a tax on these institutions. Finally in 1871, he executed a drastic reduction in the number of sowŏn, closing all but forty-seven of the academies. The abolition of the sowŏn proved to be extremely unpopular and created even more opposition to Yi from the yangban class.

The keystone of foreign policy of nineteenth century Chosŏn was one of a subservient relationship with China and isolation from other nations. However, in the 1860s contact with Western nations rapidly escalated. The events in China that had unfolded at this time such as the Opium War (1839-1842) and the Arrow Incident (1856) were, in the eyes of Yi, the result of allowing trade with Western nations. Therefore, Yi resolved to help Chosŏn avoid unequal trade treaties and humiliating relationships with the West by not allowing Western ships to enter Korean ports. This closed-door policy, however, was not honoured by the Western powers and there was increasing contact by foreigners. Perhaps the most brazen of these contacts was by the American trading ship, General Sherman, when it sailed up the Taedong River to P’yŏngyang, only to be burned by an angry mob of Koreans. Another event involved the French who were trying to assert their right to send Catholic missionaries into Korea. Both of these events were followed by clashes with the military forces of the respective nations, which were repulsed by Chosŏn. These minor victories only served to cause Yi to harden his isolation policy. The Western nations at this time were not sincerely interested in Korea as they were all occupied with other more pressing international or domestic circumstances. This was not the situation with Japan after it had been forcibly opened by the Americans in the 1850s and now turned towards Korea with its own colonial designs.

In 1873 Yi’s ten year grip on power in Chosŏn ended. He was driven from authority by a combination of the neo-Confucian officials that he had repeatedly antagonised with his reforms and the emergence of the political power of his son’s queen, Myŏngsŏng (1851-1895). Even though Yi had been sent to retirement by these forces, he was not content to sit on the sidelines. The government under the control of Queen Min began to adopt many policies that were aimed at reformation along the lines of Japan. The neo-Confucian literati became so outraged at these reforms that they sought an ally in Yi. However, the initial plot for Yi to take power was revealed and many that had been involved in the conspiracy were
1400

sentenced to death. Yi, being the father of the king, escaped this plight and simply waited for another opportunity. This was shortly manifested in the form of the Military Mutiny of 1882 (Ino Kullan), which was the result of the military forces rising up against the corruption prevalent in the Choson government. With the military targeting the Min family and the Japanese with their wrath, King Kojong had little choice but to bring his father back to power. Yi directly issued an edict that required all matters of the government be approved by him before implementation and also sought to reform the military forces. Yi's return to power would prove to be quite brief as both Japan and China now intervened in Korea to protect their interests.

As Japan had dispatched troops to Korea to extract retributions from Choson for the destruction of their legation, the Qing became very concerned and sent their own forces to Seoul. 4,500 troops under the command of General Wu Changqing were sent to Seoul and the Chinese general quickly took control of the city. Yi was kidnapped by the Chinese and taken from Choson, thereby restoring power, in title, to Kojong. Yi was returned to Choson by the Qing in 1884 and continued to be an important player in the politics of the waning days of Choson. In 1894 when the Japanese inspired the Reforms of 1894 (Kabo Kyongjang), he was again installed as the head of the Choson government, although he was in actuality controlled by the Deliberative Council that held real power. However, once Yi realised that he was not in power he planned a coup that would depose Kojong and replace him on the throne with Yi's grandson, Yi Chunyong. This scheme of Yi's was discovered by the Japanese who subsequently forced him to permanently retire from politics at this time.

Yi is remembered as a politician who attempted to enact reforms upon the stagnant and ineffectual government in late Choson. His reforms to the tax, military and political systems were partially effective but never given a chance to fully develop, due to the turbulence that surrounded Choson in this period. He also had a continuing desire for power and never fully accepted his son's right to the throne and his own limited role. Moreover, it was his political machinations along with those of Queen Min that served to throw Choson into disarray and further weaken the government. This only accelerated the fall of Choson into the hands of the foreign powers.

Yi Hoegwang (1862-1933)

Yi Hoegwang (styled Sason) was a Buddhist monk who is now infamous for his several tenacious attempts to secure a merger between Korean Buddhism and Japanese Buddhism. Although he was by no means the only Korean Buddhist monk who was involved with the Japanese government and Japanese Buddhists during the colonial period, his activities are especially poignant for he was the final entry in Kakan (Pomhae)'s 1894 collection of biographies of 198 Korean Buddhist masters, the Tongsayoljon, and was listed therein as the last Great Lecture Master (Taegangbaek) of the Choson dynasty. In 1910, shortly after Japan's annexation of Korea, Yi was responsible for creating a bitter split in Korean Buddhism, and during the following sixteen years he continually manifested a pernicious opportunism combined with a blatant disregard for the wishes of the larger Korean Buddhist establishment. Consequently, he is regarded as a traitor to both Korean Buddhism and the Korean nation.

Yi became a monk in 1880, and significantly, it was around this time that there were increasing contacts between Korean and Japanese Buddhist monks. While the latter were engaged in missionary work in Korea, some Korean monks, such as Yi Tongin, were intent on modernizing Korea and were consequently interested in both Japan's recent modernization through the Meiji Restoration and the effects that such social changes had wrought on Japanese Buddhism. It would appear that this nascent, somewhat political, relationship between Korean and Japanese Buddhism played a crucial role in laying the groundwork for Yi's subsequent political intrigues and insistence that Korean Buddhism unite with Japanese Buddhism.
By 1890 Yi was lecturing at Kôngbongsa Temple, and he thus seems to have been a man of able intellect. Moreover, judging from his actions and the opinion of others, he also seems to have been a man of great ambition. In 1906 the Pulgyo yŏn’guhoe (Buddhist Research Society) and its school, the Myŏngjin hakkyo, had been established to centralize the administration of Korean Buddhist affairs and education, but in 1908 these two entities were replaced by the Wŏnjong chongmuwŏn (The Office of Religious Affairs of Korean Buddhism) after a formal meeting of 52 Buddhist leaders in Seoul. At this meeting Yi was elected as the organization’s Supreme Patriarch, and shortly after this he had a Japanese monk from the Sŏtŏ Sect installed as an advisor.

Yi proposed to merge Korean Buddhism, under the aegis of the Wŏnjong chongmuwŏn, with the Japanese Sŏtŏ Sect, but the larger Korean Buddhist community was so vehemently opposed to this plan that it had to be abandoned. However, the annexation of 1910 provided him with another opportunity, and in December he travelled to Japan and met with the chief of the Sŏtŏ Sect who advocated an alliance in which Korean Buddhism would be made subordinate to the Sŏtŏ Sect. Yi was firmly opposed to this and stubbornly pushed for an equal merger. Nevertheless, on December 6, a mere forty-five days after the annexation, he signed an agreement which was obviously in favour of the Sŏtŏ Sect. It not only allowed them to conduct missionary activity in Korea and send Japanese advisors to oversee Korean Buddhism, but more importantly it implicitly subordinated Korean Buddhism to the Sŏtŏ Sect by retroactively handing over the ratification of the foundation of the Wŏnjong to the Sŏtŏ Sect.

Upon returning to Korea, Yi attempted to gather support for this merger without disclosing the full details of the agreement. Despite his secrecy, word of his plan got out when a secretary within his organization handed over a copy of the document to some Korean monks, and violent opposition soon arose. While this opposition can be seen as essentially political, it was founded on the premise that Korean Buddhism was fundamentally of the lmje (Japanese, Rinzai; Chinese, Lin-chi) school and was thus incompatible with the teachings of the Sŏtŏ Sect; consequently, a group of dissenting monks formally organized an Imje Sect to oppose Yi. Amidst this storm of criticism directed at Yi, in 1911 the Japanese Government-General of Korea promulgated its sach‘allyŏng (temple-edict), which recognized that Korean Buddhism had the unique character of combining both scholastic and meditative practices, and decided against granting formal recognition to Yi’s organization. Therefore, Yi’s merger agreement with the Sŏtŏ Sect was made void. This setback was, nevertheless, temporary, for later that same year Yi was made abbot of the important Haein Temple. This position made him effectively the most powerful Korean monk, and in the middle of 1912 his authority was formalized when he became the first director of a newly created organization which encompassed the thirty main Korean Buddhist temples.

As can be expected, Yi not only encountered opposition from patriotic Korean monks, but was also challenged by other ambitious monks from within his own ranks. Thus, by 1917 his undisputed dominance within the pro-Japanese faction had come to an end. In August of the same year Yi and several other pro-Japanese monks obtained funds to visit Japan, and during their travels they dined with Terauchi Masatake who was then the Prime Minister of Japan and had been the first Governor-General of Korea from 1910-16. Yi outmanoeuvred another monk who was among his travelling companions by giving Terauchi a better gift, and this incident was but one example of the internal rivalry among the group and the overall obsequious attitude which they displayed during their visit to Japan.

Yi’s next bid to gain absolute control of Korean Buddhism occurred at the end of 1919, a mere eight months after the March First Independence Movement, when he went to Japan and took part in negotiations with a representative of one of the sects of Japanese Rinzai. His efforts at forging an affiliation with the Rinzai Sect were reported by a Japanese
newspaper, and one of his old foes translated this article and sent it out to all of the main temples in Korea. Once word of his activities spread Koreans in general were infuriated, and Yi and his coterie's plan was crushed by the middle of 1920.

In 1922 Yi managed to gain a powerful office within the Pulgyo kyomuwون (The Office of Religious Affairs of Korean Buddhism), an organization hastily created by pro-Japanese Korean monks. Once again, fortune played a fickle hand. Anger about his attempt to forge an affiliation with the Rinzai Sect was still strong, and in 1923 the monks at Haeinsa Temple made a formal petition to the Government-General requesting that Yi be removed from his position as abbot of Haeinsa. This petition was accepted, and Yi was forced to wait three years before making another attempt to rise to power.

In 1926 Yi and several other disgruntled figures conspired to gain absolute control of Korean Buddhism by pushing for a thorough reformation which would entail the destruction of the current institutional structures and the creation of a Korean Buddhism which would work for harmony between Japan and Korea. To this end, they dispatched one of their members to Japan to talk with various people about the plan, but these efforts ran into intense opposition from Korean students and monks who were studying there. The final blow, however, came when one of the conspirators was arrested upon returning to Korea. He had illegally sold temple property to finance his trip to Japan, and the disclosure of this in Korean newspapers spelt the end of Yi's career. He spent the remainder of his years outside the sphere of Buddhist politics and died in 1933, at the age of 71, in a Zen school beside the Han River.

Bibliography

Im, Hye-bong (1993) Ch'in'il pulgyoron (On Buddhist Collaborations with Japan), volumes 1 and 2, Seoul: Minjoksa.

Yi Hou (1912-1970)

Yi Hou was a poet. His family's ancestral home is in Kyŏngju and he was born in Ch'ŏngdo of North Kyŏngsang Province. His father was Yi Chongsu, his mother was Ku Pongnae and his younger sister Yi Yongdo was also a shijo poet. Yi began his formal education at the Ŭmyŏng Academy and continued at Miryang School where he graduated in 1924. In 1929 he travelled to Japan and entered Tokyo Arts University. However, due to a nervous breakdown he returned to Korea in the following year. In 1934 he was married to Kim Sunnam. After liberation in 1945 he worked on the editorial board of the Taegu ilbo newspaper and in 1956 became managing editor and editorial writer for the Taegu maeil shinbo. newspaper. His literary debut was in 1940 with the publication of his poem Talbam (Moonlit Night) in the literary magazine Munjang.

Yi chiefly composed poems in the shijo style and incorporated many of the important values of his times. His early works reveal a longing for national independence while his later works exhibit the sense of tragedy resultant from the Korean War and the national division. His works in the late 1960s reveal his condemnation of Korea's participation in the Vietnam War as he took the role of an impassioned protester. His first shijo collection, Yi Hou shijo chip (Shijo Poems of Yi Hou), was published in 1955 and received widespread acclaim.

Yi Hwang (1501-1570)

Known by his pen name Toegye, Yi Hwang was the most influential scholar in the
Korean neo-Confucian tradition. Of the Chinbo Yi lineage, he was born near Andong in North Kyŏngsang province. Since his father died when he was only seven months old, he was raised by his mother and an uncle.

Yi passed the minor government examination in 1528, and was admitted to the National Academy in 1533. In 1534, he passed the civil service examination and began his career in public service. However, he preferred the times when he was out of office, when he could return to his home in Andong and pursue his studies.

When he served as magistrate of P'unggi, near Andong, he was instrumental in obtaining a royal signboard for the first sŏwŏn (private academy) in Korea, the Sosu Sŏwon. A few years later he obtained a royal signboard for his own academy, the Tosan Sŏwon, on the north side of Andong. Today, as a symbol of the importance of both Yi and his Sŏwon, his portrait and the Sŏwon building are featured on the front and back of the 1,000 won note.

The most important philosophical issue occupying the minds of Korean scholars during Chosŏn was the i and ki debate. Yi Hwang held that 'the Four Beginnings are the issues of principle (i) and the Seven Feelings are the issues of material force (ki). The Four Beginnings refer to the Mencian concepts of humanity, whereas the Seven Feelings (joy, anger, sorrow, love, hatred and desire) are sometimes good and sometimes evil. In analyzing the functions of i and ki, Yi Hwang stressed in particular the role of the formative or normative element, i, as the basis of the activity of ki; thus i comes to be seen as an existential force that masters or controls ki. Thus Yi Hwang emphasized the supremacy of i in the i and ki duality. Yi I, however challenged Yi Hwang’s position by placing equal importance on both i and ki in the activation of the Four Beginnings and the Seven Feelings, but he came to be identified as emphasizing the supremacy of ki. (see Yi I) The Four-Seven Debate thus became the most important philosophical issue of Chosŏn.

Yi developed a large following of disciples and became known throughout the country for his interpretations of neo-Confucian doctrine. The letter exchanged between Yi Hwang and the much younger scholar, Yi I, as well as letters between other scholars of the time became an important forum in the development of neo-Confucian ideology. Yi I became the founder of one school, and Yi Hwang founder of the other school. Both of schools retained disciples throughout Chosŏn, but neither master intended for their schools to develop into the rival factions that came to disrupt the tranquility of the recruitment process for the all-powerful government service positions.

In 1610, a century after his birth, Yi Hwang was inducted into Munmyo (National Confucian Shrine), of the National Academy. His surviving works were eventually collected and published by Taedong Munhwa Yŏn’guso of Sun Kyun Kwan (Sŏnggyun’gwan) University in 1958 as T’oegeye chŏnsŏ (Collected works of T‘oegeye). This consists of sixteen works (including Tosan chŏnsŏ ) which are kept at Tosan Sŏwon. However, these are only part of his writings. The manuscript copies of his works collected by his disciples after his death amounted to more than one hundred fascicles, of which only twenty have survived.

Unquestionably the most important scholar of traditional times, his influence spread to Japan, and today there are institutes for the study of ‘T‘oegeye’s philosophy’ throughout Korea and overseas.

Yi Hyosŏk (1907-1942)

The writer Yi Hyosŏk (styled Kasan), most famous for his popular short story, Memil kkot p’il muryŏp (The Buckwheat Season, 1936), was born in Pyŏngch’ang, Kangwŏn Province. When he was four years old, his family moved to Seoul to join his father who was teaching there. Two years later, they moved back to Kangwŏn Province and Yi began
his studies in Chinese Confucian classics at a local village school. After finishing middle school in his hometown, he went alone to Seoul to attend what is now Kyŏnggi High School. In 1925 he entered the present Seoul National University as a law student, but later changed his major to English literature. He graduated in 1930. The following year he married Yi Kyŏngwŏn and, with the help of his former Japanese teacher, obtained a job working for the Censorship Section of the Governor-General's Bureau of Police. However, due to severe criticism from his colleagues and people around him, he left the job after a month and moved to his wife's home town of Kyŏngsŏng in North Hamgyŏng Province. He taught English at Kyŏngsŏng School of Agriculture. In 1934 he moved to Pyŏngyang, and there he taught at Sungshil Technical School from 1936 until the school closed in 1938. Yi was also a founding member of the Nine Member Society, a literary group which played a prominent role in introducing and promoting modernism in Korea. He died of meningitis in 1942.

Yi made his formal literary debut in 1928 with the publication of Toshi wa yurryŏng (City and Ghosts) in a magazine called Chosŏn ch'i kwang (Light of Korea). Although he had published numerous short works in the Maeil shinbo newspaper as early as 1925, City and Ghosts first earned him recognition in literary circles. This short story described impoverished, distressed, and homeless Koreans in the city. Yi's early writings reflected social conditions, and his portrayal of indigent laborers and their discontent was interpreted as leftist. Thus, he was labelled a 'fellow traveller' along with his contemporary Yu Chino. After he moved to Kyŏngsŏng, he wrote Noryŏng kŭnhae (Sea Near Russian Territory, 1931) and this story was seen as the work that most revealed his sympathy toward the proletarian literary group KAPF (Korea Artista Proleta Federatio, formed in 1925 and dissolved in 1935). Although Yi may not have committed himself to the socialist cause, his early writings responded to the social situation of the 1920s and 1930s, a time when the idea of communism was spreading very rapidly, and many intellectuals and writers were being drawn to radical politics as a means to gain independence from Japan.

After 1932 Yi began to shift from stories dealing with social issues to the realm of aesthetic lyricism, using sexuality, nativistism, and exoticism as central motifs. These motifs are seen in stories like Sut'ak (The Rooster, 1933), San (The Mountain, 1936), and Tŭl (The Field, 1936). Yi often used animals to draw parallels with human characters, describing the sexuality of the characters through animals. During this period, he wrote one of the most popular stories of modern Korean literature, 'The Buckwheat Season', which marked the peak of his maturity, talent, and craftsmanship. The story is set in the rural environs of his hometown, and it is rich in local color and lyrical in style. The juxtaposition of nature and human relationships is rendered in a highly romantic mode of poetic expression.

Bibliography

Yi I (1536-1584)

An acclaimed Confucian scholar, Yi I (styled Yulgok) is better known by his pen name, Yulgok. Born in Kangnung at his mother's lineage home, he was taught the basics of Confucian ideology by his mother, Shin Saimdang. (see Shin Saimdang) His mother is honoured as the classic example of motherhood in Korea. Yi passed the Literary Licentiate Examination when he was only thirteen years old. His mother died before he could take the Civil Service Examination, when he was sixteen. He then retreated to a Buddhist temple to mourn and to study Buddhism. He returned to his home a year later and resumed his study of neo-Confucianism.

In 1558, Yi visited Yi Hwang, who with Yi I in later years would be regarded as the two
great interpreters of Confucianism. Yi I was a young man of twenty two, Yi Hwang, at age fifty seven was already established as a major figure of his time. The senior scholar was impressed with the junior, and the junior was inspired by the senior. Later that year Yi I headed the Civil Service Examination. In fact, he was at the top in all nine examinations the preparatory, regional, and national levels.

Yi held posts in various government ministries, in provincial magistracies, and in central government as a censor. He was also an assistant in the office of the Chief State Council. When serving in the Board of War, he called for the recruitment of an additional one hundred thousand soldiers. A few years after Yi’s death, many wished they had listened to his prophetic advice when the devastation of the Japanese invasion was unleashed on the Korean peninsula.

In addition to being acknowledged as one of Choson’s two greatest philosophers of Neo-Confucianism, Yi was a highly respected statesman who enjoyed a distinguished career as a government official. Among his works on government and individual ethics, Sŏnghak chibyo (Essentials of the Sages’ Learning) was one of the most popular with scholars and government officials. Written for the king in 1575 as a guide for sagely rule, Sŏnghak chibyo offers Yi’s views on how a ruler should conduct himself and administer the government. In it, Yi quotes from former sages as well as adding his own comments and ideas. In the seventh chapter which deals with the economy, Yi emphasizes the importance of thrift in order to protect the country’s wealth and promote the well-being of the people.

In neo-Confucian thought, principle (i) and material force (ki) describe not only the constitution of the universe but also the constitution of every individual being. Thus, it is held that they also have an important role in the normative pattern of our nature, informing our activity as we respond to things around us. 'Material force’ concretizes, particularizes, energizes, and also, by its relative degree of purity of turbidity, limits or distorts the otherwise perfect goodness of our ‘original nature.’ So the neo-Confucians talked not only of our original nature (principle with its inherent perfection) but also of the ‘physical nature’ - that is, the principle as limited by the imperfection of the material force that constitutes our concrete psycho-physical being. Yi Hwang and Yi I were the protagonists for opposing positions (see Yi Hwang). Loyalties to either Yi Hwang or Yi I and their contrasting orientations constituted the major intellectual divide throughout the remaining three centuries of Choson.

Of the Tŏksu Yi lineage, Yi I was a distant cousin to Admiral Yi Sunshin who fought the Japanese during the invasion of 1592. Yi I’s numerous essays and other writings are collected in his Yulgok chŏnsŏ (Collected Works of Yulgok). In 1682, he was canonized as one of the eighteen Korean sages enshrined in the Mumnyo (National Confucian Shrine) of the National Academy.

Yi Ik (1681-1763)

Yi Ik was a late Choson shirhak (practical learning) scholar. His family’s ancestral home is in Yŏju, his courtesy name was Chashin and his pen name Sŏngho. His eighth generation ancestor, Yi Kyeson, had held high government positions, such as Minister (p’ansŏ) of the Board of War (Pyŏngjo), during Sŏngjong’s reign (r. 1469-1494) and from that time forward the Yŏju Yi family maintained very influential positions in the Choson government. His great grandfather Yi Sanggūi was the Second State Councillor (chwajjong) and his grandfather Yi Chian was a Fourth Inspector (chip’yŏng) at the Office of the Inspector General (Sahŏnbu). His father, Yi Hajin, was married twice and had a total of nine children. However, he died when he was fifty-five after being exiled to Unsan. It was then that Yi Ik went to live with his mother’s family. He learned Chinese characters when he was ten years and at twenty-five applied for the civil service examination. He was not able to sit for it and subsequently gave up his aim to enter officialdom.
After abandoning his plans to enter government service, Yi remained at his home in Ch'omsong Village. He had inherited ample wealth and property from his ancestors and accordingly he could live the life of a retired country gentleman. From then on, Yi devoted his full attention to the pursuit of scholarship, being joined by his third and fourth brothers. In 1715, when he was thirty-five, his mother died and after observing the proper mourning period he sent all of his slaves and household belongings back to his ancestral home. Yi remained engrossed with his studies until his death at the age of eighty-three.

The shirhak scholarship movement became consolidated with the studies of Yu Hyóngwŏn (1622-1673). Yu spent his life in a farming village and based his studies upon empirical evidence. The specific work attributed to his lifetime of study is Pan'gye surok (Pan'gye’s Treatises), which details and appraises many features of Chosön society, such as the government structure and appointments, education, the land system, and the military service system. Yi followed the same model as Yu and his studies served to extend the breadth and depth of Yu’s findings and to establish the basis for the distinct school of thought called shirhak. Yi’s most comprehensive work was Sŏngho saesol (Insignificant Explanations of Sŏngho), which is almost encyclopaedic and displays the diversity and depth of his scholarship. In this, he outlines his proposals for reform of the land and economic systems with well-thought out proposals and insight. However, it is his work, Kwagu rok (Record of Concern for the Underprivileged) where he expounds his proposals for wide-ranging reforms of Chosŏn institutions. Yi’s reputation grew with the passing of the years and he attracted many disciples. Through these men the school of shirhak thought became established and consolidated as the dominant ideology of late Chosŏn.

Yi’s value as a scholar can be seen in the impact that his works had on later generations. Particularly, that of Sŏngho saesol, which greatly influenced scholars such as An Chŏngbok (1712-1786), Yi Chungwan (1690-?), Pak Chiwon (1727-1805) and Chŏng Yagyŏng (1762-1836). It was also the pragmatic approach of the shirhak scholars that allowed the adoption of Western scientific theory to Korea. The shirhak ideology marked a major break from the staid neo-Confucian ideology that had dominated Chosŏn up until this time. However, shirhak thought was unable to reach fruition due to the onslaught of Western culture and belief systems in the mid-nineteenth c..

Sŏngho sŏnsaeng munjip (The Collected Works of Master Sŏngho) and Yi sŏnsaeng yesol (Master Yi’s Explanation of Propriety) are another two of Yi Ik’s large number of works. Yi’s burial site is located close to his home in Ansan City of Kyŏnggi Province and has been designated as Kyŏnggi Province Monument no. 40.

Yi Illo (1152-1220)

Yi Illo (styled Ssangmyŏngjæ) was a literati official under the military rule of the Ch'oe house during Koryŏ. His clan seat was Kyŏnwŏn, and he was praised from his childhood days for his brilliance. Yi lived as a Buddhist monk through the early military period but returned to secular life after Ch'oe Ch'unghŏn came to power. He was successful in the government service examinations in 1180; held official positions under Ch'oe's rule; and followed in literary pursuits. He associated with literary men - O Jeajae, Im Ch'un, Cho Tong, Hwangbo Hang, Ham Sun, and Yi Tamji. They formed an exclusive group, enjoying wine and writing poetry, and calling themselves the Seven Worthies of the Bamboo Grove, reminiscent of the earlier Chinese poets with the same name. He is the author of 'The Four Treasures of the Studio' and of the first literary miscellany in Korea, P'ahan chip (Jottings to Break Up Idleness).

Yi wrote two more collections, the Undae chip and the Ssangmyŏngje chip (Collected Works of Ssangmyŏngje). Lamenting the contemporary situation whereby outstanding Confucian scholars and poets were gradually fading away without passing their works on to
succeeding generations. The *P'ahan chip* is an anthology of essays, which includes poetical romances; historical narratives; the author's Chinese verses; customs of ancient Shilla; features of the western capital (Sŏgyŏng, present P'yŏngyang); and customs and word-scenes of the contemporary capital (Kaegyŏng, present Kaesŏng), thereby revealing aspects of Koryŏ culture. The anthology was published in photostat during the Japanese occupation of Korea by the Koso Kanhaenghoe as the nineteenth volume of a series.

Jennifer M. Lee

**Yi Injik** (1862-1916)

Yi Injik was a novelist and member of the new drama movement of the late Chosŏn and early colonial periods. His pen name was Kukch’o and he was born in Ich’ŏn of Kyŏnggi Province. In 1900 he travelled to Japan to study on a government scholarship. With the outbreak of the Russo-Japanese War in 1904 he was appointed as a Korean translator for the Japanese Army headquarters. In 1906 he was appointed editor-in-chief of the *Kungmin Shinbo* newspaper and also editor of the *Mansebo*. In 1907 he was the first president of the *Taehan shinmun* newspaper. In 1908 he established Wŏngaksa and staged the production of *Unsegye* (Silver World).

Yi is perhaps best known as one of the writers who helped introduce the style of the so-called ‘new’ novel (*shin sosol*) to Korea. These new novels had a character that emphasized the renovation of politics, social systems, customs, a new view of education, women’s freedom, social and cultural equality and a scientific view of the world. Moreover, the new novels had a market-orientated character that flattered popular taste and followed current trends. Yi was among the representative writers of this new genre, and in particular his *Hyŏl ŭi nu* (Tears of Blood, 1906) is widely acclaimed as being the first novel of this genre. Other works of Yi include *Moran pong* (The Peony Peak, 1913), *Kwi ŭi sŏng* (Voice of a Demon, 1908), *Ch’iak san* (Pheasant Mountain, 1908) and *Unsegye* (Silver World, 1913).

Yi’s career as a writer only spanned a period of less than a decade but in this short time he established the genre of the new novel and greatly contributed to the overall development and growth of Korean literature. His works broached subjects such as new education, women’s rights, the tragedy of war and the need for enlightenment of the Korean people. For these reasons he is praised as one of the finest writers of his period and of great importance in the history of Korean literature.

**Yi Insang** (1710-1760)

Yi Insang was a late Chosŏn poet, writer and painter. His family’s ancestral home is in Chŏnju, his courtesy name was Wŏlyŏng and his pen names were Nŭnghogwan and Posanja. In 1735 he passed the Literary Licentiate Examination (*chinsa shi*) but could not assume an official position due to the fact that his great-grandfather was an illegitimate son. However, by virtue of the good standing of other ancestors he overcame this handicap and served first as assistant custodian (*ch’ambong*) and then as superintendent (*ch’albang*) of the Sagun Post Station at Chiri Mountain, as well as holding other official posts. However, he suffered while serving in his official capacities due to chronic illness, his inability to bear the graft and corruption of officials and his disagreements with the governor (*kwanch’alsa*). He resigned from officialdom and retired to Tanyang with friends. There, he composed poetry and prose, painted and lived out his life doing what he liked best.

Despite the fact that Yi was the son of a concubine, his artistic and literary talents were great and would have major impact on future generations of artists and writers. He shared the scholastic mantle of the balance between *i* (a patterning or formative element) and *ki* (a concretising element) that compose all matter of the universe along with Kim Ch’anghŏp and Yi Chae. Yi Insang’s close acquaintances included Yi Yunyŏng, Song Munhŭm,
Hwang Kyongwon and Kim Mut'aek et al. In his calligraphy, he followed the haesŏ (Regular Style) of An Chingyŏng. His composition of the Tang-style poetry was highly praised by his contemporaries. As with his writings, his paintings are also acclaimed for both the vivid use of colour and the presentation of his subjects.

There are many extant works of Yi including paintings such as Susŏk to (Trees and Stones) and Sŏlsong to (Snowy Pine Tree), and his literary collection Nŭngho chip (Collected Works of Nŭngho). He is praised as one of the great talents, in both literature and art, of the late Chosŏn period.

Yi Kibung [History of Korea]

Yi Kwal [History of Korea]

Yi Kwangsu (1892-?)

Yi Kwangsu was a poet, novelist, critic and journalist. His family's ancestral home is in Chŏngju and he was born in Chŏngju of North P'yonan Province. His pen name was Ch'unwŏn. His father was Yi Chongwŏn and his mother was from the Ch'ungju Kim family. At the tender age of five, Yi began to learn both han'gul and Chinese characters and also heard various classic works recited by his maternal grandmother. In 1902 when Yi was eleven, he lost both parents to cholera. In 1903, Yi embraced the Tonghak Religion, lived in Pak Ch'amyong's house for adherents to the faith and worked on the clerical staff. In 1905 he was selected to study abroad by the Ilchin Hoe (Advancement Society), a pro-Japanese society. He enrolled at a middle school in Japan, but was forced to return in November 1906 because of financial difficulties.

In the following year, he again travelled to Japan and enrolled in the third year of middle school at the Meiji Institute. At about this time, Yi heard a patriotic speech made by An Ch'angho, who had stopped off in Tokyo on his way from America to Korea, and was greatly impressed. Together with Hong Myŏnghŭi and Mun Il'pyŏng he organized the Sonyŏn Hoe (Youth Association) and began the publication of a magazine, Sonyŏn (Youth), in which he wrote poetry, short novels and literary theory, as well as the editorials. In December 1909 his work, 'Chongyungnon' was published by the Hwangsong shinmun (Imperial Capital News) newspaper. In 1910 he returned to Korea and became a teacher at Osan School. In this year he also published his short story, Mujong (Heartless), which was written in a style that unified the written and spoken Korean language. In July of the same year through an arranged marriage, Paek Hyesun became his wife. However, this would prove to be a loveless marriage which caused him great sorrow. Moreover, with the passage of time Yi's health deteriorated due, it is thought, to the sadness he felt concerning the fate of Korea and the agony of his probable future. Compounding his troubles was the fact that while at Osan School, he enjoyed teaching the works of Tolstoy and the theories of Darwin, which held him up to much criticism.

In 1913, Yi translated the work of H.E.B. Stowe, The Grief of Black Men (Kŏmdungi sŏrŭn) and also had a poem, 'Mal tŭkkŏra' (Listen to the Words) published in a collection entitled Saebŏyŏl (New Star). In November of that year he was informally appointed chief editor of the Shinhan minbo newspaper and tried to travel to America, but due to the outbreak of World War I he was unable to do so. At this time his associates included Kim Pyŏngno, Chŏn Yongtaek and Shin Sŏgu. In September of 1915 he again went to Japan and enrolled in the Art Department of Waseda University. In the following year he transferred to the Philosophy Department at Waseda and was during this time that he began to serialize the epoch-making long novel Mujong (Heartless) in the Maeil shinbo (Daily News), which marked a turning point in the history of Korean literature. From this point forward he wrote continuously and finished short works such as 'Sonyŏn ŭi plae' (The Sorrows of a Young Boy) and 'Panghwang' (Wanderings), and published Ch'ŏngch'un.
However, probably due to overwork, he contracted tuberculosis and returned to Korea in 1917.

Upon his return to his home country, he worked as a correspondent for the *Maeil shinbo* newspaper and travelled widely in Korea. He now began his second serial for the *Maeil shinbo*, this time *Kaech’okcha* (Pioneer), that was extremely well received by the younger generation. Despite his chronic illness, he published the essays ‘Shinsaenghwal non’ (New Lifestyle Theory) and ‘Chanyŏ chungsim non’ (Focus on Children Theory) that both criticized the patriarch-centred family system and the traditional feudal social system, which caused much controversy. Shortly thereafter, he divorced Paek Hyesun and in October 1918, became betrothed to the woman doctor Hŏ Yŏngsuk. Yi and Hŏ fled Korea and travelled to Beijing, but when he heard that the Paris Peace Conference would soon convene (based upon the American President Wilson's Fourteen Points) he returned to Korea. In November he again went to Japan, joined the Chosŏn Youth Independence Party (Chosŏn Ch’ŏngnyŏn Tongnip Tan), drafted the February Eighth Declaration of Independence, and then fled to Shanghai. While in China he assisted An Ch’angho, took a position as president as well as chief editor of the *Tongnip shinmun* (The Independent) newspaper and wrote many patriotic editorials designed to enlighten and move the people. In April 1921 he departed Shanghai, returned to Korea and was subsequently arrested by the Japanese police, but agreed to a disposition not to instigate public unrest and was released. Therefore, from this time forth he was branded as a Japanese collaborator. In the same year he was married to Hŏ Yŏngsuk. After publishing ‘Sonyŏn ege’ (To a Boy) in the magazine *Kaebyŏk* he was arrested by the police on suspicion of violating the publishing law.

Yi continued writing and published *Minjŏk kaejo ron* (Theory on National Reconstruction) in *Kaebyŏk* which aroused a great amount of criticism from the nationalist camp and estranged him from those established in literature and the arts. In 1923 his long serial *Sŏndoja* (The Leader), which was patterned on the life of An Ch’angho was serialized in the *Tonga ilbo*, but because of its content this was halted by the Japanese Government-General. Later in the same year he resigned from the *Tonga ilbo* after his editorial *Minjogijŏk kyŏngnyun* evoked much criticism. After this time many of his works were serialized including *Hyŏgmyŏngga ŏ nae* (The Revolutionary’s Wife) in 1930, *Yi Sunshin* (The Story of Admiral Yi Sunshin) in 1931, and *Huk* (Earth) in 1932.

The literary point of view of Yi Kwangsu, given in his own words is: ‘I selected the best view of the world of contemporary times, and selected those of the middle class for my characters.’ He rejected degenerate literature or extremist literature that leaned heavily to one side or another, and in his own writing sought. Yi bore the ordeal of modern Korean history as if it were his personal tragedy, and expressed his passions to his reading audience in various forms such as novels, editorials, poems, essays and travel sketches. Yi is valued as a writer of enlightenment, nationalism and humanism as well as being a leading writer in modern Korean literary history. His impact on the course of modern Korean literature is undeniably a major one and he strongly influenced both his contemporaries and writers of later generations. The early works of Yi advocated ideals such as free love and rejected the traditional custom of early marriages, through which he would come to suffer himself. Other aspects of his works advocated enlightened thought and promoted new education forms such as in *Mujŏng*, scientific thought in *Kaech’okcha*, and enlightened education for farmers along with nationalistic theory enlightenment in *Huk*. However, research of Yi Kwangsu and his works also reveal a negative aspect such as his decision to avoid confrontation with the Japanese colonial forces and his attempts to dissuade others from doing so. Yi advocated a gradual return of sovereignty to Korea with a transitional period since he felt Korea was not ready for independence. Views such as this turned the nationalist camp against him and resulted in him being branded a traitor to Korea in some quarters. Yi is known to have been kidnapped to North Korea during the Korean War and is thought to have died there around 1950.
Yi Kyubo (1168-1241)

Yi Kyubo was literati official of Koryo dynasty. His family's ancestral home was Hwangnyo (present Yóju), Kyonggi Province. His father was Deputy Minister of the Board of Taxation, Yi Yunsu. He was academically brilliant from his childhood, and it is said that he could recite the standard classics from memory at the age of nine. He was born and grew up in an age of military dominance of Ch'oe house. The Ch'oe house, while upholding its own military supremacy, took an interest in scholarship. The bounty of literature appearing during the military period revealed that there still was intellectual vitality in this age. Yi Kyubo was the literary giant of the period, and more of his writings have survived than of any of his contemporaries.

While active in public life, Yi showed strong interest in Buddhism, and described Ch'oe Ch'unhon's active support of Meditation in his 'On trip to Ch'angbok Monastery' (Togguk Yi sangguk chip. (Collected Works of Minister Yi of Korea). On the publication of Koryo Tripitaka he wrote 'Royal Prayer on the Occasion of the Production of the Tripitaka' (Tongguk Yi sangguk chip. The erudite Yi Kyubo had little use for shamans. He thought that they lowered the cultural level of life and took advantage of superstitious peasants. His writings have been preserved in the Tongguk Yi sangguk chip. He retired in 1237 and died in the temporary capital Kanghwa, in 1240, at the age of seventy-four. Yi Kyubo enjoyed the favour of the then ruling Ch'oe house largely because of his work in compiling national and diplomatic documents. When Yi was on his deathbed, Premier Ch'oe U expressed his intention to have his collected works wood-engraved for printing.

Yi Kyugyong (1788-?)

Yi Kyugyong was a late Choson period shirhak (practical learning) scholar. His family's ancestral home is in Chonju, his courtesy name was Paekkyu and his pen names were Oju and Ungosa. Yi received his education from his father and grandfather. When King Chongjo (r. 1776-1800) established the Kyujanggak (Royal Library) in the first year of his reign he appointed noted scholars as Editor-Compilers (komsogwan). Yi's father and grandfather both served at this institution and were both famed for their pursuit of shirhak scholarship. Yi later served at the Kyujanggak.

Yi's scholarship is evident in his monumental work, Oju yónmun changjón san'go (Random Explanations by Oju), which has about 1 400 topics in sixty volumes. This encyclopaedic collection covers a vast array of matters, including astronomy, geography, government, economic, society and history. Yi demonstrates his knowledge of Western scientific thought in this collection and moreover, he presented it to the reader in a forthright manner. Yi also had tremendous interest in matters concerning the economy of Choson. He advocated an opening of Choson to trade with Western nations, and in particular, when an English merchant ship requested permission to trade with Korea in 1832 he urged that this be allowed.

Yi is recognised as one of the great minds of late Choson and his scholarship is considered a pinnacle in shirhak scholarship. However, the labours of his research largely went unrealised as Western ideology and technology soon swept into Choson in an unrelenting torrent. Other works of Yi include Paegunp'il and Oju sǒjong pangmul kobyŏn.

Yi Muyong (1908-1960)

Yi Muyong was a novelist. Born in North Ch'ungch'ong Province in Ùmsŏng, he entered Hwimun High School in 1920, but left before graduating. In 1925 he travelled to Japan to attend Seizō Middle School. For the four years that he lived in Japan he stayed in the house of the Japanese writer Katō Takeo. In 1926 he wrote Üijjomnnu yŏnghon (A Lonely and Helpless Soul) and in the following year published his short novel P'yehŏ (Ruins).
1929 Yi returned to Korea and worked in various positions such as schoolteacher and as a journalist for both newspapers and magazines. During this time Yi joined the Kuinhoe (Nine-Man Association) and continued to produce many works. Representative of his early period are Panyŏkcha (Traitor, 1931) and Nogbu (The Farmer, 1934).

The major works of Yi are considered to have been written in the late 1930s and early 1940s. At this time there were many works that revolved around the lives of peasants and farmers and Yi's was no exception. His representative works with this theme are Che 1 kwa che 1 chang (First Section, First Chapter, 1939) and Hük ui (A Slave to the Soil, 1940). These reveal Yi’s desire to underscore the productive lives of the farmers, which he saw as a sharp contrast to the shallow and meaningless lives that urban dwellers led.

After liberation Yi continued to publish and also served as a Professor at Dangook University from 1957 to 1960. Among his novels are: Ch'ŏlmun saramdul (The Young People, 1951) and Samnyŏn (Three Years, 1956). He also published many short stories such as B nyŏ ūi somyo (A Sketch of Miss B, 1953), Pyŏkhwa (Mural, 1958) and the posthumously published Tssi Haengjanggi (The Life of Mr. T, 1974).

Yi Nŭngwha (1869-1943)

Yi Nŭngwha was a scholar. His courtesy name was Chahyon and his pen names were Kanjŏng, Sanghyŏn and Mun'gangosa. Yi was born in Koesan of North Ch'ungch'ŏng Province and was the son of Yi Wŏnggŭng. He studied at a village school and moved to Seoul with his father when he was twenty. Seoul proved a dramatic change for Yi, as he was suddenly thrust into a situation where he was made acutely aware of both domestic and international issues. He endeavoured to learn foreign languages including Chinese, Japanese, English and French. In 1895 he entered the Public French Language School, from which he graduated in 1897. He was the first Korean to teach French. In 1906 he was appointed instructor at the Public French Language School and later served in various capacities at other educational institutions.

Yi also participated in the Buddhist enlightenment movement of the day as he strove to help improve the lot of Koreans through Buddhist educational activities. In 1915 with the head abbots of some thirty temples and fifty Buddhist lay people he helped form Kakhwang Temple in Seoul and at this time also established the Society for the Advancement of Buddhism (Pulgyo Chinhŭng Hoe). He also published various Buddhist magazines for the general public such as Pulgyo chinhŭng hoe wŏlbo (Society of the Advancement of Buddhism Monthly Bulletin) and Chosŏn pulgyo ch'ŏngbo (Korean Buddhist Bulletin).

In 1922 the Japanese Government General in Korea established the Korean History Compilation Committee (Chosŏnsa P'yŏngsuhoe) and for fifteen years Yi was its head. At the same time, he continued his collection of religious and folk data with the intent of preserving his findings for future generations. In 1931 he served as an instructor in Korean religions at the Central Buddhist College (modern day Dongguk University) and afterwards as editor in the compilation of Chosŏnsa (History of Korea) published by the Japanese Government General.

Yi's works have provided much valuable data for the study of Buddhism and Korean folk customs. His Chosŏn pulgyo t'ongsa (The Complete History of Korean Buddhism, 1918) provides comprehensive tome of Buddhism in Korea. Insofar as traditional Korean culture is concerned, Yi's works include Chosŏn shinhyŏ wŏllyu which covers traditional religious beliefs in Korea; Chosŏn shinhwago (Chosŏn Mythology Theory); Chosŏn sahŏesa (History of Korean Society), and Chosŏn togyosa (History of Korean Taoism). Yi's works supply important data for the study of many aspects of Korean society to the present-day and, not least, this points out his importance as a scholar of late Chosŏn and the colonial period.
Yi Pyŏnggi (1891-1968)

Yi Pyŏnggi was a poet. He was born in Iksan of North Cholla Province and his pen name was Karam. He attended Hansŏng Teachers' School and after graduation worked in various educational capacities. He was a teacher at Tonggwan and Hŭimun High Schools; a professor at Seoul National University and Dean of the College of Liberal Arts at Chŏnbuk National University. He was a member of the Korean Academy of Science and received its Award in 1960 and the Culture Award from the government of the Republic of Korea in 1962.

Yi began writing in the mid-1920s for the Tong-a Ilbo newspaper and magazines such as Chosŏn mundan. Yi dedicated his life to the promotion and development of the traditional poetic form of Korea, the shijo. He sought to increase the popularity of shijo by making this form more appealing to the public of the time. Thus, he began to infuse his shijo with modern elements and suggested the way that modern shijo should be directed to include modern emotions, subjects, and use new language and rhythm. He put forth his opinions through his thesis Shijo rŭl hyŏksin haja (Let's Renovate Shijo) published in the Tong-a ilbo newspaper in January 1932. Moreover, Yi attempted to move away from the tendency by some to compose excessively nationalistic shijo as a counter to the socialist literature being produced by the Korean Proletariat Artists Federation (KAPF). Yi believed that shijo should have universal values and appeal to a wide audience while displaying aesthetic values. This he contended would enable the form of shijo to survive any onslaught of Western culture, since this poetic form represented the essence of the Korean people. Finally, Yi reinforced the propagation of shijo with his efforts to establish a body of literature to form the basis for theoretical discourse.

Yi was largely successful in his attempts to increase the awareness of and range of shijo. His shijo collections include Karam shijo chip (Shijo of Karam, 1939, 1947) and the posthumous collection Namdo ajirangi (Shimmering Haze in the Southern Province, 1971). Among the critical works of Yi there are Karam munsŏn (Collected Writings of Karam, 1966), Kungmunhak chŏnsa (The Complete History of Korean Literature, 1952) and P’yojun kungmunhaksa (Standard History of Korean Literature, 1955).

Yi Saek (1328-1396)

Yi Saek (styled Mogûn) was renowned as one of the two greatest writers of the Koryŏ dynasty, the other being Yi Kyubo (1168-1241). As a child he was an outstanding student and passed the licentiate examination of the Sŏnggyun’gwan at the age of fourteen. When he was twenty, his father was appointed to an official post in China, and Yi Saek accompanied him. He studied for three years as a classics licentiate at the Guozijian. After returning to Korea, he won first place in the civil service examination and accompanied the Korean envoy to China as a recording officer. While there he gained second place in the higher civil service examination. He served in the Chinese government for a time and then returned to Korea, where he held political, academic and diplomatic appointments for some twenty years.

In 1361 he was appointed head of the Sŏnggyun’gwan and directed to reorganize and develop it. He devoted himself to this task and succeeded in raising the standards of scholarship and learning to a significant degree, particularly by inviting many prominent Confucian scholars to work there. However, following the coup d'état of Yi Sŏnggye in 1392, Yi Saek was banished to Hansan, South Ch’ungch’ong Province. After moving several times he died at the Sillûk Temple in Yŏju, Kyŏnggi Province, in 1396.
Yi Saek’s collected works entitled Mogun chip comprise fifty-five volumes of poems and other writings. This collection was published in different editions at various times between 1404 and 1686. The last extant edition was reproduced by the Taedong Cultural Research Institute of Songgyun’gwan University in 1961 as part of the Yogye myônghyông chip.

Yi Sang (1910-1937)

Yi Sang is the pen name of Korea's best known modernist writer. He was born Kim Haegyong in Seoul, the eldest of two boys and a girl. At the age of three he left his parents to live in the family seat with his uncle who was head of the main family line. In 1917 he entered Shinmyong school, advancing in 1921 to what was later to become Posông High School, from which he graduated in 1926. That same year he entered the architecture department at Kyōngsŏng Technical High School. After his graduation in 1929 he worked in the architecture section of the Government General's Home Affairs bureau. During this period one of his designs was selected for the cover of the journal of the Korean Architectural Society, Choson to kenchiku (Korea and Architecture). In 1933 Yi had to stop work because he was coughing up blood. After taking a short trip to a hot spring in Hwanghae province, he opened a coffee shop in central Seoul which was frequented by the likes of Yi T'aejun, Pak T'ae-won, and Kim Kirim. The following year this group of young writers, including Yi Sang, formed the Nine Member Society (Kuinhoe). They constituted the vanguard of the Modernist literary movement in Korea and shocked Korean society with their avant-garde writings. Yi's several attempts to run coffee shops all ended in failure, and in 1936 he briefly took a job at a publishing company. In June he married Pyŏn Tongnim and moved to Tokyo. In February 1937 Yi was imprisoned for 'impure thoughts' but was released on bail the next month because of bad health. In April he died of tuberculosis in Tokyo Imperial University Hospital. After his death his wife brought his remains back to Korea and had them buried in Miari public cemetery. However, no trace of them can now be found.

Yi Sang made his literary debut in 1930 with his novel December Twelfth (12 wŏl 12 il ). During his short but prolific writing career he produced not only novels but also poetry, essays, and short stories. Of the Nine Member Society Yi Sang was the most consistent and representative modernist, and as such his work reveals the anxiety and the fascination with the modern of Koreans in a rapidly urbanizing country in the 1930s. It also shows the influence of Japanese avant-garde literature and, through Japanese translations, Dada, Surrealist and Modernist works from Europe. However, Yi created his own original style from among all these diverse influences. Yi's most famous work is the short story 'Wings' (Nalgae; 1936) about a dysfunctional young man living parasitically off his wife's prostitution in a pill-induced haze. He spends his days holed up in their tiny two-room apartment playing with his wife's perfume bottles and cosmetics, hiding in the back room when her male friends visit. The story shows the negative side of urban life, probably reflecting Yi's despair at his own deteriorating health.

Yi's poetry is highly creative. He plays with words by arranging their position on the page, omitting spaces between them, and by including within the text mathematical symbols and words from other languages, such as English and French. A good example of this is the series of poems entitled 'A Crow's-Eye View' (Ogamdo; 1934). Because of his constant theme of suicide, split identity, and the macabre, some critics see a historical depth to his work as reflecting the alienation of the Korean artist under colonial rule.

Bibliography

Kim Jong-chool. 'The Literature of Exile: Yi Sang as a Short Story Writer.' Korea journal 8, no. 9 (1968):
Yi Sangjae (1850-1927)

Yi Sangjae was a politician, civil rights activist and youth movement participant of the late Chosŏn and early colonial periods. His family’s ancestral home is in Hansan, his courtesy name was Kyeho and his pen name was Wolnam. He was born in Sŏch’ŏn of South Ch’ungch’ŏng Province to Yi Hŭı’t’aek and his wife, daughter of the Miryang Pak family. Yi received a traditional education and married when he was fourteen. In 1867 he applied for the Civil Service Examination (kwagŏ shi) but did not pass due to the actions of corrupt officials who would pass only those who had paid a bribe. Yi’s early years were filled with images of the corrupt Chosŏn government, his country’s isolation from other nations and the stagnant nature of society. However, by the 1880s major changes were occurring in Chosŏn. In 1881 Yi was part of the so-called ‘gentlemen’s sightseeing group’ (shinsa yuramdan) that travelled to Japan in order to see the effects and results of Western society. This was to have a major effect in Yi’s outlook on the reforms needed for Chosŏn society.

After returning from Japan, Yi served in a variety of capacities in the Chosŏn government. With the establishment of the Postal Administration (Ujongch’ongguk) in 1884, the director of this office, Hong Yongshik (1855-1884), appointed Yi as junior official in the Communications Department. However, with the Coup d’Etat of 1884 (kapshin chŏngbyŏn), the Postal Administration was abolished. After this time Yi served in important posts and in 1887 was appointed secretary of Pak Chongyang at the first Korean embassy in America. By the time of his return to Korea from the United States, Yi had furthered his understanding of Western technology and had an interest in propagating this information in Korea. His associates in Korea included Sŏ Chaep’il and Syngman Rhee (Yi Sŏngman), who had the same beliefs in the necessity for modernisation and who also shared his Christian philosophy. Thus, when Sŏ formed the Independence Club (Tongnip Hyŏphoe) in 1896 Yi quickly joined.

The Independence Club sought to bring about both social and political change to Korea through the implementation of Western systems and educational activities. A symbol of its activities and philosophy was the building of the Independence Gate (Tongnip mun) in Western Seoul on the site where formerly the embassies from China were greeted and entertained. Other activities of this organisation were not symbolic but directed at increasing awareness among the people. Public debates were held and a newspaper, Tongnip shinnun, was published. Naturally, these activities invited the attention of the Chosŏn government, since the ultimate aim of the Club was to abolish the monarchy and institute a modern government. Accordingly, in 1908, the Chosŏn government prohibited activities by the Club and arrested sixteen members, including Yi Sangjae.

After the failure of the Independence Club, Yi turned his political attention to different outlets. At this time, with the help of American missionaries, he assisted the establishment of the Young Men’s Christian Association (YMCA) in Seoul in 1903. Here, nationalism and patriotism were imbued and members undertook various social welfare programs. After the March First Independence Movement in 1919, Yi was one of a group who took over the operation of the Chosŏn ilbo newspaper and used this as a platform to criticise the Japanese. He continued his anti-Japanese stance and the promotion of education for Koreans.
until his death in 1927. In 1962 he was posthumously awarded the Order of Merit for National Foundation by the government of the Republic of Korea.

**Yi Shik (1584-1647)**

Yi Shik was a mid-Chosŏn civil official. His family’s ancestral home is in Tŏksu, his courtesy name was Yŏgo and his pen names included T'aektang, Namgungwoesa and T'aekkugŏsa. He was the son of Yi Ansong who was a Fourth State Councillor (chwač'ansŏng). In 1610 he passed the Special Examination (pyŏlshī) and was appointed as Fifth Tutor (sŏlsŏ) at the Crown Prince Tutorial Office (Seja Shigangwŏn) in 1613. Subsequently, he was appointed as an Army aide (pyŏngma p'yŏngsa) in 1616, but in 1618 with the issue surrounding the deposing of the dowager Queen he retired from public life and retreated to Chip'yŏng in Kyŏnggi Province, where he concentrated on his studies.

In 1623 with the deposition of Prince Kwanghae (r. 1608-1623) and the enthronement of King Injo (r. 1623-1649), Yi again returned to life in officialdom. With his associates holding positions of high political import, Yi was appointed as Assistant Section Chief (chwarang) of the Board of Personnel (Ijo) and in the next year also served in such positions as Junior Sixth Counsellor (pusuch'an) of the Office of Special Counsellors (Hongmun'gwan) and Second Inspector (chipŭi) at the Office of the Inspector-General (Sahŏnbu). In 1625 he served as Third Minister (ch'amŭi) of the Board of Rites (Yejo), Sixth Royal Secretary (tongbusŭngii) and Fifth State Councillor (uch'anch'an) of the State Council (Ŭijŏngbu). In the following year he continued to be promoted to positions of higher rank and served as Headmaster (taesasŏng) of the National Academy (Sŏnggyun'gwan) and as Fourth Royal Secretary (chwabusŏngji). In 1633 he served as First Counsellor (puchehak) of the Office of Special Counsellors, in 1638 he was Director (taejehak) of the same office and also as Second Minister (ch'amp'an) of both the Board of Rites and the Board of Personnel. From 1643, he held office as Minister (p'ansŏ) of the Board of Rites, Board of Personnel and the Board of Punishments. However, in 1646 arising from questions that he prepared for the Special Examination, he was stripped of his official position and retired from government service.

Yi was renowned for his scholarship and along with Yi Chonggu (1564-1635), Chang Yu (1587-1638) and Shin Hŭm (1566-1628), is known as one of the ‘Four Great Men of Sino-Korean Literature’ (hanmun sadaega). Yi is highly praised for his knowledge of ancient Korean literature, and the ability to write poetry in all styles. Extant works include his literary collection T'aektang chip (Collected Works of T'aektang), and Susŏngji and Yasa ch'obon.

**Yi Sŏnggye (King T'aeto)**

[History of Korea; Society]

**Yi Sugwang (1563-1628)**

Yi Sugwang was a Confucianist and literary man. His family’s ancestral home is in Chŏnju, his courtesy name was Yungyŏng and his pen name was Chibong. His father was the Minister (p'ansŏ) of the Board of War (Pyŏngjo) and his mother was of the Munhwa Yu family. When he was sixteen he passed the preliminary civil service examination (ch'osŏ), one year before his father’s death. After observing the appropriate mourning period, Yi became a literary licentiate (chinsa) at the age of twenty and in 1585 he was appointed as Third Copyist (pujŏngja) of the Office of Diplomatic Correspondence (Sāngmunwŏn). Three years later he was appointed Librarian (chŏnjŏk) of the National Confucian Academy (Sŏnggyun'gwan) and in the following year served as Assistant Section Chief (chwarang) at the Board of Taxation (Hojo) and the Board of War. He also served as member of an embassy to Ming China during this period.
When Yi reached thirty years of age in 1592, the Japanese invaded Korea and he was engaged against the enemy in the Kyongsang Province. In 1597 he was appointed as president (taesasong) of the National Confucian Academy and later in the same year he was part of another official embassy to Ming China. In 1602 while serving as First Counsellor (pujehak) of the Office of Special Counsellors (Hongmun'gwan) he edited Kogyong chuyok (Ancient Classic, Book of Changes), in the next year edited Chuyok onhae (Book of Changes, Korean Annotated Edition) and in the following year also edited Sagi (Historical Records). In 1611, he again travelled to Ming China on an official embassy mission for the third time, but upon his return he was caught up in the mass purge of 1613. However, with King Injo's ascension to the throne in 1623 he again resumed his life in officialdom. He served in various positions including Minister of the Board of Personnel (Ijo) in 1628 until his death at the end of that year.

Yi’s extant works include his thirty-one volume anthology Chibong chip (Collected Works of Chibong) that recounts the turbulent era in which he lived, and Chibong yusol (Topical Discourses of Chibong) a twenty-volume encyclopaedic collection that covers a variety of topics and was the first work of its kind in Korea. Yi is widely acclaimed as the first of the shirhak (practical learning) scholars to pay close attention to history. Moreover, his work served as a foundation for subsequent shirhak scholars, such as Yi Ik (1681-1763) and Hong Manjong (1643-1725) to expand upon and thus he can be viewed as the forerunner of the shirhak school of thought.

Yi Sünghun (1756-1801)

Yi Sünghun was the founder of the Catholic religion in Korea and the first Korean to be baptised. His baptismal name was Pedro; his family’s ancestral home is in P’yöngch’ang; his courtesy name was Chasul and his pen name was Manch’ön. Yi’s father was a high-ranking government official who was born in Seoul. In 1780 Yi Sünghun passed the chinsa (literary licentiate examination) but he did not enter government service and instead devoted himself to the pursuit of scholarship. He travelled to Beijing where he studied Western Learning and it was around this time that he became acquainted with Yi Pyök who introduced him to Catholicism.

In 1783 Yi accompanied the winter solstice embassy to Beijing and spent about forty days in China, where he studied the Catholic doctrines under the missionary Jean Joseph de Gramont and was eventually baptised, becoming the first Korean to have done so. In 1784, he returned to Korea bringing with him many writings explaining the Catholic faith. Back in Korea he baptised Yi Pyök and Yi Kahwan among others. After this, in consultation with Yi Pyök and others, he began to hold services in the house of Kim Pömu, a chungin (middle-class professionals), and thus, the first Korean Catholic Church, which consisted only of laymen, was established. In 1785, these church leaders, under a provisional ministry system, decided to conduct mass, penance, confirmation and other sacraments. Ten people were appointed including Yi and Kwön Ilsin, and this group assumed authority to conduct the sacrament of confirmation. Soon, however, it was realized through a doctrinal book that the sacraments performed by them constituted both illegal and sacrilegious conduct. Therefore, they ceased conducting the sacraments pending advice from the Beijing church, to which they had despatched a secret envoy.

At the end of 1789, Yun Yuil, (the secret envoy of the Korean church), went to Beijing with the winter solstice embassy of the Chosôn government, delivered a letter from Yi to a Beijing missionary, and returned to Korea with his reply. The fledging Korean church was advised to find a way to bring in a missionary as soon as possible in order to conduct the sacraments. Yun Yuil was once more sent to Beijing for this purpose. Eventually, in 1795, the Chinese priest Zhou Wenmo came to join the Korean church, but severely limited his activities, since the Chosôn authorities were aware of his presence. Shortly following, the so-called Persecution of 1795 (Ülmo shil’po sakkôn) took place and many of those who
had been active in the Catholic Church were either executed or exiled. Yi Ŝunghun was among the exiled -- banished to Ch'ungch'ŏng Province. He was eventually freed, but with the ascension of King Sunjo (r. 1800-1834) to the throne there began a new wave of persecution against the Catholics. So, with the Persecution of 1801 (shinyu saok), Catholicism in Korea was dealt a crushing blow and Yi was among those executed in this large-scale purge.

Yi’s literary collection Manch’ŏn yugo (Posthumous Works of Manch’ŏn) is extant. His son and grandson continued Yi’s aspirations for the spread of Catholicism in Korea and as a result were both martyred in 1868. In addition, in 1871 two of his great-grandsons were also martyred at Chemulp’o. Yi’s legacy is his devotion to the spread of the Catholic faith in Korea.

Yi Ŝunghyu (1756-1801)

The author of Chewang un’gi (Rhymed Record of Emperors and Kings) and Naejŏn nok, Yi Ŝunghyu (styled Tongan kŏsa) (1224-1300) was born in Kari county, Kyŏnsan Prefecture (the present Sŏngju), North Kyŏnsang Province. After passing the higher civil service examination in 1252, he spent some ten years in seclusion on Mt. Tut’a. He then entered the government service and in 1273 was appointed Tobyŏngmaroksa (the Supreme Commander of the military forces). In the same year he was sent to the Yuan court as secretary to the King’s envoy. It is recorded that Hou You Xian, a Chinese official, was greatly impressed by Yi’s outstanding talent as a poet. He was sent a second time to the Yuan court, and eventually in 1298 became the Sungmun'gwan haksa (Royal Counsellor), the highest government official of his time. After he retired from government service, he returned to Mt. Tut’a, became a devout Buddhist, and devoted himself to books and writing. He was highly regarded both as an able government official and as a Buddhist scholar.

Yi Sungin (1349-1392)

Yi Sungin (styled Toun) was born in Sŏngsan, North Kyŏnsang Province, and he was regarded as a bright and talented student. He was taught the Chinese classics, and later became well versed also in the Buddhist scriptures and the works of Laozi and Zhuangzi. Yi Sungin passed the higher civil service examination when still very young and was appointed to prominent political and academic posts. He was influential in the reconstruction of the Sŏnggyun’gwan and in the appointment of Yi Saek as its head. He also taught there and, along with such noted scholars as Chŏng Mongju, Kim Kuyong and Pak Úijung, promoted and developed classical studies. As a teacher, he was praised for the depth of his learning and the clarity of his exposition.

He was well known for his ability in writing diplomatic documents and while he was a privy councillor he was sent to China as the King’s envoy. However, due to his association with Chŏng Mongju, he was banished to Sunch’ŏn in the far south after Chŏng’s assassination, and he himself was assassinated at the age of forty-three, while in exile.

Yi Sungin’s collected works entitled Toăn chip were published in two volumes in 1406. A later edition consisting of three volumes of poems and two of other writings was published by the Taedong Cultural Research Institute of Sŏnggyun’gwan University in 1961 as part of the Yŏgye Myŏnghyŏn chip.

Yi Sungman, Dr (see Rhee Syngman)

Yi Sunshin, Admiral (1545-1598)
Yi Sunshin was a famous admiral of the Choson period. His family’s ancestral home is in Tóksu and his courtesy name was Yóhae. He was born in Seoul and in his adolescence showed a considerable interest in the military arts. Yi became a fine archer, and developed a keen interest in military strategy that was unusual for one so young. He accomplishments included the diverse skills of horseman and writing. By the age of twenty-one he began formal training in the military arts by serving as an apprentice to various armourers, and soon took the military examination (mugwa). However, in his first attempt in the examination he failed the portion on horsemanship as he fell off his mount. Thus, for the next four years he devoted himself to passing the next scheduled military examination, successfully completing it in 1576, following which he took-up a position as an official in the Military Training Administration (Hullyónwon). Yi continued his rise in the military hierarchy of Choson, holding diverse positions, including that of Second Deputy Commander (ch’ómjŏl chesa) of Manp’o, before being appointed as Commander of the Left Cholla Naval Station (Chólla chwado sugunjŏldosa) at the age of forty-seven.

The year after Yi was appointed to his post in Cholla Province, the 1592 Japanese Invasion occurred and it was at this time that Yi made his greatest contribution to Choson. After being commissioned as Commander, Yi strongly realised the importance of strengthening the Choson naval forces, and in particular focused his energies on the development of warships and their crews. It was at about this time that he developed the ‘turtle ships’ (kóbkusŏn) that gave Choson a clear advantage over Japan in naval strength. These ships were based on the design of warships already in use in Choson, but to this he added protective shields (it is not clear whether these were iron-plated) dotted with spikes to prevent the enemy from boarding the vessels. Moreover, Yi placed cannons around the circumference of his ships, so the enemy could be attacked from every quarter. With these formidable naval weapons at his command, Yi set his sights on the Japanese fleet. The first encounter was at the port of Okp’o where Yi crushed the enemy. He followed this with decisive victories at Tangp’o, Tanghangp’o, Hansan Island and Pusan. In particular, Yi’s victory in the waters around Hansan Island is counted as one of the three great achievements of Choson during the invasion. Yi’s superior weaponry and command skills gave control of the sea-lanes to Choson and prevented the Japanese naval forces from linking up with their land forces as they pushed northward. Moreover, he protected the grain-rich Cholla region from the invaders, thus ensuring a food supply for the Koreans.

Although Yi’s success against the Japanese naval forces was instrumental in limiting the effectiveness of the Japanese invasion, due to political infighting in the Choson court he was removed from his post as Commander in 1595 and replaced by Wŏn Kyun. At this time the Choson forces had effectively pushed the Japanese into the area of Kyŏngsang Province and were negotiating a peace settlement. However, in the absence of Yi, the Japanese navy was successful in its naval campaign and was able to defeat the Choson navy. The government was alarmed at this and quickly reinstated Yi to his former position. With a flotilla of only a dozen warships, Yi then attacked the Japanese fleet as it was sailing towards Mokp’o and overwhelmingly annihilated it. The Japanese now found themselves under siege on both land and sea with nowhere to turn. With the death of Toyotomi Hideyoshi in 1598, the Japanese forces withdrew from Korea. Yi, however, continued to attack the retreating Japanese navy until the very end, and was killed by a stray enemy shot in the seas off Noryang.

Yi’s is arguably the most famous war hero of Korea and his efforts in the face of the Japanese invasion played a key role in preventing the fall of Choson. His own chronicle of the war is contained in his work Nanjung ilgi and this, along with his literary collection Yi Ch’ungmu kong chŏnsŏ (The Collection of Admiral Yi Ch’ungmu), which was compiled and published in 1795 by royal edict, are extant. His heroic deeds were again brought to the forefront of the Korean public’s consciousness in the face of another infringement by the Japanese on the sovereignty of Korea at the end of the nineteenth c. in Shin Ch’aeho’s
Yi Sunshin ch'on. (The Story of Yi Sunshin). There are many monuments throughout Korea extolling Yi’s heroic deeds, including a stately statue of the admiral and his turtle ship on Sejong Road in the heart of Seoul.

Yi Tal  

Yi Tongwhi (1872-1935)

Yi Tongwhi was an independence fighter of the late Choson and colonial periods. He was born in Tanch’ŏn of Hamgyŏng Province and his childhood name was Sŏngjae. From the age of eight he studied Chinese and when he was eighteen he travelled to Seoul. There he became acquainted with Yi Yongik (1854-1907) and enrolled in Kungwan Military School. After graduation he joined the army and was commissioned with the rank of major (ch'amryong). With the 1907 Korea-Japan new agreements (Han-il Shin Hyopyak) he was sent to Kanghwa Garrison and shortly thereafter, as the Japanese forced Chosŏn to disband her army, he lost his commission. Thus in 1909, along with his comrades Yŏn Kiu and Kim Tongsu, he conspired to form a guerrilla army on Kanghwa Island. The authorities discovered this and he was exiled, but due to the efforts of the American missionary D. A. Bunker he was reinstated shortly. In the same year Yi and fellow patriots -- An Chi’angho (1878-1938) and Yi Tongnyŏn (1869-1940) -- formed the New People’s Association (Shinmin Hoe) and began both the work of enlightening the Korean people and of opposing the Japanese in Korea. However, the operations of this organisation were brought to a halt with the so-called Case of the One Hundredand Five (paegoin sagon) as the Japanese arrested many of those involved in the association. Other enlightenment activities of Yi included the founding of a school on Kanghwa Island with D. A. Bunker and the creation of an aid society for youth from the Hamgyŏng area.

As it became increasingly difficult for Yi to carry out his activities within Korea, he fled to Manchuria in 1915. There he formed the Korean People’s Socialist Party (Hanin Sahoe Tang) and also participated in the Korean Provisional Government (Taehan Min’guk Imshi Ch’ongbu) after its formation in 1919. Yi’s ideology was more akin to socialism and in 1920 he helped form the communist faction of the Korean Provisional Government. Moreover, in 1921 he changed the name of the Korean People’s Socialist Party to the Koryŏ Communist Party (Koryŏ Kongsan Tang). Yi continued to carry out his independence activities, travelling to Moscow in the same year, where he obtained financial aid to the extent of about two hundred million Russian roubles from the Soviet leader Lenin. However, of this money Yi appropriated some forty million roubles to fund the formation of the Koryŏ Communist Party and when this was detected by the Korean Provisional Government he was forced to resign his post as prime minister.

During this period, Yi was engaged in independence activities in Manchuria and Jiandao (Kor. Kando) as well as in other regions. Late in 1920 the Japanese army drove the independence forcs of Yi from the Jiandao area and they retreated to Siberia, where Yi eventually died in 1935. Yi is remembered as the leader of the communist movement within the Korean independence forces and for helping strengthen this ideology among Koreans. Moreover, Yi brought the Korean cause to the international stage and secured the aid of the Soviet Union, at least financially, for the Korean revolutionary cause.

Bibliography

Yi Tongin (?-1881)

Yi Tongin most likely came from Samsŏng hermitage at T’ongdo temple in South
Kyongsang Province, near Pusan. He was a Buddhist monk who became a central figure in the *Kaehwap'a* (Enlightenment Party) which developed in the late 1870’s around nascent political luminaries such as Kim Okkyun, Sŏ Chaep’il (Dr Philip Jaisohn), and Pak Yonghyo. The intellectual centre of the group seems to have been a doctor of Chinese medicine, Yu Honggi (styled Taech’i), who was an exponent of Buddhism and an advocate of modern, scientific learning, and it was probably he who introduced Yi to the other members. Although Yi’s involvement lasted only three years, he had a marked influence on both the *Kaehwap’a* and the tumultuous final years of the Chosŏn dynasty.

In the aftermath of the military/naval actions by France (1866) and America (1871) on Korean soil, the conservative faction of the royal court instituted a strict policy of national isolation, but in 1876 Japan compelled Korea to sign the *Treaty of Kanghwa* which stipulated that Korean ports be opened to Japanese trade. In short order Japanese residents came to Korea, and while they lived within their own enclaves, the conservative policies of the Korean government no longer could be enforced so easily.

Okumura Enshin, a Japanese Buddhist monk and missionary of the *Jōdo Shinsū* (True Pure Land Sect) *Higashi Honganji* (Eastern Temple of the True Vow) arrived in Pusan in 1877 where he quickly established a branch temple. He attracted considerable attention from Korean monks and lay-believers alike, and in mid-1878 Yi came to the Honganji headquarters in Pusan. He visited sporadically over the next several months, and the diary which Enshin kept suggests that Yi was intelligent and concerned with both Korea’s fate and that of Korean Buddhism. In December 1878, Yi spent four days with Enshin, two of which were spent in discussing the ‘national protection’ of Korea and the ‘promotion of Buddhism’. The two men also exchanged gifts, and Yi was allowed on board a Japanese battleship.

Yi subsequently went to Seoul where he encountered the other members of the *Kaehwap’a*. Sŏ’s biography records that Yi was well-spoken and that he gave the impression of being extremely learned. He had a copy of a Japanese text on world history, the *Bankoku shiki*, which especially caught Kim Okkyun’s attention.

Sensing the opportunities which Yi could provide, Kim Okkyun supported him with funds, and some two months later Yi returned to Pongwŏn temple with photographs and many Japanese books on physics, chemistry, geography and history. They met at the temple to study these 'heretical' texts in secret, and later, for fear of being discovered, they moved to another temple. Nevertheless, it was the time at Pongwŏn temple which Sŏ Chaep’il regarded most highly; "The monk Yi Tongin read us those books and brought us those thoughts. The days spent at Pongwŏn temple were indeed the 'nursery' of the *Kaehwap’a*.”.

In August 1879 Enshin returned to Pusan and found Yi waiting with four round bars of gold given to him by Pak Yonghyo. With Enshin’s help he arrived about one month later at the main temple of the Higashi Honganji in Kyoto where he devoted himself to studying Buddhism and Japanese. Several months later, in 1880, he became a *Shinshū* monk.

In mid-1880 Yi went to Tokyo, where he continued his study of Japanese and forwarded a wide variety of books and materials to Kim through Enshin. At this time he was introduced to Fukuzawa Yukichi (1835-1901), the prominent intellectual who championed Japan’s modernization during the Meiji period, and spent time at Fukuzawa’s private academy, the Keiō Gijuku. He also attended the *Kōa-kai* (Asia Development Meeting) in which means of Asian resistance to the Western Powers were discussed, and thereby met a wide variety of people who had influence in Korean political and economic affairs. Through these contacts he learned much about the political situations of Japan, Korea, and the rest of the world.

In August 1880 Yi’s life reached a turning-point, when he was introduced to Kim Hongjip,
the second Korean Diplomatic Envoy to Japan. Yi came to meet Kim wearing Japanese
clothes, and speaking at length in both Japanese and Korean, he gave detailed analyses of
Japanese, Korean, and world affairs which surprised Kim with their precision and insight.
Kim was under the impression that Yi was a Japanese, and it is said that upon learning that
Yi was indeed Korean, that he was friends with Kim Okkyun and Pak Yonghyo, and had
secretly left Korea to study in Japan, Kim nearly wept as he took Yi's hand and
roared, "Korea still has such a fine man!"

After one year in Japan, Yi returned to Korea in September 1880 where he was quickly
introduced by Kim Hongjip to the queen's nephew, Min Yongik, who was so impressed
that he invited him to stay at his home. Yi was also given an audience with King Kojong,
and upon the urgings of Kim Okkyun and Pak Yonghyo, the king decided to despatch Yi to
Japan as a 'secret envoy'.

Out of fear of the conservative faction, all arrangements were made secretly by Enshin from
his newly-built temple in Wonsan. He secured Yi's passage on a Japanese warship, and Yi
embarked on 4 November 1880, a little over a month since he had returned from Japan. He
stayed in Japan just over a month, and it seems that the purpose of his visit was to meet
with the Chinese Diplomatic Minister residing in Japan and to begin preliminary talks related
to a treaty between Korea and America.

He returned to Korea on 18 December and with money borrowed from the Honganji, he
sent ceramics, textiles, and other new-style, industrially-manufactured products to the
imperial household. He was also arrested by a local magistrate on the plea of the
conservative faction, but Yu Taech'i quickly came to his aid and the two arrived in Seoul at
the beginning of January 1881.

Based on his consultations in Japan, Yi completed a draft which became the basis for the
Corean-American Treaty of Amity and Commerce which was later signed in 1882. He was
also immediately appointed to the Pyolsogun'gwan, a military office of elite soldiers, and in
this capacity he was shortly thereafter made an adviser in King Kojong's newly­
established T'ongni kimu amun (Office for the Management of State Affairs).

Yi's position in the military office gave him direct access to the king who was planning the
Shinsa yuram tan (Gentlemen's Sightseeing Mission) which was to leave in April 1881 for
an inspection of modern Japanese institutions. Although the plans surrounding the mission
were made in secret, it is clear that sometime in early to mid-February the king ordered Yi to
lead the group and to make the relevant preparations. Furthermore, he charged Yi with
carrying-out a secret mission during the trip: to purchase guns including artillery pieces, and
warships with public bonds to be issued in Japan by the Korean government.

It seems that Yi was given full authority over these matters, and on 20 February he met the
Japanese minister Hanabusa and reaffirmed his plans. A Japanese Consul document dated
21 February stated that, 'Yi Tongin, seven other gentlemen, and a retinue of thirty-five
servants left [Seoul]'. The document was well wide of the mark..

That same evening Yi appeared at the Japanese Consul and said that, as he had some last
minute business to finish in Seoul, he would leave the following day and meet the other
seven gentlemen in Pusan. Their wait was pointless, however, Yi simply vanished without
trace.

Based on Japanese records, it is known that Yi disappeared sometime between 21 February
and 15 March 1881. Judging by a photograph taken early in 1881, we can guess that he
was then in his thirties. It is assumed he was assassinated, and although there are many
theories, none of them is any more credible than the other.
Nevertheless, the connections which Yi created between the *Kaehwap’a*, the Higashi Honganji, and Fukuzawa Yukichi proved durable and remained intact for some nineteen years. With Fukuzawa’s assistance, Kim laid the basis for the attempt at overthrowing the government in 1884 (*Kapsihn chongbyon*), and during his subsequent decade-long exile in Japan, he was given considerable help by Fukuzawa. Pak Yonghyo, who underwent several political exiles to Japan, was cared for until 1897 by Okumura Ioko, a Honganji nun, missionary and political activist, who was the younger sister of Enshin.

**Yi Tŏngmu** (1741-1793)

Yi Tŏngmu was a *shirhak* (Practical Learning) scholar of late Chosŏn. His family’s ancestral home is in Chŏnju, his courtesy name was Mugwan and his many pen names included Hyŏngam, Ajŏng, Ch’ŏnghanggwan, Yŏngch’ŏ and Tongbang ilsa. Since Yi was the son of a concubine, he was not able to secure a good position in Chosŏn officialdom despite his erudite scholarship. He was educated mainly at home and displayed unusual talent in his boyhood. By the age of six he could compose prose in classical Chinese and from his early twenties his poetry, along with the work of Pak Chega (1750-1805), Yu Tŭkkong (1749-?) and Yi Sŏgu (1754-1825), was published in *Kŏnyŏn chip*, which resulted in him gaining widespread fame as a poet. In addition, he was closely associated with the School of Northern Learning and the scholars Pak Chega, Yu Tŭkkong, Pak Chiwŏn (1737-1805) and Hong Taeyong (1731-1783) et al. However, in his opinions on economic reform, his views differed from School of Northern Learning opinion. He favoured more philosophical inquiry into reform rather than a desire to hasten reform. Thus, he continued his research into the Chinese classics, thereby seeking a solution to the needed economic reform for Korea.

In 1779 Yi, along with Pak Chega, Yu Tŭkkong and others, was appointed to an official position in the Kyujanggak Library by King Chŏngjo (r. 1776-1800). For fourteen years he conducted research in this position and became well acquainted with many of the scholars of Chosŏn. Additionally, he worked on the compilation of numerous works while at the Kyujanggak Library including *Kukcho pogam* (Precious Mirror for Succeeding Reigns), *Kyujanggak chi* (Record of the Kyujanggak) and *Hongmun’gwan chi* (Record of the Office of the Special Counselors) among many others. Yi continued to be active in his scholarship up until his death in 1793 and had a major influence on the development of the *shirhak* thought of his day. His extant literary works are numerous and include *Kwandok ilgi*, *Yŏngch’ŏ shigo* (Poetry Collection of Yŏngch’ŏ) and *Yŏngch’ŏ mun’go* (Literary Works of Yŏngch’ŏ).

**Yi Ŭn** (1897-1970)

Yi Ŭn was a member of the Chosŏn royal family and the last crown prince of the Great Han Empire (1897-1910). He is of the Chŏnju Yi family and was the seventh son of King Kojong (r. 1863-1907) and the half brother of King Sunjong (r. 1907-1910). He is also called by the titles of King Yŏngch’ŭn and King Yŏng. In 1900 he was given the title of Yŏngwang and in 1907 was enfeoffed as crown prince. In the same year he was taken hostage to Japan, with the Japanese pretending to the Koreans that he was there to study at the behest of the Resident General Ito Hirobumi. With the loss of sovereignty to Japan in
1910 and Sunjong’s dethronement, Yi became the de facto king of Korea. In 1920 under the Japanese plan to assimilate the Chosón royal family into the Japanese one, Yi married the youngest daughter of Nishimoto, Masako. When his elder half-brother Sunjong died in 1926, Yi formally became the king of Chosón and thus he was taken to Japan and not allowed to return to Korea. While in Japan Yi received a Japanese education and attended the Japanese Military Academy.

After liberation in 1945 Yi desired to returned to Korea, but faced with the Korean political situation and diplomatic relations between Korea and Japan he was not able to do so. On one hand, Yi was viewed as a member of the defeated royal family of Japan by Koreans, and on the other he was seen as a Korean-Japanese by the Japanese and thereby subjected to hardship in Japan. In 1965 with the normalisation of Korea-Japan relations, Yi was able to return to Korea. However, he suffered a cerebral thrombosis and lost the ability to speak. He died in 1970 and his wife, who had the Korean name of Yi Pangja, died in 1989. The couple is buried together in Miguk City of Kyonggi Province.

Yi Wanyong (1858-1926)

Yi Wanyong was a government official, pro-Japanese politician and traitor to Korea of late Chosón. His family’s ancestral home is in Ubong, his courtesy name was Kyŏngdŏk and his pen name was Ildang. He was born in Kwangju City of Kyonggi Province. In 1882 he successfully sat for the Augmented Examination (ch'unggwan pyŏlsli) and held various official positions such as Sixth Counsellor (such’an) at the Office of Special Counsellors (Hongmun’gwan) and Legal Secretary (kŏmsang) of the State Council. In 1886 he entered an academy to study English and received a Western-style education. Following this, in 1887, he accompanied Pak Chŏngyang, an envoy, to the United States and after he returned to Korea in the following year held a succession of official positions such as Sixth Royal Secretary (tongbusingji) of the Royal Secretariat and Third Minister (ch’amŭi) of the Board of Personnel (Ijo). He again travelled to the United States at the end of 1888 and was appointed as charge d’affaires of the Chosón legation before his return to Korea in 1890. Back in Korea, Yi continued his rise through the Chosón officialdom holding such positions as Second Minister (ch’amp’an) of the Board of Punishment (Ijo) before being appointed to the cabinet of Kim Hongjip (1842-1896) in the aftermath of the Reform of 1894 (Kabo kyongjang).

As the political situation in Chosón continued to degenerate, Yi became primarily attached to the pro-Russian faction while still remaining in favour with those that supported Japan. After the assassination of Queen Min (1851-1895) Yi served on the pro-Russian cabinet that arose after King Kojong (r. 1863-1907) fled to the Russian legation. Russia’s influence in Korea, however, did not last long and after being defeated by Japan in the 1904-5 Russo-Japanese War, disappeared altogether. Nonetheless, Yi continued to hold powerful positions and in 1905 was appointed Minister (taeshin) of the Ministry of Education (Hakpu). At this time Yi struck a deal with the Japanese Resident General Ito Hirobumi and with the treaty-making powers that he had concluded the Protectorate Treaty of 1905 (Ulspa poho choyak) that in essence ceded the sovereign power of Korea to Japan in matters of foreign affairs. For this traitorous act, Yi is remembered as one of the ‘Five Traitors’ (ulspa ojŏk). However, Yi was to commit an even greater crime against Korea as he continued to rise in the pro-Japanese government of this period. By 1907, he had assumed responsibilities as Prime Minister of the Greater Han Empire, and was in office when King Kojong (r. 1863-1907) abdicated the throne to his son Sunjong (r. 1907-1910). Japan continued to solidify her position in Korea and with the appointment of General Terauchi Masatake as Resident General in 1910, her intent to annex Korea was patently clear. Yi had long been the target for the outrage of the Korean nationalists, with his house razed by an enraged mob after the abdication by Kojong and the attempted assassination of Yi Chae-myŏng in December 1909. Yet, through Korean eyes, no punishment could suffice his betrayal of the Korean nation when he signed the annexation agreement in 1910. Yi is by far
one of the most despised traitors in the history of the Korean nation for his action in the selling out of Korea to Japan. His only concern in signing the treaty was to protect the positions of the royal household and his fellow conspirators, and this is the legacy he has left to subsequent generations of Koreans.

**Yi Yangha** (1904-1963)

Yi Yangha was a scholar of the English language and an essayist. He was born in South P’yŏngan Province and in 1923 graduated from P’yŏngyang High School. He then travelled to Japan for further study and eventually graduated from the English Literature Department of Tokyo Imperial University in 1930. He then attended graduate school in Japan before returning to Korea and taking-up a position as lecturer at Yŏnhŭi College in 1934. From 1942 he was appointed as professor in the Literature Department of the same where he also published various papers on English literature. In 1945 he took a position as professor at Kyŏngsŏng University and in 1950 was appointed as professor at the College of Arts and Sciences of Seoul National University. In 1951 he travelled to the United States for research at Harvard University and in 1953 collaborated with Samuel Martin of Yale University to publish *Hanmi sajŏn* (Korean-American Dictionary). After returning to Korea, he was appointed as acting Dean of the College of Arts and Sciences of Seoul National University in 1958.

Yi’s writings are varied and range from those that display his creative talents to translations and academic works. His essay collections, *Yi Yangha sup’i chip* (Essay Collection of Yi Yangha, 1947) and *Namu* (Tree, 1964), reveal the range of his writings and creative genius. The former work in particular is considered as one of the most important in the history of the modern essay in Korea. Yi was also a prolific translator and thus introduced many English titles to Korean audiences.

**Yi Yongik** (1854-1907)

Yi Yongik was a politician of the late Chosŏn and Han periods. He was born in Myŏngch’ŏn of North Hamgyŏng Province. Since he was the son of a commoner he educated as only in the local sŏdang (village school). Yi left home and worked as a peddler and through his hard work was able to accumulate an amount of capital, which he invested in a gold mining operation that made him quite wealthy. At the time of the outbreak of the Military Mutiny of 1882 (Imo kullan), Yi was entrusted with secretly contacting members of the Min family (the relatives of Queen Min (1851-1895)), who were the objects of the mutiny. With the recommendation of Min Yongik he met King Kojong (r. 1863-1907) and thus began his rise in Chosŏn politics. By 1897 he was selected as High Minister (kyŏng) of the Crown Property Office (Naejang’wŏn). In this position Yi was charged with managing the royal family’s ginseng fields and mines, and through his effective administration the royal family’s wealth was increased. Yi also was head of the Mint (Chŏnhwan’guk), but in the end his efforts to create a new coinage and monetary reform failed.

Yi’s humble birth had denied him the traditional Confucian education and this left him unacquainted with the workings of the political sphere. However, he was honest and sagacious; qualities which helped him to succeed in politics. Yi was in the vanguard of the modernisation efforts of this age, and he became the head the government agency charged with the construction of the Seoul-Ŭiju railway. He also contributed to the reforms in the operation of the royal household and palace. Other innovations that Yi was responsible for include the establishment of local enterprise offices in the provinces and the foundation of a munitions factory. Moreover, in 1898 he introduced a modern lithographic printing press to the government for printing stamps. In short, Yi was a visionary who tried to implement a wide range of innovations to the floundering Korean State.
Yi was associated with the pro-Russia anti-Japan political faction of the Han government. With the outbreak of the Russo-Japanese War of 1904-1905, Yi was seized by the Japanese and taken to Japan and forced to proclaim an appeasement line. He returned to Korea in 1905 to oversee the construction and operation of the various railways in Korea, now controlled by Japan. While in Japan Yi had been exposed to a modern and advanced culture, which he desired for his own country. One result of this was his establishment of the Posong School in Seoul, which he hoped would help bring about the enlightenment of his countrymen. However, with the singing of the Protectorate Treaty of 1905 (Ulsa poho choyak), which enabled Japan to effectively wrest Korea’s sovereignty from her, Yi fled his homeland. He wandered to Europe and back to Asia while continually working for the salvation of the nation. He never returned to Korea and died in Vladivostok in 1907.

**Yijo hugi üi sahoe wa yŏn’gu (A Study of Society in the Late Chosŏn Dynasty)**

Yijo hugi üi sahoe wa yŏn’gu is a 412-page work written by Han Ugun and published in the sixteenth volume of Han’guk munhwa ch’ongso (Korean Culture Series) in 1961. This work centres on the ideology of the early eighteenth century scholar Yi Ik (1681-1763) against the backdrop of his age. The contents are a series of previously published theses that address the social economy of Chosŏn, the ideology of Yi Ik, the impact and repercussions of the introduction of Catholicism into Korea, the shirhak (practical learning) ideology and a study of the ideology of Yu Hyŏngwŏn (1622-1673). This work provides a thorough explanation of the ideology and resultant social conditions that dominated the late Chosŏn period.

**Yijo kon’guk üi yŏn’gu (A Study of the Foundation of the Chosŏn Dynasty)**

Yijo kon’guk üi yŏn’gu is a 240-page work that was written by Yi Sangbaek and was published in 1949 by Eul Yoo Publishing Company. The contents are divided into six chapters and nineteen separate headings. Many aspects of the fall of Koryŏ and the rise of Chosŏn are covered by the author such as the role of political strife in Koryŏ, the part of land reform in the fall of Koryŏ and the actions of Yi Songgye’s political faction at the end of the Koryŏ period. Particularly notable among the contentions of the author is that the land reform at the end of the Koryŏ period provided the most important basis for the foundation of Chosŏn.

**Yŏ Unhyŏng (1886-1947)**

Yŏ Unhyŏng was a politician and independence fighter of colonial Korea. His family’s ancestral home is in Hamyang, his childhood name was Mongyang and he was born in Yangp’yŏng of Kyŏnggi Province. Yŏ was married at the age of fourteen but his wife died just four years later. After her death he was remarried to a daughter of the Chin family. When he was fifteen he entered the Paejae Academy and after one year transferred to the private Hŭngwa School, and again in 1903 transferred to the public Uch’e School. However, one month before his scheduled graduation he stopped attending school. In 1907 he studied the Bible and became a Christian, and in the following year became acquainted with the American missionary C.A. Clark. It was with Clark’s assistance that Yŏ was able to establish the Christian Kwangdong School in 1909. Yŏ continued his studies and entered the P’yŏngyang Presbyterian Theology School in 1911, but he did not complete his studies once again and withdrew from school. In 1914 he travelled to Nanjing China where he entered Jinling University and took a major in English literature. However, as had become common for Yŏ he transferred to another school in Shanghai in 1917 and then for the most part stopped attending school.

In 1918 he rallied his fellow Koreans in Shanghai and formed the People’s Party (Min Tang) and began to make preparations to join the movement to regain Korea’s sovereignty. With the formation of the Korean Provisional Government (Taehan Min’guk Imshi
Chōngbu) in Shanghai in March 1919, Yō entered the next stage of his political life as he was appointed to this government as a representative. Yō was also active in other political bodies and joined the Soviet Communist Party in 1920 and attended a large conference organised by this body in Moscow in the following year. He likewise organised the Korea-China Mutual Aid Society (Han-Chung Hojo Sa) and in 1922 he planned and co-ordinated the Labour-Military Conference (Nobyōng Hoe). In 1924 he joined the Chinese Citizen’s Party (Chungguk Kungmin Tang) and to further the Korean independence movement he conducted guerrilla activities as a member of the Southern Region Revolutionary Army (Nambang Hyōngmyōng Army). Due to his activities against British colonial policy in China he was arrested by the British and conscripted in their army in 1929, and was finally discharged in 1932. The following year he took office as president of the Chosōn Chungang Ilbo Sa, which published the Chosŏn chungang ilbo newspaper, and carried out his anti-Japanese activities through the newspaper. However, in 1936 the Japanese government closed the newspaper. In the final years of the colonial period, Yō helped form two organisations that sought to make preparations for Korea’s impending independence. In September 1944 the Chosŏn Foundation Alliance (Chosŏn Kŏn’guk Tongmaeng) was founded and in October the Farmer’s League (Nogmin Tongmaeng) was established.

After liberation in 1945 he helped found the Committee for the Preparation of Korean Independence (Chosŏn Kŏn’guk Chunbi Wiwon) and served as its leader. Yō felt it was necessary to form an alliance of political groups of all ideologies. However, the political groups from the right withdrew from this organisation and thus in September of the same year the group was renamed as the Korean People’s Republic (Chosŏn Inmin Konghwaguk) that was composed almost entirely of left-wing elements. Yō served as vice-president of this organisation which was in actuality an opposition group to the Korean Provisional Government in China. Whether Yō was actually a communist in his ideological beliefs is a matter subject to much controversy. What is known is that he was an ardent nationalist and strongly opposed the Japanese occupation of Korea. Moreover, after liberation he sought a politically unified Korean State that was independent of foreign interference. Thus he not only sought unity from the Left, but also with those figures on the Right. In the end he was not fully accepted by either group as the communists did not consider him to be devoted to their cause and those on the Right, including the Americans, did not trust him due to his contacts with the Soviets and communists. Thus, although Yō was very influential immediately after liberation, he could not solidify a power base that would enable him to construct a lasting power base.

Despite being a controversial figure, Yō’s allegiance was sought after by both the communists and those on the Right. The reason for this is that he represented the non-communist left that included many supporters. The American leaders, including General Hodge who was at the top of the American Military Government, exerted much effort to gain the support of Yō and Kim Kyushik (1881-1950), who represented the moderate Right. However, in the end it was the hard line approach of Syngman Rhee (Yi Sŏngman) that won the support of the people and the American government. Yō’s political career and life came to an end on July 19, 1947 when an assassin shot him.

Bibliography

Yŏch’ŏn

Yŏch’ŏn is situated in the southeastern part of South Cholla Province. The city is surrounded by Yŏsu to the east, Yŏch’ŏn County to the west, Yŏsu Bay to the south and Kwangyang Bay on the north. Comprised of a strip of land at the end of the Yŏsu Peninsula together with Myo Island and several smaller islands, Yŏch’ŏn has a total area of 106 sq. kms. and a population of 63 055 (1989 statistics). Mt. Yŏngch’wi (510m) rises in
central Yŏch'ŏn and Mt. Horang (460m) stands on the border with Yŏsu. The area’s transportation links include both roads and rail. In 1936, the Cholla Line between Iksan and Yŏsu was opened, followed by the Yŏch’ŏn Line in 1969.

Rice and barley are grown in the level areas on the western side of the city, while other grains and sweet potato are cultivated on the higher elevations. Fishing is another important source of income for local residents. Commercial boats operating in the warm waters off the coast bring in catches of grey mullet, gizzard shad, eels, sea bream, anchovy, and octopus. Edible seaweed (laver) is also gathered on the shoreline. The area was formerly Korea’s leading producer of cockles (Tegillarca granosa), but this has declined as a result of industrial pollution. In 1966, the Yŏch’ŏn Petro Chemical Industrial Complex was set up here. The complex is home to a number of large factories, including Honam Oil Refinery, Taesŏng Methanol and Namhae Chemicals.

Tourists are attracted by Shindŏk Beach in Shindŏk-dong and the area’s historical sites. Historically, Hungguk Temple in the centre of the city is the area’s most important Buddhist temple. An arched stone bridge (Treasure No. 563) can be seen, as well as a pagoda commemorating Grand Master Pŏpsu, and a Buddhist scroll painting (South Cholla Province Tangible Cultural Asset No. 26). Within the Main Buddha Hall (Treasure No. 396), there is an old altar painting (Treasure No. 578).

In Ungch’ŏn-dong stands Och’ungs-a, a shrine commemorating Chŏng Ch’ŏl, Chŏng Ch’un, Chŏng Taeyŏng and Chŏng Rin. These four members of the Chŏng clan fought valiantly under Yi Sunshin against the Japanese during the Hideyoshi Invasions (1592-1598). In Shijŏn-dong, not far from the shrine, lies Sŏnso Village, another famous site associated with Yi Sunshin. This village is where Yi constructed his kŏbuksŏn (turtle ships) which aided the defeat of a Japanese armada. Yi’s cavalrymen trained on Mt. Mangma (142m) behind the village. In order to preserve this important historical area, Mt. Mangma has been made into a park.

Yŏch’ŏn County

Situated in the southeastern corner of South Cholla Province, Yŏch’ŏn County comprises the town of Tolsan, and the townships of Nam, Samsan, Sora, Yulch’ŏn, Hwayang and Hwajŏng. With a total area of 344 square kilometres, the county consists of a narrow strip of land on the western side of the Yŏsu Peninsula, Tolsan Island, 45 other inhabited islands, and 166 uninhabited islands. Highway 17 connects the mainland portion of the county with Sunch’ŏn to the north and Yŏch’ŏn, Yŏsu and Tolsan Island to the south. The warm currents of the southern coast provide the region with a clement weather pattern. The average yearly temperature is 13.6c. and the average annual rainfall 1185mm. As of 1989, the population was 79,802.

With a number of level areas, including the Sora Plain on the Yŏsu Peninsula, the county is able to produce large quantities of rice. Other crops grown are barley, wheat, bean, and sweet potato. Fishing plays a vital role in the local economy. Boats operating in waters off the coast bring in catches of anchovy, filefish, eel, yellow corbina, hairtail, flatfish and gizzard shad. Laver is also produced here. Since the early 1970s, oyster farming has burgeoned, transforming hamlets such as Kŭmch’ŏn into some of the most prosperous villages in the province. The county now has over 1,000 hectares of oyster farms, making it, along with Ch’ungsamu, the leading oyster producing area in Korea. Most of the oysters grown here are exported to Europe and Japan.

With its numerous islands and picturesque scenery, the county attracts large numbers of tourists, especially during the summer months. Popular beaches include Pangjukp’o on the east side of Tolsan Island, Ando on An Island, Yurim on Sŏ Island and Sado on Sa Island. Opened to the public in 1987, Sado Beach is known for its magnificent views and its clear
water. Tourists flock to the beach during the ebb tides around the 2nd and 15th of each lunar month to see the ‘miracle of Moses.’ At this time, a sand bar is exposed, forming a link between five islands.

Visitors also come to see the area’s temples and historical sites. At the base of spectacular rocky bluffs in Tolsan’s Kunnae Village, can be seen Unjok Hermitage. This small monastery is said to have been founded by Chinul (National Master Pojo) in 1172. Within walking distance of the temple lies Tolsan Hyanggyo, an old Confucian school established in 1897. There are also numerous sites in the area associated with the Hideyoshi Invasions (1592-1598). In Tolsan’s P’yöngsa Village there is a stele commemorating the 1598 Musulmok Battle, during which Yi Sunshin’s forces routed a force of invading Japanese.

**Yöju County**

Situated in southeastern Kyönggi Province, Yöju County is comprised of the town of Yöju and the townships of Kanam, Kangch’ŏn, Kûmsa, Nungso, Taeshin, Pungnae, Sanbuk, Chŏmdong and Hŏngch’ŏn. Low mountains run along the county’s eastern border, while Mt. Ogap (609m) rises in the south and Mt. Yangji and there are other high peaks in the northwest. The county primarily consists of low hills and plains, while the Namhan River flows through the county from the southeast to the northwest.

Most of the local population is employed in agriculture. Rice is the leading crop, but other grains and beans are also common here. In the area around the Namhan River, there are commercial sand and gravel operations, and pottery clay is also excavated. Numerous factories near Mt. Ssari in Pungnae Township use this clay to make pottery and ceramics. Taking advantage of the county’s close proximity to Seoul and Inch’ŏn, a large number of manufacturing and export businesses have been set up here, especially in the town of Yöju.

Tourists come to the area to see the various temples and historical sites. Excavations in Chŏmdong Township’s Hŭnam Village have unearthed prehistorical settlements. Carbonised grains found here suggest that agriculture was practiced in Korea as early as the 7th century B.C.E. Early relics from the historical period include numerous old tombs in the townships of Taeshin and Nungso, and P’asa Fortress, which was built in 1592 in Taeshin Township’s Ch’önsŏ Village.

There are several important Buddhist sites in the area. Kodal Temple, in Pungnae Township’s Sanggyo Village, was founded in 764. Although the temple is no longer extant, artefacts at the site attest to the monastery’s former brilliance. The temple’s exquisitely carved, 3.4-metre high stupa (National Treasure No. 4) is from the Koryŏ period. Other artefacts found here include a stone lantern (Treasure No. 281) with a pair of lions at the base, a 1.57-metre high statue pedestal, the stupa of Grand Master Wonjong (869-958) and a Koryŏ stele holder with a tortoise base (Treasure No. 6). Grand Master Wonjong’s stele, erected here in 975, is now housed in Kyöngbuk Palace. Situated on the bank of the Namhan River in Pungnae Township, Shillük Temple is another famous Buddhist site in the area, housing a large number of artefacts.

Other historical sites include the Tanjongŏ Well in Taeshin Township’s Sanggu Village. Legend has it that this is a natural spring created by the forces of Heaven. The well gets its name from Tanjong who purportedly stopped by the spring in 1456 to quench his thirst on his way to banishment in Yongwŏl. There are also a couple of old Confucian schools in the area, such as Yöju Hyanggyo (county public school) founded in the early Chosŏn period and Maesan Sŏwŏn (private academy) in Nungso Township’s Pŏndo Village.

As for modern education institutes, Yöju Self-Management High School has been especially founded here to provide practical training in the newest farming technology. Students, recruited from Kyönggi and other provinces, receive government subsidies for both tuition
and accommodation fees.

**Yŏkch'am**

[Communications; Tourism]

**Yŏlban Sect**

[Buddhism]

**Yŏllyŏshil kisul** (Narratives of Yŏllyŏshil)

*Yŏllyŏshil kisul* is an unofficial history written by Yi Kŭngik (1736-1806), styled Yŏllyŏ. This is a hand written work and there are many versions presently extant. However, the original version has not been transmitted to the present time. Moreover, of the many extant versions of this work the content is quite varied due to the author’s leaving blank spaces in the manuscript for the reader to fill in with personal comments or observations. Two works presently extant that appear to be the closest to the original are the one that was published by the Chosŏn Kosŏ Kanhaenghoe in 1913 and the other by the Kwangmunhoe of Ch’oe Namsŏn in 1911. The former consists of thirty-three volumes covering the period of King T’aejo (1392-1398) to King Hyŏnjong (1659-1674) with a seven volume supplement that covered the reign of King Sukchong (r. 1674-1720) and a nineteen volume appendix, for a total of fifty-nine volumes. The latter collection contains twenty-four volumes covering the period from King T’aejo to King Injo (r. 1623-1649) with a ten volume appendix. Therefore the later work does not cover the period from the reign of King Hyojong (r. 1649-1659) to the reign of Sukchong.

The contents of this work are manifold and cover a wide spectrum of affairs during the Chosŏn period. Some of the items recorded include the founding of Chosŏn, religious rites, the ideology of subservience to China (*sadae*), governmental structure and organizations, religions, literature, astronomy and geography among other topics. This work is therefore very useful in understanding the politics, society and culture of the Chosŏn period.

*Yŏllyŏshil kisul* provides a wealth of data and is considered to be one of the best models of an unofficial history of the Chosŏn period. As an unofficial history, the work includes many elements that are not present in the official histories of Chosŏn such as the *Chosŏn wangejo shillok* (Veritable Records of the Chosŏn Dynasty). In 1934 this work was published as *Chosŏn yasa chŏnjip* (Complete Unofficial History of the Chosŏn Dynasty) by Kyeyu Ch’ulp’ansa Publishers in han’gul, and again published in the Korean script in 1966 by Minjok Munhwa Ch’ujinhoe in the twelfth volume of *Kojon kugyŏk ch’ongsŏ*.

**Yŏm Sangsŏp** (1897-1963)

Yŏm Sangsŏp is best known for his writings of the colonial period, which attempted to depict the reality of colonial society. He was born in Seoul, the third son of eight children of a distinguished family: his grandfather had been a member of the Privy Council, and his father a county magistrate. He learned classical Chinese from his grandfather before briefly entering the Elementary School attached to the National College of Education in 1907. He graduated from Posŏng Elementary and Middle School before going to Japan in 1912. After drifting through many schools as he struggled to pay his tuition fees, Yŏm finally settled at the Second Kyoto Prefecture Middle School. Upon graduation in 1917 he entered Keio University Art department.

Yŏm was in Osaka in 1919 at the time of the March First Independence Movement demonstrations. He was arrested and spent three months in prison. The following year, he returned to Korea and worked initially as a political reporter for the *Tonga ilbo* newspaper, followed by spells of teaching and writing for various journals. In 1921 he published the short story "The Frog in the Specimen Room" (*Pyobonshil <ui ch’ong kaeguri*), which
launched his literary career. From 1925 to 1936, apart from a short interlude spent in Japan, Yóm worked first for the Shidae ilbo newspaper and then as head of the arts section of the Chosôn ilbo. During this period, when he began writing novels, he married Kim Yǒngok, who gave birth to their first son and daughter. In 1936 the family moved to Manchuria, where Yóm took up the post of chief editor of the Mansön ilbo. He left this post after a clash with his Japanese managing editor but remained in Manchuria until Liberation. Upon his return to Seoul Yóm dedicated himself to the rebirth of his country’s literature and to the anti-communist movement, volunteering to fight in the navy during the Korean War. In his twilight years he continued to write, receiving countless literary awards including the Culture Medal from the President before his death from cancer in 1963.

'The Frog in the Specimen Room' is considered a landmark in early modern Korean fiction. However, it is an immature work by Yóm's standards and reveals much European literary influence. From a cursory reading it would be hard to tell that the story is set in Korea, as it concentrates on the angst of a young intellectual. Just two years later Yóm wrote 'Before the March First Movement' (Manse chón), which is acclaimed for its realistic portrayal of Korean society prior to the huge independence demonstrations. The narrator, a young student in Japan, receives a telegram informing him that his wife is seriously ill back home in Korea. He travels back through the Korean peninsula describing the scene as he himself is awakened to the situation in his home country. Yóm's masterpiece, however, is the long novel Samdae (Three Generations, 1931). This represents contemporary Korean society by the three generations of one family: the grandfather, a Confucian patriarch who bought yangban status during the old Chosôn period; his spoilt and incapable son, exposed to Western learning during the enlightenment period but unable and unwilling to do anything concrete with it; and the grandson, born during the colonial period with the responsibility for bridging the gap between his father and grandfather, and solving the problems they left him. This novel is acclaimed by some critics as Korea’s greatest literary achievement of the colonial period.

Yǒn Kaesomun

[History of Korea; Daoism]

Yǒn’gi County

Yǒn’gi County, situated in South Ch’ungh’ông Province, is comprised of the town of Choch’iwôn and the townships of Kûmnam, Nam, Sô, Chǒndong and Chônûi. The county has an area of 356.41 sq. kms and (1989 statistics) a population of 88 489. Mt. Unju (459m), Mt. Kûmsông (424m) and other peaks of the Ch’aryông Mountain Range run through the northern part of the county, while the Kûmgang River flows through the south. Because of its inland location, the county experiences sharp fluctuations between summer and winter temperatures, with an average yearly temperature of 11.7c. and an annual rainfall of 1 193mm.

About thirty per cent of the county is arable land. Rice paddies occupy almost 7 000 hectares. Many different dry-field crops are cultivated, for example, in close proximity to Taejôn to the south, Ch’ôngan to the north, Kongju to the west and Ch’ôngju to the east, cucumber, tomato, red pepper, scallion, peach and strawberry are harvested for regional markets. With acidic soil and abundant sunshine, over 800 orchards are established, which produce more than twenty-five per cent of the province’s entire peach crop. Cotton and sericulture were once important, but these have been eclipsed by vegetable farming.

Located on the ancient border between the Paekche and Shilla kingdoms, Yǒn’gi is where Paekche fought its last battles against Shilla. As a result, over thirty stone fortifications can be found scattered throughout the area. The county also contains numerous Buddhist sites.
In Chŏn'ŭi Township is Piam Temple. According to one source, this was built by Hyemyŏng during the reign of King Munmu (r. 661-681) for Paekche refugees who lost their friends and families during the bitter war against Shilla, whereas another source claims that the temple was founded much later by Tosŏn (827-898). In its grounds stands a three-metre-high pagoda. In 1960, a forty-three centimetre-high Amitabha triad was discovered within the top of the structure. Designated National Treasure No. 106, this exquisitely detailed carving is now to be seen in the National Museum of Korea.

In addition to Buddhist sites, the county contains several Confucian schools. Both Yŏn'gi Hyanggyo just west of Highway 1 in Nam Township and Chŏn'ŭi Hyanggyo just north of Highway 1 in Chŏn'ŭi were founded here in 1416. Hapho Sŏwŏn in Tong Township’s Hapkang Village was first built during the reign of King Sukchong (r. 1674-1720) in honour of the neo-Confucian scholar An Hyang (1243-1306). Rites are held at the Sŏwŏn each year on the 12th day of the 9th lunar month. Modern higher education institutes include Daejon Catholic University in Chŏn'ŭi Township.

**Yŏnam chip** (Collected Works of Yŏnam)

_Yŏnam chip_ is the literary collection of Pak Chiwŏn (1737-1805). This work, titled after the pen name of Pak, consists of seventeen volumes in six fascicles and was printed with new type after being compiled by Pak Yongch'ol in 1932. The original edition has not been transmitted to the present time. It contains a wide variety of writings by Pak including official memorials and documents, poetry and short stories. In addition there are writings that expound the ideology of the author including his treatise against the discrimination of the sŏdol class (illegitimate sons of yangban) and various other topics. This work is perhaps best known for the inclusion of the author’s satirical works such as _Yangban chŏn_ (Story of a Yangban) and _Yedŏk sŏnsaeng chŏn_ (The Story of Master Yedŏk) which are highly critical of the hypocritical Chosŏn society based upon the superiority of the yangban ruling class.

_Yŏnam chip_ reveals many aspects of Pak who was not only an astute scholar with a keen interest in such Western sciences as astronomy and geography, but also was a social critic who saw the need to reform the stagnant Chosŏn society which excluded many men of talent simply on the basis of their birth. The author’s satirical writings are perhaps his greatest legacy as these continue to be enjoyed by present day audiences.

**Yŏnam sosŏl yŏn'gu** (A Study of Yŏnam’s Novels)

_Yŏnam sosŏl yŏn'gu_ is a 795-page work written by Yi Kajōwon and first published by Eul Yoo Publishing Company in 1965. It explores the literature of the late Chosŏn period scholar Pak Chiwŏn (1737-1805), styled Yŏnam. The work is divided into sections that cover the personal history of Pak and his ideological background, and literary analyses of Pak’s short stories such as _Yangban chŏn_ (The Tale of a Yangban), Hŏsaeng chŏn (The Tale of Mr. Hŏ), and _Yŏllyŏ Hamyang Pak ssi_ (The Virtuous Wife of Mr. Pak of Hamyang). This work is valued for providing insight into one of the greatest literary men of the Chosŏn period. It has subsequently been republished in 1985.

**Yŏnch'ŏn County**

Situated in northern Kyŏnggi Province, Yŏnch'ŏn County is comprised of the towns of Yŏnch'ŏn and Chŏn'gok, and the townships of Kunnam, Misan, Paekhak, Shinsŏ, Wangjing, Changnam, Chung and Chŏngsan. The border between North and South Korea cuts through the county from northeast to southwest. Mt. Kodae (832m), Chijang Peak (877m), Mt. Pogae (724m) and other peaks of the Kwangju Mountain Range run along the county’s eastern border, while peaks of the Mashingnyŏng Mountain Range rise along the northwestern border. The Hant’an and Imjin rivers flow across the Ch’ŏrwŏn
lava plateau cutting deep gorges. Located on the Hant’ an River near Chŏn’gok Village, Yŏnch’ŏn Hydro-electric Plant was completed in 1985.

About 22 per cent of the county is arable, and the majority of this land is used for rice farming. On the lava plateau in the northeast, ginseng is grown along with apples, pears and peaches. Mines in the area excavate a wide range of minerals, including silica, lime and clay. Although Highway 3 and an adjacent railway line connects the area with Tongduch’ŏn and Seoul, much of the county is not readily accessible. The area’s remote location and the large number of military bases along the DMZ has stifled the development of the area’s industry.

Traditionally, visitors frequented the scenic area around Korangp’o Village in Changnam Township; however, this area is no longer popular as it is located just south of the DMZ. Currently, local tourism is centred around the Hant’ an River Resort near Chŏn’gok Village. Designated a resort in 1977, recreational facilities were built here in 1983. The area is popular in the hot summer months, especially in August. Fishing is also common here, and maeun’t’ang (a pepperpot soup) made with mandarin fish is the area’s specialty.

There are a number of historical sites in the area. At Chŏn’gok Village, stone hammers and hand-axes from 50 000 to 100 000 years ago have been discovered. Stone graves from the bronze age have also been found here. As for relics from the historical period, there are several ancient tombs, including the tomb of Shilla’s King Kyŏngsun (r. 927-935) in Changnam Township’s Korangp’o Village.

Buddhist sites include a stupa, statue and other artefacts on Mt. Pogae in Shinsŏ Township. Shimwŏn Temple, which was built during the Three Kingdoms period, originally stood here, but was destroyed during the Korean War. At the Obong Temple site in Yŏnch’ŏn’s Komun Village, there is another stupa, which has been designated Kyŏnggi Province Tangible Cultural Asset No. 131. As for Confucian sites, there is Yŏnch’ŏn Hyanggyo (County public school) in Ùmnae Village. Founded in 1407, this school was burnt down in 1950 at the beginning of the Korean War but was rebuilt by local Confucian scholars in 1965.

Yŏndŏnghoe

Yŏngam County

Situated on the coast in South Chŏlla Province, Yŏngam County includes the town of Yŏngam, and the townships of Kunsŏ, Kŭmjŏng, Tŏkchin, Top’ŏ, Miam, Samho, Sŏho, Shijŏng, Shinbuk and Haksan. The county covers a total area of 501 sq. kms. with a population of 76 842 (1989 statistics). Kuksa Peak (613m) and Mt. Wŏlch’ul (809m) lie along the eastern border and the Yŏngsan River flows along the northwestern border into the Yellow Sea. The county has an average temperature of 13c. and a high annual rainfall averaging 1 539mm.

In spite of the rugged terrain along the eastern border, 37 per cent (18 220 hectares) of the county is arable land. Of this, about two-thirds grows rice and one-third is devoted to dry-field crops, orchards and several large dairy-farms. Fishing is another important source of local income, and the area is renowned for its octopus and edible seaweed (laver).

Local tourism is centred around Mt. Wŏlch’ul, a spectacular set of granite peaks that rise abruptly from the plains. On the mountain, the Yongch’u, Ch’ilch’i and Hwangch’i waterfalls can be viewed. In order to protect this picturesque area, the mountain has been designated Mt. Wŏlch’ul National Park (See Wŏlch’ul Mountain).

Tourists also come to see the area’s historical sites and relics. There are a few Confucian
schools here, including the beautiful Yongam Hyanggyo and Noktong Sŏwŏn just west of Highway 13 in Yongam. Established in 1420, Yongam Hyanggyo was destroyed during the Hideyoshi Invasions (1592-1598) before being rebuilt at its present location. In 1918, it was used as a public school. After its destruction by fire, the complex was rebuilt several times. Most of the present buildings date from the 1960s.

Pavilions found in the area include Yongbojong and Chonyangnu in Tŏkchin’s Yongbo Village. The latter was first built by Ch’oe Tŏkchi in 1420 and was last reconstructed in 1970. In Yongam’s Mangho Village, is Yŏnghosa, a shrine commemorating the Koryŏ scholar Yŏ Chehyŏn (1287-1367). This small structure is said to have been constructed in 1547.

The area’s unique cultural traditions are perpetuated by a number of celebrations and rituals, which are carried out on a regular basis. On 5 May of each year, the P'unghang Festival is held. At this time, a concert is given for the older residents. The concert honours those who took part in a demonstration for independence on Hyongje Peak in 1931.

**Yongbi ḍch’ŏn ka (Songs of flying dragons)**

The *Yongbi ḍch’ŏn ka* is the first work of poetry written in *han’gŭl*. It was compiled by order of King Sejong in 1445 and is an epic work consisting of 125 sections. The title is derived from the Chinese work *Zhou yi*, and refers to the two kings, the founder of the Chosŏn dynasty King T’aegŏng and four generations of their grandfathers, Mokcho, Ikcho, Tojo, and Hwanjo. It was jointly written in Chinese by Kwon Che, Chŏng Inji and An Chi, and then translated into Korean and annotated by another group of scholars chosen by King Sejong. It was first published in 1447 in ten fascicles in five volumes printed from woodblocks. As a project it was foreshadowed in 1442, according to the *Sejong shillok* (Veritable records of King Sejong), indicating that its compilation and production probably took some five years to complete.

It is generally accepted that the *Yongbi ḍch’ŏn ka* had a political purpose in that it was intended to inform the people of the divine mandate and the past achievements of the Chosŏn dynasty and thus engender their loyalty, and to admonish future kings to fulfil their imperial mission. By using the Korean script, King Sejong no doubt expected to gain a much wider readership for this work. The text comprises 125 sections of two stanzas each, with the exception of the first and the last which are only one. The two stanzas of each section contrast a Chinese historical event with a similar event of the Chosŏn dynasty. This form of poetry, known as *akchang*, is the same as that of the *Wŏrin ch’on’gang chi kok* composed by King Sejong.

As the first work written and published in *han’gŭl*, the *Yongbi ḍch’ŏn ka* is of paramount importance in the study of the history of the Korean language. It is also regarded as a literary work of excellence, as well as providing valuable source material on the history, geography, government and social institutions of the period.

Several wood-block editions of this work of the early Koryŏ dynasty are extant, and these are held in the Karan, Ilsa and Kyujanggak collections. They are the *Mannyŏk* edition which was published in 1612, the *Sunch’i* edition published in 1659 (reproduced from the *Mannyŏk* edition with many corrections to the text and also held at the Kyujanggak Library of Seoul National University), and the *Konnyung* edition (the last known wood-block edition, published in 1765). The *Konnyung* is a reproduction of the *Sunch’i pon* and many copies of it have survived.

**Bibliography**

Maema, K., *Ryūka kogo sen* (Notes on old words appearing in *Yongbi ḍch’ŏn ka*) Tokyo, 1924.
Yǒngch’ang Sŏgwang

Yǒngch’ang Sŏgwang was a book store and publishing company established in Seoul in 1916 by Kang Úiyŏng. The company initially published texts on letter-writing and song collections, but its activities soon expanded to include Korean novels as well as translated foreign novels. Focusing on popular works, the company continued to diversify, publishing books on a wide range of subjects. In the 1960s, it moved to Seoul’s Kwahundong. At this new location, its publishing activities were discontinued, and eventually the company went out of business.

Yǒngch’in, King (see Yi ѐn)

Yǒngch’ŏn

Situated to the east of Taegu in North Kyŏngsang Province, Yǒngch’ŏn is comprised of the town of Kŭmho and the townships of Kogyŏng, Taech’ang, Pugan, Shinnyŏng, Imgo, Chayang, Ch’ŏngt’ong, Hwanam, Hwabuk and Hwasan. The southern end of the T’aebaek Mountain Range runs along the city’s eastern border, while Mt. P’algon (1 193m) rises to the west, Mt. Pohyon (1 124m) and other high peaks are to the north, and Mt. Kuryong (675m) and Mt. Saryong (685m) stand in the south. Chaho Stream, Hoenggye Stream, Kohyŏng Stream, Shinnyŏng Stream, Kŭmho River and Pugan Stream traverse the area. In addition to the large number of reservoirs found throughout the area, there is Yǒngch’ŏn Lake in the northwest. The Kyŏngbu Expressway along with other highways and railway lines link the city with other large cities in the region.

Traditionally, the area’s agriculture was hindered by low rainfall and periodic droughts, but the problem was alleviated with the construction of a dam on the Kŭmho River in 1980. The dam provides drinking water to P’ohang residents and water for industrial use at the P’ohang Steel Company. The city’s agriculture is primarily devoted to rice cultivation, but apples and peaches are also grown here. Other crops include red peppers and tomatoes in Hwabuk Township, onions in Shinnyŏng Township and strawberries in Imgo Township. In the Kogyŏng and Pugan townships, there are a number of sericulture operations.

Located next to Taegu, the city attracts tourists from the Taegu area who come to enjoy the region’s natural scenery. Fishermen catch carp in the city’s lakes and reservoirs. Popular tourist destinations in the city include the picturesque Sudo Temple Waterfall on Mt. Ch’i in Shinnyŏng Township and the Shinan mineral spring in Hwanam Township. The water from this natural spring is said to cure stomach ailments.

Tourists also come to visit the area’s historical sites. Situated on the eastern slopes of Mt. P’algon, Unhae Temple is the most famous monastery in the city. Founded by National Master Hyech’ŏl in 809, the temple houses a number of important artefacts including several old altar paintings. Other important Buddhist sites include Paekhong Hermitage, a nunnery founded in 861 by National Master Hyech’ŏl, and Sudo Temple in Shinnyŏng Township. In Imgo Township’s Sŏnwŏn Village, there is a 151cm high bronze Buddha statue (Treasure No. 513) from the Koryŏ period.

There are a number of old Confucian schools in the area, including Imgo Sŏwŏn (private school) in Imgo Township’s Yanghang Village, Koch’ŏn Sŏwŏn south of Imgo stream, Yǒngch’ŏn Hyanggyo (county public school) in Kyoch’on-dong, Shinnyŏng Hyanggyo in Shinnyŏng Township’s Hwasŏng Village, Yonggye Sŏwŏn on the north bank of
Yǒngch’ŏn Lake, Tojam Sŏwŏn northwest of Mt. Kuryong and Songgok Sŏwŏn near Unhae Temple. In Yǒngch’ŏn’s Kyoch’ŏn-dong, there is a folk museum where many local artefacts are on display.

Yongdam yusa (Hymns from the Dragon Pool) [Ch’ŏndogyo kyŏngjŏn]

 Yöndŏk County

Situated on the east coast in North Kyŏngsang Province, Yöndŏk County is comprised of the town of Yöndŏk and the townships of Kanggu, Namjŏng, Talsan, Pyŏnggok, Yŏnghae, Chip’um, Ch’angsu and Ch’uksan. The T’aebaek Mountain Range runs along the western part of the county and a section of Mt. Chuwang National Park crosses the border in the southwest. Historically, the T’aebaek Mountain Range in the west made the county difficult to access, but a coastal highway was built in 1979 connecting the northern and southern coastal regions.

Most of the county’s residents are employed in either agriculture or fishing. Only 11.3 per cent of the county is arable, and most of this is in the Yöndŏk and Yŏnghae plains. Constructed in 1963, Myogok Reservoir, along with other reservoirs in the region, provides irrigation to these plains. Rice is grown in the area, as well as dry-field crops such as barley, garlic, tobacco and beans. In addition, the area produces about 10 per cent of the nation’s peaches, most of which are sold to canneries.

Local fishermen, operating out of the ports of Kanggu, Ch’uksan and Taejin, catch a wide variety of fish, but most need to supplement their income through other means such as mushroom cultivation or fertiliser production. In Ch’uksan Township, seaweed gathering and abalone farming are common. Storage pots are produced in Chip’um Township’s Samhwa Village and in Och’ŏn Village, an over 300-year old tradition of rice paper production is being maintained, but these operations are small due to a decline in demand.

With high mountains and beautiful beaches, the county boasts a number of tourist attractions. In the summer, crowds of tourists can be found at the Taejin and Changsa beaches. The area is also famous for its mineral springs, especially the Ch’osugok mineral springs southwest of Myogok Reservoir. The bubbly water found here is said to cure stomach ailments.

Most of the county’s historical sites are located between Myogok Reservoir and the coast. Buddhist artefacts include Yugum Temple’s three-storey pagoda (Treasure No. 674), Changnyuk Temple’s Main Buddha Hall (North Kyŏngsang Province Tangible Cultural Asset No. 138), and a two-storey pagoda and a seated Buddha statue in Namho Village. There are also a number of Confucian sites in the area, such as Yŏnghae Hyanggyo (county public school), founded in 1346 in Yŏnghae Township’s Sŏngnae Village and Hwasaru, a pavilion erected in 1693.

 Yöngdong County

 Yöngdong County, situated on the southern tip of North Ch’ungch’ŏng Province, consists of the town of Yöngdong, and the townships of Maegok, Sangch’ŏn, Shimch’ŏn, Yanggang, Yangsan, Yongsan, Yonghwa, Haksan, Hwanggan and Hwanggŭm. The county covers an area of 846 sq. kms. and as 1989 statistics show, had a population of 80 638. The Sobaek Mountain Range runs from the northeast to the southern part of the county, and Mt. Mani (640m), Mt. Sŏngjiu (624m) and other peaks of the Noryŏng Mountain Range rise in the west. As an inland mountainous region, the local climate is subject to sharp fluctuations. The county has an average temperature of 11.8c. and a yearly rainfall of 1 012mm.
Arable land forms about 12,100 hectares of the county area and this is used for rice growing (6,800 hectares) and for dry-field crops (about 5,300 hectares) such as barley, wheat, potato, red pepper, ginseng and tobacco. Orchard produce includes pear, apple and walnut. In the mountainous areas there is dairy-farming as well as goat and pig farms. Many of the county’s farms include apiculture and sericulture in their operations. From the county’s extensive forests, workers cut and process timber, cork and tree-barks for tannin. Local residents gather fuel for domestic use and medicinal herbs. Mineral resources include gold, coal and limestone.

With its picturesque mountains and streams, the county has a large number of scenic attractions. One of the most popular sights is the twenty-metre-high Okkye Waterfall in Shimch’ôn’s Kodang Village. Legend has it that two lovers fell to their death while playing together on a swing above the falls. Later, two beautiful birds, believed to be incarnations of the deceased couple, were seen fluttering around the waterfall singing a woeful tune. The Wônch’ôn Village area in Hwanggan is also well-liked by tourists, who come to see Yongyｏndae (Dragon Pool Heights), a spectacular series of bare granite cliffs rising above the Ch’o River. Other favourite tourist attractions include the Murhang Valley in Sangch’ôn and Mt. Hwanghak (1,111m) in Maegok.

In addition to its natural beauty, the county has some important historical sites. There are several old Buddhist temples, such as Yongguk Temple in Yangsan’s Nugo Village and Panya Temple in Hwanggan’s Umae Village. At the former, are two three-storey pagodas (Treasures No. 533 and 535), a stupa (Treasure No. 532) and a stele (Treasure No. 534) commemorating National Master Wŏn’gak. At the latter, there is a three-storey pagoda.

Confucian schools include Hwanggan Hyanggyo in Hwanggan’s Namsŏn Village; Yongdong Hyanggyo in Yongdong’s Puyong Village; Ch’ŏgang Sŏwŏn (founded in 1611) north of Highway 4 in Shimch’ôn, and Songgye Sŏwŏn (founded in 1725) to the south of Ōch’ŏn Stream in Maegok. Hwanggan Hyanggyo was founded in 1394 and was repaired in 1901, while Yongdong Hyanggyo was founded during the reign of King Sŏnjo (r. 1567-1608) and was moved three times before reaching its present location in 1754. Modern schools include Youngdong Institute of Technology in the town of Yongdong.

In Shimch’ôn’s Kodang Village stands the picturesque Nan’gyesa, a shrine commemorating Pak Yŏn (1378-1458). Styled Nan’gye, Pak is considered to be one of Korea’s three most important musicians. Built in 1973, the shrine is used during the Nan’gye Arts Festival which is held in the county each year. The festival features traditional music performances, parades, contests and various art and literature exhibitions.

Yŏnggo

Yŏnggwang County

Situated in the northwest corner of South Cholla Province, Yŏnggwang County embraces the towns of Paeksu, Yŏnggwang and Hongnong, and the townships of Kunnam, Kunsŏ, Nagwŏl, Taema, Myoryang, Pŏpsŏng, Pulgap and Yŏmsan. The county covers a total area of 469 sq kms. with a population of 103,931 (1989 statistics). Mt. Kosŏng (546m), Mt. T’aech’ŏng (593m), Mt. Pulgap (516m) and other peaks of the Noryŏng Mountain Range run along the county’s eastern border. To the west of these peaks, the elevation gradually declines, giving way to narrow plains punctuated by low hills. The effect of seasonal winds from the northwest makes the area cooler than the area at the same latitude on Korea’s east coast. The county has an average annual temperature of 13.1c. notwithstanding the January average of minus 0.5c. The area receives a moderately heavy snowfall and a substantial average annual rainfall (1,441mm).
The county’s main crop is rice, but dry-field crops, including grains, legumes, tobacco, cotton and ginseng are also grown. Stock breeding and apiculture are other sources of rural income. A number of mines are found in the area, some concerned with the extraction of large deposits of silica on the islands of Nagwol Township. There are salt flats along the coast as well as shellfish farms and laver gathering operations. Fishing and marine products provide the farming community with a supplementary income.

Local tourism is centred around the mountains to the east and the seashore to the west. Kyema Village Beach, located in Hongnong, attracts throngs of visitors from nearby Kwangju during the summer months. Surrounded by more than two-hundred mature pine trees, this four kilometre-long beach is considered to be one of the most beautiful in the region. In close proximity to the beach lie Mt. Kŭmjŏng (264m) and the Kŭmjŏng Hermitage.

In addition to scenic attractions, a number of historical sites are located in the area. The most important monastery is Pulgap Temple, which contains several ancient buildings as well as a stele commemorating National Master Ch’ingak (Hyeshim, 1178-1234). Other Buddhist relics here include a three-storey pagoda (Treasure No. 504) in Myorang’s Shinch’ŏn Village and a three-storey pagoda in Yonggwang’s Wŏlp’ŏng Village. A number of old Confucian schools are in the area such as Yonggwang Hyanggyo just north of Noin Peak (257m), Mujŏng Sŏwon to the west of the peak and Naesan Sŏwon to the south of Pulgap Reservoir. The modern educational institution is Youngsan Won Buddhist University in Paeksu.

Rituals and festivals are held in the region on a regular basis. One of the most important is the Oktang Festival which has been held in October every year since 1977. In addition, a number of village rituals (tongje) can still be seen. Of these, the best known are the T’angsanje (Mountain Spirit Rite) held at Ansu Village in Yŏmsan and the Sanshinje (Mountain Spirit Rite) held in Yonggwang’s Muryŏng Village. During the Ansu Village rite, held on the 15th day of the first lunar month, villagers worship guardian deity.. In most areas, such rites are held before a sacred tree which is thought to contain the spirits, but in Ansu Village, the spirits are believed to inhabit a carved granite rock. The ritual is thought to be antidotal against cholera. It is also said that if a woman sincerely prepares food offerings and offers prayers on the eve of the ritual she will be blessed with a male child after three years.

Yonghŭng River

Having its source to the south of Mt. Kakko (1,038m) in South Hamgyŏng Province’s Kowŏn County, the Yonghŭng River flows through Yonghŭng on its way to Songŏn Bay just north of Wŏnsan. On its 135.0 km.-long journey, it merges with Ipsŏk Stream, Tansŏk Stream and Tŏkchi River. Sedimentary deposits from the Yonghŭng have formed Yonghŭng Plain, the key grain-producing region of South Hamgyŏng Province. The river provides irrigation water to the plain and is of sufficient depth to enable the stretch between Sŏnhŭng Township and the town of Kowŏn to be used for transport. The mountainous terrain surrounding the upper reaches of the river protect the adjacent areas from flooding, but the Yonghŭng Plain is usually flooded several times each year. It is on record that extensive flooding occurred in 1186, 1729, 1739, 1829, 1860 and 1919. In the 1919 flood, 215 people drowned. Between 1926 and 1936, flood dikes were built on the Yonghŭng Plain section of the river. In ancient times, the river was known as Hoeng River and Yorakchi. The current name is said to have been coined by the pongsa (curator) Haryun during the reign of King T’aejong (r. 1400-1418).

Yongin

Situated in Kyŏnggi Province, Yongin is comprised of the towns of Yongin and Kihŭng,
and the townships of Kusŏng, Namsa, Naesa, Mohyŏn, Suji, Idong, Oesa, Wŏnsam and P'ogok. With the Kwangju Mountain Range running through the northeast and the Ch'aryŏng Mountain Range cutting through the southeast, the city's topography is characterised by rugged mountains and hills. Streams from these mountains flow into two reservoirs in Idong Township and Kihŭng.

Due to the area's mountainous terrain, only about 32 per cent of the land is arable. The main crop is rice, but barley, beans and millet are also grown here along with various fruit crops. As the local specialty crop, ginseng is grown in the southeast. In addition, there are numerous livestock breeding operations.

The Kyŏngbu and Yongdong Expressways link the city with Seoul, Taejŏn and Wŏnju. Taking advantage of the area's good infrastructure, industrial complexes were built in Kihŭng, Yongin and Suji Township in the 1970s. At present, the city's factories produce textiles, chemicals, food stuffs, machinery and other manufactured goods.

There are a number of popular tourist attractions here that cater to both domestic and foreign tourists. The Korean Folk Village, located in Kihŭng, is one of the most popular tourist destinations in the country. In this 250-acre complex, one finds 132 tile-roofed houses and 143 thatched cottages. More than 20 000 artefacts are displayed in and around the houses. Visitors can watch craftsmen, using the traditional methods, produce objects such as fans, straw shoes and hats. Traditional ceremonies and entertainment are also re-enacted here.

As one of the few race tracks in the country, Yongin Motor Park has a 2.125-kilometre track that is recognised by the FIA. The 1995 Korean Motor Championship series was held at the track. Other local attractions include the Caribbean Bay, which was recently opened in Yongin as one of Korea's newest theme parks. Built on the theme of 17th century Spain, this giant resort includes an artificial beach with a wave machine.

Tourists also come to see the area's historical relics. There are northern-style dolmens from the prehistoric period in the villages of Wangsan, Chubuk and Sangha, while southern-style dolmens can be seen in the villages of Maeng and Kūnram. Buddhist artefacts include two rock-carvings of Bodhisattvas on Mt. Munsu in Wŏnsam Township, a five-storey pagoda in Yongin's Kongse Village, a three-storey pagoda in Ōbi Village and a five-storey pagoda in Yongch'ŏn Village. In Yongin's Mokshin and Ch'ŏn Villages, there are standing Buddha figures that are believed to date from the Greater Shilla period. The seated figure in Kongse Village and the standing figure in Mip'yŏng Village, on the other hand, are from the Koryŏ period. At Sŏbong Temple in Suji Township, there is a stele commemorating National Master Hyŏno.

There are several old Confucian schools here, including Yongin Hyanggyo (county public school) founded around 1400, Yangji Hyanggyo founded in 1523, Ch'ungnyŏl Sŏwŏn (private school) founded in 1576 and Shimgok Sŏwŏn founded in 1650. In addition, there is a Koryŏ white porcelain (paekcha) kiln site in Idong Township's Sŏ Village, and a punch'ŏng kiln site in Oesa Township's Koan Village.

Yongjae ch'onghwa (Assorted Writings of Yongjae)

Yongjae ch'onghwa is a literary miscellany of the early Chosŏn period scholar, Sŏng Hyŏn (1439-1504). This work was published in 1525 as a three-volume, three-fascicle work that has been transmitted to the present time, and also in 1909 the Chosŏn Kosŏ Kanhaenghoe included this work in Taedong yasŭng (Unofficial History of Korea).

In this work the author covers a wide variety of topics from the end of the Koryŏ period to the reign of King Sŏngjong (r.1469-1494). Some of the notable items included are the changing popular customs among the common people, literature, geography, history,
religion, music and society in general. Song Hyŏn wrote this book based upon his wide scholarship and experience as a government official and he notes the changes from the Koryŏ period to the reign of Sŏngjong of the Chosŏn period. Thus, this work provides an opportunity to understand the general culture of that time.

First, 

_Youngiae ch'onghwa_

discusses the Confucianism of Korea. In particular it details the scholarly characteristics in the fine writings of the great masters of the Chinese classics such as Chŏng Mongju (1337-1392) and Kwon Kŭn (1352-1409), the noted luminaries of Shilla and Koryŏ such as Ch'oe Ch'iwŏn (857-?) and Chŏng Chisang (? -1135), and the literary men of early Chosŏn including Sŏ Kŏjong (1420-1488) and Sŏng Im (1421-1484). Also this work discusses the skills of calligraphers, commenting in particular on the special traits of Kim Saeng and Yi Yong. Moreover, the landscape paintings from King Kongmin (r. 1351-1374) of Koryŏ to An Kyŏn of Chosŏn are appraised. Concerning music, Song writes of the _hyŏng'gŭm_ (a type of zither) of the Shilla period, the _kayagŭm_ (a twelve-stringed zither) of Kaya, and of court musicians such as Song T'aep'yŏng and To Sŏngil.

In addition to the above, this work also includes much other information such as the decorum involved in accepting Chinese envoys, character sketches of the various Chinese ambassadors and comments on the state examination system. Song also includes information on sacrificial rites and stories about Buddhism and Buddhist monks. The author does not limit his stories to the upper classes of these periods but also includes those who were shunned by society such as widows, monks, fortunetellers, _kisaeng_ (female entertainers) and even ribald women. Since this book contains various stories and humorous episodes concerning both famous and common people, it provides valuable data for studies of the society and social mores of the late Koryŏ and early Chosŏn periods.

**Yŏngjo, King** (r. 1725-1776)

Yŏngjo (1694-1776), was the twenty-first king of Chosŏn and reigned from 1725 to 1776. He was one of the most outstanding Korean rulers, his reign marked by political stabilisation, remarkable progress in the economy and successful reforms.

Yŏngjo (personal name Yi Kŭm) was a son by a concubine of Sukjong (r. 1674-1720), the nineteenth king of Chosŏn. Sukjong was initially succeeded by another son, Kyŏngjong (ruled 1720-1724), who was in poor health and had no children. Under pressure of the Old Doctrine faction (Noron) which allied itself with Yŏngjo, Yŏngjo was made heir to the throne in 1721 and acceded in 1725, after his half-brother’s death.

The principal task confronting the young king was that of political stabilisation. At this time the ruling elite was split by the fierce rivalry of court factions. These factions, which were rather stable and cohesive, strove to place their members in all-important and lucrative administrative positions and were engaged in endless intrigue and schemes against their rivals. In 1728, disgruntled literati from disgraced factions even started an armed rebellion to overthrow Yŏngjo. While the uprising was promptly suppressed, it revealed the danger that these factional feuds posed to the internal stability of Chosŏn. Though Yŏngjo had the backing of the powerful Old Doctrine faction, he tried to be impartial and used all possible means to calm the strife and to break down the inner cohesion of the factions. He even forbade marriages within the same faction. Paramount during his reign was the policy of impartiality ("t'angp'yŏng ch'ae'ak") which accorded equal favour in official appointments to men of all four major factions, i.e., the Old Doctrine, Young Doctrine (Soron), Southerner (Namin) and the Northerner (Pugin) factions. His policy of neutrality and candour, exercised over many years, proved successful, and the factional strife which had plagued Chosŏn politics since the late sixteenth c, eventually died out or, rather, eased considerably. Moreover, as a result of the equilibrium between the factions, the crown’s authority authority was considerably enhanced.
Even so, Yongjo's reign was troubled by political incidents and feuds, the most remarkable being the death of his son and heir Sado in 1762. Growing angry at Sado's increasingly erratic behaviour and excesses, Yongjo ordered the crown prince to be locked in a rice chest and starved to death. Understandably, this tragic incident led to numerous clashes in the court, and even more so since Changhön's son was designated as the new heir to the throne. However, in spite of this and other incidents, Yongjo's reign was largely a time of political stability and economic prosperity.

During Yongjo's reign there were many technological and economic advances brought about by the development of the shirhak (practical learning) ideology. Shirhak, which was founded in empirical inquiry, stood in opposition to the neo-Confucian ideology that heretofore had been dominant in Chosön. The shirhak scholars sought to bring about economic betterment through land reforms, which would result in a lessening of the hardships of the Chosön peasantry. A major exponent of the shirhak movement during Yongjo's reign was Yi Ik (1681-1763) who outlined his proposals for governmental and economic reforms in his works Sŏngho sasŏl (Insignificant Explanations of Sŏngho and Kwagu rok (Record of Concern for the Underprivileged). Other works of this period by shirak scholars include Usŏ (Idle Jottings) written by Yu Suwon (1695-1755) and Yŏrha ilgi (Jehol Diary) by Pak Chiwon (1737-1805). These and other works introduced new ideas and views of society, social institutions and the ramifications of history. Moreover, the shirhak ideology served to introduce many facets of Western society, and thus was of major importance to the subsequent societal developments.

Internationally, the reign of Yongjo was an uneventful period and free from major challenge and danger. During this period the Qing dynasty of China ruled supreme over eastern Asia, and although Chosön was technically a vassal kingdom of Qing, she was free from direct interference. Thus, the strength of China provided a stable international environment for Chosön. The Qing served as an important conduit for knowledge to flow into Korea from the West, and thus the relationship between the two states provided the opportunity for many Chosön scholars to travel and observe various Qing institutions.

Yongjo was an active and intellectually inquisitive monarch, well educated, but pragmatic and not confined by Confucian scholastics. He strove to change the country's situation for better, and initiated numerous reforms. During his reign the legal code of Chosön was revised with the promulgation of Sok taejŏn (Supplement to the National Code) in 1746, the further prohibition of some exceptionally cruel means of torture, and an improved justice system. During Yongjo's reign the use of new tools was encouraged, new crops were introduced, and the government supported the inventors of novel tools and weapons. Yongjo is praised as one of the most economy-oriented monarchs of Chosön, who devoted a great amount of attention to the development of agriculture and the handicrafts industry. An important accomplishment of Yongjo was the launching of an ambitious and generally successful tax reform. The Equalised Tax law (Kyunyŏpŏp) led to a more egalitarian redistribution of taxes, to a certain degree reduced the various tax exemptions of the upper classes, and alleviated the tax burden of the peasantry with a considerable reduction of tax rates. Consequently, these measures facilitated economic growth during this period. Yongjo's reign was a time of burgeoning trade, and the development of literature, publishing and education.

King Yongjo, whose reign was the longest in the five hundred-year history of Chosön, died in 1776 and he was succeeded by his grandson Chongjo (r. 1776-1800). He is highly acclaimed for the stability present during his reign and the attempts he made to bring about an end to factional politics. Moreover, his reign is notable in that it marked the flourishing of the shirak ideology, which served to invigorate the intelligentsia of Chosön which had been long stifled by the oppressive neo-Confucian ideology.

Yŏngju
Situated in North Kyongsang Province, Yongju was recently formed when Yongju City was expanded to include Yongp'ung County. The city is comprised of the town of P'unggi and the townships of Tansan, Munsu, Ponghyön, Pusok, Sunhung, Anjong, Isan, Changsu and P'yongsŏn. Most of the city is in a basin with the T'aebaek Mountain Range to the east and the Sobaek Mountain Range to the north. Sŏ Stream flows through the city’s central area.

Nearly a quarter of the city area is arable land. Over half of this is used for rice cultivation, and the remaining land for dry-field crops such as barley, radishes, Chinese cabbage, green vegetables, and tobacco, as well as fruits such as apples and pears. In P'unggi, ginseng is an important speciality crop. The town holds ginseng exhibitions every October. Sericulture is another important source of income in the region.

Taking advantage of the city’s central location, timber mills and wood-pulp plants have been set up in the area. There are also a number of small factories that produce food-stuffs and textiles, and in Changsu Township’s Sŏnggok Village, high quality granite is quarried and dressed.

Local tourism is centred around the area’s picturesque mountains and valleys. Throughout the year, tourists visit Mt. Sobaek National Park, which is split between Yongju and Tanyang County (See Sobaek Mountain). The Kumsŏn Valley, which winds down from Mt. Sobaek’s Piro Peak, is particular well known for its interesting rock formations and clear streams. Another popular destination is the Chukkye Valley, which descends from Kungmang Peak.

Visitors also come to see the ancient temples and other historical sites found here. At the foot of Mt. Ponghwa (819m) in Pusok Township, one finds the ancient Pusŏk Temple. Originally founded by ŭisang in 676, the monastery contains the Muryangsujŏn (Hall of Everlasting Life). This beautiful building was constructed during the mid-Koryŏ period, making it one of the oldest wooden structures in Korea. Other artefacts at the temple include a stone lamp, a seated Buddha statue made of clay, a seated Buddha statue made of stone, a three-storey pagoda and stone banner-pole supports. In the temple’s Chosadang (Patriarchs Hall), there is an old wall painting.

Below Mt. Sobaek’s Yŏnhwa Peak, one finds Huibang Temple, another ancient monastery, which is frequented by tourists many of whom also visit the area’s beautiful waterfalls. Other important monasteries in the area include Ch’oam Temple and Sŏngnyun Temple in Sunhung Township, Piro Temple in P’unggi, Yongmyŏng Temple at the foot of Mt. Taema (376m), Ponghyŏn Temple in Ponghyŏn Township and Chinwŏl Temple in P’yŏngŏn Township.

In addition to ancient Buddhist temples, there are a number of important Confucian sites in the city. Located about 20 kilometres from downtown Yongju in Sunhung Township, Sosu Sŏwŏn (private academy) is famous as Korea’s first sŏwŏn. The school’s beginnings go back to 1542 when P’unggi county magistrate Chu Sebong founded a shrine here and then moved a school to the site calling it Paegundong Sŏwŏn. In 1550, when Yi Hwang (T’oegye) was acting as P’unggi’s county magistrate, the institution was officially recognised as the Sosu Sŏwŏn. When Hŭngsŏn Taewŏn ‘gun order the closing of sŏwŏn across the nation, this was one of the 47 schools allowed to remain open. Inside the school, there is a screen on which Yi Hwang personally inscribed his famous work Sŏngak shipto (The Ten Diagrams of the Sages’ Learning).

Yongju Temple

Located in Hwasŏng County in Kyŏnggi Province, Yongju Temple is one of the main
temples of the Chogye Order. Founded in 854 C.E., the monastary was reconstructed in 952 on the old site of Kiryang Temple, which had burnt down. The temple was again reconstructed in 1790 by Sail in order to provide spiritual protection for the tomb of Prince Changhŏn (1735-1762), the second son of King Yŏngjo (r. 1724-1776). The temple was repaired by Yonghae in 1900, and by Kang Taeryŏn in 1931. In 1955, Kwaniing built a seminary at the temple. In 1966, the abbot Hūisŏp founded the Tongguk Yŏkkyŏngwŏn (Tongguk Sutra Translation Centre), and in 1969, Chŏn’gang established the Chungang Meditation Hall.

In addition to the Main Buddha Hall, which was built in 1790, the temple houses several important artefacts. The temple’s bronze bell (National Treasure No. 120) is one of the few large bells dating from the early Koryŏ Period. Unlike most Koryŏ bells, it is made in the Shilla style. There is also a gilt-bronze incense holder and a bronze incense holder (Kyŏnggi Province Tangible Cultural Assets No. 11 and No. 12 respectively). In the Main Buddha Hall, there is an altar painting of a bodhisattva triad which was painted in 1791. At the temple, there is also an old screen from the Chosŏn Period (Kyŏnggi Province Tangible Cultural Asset No. 15). In addition, there are sets of stone, wood and bronze printing blocks of a sutra and a corresponding illustration.

**Yongmun Mountain**

Situated north of Yangp’yŏng in Kyŏnggi Province, Mt. Yongmun (1,157 metres) is part of the Kwangju Mountain Range. The mountain is surrounded by Mt. Pongmi (856 metres) to the north, Mt. Chungwŏn (800 metres) to the east and Mt. Taebu (743 metres) to the west. There are several temples on the mountain, including Yunp’il Hermitage, Sangwŏn Temple and the well-known Yongmun Temple which was founded by Wŏnhyo in 649 C.E. Yongmun Temple was burnt down by Japanese occupational forces during a battle with anti-Japanese guerrillas in 1907. The temple was reconstructed, only to be damaged again during the Korean War. The renovated temple presently houses a number of important historical relics. Numerous tourists visit Mt. Yongmun’s temples, hike the trails and fill jugs with medicinal water from the famous Changgun springs.

**Yŏngnam kan’gosang** (Wretched Sight of Yŏngnam, The) [Literature]

**Yongsai ilgi** (Diary of Yongsai)

*Yongsai ilgi* is the diary of Yi Ro that describes the activities of the volunteer forces who fought the invaders under the command of Kim Sŏngil during the 1592 Japanese Invasion. This diary was published in 1762. Yi was a staff member of Kim Sŏngil and accompanied him on an official mission to Japan in 1590. This is the beginning of the diary. It records the events from this point until the fourth lunar month of 1593 when Kim was buried in his hometown of Andong.

The accounts in the diary are detailed in chronological style and it records many of the events that took place in the defence of Kyŏngsang Province. It also includes many of the royal mandates issued to the region, statements that Kim Sŏngil released to the populace and appeals made by members of the volunteer forces to the throne. The work also covers the activities of Kim, the movements of the volunteer army and the situation and problems of the common people during this period. The data in this diary are useful for the study of the 1592 Japanese Invasion as they provides not only a military account of the struggle, but also a view of the common people’s plight at this time.

**Yŏngsan River**

From its beginning at Yongch’u Peak (560m) in South Chŏlla Province’s Tamyang County,
the Yongsan River flows 122 kms. through Kwangju, Naju and Yongam County on its way to the Yellow Sea. The river is navigable for 48 kms, from Mokp’o to Yongsanp’o. Dolmens and plain pottery have been discovered along the river in Naju County, indicating that people have lived near the river since prehistoric times. Burial urns from Paekche have also been discovered near the river. During Koryŏ, the river was used to transport rice from the public granary at Yongsanp’o to other areas in the region. Before the construction of modern transportation networks, small steamboats plied the river and there was a lighthouse at Yongsanp’o. In ancient times, the river was known both as Kum Stream and Kum River. Its present name comes from the residents of Yongsan Island. Harassed by Japanese marauders, the islanders fled to the Yongsanp’o area where they created a port.

The river’s main tributaries are the Orye River, Chungam River, Kwangju Stream, Hangnyong River, P’yŏngnim Stream, Chisŏk Stream, Umagwŏn Stream, Kŭmph’ŏn Stream and Hamp’yŏng Stream. The upper stretch of the Yongsan between Tamyang Dam and Kwangju is known as the Kungnak (Paradise) River. The terrain surrounding the Yongsan River system is generally hilly but plains are found around the Kungnak River, Hwangnyong River, at the point where it meets Chisŏk Stream and in the Kwangju area. In order to prevent flooding, Naju Lake, Changsŏng Lake, Kwangju Lake and Tamyang Lake were formed and a dike was built at Mokp’o. Dams in the area include Changsŏng Dam on the Hangnyong River and Tamyang Dam on the upper reach of the Kungnak River.

Yōngwŏl County

Situated on the southern tip of Kangwŏn Province, Yōngwŏl County is comprised of the towns of Sangdong and Yongwŏl, and the townships of Nam, Puk, Sŏ, Suju, Chuch’ŏn, Chungdong and Hadong. Yōngwŏl Town lies in a low hilly area between the Ch’aryŏng Mountain Range to the northwest and the T’aebaek Range to the southeast. Mt. Paegun, at 1,426 metres, is the county’s highest peak. As part of an inland mountainous region, the region’s weather is characterised by sharp fluctuations in both daily and yearly temperatures.

Although some rice is grown here, the area’s agriculture is centred on dry field crops such as corn, potatoes, peanuts and tobacco. Due to the abundance of pasture, the area has traditionally raised cattle. The county’s agricultural revenues are supplemented by the area’s coal and limestone mines.

The area contains a number of historical relics. In particular, there are a number of sites associated with King Tanjong (r. 1452-1455). Tanjong briefly became king at the young age of 11, but was soon forced to go into exile to Ch’ŏngnyangp’o by Sejo (r. 1455-1468). According to the local legend, in 1457 when Sejo had Tanjong killed, one of the palace women and ten of the palace slaves committed suicide at Nakhwa Rock. Tanjong’s grave mound can now be seen at Yonghung Village in Yongwŏl. In spring during the Tanjong Festival, elaborate ceremonies are held at a number of shrines in the area in commemoration of Tanjong and his retainers’ loyalty.

In Yongwŏl Town, there is the Yongwŏl Hyanggyo (County public school). Built in 1398, everything but the Taesŏng Hall was destroyed during the Korean War. In 1973, the hall was repaired. There are also a number of Buddhist sites in the area, including Kŭmmong Hermitage, founded by Uisang during the Shilla period, and a seated Buddha in relief (Kangwŏn Province Tangible Asset No. 74) at Murung Village in Suju Township.

In addition to the area’s historical relics, there are several natural caves in the region. East of Mt. T’aehwa, there is the cave of the Yongwŏl Ko clan. Within the cave, which is open to tourists, there are a number of stalactites and other interesting formations.

Yŏngyang County
Situated in the northwest part of North Kyŏngsang Province, Yŏngyang County is comprised of the town of Yŏngyang and the townships of Sŏkpo, Subi, Irwŏl, Ibam and Ch'ŏnggi. The T'aebaek Mountain Range runs through the county, making this the highest region in the province. Mt. Irwŏl (1,219m) rises in the north, Mt. Paegam (1,004m) in the east, Mt. Myŏngdong (812m) in the south and Mt. Hŭngnim (767m) in the west. As an inland mountainous region, the local weather is characterised by sharp daily fluctuations in temperatures.

The area’s rugged terrain brings low temperatures and meagre rainfall, so that only about 10% of the county is arable. About three quarters of the cultivated land is used for dry-field crops. The county is particularly famous for its red peppers and tobacco. In mountainous areas, there are numerous cattle and sheep breeding operations, as well as bee-keeping. As for mining, there is a lead mine on Mt. Irwŏl, and flourite mines are found in Irwŏl Township near Chugok Village.

Due to its remote location, the county’s tourism is relatively underdeveloped. However, with high mountains and numerous interesting rock formations along Panbyŏn stream, the area has many potential tourist attractions. Mt. Irwŏl, Mt. Ullyŏn (939m) and Oship Peak (827m) are popular with hikers. In Ibam Township, there is Iham (Standing Rock), a giant pillar of granite that stands above Panbyŏn Stream. Across from the rock is a picturesque stretch of white sand. The area is popular with fishermen and local tourists. In Yŏngyang’s Hawŏn Village, one finds Sŏnyu Cave and Yanghodae, an impressive cliff over 30 metres high.

Most of the county’s historical sites are located in the south. In Ibam Township’s Sanhae Village, there is an interesting five-storey pagoda (National Treasure No. 187). The pagoda has been built of small cut stones so as to resemble a brick pagoda. Another ‘imitation-brick’ five-storey pagoda can be see in Yŏngyang’s Samji Village. In addition to the Koryŏ-era three-storey pagoda (Treasure No. 609) in Yŏngyang’s Hwach’ŏn Village, there are three-storey pagodas in Irwŏl Township’s Yŏngwa Village (North Kyŏngsang Province Tangible Cultural Asset No. 8), Yŏngyang’s Hyŏn Village (Treasure No. 610), Yŏngyang’s Shin’gu Village, and in Sŏbu-dong. As for Buddhist statues, there is a Bhaisajyaguru (Medicine Buddha) statue (North Kyŏngsang Province Tangible Cultural Asset No. 111) in Yŏngyang’s Yŏndang-dong, and there are seated Buddha statues in Togok-dong and Shin’gu-dong.

There are several old Confucian schools in the area, such as Pongnam Sŏwŏn, Yŏnam Kangdang (Lecture Hall), Myŏnggo Sŏwŏn in Irwŏl Township’s Kagok Village, and Yŏngyang Hyanggyo to the east of Mt. Hŭngnim in Irwŏl Township. Founded in 1679, the Yŏngyang Hyanggyo was last reconstructed in 1974. The writing on the signboard of Myŏngnyun Hall is from the famous Koryŏ calligrapher Han Su (1333-1384).

Yongyu Island

Yongyu Island is in the Yellow Sea between the islands of Kanghwa and Taemunŭi. Originally attached to Ongjin County, it became part of the city of Inch’ŏn in 1989. The island has a total area of 13.61 sq. kms. and a coastline of 31.0km. Except for Mt. Osŏng in the east, the terrain is undulating, with plains along the southwestern coast. As indicated by 1985 statistics, the population was 2,311. Yongyu has an average temperature of -3.7c. in January and 25.5c. in August. Annual rainfall averages 940mm. and the island’s snowfall averages 250mm.

Over one-quarter of the island area is arable land. Of this, almost 2.0 sq. kms grows rice and about 1.5sq.kms. dry-field crops such as barley, bean peanut, garlic, red pepper and sesame. Local marine products include yellow corbina, croaker, shrimp, oyster and laver.
There are two primary schools and one junior high school on Yongyu. A daily ferry runs from the island to the mainland. Úrwang Village Beach is the island's most popular tourist destination. The beach is renowned for its picturesque setting in dense pine forest and sweet briar (*Rosa rugosa*).

**Yŏnp'yŏng Island**

Yŏnp'yŏng Island is situated eighty-three kms. northeast of Inch'on and about five kms. north of So (Lesser) Yŏnp'yŏng Island. Administratively, the island belongs to Ongjin County in the Inch'on Metropolitan Area. The island has an area of 6.95 sq. kms. and a 24.3 km coastline. 1985 statistics give a population of 1 925. Yŏnp'yŏng has an average January temperature of -4.0c. and an average August temperature of 25.0c. The average annual rainfall is 937mm and the average snowfall is 255mm.

About one-sixth of the island is arable land. Rice is grown (0.53 sq.kms.) and barley, bean, sweet potato, peanut, garlic and red pepper make up the bulk of the dry-field crops. Shrimp, oyster, crab and laver are the island's marine products, but the seas surrounding Yŏnp'yŏng are rich in yellow corbina (*Kor. chogi*), making the island a national leader for catches of this particular fish. During the short season when yellow corbina are caught, over one and a half thousand fishing vessels work the area, and about one-thousand four hundred temporary workers are employed to land and process the catch. Due to its proximity to North Korea, the island is of great strategic importance.

Local transportation is limited to a ferry that arrives once every three days. There is a primary school, a junior high school and a high school on the island. Numerous shell mounds dating from the prehistoric period are scattered around the island. These mounds contain both patternless and comb-pattern pottery, in addition to shells.

**Yŏnsan, Prince** (r. 1494-1506)

Prince Yŏnsan-gun (1476-1506) was the tenth king of Chosŏn and ruled from 1494 to 1506. His given name was Yong, his father was King Sŏngjong (r. 1469-1494) and his mother was Queen Chŏnghyŏn. He was also the half brother of the King Chungjong (r. 1506-1544) who would succeed him on the throne. In 1483 he was named as crown prince and in the twelfth lunar month of 1494 he assumed the throne upon the death of his father. He would rule Chosŏn for a turbulent and bloody twelve years before he was dethroned in 1506. Yŏnsan-gun, along with the fifteenth king Kwanghae-gun (r. 1608-1623) were the only two kings to be deposed in the over five hundred years of the Chosŏn Kingdom. Accordingly, these two monarchs are not designated as 'king' in Korean historical records, including the *Sonwon kyebo* (The Genealogy of the Chosŏn Royal Family).

The official record of Yŏnsan’s reign is entitled *Yŏnsan-gun ilgi* (Record of Yŏnsan-gun) and includes the following comments on the monarch: “In all of history there has not been one that indulged in carnal desires and wickedness with the murderous heart like Yŏnsan, his vassals and officials were killed throughout his reign and none remain...”. This displays the official contempt for Yŏnsan and his actions, particularly against the literati whom he felt had betrayed him. The Purge of 1498 (Muo Sahwa) was the result of a writing that criticised the usurpation of the throne by King Sejo (1455-1468) through an analogous story by Kim Chongjik (1431-1492) that was incorporated by his disciple Kim Ilson (1464-1498) into the official records of the reign of King Sŏngjong. When this was discovered by the meritorious elite they incited Yŏnsan to punish those responsible and thus a number of literati were either executed or sent into exile. This served to greatly diminish the power of the neo-Confucian literati and allow Yŏnsan to begin his abuse of power.

Following the Purge of 1498 Yŏnsan became intoxicated with his power and led a life filled
with pleasure seeking and excesses, thereby depleting the government’s resources. To compensate for his misappropriation of the government’s funds, Yŏnsan attempted to confiscate the property of the meritorious elite and thus incurred their wrath also. Yŏnsan’s reaction to their resistance was an attempt to purge the government of all sources that ventured to resist his kingly authority. At this same time some courtiers that were connected to the throne by marriage brought up the issue that surrounded the death of his mother. Lady Yun who had been the consort of King Sŏngjong had been stripped of her title and executed by her husband the king. Yŏnsan had been unaware of the particulars of this situation and thus was seized with a murderous rage. This marked the beginning of the Purge of 1504 (Kapcha Sahwa) in which many neo-Confucian literati, whom Yŏnsan held responsible for the death of his mother, that had survived the previous purge were either executed or exiled. The scale of this purge was unparalleled in the history of Chosŏn and continued for two years.

In 1506 the situation in Chosŏn had reached a crisis point and the same forces that had abetted him in his bloody purges dethroned Yŏnsan. Behind the leadership of Sŏng Huian, Pak Wŏnjong and Yu Sunjong, Yŏnsan was replaced on the throne by his half-brother, King Chungjong, and executed. Yŏnsan’s reign of terror exceeded all bounds and he is remembered as a monarch that had no compassion for the people or the nation. His burial tomb is located in present day Paktong-dong of Seoul and bears the simple inscription of ‘Yŏnsan’s Tomb’, with no further ornamentation.

Yonsei University

Yonsei (Yŏnse) University is situated in Shinch’ŏn-dong in western Seoul. The university was founded when Yŏnhŭi University and Severance Medical College merged in 1957. Both Yŏnhŭi and Severance were inter-denominational institutions founded by Protestant missionaries to Korea. In 1915, Reverend Horace Grant Underwood established the former as Chosun Christian College (Chosŏn Kidokkyo Taehak). This consisted initially of four departments (literature; commerce; science; and agriculture). On 1 March 1919, students of the college were involved in the nationwide demonstrations then taking place, and as a result, the first graduating class of twenty-two students had to forego their commencement ceremonies. In 1948, the college, with Dr. L. George Paik (Paek Nâckchun, 1895-1985) as its head, became a university, consisting of the Colleges of Liberal Arts; Commerce and Economics; Science; and Theology. A College of Political Science and Law and a Graduate School were soon added.

Severance Medical College has its origins in a hospital founded by Dr. H. N. Allen in 1895, under the royal decree of King Kojong (r. 1863-1907). At the hospital, Dr. Allen, who was part of the Korea Mission of the Presbyterian Church in the USA, taught Western medicine to Korean students.

Yonhi University and Severance Medical College maintained a close relationship from their inception. Dr. O.R. Avison, president of Severance, also served as president of Yonhi, and many of the directors also held appointment to both boards. In 1949, Yonhi assumed responsibility for pre-medical training for Severance, and in 1955 the decision was made to grant part of the Yonhi campus for the relocation of Severance Hospital and the medical college. Finally, in 1957, the two institutions were formally united and the first syllable of each name, Yon and Sei, were used to designate the new institution, Yonsei University. Dr. L. George Paik was Yonsei’s first president.

The Yonsei Medical Centre opened in 1962 and this was followed by the United Graduate School of Theology and the Graduate School of Business Administration in 1964; the University Museum in 1965; the Graduate School of Education in 1967; and the College of Dentistry in 1968.
In the 1970s, Graduate Schools of Public Administration; Engineering; Health Science and Management were opened. Also, in 1976, the Wonju Christian Union Hospital became a part of Yonsei and after two years, a Wonju branch of the College of Medicine was established. During the 1980s, the university’s undergraduate and postgraduate curriculum developed at a rapid pace, coinciding with the growth of the university’s Wonju campus.

Today, the university has seventeen colleges and twelve graduate schools. At the Seoul campus are the Colleges of Business & Economics; Dentistry; Engineering; Human Ecology; Law; Liberal Arts; Medicine; Music; Nursing; Science; Social Science; Theology; and the College of Sciences in Education. For post-graduate studies, the Seoul campus has the Graduate School; the United Graduate School of Theology; and the Graduate Schools of Administrative Sciences; Business Administration; Education; Engineering; Health Science and Management; Intellectual Property and Law; International Studies; Mass Communication; and Public Administration. At the Wonju campus are located the colleges of Commerce & Law; Health Sciences; Liberal Arts and Sciences; the Wonju College of Medicine; and the Graduate School of Administration Science.

As part of its international focus, Yonsei Graduate School also offers a two-year Masters of Art in Korean Studies for foreigners, while the Graduate School of International Studies, established in 1987, gives students an opportunity to earn a master's degree in six areas, viz, Business Administration; East-Asian Studies; Economics; Korean Studies; Political Science; and Public Administration, through the teaching medium of English. Yonsei also contains the Korean Language Institute for foreigners studying Korean and the Foreign Language Institute, for Korean students learning English and other languages. In addition, the school offers a summer program for international students. Yonsei has 'one-to-one' exchange agreements with some 178 universities in a dozen or so countries -- Australia; Canada; China; Finland; France; Germany; Israel; Japan; Russia; United Kingdom; USA; and Vietnam.

**Yorha ilgi** (Jehol Diary)

*Yorha ilgi* is a travel diary written by the noted scholar Pak Chiwon (1737-1805) of the late Choson period. This work consists of twenty-six volumes in ten fascicles. It was included in *Yonam chip* (Collected Works of Yonam) that Kim Taekyông published in 1901, and was again published with movable type technology in 1911. In 1956 Taiwan University reprinted the collection from its own copies of the work.

The contents are a travel record of the author from when he visited the summer palace of the Emperor of Qing China along with his brother Pak Myôngwon in order to celebrate the seventieth birthday of the Chinese scholar Kan Longdi in 1708. During this time, Pak observed the whole of northern China and the southern part of Manchuria, and he was also able to experience scholarly discourse with the literary men and luminaries of China.

This work describes many of the sights and events that Pak encountered on his journey. Some of the items that are commented on include the writer's interest in the Qing governmental systems and the building techniques that he witnessed. Other notable sections include the discussions that Pak had with the scholars at the Taixue (an academic institute of Qing) about heliocentric theories and the moon. In this work the author also introduces the story of 'Hosaeng' which in later times was the subject of an independent work entitled *Hosaeng chôn* (Tale of Mr. Ho). Other topics broached by Pak include his commentary on the policy of Qing towards Choson, a drama performed at a longevity celebration for the Qing Emperor, criticism of songs, poetry and prose, and further discussions with Chinese scholars.

This book along with Pak Chega's *Pukhakai* (Discourse on Northern Learning), notably advocate Northern Learning (*pukhak*), and for this reason were criticized by King Chôngjo.
(r. 1776-1800) of Chosôn, but nonetheless seem to have been well known to many of the intelligentsia. This book marked a departure from the usual travel records and it is considered a masterpiece that satirized many of the social problems of the time. Pak’s writing style is very distinct and well represents the literature and ideology of the late Chosôn period.

Yósu

Located in the southeastern part of South Cholla Province, Yósu covers an area of 45.19 square kilometres and as of 1989, had a population of 180,226. Mt. Ch’ónsŏng (460m) and Mt. Ponghwa (422m) rise to the north of the city, with Mt. Changgun (325m) and Mt. Kubong (389m) to the south. Yósu borders the city of Yŏch’ŏn to the north and west, and Tolsan Bridge connects it with Yŏch’ŏn County to the southeast. With Tolsan and other islands off the coast acting as a natural barrier, the sea is usually placid. The city’s southern location, touched by warm currents of the Southern Sea, makes for mild weather, with an average annual temperature of 13.7°C and an average yearly rainfall of 1,313.7mm.

Approximately a quarter of the city’s land is under cultivation, but urban encroachment is decreasing this. Commercial fishing is a mainstay of the local economy. Catches include filefish, sardine and anchovy, but hairtail, gizzard shad, mackerel, sea bream, clam and octopus are also caught here. Gizzard shad and shellfish were once found in abundance on the coast of Shinwŏl-dong and around the islands of Kyŏngho-dong, but these have been wiped out by chemical pollution of the sea from refineries in Shinwŏl-dong. The city’s wholesale fish market is the second largest in Korea after that of Pusan. Much of the catch from the outlying islands in the region comes through Yoso on its way to other mainland markets. To serve the local commercial fishing fleet, there are ice making plants, fish processing plants, a shipyard and net factories in the area. In order to promote better management of the area’s resources, the Yosu National Fisheries University has been set up in Kuk-dong.

Yósu’s downtown area is located between the railway station and the passenger ship terminal. There is a bus terminal about 3.5 kilometres from the city centre, and further out a domestic airport. Relatively easy to access from major cities across the country, the area has become a popular tourist destination. Situated on the rugged southern coast, Yósu is a particularly beautiful area. One of the city’s most popular excursions is the hydrofoil ride between Yósu and Pusan via Namhae, T’ongyŏng and Sŏngp’o. In order to preserve the area’s picturesque coast and islands, much of the area between Yósu and Pusan has been designated as Hallyŏ Haesang Kungnip Kongwon).

On the coast near Sujŏng-dong, is a 730 metre-long causeway linking the mainland to Odong Island. Covered with pines and bamboo, this rugged island has a lighthouse, walking trails and picnic areas. It is especially popular in spring when the camellia flowers are in bloom. On the mainland just south of the causeway, lies Chasan Park. From a high-point in the park, there is a good view of Yósu City and Odong Island. The high land within the park is covered with thousands of evergreen trees, and flowering shrubs. Other attractions in the park include a fifteen meter-high statue of Admiral Yi Sunshin, Chasan Pavilion, Chasan Temple and an archery range.

Another popular attraction is Changgun Island. Situated just north of Tolsan Bridge, this small, uninhabited island is famous for its cherry trees. To the north of the city’s central district, in Manhong-dong, is Mansŏng Village beach. Unlike most Korean beaches, this 300-metre-long strand consists of black sand. The beach attracts large crowds of tourists throughout the summer months.

In addition to scenic attractions, the area has some interesting historical sites. In Kunja-dong is Yósu Hyangggyo, a Confucian school founded in 1897 and reconstructed in 1950.
Within walking distance from the school, is Chinnamgwan, one of the longest pavilions in Korea. This stately building was originally built for receiving and greeting officials and holding ceremonies but was later used as a military headquarters. To the north, in Tŏkch’ung-dong, is Ch’ungminsa, a shrine built in 1601 by Yi Shiŏn, a naval commander, in memory of Admiral Yi Sunshin.

Yŏwŏn  (see Magazines)

Yu Chŏng [Buddhism]

Yu Hyŏngwŏn (1622-1673)

Yu Hyŏngwŏn was a late Chosŏn period shirhak (practical learning) scholar. His family’s ancestral home is in Munhwa, his courtesy name was Tŏkpu and his pen name was Pan’gye. He was born in Seoul to a family that had many high-ranking government officials in its past. During this period directly after the 1592 Japanese Invasion, Chosŏn society was in complete chaos and the inconsistencies between the yangban, or ruling class, and the common people had reached new peaks. Yu is said to have been an extremely talented youth and began his study of classical Chinese at the age of five. When he was fifteen the Manchu Invasion of 1636 (pyŏngja horan) broke out and his family fled to Wŏnju in Kangwŏn Province and subsequently moved several more times. As Yu reached the age at which he should have sat for the civil service examination his family was plagued by a series of deaths. He had already lost his father, who had died when Yu was but two years old, and shortly lost his grandmother, mother and grandfather by 1651. Thus after he had completed mourning for his grandfather he retired to Puan in Cholla Province at the young age of thirty-two. For the balance of his life he stayed in Puan and conducted his studies, and when he died in 1673 he left behind one son and six daughters.

Yu is best known for his empirical study Pan’gye surok (Pan’gye’s Treatises), which discussed the land systems and bureaucratic structure of Chosŏn. While he lived out his life in retirement in Puan, he became very much aware of the problems that the farmers of Chosŏn were burdened with. The shirhak ideology stressed the examination of actual conditions as a starting point and thus, agriculture, which was the basis of the Chosŏn economy, was seen as the area in need of fundamental reform. Yu saw that the only way to improve the situation of Chosŏn was to ease the tax burden on farmers, and thereby help them from their poverty stricken existence. However, his ideas were not well received by the government since the country was in dire need of all the taxes it could collect. The fact that Pan’gye surok was not even published for almost one hundred years after Yu’s death bespeaks of the unpopularity of the ideas that it espoused. Yet Yu did establish the shirhak school of thought in Korea and his work paved the way for future scholars who would have a greater say in the Chosŏn government. Notably, Yi Ik (1681-1673) built upon the scholarship of Yu and attracted many disciples, thus allowing the shirhak school to flourish in Chosŏn.

Yu Kilchun (1856-1914)

Yu Kilchun was a politician and advocator of the enlightenment ideology of the late Chosŏn and early colonial periods. His family’s ancestral home is in Kigye, his courtesy name was Sŏngmu and his pen name was Kudang. He was born in Seoul and his father, Yu Chinsu was a literary licentiate (chinsa). From an early age he was tutored in the Chinese classics by his father and grandfather on his mother’s side. In 1870 he learned the shirhak ideology from Pak Kyusu (1807-1876) along with other youths such as Kim Okkyun (1851-1894), Pak Yŏnghyo (1861-1939) and Kim Yunshik (1835-1922). At this time he also pursued knowledge of foreign countries and institutions through works such as Haeguk toji (Illustrated Treatise of Nations across the Sea). In 1881 through the help of Pak Kyusu he
was able to travel to Japan on the so-called ‘gentlemen’s sightseeing tour’ (shinsa yuram tan) that was a type of fact finding mission to observe the modernisation of Japan. It was a result of this visit to Japan that Yu saw the urgency of reform for Korea, and he remained in Japan and studied under Japanese scholars at this time.

As a result of the Military Mutiny of 1882 (Imo Kullan) Yu was compelled to return to Korea and at this time he along with Pak Yonghyo began operation of the Hansŏng sunbo newspaper, which was the first newspaper in Korea. The newspaper and the reforms that Yu hoped to implement did not occur due to the opposition from the faction of Queen Min (1851-1895), but nonetheless Yu was able to continue his studies and eventually travelled to the United State where he attended the Governor Dummer Academy in 1884. This made Yu the first Korean to study abroad in the United States. Shortly after this he heard accounts of the Coup d’Etat of 1884 (Kapshin Chŏngbyŏn) and decided to return to Korea. First, however, he visited many of the European nations before eventually returning to Korea in December 1885. Upon his return to Korea he was arrested for he was a close acquaintance of those that had engineered the coup such as Kim Okkyun and Pak Yonghyo, and moreover he was a member of the enlightenment faction. He was released from prison through the help of Han Kyusŏl (1856-1930) and retired to his home where he wrote his account of his travels abroad, Sŏyu kyŏnmun (Observations on a Journey to the West) in 1895.

Yu’s view for the process enlightenment envisioned two possible courses, with one being fruitful and resulting in a national renaissance and the other being a waste of time. The process that he saw as wasteful was the mechanical imitation of the ways of other nations without first gaining an understanding of the context in which these ways had developed. In order for enlightenment to be successful, Yu felt that first a fundamental cognition of the core principles of Western culture was necessary, only then did he feel that Korea could adapt these core principles to her particular situation. Yu’s ultimate goal was the establishment of a constitutional democracy with a free enterprise system for Korea, but he realised that as a transitional stage Korea would first need a government that was jointly managed by the sovereign and his subjects. Accordingly Yu sought reforms that would help bring about this transitional constitutional monarchy that would allow Korea to eventually take the next step towards a true democracy.

In the aftermath of the Reforms of 1894 (Kapo Kyŏngjang) Yu served as the Minister of Home Affairs in the new government headed by Kim Hongjip (1842-1896). However shortly after the reforms were enacted, the assassination of Queen Min by the Japanese created a powerful backlash against the pro-Japanese elements in the Korean government and thus the pro-Russian faction took control. In this situation Yu was among those who faced possible execution and thus he fled to Japan where he remained for the next twelve years. He was eventually pardoned by King Sunjong (r. 1907-1910) and allowed to return to Korea where he continued his enlightenment activities. Upon his return he established the Kyesan School and an educational society, and also participated in public work projects such as the management of railways. He also continued his academic endeavours most notably compiling Chosŏn munjon (The Grammar of Chosŏn), which was the first work on han’gul grammatical rules ever made in Korea.

Yu continued his contributions to Korean society up until the time of his death in 1914. He has left a wealth of literary resources behind including the aforementioned Sŏyu kyŏnmun and his poetry collection Kudang shich’o. In addition in 1971 a collection of his works, Yu Kilchun chŏnsŏ (Collected Works of Yu Kilchun), was published in four volumes.

Yu Kwansun (1904-1920)

Yu Kwansun was a freedom fighter. Her family’s ancestral home is in Kohŏng and she was born in Ch’ŏnan of South Ch’ungch’ŏng Province. In 1916 through the help of an
American female missionary, Yu was able to enter Ehwa School with the Methodist Church providing expenses for her. When the March First Independence Movement took place in 1919 she was a first year high school student at Ehwa but she left school to participate in the movement. In the aftermath of the Independence Movement, the Japanese authorities closed Ehwa and Yu intended to return to her hometown to further her education and religious beliefs. However, as she was about to leave Seoul she met some of those who had been active in the Independence Movement and they invited her to join the cause. Thus she rallied others to join the cause such as Kim Kueng and Cho Inwon along with village leaders and church members and led demonstrations for Korea's independence in places such as Ch'ongju, Yon'gi and Chinch'on.

On the first day of the third lunar month in 1919 she pushed for an independence demonstration to be held on the market day for the Aonae area. On that day several thousand demonstrators gathered, and with Yu at the lead began an energetic rally for independence. The response of the Japanese military police was brutal as they shot and killed Yu's mother and father and arrested Yu as a leader of the Aonae movement. She was subjected to tortures of all varieties before being sentenced to three years imprisonment. This decision was appealed and when Yu faced a judicial review board her condemnation of the imperialist actions of the Japanese and rejection of their authority resulted in her being sentenced to seven years incarceration. She was transported to Sōdaemun Prison in Seoul where she cried out for the independence of Korea at every opportunity. However, she was continually subjected to every imaginable torture and atrocity by the Japanese and despite her resolute will to overcome these adversities died as a result of her treatment in 1920 at the young age of twenty. Her barbarous murder caused outrage among her teachers at Ehwa and others involved in the independence movement. Yu is remembered as a devoted patriot who willingly sacrificed herself to the cause of Korean independence. She was honoured by the Republic of Korea with the Order of Merit for National Foundation in 1962.

Yu Mongin (1559-1623)

Yu Mongin was a civil official and literary man of the middle Chosön period. His family's ancestral home is in Kohung, his courtesy name was Ùngmun, and his numerous pen names include Ùdang, Kanjae and Mukhoja. His father was a literary licentiate (chinsa) and he was born in Seoul. In 1582 he became a literary licentiate and in 1589 passed the Augmented Literary Examination (chìnggwan mun'gwà) with the highest score. He travelled to Ming China in 1592 as the Sixth Counsellor (such'an) of the Office of the Special Counsellors (Hongmun'gwàn).

During the time he was away the 1592 Japanese Invasion began and he joined King Sônjo (r. 1567-1608) in exile in P'yôngyang. While Chosön was under siege from the Japanese invasion, Yu acted as envoy to Ming among other official capacities. After this time he served as Third Minister (ch'amüi) of the Board of War (Pyôngjo), Governor (kamsa) of Hwanghae Province and as First Royal Secretary (tosëngji) of the Royal Secretariat (Sûngjôngwôn). He also travelled to Ming for the third time in 1609 as part of an official embassy. Yu attempted to retire from officialdom when he returned from China, but at the king's insistence served in other official capacities including Town Magistrate (pusa) of Namwôn and Censor-General (taesagan) of the Office of the Censor-General (Saganwôn). However, it was at about this time that the dethronement of the Queen Mother (the mother of Kwanghae) occurred and Yu retired from public life. When King Injo (r. 1623-1649) replaced the deposed Prince Kwanghae (r. 1608-1623) on the throne, Yu was among those who faced the new king's wrath and thus he was sentenced to a life of wandering. In the end, Yu was executed by King Injo for suspicion of mounting a plot to overthrow the monarch.

Yu is best known for his unofficial history Øu yad'am (Ou's Unofficial History), which is a collection of tales recorded in the form of 'town talk' and 'street words' from which many
different angles of human life are recorded. In a simple and distinct literary style, the situation of the people both before and after the Japanese Invasion of 1592 is recorded in this work. This collection of prose and tales marked the beginning of a historical-romance type story that would become prevalent in the late Choson period, and is considered to be bold in its descriptions and as being as epoch work. Yu also left behind a literary collection Ou chip (Collected Works of Ou).

Yu Sŏngnyong (1542-1607)

Yu Sŏngnyong was a civil official of the middle Choson period. His family’s ancestral home is in P’ungsan, his courtesy name was Igyŏn and his pen name was Sŏae. He was born in Ùisŏng and was the son of the Hwanghae Province Governor (kwanch’alsa), Yu Chungyŏng. He was a disciple of Yi Hwang (1501-1570). In 1564 he became both a literary licentiate (chinsa) and a classics licentiate (saengwŏn) and in the next year entered the National Academy (Sŏnggyun’gwan) for further study. In 1566 he passed the Special Literary Examination (pyŏlshī mungwa) and served as the Third Copyist (pujŏngja) at the Office of Diplomatic Correspondence (Sŏngmun’wŏn) and thus began his career in Choson officialdom. In the following year he served as Third Diarist (komyol) at the Office of Royal Decrees (Yemun’gwan) and at the same time as Copyist (kisagwan) at the Bureau of State Records (Ch’unch’ugwan). Subsequently he continued his rise in the Choson bureaucracy and served in a variety of positions such as Second Diarist (taegyo) in the Office of Royal Decrees in 1568, Assistant Section Chief (chwarang) of the Board of War (Pyŏngjo) and by 1578 was appointed as Second Censor (sagan) at the Office of the Censor-General (Saganwŏn). In 1580 he was promoted to Third Minister (ch’amui) at the Board of Personnel (Ijo) and by 1590 he had achieved the position of Third State Councillor (uuijong) of the State Council.

At the time of the outbreak of the 1592 Japan Invasion, Yu had been promoted to the Chief State Councillor (yŏnguĳjong) of the State Council and was thus instrumental in the Korean efforts against the Japanese invaders. It was in this capacity that he directed the nation’s war efforts and moreover, the diplomatic exchanges with Ming China. Yu also carried out direct battle activities against the Japanese and was instrumental in the retaking of P’yŏngyang Fortress along with the Ming General Li Rusong (kor. Yi Yŏsong). In addition he served as Military Commander (toch’ech’alsa) over the three provinces of Ch’unch’ŏng, Ch’olla and Kyŏngsang. It was during his efforts against the Japanese that he wrote Chingbi rok (Record of a Timely Warning) that recorded many of the happenings of this period, and thus supplies the modern scholar valuable data for study of this period.

Yu proved himself to not only be a competent official, but also a skilled military commander who served Choson in her most precarious moments. Moreover, his writings from this period, including the aforementioned Chingbi rok, provide important records of this period. Other works of Yu include Sŏsaе sŏnsaeng munjip (Collected Works of Master Sŏsaе) and Kwanhwa rok (Record of Kwanhwa), which both display the literary talents of Yu and provide insight into the workings of the Choson government during his lifetime.

Yu Tükkong (1749-?)

Yu Tükkong was a late Choson period shirhak (practical learning) scholar. His family’s ancestral home is in Munhwa, his courtesy name was Hyep’ung and his numerous pen names included Yŏngjae, Yŏngnam and Koundang. After becoming a literary licentiate (chinsa) Yu was appointed as a Librarian (kŏmsŏ) in the Kyujanggak Library where he served along with other scholars such as Yi Tŏkmu (1741-1793) and Pak Chega (1750-1805). Yu was associated with the Northern Faction (Pukhakp’a) that advocated the modernisation of Choson based upon the reforms present in Qing China.

Yu produced many works that outlined his vision for reform in Choson and among these
Kyŏngdo chapki (Seoul Miscellany), Yŏngjae chip (Collected Works of Yŏngjae) and Koundang p’ilgi (Jottings of Koundang) are notable. However, the most well known work of Yu is his Parhaego (Treatise on Parhae), which led to a new view of the ‘unification’ by Shilla and provided a review of the oft-overlooked Parhae Kingdom. Yu, typical of shirhak scholars, thought that the Korean historical experience should be extended beyond the Korean peninsula into Manchuria and this gave rise to many new theories concerning the origin of ancient Korean states.

Yujŏng (1544-1610)

Yujŏng was born Im ŭnggyu, in Miryang in South Kyŏngsang Province. In 1558, his mother passed away, followed by his father a year later. As a result, the young Yujŏng entered Chikchi Temple as Shinmuk’s disciple. Three years later, he passed the monk’s examination (sŏnggwâ). After this, he began to associate with a number of young Confucian scholars including Pak Sun and Im Che. He also studied the Confucian and Taoist classics under No Sushin, who was the Minister of State. After serving as the abbot of Chikchi Temple, he was recommended as the abbot of Pongūn Temple, the head monastery of the Sŏn (Zen) Sect. He declined, however, and instead went to Pohyon Temple on Mt. Myohyang where he studied Sŏn under Hyujŏng (Grand Master Sŏsan). After undergoing additional training at Haein Temple and other meditation centres throughout the country, he went to Sangdong Hermitage on Mt. Okch’ŏn where he achieve awakening. He then went to live at Yŏnggām Temple on Mt. Odae.

In 1589, he was accused of complicity with Chŏng Yŏrip (?-1589), a scholar who had conspired to seize the throne from King Sŏnjo. As a result, he was imprisoned in the Kangnung area. However, he was later released, after Confucian scholars based in Kangnung pleaded on his behalf. When Hideyoshi’s armies invaded in 1592, Yujŏng, responding to a call to arms from both the court and Hyujŏng, established a monk’s army which he led to Sunan where they joined up with forces led by Hyujŏng. From here, he led the combined army of 2,000 monks to the corridor between P’yŏngyang and Chungwha in preparation for the retaking of P’yŏngyang fortress. In the early part of 1593, he joined the allied Ming forces in recapturing the capital, and then continued to engage the Japanese in battles around present-day Seoul.

During the next four years, Yujŏng participated in negotiations with the Japanese, who were attempting to force an unequal treaty on Korea. He also presented the king with a written proposal urging the king to use all means possible to drive away the Japanese forces. At the same time, he offered advice on ways to strengthen the national defence and improve agriculture. In addition, he urged the king to cease discriminatory policies toward monks. Through Yujŏng’s efforts, an number of stone fortifications were built throughout the nation, and reserves of grain were stored for use during military crises.

In 1604, King Sŏnjo appointed Yujŏng as envoy for peace talks with Japan. He therefore went to Japan, where he engaged in eight months of negotiations which ended successfully. When he returned to Korea in 1605, he brought with him over 3,000 Korean prisoners of war. After a trip to Mt. Myohyang to pay respects to the deceased Hyujŏng, he returned to Haein Temple where he died of an illness in 1610. Yujŏng was styled Samyŏng-dang,
Songun and Chongbong. He wrote several treatises, including the seven-volume work *Samyŏng-tang* taesa chip and the single-volume work *Punch’ung* sŏnan nok.

**Yuk Yŏngsu (1925-1974)**

Yuk Yŏngsu was the wife of the president of the Third and Fourth Republics, Park Chung Hee (Pak Chŏnghŭi). She was born in Okch’ŏn of North Ch’ungch’ŏng Province and was the daughter of Yuk Chonggwon and Yi Kyŏngnyŏng. In Okch’ŏn she attended Chukhyang Elementary School and then attended Paehwa Girl’s High School where she graduated. After graduation she served as an instructor at Okch’ŏn Girl’s Middle School. In 1950 she met and married the young military officer Park Chung Hee and the couple had one son, Chiman, and two daughters, Kūnhye and Kŭnyŏng. In 1961 Park assumed the presidency of Korea through a military coup and then later in 1963 was directly elected by the Korean people. From 1963 until her death in 1974, she served as the first lady of Korea.

During her tenure as first lady of the nation, Yuk Yŏngsu carried out many charitable acts that were mostly focused on children. She helped establish a children’s association in Seoul, Children’s Park (Orini Taegongwŏn) in Seoul, and even a children’s magazine entitled *Otkae tongmu*. Additionally, she was the driving force behind the construction of the Chŏngyŏngsa Dormitory at Seoul National University and many other projects throughout the nation. In August 1974 she was standing beside her husband who was making a speech at the National Theatre in Seoul when an assassin’s bullet aimed at her husband struck and killed her. Her funeral was attended by thousands, which attests to her great popularity and humanitarian actions. She is still remembered for providing the softer side to her husband’s authoritarian rule, and the great tragedy the nation suffered with her grievous death.

**Yukka chabyŏng**

[Literature]

**Yulgok chŏnsŏ (Collected Works of Yulgok)**

*Yulgok chŏnsŏ* is the literary collection of the middle Chosŏn period scholar Yi I (1536-1584). The author of this collection is considered one of the two greatest neo-Confucian scholars of the Chosŏn period along with Yi Hwang (1501-1570). It was compiled by his fifth generation descendent and consists of a total of twenty-three volumes and thirty-eight fascicles. It is titled after the pen name of Yi, and was published in 1749. In more recent times, Sŏngyun’gwan University published an annotated version in 1958, and it has also been included in works such as *Yulgok sŏngnihak chŏnsŏ* (The Complete Collection of the Neo-Confucian Thought of Yulgok) published by the Han’guk Kojŏn Kugyok Wiwŏnhoe in 1961 among others.

This collection contains various literary works of Yi, including his poetry, inscriptions, memorials, epitaphs and other writings. However, it is most noted for Yi’s ideological discussions on his interpretation of the neo-Confucian doctrines. Yi’s writings are heavily influenced by his belief in the fundamental supremacy of *ki* (life force) over that of *i* (principle) which was in marked contrast to the ideology of Yi’s contemporary Yi Hwang who advocated the opposite. Yi I, however, stressed the primacy of *ki*, the energizing force, as the fundamental factor in the existence of the universe rather than the formative power of *i*. The ultimate view of *i* was that it was no more than the law of motion or activity that was inherent in *ki*. Hence, those who emphasized the primacy of *ki* were in a better position to understand the law that governed the objects of the material world.

This work is essential for understanding the neo-Confucian philosophy that dominated the Chosŏn period. Yi’s school of *ki* supremacy had a major impact on later writings and
Yullyŏng

Yun Ch’iho (1865-1945)

Yun Ch’iho was a politician and nationalist activist of late Chosŏn, the Han Empire and the colonial period. His family’s ancestral home is in Haep’yŏng and his pen name was Chwaong. Born in Ansan of South Ch’ungch’ŏng Province, he received a traditional Confucian education, but in an enlightened atmosphere. In 1881 he was a part of the ‘gentlemen’s sightseeing group’ (shinsa yuramdan) that was dispatched to Japan to witness the effects of modernisation on Japan’s social and political institutions. Yun remained in Japan, enrolling in a modern school where, among other subjects, he studied English. This denotes him as one of the first Koreans to study in modern Japan. At this time Yun became acquainted with members of Korea’s modernisation faction, including Kim Okkun (1851-1894), Sŏ Kwangbŏm (1859-?) and Pak Yonghyo (1861-1939), as well as pioneers of the movement in Japan. Upon returning to Korea, Yun served as an official on the Board for General Control of Diplomatic and Commercial Matters (T’ongni Kyosop T’ongsang Samu Amun) and worked to establish Korean political autonomy. However, as a result of the failed coup d’etat of 1884 (Kapshin Chŏngbyŏn), which was carried out by members of the modernisation faction, Yun was forced to flee from Korea to Shanghai.

While in Shanghai Yun got to know the American Consul, Mr G. Stahl, and entered the Zhongxi Shuyuan (school) where his studies proceeded along modern lines, for three and a half years. While still a student of Zhongxi Shuyuan, Yun embraced Christianity through the tutelage of the missionary Mr A.J. Allen and the headmaster of the school Mr W.B. Bonnel. After completing his studies at Zhongxi Shuyuan and with the assistance of Allen and Bonnel, Yun travelled to the United States where he entered Vanderbilt College (now Nashville University, Tennessee). While at Vanderbilt, Yun studied theology and English and after three years graduated with high grades. He then entered Emory College (now Emory University, Atlanta, Georgia) where he studied the humanities and sciences, being greatly influenced by his instructor Mr W. A. Candler. During his studies in the United States, Yun attended a variety of on-and-off campus events and engaged in many useful activities. During his study in Japan, Yun had witnessed the effects of the Meiji reforms and modernisation, and was able to compare this with his own first-hand assessment of the backwardness of China and Chosŏn. His period of study in America had consolidated his Christian beliefs, while at the same time letting him see how a democracy worked.

By 1895 Yun had completed his studies in America and returned to Korea by way of Shanghai. In 1896 he accompanied Min Yonghwan (1861-1905) to the coronation ceremony of the Russian Czar Nicolas II. The following year he concentrated his efforts on supporting the Independence Club (Tongnip Hyophoe) and undertook various activities with Sŏ Chaep’il (1866-1951) and Yi Sangjae (1850-1927) among others. The Independence Club’s activities centred on modernisation and the establishment of a strong and politically neutral Korean foreign policy. Thus, it did not favour any one of the major powers that were then vying for supremacy in Korea. However, the operations of the Club were viewed with distrust by the government, which felt that its ultimate goal was to replace the monarchy, which King Kojong (r. 1863-1907) eventually dissolved.

Yun continued his political activities in various official capacities and after the 1905 Protectorate Treaty (Ulsa poho choyak) with Japan, concentrated on the new education movement, where he was active in the Young Men’s Christian Association (YMCA) and the Korean nationalist movement. His involvement in the New People’s Association (Shinminhoe), a nationalist organisation, led to his arrest in the Case of the One Hundred and Five (paegoin sakkôn) in 1912 and his subsequent incarceration by the Japanese. He
was released from prison in 1915 then resuming his interests in the YMCA. Yun was also active in educational circles during this period and served as director at Yŏnhŭi College, Severance Medical College and Ehwa Women’s College. Additionally, he served as director of Yŏnhŭi College and Songdo Normal High School. From the 1920s onward Yun was involved in several pro-Japanese factions that sought to create co-operation between the Japanese and the Korean nationalists. His literary works include *Usūn sori* (Amusing Sounds) and *Yun Ch’iho ilgi* (Diary of Yun Ch’iho).

**Yun Ponggil** (1908-1932)

Yun Ponggil was an independence activist and a martyr of the colonial period. His family’s ancestral home is in P’ap’yŏng, his given name was Uŭi and his pen name was Maehŏn. He was born in Yesan of South Ch’ungch’ŏng Province. In 1918 he entered the Tŏksan Normal School, but after the outbreak of the March First Independence Movement in 1919, he withdrew from school as a protest to Japanese educational policies. He continued his education in the Chinese classics under Ch’oe Pyŏngdae and then began to engage in various enlightenment movements for farmers and those living in the rural areas. Yun provided many services to the farmers, particularly through the Wŏljinhoe organisation that he created to assist in their education. However, his activities were inviting scrutiny from the Japanese authorities and as a result he moved to Manchuria in 1930. It seems that he had already decided his fate when he left his native land, as the entry in his diary the day prior to his departure reveals -- ‘It is impossible for a fully-grown man who has left his home to return alive’.

In China, Yun became even more active in the independence movement and became associated with such leaders of the movement as Kim Ku (1876-1949). Yun moved to Shanghai and began to search for a way to strike at the Japanese. It was announced in the local newspaper that there would be a birthday celebration for the Japanese emperor at a park in Shanghai and Yun, along with other leaders of the Korean independence movement, began to devise a resistance action to coincide with the celebration. Yun proposed the setting off of an explosive device, which met the complete approval of the movement’s leaders. Under the direction of Kim Ku, on 29 April 1932 Yun stood close to the grandstand and immediately after the Japanese national anthem threw a grenade, which killed the commander of the Japanese troops in Shanghai and the head of the Japanese residents’ association. Many others were also injured in the explosion. Yun was placed under arrest and taken to Osaka, Japan on 20 June. He was executed there on 19 December 1932.

Yun is honoured as a martyr to the Korean independence movement as one who willingly sacrificed his own life for the good of the movement. He is remembered in many memorials throughout Korea, most notably at the Independence Hall that has a special display detailing the bombing. He was posthumously awarded the Order of Merit for National Foundation by the government of the Republic of Korea in 1962.

**Yun Posŏn** (1897-1990)

Yun Posŏn was a politician and the second president of the Republic of Korea. He was born in Asan of South Ch’ungch’ŏng Province. He received his university education at Edinburgh university and graduated from there in 1930. After Korea’s liberation in 1945 Yun became active in politics, serving a term as mayor of Seoul after the formation of the Republic of Korea in 1948 and then in the administration of Syngman Rhee (Yi Sungman) as Minister of Commerce. He was a member of the National Assembly from 1954 to 1960, becoming leader of the Democratic Party in 1957. This was a stepping stone to his election as President of the ROK in 1960.

With the 19 April 1960 Student Uprising, Rhee stepped down as president. A new Constitution was adopted under the interim government of Hŏ Chŏng, which stipulated an
indirect election for the presidency, by the National Assembly. The position of president was to be a figurehead, except for the important duty of nominating the prime minister. Thus after the new constitution was adopted, elections were held on 29 July 1960, with the Democratic Party gaining a clear majority in both houses. The assembly then elected Yun as president and additionally approved his nomination of Chang Myōn (1899-1966) as prime minister. Later in December of the same year, provincial elections were held and Korea seemed well on the way to establishing a true democracy. However, Yun and Chang failed to provide decisive leadership and as a result many factions sprang up, which led to a chaotic period. The end result of this turmoil was the May 1961 Military Coup by Park Chung Hee (Pak Chŏnghŭi) that ushered in an authoritarian regime for the next eighteen years.

Yun continued to be active in politics after the coup d'etat by Park and assumed the role of leader of the opposition party. When presidential elections were held in 1963, Park narrowly defeated Yun, his main opponent, with 47 per cent of the total vote. The election seemed fair and Yun publicly congratulated Park on his victory. Yun again ran against Park in the 1967 election but did not come as close to victory as he had four years earlier. The 1967 election was the last for Yun but he still remained active in the opposition political parties of the day. He died in 1990 at his home in Seoul at the age of ninety-three.

**Yun Sŏndo** (1587-1671)

Yun Sŏndo was a civil official and shiijo composer of mid Chosŏn. His family's ancestral home is in Haenam, his courtesy name was Yagi and his pen names were Kosan and Haeong. He was the son of Yun Yushim who followed a career as a government official and the adopted son of Yun Yugi who was the provincial governor of Kangwŏn Province. Although Yun was born in Seoul, his father's elder brother adopted him when he was eight years of age and moved to Haenam.

After reading Sohak (Small Learning) he was deeply impressed with it and took it as his standard. In 1616 as a student of the National Confucian Academy, he presented a memorial to the King bitterly criticizing the political heavyweights of the time, including Yi Ich'ŏm (1560-1623), Pak Sŏnjong and Yu Hŭibun. As a result, he was the victim of a cunning scheme of the Yi Ich'ŏm faction and was exiled to Kyŏngwŏn in Hamgyŏng Province. While in exile he composed six shiijo style poems, five pieces for Kyŏnhoeyo (Dispelling Gloom) and Uhuoyo (After Rain). One year later he was moved to Kijang in South Kyŏngsang Province. In 1623 after the members of the Yi Ich'ŏm faction were purged in the aftermath of the dethronement of Prince Kwanghae (r. 1608-1623) by the Westerner faction, he was released and appointed to an official position. However, after three months he resigned his post and returned to Haenam. In 1628 he passed the special (pyŏlsi) and preliminary (ch'oshi) examinations with the highest score and was appointed as tutor of Prince Pongnim and Prince Inp'yŏng. Moreover, despite the fact that as tutor he was debarred from concurrently holding another official position, he served as Section Chief (chwarang) on the Board of Works (Kongjo), Section Chief (chŏngnang) on the Board of Punishments (Hyŏngjo) and as the Deputy Magistrate (pusŏyun) of Seoul for five years by special order of King Injo (r. 1623-1649). In 1633 he passed yet another government service examination and took positions with the Board of Rites (Yejo) as a Section Chief and as Fourth Inspector (chip'yŏng) with the Office of the Inspector-General (Sahŏnbu). However, due to the political scheming of Kang Sŏkki he was relegated to Magistrate (hyŏngam) of Sŏngsan and in the next year relieved of even this position. After this episode, Yun returned again to Haenam where he heard that the Manchu Invasion of 1636 had occurred and that the King had surrendered. He considered this a great dishonour and headed for Cheju Island. On his way there he was enamoured by the exquisite scenery of Pogil Island and for this reason came to settle in this place. He named his chosen area Puyongdong (Lotus Flower Valley) and under Kyo'kcha Peak he built a
house which he called Naksojae. In this serene locality he fully enjoyed many refinements, and with the substantial possessions that he inherited, he built many fine buildings and pavilions.

However, for the misdeed of not paying court on the King when he returned to Seoul after the Invasion, he was again exiled to Yongdok in North Kyongsang Province in 1638. But on this occasion, he was pardoned after one year. For the following ten years, he enjoyed a casual lifestyle in the natural surroundings of Kumswoedong and Puyongdong on Pogil Island, without any regard for the political scene. At this time, against the backdrop of Kumswoedong, he composed Sanjung shin'gok (New Songs in the Mountain) and Sanjung sok-shin'gok (More New Songs in the Mountain) among other works. Then in 1651, in a greatly relaxed mental state, he wrote Ōbu sashisa (Fishermen's Songs of the Four Seasons) -- widely acclaimed as one of the finest shijo cycles.

In 1652, King Hyojong (r. 1649-1659) commanded Yun to take up the position of Third Minister (ch'amul) of the Board of Rites, but he soon resigned due to the political manoeuvres of the Westerner faction and lived in retirement in Kosan in Kyonggi Province. His last work, Mongch'önyo (The Dream Journey to Skyland), was written here. In 1657 when he was seventy-one years old, Yun was again appointed to an official position as Sixth Royal Secretary (tongbusangju) of the Royal Secretariat. However, he was prevented from taking this office by the political schemes of the Song Shiyol (1607-1689) faction. At about this time he presented two memorials to the King in which he strongly emphasised the need for the establishment of greater power for the monarchy. In 1659 when King Hyojong died, he was once more confronted by the Westerner Faction concerning the doctrine of propriety. Once more, he was sent into exile, this time to Samsu and was released in 1667. He lived out his life mainly in Puyongdong, and died at Naksojae when he was eighty-five.

Yun’s devotion was to the Southern Faction, which was politically weak and constantly confronted by the powerful Western Faction. Yun constantly advocated the strengthening of the monarchy, a platform which had calamitous results for him, resulting in over twenty years of exile and banishment and retirement from active political life for another nineteen years. Despite this, he enjoyed a splendid life in retirement with the property he had inherited from his ancestors, and his outstanding literary skills were revealed in this lifestyle. He is praised as the one who displayed the most excellent literary ability among the shijo poets, who chose nature as their theme.

A special characteristic of Yun’s writing is that he expresses nature, his main subject, in the common language of society, and he chooses nature in order to represent certain conceptions. Moreover, in most instances, nature appeared to him to have a strict relationship with the Confucian ethical world. However, neither a direct confrontation with nature nor the animation of nature as a living entity is seen in his works. This is probably due to the fact that he lived a life of plenty and did not experience the degree of suffering or hardship that nature could deal the common man.

His collection Kosan sŏnsaeng yugo (Posthumous Works of Master Kosan) contains Sino-Korean poetry, and in another collection more Sino-Korean poems, thirty-five shijo, and forty pieces of the short songs of Ōbu sashisa are included. There are also two books, Sanjung shin’gok and Kumswoedong chipko (Collection of Kumswoedong), written in his own hand. Together with Chŏng Ch’ŏl (1537-1594) and Pak Illo (1561-1642), Yun is considered as one of the three great poets of Chosŏn. He wrote seventy-five pieces of lyrics and shijo, many of which are famous.

Yun Tusō (1668-1715)

Yun Tusō was a gentleman painter. His family’s ancestral home is in Haenam, his courtesy
name was Hyoŏn and his pen name was Kongjae. Yun’s family was renowned for producing painters of high calibre and he is accepted as one of the three great painters of the period, together with Chŏng Sŏn (1676-1759) and Shim Sajŏng (1707-1769). In 1693 he became a literary licentiate (chinsa) but due to the intensifying factional politics Yun gave up his pursuit of an official post and instead dedicated his life to his studies. In 1712 he returned to Haenam, where he retired. In 1774 he was posthumously honoured with the position of Second Minister (ch'amp'an) of the Board of Taxation (Hojo).

Yun is praised as a painter who well represents the change in the style which occurred between middle and late Chosŏn. His subject material was often a personage who displays the artist’s perception of their inner and innate qualities. He was also influenced by the shirhak (Practical Learning) of the time that further influenced his artistic style. There are extant many representative paintings by Yun including Nosŭng to (Portrait of the Old Monk), Paengma to (Painting of a White Horse) and Chahwasang (Self-Portrait). Yun also left literary works, including Kijol and Hwadan.
