EDITOR'S FOREWORD

The publication of the *Encyclopaedia of Korea* has resulted from almost seven years of continuous and intensive work by a small team, which I headed as project director-chief editor; assisted by one part-time editor and for one year only, two full-time writer-translators. The project was undertaken within the Research School of Pacific and Asian Studies of The Australian National University, in Canberra. From its inception, the *Encyclopaedia* was conditioned to run on a very modest budget, with considerable reliance on the availability of outside funding. In its later stages the project was supported solely from Korean-sourced grants.

The idea for an *Encyclopaedia of Korea* in the English language was conceived from the many general and specific enquiries about Korea being made to the university, and which were increasingly being referred to me for answer. It was apparent that academics, broadcasters, journalists, politicians, students, teachers and the public in general needed to know more about Korea. In the absence of an encyclopaedic work on Korea in English, the search for information in a library where many references could be found only in Korean or in works which were too specialised for the general reader or those unacquainted with Korea, could be daunting. With the good fortune afforded me to transfer from a University teaching position to a research appointment, the *Encyclopaedia* concept seemed a natural choice for my research, and with the strong encouragement of a professor colleague, the project was launched, though - as is often the norm in universities today - with the above-mentioned financial stringency and concomitant dearth of staff support.

The *Encyclopaedia of Korea* is meant to be a balanced guide to the country and its people. Its limitations are fully acknowledged and in some respects it serves only as an introduction to a topic, while in others its entries offer a definitive statement. In some of its subjects, therefore, the *Encyclopaedia* is intended to have the first word and not the last, and must be regarded as such. Omissions are bound to happen in a book of this scope. The task was, of course, a presumptuous one, because the Korean heritage is so enormous, so varied and complex, that there is no single person who could possibly write with authority on the range of entries which are collated here. However, this may be the *Encyclopaedia’s* strongest point, because in the absence of such a single authority, the search for and the engagement of contributors became a worldwide one. The interests of specialists on Korea were sought and from a trickle of articles at the beginning, at the end of the compilation thirteen hundred articles had been written and accepted for publication. The contributors are, therefore, drawn from multifarious fields of Korean studies, and while some have written a single major article, others have contributed more than one, or a number of minor articles. One or two have given their services willingly with material which needed translation and verification from Korean, Chinese, Japanese, or occidental language sources. Many dozens of the minor entries and some of medium length are from Korean sources. This has been a time-consuming task, and one which has been shouldered largely by the editorial staff. Two writer-translators were engaged from overseas and came to Canberra to work on the project for a period of one year. Mr Michael Pettid of the University of Hawaii assumed the task of writing medium-length entries for which a contributor could not be found elsewhere, as well as having specific responsibilities for translations from Korean for the writing of other entries, and the modification of major and medium-length entries to suit the *Encyclopaedia’s* needs. Mr Mark Mueller, of Hallym University, South Korea, translated material and produced many of the short entries for the work.

For the articles contributed by the sixty specialists, the name of the author is given at the end of each entry. Where and when, for instance, an entry expresses a particular viewpoint, perhaps in a politically-sensitive field, it is the view of its author and not necessarily that of other contributors, or the editors. Except for normal editing requirements, the articles are presented
as their authors wrote them. Where, however, obvious changes have taken place in the subject matter of articles since they were written, the authors have been requested to cooperate by making such amendments necessary to bring their work up-to-date. In some instances, however, the author has been unavailable to do the revision and when this has occurred, project staff members have been committed to carrying out such research and composition so as to present the most topical entry possible. In a few instances, this has resulted in a virtual representation of the piece, and while the original author is still acknowledged, the entry is annotated with the source of the information used in the amended article.

Throughout the compilation of the *Encyclopaedia of Korea* the question of its comprehensiveness has been kept firmly in mind. It is an issue which every compiler concerned with an alphabetical or chronological production views with some misgiving. How do you balance, for instance, the just claims for inclusion of writers and philosophers against politicians, freedom fighters and ancient kings? The argument about who or what should be included and who or what should be left out required some rather arbitrary decision-making, and for justification of the apparent omissions the single plea that can be made is the one that limits most human activities today -- that of available time. With an encyclopaedic work, the time lag is perhaps doubly important as a balance has to be struck between many disciplines, such as economics, science and politics -- even ‘archaeology’ required some amendment during the compilation. Even though Korean dynasties have been long-lasting, with Chosŏn reaching the half millennium, the country has always had to contend with many kinds of change. Since the opening of Korea to the West and to Japan, in the late nineteenth century, changes have become more frequent and more dramatic. In the twentieth century alone, Korea experienced the persistence of over three decades of colonization by Japan, a half-century of political and ideological division, the devastation of civil war, several military dictatorships and the promulgation of a democratic constitution, the sum of which eventually led to the emergence of the Republic of Korea as a modern industrial nation, and a respected and powerful economic force in world terms.

The troublesome question of an insufficiency of suitable material on North Korea (DPRK) was not resolved, and although there are several articles specific to the DPRK, many subjects are not included because the information required is simply not available, or is not capable of being substantiated.

Although I am now at the close of what has been a monumental and seemingly never-ending task, the compilation of the *Encyclopaedia of Korea* has broadened considerably my horizons on Korea, beyond my own field of Chosŏn literature. Similarly, I hope that through its pages, readers will find an interest in gaining a wider view and understanding of Korea and the Korean people.

ACKNOWLEDGEMENTS

The Encyclopaedia of Korea owes its existence to many people and several institutions.

The sixty contributors have given their time freely and enthusiastically in recognizing the need for an encyclopaedic work on Korea in English. Some have given valuable advice on particular matters of concern to the editorial staff, even while engaged in meeting deadlines with their own publishers or heavily committed elsewhere. The names of those who have contributed entries to the Encyclopaedia are recorded both in the List of Contributors and Translators and at the end of the entry itself.

In the initial stage of the Encyclopaedia's production, the late Professor Marshall Pihl, of the University of Hawaii at Manoa, was an inspiration, visiting Canberra to work with the project director on the content and the indexing. Professor Gavan McCormack, of the Division of Pacific and Asian History, The Australian National University, gave strong encouragement for the launch of the Encyclopaedia project and was instrumental in guiding its passage through the University's administrative processes. He has remained as its supporter and adviser throughout, and the project is indebted to him. Dr Kenneth Gardiner, a contributor of three major entries, also translated articles submitted in French. Professor Tessa Morris-Suzuki, as Convenor of the Division of Pacific and Asian History, was always available to assist with problems and decisions. The Division's administrator, Dorothy Macintosh, ever helpful and considerate, met any financial difficulties head-on, or knew a way around them. Enid Gibson edited some of the shorter entries and Kim Hee Young researched material for the selection of photographs.

The Encyclopaedia project would have foundered early without the strong backing of its sponsors. These are: The Korea Research Foundation; The Australian National University; the Australia-Korea Foundation; the Department of Foreign Affairs and Trade, and the Institutional Links with Korea Program in the Department of Education, Employment and Training of the Australian Government. The project's profound gratitude is due to Mr Hong Sah Myung, former Director of the International Exchange Division, Korea Research Foundation for his continuing support.

The Academy of Korean Studies massive work, Han'guk Minjok Munhwa Taebaekkwa Sajŏn, has been an extremely valuable point of reference throughout the Encyclopaedia's compilation, and the Academy's sanction in permitting the translation of material from its pages has been of immense help and greatly appreciated.

Although many of the entries list a short bibliography, the biographical and bibliographical entries themselves do not generally bear references. The following works, however, are those most frequently consulted in the preparation of the biographies and bibliographies included in the Encyclopaedia of Korea.

Lee Ki-baik, Han'guksa shillon. Wagner, Edward W. and Shultz, Edward J., tr., A New History of

The Academy of Korean Studies, Korea Press Centre and Ministry of Culture and Information (present Ministry of Culture and Tourism) are thanked also for providing the negatives on copyright loan of the photographs included in the *Encyclopaedia*. The local, regional and national maps of Korea were drawn by Kay Dancy of the Cartography Unit in the Research School of Pacific and Asian Studies, The Australian National University.

ROMANIZATION

1. Korean words are spelled according to the McCune-Reischauer Romanization System, with some exceptions. The system does not transcribe the spelling of Korean words, letter by letter, into a Roman alphabet, but represents the pronunciation by taking full account of euphonic changes.

   Examples: Several consonant letters in the Korean alphabet represent two or more different sounds according to their position in a word or phrase. A different letter is used in romanizing each sound: thus may be written $r$, $l$, or $n$ and $\grave{a}$ as $k$, $g$, or $ng$, according to the value given to it in pronunciation.

   The syllables of Sino-Korean words, and especially of proper names, are not separated by hyphens.

   Examples: Song Shiyol is used instead of Song Shi-yol and Ch’a Ch’oollo instead of Ch’a Ch’oon-ro.

   Where a person’s or an institution’s romanized name is not spelled according to the McCune-Reischauer System, and yet that spelling is well established and familiar to the public, it is retained with the correctly romanized name in the bracket.

   Examples: Syngman Rhee (Yi Sŏngman), Kim Il Sung (Kim Ilsŏng) Sun Kyun Kwan (Sŏnggyun’gwan) University, Sookmyung (Sungmyŏng) Women’s University

   The diacritical mark over $o$ (°) and $u$ (~) is used to distinguish $o$ from $o$ (Ø) and $u$ from $u$ (Ø)

   The Korean alphabet $\hangeul$ is romanized as ‘sh’ rather than as ‘s’.

   Examples: Shilla is used instead of Silla and shirhak instead of sirhak.

   An apostrophe is used for the strongly aspirated word as well as to separate $n$ and $g$ when they do not form the single sound $ng$ (°)

   Examples: Ch’angdŏk Palace

   han’gŭl

   The romanization systems used for Chinese and Japanese are the Hanyu Pinyin Romanization System and Hepburn System respectively.

2. All Korean words have been italicized except for proper nouns.

3. The hyphen usually reserved for geographical and architectural suffixes within words, such as kang or -gang (river), san (mountain), to or -do (island or province), sa (temple), kung or -gung (palace), tang or -dang (hall), etc. is not used, and instead the English equivalents of suffixes are included as a separate word.

   Examples: Tŏksu Palace is used instead of Tŏksu-gung and Haein Temple instead of Haein-sa.
The repetition of information in English and Korean is also eliminated for hyphenated suffixes.

Examples: Han-gang is referred to as Han River or River Han and not as Han-gang River, and Kyŏngbok Palace not Kyŏngbok-kung Palace

This has created some difficulty in romanizing proper nouns with mono-syllable words such as Hong-do being referred to as Hong Island (which sounds as if a part of name is missing) or Nam-san as Nam Mountain, but it was necessary to achieve uniformity. Where a suffix is retained for unavoidable reasons, its translation is given in brackets.
HOW TO USE THE INDEX

1. Entries in bold type indicate that they are independent entries in the *Encyclopaedia of Korea*, for example:

   History of Korea
   Literature
   Musical instruments, etc.,

   while entries in plain type are used for:

   Topics discussed within articles.
   Sub-entries (e.g., under the heading of History of Korea there are many sub-headings with articles of their own. These sub-headings are indented under main entries, thus,

   History of Korea
   Chosŏn
   Koryŏ
   Three Kingdoms, etc.

   Cross-references which direct the reader to the form used in the Index. (e.g., Pak Chŏnghŭi see Park Chung Hee).

2. All bibliographical entries including titles of books, newspapers and magazines are italicized. (e.g., *Samguk yusa, Dong-A (Tonga) ilbo, Sonyŏn*, etc.)

3. The entries in the Index are in alphabetical order of letter-by-letter, and not word-by-word. The apostrophes within words are ignored in the alphabetical sequence.

   Example:
   Ch’ae Manshik
   Cho Chun
   Ch’oe Ch’ung

4. In order to clarify the romanized Korean and Chinese words used in the *Encyclopaedia of Korea*, the *han’gul* and Chinese characters are given in the Index with the English translation of the words in brackets in the Index.

Academy of Korean Studies

Located in Sŏngnam in Kyŏnggi Province, the Academy of Korean Studies (Han’guk Chŏngshin Munhwa Yŏn’guwŏn) was established by the government in 1978 to undertake studies in the heritage of the Korean people. The Academy sponsors research projects in the fields of history, philosophy, education, society, literature, arts and other attributes of traditional Korean life and culture. Graduate courses commenced in 1980, with master and doctorate programs now well established in most fields of Korean studies. Unlike normal graduate schools in Korea, the academy is not affiliated with an undergraduate program. Graduate students are exempted from tuition and accommodation fees, and they live on campus, thus encouraging their complete devotion to their studies. An allowance is granted to students who maintain outstanding grades. To promote the study of Korean culture overseas, enrolment opportunities are offered to overseas students interested in Korean studies. Foreign students receive similar privileges and the same level of instruction as Korean students.

Adoption

Characteristics

Traditional methods of adoption (yangja) in Korea were radically different from what is connoted by the accepted English meaning. The primary focus of the adoption was not the child, but the parent. Traditional adoption meant the selection of a relative of the next lower generation, to serve as the heir for a man, and to provide rituals for him after he died. Many adoptions, in fact, did not take place until after the father had died; and in most cases, the 'child' was a full-grown adult.

In traditional Korea, society was based on the principles of patrilineage, that is to say, a lineage resting on patrilineal inheritance and organisation. The patrilineage was patrilineal in its inheritance practices, patriarchal in its authority structure, and patrilocal in its marriage practices. In other words, inheritance was from the father to his male heirs, political and social authority was completely in the hands of males, and upon marriage the newly-weds settled in the home of the groom's father. The patrilineage can be described as 'men, related to men, through men.'

In such a society, when a man did not have an heir (meaning he had no children or had only daughters), he would have to adopt. The adopted heir would have rights to the adopter's property, and would be obligated to watch after him if still alive, and perform ancestor ceremonies for him after he died. In ideal practice, the adopted heir was the son of one's brother. If the brother did not have more than one son, then a near cousin's, or if necessary, a distant cousin's son would be a candidate for adoption. An elder brother, or the heir to the main line of the lineage (or sublineage), that is, the eldest son of the eldest son for several generations, would have claim on the older son of a younger brother or cousin. However, a younger brother (or cousin) could only ask for the younger son of his older brother or cousin.

Adoption in the Koryŏ Kingdom

From early Koryŏ times, households with no natal male child were legally empowered to adopt an heir from the husband's close relatives. When this was not possible, however, it
was permissible by law to adopt from the close kin of the wife. Yet, as the patriarchal system became firmly entrenched in late Koryo, in practice the adopted child was chosen only from the husband's close kin. Since an illegitimate son did not have the right to continue the lineage, a family without a male heir had no recourse but to adopt a male child from their relatives to carry on the lineage. The distinction within the family between legitimate and illegitimate children, which can be said to have had its origins in Koryo, developed into full-blown discrimination and existed throughout and even beyond Choson (1392-1910).

Adoption During Choson

The adoption laws of Choson were mostly decreed during King Sejong's reign (r. 1418-1450) and they emphasised the importance of the continuation of the patrilineage. They may be summarised thus:

1) When the eldest son did not have an heir, he was to adopt the child of a younger brother if such a nephew existed. As a last resort, where there were no sons or nephews, it was permissible to adopt an illegitimate male child, either of the eldest son's own procreation, or that of his brother. While adoption from the wife's kin was acceptable, the person adopted was not given the full legal rights of succession.

2) The eldest son of a given family could not be adopted, even in the case of being an orphan, without special dispensation from the government.

3) When a son was born after the adoption of an heir, the adopted, not the natal son, held full legal rights as the heir to the lineage.

4) When an adopted child's natural family lost its eldest son, the adoptee was to be encouraged to return to his natal household to serve as heir and continue the lineage.

5) The adopter household was required to report the adoption to the Yejo (Board of Rites), which recorded the adoption and issued the necessary validating document.

Although strict regulations existed, in practice these were not observed to the letter of the law and ways were devised to circumvent them. These included paekkol yangja (white bone adoption), su yangja (foster adoption) or shi yangja (orphan adoption). Paekkol yangja involved taking the name of a deceased relative of the second generation in order to adopt a grandchild. By this method, the generation of the one adopted did not need to be changed. Su yangja was the adoption of a child under three years of age from a different lineage, with the adoptee being granted the equivalent rights of a natal child; while Shi yangja used the adoption of a foundling (also under three years old), ostensibly for the welfare of the child, but in practice mainly for the purpose of providing additional labour for the adopting family.

As Choson society became more thoroughly indoctrinated in neo-Confucian ideology, the importance of perpetuating one's family line became increasingly important. Moreover, the most important tenet of neo-Confucian society was that of filial piety and while this was achieved by various means, producing a male heir to carry on one's lineage was paramount. Hence, when one was not able to procreate an heir, adoption was a necessity. It is, therefore, not surprising to discover, based on both governmental documents and private genealogies, that less than one per cent of the population was involved in an adoption in the fifteenth century, but by the eighteenth century, over fifteen per cent of the men were adopted to be heirs to their uncles.

Modern Adoption Practices
In modern Korea inheritance laws have been re-written to grant heir status to daughters once again, but old customs die hard and many families still prize sons highly and arrange an adoption if deemed necessary. With the current trend towards smaller families, many families will not have a male heir; yet how the situation will be resolved, and whether adoption will continue to be practised as it was in the past, remains to be seen. Moreover, the growth of the women’s movement in Korea has caused a revaluation of those practices that systematically discriminated against females, and the resultant new societal mores indicate that future generations will be less inclined to feel compelled to perpetuate a society based on patrilineal inheritance principles.

As for the adoption of Korean children by overseas families, during the chaos of the Korean War and thereafter, foreigners began to adopt Korean orphans. Throughout many western countries Korean-born babies have grown up with western names in western families and are culturally completely westernised. Many adoptees, who are now adults, serve in government, business, education, and other occupations. However, the practice of handing-over infants to people from foreign countries came to be criticised by North Koreans and by some South Koreans too. Consequently, the South Korean government has instituted laws restricting overseas adoptions, and has resolved to prevent them altogether.

In the meantime, within Korea, the number of people who are practising western style adoption, that is, the rearing of an infant or child with whom there is no blood relationship is increasing. In some cases, when a couple cannot have children, with the help of one of the three authorised agencies, they arrange to adopt an infant before the child is born. Sometimes, the adoptive mother goes through a charade of padding her clothes and then going off to stay with a relative until the child is born, then returning with the child and the illusion that she was the birth mother. Thereby, the family avoids any stigma that might befall the child from some traditional segment of society that would criticise the rearing of a child who is of a different bloodline.

**Agricultural Cooperative Associations**

Advancement Society (Ilchin Hoe) [Communism, Korea]

Aerophones [Musical instruments]

Agency for National Security Planning (Kukka Anjong Kihoek Pu) [History of Korea]

Agricultural cooperatives are organizations designed to assist farmers independently in diverse matters, such as increasing production, and providing economic and social advancement. In August 1961, the Agricultural Cooperative Law (*Nongŏp hyŏptong chohap pŏp*) was enacted and forms the basis for the agricultural cooperatives in Korea today. These cooperatives manage the economic activities of firms in a partnership with the farmers themselves. There are two basic types of cooperatives. The first is the specialized cooperative that focuses on one particular activity such as stockbreeding, sericulture, or fruit production. The other is the general cooperative that covers many diverse activities. The latter type is most common in Korea.

Korea has a long history of agriculture-based community organizations. Chief among
these are rural community agreements (*hyangyak*) and the mutual assistance groups known as *kye*. There are records of a *kabae kye* organized in Shilla during the reign of King Yuri (r. 24-57 CE) that provided resources for holding a harvest festival. In the early Chosŏn period there were many types of *kye* such as *hak kye* which were established to provide funds for education and *honsang kye* which funded wedding and funeral expenses. Many kinds of *kye* exist today, to provide funds for a broad range of items. The *hyangyak* began in the Chinese Song Dynasty and entered Korea by the reign of King Chungjong (r. 1506-1544). The *hyangyak* agreements provided funds for items such as community rice warehouses and famine relief. In traditional times in Korea, the structures of *kye* and *hyangyak* provided relief and assistance to Korean farmers in times of need and were based upon the principle of mutual cooperation.

The first modern cooperative was established in 1907 in Kwangju under the provisions of the Regional Financial Union Regulations (*Chibang kŭmyung chohap kyuch'ik*). The cooperatives organized under these regulations provided funds to farmers. After liberation, the financial aspect of cooperatives fell chiefly under the control of the agricultural banks (*nongŏp únhaeng*) and were codified by the Agricultural Bank Law (*nongŏp únhaeng póp*: 1957). The cash flow problems of some farmers stem from the fact that they receive the bulk of their income once a year, and if this proves insufficient on occasions to meet both living and production expenses, they then must find a financial source to help with their next crop. The financial institutions under the umbrella of the National Agricultural Cooperative Federation (NACF; *Nongŏp Hyŏptong Chohap Chůnganghoe*) serve to relay funds from the parent organization to the members of the various agricultural cooperatives who are in financial need. The NACF member institutions provide about ninety-five per cent of the total credit needs for farmers.

The superstructure of the agricultural system under the NACF consists of the parent organization with provincial branch offices located under it and then either specialized cooperatives or general cooperatives. Farmers become members of their local cooperatives by buying shares in them, which then enables them to use the various services the cooperatives offer. Some of the services include credit extension facilities; purchasing of fertilizers, pesticides and farming implements, which are in turn resold to their members; buying grains and vegetables from the farmers; aid to member families; and processing services for the grains that the farmers grow. Since the NACF can purchase from wholesalers in bulk, it can offer fertilizers and pesticides to its members at lower cost than they would get elsewhere. Likewise, the credit services that are extended to members are at lower interest rates than small farmers could reasonably hope to secure individually.

Other services that are performed by various levels of cooperatives include the storage of agricultural goods and transportation of these products to markets, both of which are generally handled by the county-level cooperatives. Cooperatives also provide information to farmers, including technical advice for the implementation of new enterprises, and market research which assists farmers to cultivate crops that are in demand. In addition to their primary function of providing agricultural assistance and management advice, the cooperatives, along with government programs such as the *Saemalil undong* (New Village Movement), have also supplied funds for improvements to the rural communities. The NACF, through its local organizations, has sponsored the building of many community halls where members can hold meetings, farmer education classes, weddings and so on, and it also provides funds that permit the operation of local health clinics, barber shops and public baths.

*HMMTS*, vol. 5.
Agricultural rites

Agricultural ceremonies tend to have shamanistic origins, but also were heavily influenced by introduced belief systems such as Buddhism and Confucianism. The origin of agricultural rituals extends to the oldest historical records in Korea which are in the form of foundation myths. One such example is the Tan’gun Myth which shows the subjugation of the hunting people of North-east Asia to an entity that controls the forces of agriculture: specifically, the wind, rain, and clouds. Another is the Sŏk’alhae Myth which reveals a deep relationship with the Sŏk clan farming ceremonies. The Sŏk clan was originally from a fishing area, but moved inland to the Kyŏngju region. Also, the myth surrounding the birth of the founder of Koryŏ, T’aejo, was expressed in Koryŏsa (History of Koryŏ) as if it was deeply related to the planting of millet. All of these myths, albeit in an indirect manner, disclose concepts of farming deities and grain spirits, and they indicate the processes of the early agricultural rituals.

In addition to the allusions to agrarian rituals in the foundation myths of Korea, there are many references to these myths in other ancient records of, and concerning, Korea. The records of large festivals held in the spring and autumn, such as Yonggo, Tongmaeng, Much’ŏn and Chec’ŏn, were recorded in Chinese historical accounts such as Sanguo zhi (History of the Three Kingdoms) and Beishi (The History of the Northern Dynasties), and are all thought to be representative of ancient farming rituals. In Beishi there is a mention of the people of Koguryŏ building special shrines at every house and holding sacrificial rituals. Moreover, in the winter Koryŏ people held a rite to yŏngsŏng (the star spirit) and the sajik (the gods of the earth and grains). These actions can be directly linked to the seasonal farming rites of the present day. From the records in the Samguk sagi (The History of the Three Kingdoms) we know that there were many periodic ceremonies held in Shilla including New Year’s Day, Kabae, Tano, Yudu and Hunong, and that while these may not have been exclusively agricultural ceremonies at their core, they all had the purpose of praying for an abundant harvest or offering thanksgiving for a successful harvest innate. In Koryŏ, there were many rites that held import as farming ceremonies. Chief among these were the P’algwanehoe and Yŏndŭnghoe, large national festivals in the autumn and spring that had many attributes as links to agricultural rituals. The hallmark of these farming rituals from ancient days is that they are large-scale in nature, in contrast to the smaller-scale ceremonies of more recent times.

Chosŏn agricultural ceremonies are notable for their dual nature. On the level of the common people of farming communities, the rituals continued, much as they had for centuries past. The major change was the inclusion of Confucian elements into the belief systems of the people. The rituals that heretofore had been offered to various shamanistic deities now incorporated a Confucian flavour and in some manner emulated the sacrificial rituals performed by the upper classes to their ancestors. The agricultural rituals conducted by the monarch, presented the ruling classes with a conundrum since the official belief system of the state, Confucianism, did not allow for adherence to shamanistic rituals. Nonetheless, the king performed sacrificial rituals at Sajik Altar to the shamanistic gods of the earth and of the grains to entreat them to deliver a bountiful harvest to the nation. This reveals the importance of the harvest to the welfare of the kingdom.

In general, agricultural ceremonies can be divided into four categories: prayer ceremonies, planting ceremonies, cultivation ceremonies, and harvest ceremonies, in accord to the processes of farming work. The prayer ceremonies act to either pray for an abundant harvest or to divine the result of a pending harvest. There are a number of different prayer ceremonies, such as the nae nongjak or the ka nongjak, both based on the belief that an abundant harvest would follow their performance. The first record of such ceremonies being performed is in the thirtieth volume of Sejo Shillok (The Veritable Records of King Sejo) which states that shrines were erected in the homes of commoners on the fifteenth
day of the first lunar month to pray for an abundant harvest, and that in 1464 this was even done in the palace. Another type of prayer ceremony is the ritual of chisan papki (treading down the earth spirits). This consists of a masked dance performed by young people who go about the village disguised as various spirits and perform incantatory dances at each house. The villagers offer gifts, which are then offered in proxy by the dancers to the spirits of farming.

Other prayer ceremonies are represented by ritual games such as tug-of-war, stone and torch-fighting games which all serve as divination methods to predict the outcome of the coming harvest. These folk games are recorded in the Tongguk sesghi (Annual Customs of Korea). Tug-of-war contests were waged by two teams, East and West. The West team represented the female powers of reproduction and if it won, it foretold of an abundant harvest. The joining of the East (male) and West (female) ropes and the actions of pulling back and forth represented fertility rites. By holding this contest in the rice fields, the farmers sought to bring fertility to their land.

Prayer ceremonies also had a purpose of divining the outcome of the crop. Some of the methods used were very passive, such as the custom of Chomsaengi pogi (Observing the Pleiades - six visible stars in the constellation Taurus) which was done on the sixth day of the second lunar month. It was believed that if the Pleiades appeared close to the moon it foretold of a plentiful harvest. However, if the constellation was too distant from the moon it was a bad omen. Other divination methods involve the use of grains, ashes and the moon’s shadow, to predict the harvest of the coming year. Most of these rituals were performed on the first full moon of the first lunar month.

Planting ceremonies were performed in the appropriate season to pray for an abundant crop. These ceremonies were not common in Korea but, nevertheless, may be the origin of traditional holidays. For instance, the making of flower-cakes (hwajon) took place on the third day of the third lunar month, which would have been shortly before planting commenced. Another custom, one that imitates the actions of planting is Moshimkki norım. However, this ceremony is observed during the first full moon of the new year which is well before the planting season. Nonetheless, it serves to entreat the mountain god (sanshin), the guardian deity of the village, to ensure a good crop. To perform this ritual, one villager plays the role of the sanshin and rides on the back of a cow to the place where the other villagers are pretending to plant rice.

Cultivating ceremonies are rituals that pray for the abundance of crops during the growing period. Some examples include the Tano Festival, the shamanistic P’ut kut ritual and rain ceremonies. The Tano festival has origins in China but it incorporated many indigenous Korean customs, such as the folk games with their emphasis on combat, and mask dances too. These acts have their purpose in petitioning the spirits for an abundant harvest. The P’ut kut is a shamanist ceremony generally held after the second or third sowing of the fields. It, too, implores the spirits to ensure a bountiful harvest.

Representative agricultural rituals of the harvest season include the Yudu ch’önshin held in the middle of the summer, the Ch’usok ch’önshin held in mid-autumn, and Kosa ch’önshin in early winter. Their purpose is to express gratitude to various deities for the harvest. The Kosa ch’önshin is considered as one of the most fundamental harvest ceremonies in Korea. It is a household ritual performed by women to various guardian deities, including the tutelary deity of the household. This ceremony is still common to the present day.

Agricultural ceremonies are seasonal rituals in which the various deities of farming are petitioned for an abundant crop. Another reason is to assuage the anxiety a farmer may have in regards to his crops, in addition to entreating the supernatural forces that govern farming, for a copious return. Many present-day customs and holidays have their origins
in these rituals. Some examples include the Tano Festival, Ch’usŏk, and many folk games. The preponderance of the number of agricultural rituals in traditional Korea indicates the great importance attached to a successful harvest, which would determine the ability of the farmers to survive for another year.

HMMTS, vol.5.

Agriculture

Early Periods

The earliest period of agricultural activity in Korea was the Early Ch’ollmun which dates from 6000-3500 B.C.E., and is denoted by the subsistence gathering of various fruits, tubers and grasses. The Middle Ch’ollmun period (3500-2000 B.C.E.) is characterized by primitive farming activities and the intermittent cultivation of millet. Man began to use simple tools such as grinding stones and various digging implements, and the development of such tools marked a step forward in primitive farming methods. The size of vessels increased which points to the possible use of pottery as a means to store grain. By Late Ch’ollmun (2000-100 B.C.E.), grains such as rice, barley, and buckwheat were being cultivated.

The tools used in these early stages were very basic. The grinding tools would have been used to either shell or grind foods such as acorns, chestnuts and seeds, and these implements have been found at many archaeological sites throughout Korea. The digging tools were simply short hoes that evolved into the metal homi, still used today to gather wild greens and tubers. This hoe was later modified with a long handle that enabled it to be used in planting and in turning the soil.

In China during the early part of the Chou Dynasty (1122-255 B.C.E.) bronze implements began to be used in farming. Bronze ploughs were crafted and these were used for the cultivation of grains and beans, including rice. By the Warring States Period (5th c. - 3rd c. B.C.E.) iron-tool farming had begun in China. It is thought that this culture spread to Korea and around this time metal tools came into use on the Korean peninsula. The first such implements used in farming were iron ploughs, hoes, and a weeder known as a ttabi. It is recorded in the Samguk yusa (Memorabilia of the Three Kingdoms) that these items were being used by the time of King Yuri (r. 24-57 B.C.E.) of Shilla. In addition, there have been archaeological finds of pottery decorated with depictions of men using farming implements such as hoes and ttabi.

By the advent of the Three Kingdoms, agriculture had become more established on the Korean peninsula. In this period, the production of iron became prevalent. It is thought that since this technology entered Korea from China, the use of iron farming implements became widespread during Koguryŏ. The region surrounding the Yalu River in northern Korea has been the site of many archaeological finds of ancient farming implements. From that location iron technology spread south. One region in which agrarian culture became most pronounced was the Han River basin. This area had been inhabited by man since the early Neolithic period and it became the site of many agricultural advances in Korea. Using tempered-iron farming tools, the inhabitants were able to exploit the fertile alluvial plain of the Han River. Archaeological discoveries of settlements such as Amsa-dong and P’ungnap-dong denote them as among the oldest in Korea and reveal that the cultivation of crops was common there. The Samguk sagi (History of the Three Kingdoms) records that in the time of King Taru (r. 28-77 C.E.) rice farming had begun, and that in King Kiru’s
reign (r. 77-128) the Han River flooded causing much damage to the surrounding rice fields. To combat this problem, a reservoir was constructed, together with the reinforcement of the river banks. It is noted in both the Nihon shoki (Kor. Ilbon sōgi) and Kojiki (Kor. Kosagi) that details of these flood-control and irrigation measures were transmitted to Japan via the Paekche Kingdom.

In the Samguk sagi it is recorded that by the fourth or fifth century the cultivation of barley had begun in Shilla. After this came rice cultivation and at that time irrigation and river control were being undertaken in earnest. The farming culture of Greater Shilla reached a high level, evidenced in the fact that much of this and the farming technology of Shilla has been passed down the ages. For example, holidays with origins in this period such as New Year, the first full moon of the New Year, the Tano Festival, Ch'ilsŏk, and the Han'gawi Harvest Festival are all still observed today in Korea.

Koryŏ Period

From Greater Shilla and Later Paekche, Koryŏ adopted much of its land and farm system, and then reformed, taxed and regulated this with vigour. On the other hand, various tax reforms, farm implements, cattle and the like were periodically provided to the populace to soothe grievances. However, with an increasing population, public poverty worsened and the Koryŏ government saw the expansion of farming lands as a way to alleviate this problem. Accordingly, the plains to the north were the target of reclamation projects. The northern frontier was a dangerous area and the presence of a depleted Koryŏ military force gave scant security to the farming population. Moreover, the effort of land reclamation required a large amount of farming labour and technical skill, and drew heavily on the stocks of farming implements, as well as on water resources. Eventually, by King Sŏngjong’s reign, (r. 981-997), every military foundry in both province and county was given a quota for farming implements. It is noted in Koryŏ togyŏng (Illustrated Account of Koryŏ) that the farming techniques of Koryŏ were generally quite similar to those of Sung China, and that further improvement seemed possible.

A policy of encouraging agriculture was adopted during the long reign of King Munjong (r. 1046-1083), and in each area an official was charged with this task. This policy was further reinforced under King Myŏngjong (r. 1170-1197), and by the time of King Ch'ungnyol (r. 1274-1308) a central government office for the purpose of encouraging agriculture, Nongmu togam, had been established. At its peak, the Koryŏ state-financed central farming policy was quite successful. The Koryŏsa (History of Koryŏ) records that the people were so self-sufficient, that rice in the huge storehouses was left to mould. The Koryŏ togyŏng notes that every warehouse was chock-full of rice, as security against war, flood, and drought.

Chosŏn Period

Early Chosŏn farming policy centred around autocratic reform. The land-tenure system of the first king, T'aejo (r. 1392-1398), revised and strengthened the tax system. Also, in several regions agricultural encouragement policies along with irrigation works were established. During the reign of T'aejong (r. 1400-1418) farm surveys were again carried out by the government and various documents concerning agriculture and sericulture were published. In the reign of King Sejong (r. 1418-1450) a rain gauge was invented; copies of Nongsa chiksŏl (Straight Talk on Farming) were distributed; almanacs were published; and the overall level of farming technology was raised. In King Munjong’s short reign (r. 1450-1452) plans were made for irrigation works, river embankments and reservoirs. In the reign of King Tanjong (r. 1452-1455) horse farms were established, and silkworm distribution (for raising) escalated. King Sejo’s reign (r. 1455-1468), saw dams for irrigation purposes built, books on farming published, and several stock-breeding and sericulture farms established. The quarter-century during which Sŏngjong (r. 1469-1494)
was king brought a stepping-up of the manufacture of various farming implements, and in the official encouragement of farming. As indicated earlier, the farming policies of early Chosón were quite successful. However, with the misgovernment that occurred during the reign of King Yŏnsan (r. 1494-1506) the country suffered greatly and farming went into decline. Yŏnsan’s reign was a blot on the fortunes of early Chosón and caused many hardships among the populace. The subsequent reign of King Chungjong (r. 1506-1544) saw the revival of enlightened farming policies. A principal accomplishment was the promulgation of the Village Code (hyangyak).

Early Chosón was marked by the shift in dry-field to wet-field cultivation. Irrigated areas increased considerably and allowed farmers with newly-acquired or increased water resources to produce crops that were less affected by fluctuations in rainfall. As well as irrigation, improved methods of field fertilization were developed. This was an important step forward, encouraging farmers to better nourish their crops, without having to let the fields lie fallow for a year or more. The use of improved fertilising techniques brought economic gain from increased crop yields.

When compared with early Koryŏ, productivity per kyŏl (a traditional unit of measurement for agricultural land) increased from six to eleven sŏk (one sŏk equals about five bushels) to a range of twenty or thirty to fifty or sixty sŏk, which represents a massive increase. The greatest portion of this increase can be attributed to the shift to wet-field farming and more efficient fertilisation, but there were also significant advances in farming technology and medical knowledge which contributed to this increase, directly and indirectly. The advances in medical knowledge brought better health and longer life, which increased the population over time and provided more labour for agriculture. Technical advancement included the publication and wide distribution of books on farming techniques, and also the increased utilisation of dykes, water wheels and other irrigation methods.

In mid-Chosón, government policy in regard to agriculture was that of first relieving the country’s famine conditions. Some of the measures taken by the government included the reduction by half of the rice and cloth tax; a cut in the amount of rice allocated to the military; the curtailment of the presentation of local products to the king; the abrogation of the law requiring government approval before land contiguous to rivers was reclaimed for agricultural use; prohibition on the cultivation of tobacco and the brewing of liquor; and there were other urgent adaptations to the difficult circumstances of the time. From mid-Chosón, the government was cognizant of the need to increase public welfare through an enlightened farm policy, and it maintained its critical view of farming methods, with an eye to their improvement.

After the Japanese Invasion of 1592, Korea began to cultivate crops that were introduced through both China and Japan. Also, from the Americas, red pepper, squash and tobacco were introduced through these countries during the reigns of King Sŏnjo (r. 1567-1608) and King Kwanghae (1608-1623). Soon these crops were grown throughout the country. Squash and red pepper proved to be vegetables well-suited to the Korean palate and were relatively easy to cultivate. In particular, red peppers created a major change in the recipes and dishes of Korea. Tobacco was cultivated to meet a growing demand.

The lives of mid-Chosón farmers were regulated by the twenty-four divisions of the calendar that detailed which farming tasks should be done at certain times of the year, such as winter field preparation, weeding, and harvesting tasks. In addition, farming technology was also improved with the publication of Nongga chipsŏng (Compilation for Farmers). This work provided an insight into the most efficient way to plough a field, which crops to plant in certain soil conditions, how best to harvest crops, and much other advice for farmers.

Late Chosón saw the establishment of many government offices to supervise and
administer the farms of the nation. During the reign of Yongjo (r. 1724-1776), the Office of Embankment Works (Cheónṣa) was established, and with it many dykes were repaired, water wheels manufactured and installed, and the irrigation policy was strongly implemented. The Equalized Tax Law (Kyunyŏk pŏp; 1750) was declared and its provisions lessened the heavy tax burden of the commoners. To replace revenue so lost, taxes were collected on fisheries, saltmills and boats, in addition to a tax on the so-called ‘hidden fields’. Other laws saw the growing of tobacco again prohibited since it was said to deplete the soil, and after a cattle epidemic devastated the country’s herds to such an extent that the farmers had no recourse but to plough with human labour, a ban on the slaughter of cattle was enforced.

In the 1600s, the shirhak (Practical Learning) movement swept through Korea and this was reflected in the agricultural policies of the time. In the 1700s, Nongp’o mundap (Dialogue of Nongp’o) by Chŏng Sanggi was published and shortly thereafter Pan’gye surok (Pan’gye’s Treatises) by Yu Hyŏng’wŏn appeared. These works served as the dominant writings for the next one-hundred years. The shirhak scholars took the actual conditions of Chosŏn as their point of departure and then advocated reforms in such areas as the land system, the administrative system, and the military organization, with the goal of creating an agricultural economy based upon the independent, self-employed farmer.

Natural disasters often struck, causing poor crops and famine, and as a consequence other crops were introduced. New crops included sweet potato, potato and corn. Of these, corn had the greatest impact. In 1736 seed sweet potatoes were introduced and after considerable experimentation they too became a well-established crop. About sixty years after sweet potatoes were introduced, seed potatoes were brought to North Hamgyŏng Province, and within ten years they were being grown throughout the country. During this period many varieties of corn were introduced, as were peanuts in 1778.

Problems that occurred in late Chosŏn resulted from poor water and crop management. The use of the water wheel and extensive irrigation projects became so widespread that water resources were considerably depleted. Cotton was a prominent crop, but as a result the sericulture industry declined to the extent that it became nothing more than a part-time occupation for women and consequently the yield of silk declined every year. As crop farming declined, the cultivation of ginseng and cotton increased. Amidst the overall fall in farming productivity, these two crops showed remarkable resilience with high crop yields and a ready market for the product. This was due, in large part, to the technical knowledge which had developed in regard to the cultivation of these crops.

By the second half of the nineteenth century, Western culture was flowing steadily into Korea. As in many other parts of Asia, this also had a major influence on farming technology. In 1884, an experimental crop production area and a cattle breeding facility were established, along with an enterprise to cultivate silkworms and mulberry trees. Also in this period, American farming implements were introduced. New writings on farming appeared, such as Nongjŏng shinpyŏn (New Approaches to Farm Management) by An Chongsu, and Chamsang ch’waryo (Essentials of Sericulture) by Yi Ugyu in 1884, which were followed by Nongjŏng ch’waryo (Essentials of Farm Management) by Chŏng Pyŏngha in 1886. These works incorporated the new ideas and technologies brought into Korea during this period of enlightenment.

At this time, the Japanese, who were entering Korea in large numbers, saw a retarded farming system. Dry-fields were being planted only with a single crop, and the rice varieties were a mixture of both hardy and weak strains. Rivers and waterways were not being fully utilized and there was an insufficient number of reservoirs. In addition, the farming implements used were very crude and inefficient. The yield of the rice crop for the entire country was extremely low at nine to twelve million sok per year. One salvation, however, was the ginseng industry, with excellent cultivation techniques and a superior
product of both red and white ginseng. Another successful export was the market for Korean cattle, with most (upwards of 13,000) going to Japan and Russia in the late 1880s.

Japanese Colonial Period

During the Japanese occupation of Korea from 1910, against a strong backdrop of Japanese capital, the Japanese agricultural industry profited greatly from Korean grown rice, cotton, fruit, tobacco and ginseng. Particularly with an eye to solving the food problems in their own country, in 1920 Japan introduced the Plan for Increasing Rice Production (Sanmi chūn̄san kyōhō) in Korea.

The Japanese colonial occupation of Korea resulted in a transformation of Korean agriculture, and this change was most notable in rice yields. In 1910, the year that Japan officially colonized Korea, there were 1.32 million chōngbo (one chōngbo = 0.992 hectare) under rice cultivation, with an annual yield of 12.4 million sōk of rice. By 1941, there were 1.64 million chōngbo under cultivation which produced a harvest of 24.88 million sōk. Together with the improved rice yield came the introduction of improved varieties of other crops, irrigation facilities were augmented, and the amount of chemical fertilizer applied to crops was markedly increased. However, Japan was the principal recipient of Korea's agricultural endeavours. The following table demonstrates the degree to which Korea was exploited by Japan.

*All exported rice is to Japan.

This decline in rice consumption in Korea points directly to economic pressure, whereby an incomplete substitution of inferior cereal grains for rice, occurred and where food shortage intensified. There were also other areas in which Korea was exploited, but perhaps the most dramatic view of this is visible through the manipulation of the rice harvest.

Another very visible factor at the conclusion of the colonial period was the exploitation of Korean farmers. Although in 1945 about seventy-five per cent of Koreans earned their living from the land, this is not reflected in figures concerning land ownership. Eighty-one per cent of all Korean farm households only accounted for ten per cent of total land ownership. The high concentration of land in the hands of the few was the product of two factors. One is the colonial land policy of the Japanese, and the other is the economic exploitation of tenant farmers by landlords.

Korean Agriculture After Liberation

After liberation, agriculture was so disrupted that production markedly declined. The American Military Government's land reforms improved the situation somewhat, and in 1948 the newly-founded Korean government quickly declared its own land reforms, with the Farm Land Reform Act (*Nongji kaehyŏk p'on;* 1949). In addition, there were various agriculturally-related master plans such as a three-year agricultural policy and a nine-year stock-breeding policy. However, the outbreak of the Korean War in June 1950 brought all
of these plans to an abrupt halt.

When peace came to Korea, farming modernisation activities resumed. The 1953 and successive harvests brought a respite from food shortages and at this time foreign aid was received in large quantities. The existing five-year plan for agricultural development was modified to provide additional farmland development programs; irrigation project improvements; farmer education programs; along with other policies designed to both stimulate and modernize Korean agriculture. As a result, the harvest in 1959 reaped 27 million sŏk of grains and the 1960 harvest was of similar capacity.

From 1962 the First Economic Development Plan under President Park Chung Hee commenced, and farming policy within this was aimed at the modernisation of Korean agriculture and the securement of increased income for farming households. The manifestations of these policies saw an increase in the number of experimental farms and a focus on the realignment and extension of farming lands. Agricultural production policies concentrated on developing and improving fertilizers, pesticides and farming implements, and on diffusing this technology to the farmers. The Second and Third Economic Development Plans also had the modernisation of agriculture as the cornerstone of their agrarian policies.

The trend of modernisation and use of chemical fertilizers and pesticides continued at a pace throughout the 1970s. By 1977, there were seven chemical fertilizer plants with an annual production of three-million tonnes for domestic use and another half-million tonnes for export. With the modernisation of farming methods, came an accompanying increase in harvests. By 1975, Korea had achieved self-sufficiency in rice and barley, her two staple grains. Rice harvests continued to rise throughout the 1980s. However, more than half of the country’s demand for corn, wheat and beans was still met by imports.

By 1988, Korea was producing 6 054 000 tonnes of rice; 565 000 tonnes of barley and wheat; 302 000 tonnes of soybean; and about 260 000 tonnes of potato annually. The harvest of fruits such as apples, peaches and pears totalled 1 714 000 tonnes. Vegetables such as Chinese cabbage; radish; red pepper; garlic; and onion were grown extensively and found ready markets. As a result of the various mechanization programs, farm machinery made the planting, cultivation and harvesting of these crops less burdensome for farmers. In addition, the widespread use of chemical fertilizers and pesticides increased the per acre yields. Meat production averaged 724 000 tonnes of beef, pork and chicken annually.

With the opening of the Korean agricultural market in the 1990s, as a result of free-trade agreements such as the General Agreement on Tariffs and Trade (GATT), government agricultural policies turned towards a fine-tuning of the agricultural sector. The basic thrust of the policies now aimed at supporting the special requirements of selected sectors of agriculture in order to prepare for the advent of market liberalization. In addition, policies sought an improvement in quality levels and reductions in production costs. In agricultural areas, these changes were seen in an improvement in the labour structure, realignment of farmland and technical reform. In 1995, the Korean rice harvest was 4.7 million tonnes, and the barley harvest added another 282 000 tonnes. Overall, grain self-sufficiency was 54.3 per cent, which was an increase of 1.5 per cent from 1994, but still decisively lower than the 1988 yield. Vegetable production in 1995 was 10.59 million tonnes, up by 15.0 per cent from the previous year. The consumption of meat continued to rise in the 1990s with a total of 1 231 000 tonnes in 1995.

The lifestyle of Korean farmers continues to improve as do the methods they use to cultivate their crops. The total income of farming families has almost doubled in the period 1990 to 1995. Despite increases in farming costs and an overall rise in the cost of living, the average farming family saw its available income, after expenses, rise from about 2.5
million wŏn in 1990 to over 6.3 million wŏn in 1995. The modernisation of Korean agriculture has given farmers a livelihood which now equates roughly to the standard of living that Korean city-dwellers enjoy.

Farmland

Land and Climate

Korea consists of a 1,000 km-long peninsula, together with 3,900 islands. The peninsula lies between 124° 11'00" and 131° 52'42" East longitude, and between 33° 06'40" and 43° 00'39" North latitude. To the north lie China and Russia, with the Chinese mainland directly to the west and the Japanese islands to the east. At its closest point, the Shantung Peninsula of China is 190 kms. from the west coast of Korea, and from the southern port of Pusan to the Japanese island of Honshu is 180 kms. The total land area of Korea is 221,764 sq. kms., and the peninsula is divided politically into two parts: the Republic of Korea (South Korea) and the Democratic People's Republic of Korea (North Korea). The Republic of Korea occupies about forty-five per cent of the peninsula with a total area of 99,793 sq. kms.

The peninsula is very mountainous with about seventy per cent of its land so covered. As a result, only about twenty-one per cent of the land-mass is arable land. The plains that have developed along the rivers are the major rice producing areas in Korea. However, the wider plains near the river mouths abruptly change to narrow flood plains a short distance upstream. Moreover, the alluvial soils are relatively thin and fragile, making them easily subject to damage from erosion.

Korea is considered to have a monsoon climate, with a dry winter and a wet summer. Average rainfall is about 1,300 mm, which should provide sufficient water for most crops. However, the bulk of the rain falls in the summer. Upland crops very often suffer from dry spells caused by uneven rainfall patterns. Because of the rainfall variance, many fields have to be irrigated -- seventy-two per cent of all rice fields are dependent upon man-activated watering. There are many large-scale multi-purpose dams throughout Korea providing water for irrigation, flood control and the generation of electricity.

Temperatures on the Korean peninsula are influenced both by the Asian continental land-mass and the oceans that touch its shores. The seasonal climatic change is distinct, and marked by short spring and autumn seasons. Summer is hot with a record high temperature of 40° C recorded in Taegu in 1942. Temperature variations between the north and the south regions of the peninsula are not extreme in summer, but in winter there is a large difference between the two regions. Winter is cold with a dry climate that is mainly influenced by the Siberian weather system and lasts for about four months in the central and southern regions of Korea. In the peninsula's north most rivers are frozen over for several months. The lowest temperature on record is -43.6° C. in Chunggangjin, in 1933. Winter temperatures have an important bearing on agriculture, in that only those regions where the weather is less severe can double cropping, usually rice and barley, be grown.

Traditionally, Korea was divided into six regions that shared similar geographic features. The Kiho regions encompasses much of the area of today's Kyŏnggi Province. This area is known for its production of fruits and vegetables. Since it is close to Seoul, the major population centre of Korea, the production of high-demand products is achieved year round through the use of greenhouses (largely of plastic sheet construction). The proximity to Seoul makes for the easy transport of perishable goods to the markets there. The area also is known for stockbreeding, particularly cattle.

The Kwandong area encompasses much of Kangwŏn Province and North Ch'ungch'ŏng Province. This area is mountainous which is not conducive to rice growing. However, it
does have many dry-fields and its produce includes potato, sweet-corn and other vegetables. It is also a major centre of cattle breeding.

The Honam region includes North and South Cholla Provinces and South Ch’ungch’ŏng Province. This is the major rice and barley producing area in Korea, and accounts for sixty per cent of the annual total for these grains. Of all the cultivated land in this area, sixty-five per cent is rice paddy. The relatively mild winters in this region also allow for double cropping which is the season when barley is planted. Other major products of the region include fibres, such as cotton, hemp and ramie.

Cheju Island is also sometimes included in the Honam region, but in actuality it is a very distinct region. Originally, Cheju farmers cultivated dry-field crops such as sweet potato, barley and rape, but from the 1960s the focus shifted to fruits and vegetables. The island has a mild climate that permits the cultivation of fruits for which the climate elsewhere in Korea is too harsh. Of all the cultivated land on the island, thirty per cent is dedicated to orange groves, with mandarin as the main crop. Stockbreeding also plays an important role in the Cheju economy.

The Yŏngnam region is composed of North and South Kyŏngsan Provinces. Next to the Honam region, this area is the second largest producer of rice with about sixty per cent of its cultivated land being paddy. The mild winters allow for double-cropping with barley. The region is also well known for the apples grown in Taegu, and the pears grown in Kimhae and Kup’o. Other products of the region include the cultivation of medicinal herbs and a thriving sericulture industry. The mulberry groves serving the sericulture farms in this region account for about forty-five per cent of the country’s total.

The Kwansŏ region consists of North and South P’yŏngan Provinces and Hwanghae Province. Before liberation in 1945, the cultivated land here was seventy-five to eighty per cent dry-fields. The region receives only about 1 000 mm. of rainfall a year, so rice cultivation is difficult. However, this is adequate for crops such as wheat, barley, millet and Indian millet (sorghum). Under the Japanese, the region was the largest producer of these grains.

The Kwanbuk region includes North and South Hamgyŏng Provinces. This is the driest (600 mm rainfall per year) and coldest region in Korea. Only dry-field farming is possible, with potato, oat and millet as the common crops.

Land Ownership

During Chosŏn, tenant farming was common as much of the land was owned by the ruling class. In the Japanese colonial period, this land-tenure system allowed for the systematic exploitation of the tenant farmers, and it became more formal and codified. In the early years of the colonial period, from 1913-1917, landowners who worked their own farms accounted for 21.8 per cent, part-owners 38.8 per cent, and tenants 39.4 per cent of total farms. A comparison with 1938 statistics shows that 19.0 per cent were owners, 25.3 per cent were part owners, and 55.7 per cent were tenants -- a marked increase in the numbers of tenants and part-owners. Over eighty per cent of Korean farmers at the close of the colonial period did not fully own the land which they worked.

After liberation in 1945, the lands that the Japanese had owned did not pose a problem for redistribution to Koreans. However, over eighty per cent of leased land was owned by Korean landlords. The U.S. Military Government did not have a unified land reform policy but was able to repartition some 240 000 hectares of former Japanese-controlled land, mostly to the tenant cultivators of the land. The formation of the Republic of Korea in 1948 brought about more sweeping land reforms with the enactment of the Land Reform Act of June 1949. Under its provisions, the government had purchased and distributed about 330
000 hectares of farmland by 1952. In addition, the sale by landlords to tenants of over 500,000 hectares of land was concluded. The result of these sweeping reforms was that the number of owner-cultivators in 1964 was almost 72.0 per cent, up from a low of 13.8 per cent in 1945. Tenant farmers accounted for just 5.2 per cent of the total in 1964. The end result of the land reforms in Korea was that the vast majority of farmers either fully or partly owned the land they worked.

The size of individual farms in South Korea remained small after the land reforms. The government established a 3 chöngbo (roughly 3 hectare) limit on the size of landholdings, excluding land reclaimed by the farmer. In traditional times, a farm of over 3 chöngbo would rely upon hired labour to do much of the work, but those under this size could be worked by a single family. This limit seems to have effectively eliminated the landlord class. However, holdings of less than 0.5 hectare, which accounted for 45 per cent of the total in 1953, proved too small to provide sustenance for a family. As a result, the number of these farms declined to 32.4 per cent of the total in 1973. The average landholding in 1986 was 1.12 hectares.

Farm Income

During the early stages of industrialization, the income level of those in rural areas and those in urban areas was similar. For example, in 1963 the average rural income of 83,000 won per year was 103 per cent of the total of those residing in the cities. This parity of rural and urban income was the result of indifferent harvests in the early 1960s, which escalated farm produce prices, and to the fact that industrialization was then in its infancy. However, by the late 1960s the difference in urban and rural incomes was substantial. In 1967, rural incomes were only 56 per cent of those in the cities. Korean agriculture contributed little to the great economic growth of the late 1960s to the 1980s, except in the supply of its surplus labour to industry. Industrialization, however, brought about modernisation of the agricultural sector. This helped to increase productivity of the farms and also released additional labour from the agricultural sector for work in the industrial sphere. Nonetheless, standards of living and income of those engaged in agriculture remained below those in the urban areas.

The 1970s brought the Saemaul undong (New Village Movement) to the rural areas in an effort led by the government to modernize the rural sector. This movement can be described in simple terms as a self-help program for the rural areas aimed at improving productivity and living standards. The Saemaul undong has been in existence for several decades and its benefits to the countryside have included road and bridge construction; the beautification of rural villages; the replacement of thatched roofs with cement or slate tiles; and various farmer-education programs. From the late 1970s farm income came to approach the levels of urban workers, and the overall standard of rural living improved markedly. Programs focusing on improved rural medical services and education also brought about better living standards for the rural communities. (The Saemaul undong is referred to again below under Modernisation Programs.)

The outcome of farming-directed government programs was a steady increase in the income and living standards of Korean farmers. The size of farming households has declined gradually from 6.29 persons in 1965; to 5.63 in 1975; to 3.77 in 1990; and to 3.32 in 1995. This steady shrinkage of farm households has been counterbalanced by an increase in the amount of mechanisation available to farmers, and farm productivity has actually increased. Farm household income still remains lower than urban households, but the gap has narrowed and in 1995 the average income of a Korean farming household was 21.8 million won, which represents almost twice that of the 1990 figure of just over 11.0 million.
Farming Techniques

Rice

Of all the crops grown in Korea it can be said that rice holds the most importance as both a staple grain and as a symbol for Korean agriculture. Rice was introduced into Korea during the Neolithic Period in the second or third millennium B.C.E., and its cultivation was improved upon and expanded during the Three Kingdoms. In Chosŏn, rice became the staple food, and (as noted above) the government policies on agriculture centred on flood control and irrigation projects, which had the result of steadily increasing the rice yields. The advent of the colonial period brought about a great increase in the size of the rice harvest due to the increased use of chemical fertilizers and land reclamation projects. However, this increase was not realized by Koreans who saw their actual per capita consumption of rice reduced by almost fifty per cent (see Table above). After the end of the Korean War in 1953, rice yields began to climb and reached three million tonnes in 1960. Rice production doubled from 1955 to 1986, and in part at least this can be attributed to the development of hybrid rice varieties, notably the tongil, as well as to improved rice cultivation techniques.

In the growing of rice, water is by far the most important element. Wet-fields are superior to dry-fields in their respective yields. Moreover, wet-fields are more efficient in regard to labour used and fertilization needs. Another distinctive feature of wet-field cultivation is that regardless of the original fertility of a given piece of land, after several years of continuous cultivation, through the process of podzilisation, the fertility of the land is not diminished. This is another positive feature of wet-field farming which allows soil fertility to be maintained for many years. For planting rice, seed beds are used for the initial propagation. This is done since it is quite wasteful to sow seeds directly to the field, and the use of seed beds also permits more economical use of water and fertilizers. Today, seed beds are first prepared with either a tiller or tractor and then fertilized with chemical fertilisers. Transplantation of the seedlings from the seed bed to the field takes place when the seedlings have reached a height of twenty to twenty-five centimetres, which usually takes from one to two months, depending on the variety of the rice. Transplanting encourages higher yields by strengthening the root system of the plant. By planting the seedlings in neat rows, weed and pest control are greatly facilitated. The seedlings are then fertilized, traditionally this was done with manure and compost, but today with commercial nitrate and phosphate fertilizers. Weeding is also important to the yield as it rids the fields of overpowering weeds that not only deprive the rice plants of water and nutrients, but which also harbour pests and diseases. Today, chemical pesticides and herbicides are often used as control agents.

Once the rice is fully ripened, there are several steps in getting the grain to the white rice stage. The first step after harvesting is the threshing of the plants in which the husk of the rice is stripped and discarded. The grain produced from the threshing is known as brown rice. This is then polished in a mill until it reaches the desired quality and becomes the white rice favoured by Koreans. However, polishing the rice removes many of the nutrients. Brown rice has about ten per cent protein, while white rice contains seven per cent. Traditionally, the rice-milling process was done in many kinds of mill, such as water mills, treadmills and those mills powered by either oxen or horses. Today, the threshing and milling of rice is as mechanized as that used to process other cereals.

Grains, Vegetables and Fruits

Although rice is the most important crop, other grains and legumes play a role in the diets of present-day Koreans. Barley is the second major crop after rice. Corn, millet (including sorghum), rye, soy and other kinds of beans, and wheat, are grown throughout Korea and play a major role in agriculture. Barley is widely grown as a double-crop during winter.
Upland or dry-field crops are of great importance in those areas where rainfall is insufficient or suspect for the cultivation of rice. North and South P’yŏngan Provinces and Hwanghae Province receive only about 1,000 mm. of rain annually, so the main crops of these areas are barley, millet and wheat. Even less rain falls in the northern-most regions of South and North Hamgyŏng Provinces, with millet, oats and potato as the main crops. During the early months of growth (for a spring crop this would be in May and June), the country often experiences a lack of rain which, however, does not set-back these crops to any great extent. The monsoons reach the peninsula in July and August, when dry-field crops require most water, but by harvest time the rains have again subsided.

In general terms, there are two kinds of dry-field. Some ‘short-term’ fields grow crops that are harvested, for the most part, every year. In the south-central area, yearly double-crops are planted -- barley or wheat followed by a crop such as (several varieties of) bean, cotton, sweet potato, or foxtail millet. In the central mountainous regions, potato or some other vegetable is followed by the planting of beans of various kinds. In the northwest, the pattern is to plant three crops every two years, and this might consist of a planting of wheat followed by bean and then foxtail millet to complete the cycle. The crops are adjusted for the particular conditions of each region and economic considerations.

The other type of field is one devoted to long-term crops. These are generally in the form of orchard fruits or dedicated mulberry tree plantings. Such undertakings require a relatively long investment of time and a strong input of capital before a harvest can be reaped. Tea plantations are also in this category. Tree and vine production includes apple, pear, peach, grape and mandarin orange. North and South Kyongsang Provinces are well known for their fruits and the bountiful harvest of mandarin on Cheju Island give the farmers there one of the largest per capita agricultural outputs in Korea.

As Korea has increased her self-sufficiency in staple grains such as rice and barley, the demand for vegetables for the table has also increased. The largest vegetable producing region in Korea is Kyŏnggi Province which surrounds the city of Seoul. The proximity to the capital enables farmers to get their produce to market quickly. The vegetables produced in the greatest quantity are Chinese cabbage, onion, potato and radish. In 1995, the harvest of Chinese cabbage exceeded 2.8 million tonnes. In addition to these dry-field vegetables, many other types are cultivated in forced conditions under ‘greenhouses’ largely of framed, plastic-clad construction. This type of farming (more appropriately -- market gardening) has extended the growing season considerably, with some crops now being harvested on a ‘year-round’ basis. The trend during the past two decades or so has been towards an abundance of dry-field vegetable farms located in close proximity to the major urban areas.

Stock Breeding

Stock breeding and growing consists mostly of beef and dairy cattle, pigs and poultry. The largest landholdings are those concerned with cattle-raising, even though almost twice as much pork is consumed as beef annually. The consumption of beef climbed steadily throughout the 1990s, with domestic beef accounting for about fifty-one per cent of the market in 1995. The self-sufficiency rate of beef production, however, declined in the 1990s, with the opening of the Korean beef market to overseas producers.

The development of pasture land in Korea has its origin in the colonial period. Following liberation, the Korean government established a stockbreeding farm in South Ch’ungch’ŏng Province. This was followed in 1962 by the establishment of a 1.2 million p’yŏng national stockbreeding facility in Taegu under the supervision of the Rural Development Administration (Nongch’on chinhŭngch’ŏng). The development of pasture land did not, however, begin in earnest until the 1960s. The expansion of and scientific research into improved methods of animal husbandry was stimulated by the need to increase beast quality on improved pastures. There were cattle farms before the 1960s,
which relied primarily on native, largely unimproved, pasture. With increased research and experimentation came an increase in the number of cattle which could be maintained per acre and also in the meat yield per carcass. The amount of pasture land was increased and by 1984 had reached 113,030 hectares, with much of this land being sown with varieties of grasses best suited to cattle grazing. Nevertheless, most of the cattle are owned by small farmers, who keep them as an adjunct to their main farming activities. Statistics show that the average stock farmer in Korea had only four head of cattle, in 1992.

**Modernisation**

Mechanisation

The first modern farming implements and equipment came to Korea through Japan at the end of the nineteenth century. They consisted mainly of ploughs; grain blowers; water wheels; wooden rice-hulling machines; and sieves. However, the large-scale mechanisation of Korean farming did not begin in earnest until after liberation, and (like much of Asia) it came in three basic stages (but with some overlap between them): (a) the mechanisation of grain processing; (b) the substitution of power equipment for human labour; (c) the introduction of small and large tractors.

The first stage of mechanisation began from the Japanese occupation, with the introduction of improved wooden rice-hulling machines. By the late 1950s, this stage was almost complete and resulted in a great amount of labour being freed to perform other tasks, either on or off the farm. In traditional times, the processing of grains was very time-consuming, but the introduction of machines both simplified and expedited the irksome tasks involved. The number of grain processing machines in Korea increased markedly during the thirty years after liberation. In 1951 there were just over 40,000, but by 1975, the figure had almost tripled, to 110,000.

The second stage of farm mechanisation was the greater substitution of machine power for human labour. For example, the transfer of water from river, dam or reservoir to irrigate crops is a grossly inefficient task when done by hand with water scoops, or even by animal or hand-powered water wheels. A motorised water pump does the job in a fraction of the time, with little use of human resources. The number of water pumps increased from below 7,500 in 1956 to over 286,000 by 1985. With the introduction of threshing machines, essential labour became available at times of peak demand, since the planting of a second crop usually follows closely on the heels of the threshing of the first crop. This release of labour enables the farmer to concentrate on the essential activity of planting his second crop. The extent of the industrialisation of farms can be seen by a comparison of the 1951 figure, when there were exactly 93 threshing machines in Korea, to a 1985 figure in excess of 300,000. The second stage of mechanisation was well underway by the early 1970s, and was virtually complete by the early 1990s.

The third stage of farming mechanisation is the use of small and large tractors for specific and general farm tasks. This process began in earnest in the early 1970s, with small tractors, or tillers. Their use became widespread in Korea over a short period of time, and even farmers who did not have such a machine themselves, might borrow a neighbour's or a friend's tiller/tractor. Today, almost every farming household owns at least one power tractor/tiller. In 1964 there were less than 1,000 of these small machines in use on farms, but this had increased to almost 600,000 by 1985. The number of standard and large size, multi-use (power take-off) tractors has also dramatically increased: from almost a zero figure in the early 1960s, to over 12,000 in 1985.

Other machine-driven farm equipment is also in large-scale use throughout the ROK, with or without the use of tractors as the primary source of power. Rice transplanter, binders, combines, dessicators and sowing machines are all part of the modern process of planting,
tilling and harvesting. Since the average size of a farming household has continued to 
decline, the necessity for machinery to replace, or at least assist, human labour is evident. 
The present-day high levels of production would not be possible without the use of modern 
farm machinery.

Modernisation Programs

Notwithstanding the number of programs directed at the development of the countryside 
since the founding of the Republic of Korea in 1948, it was not until 1962 that the 
government made a determined effort to promote increases in agricultural productivity and 
farm income. However, even these early efforts were rather limited, with most of the 
nation’s resources and attention being directed towards development in the industrial sector. 
The first government office to operate with the furtherance of rural community values as its 
brief, was the Office of Rural Development (ORD) established in 1962, and which 
gradually expanded its sphere of activities. The ORD undertook many and 
varied projects in the rural areas to increase productivity on the farms and thus pave the way 
for increased farm income. It also looked at the utilisation of idle land; the training and 
education of country people who could become leaders in the agricultural sphere; the 
dissemination of technical information; general improvements to the standards of rural 
living; and strengthening the cooperation among various institutions such as the ORD, 
aricultural colleges and agricultural high schools. The present-day operative arms of this 
organization are the Rural Guidance Offices (RGO), which are located in every county. The 
RGO’s are in touch constantly with the rural communities and are aware of trends and 
problems among the farmers. They in turn contact the ORD, where the central planning and 
decision-making process is conducted.

A major turning-point for rural Korea came with the launching of the 1971 Saemaul 
undong (The New Village Movement) by President Park Chung Hee. This rural 
development movement was promulgated in order to combat several major problem areas, 
such as: (a) a low rate of increase in agricultural productivity and a stagnant rural economy 
that could not keep pace with the growing food demands of the urban population, thereby 
calling for large amounts of foreign exchange being used for grain imports; (b) the exodus 
of the rural population to the cities, which added to the administrative burdens of the cities 
and the consequent potential for social discord; (c) the growing economic inequities 
between the rural and urban populations; and (d) the results of the 1971 presidential election 
which revealed that President Park had lost much of his following in the predominantly 
rural areas of south-west Korea.

The Saemaul undong has proved an overwhelming success in raising the living standards 
of those in rural Korea. Its key is that it is a pro-active, self-help program in which the rural 
residents play a direct role in the improvement of their own communities. Major 
accomplishments in the program included the building of about 65 000 bridges in the rural 
areas in the four-year period of 1971 to 1975, which enabled almost all villages and farms 
to be accessed by motor vehicles. Also, through the program, high-yield rice seed was 
distributed to the farms, which resulted in the average rice yield per hectare increasing from 
3.5 tonnes in 1971 to 4.9 tonnes in 1977. Since the movement emphasised cooperation, 
many projects were undertaken by entire communities and this resulted in better living 
conditions for everyone. The Saemaul undong has now moved beyond its original scope 
and has extended to urban communities where it is trying to create the same type of 
cooperation and spirit of self-help.

Agriculture and Forestry, Ministry of [Government]

_Agye yugo_ (Posthumous Works of Agye)

_Agye yugo_ is a collection of poems and writings by Yi Sanhae (1539-1609) who held the position of Chief State Councillor (_yŏngŭijŏng_) before and after the 1592 Japanese Invasion. The original work, published in 1659, consisting of six volumes was woodblock-printed. The _Agye yugo_ was included in the 1981 _Hansan munhŏn ch’ongsŏ_ (Hansan Literary Library).

Although _Agye yugo_ is composed mostly of poetry with themes drawn from various stages of Yi’s life, there are discrete entries such as funeral odes and discourses that seem to have been added by his descendants when compiling the collection. Some pieces were written by Yi while in exile, and there are also his petitions to the crown offering his resignation, which points to his distress with the turmoil surrounding Chosŏn at that critical time. Yi’s work is praised both for its literary quality and historical value.

_Ahn Eak-tay_ (An Ikt’ae, 1906-1965)

Composer and conductor An Ikt’ae was born in P’yŏngyang. He began studying music at the age of six, and was given tuition in violin by a missionary, and later the trumpet and cello as well. In 1919, An was expelled from P’yŏngyang missionary school for his youthful involvement in the March First Movement, a large-scale protest against Japanese colonial rule. But with the help of his school principal, Dr. E. M. Mowry, he was able to enrol in the Seisoku Middle School in Japan in 1921, with music again his chosen field. He went on to major in cello at the Kunitachi Music School in Japan, where he continued his education in music with other Korean musicians, like Kim Wonbong and Hong Son’gyu. During his summer vacations, An returned to Korea and gave performances around the country. It was during this time that he was absorbed with the national interest in Western music. In P’yŏngyang, he got to know Yi Sangje, Cho Manshik, and other political advocates of Korean independence, who re-kindled his interest in the nationalist movement. In 1931, An graduated from Kunitachi School and was invited to give recitals at concerts in Tokyo and Seoul.

After further study at the Curtis School of Music in Philadelphia, An went on to major in cello and composition at the Cincinnati Conservatory. While there, he joined the Cincinnati Symphony Orchestra’s cello section, then (in 1934) travelled to Germany, where he was engaged both as composer and conductor. Spending some time in Austria, he became a pupil of composer Richard Strauss in Vienna. In Berlin, in 1936, An composed the stirring Korean national anthem, based on the words of Korean activist An Ch’angho and a sermon he had heard in a San Francisco Korean church, setting his words to a haunting melody which is said to have come to him in a dream. From Germany, he travelled to Hungary and joined the Budapest National School of Music. At the outbreak of World War II, An was a guest-conductor in Germany and Austria, and by then had conducted the Berlin Philharmonic Orchestra, the Rome Symphony Orchestra and the Budapest Symphony Orchestra.

As WW II drew to a close, An moved to Spain, where in Barcelona he continued work on his compositions. At a reception given in his honour, he met Lolita Taravera, the daughter...
of a Spanish count. They married and settled on the island of Majorca, in the Balearic Islands, where their three daughters were born. An helped to establish the eighty-member Majorca Symphony Orchestra, actively enlisting financial and popular support for the orchestra; eventually becoming its assistant director of music and permanent conductor. In the late 1950s, he visited London as a guest conductor, conducting among other works, his Korean Fantasy for orchestra and choir, based on themes from his national anthem composition. Despite his resounding success in Europe, his prior association with Richard Strauss prevented him from obtaining a visa to travel to America until well after the end of World War II. (Strauss elected to stay in Germany during the Nazi period, though his attitude to the regime remained ambivalent).

An returned to Korea in 1959 to conduct the Korean Broadcasting System (KBS) Symphony Orchestra and the Seoul Symphony Orchestra in performances of his compositions - Kangch'ŏn sŏngak (Sacred music descending from Heaven) and the Korean Fantasy. In 1962 he returned, to conduct the opening of the first annual Seoul Music Festival, with which he held a closed association for the following three years. In 1964, however, he was the subject of much controversy when he was invited to return to Japan to conduct the NHK Symphony Orchestra in an international broadcast premier performance of his symphonic poem Non'gae. An wrote the piece in honour of the historic martyrdom of the sixteenth-c. kisaeng Non'gae, who in order to stem an attack by the Japanese, leapt to her death from a cliff above the South River, pulling the enemy general with her. An's invitation to conduct the NHKSO was eventually approved by the Korean government and his performance was successful enough to warrant a standing invitation to return and conduct the same piece each year.

In the Royal Albert Hall in London on 4 July 1965, An was guest-conductor with the New York Philharmonia Orchestra in a performance of what were to be his last compositions, Ae (Sorrow) and Non'gae. He was already seriously ill with beriberi and died in hospital in Barcelona on 17 September 1965. During his lifetime, An Ikt'ae had conducted well over three hundreds of the world major orchestras, and was awarded Korean presidential medals in recognition of his accomplishments. A world-respected figure in music as a conductor of post-romantic works, An enjoyed most of all conducting the music of Beethoven, Brahms, Dvorak, Sibelius and the works of his mentor Richard Strauss. But, to Koreans, he is best remembered for the timeless refrain from the national anthem,

'Land of the Rose of Sharon,

thousand miles of fairest land;

guarded by her people,

may Korea ever stand.'

Herbert Mahelona

Ajou University

Ajou University (Aju Taehakkyo) is a private university located in Suwŏn in Kyŏnggi Province. Founded by Pak Ch'angwŏn as Ajou Kongŏp Ch'o'gūp Taehak (Ajou Industrial Junior College) in December 1972, it opened in March 1973. When the college became a four-year college of engineering in 1974, it changed its name to the Ajou Institute of Technology. In March 1981, the college attained university status and its colleges then included those of Engineering; Business Administration; and Liberal Arts and Sciences. In the same year, the University started its master's degree program. A doctoral program commenced in 1993.

Today, the university consists of six colleges with thirty-three academic departments.
Twenty-eight of these offer degrees at master's level and eighteen offer doctorates. In the mid-1990s, the university liberalised its undergraduate curriculum, allowing students to take subjects other than their declared major and also to pursue majors outside their main field of study. Other changes which greatly widened the scope of undergraduate courses were also introduced.

In 1995, the university graduate school commenced courses given in English to eighteen graduate students from Romania. The Graduate School of International Studies was launched in 1996, together with three other graduate schools (International Studies; Public Affairs; and Education) entrusted with meeting the challenges of globalisation and regional decentralisation.

Akchang kasa (Text of music composition) [Literature]

Akhak kwoebôm (Guide to the Study of Music)

In 1493, a team of scholars headed by Sŏng Hyŏn (1439-1504) received a royal decree to compile every type of music that had been composed in past times, into a guide to the study of music. Akhak kwoebôm (which was the outcome of the decree) is an illustrated treatise on ceremonial music, Chinese music, and native songs, which deals painstakingly with all aspects of the three, from musical notation to the staging of the actual performances. It consists of nine volumes in three fascicles.

Notable among the contents of this work are the various forms of palace music that display distinctive rhythms and the explanations of their use. The work also contains a few folk songs including Tongdong (Tongdong Refrain) and Ch’ŏ Yong ka (Song of Ch’ŏ Yong). The explanations aid the understanding of early Chosŏn music and that of late Koryŏ. Moreover, the data in this work can be used for studies of the changes that occurred in Chosŏn musical styles after the reign of King Sŏngjong (1469-1494). As such, it is highly valued by votaries of Chosŏn music. The original edition was destroyed during the 1592 Japanese Invasion, and the oldest extant version is the 1610 T’aebaeksan-pon edition, now in the keeping of the Seoul National University Library. Akhak kwoebôm was reissued in 1979 by Minjok Munhwa Ch’ujinhoe under the title of Kugyŏk Akhak kwoebôm.

Allen, Horace Newton [USA and Korea]

American Forces Korea Network (AFKN) [Broadcasting companies]

Amnok River (Yalu River)

The Yalu flows from east to west along the border between North Korea and China. About 790 kms. in length, the Yalu is the longest river in Korea. As the crow flies, it is about 400 kms. from the river’s source to its mouth, but in fact it flows almost twice that distance because of the many sharp turns and winding course. The Yalu begins near the peak of Mt. Paektu from whence it flows west past Hyesan, Changgangjin, Manp’o and Shinŭiju before entering the Yellow Sea. During Koguryŏ the river was known as Ch’ŏng ha (Blue River).

Prehistoric relics have generally been found on the Yalu’s tributaries rather than close to the river itself. Palaeolithic relics have yet to be found, but there are a number of Neolithic relics such as the remnants of dwellings, as well as earthenware, stone tools and bone implements. A number of Bronze Age implements, such as earthenware, spindles, semilunar knives, stone axes, swords and arrowheads, have also been excavated from around the river, and Bronze Age stone tombs have been found at P’ungnyong-dong and Konggwi-dong in Kanggye. Early Iron Age artefacts, including coins, have been found
near Manp’o.

During the Three Kingdoms, the river was part of Koguryô’s territory. As a result, there are many Koguryô relics from before the fourth c., when the kingdom had its capital in the area. After the fall of Koguryô, most of the riverain became part of the Parhae (Chin. Pohai) Kingdom, while a section of the lower reaches was annexed by China’s Tang Dynasty. After the fall of Parhae, some of the kingdom’s nomads set up a small state on the middle section of the river while the Jurchen people resided in the lower section. In the late tenth c., however, the Khitan people took control of both the middle and lower sections. Around this time, the Koryô kingdom managed to gain control over the Kanggye and Üiju (modern-day Shinûju) areas. The remainder became Koryô territory when the Mongols moved the Tungning Commandery from Sŏgyŏng (modern-day P’yŏngyang) to Manchuria in 1290.

During Chosôn, continuous efforts were made to establish the Yalu River as the kingdom’s northern boundary. To this end, Chosôn followed a policy of resisting Jurchen invasions, while establishing its military forts and fortifications. However, denoting the river as border was problematic at times due to the large number of deltas and islands which were formed by floods and erosion. Even in modern times, there have been occasional signs of friction between China and North Korea concerning ownership of this alluvial land. In September 1963, however, the two countries established their international border as the deepest point of the Yalu River bed, instead of the geographic centre of the river. China and North Korea now hold an annual conference where they discuss boundary problems, such as changes in the river’s course.

In modern times, the Yalu has served as an important source of generated electricity. Since the 1920s, large hydro-electric dams have been set up on the river and its tributaries. When the Pujôn River Power Plant was built in 1929, it was the largest in northeast Asia. More hydro-electric plants were constructed nearby. The electricity from these plants is now used by Sŏngjin, Ch’ŏngjin and Hŭngnam’s nitrogen fertiliser factory. On the nearby Changjin River, a hydro-electric power plant was constructed in 1931. Before 1945, power from this plant reached places as distant as Seoul and P’yŏngyang, but since the division of the country, it has been used for Hŭngnam and the region generally. Dams were built on the Ungi River and Hwangsuwon River in 1941. Water contained by the dams is piped through the Pujŏnnyŏng Mountain Range from which it drives the turbines of power plants located on Tanch’on’s Namdae Stream.

Between 1937 and 1944, the famous Sup’ung hydro-electric plant was created in Sakchu County in North P’yŏngan Province. Although the dam’s effective head is only one-hundred metres, the 345-sq.km. Sup’ung Lake that the dam creates ensures a sufficient flow of water. The dam is the source of the 640 000 kilowatts output of electricity that is shared with China. On the Korean side, this electricity is used by Shinûju and P’yŏngyang, and also to power factories in the riverain. Other hydro-electric plants on the river include the Unbong Power Station (completed post-1945) in Chasŏng County and the Tongno River Power Station in Changjin County.

The Yalu River is also used to transport timber. Before the Manp’o and Hyesan railways were built, logs were transported all the way to Shinûju by boat. Nowadays, however, they are sent to Kilchu, Sŏngin, and other places via the Hyesan railway or to P’yŏngyang, etc. via the Manp’o railway. As well as its commercial uses, the river serves as an important habitat for numerous wildlife species. Fish varieties in the river include catfish, eel, carp, snakehead mullet, chaugasari (Liobagrus mediadiposalis), pŏdidae [i (Moroco oxycephalus), saemi (Ladislavia taczanowskii) and yolmogo (Brachymystax lenok). Because of the Yalu river’s sparse population, fishing is not a major source of employment.

An Ch’angho (Tosan, 1878-1938)
An Ch’angho was an independence fighter during the Japanese annexation of Korea (1910-1945). An’s achievements note him as one of the most prominent activists for national independence and as an educator with a vision for his country that included not only independence but modernization; a patriot who played an important role in his country’s struggle for freedom. With the pen-name Tosan, An was born to a farmer’s family in Kangsŏ in South Pyŏngnan Province, now in North Korea, in 1878.

When China and Japan fought a war in 1894-95 to wrest control of Korea, An, although only sixteen, decided to play his part in the enlightenment of the Korean people. In 1897, he joined the Independence Club (Tongnip Hyŏph’oe), which had as its main thrust the preservation of Korea's independence and freedom from foreign power servitude. He went to the United States in 1902 and while there organized a group of Koreans living in the San Francisco area, to improve their living standards and to promote support for their homeland.

Promulgation of the Protectorate Treaty (Uluslararası Traktat) between Korea and Japan came in 1905, and two years later An returned home to participate in the independence movement. He was the linchpin in the clandestine New People’s Association (Shinmin Hoe), in co-operation with a number of journalists, businessmen and military leaders, to combat Japanese control of Korea.

In 1911, the year following Korea's subjugation to Japan, An's subversive activities came to light and he had to flee the country to avoid the close attention of the security police. Again he went to the United States and to San Francisco, where he founded the Society for the Promotion of Activities for National Independence (Taehanin Kongnip Hyŏphoe). This organization played a leading role in the United States in the movement for a free and independent Korea. In 1919 patriots in Shanghai had established the Korean provisional government, which An joined in 1926, soon becoming a key member.

In 1932, the police net closed and An was arrested in Shanghai, after Yun Ponggil (a member of the Aeguktan (Patriotic Association) had assassinated several visiting Japanese army commanders in a bomb explosion. Taken to Seoul An was imprisoned for almost three years. He died in 1938 at the age of fifty-nine, while serving a further prison sentence for his nationalistic principles.

An had argued that Korea must meet two prerequisites to gain independence. One was through education to raise the level of knowledge and awareness and the moral standard of the Korean people. In this respect, he had founded Hŭngsadan (Society for Fostering Leaders) in the U.S. in 1913, underlining his philosophy of sincerity and diligence, for straight-dealing with his contemporaries. The other was to achieve economic strength through industrial development. While his primary emphasis was aimed at informing and educating the people of Korea, he worked towards creating a base for independence movements overseas. His ideas on national strength and independence are expounded in his writings, which include, 'The Collected Works of Tosan' (An Tosan chŏnjip).

Bibliography

An Chŏngbok

An Chunggŭn (1879 - 1910)

A name known well to Koreans and most always preceded by the word patriot, An is not remembered for his dynamic oratory or historic compositions and the like, but for his prowess as an independence fighter. His distinguished role in the anti-Japanese struggle was the assassination of Japanese statesman Itō Hirobumi in 1909. This singular act eventually cost him his life, but was an inspiration to Koreans everywhere in the ensuing independence movement and throughout the Japanese occupation of Korea.

Little record exists of An's early life. He was born during the period of Korea's opening to foreigners and grew up as Japan was systematically moving to control the peninsula. His birthplace is said to be Haeju, in Hwanghae Province, where he spent much of his youth in the mountains nearby. In 1905, he moved to Chinnamp'o and founded a school where he taught for a few years.

An had become an admirer of a famous namesake, An Ch'angho, and was very taken with his thoughts on Korean independence. In 1907, or thereabouts, he travelled to Manchuria where he helped organise other Koreans in the Korean Volunteer Army, which aimed to disrupt Japanese operations in the region. While in Manchuria, he heard of the pending visit of Itō Hirobumi to Harbin and laid plans to assassinate him.

Itō had been named the first Resident-General of Korea in 1905 after the Japanese defeated the Russians in the Russo-Japanese War (1904-5). The Treaty of Portsmouth, which negotiated the end of the war, gave Japan virtual control over Manchuria and all of Korea's foreign relations. Japan moved quickly to control its new possessions by installing commissioners in Seoul and in every province. After Itō arrived in Seoul all foreign legations were soon withdrawn. Following the abdication of King Kojong (r.1864-1907) in 1907, Itō helped conclude an agreement that even further strengthened Japan's control of Korea. On the same day of the agreement a press law was instituted which banned all nationalistic books and restricted or closed some newspapers. Within a week, the Korean Army was also disbanded and the Japanese assumed control of the police and judicial systems. For these and other reasons Itō is often labelled as the engineer of Japan's takeover of Korea. He had become a symbol of colonialism on which Koreans could focus their hatred. Itō later became the chairman of a group that advised the Japanese emperor on territorial expansion. As part of his duties, he planned to travel to Harbin to meet with the Russian Minister of Finance and inspect northern Manchuria in October of 1909. He left on the inspection tour and arrived in Harbin at about nine o'clock in the morning of 26 October.

By passing himself off as a Japanese press reporter, An was able to obtain access very close to the arriving dignitaries. Itō's first act on his arrival at the railway station was to inspect a contingent of Russian Army troops, which had been turned out for the occasion. At that moment, An burst from the crowd, aimed his pistol and shot Itō three times, in the chest, stomach and shoulder. Further shots missed their mark, but some hit other Japanese dignitaries travelling with the party. An was quickly arrested by the Russian military police and later taken to a prison in Manchuria.

Throughout his captivity, An insisted he should not be treated as a common criminal but as a prisoner of war. He argued that he was leading Korean troops against the Japanese at the time and killed Itō as an act of war. The Japanese, of course, did not agree. An was sentenced and later executed on 26 March 1910 in Lushin Prison in China. Less than five months later, Japan officially annexed Korea.
Still venerated today, An is one of the most celebrated of Korea's independence fighters. A museum dedicated to him is located in the park on Namsan mountain in the centre of Seoul. A large statue and outdoor memorial are also to be found there. Further recognition, in the form of displays and a statue are located at the Independence Hall in Ch'ŏn'an. A few photographs and other memorabilia of An's can be seen at the Chŏltusan Shrine, in Map'o, in western Seoul.

An Hyang (1243-1306)

An Hyang's original name was Yu and his birthplace was Hŭngju (Present P'unggi, Yŏngju County, N.Kyŏngsang Province). His father, Pu, was qualified as a medical doctor, but served as a local clerk in the government administration. Later in life, however, Pu was appointed deputy commissioner of the Security Council. An was studious and as a very young man he passed the civil service examination. In 1275, the second year of King Ch'ungyŏl's reign (r.1274-1308), he was appointed area administrator in Sangju and it was there that he confronted shamanism head-on. An would have none of the shaman disturbances of the peasant community: he abhorred the shamanistic perpetuation of superstition and resolved to rid his district of shaman activity.

An is traditionally accredited with the introduction of Neo-Confucianism to Korea. His initial exposure to Neo-Confucian ideas came from his study of Chu Xi quan-shu (Complete Works of Zhu Xi), read during his stay in the Yuan capital, while he was a member of a Koryŏ embassy there. Impressed by the idea of Zhu Xi (1130-1200), An made a copy of the Complete Works and brought it back to Koryŏ. He was a determined disciple of Zhu Xi's work, and his contribution to Neo-Confucianism is principally not from his own speculative thought, but from his promotion of Confucian education and the propagation of Zhu Xi's ideals. An does, however, make his own major contribution to Confucian theory, as in citing social ethics in his discussion of Confucius's legacy, he is introducing a major recurring theme of fourteenth c. Korean Neo-Confucianism.

In 1318, twelve years after An's death, King Ch'ungsuk (r.1313-30) ordered a Yuan artist to paint a portrait of An, in recognition of the great scholar's achievements. That portrait can be seen today in the academy dedicated to An, the Soṣu Sŏwŏn near Andong in N. Kyŏngsang Province. The Soṣu Sŏwŏn, the oldest private Confucian academy in Korea founded in 1542 by Chu Sebong, still hosts ceremonies to An Hyang.

An is also known by the name An Yu. His given name had to be changed two centuries later, because Hyang was also the given name of King Munjong (r.1450-52), and thus out of respect to the sovereign, it had to be avoided by others. An is considered to be the founder of the Sunhŭng An lineage, which includes most persons with the surname An in present-day Korea. An Hyang was the third person to be inducted into the Confucian Hall of Worthies at the National Academy.

Within a century of its introduction by An, Neo-Confucianism flourished, with a major focus of the curriculum in the highest academic institution. It became the prevailing ideology of Chosŏn (1392-1910), and one which was firmly supported throughout by the Chosŏn court's commitment to Neo-Confucianism.

An Ikt'ae (see Ahn Eak-tay)

An Kyŏn (?)

An Kyŏn is a representative painter of early Chosŏn. His family's ancestral home is in Chigŏk, his courtesy name was Kado and his pen names were Hyŏndongja and Chuhyŏng. The majority of his works are from the time of King Sejong's reign (1418-
Anam

**Andong**

Located in North Kyŏngsang Province, Andong (pop. 200,000) comprises the town of P'ungsan and the townships of Namsŏn, Namhŭ, Nokch'ŏn, Tosan, Pukhu, Sŏhu, Waryŏng, Ilchik, Imdong, Imha, Yean and P'ungch'ŏn. Surrounded by high mountains, the city itself is built among hills. The Naktong River flows through the city and provides water to the region. In 1976, the Andong Dam was built to the northeast, creating Andong Lake.

With afforestation covering nearly three quarters of the city and its environs, arable land is necessarily limited. Even so, fertile soil combined with relatively modern agricultural methods have led to fairly high crop yields. In the fertile areas of the P'ungsan plain in the northeast, rice is cultivated, while elsewhere, other grains along with dry-field crops such as red pepper, onion, potato and tomato are common. Andong soju, (a distilled liquor), is a celebrated local speciality. A number of stock-breeding farms exist and there are mining operations in the region also. The city’s industrial sector is limited to several small textile factories.

Tourists look to the area’s numerous cultural sites. Pongjŏng Temple, located in Sŏhu Township, contains the oldest extant buildings throughout Korea. Here, one finds Kūngnakch'ŏn (Paradise Hall, National Treasure No. 15), Taeungjon (Main Buddha Hall, Treasure No. 55), Hwaŏm Kangdang (Avatamsaka Lecture Hall, Treasure No. 448) and Kogumdang (Old and New Hall, Treasure No. 449). Built during early Chosŏn, the temple’s Main Buddha Hall is acknowledged as a fine example of multiple bracket roof construction.

There are numerous ancient pagodas in the city, including a seven-storey brick pagoda (National Treasure No. 16) in Shinse-dong. Built during Greater Shilla, this 17-metre high pagoda is the oldest and largest brick pagoda in Korea. As for Buddha sculptures, there is a seated Buddha statue at Anjŏng Temple (North Kyŏngsang Province Tangible Cultural Asset No. 44), a Buddha carved in relief at the Oksan Temple site, a seated Buddha statue (Treasure No. 58) from Greater Shilla in An'gi-dong, a statue of the ‘benevolent king’ at the Sŏak Temple site and a large Buddha figure (Treasure No. 115) commonly known as the ‘Chebiwŏn Maitreya’ in Ich'ŏn-dong. The Chebiwŏn figure’s body was carved from a large rock face, while the head was sculpted from a separate stone and then placed on the torso. Standing 12.38 metres high, this majestic figure is believed to have been carved in the twelfth century.
Andong is famous also as an area which has preserved its Confucian heritage. As a result, there is a fairly large number of Confucian artefacts and buildings. Located in Tosan Township’s T’oegeye Village, Tosan Sŏwon is one of the most important Confucian sites in the area. The school was founded in 1574 by the disciples of Yi Hwang (1501-1570, styled T’oegeye), one of Korea’s foremost Confucian philosophers. It was one of the forty-seven sŏwon (private academy) that survived the reforms of Taewŏn’gun (Yi Haeng, 1820-1898) at the end of Chosŏn. The school’s buildings now serve as a small museum. Other Confucian schools in the area include Pyŏngsan Sŏwon, Hogye Sŏwon, Andong Hyanggyo (founded during Chosŏn and rebuilt in 1986) and Imch’ŏn Sŏwon which was founded in 1607 in honour of the scholar-official Kim Sŏngil (1538-1593).

When Andong Dam was constructed in 1976, a large number of traditional houses were threatened by the rising water level. In order to preserve these historical buildings, Andong Folk Village was built on safe ground near the dam. Many of the old buildings here now serve as restaurants offering traditional Korean meals.

Hahoe Village, one of Korea’s most authentic folk villages, is located on the Naktong River in P’ungch’ŏn Township. Unlike many ‘folk villages’ in Korea, this is an actual settlement with a history going back hundreds of years. During Chosŏn, Hahoe was home to many famous Confucian scholars and government officials. In addition to its Confucian heritage, the village maintains several Shamanist traditions. The Pyŏlshin kut performed here is a Shaman ritual performed exclusively on the east coast of Korea. During part of the complex ceremony, performers don masks depicting various stereotyped roles. Villagers also produce handcrafted masks for sale to the public. In order to encourage these traditions, the city held the first International Mask-Dance Festival in October 1997. With financial support from the government, the residents have maintained about 130 traditional houses in the area. In recent years, the electricity supply lines running through the village have been placed underground in an attempt to maintain the site’s atmosphere. As an accurate picture of a Chosŏn community, the village has also become a popular location for the filming of historical scenes.

There are several schools of higher education in Andong. In 1979, Andong National College was established in Songch’ŏn-dong, and Sangji Junior College is located to the east of the central business district.

**Andong National University**

Located in Andong in North Kyŏngsang Province, Andong National University was originally built as Andong Normal School (Andong Sabŏm Hakkyo) in 1947. In March 1962, it became Andong Junior College of Agriculture (Andong Nongŏp Ch’ŏgup Taehak) and from 1965, the Andong Junior College of Education (Andong Kyoyuk Taehak).

In 1979, a presidential decree established the school as the four-year Andong National College (Andong Taehak), with Kim Haksu as its first dean. The college initially consisted of the Departments of Sino-Korean Literature; History; Folklore; Business Administration; International Trade; Home Economics; Music; and Fine Arts. In 1980, the Departments of English Education and Mathematics Education were added, followed by the Departments of Korean Language & Literature and Public Administration, in 1981. Throughout the 1980s, the college continued to expand, with the opening in 1988 of the Graduate School containing the Departments of Sino-Korean Literature; Folklore; Business Administration; and Chemistry.

In March 1991, the college was raised to the status of a university with Dr. Nam Gyu-chang as president. Today, Andong National University consists of the Colleges of Arts & Physical Fitness; Education; Engineering; Humanities; Life Science; Natural Science; and Social Science; as well as the Graduate School. Institutes within Andong University include
Anglo-Japanese Alliance, 1902

Animals

The Korean peninsula is a part of the Palaearctic zoogeographical zone, and its geographical history, topography and climate divide the peninsula into highlands and lowlands. Areas included as being part of the highlands are the T’aebaek and Myohyang mountain ranges, and the Kaema Plateau, which have high altitudes and similar climatic conditions to the Amur-Ussuri river region of northern Manchuria. The flora of this region is characterised by dense boreal forests, and many of the highest mountains were covered with glaciers in the Pleistocene era. Accordingly, the animals found in this region are quite similar to those found in the boreal zones of Manchuria, China, Siberia, Sakhalin and Hokkaido. The lowlands form the majority of the peninsula and are distinguished by a more temperate climate. The fauna here are similar to those found in southern Manchuria, central China and Japan.

Species

There are six orders, seventeen families, forty-eight genera and seventy-eight species of mammals indigenous to Korea. Of the six orders, the most numerous is the Chiroptera (bat), with some twenty-eight subspecies followed by the Rodentia (rodent), with eighteen and the Carnivora (carnivore), with sixteen subspecies. There are also eleven subspecies of the Insectivore (shrew) order, seven subspecies in the Artiodactyla (ungulate mammals) order and two subspecies of the Lagomorpha (rabbit) order. Of the species found in Korea, some twenty-eight are reported to be endemic to Korea and include the Hydropotes inermis argyopus (a small deer; korani); Meles meles melanogenys (a badger; osori); Nyctereutes procyonoides (a raccoon; nōgūri); Erinaceus europaeus koreensis (a hedgehog; kosūmdoch’i); and Talpa wogura coreana (a mole; tudōji). Korea also has large animals, such as tiger; leopard; bear; wolf; wild boar; roe deer; and Amur goral (naemorhedus goral raddeanus). These larger mammals, however, are increasingly difficult to find in the wild and are thought to exist only in the more remote areas of the peninsula. There are also two endemic species of dog in Korea, the Chindo-kae and the P’ungsan-kyon.

There are eighteen orders, sixty-seven families, 189 genera and 191 subspecies of birds in Korea, with the largest portion of these being migratory. Some twenty-four genera or subspecies of birds have been designated as natural monuments by the Korean government, and include the White-bellied Black Woodpecker (Dryocopus javensis richardi; k’unak sae); Japanese Crested Ibis (Nipponia nippon; taogi); Golden Eagle (Aquila chrysaetos; kōmdok suri); Whooper Swan (Cygnus cygnus; k’un koni); Manchurian Crane (Grus japonensis; paek turumi); Mandarin Duck (Aix galericulata; wōnangi); Peregrine Falcon (Falco peregrinus; pada mae); and the Great Bustard (Otis tarda dybowskii; nūshī). Other, frequently-seen birds include the Marsh Tit (Parus palustris; soe paksae); Siberian Ground Thrush (Zoothera sibiricus sibiricus; hwun nunsŏpchi ppagwi); Black-naped Oriole (Oriolus chinesis; kkoekkori); Magpie (Pica pica; kkach’i); Carrion Crow (Corvus corone; kamagwi); House Swallow (Hirundo rustica; chebi) and the Tree Sparrow (Passer montanus; ch’umsae).

There are two orders of reptiles in Korea: Testudinata (turtles) and Squamata (snakes). The turtles of Korea can be divided, for the most part, into sea turtles such as the Leatherback Turtle (Dermochelys coriacea; changsu kōbuk); the Sea Turtle (Chelonia japonica; pada kōbuk), and the freshwater or land turtles such as the Japanese Terrapin (Geoclemys reevesii; namsaengi) and the Snapping Turtle (Amyda japonica; chara). Poisonous snakes can be divided into three families and nine subspecies while non-venomous snakes account for the Agricultural Development Centre and the Language Centre (both established in 1996). The latter is also used as a centre for the training of elementary school teachers.
for an additional three families and fifteen subspecies. Some representative snakes include the Yellow-spotted Serpent (*Dinodon rufozonatum; nung kurŏngi*), Pit Viper (*Agristrodon halys; salmu sa*) and the Thread Snake (*Zamensis spinalis; shil paem*).

Amphibians in Korea are separated into two orders, the Urodela (salamander) and Salientia (frog). There are three subspecies of salamander, including the Giant Salamander (*Hynobius nebulosus; toryongnyong*) and the Four-Toed Newt (*Salamandrella keyserlingii; nebal karak toryongnyong*). The frog order is represented in Korea with eleven subspecies such as the Red-Bellied Frog (*Bombina orientalis; mudang kaeguri*); Green Tree Frog (*Hyla arborea japonica; ch’ong kaeguri*); Golden Frog (*Rana nigromaculata chosenica; kum kaeguri*) and the Toad (*Bufo vulgaris; tukkŏbi*).

Salt and freshwater fish in the waters on and around the Korean peninsula are divided into the Cyclostomata (bryozoans), composed of two orders, two families and five subspecies; Chondrichthyes (cartilaginous fish), which are composed of three orders, twenty-one families and fifty-nine subspecies; and Osteichthyes (true-bone skeleton fishes), which are divided into twenty-three orders, one-hundred and seventy-three families and eight-hundred and eight subspecies. Of these fish, about one-hundred and fifty are freshwater species. Commercially-popular fish are mostly saltwater varieties and include Mackerel (*Sawara nip honia; samch’i*); Yellow Corvenia (*Pseudosciaena manchurica; ch’am chogi*); Yellow-fin Tuna (*Elagatis bipinnulatus; ch’amch’i*); and Anchovy (*Engraulis japonica; myŏl ch’i*).

Korean waters are also rich in shellfish, and cephalopods such as octopus and squid. A large number of species are endemic and significant among these are some twenty-eight subspecies of carp (*Cyprinus carpio; ingŏ*) and five subspecies of herring (*Clupea pallasii; ch’ŏngŏ*).

Arthropods compose the greatest number of creatures in Korea, there being three-hundred and sixty subspecies, or thereabouts, of Anachnoidea (spiders), five-hundred and thirty subspecies of Crustacea (marine or freshwater arthropods), and about five-thousand subspecies of the Insecta (insect) order. Among the insects, the Lepidoptera (butterfly) order is the largest with about one-thousand, four hundred subspecies; and this is followed by Coleoptera (beetles) with about one-thousand, one hundred and fifty subspecies; Hymenoptera (bees) with nine-hundred and twenty subspecies, Hemiptera (locust) with eight-hundred and eighty subspecies; and Diptera (flies) with four-hundred and forty subspecies. The Long-horned Beetle (*Callipogon relictus; changsu hantul so*) is counted among the natural monuments of Korean fauna.

**Utilisation of Fauna**

Fauna has long been important to the survival of the Korean people. From earliest times, humans have looked upon fish, animals and birds as a form of subsistence, which is evidenced by the presence of bones and shells in excavations of ancient sites. Large animals, such as mammoths, further supplied the early Koreans with bones, from which crude tools were made, and skins that protected them from the elements. Early man occupied those regions in Korea along waterways or the coastline, which provided a steady source of food. Excavations of coastal and riverside sites often reveal stone sinkers that were attached to the fishing nets. Rudimentary stone and bone arrowheads, and spear-tips reveal that ancient man had developed the skills necessary for hunting larger mammals including deer, wild boar and bear.

As ancient Korean societies emerged from the hunting and gathering communities in the late Neolithic period, agrarian skills were developed which made for more permanent settlement. The use of animals for food, however, remained an essential aspect of these early Korean states, with both fishing and hunting skills being further refined. It is also during this period and the early Bronze Age, that man began to domesticate oxen, horses and dogs. The horse was valued not only for transportation, but also as a means to increase
the ability to wage war, and by the advent of the Iron Age, implements made for the use of horses in battle had substantially increased. Therefore, as the ancient Korean states began to form confederations by either alliances or force, the horse became essential to aggressive acts and the defence of territory. The use of domesticated animals for agrarian purposes, however, was not accomplished until much later. Records in the Samguk sagi (History of the Three Kingdoms) show that oxen were used in farming by at least the sixth century CE, but it is thought that in reality they had been domesticated and utilised earlier than this. Certainly, by the early Three Kingdoms, domesticated animals such as oxen played a major role in Korean agriculture. As society developed to higher levels, animals continued to be important to the survival and welfare of the people; but with hunting still a substantial factor in providing meat for their table and hides for their clothing.

Animals still play a major role in modern Korean society, although they are no longer used for transportation purposes, having given way to a variety of machines. Nevertheless, cattle, pig, poultry and dairy farms are all represented in Korea today, and each of these agricultural divisions has become a highly technical, scientific and economic enterprise. Likewise, marine products are being harvested through a variety of means, including deep-sea fishing and coastal shellfish beds. Additionally, animals serve an important role in the psyche of today’s Korean in that pets such as dogs and cats provide companionship and a means to alleviate stress. Further, fauna in the wild is greatly appreciated by many Koreans, as witnessed in the growing popularity of ornithology. While in past times the fauna of Korea was at risk through senseless slaughter or environmental pollution, today the national consciousness has grown in regard to the importance of preserving the natural environment and in maintaining natural habitats for fauna. This provides a new horizon for the protection and preservation of the diverse fauna of Korea.

Bibliography

Animism

Animism, the doctrine of *anima mundi*, is the attribution of living soul to plants, inanimate objects and natural phenomena. It is the behavioural system founded in the veneration of natural objects, and the endowment of these objects with supernatural powers. Often, the worship of natural objects discloses a hierarchy in which, for example, a sky or heaven god is given a higher status than an earth or mountain god. The objects held sacred by the ancients reveal four basic groups: celestial bodies, geographic items, physical objects and animals. Celestial bodies included the heavens, with the sun, moon, stars; and the traits of nature (such as thunder and lightning), cloud formations and rain. Geographic items might include mountains, rivers, seas, and the earth itself. Of the physical objects, caves, grains, rocks, trees and small bodies of water were included; while animals held sacred included the bear, crow, dragon, (certain types of) fish, tiger, magpie, and snake.

Ancient Korean man held animistic beliefs, in combination with shaman convictions. Many natural objects were seen as being possessed of supernatural qualities, or the presence of a ‘soul’ that denoted immortality. Early men and women believed in the human soul and this belief is seen in the development of burial customs and rites. These sought to protect the corpse from evil spirits by covering it with stones, and also to provide the dead with the tools and hunting articles needed in the life to come. The ‘souls’ of natural objects were thus venerated by ancient man as the means of invoking their supernatural powers to act for the good of man. From these beliefs, rudimentary incantatory rituals developed among ancient communities, and these in turn evolved into the state rituals practised in the ancient
Korean kingdoms of Puyŏ, Koguryŏ and Ye.

Animistic Rituals

One ancient ritual that gives fragmentary glimpses of the animistic beliefs of ancient Koreans is the Much’ŏn of the Ye Kingdom. Accounts of this ritual are found in Chinese sources, like the Sangou zhi (History of the Three Kingdoms) and the Houhan shu (History of the Later Han). They relate that in the tenth lunar month the people of Ye gathered to perform a ritual to the heavens, and this included song, dance, food and drink. The Ye people held the tiger in great esteem and rituals were performed to supplicate it for the benefit of the kingdom. The Yonggo ritual held by the Puyŏ people was similar in many aspects to the Much’ŏn, and the underlying rationale for holding this ceremony was to offer thanksgiving for a successful harvest. Like the Ye ritual, the Yonggo was offered to the celestial forces that governed agriculture. Its importance in Puyŏ society can be seen in the fact that the king acted as the chief officiant of the ceremony and that the entire population participated in the ritual activities. Therefore, from these and other records we can ascertain the importance given to various animistic deities by early Koreans.

Animistic-based ritual continued to exist in Korea even after religions such as Buddhism entered Korea. Animism, with its close cousin shamanism, is deeply imbedded in Korean folk practices, many of which are still in existence. An examination of the belief system that surrounds the cult of Sanshin shinang (beliefs in mountain gods) shows that animistic practices are still prominent in many aspects of Korean folk religion. Ritual offerings, prayers or other supplications have long been offered to the deity of a particular mountain in the desire to receive supernatural assistance in one form or another. Sacrifices are commonly offered to sanshin, either by individuals or communities, to bring about an abundant harvest, to usher in a fortuitous year or in the case of many women, to allow them to give birth to a male child. Hence, the practice of making pilgrimages to certain mountains, or offering sacrifices to the deity of a mountain, remain common manifestations of animistic beliefs.

There are other practices in recent times and some present-day folk customs which also represent the continuation of animistic beliefs, although due to the syncretic nature of folk religions in Korea, it is sometimes difficult to clearly differentiate between animistic and shamanistic belief systems. Many villages in former times (and today, too), have spirit trees (shin namu) at which offerings are made to tutelary deities on behalf of the village or an individual. These trees are believed to be growing where the guardian deity of the village resides, and so invocations are made directly to the tree. Sottae (spirit poles) and changsŏng (guardian posts) represent respectively, the presence of a tutelary deity and the protective powers of a guardian deity. These materialisations of supernatural powers are often used in conjunction with one another, and thus serve to protect the village from baleful forces. A further example of animism in contemporary Korean folk beliefs is evidenced in sushin shinang (belief in water deities), which is particularly strong in coastal villages. Rituals are offered to the sushin to protect seafarers and also to ensure an abundant catch. The sushin is often represented by the Dragon King (yongwang), a deity that has many rituals offered to it in order to secure its blessing.

Animistic Deities

Foremost among animistic deities are the gods of the heavens, sun, moon and constellations such as the Ch’ilsŏng (Big Dipper and Ursa Major). Belief in sky or heaven gods usually focused on explaining the origins of the universe, its structure and its dynamics. The god of the heavens is often based in a masculine ideology, which can be contrasted with the earth goddesses that are predominantly female. The gods of the sun and moon are both deities which are believed to be protectors of man. Specifically, they illuminate the world and protect mankind from the evil forces which control darkness. The
seven deities of Ch'ilsŏng have been ascribed various powers depending upon period and region, including rainfall regulation; functioning as protectors of young children; and being capable of influencing the fortunes and longevity of humans. The deities of the celestial bodies are considered to be in the upper echelon of animistic deities.

Along with the aforementioned mountain and water deities, the most numerous of the animistic gods are those embodied by animals. Perhaps due to the agility, strength, beauty or sheer size of animals, ancient man held these creatures in awe and thus sought to invoke the superior qualities of the animals on his behalf. Moreover, the fear that ancient man held for larger animals such as tigers and bears may also have been the psychological basis for the veneration of certain animals. Some creatures were thought to be capable of defining the future - magpies, spiders and ants were included here - such as the song of a magpie being an auspicious omen foretelling a visit. On the other hand, the sighting of a spider in the evening was thought to be a bad omen. Tigers and dragons are perhaps the most prominent subjects of animal veneration. The tiger, almost always closely associated with the sanshin, was honoured as the supreme deity of the mountains and rituals offered to it were thought to prevent disaster. The dragon, although an imaginary beast, was closely aligned with water, and so supplications were often offered to the Dragon King to prevent or end droughts. Other animals such as snakes and foxes were also highly venerated in ancient animistic practices.

Animistic Beliefs in Literature

The prevalence of animistic beliefs among early Koreans is strongly evidenced by the presence of animistic themes in literature of the times. The themes are especially strong in the foundation myths of the ancient kingdoms and in family origin legends. Representative of the manifestation of animistic beliefs in foundation myths are found in legends like the Tan'gun shinhwâ (The Myth of Tan'gun) and Tongmyŏng shinhwâ (The Saga of King Tongmyŏng). In the Tan'gun shinhwâ the bear is deified and by virtue of its patience, is transformed into a human. The bear-women then becomes the mother of the king of Ko Chosŏn, Tan'gun, as a result of her union with the heavenly being, Hwanung. In the Tongmyŏng shinhwâ, not only is the founder of Koguryŏ, Chumong, born from an egg carried from heaven by a winged-horse, he is also the recipient of supernatural aid from animals. Therefore, Tongmyŏng shinhwâ shows clearly the desire of humans to control the forces of nature, and in particular, the animal kingdom. Other foundation myths of the early Korean states reveal similar beliefs based in the worship of animals and the desire to possess their powers. Family origin myths often incorporate similar themes as those in the foundation myths. The origins of the founders of the Pak, Sŏk and Kim clans of Shilla are all tied to animals and reveal the aspiration of these early clans to elevate their status through the vinculum of animals and their supernatural powers.

Animistic beliefs are also manifested in folk culture through the medium of folk beliefs and folktales. Thus, tales in which animals provide assistance to humans such as the turtle that rescues the father of the protagonist in Sukhyang chŏn (The Tale of Sukhyang); the magpie that shelters the abandoned princess in Pari kongju (The Abandoned Princess); and the swallow that repays the kindness of the principal in Hŭngbu chŏn (The Tale of Hŭngbu), all demonstrate animistic elements. Particularly strong in Korean folklore are those themes that exhibit animals as either benefactors of humans or as maintaining reciprocal relations with humans. Other folk beliefs founded in animistic beliefs display convictions of gaining the benefit of supernatural forces present in water, mountains, stones, trees or celestial bodies, through prayer and ritual offerings. Thus, rituals offered to a mountain deity in the hope of bearing a son, or for the prosperity of one’s family are also deeply influenced by animistic beliefs. On examining the myths, legends and folk customs of Korea, it is clear that animistic concepts are quite common and have had a crucial impact on the evolution of Korean folk culture.
Bibliography

Ansan

Ansan is in Kyŏnggi Province, and is located in a coastal area south of Shihŭng and Taebu Island. Except for Mt. Ma (246m) in the northeast, the city’s terrain is flat. The Hwajŏng and Ansan streams flow through the city centre into Kyŏnggi Bay.

As a satellite city of Seoul, Ansan is connected with the capital and to Suwŏn and Inch’ŏn by an extensive network of highways and railways. Many of the city’s residents either work in Seoul, or in local factories which produce fabricated metal, chemicals, textiles and foodstuffs. Taking advantage of the area’s paper mills, many printing works and shops have also opened here. Fishing and fish-farming also contribute to the local economy.

The city’s tourist industry is centred around sports fishing along the coast and in Hwarang Farm Reservoir. Wild orchid and reed grow around the reservoir, which is frequented by flocks of skylark, wagtail, water fowl and sparrow. On weekends, large numbers of tourists from Seoul come to the markets here to buy fresh seafood.

As for historical relics, prehistoric artefacts including dolmens, stone tools and pottery shards have been found in the area. In addition, the original site of the grave of Queen Hyŏndŏk (King Munjong’s wife and King Tanjong’s mother) is located in Mongnae-dong. Legend has it that after King Sejo deposed the child King Tanjong and had him murdered, the queen appeared to him in a dream, threatening revenge. In an attempt to get rid of the vengeful spirit of the queen, King Sejo had her coffin removed and thrown into the sea. However, a farmer who later saw it floating by secretly buried it in an auspicious spot in a pleasant sunny area.

Ansŏng County

As part of Kyŏnggi Province, Ansŏng County is comprised of the town of Ansŏng and the townships of Kosam, Kongdo, Kūmgwang, Taedŏk, Miyang, Pogae, Samjuk, Sŏun, Yangsŏng, Chuksan, Ichuk and Wŏn’gŏk. Mt. Mai (472m), Mt. Tŏksŏng (521m), Mt. Ch’irhyŏn (516m), Mt. Sŏn (547m) and other peaks of the Ch’aryŏng Mountain Range run along the county’s southeastern border, while Mt. Ssangnyong (491m) and Mt. Talgi (415m) rise in the north. Streams from these mountains flow into the Kosam, Kūmgwang and Midun reservoirs.

Apart from its mountainous terrain, much of the county consists of flat terrain conducive to rice cultivation. Fruits and dry-field vegetable crops are also grown here, and Ansŏng grapes are especially famous for their delicious flavour. Speciality crops include ginseng, which is grown in the Pogae and Yangsŏng townships, and tobacco, which is grown in the Ichuk and Ijuk townships. Beef and dairy cattle, deer and chicken are also raised, chiefly as a secondary source of farming income. The county’s mines excavate tungsten and coal, while local factories produce textiles, chemicals, machinery, paper and brassware. Ansŏng brassware is one of the area’s traditional products. Yet the area’s industrial sector is relatively underdeveloped compared with other areas in Kyŏnggi Province. As a result, Ansŏng has been able to avoid many of the pollution problems that plague much of Korea today.
The county’s clean environment and its scenic beauty have made it a haven for artists. A large community of artists centres around Omma Ranch in Ansōng. This ‘ranch’ contains both recreational and lodging facilities, as well as places where artists can gather to exchange ideas. Every May, the ranch hosts the Norigul Festival which exhibits installation art, ballet, folk rituals and art exhibitions.

Tourists from Seoul visit the area to picnic and fish by the reservoirs and streams, and to see the various historical sites scattered around the county. Since Shilla times, the area has had close connections with Buddhism. National Master Hyeguk, Grand Master Ŭn’gi (1581-1644) and Grand Master Pyŏng’uung all came from this area, and there are several ancient Buddhist temples, including Ch’ilch’ŏng Temple at Mt. Ch’îlchang, and the Sŏngnam and Ch’ŏngnyong temples near Mt. Sŏ’un. As for Confucian schools, there is the Tŏkpong Sŏwŏn in Yangsŏng Township, the Ansŏng Hyanggyo (founded in 1533), the Chuksan Hyanggyo in Ijuk Township and the Yangsŏng Hyanggyo which was built during the reign of King Sukchong (r. 1674-1720).

Ansōng Stream

The origin of Ansŏng Stream is in Ansŏng County, Kyŏnggi Province, in the townships of Kosam and Pogae. It flows through P’yŏng’aek before entering Asan Bay. This 76 km.-long stream was first known as Ānsŏngnam Stream. Where the minor stream of Chinwi, Ipchang, Han, Ch’ŏngnyong, Osan, Todae and Hwangguji converge with Ansŏng Stream, there is the alluvial Ansŏng Plain. Made up of rich sedimentary deposits, this fertile plain, along with Kimp’o Plain, has traditionally been the main rice-producing region in Kyŏnggi Province. Until Asan Dyke was built on the stream’s lower reaches, tidal waters reached Shinho Village in P’yŏng’aek, but the construction of the dyke led to the reclamation of a large area of level land which was eminently suitable for farming. On the upper reaches of the stream, Kŭmgwang Reservoir was built in 1956 and Kosam Reservoir in 1958. Originally constructed for irrigation, these reservoirs have become popular fishing places.

Anyang

Anyang is located southwest of Seoul in Kyŏnggi Province. Mt. Samsŏng (456m) is to the north of the city, while Suam Peak (395m) and Mt. Suri are in the south. Streams from these mountains flow into Anyang Stream which runs through the centre of the city.

As a satellite city of Seoul, Anyang has had rapid industrial development. Although the amount of cultivated land has continued to decline as a result of the area’s urban spread, rice is still cultivated in the level area south of Hagŭi Stream. There are also stock-breeding and poultry farms. Excellent transportation networks link the city to Seoul and Inch’ŏn, and numerous large and medium-sized industries have been established, producing textiles, chemicals, machinery and foodstuffs.

The city’s tourist industry attracts visitors from Seoul and elsewhere who come to visit Anyang Resort and the city’s Buddhist temples. Historically, the most important monastery is Sammak Temple on Mt. Samsŏng. Believed to have been founded by Wŏnhyo during the reign of Shilla’s King Munmu (r. 661-681), this ancient temple contains a large number of artefacts including a relief carving of a Buddha and attendant Bodhisattvas, a bronze bell, a three-storey stone pagoda and a stele commemorating events at the temple (Kyŏnggi Province Tangible Cultural Asset No. 94, 95, 112 and 125 respectively). The Main Buddha Hall and Myŏngbu (Lord of Death) Hall have also been designated as historical objects.

At the old site of Chungch’o Temple in Sŏksu-dong, there is a pair of stone bannerpole supports (Treasure No. 4) that were erected in 827 along with a three-storey pagoda
thought to date from the mid-Koryô period. In Sôksu-dong, there is Manan Bridge, which was built in 1795.

**Aphae Island**

Aphae Island is located about two kms. northwest of Mokp’o in the Yellow Sea. Administratively, the island is part of Aphae Township in South Chôlla Province’s Shinan County. The island has a total area of 47.47 sq. kms and coastline of 79kms. Mt. Inmae (125m) is in the north of the island and Mt. Songgong (231m) in the west. Chiefly because of its remote location, Aphae island served as a place of exile during Choson. Sites of historical interest include dolmens in Kwangnip Village, remains of Songgong Fortress in Songgong Village and Kûmsan Temple in Karyong Village.

Aphae Island has an annual rainfall averaging 1 125mm annually, but its snowfall is usually light. Over half of the island is arable land and of this about 9.0 sq. kms grows rice. Dry-field crops grown include barley, legumes, sweet potato, garlic, hot pepper and sesame. Most of the island’s workforce engages both in farming and fishing. Fishing vessels bring in catches of yellow corbina, grey mullet and octopus. On the southwest coast, there are oyster and laver farms as well as salt flats.

**April Nineteen Revolution, The**

**Archaeology**

**Japanese colonial archaeology**

The discipline of archaeology was introduced into the Korean peninsula by Japanese researchers in the late 1800s and developed there under the aegis of the Japanese colonial government between 1910 and 1945. Some of the major projects involved excavation of the Luolang commandery headquarters at T’osông-ni and nearby tombs (e.g. Tomb of the Painted Basket, Tomb of Wang Kuang); many Koguryô tombs in both Jian (modern China) and around P’yôngyang; several Shilla tombs in Kyôngju (e.g. the Golden Bell tomb, Gold Crown tomb); mountain fortresses, temples and dolmen sites, etc. The site reports appear in several series, mainly published by the Governor General of Chôsen (Choson Sôtokufu). These are still indispensable to archaeological research today.

The Japanese government maintained a museum in the Choson capital of Kaesong, but a new purpose-built museum was opened in P’yôngyang in October 1933 to house the artifacts from the Luolang commandery, tombs, and excavations in P’yôngyang. These materials now reside in the National Museum of Korea in Seoul.

**Modern North Korean archaeology**

Excavations by North Korean archaeologists began immediately in the post-war period, with To Yuho considered ‘a pioneer’ in archaeological research. By 1950, the Sop’ohangdong and Kungsan shellmiddens and the Anak tombs 1, 2 and 3, and the Ch’odô sites had been investigated. Reports of these excavations were published through the Institute of Archaeology and Ethnology, Academy of Science; in the late 1960s; this Institute was divided into separate institutes housed in the Academy of Social Sciences. In the mid-1960s, unusual cooperative work was carried out with Chinese colleagues, such as at the Gangshang and Loushang tombs in Liaodong in 1963-65 and at the Kwanggaet’o stele in 1966. Currently, the Institute of Archaeology conducts most excavations, with additional work done through Kim Il Sung University or local museums such as Shinjûju Museum, Kaesong Museum and Choson Museum of History. The ‘pooling of minds’ is also a noted feature of North Korean cooperative research, where interpretations are arrived at by consensus.
The laws governing site and artifact preservation were promulgated early: the Regulation of the Preservation of National Relics and the Natural Environment was passed in 1946 and the Principles of Preservation of Material Culture in 1948. In 1972 a new constitution was enacted, under which the Juch' e (self-reliance) philosophy of Kim Il Sung (Kim Ilsŏng) became the official ideology governing the interpretation of archaeological remains. In essence, it requires the demonstration of autochthonous development without outside influence. Whereas South Korean scholars readily derive the source of the Korean Bronze Age from Siberia and Manchuria, and openly acknowledge the presence of a Chinese Han Dynasty commandery on the peninsula, North Korean scholars are constrained to view the Bronze Age remains and those of the Luolang commandery as local developments - assigning the latter to the proto-historical Mahan group. Under this philosophy also, the centralized societies of Chosŏn (2nd c. BCE) and Koguryŏ (1-668 CE) are judged to have been consolidated states whose rule extended well into the Manchurian Basin. Thus, the North Korean view of early Korean society differs from South Korea in four basic ways: 1) outside influence is rejected; 2) Koreanness is projected over a much greater region of Northeast Asia (especially modern-day northeast China but even to Japan); 3) a Marxist framework provides for materialist interpretations (Old Chosŏn is described as a slave society and the Three Kingdoms as a feudal society); and 4) periods such as the Neolithic, Bronze Age and the early Chosŏn state are assumed to extend farther back in time than in the South.

Most archaeological work has been published through the Institute of Archaeology (and Ethnology), but several journals and monograph series receive provincial reports for publication: Munhwa yumul (1949-50), Munhwa yusan (1957-1963), Kogo minsok (1963-67), Kogo minsok nonmunjip (1969-1984), Kogohak charyojip (1958-), Chosŏn kogo yŏn'gu (1986). Syntheses of peninsular archaeology published in the north include the pre-Juch'e work of To Yuho, Chason wŏnsi kogohak (1961), followed by the heavily Juch'e-influenced works edited through the Institute of Archaeology, Chosŏn kogohak kaeyo (also in English, 1977) and Chosŏn chŏnsa (33 vols., 1979). As apparent in these titles, much of the emphasis of North Korean research concentrates on the large proto-historic states in the north: Old Chosŏn (dated by them to the 1st millennium BCE); what the Northern researchers consider Chosŏn's direct descendent, Koguryŏ (which they date to 4-3rd c. BCE-CE 7th c.) and Koguryŏ's successor, Parhae (713-926). Among the Koguryŏ sites to have been excavated are the Taesŏng and Changsu fortresses, Anhak Palace, King Tongmyŏng's tomb, Chŏngnungsa Temple, and the Yŏkp'o district of P'yŏngyang. Because of direct access to material remains, North Korean researchers have excelled in reconstructing their brand of social history for the Koguryŏ, while South Korean scholars are allegedly limited to analysis of documents for study of political systems and international relations.

Modern South Korean archaeology

Government control of and policy relating to Korea's cultural properties, including archaeological activities intended to discover cultural relics, is exercised through the Cultural Property management Office.

Archaeology is organised through three different types of organisations in South Korea: the universities (and their affiliated museums, which host the archaeological teams, publish the reports and house the artifactual results); the national museum system (headed by the National Museum of Korea in Seoul with at least nine branches in the major cities of Kyŏngju, Kŏngju, Kwangju, Chŏngju, Ch'ŏngju, Chinju, Puyo, Ch'unch'ŏn, and Taegu); and the Research Institute of Cultural Properties Preservation in Seoul, which maintains teams at outlying excavation sites. The last also incorporates a Conservation Science Department which can process special finds, such as metal objects, from excavations throughout the country.
Unlike other countries, there is currently no clear division between academic and public archaeology domains. Most of the rescue work is demanded by governmental activity in building dams, transportation networks, etc. Teams from both museums and universities, as quasi-governmental bodies, are commandeered to work on the rescue sites.

The largest projects have been investigations of proposed dam sites, requiring surface survey to identify sites and then archaeological excavation of the most sensitive. The work is usually extended over several years, and the research is carried out by several institutions, often with special teams (chosadan) created for the project. The teams are advised by members of national bodies such as the Central Cultural Properties Office (Chungan Munhwajae Úiwôn), the Central National Museum (Chungan Kungnip Pangmulgwan), and local Cultural Properties Offices. An example is the Hapch’ŏn Dam project begun in 1984 when the dam site in South Kyôngsang province was found to contain Kaya period mounded tombs and kiln sites from the late Three Kingdoms to early Greater Shilla periods. Excavation started in 1986, with the Donga University Museum responsible for the Pan'gye-ri Tomb Cluster and the Chinju National Museum responsible for the Chukchung-ni Temple Remains. The excavation team, headed by the Director of the Chinju National Museum, was comprised of individuals from the National Museums in Chinju, Kongju, Chônju, Kwangju, Seoul and Kyôngju; from various schools such as Pukdae Hakkyo, Taejŏn Kaebang Taehak, S. Kyôngsang Hagye Yŏn'gugwan and Kyôngbuk University; and other bodies such as Hoam Art Museum and Shilla Folk Village. The reports for such projects are published by the institution of the project director. In the case of the Pangyje excavations, work at three locations was carried out between October 1986 and April 1987, and by December 1987, the report on two of the locations had been submitted for publication. Such reports are circulated among institutions and are not available for sale, though individuals can obtain copies if requested.

This kind of cooperative organisation is unusual in the rescue archaeology world. Many countries either have local government teams in charge of excavations in a specified administrative area, or work is put out to tender with specialised contract companies who bid for the job. The latter kind of contract archaeology is unknown in Korea, and the system there is reminiscent of Japan's cultural properties organisation before museums and universities began refusing to do governmental excavations in the early 1970s, forcing the Japanese prefectural Boards of Education to install their own teams of government archaeologists.

In addition to reports compiled for rescue projects by the special chosadan teams, national museums and university museums have their own series for excavation reports. These are available on an exchange basis. The major society journal is the Han'guk Kogo hakbo (whose antecedent was Kogohak), published by the Han'guk Kogohakhoe (Korean Archaeological Society), currently based at Hanyang University. Both this society and the Central National Museum produce monthly newsletters of archaeological activities and discoveries.

Many universities in South Korea teach archaeology at the undergraduate level, but graduate students traditionally travelled abroad for Ph.D. degrees, beginning with archaeology doyen Kim Wŏnyong at New York University in the late 1950s. This trend has resulted in a far greater number of degree-holders in archaeology than in neighbouring Japan, for example, where Ph.D. degrees are not required even for university teaching positions. With the institution of local degree programs in archaeology in the late 1980s, e.g., at Seoul National University and Hanyang University, more home-trained students are now filling university posts.

Korean cultural history
The succession of periods in Korea’s prehistory and protohistory resembles the Western scheme: a Palaeolithic of uncertain beginnings (perhaps as early as 400,000 BCE) lasting to the end of the Pleistocene period around 10,000 BCE; the Ch’ulmum period (6,000-2,000/1,500 BCE), often described as ‘neolithic’, with textured pottery but without agriculture; the Mumun period (2,000-700 BCE) of plain pottery and beginning agriculture (both rice and millet); the Bronze Age (700 BCE-CE 0), heralded by the advent of an unusually shaped bronze sword from the Manchurian region; the Iron Age, beginning in the north around 400 BCE and in the south at CE 0. Because of its differential start, this period is usually split into two segments, the Early Iron Age (400 BCE-CE 0) and Late Iron Age (CE 0-300), the latter of which is often called the Proto-Three Kingdoms period because of the founding of complex societies during this period or also the Luolang period because of the Han Dynasty occupation of the northern peninsula under the Luolang commandery. The beginning of the Three Kingdoms period (CE 300-669) is marked archaeologically by the advent of monumental tombs and signified in the literature by the destruction of Luolang by Koguryŏ in 313. The three major kingdoms (Paekche, Shilla and Koguryŏ) plus the southern confederacy of Kaya polities vied over territory, with Shilla eventually uniting the peninsula south of P’yŏngyang, while much former Koguryŏ territory became the Parhae state. The Greater Shilla period (669-935) is marked by capital and temple building during the formalisation of the state’s administrative structure along the lines of Tang dynasty China.

With an extensive governmental programme to reconstruct archaeological sites for public consumption, the visitor to South Korea is able to see and experience architectural forms from almost every prehistoric period. For the neolithic Ch’ulmum period, Amsadong site near Seoul has several reconstructed pit-houses and a site museum. Bronze Age dolmens can be seen near Seoul and Kwangju cities, while the Masan shellmound site near Pusan can be climbed to reach a small site museum. Restored tombs are most prolific: the Pan’gido-dong and Sokch’ŏn-dong tombs in Seoul and King Muryŏng’s tomb in Kongju represent the Paekche Kingdom, while Kyŏngju’s Tumulus Park preserves the Shilla Kingdom royal cemetery—with one tomb, The Flying Horse tomb, open inside as a site museum. Walled fortresses of the Three Kingdoms period are excellently represented by Mongch’ŏn T’osŏng, now constituting the Olympic Park in Seoul.

G Barnes
Architectural Institute of Korea

Located in Sadang-dong in Seoul, (Taehan Konch’uk Hakhoe) had its origin (September 1945) as the Choson Architectural Technique Organisation (Choson Kônych’uk Kisul Tan). Its name was changed to the Choson Architectural Technique Association (Choson Kônych’uk Kisul Hyophoe) in 1954 and it acquired its present name when new Articles of Association were adopted. The Institute meets formally in the spring and autumn and publishes monthly, Architecture, and Journal of the Architectural Institute of Korea. July 1995 statistics show that the AIK had 3 976 members.

Architecture

Traditional Korean Architecture

Traditional architecture in Korea is classified into three categories which basically accord to the materials used in the construction: wooden structures, stone structures and brick structures. Most buildings used as residences or in which people worked or studied were made of wood, including houses, palaces, government offices, kaeksa (official guest house), munmyo (Confucian shrine), hyanggyo (Confucian academy), and so on. Stone structures included buildings such as pagodas, bridges, and fortresses, while those made of brick also included pagodas and tombs.

Wooden architecture comprises 'columnar architecture', which can be classified as either, 'mindori structures' or 'kongp’o structures'. Mindori consists of joined columns, beams, cross beams, and roof trusses, whereas kongp’o is a type of 'eave-support structure'. Kongp’o is composed of capitals and brackets, and supports the roof beams at the top of the columns with a horizontal member, which can be seen between the columns.

Residential architecture mainly used the mindori structure which developed from the dugout hut constructions of the Neolithic period. Kongp’o structures, which already existed during the Koguryó Kingdom (B.C.E. 37- C.E. 668), were used in the construction of authoritative architecture, such as palaces, government offices, temples, and the like. During the Choson Kingdom (1392-1910) the principal architectural designs used wooden columnar structure. However, by the end of the 19th century, Korea's political situation had changed and Western countries, as well as Japan, strongly pressured Korea into opening its ports. Eventually, as a result of the Kanghwa Treaty in 1876, Korea opened the port of Pusan to foreign ships. With this treaty the number of foreign residences increased, and foreign delegations and many business enterprises were founded. As a result, Korea was introduced to many new types of buildings.

It is not known for certain exactly where the first Western-style building was located, but there is reason to think that it was built by the late 1870s. In 1880, the Japanese construction company Daikuragumi built a two-storey, western-type consulate building. The first commercial building was a telephone exchange office which had three single level brick buildings and a high chimney. The British legation was built in Chông-dong (1890), followed shortly by the legations of Russia, France and Belgium. All of these brick buildings were designed in a quasi-Renaissance style. During this same period there were also buildings of various religious organizations constructed in Seoul such as the Paejae Academy (1886), the Myông-dong Bishop's Residence (1890), and the gothic-style Myông-dong Cathedral (1892-98).

From 1910 Korea was under the colonial rule of Japan. The Governor-General designed and constructed the main administration building of the Japanese government together with a considerable number of government offices and public schools, among other buildings. The head office of the Chosôn Bank, Kyôngsong Metropolitan Prefecture Post Office and Kyôngsong Metropolitan Prefecture Railroad Station are representative of the buildings in
this era. In the 1930's, rationalistic and modern architectural style buildings were constructed, such as Hwashin Department Store (1931) and the Chosŏn Newspaper Building (Chosŏn Ilbosa, 1935).

Conversely, from the 1930's Korean architects graduating from specialized educational institutions, designed many buildings and subsequently handed down their values to the next generation, and to the post-independence generation. Two prominent architects of this period were Pak Killyong and Pak Tongjin. After liberation, Yi Chŏnsŏng and Kim Hŭijun influenced the architectural trends of the period, particularly during the Korean War. Perhaps born of the necessities of the times, their styles leaned towards functionalism.

**Buddhist Temple Architecture**

Korean Buddhist architecture commenced with the building of the Cho'mun and Ibullan Temples. There are three basic designs that resulted from this period. First, is a design that has a pagoda located in the centre of the complex and is surrounded by three main halls which are located to both sides and to the north. The second design features a temple with a pagoda located in front of the main hall. The third design has a pair of pagodas for each of the main halls. The first and second designs were established during the Three Kingdoms Period (B.C.E. 1st–C.E. 7th century), but the third belongs to the Greater Shilla Period (618-935 C.E.).

Another factor that influenced the design of temples during the period of Greater Shilla was the relocation of temple sites. Owing to both geomantic concerns, and the prevalence of esoteric Buddhism and the Zen Buddhist sect (Kor. sŏn), Buddhist temples, which had been built on level sites and centred around the capital, moved to sites deep in the mountains. The remote location of Buddhist temples became a distinctive feature and factor influencing their design throughout Korea.

The site of Chŏngnŭng Temple shows a distinctive layout, with the two main halls housing an octagonal pagoda at their centre, that differs from the three general temple sites listed above. The sites of Kūmgang Temple at Chongam Village of the Koguryŏ Kingdom, Kunsu Village Temple at Puyŏ of the Paekche Kingdom, Hwangyŏng Temple at Kyŏngju of the Shilla Kingdom, and the site of Manbok Temple at Namwŏn of the Koryŏ period are all classified as being of the first design above. The second general temple design mentioned above can be seen at the site of Chŏngnim Temple, and Kūmgang Temple in Puyŏ, which was the capital of the Paekche Kingdom. Hŭngnyun Temple in Kyŏngju is an example of a Greater Shilla period temple that is described in the third classification above.

Most Korean temples, including such well-known temples as Pulguk, Pŏmŏ, and Hwaŏm, are located in mountainous regions so it was necessary to adapt the temple sites to the terrain. It is notable that the central axis of each building does not lie in a straight line, but at an angle. Therefore, the symmetrical balance of the whole of each building as it rises is gradually imposed. By using alternating open and closed breaks, a hierarchy of space is formed. All of these factors together, result in traditional Korean temple architecture that brings out the dynamic spatial characteristics of the temples very expressively.

**Chogye Temple**

Chogye Temple is located at 44 Susong-dong, Chongno-gu, in Seoul. This temple houses the headquarters of the Korean Buddhist Chogye sect, the largest of the eighteen Buddhist sects in Korea. This temple is ideally suited for the headquarters with its location in Seoul. Notable structures include Taewangs Hall which was built in 1910, the Buddhist Assembly Hall, the Buddhist Purification Memory Hall, the Bell Pavilion, the Temple Bell,
seven-storey stone stupa, and the Sari Pagoda among others.

Chŏndŭng Temple

Chŏndŭng Temple is located on Kanghwa Island on the estuary of the Han River north of the Port of Inch’ŏn. The temple was built by the Buddhist priest Ado in 381 C.E., in the eleventh year of King Sosurim (r. 371-384) and initially named Chinjong Temple. It was later renamed Chŏndŭng Temple, which means the temple of the transmitted lamp, after Princess Chonghwa, the first wife of King Ch’ungyŏl (r. 1274-1308), presented a jade lamp to the temple in 1282.

The main hall (Taeungbo) and Yaksa Hall have been designated as National Treasures along with a nine-hundred year old temple bell (of Chinese origin). Also within the compound are the sites of a repository for historical records and a library, Sŏnwŏnbo, where the genealogical records of the royal family of the Chosŏn Kingdom were kept.

Haein Temple

Haein Temple, located at the foot of the majestic Kaya mountains in Hapch’ŏn County, South Kyŏngsang Province, is famous for being the place in which the Tripitaka Koreana (P’alman taejanggyŏng), an over 80,000 wood-block set of Buddhist scriptures which were carved in the Koryŏ period to protect the nation, is stored. With the presence of the Tripitaka Koreana, Haein Temple is considered one of the Three Jewels of Buddhism in Korea, and represents the dharma (natural laws). Haein Temple was founded by two Shilla priests, Sunung and Ijong in 802 C.E. The temple is comprised of numerous buildings and halls, including Taejakkwang Hall, Myangbu Hall, and Samsŏng Pavilion. It also boasts many National Treasures, especially Changgyŏng’ap’an Repository (Tripitaka Hall) which is designated National Treasure No. 52, and where the wooden blocks of the Tripitaka Koreana, Second Edition, (National Treasure No. 32) are stored.

Hungguk Temple

Hungguk Temple is located in Yŏch’ŏn City, on Yŏngch’wi Mountain in South Cholla Province, and is recorded to have been founded by the National Master Chinul in 1195 during the reign of King Myŏngjong (r. 1170-1197). It has been rebuilt and repaired many times, with the last major renovation being done by the monk Kyet’ŭk in 1624.

The temple is rich in valuable relics such as Taeung Hall (Treasure No. 396), ten other wooden structures including P’alsang Hall and Pulcho Hall, an altar painting (Treasure No. 578) located behind the Buddha in Taeung Hall, wood blocks for printing scriptures, and an arched bridge (Treasure No. 563).

Hwaŏm Temple

Hwaŏm Temple is located at the foot of the Chiri Mountains in Kurye County, South Cholla Province and is recorded to have been founded by the Buddhist priest Yongi in 544 C.E., during the reign of King Chinhŭng (r. 540-576) of Shilla. It was one of ten temples used by the priest Ŭisang to propagate Hua-yen (Kor. Hwaŏm) Buddhism, one of the five major doctrinal sects of Buddhism during the Shilla period. The National Master Tosŏn, whose teachings combined Buddhism with geomancy and Taoist elements, expanded the influence of Buddhism through his teachings here.

In Hwaŏm Temple, such artefacts as Kakhwang Hall (National Treasure No. 67), Taeung
Hall which houses a statue of Buddha (Treasure No. 299), a 6.36 metre high stone lantern (National Treasure No. 12), a stone pagoda supported by four lions (National Treasure No. 35), can be found among many others.

Kūmsan Temple

Kūmsan Temple is located in Kimje County ten kilometres southwest of Chŏnju, the capital of North Chŏlla Province. It is recorded that Kūmsan was built in 599 C.E. during the reign of King Pŏp (r. 599-600) of Paekche. It was rebuilt by the Ascetic Chinp’yo from 762 to 766, during the reign of King Hyegong (r. 756-780) of Shilla. The temple was again destroyed during the 1592 Japanese invasion. It was reconstructed under the supervision of the priest Sumun and others in 1635 during the reign of Injo (r. 1623-49) of the Chosŏn Kingdom.

There are more than ten notable structures and artefacts at Kūmsan Temple including Miruk Hall (National Treasure No. 62), the Noju Stupa (Treasure No. 22), a five-storey stone pagoda (Treasure No. 25), a stone lotus stand (Treasure No. 23), a stele honoring the Royal Preceptor Hyedŏk (Treasure No. 24) and the three-storey pagoda in the courtyard of the Shimwŏn Hermitage (Treasure No. 29) among others.

Naksan Temple

Naksan Temple is located on a low hill along the east coast, in Chŏnjin Village, Yangyang County halfway between Sokcho and Yangyang. Naksan Temple was first built by the priest Uisang in 676 C.E. during the reign of King Munmu (r. 661-681) of Shilla. Legend has it that Uisang was inspired to build the temple by Avalokitesvara Bodhisattva (Kor. Kwanum posal) who appeared to him while he was praying in a seashore cave that was believed to be frequented by the Bodhisattva. The Bodhisattva is said to have given him crystal prayer beads and instructed him to build the temple.

In the courtyard of the hall is a seven-storey stone pagoda (Treasure No. 499) and a bronze bell (Treasure No. 479). The traditional adobe walls, especially the walls around Wŏn’ŏngbo Hall reveal an exquisite il-wŏl damjang (sun and moon-patterned wall).

Pŏpchu Temple

Pŏpchu Temple is located at the foot of Songni Mountain in Poŏn County, North Ch’ungch’ŏng Province. The temple was built by the priest ûishin in 553 C.E.. It was repaired by Chinp’yo in 776, but razed during the 1592 Japanese Invasion. The present structure dates from 1624 when the temple was rebuilt by the priest Pyŏgam during the second year of King Injo (r. 1623-1649) of the Chosŏn Kingdom.

A number of National Treasures are found at this temple. These include a stone lantern supported by twin lions (National Treasure No. 5); P’alsang Hall (National Treasure No. 55) which is the only five-storey wooden pagoda in Korea, a lotus-shaped basin (National Treasure No. 64), the Four Deva Kings Stone Lantern (Treasure No. 15), and a Buddhist statue carved in relief on a huge rock (Treasure No. 216).

Pongjŏng Temple

Pongjŏng Temple is located in T’aegang Village in Andong, North Kyŏngsang Province. The temple is recorded to have been founded by the Buddhist priest ûisang. He is said to have chosen this site for the temple when a paper phoenix kite he was flying at nearby Pusŏk Temple landed at the foot of the Ch’ŏndŭng Mountains. The temple has been repaired many times with the last restoration recorded in 1363, during the reign of King Kongmin (r. 1351-1374) of Koryŏ, making Kúngnak Hall (National Treasure No. 15)
Korea's oldest surviving example of wooden architecture. Taegung Hall (Treasure No. 55), Hwaöm Hall (Treasure No. 448), Kogum Hall (Treasure No. 449) were all constructed during the early Chosön period.

Pulguks Temple

Pulguks Temple is located at the base of T'oham Mountain in Kyŏngju City, North Kyongsang Province. The construction of this temple was begun by Prime Minister Kim Taesŏng in 751 C.E. and completed in 774. At the time of its completion, it was one of the largest Buddhist temples in Korea with more than eighty wooden buildings. The entire temple complex was reduced to ashes by Japanese invaders in 1592.

Although the main hall and a few principal buildings were rebuilt, it was not until 1969-73 that the temple was completely restored after the completion of thorough research and excavations of the ancient temple site. During this work of restoring the Temple, important cultural relics dating from the Greater Shilla period were unearthed, including the two-stone pagodas, Tabo Pagoda (National Treasure No. 20) and Sŏkka Pagoda (National Treasure No. 21). Also, there are such bridges as Yŏnhwa Bridge and Chi'ibbo Bridge (National Treasure No. 22) that lead to Kŭngnak Hall, and the Ch'ŏngun Bridge and Paegun Bridge (National Treasure No 23), which are both actually staircases to Chaha Gate. All of these artefacts are representative of Shilla period stone work. The seated bronze gilt, Vairocana statue (National Treasure No. 26) in Piro Hall, the seated bronze gilt Amitabha statue of Kŭngnak Hall (National Treasure No. 27), and other Buddhist relics attest to the flowering of Buddhist art and culture during the Shilla Kingdom. Pulguks Temple was placed on the UNESCO World Heritage List in December 1995 in recognition of its great historical and cultural importance.

Pusŏk Temple

Pusŏk Temple is located on the slopes of Ponghwang Mountain in Yongp'ung County, North Kyongsang Province. After a royal decree in the sixteenth year of the reign of King Munmu (r. 661-681), the temple was built under the supervision of the priest Ùisang in 676. Pusŏk Temple is the leading temple of the Hwaöm Sect that was founded by Ùisang. Pusŏk, the Temple of the Floating Stone, is so named because of a large rock in the western part of the main hall which appears to float without attachment to the ground beneath it. According to legend, when Ùisang came to this place to establish the temple, there were a large number of heathens who opposed the establishment of a temple and tried to thwart its construction. Ùisang sought help from Buddha who sent a huge rock from heaven which frightened the heathens who then converted to Buddhism. This is the same rock that now appears to float in the main hall.

The second oldest extant piece of wooden architecture in Korea, Muryangsu Hall which is designated as National Treasure No. 18, is located at the temple. There are also other National Treasures located here including a stone lantern (National Treasure No. 17) in front of Muryangsu Hall which dates from the Shilla period, Chosa Shrine (National Treasure No. 19), a seated clay statue of Amitabha (National Treasure No. 45), a mural in Chosa Shrine (National Treasure No. 46) which was painted towards the end of the Koryŏ period, a three-storey stone pagoda (Treasure No. 249) and flagpole supports (Treasure No. 255) among others.

The Site of Sachi'onwang Temple

The site of Sachi'onwang Temple is located at Paeban-dong, Kyŏngju City in North Kyongsang Province and has been designated as Historic Site No. 8. The temple was built in 679 C.E. on the advice of the Buddhist priest, Myŏngnang. The original design of the temple was in the configuration of a main hall with two pagodas. However, because of a
railway constructed by the Japanese colonial government, all that is extant today are two wooden pagodas and the flagpole supports.

Sudōk Temple

Sudōk Temple is located in Sachōn Village of Yesan County, South Ch'ungch'ŏng Province. One legend concerning the establishment of this Temple states that it was built by the priest Chimyŏng in 599 C.E. Some of the extant buildings and structures include Ilchu Gate, Taeung Hall, and a three-storey stone pagoda among others. Large-scale renewal took place in the mid-1980s but some of this work departs from the original design. Taeung Hall (National Treasure No. 49) is a variant of the chushimp'o-style building (a type of eave support that uses a wooden bracket attached to the top of the columns), and is acknowledged as one of the most beautiful structures of Korean traditional architecture.

Shillūk Temple

Shillūk Temple is located in Chŏnsong Village in Yŏju County, Kyŏnggi Province. The temple was constructed during the Shilla period, but was largely rebuilt in 1379 by the priests Kakshin and Kakchu. The priest Naong is said to have led a contemplative life of virtue within the temple and the rebuilders of the temple erected a stupa to honor his righteousness.

Considerable restoration of the temple took place in 1440. The compound was expanded and in 1473 it was renamed Poūn Temple. The complex is richly endowed with many Treasures, including Chosa Shrine (Treasure No. 180), a multi-storey stone pagoda (Treasure No. 225), a multi-storey brick pagoda (Treasure No. 226), a bell-shaped stupa dedicated to the venerable Poje (Treasure No. 228) with an attached stele (Treasure No. 229), a stone monument commemorating the Tripitaka Scriptures (Treasure No. 230), and a stone lantern (Treasure No. 231).

Sōkkuram Grotto

The Sōkkuram Grotto, located in Kyŏngju City, North Kyŏngsang Province, is one of Korea's best known and most frequented temples. The grotto has been designated as National Treasure No. 24. It is a man-made grotto high up on Mt. T'oham, constructed on the order of prime minister Kim Taesŏng (? c. 750). The grotto is composed of a square ante-chamber, a passageway (also square) leading to a large rotunda. In its layout and in a practical sense it resembles a complete temple. Eight guardian demons, two Vajradharas and four Devas are engraved in relief on granite slabs lining the walls of the ante-chamber and the passageway that lead to the rotunda. In the rotunda, a relief statue of the Buddhist Goddess of Mercy (Kor. Kwanum) is engraved directly behind the statue of the majestic Buddha. The walls to the left and right each have an engraved relief figure of a standing Deva and a Bodhisattva along with relief statues of the Ten Disciples of Buddha. The domed ceiling has ten niches in which are the seated statues of various Bodhisattvas. In the centre of the rotunda the seated Buddha, measuring 3.48 metres high, is enshrined. The rotunda was constructed to enable a beam of early morning sunlight to enter through an aperture in the rear wall above the Goddess of Mercy and briefly fall on the face of the Buddha. To witness this is a special moment for devout Buddhists and leads many to come to the grotto at daybreak. The statues in the ante-chamber, passageway and rotunda are designed in such a way so as to give the effect of constantly watching the worshipper, whether he might be entering the grotto, walking around it or leaving it.

Songgwang Temple

Songgwang temple is located Shinp'yŏng Village, Sŏngju County, South Chŏlla Province. It was constructed by the priest Haerin towards the end of the Shilla Kingdom.
This temple is one of the Three Jewels of Korean Buddhism along with Haein and Tongdo Temples, and represents the sangha, or Buddhist order. In this temple sixteen priests, together with the National Master Chinul appeared in sequence. Their portraits are enshrined in the Kuksa Hall.

Of the existing relics and structures of this temple, there is a wooden Buddhist triptych (National Treasure No. 42), and buildings such as Kuksa Hall (Treasure No. 56), Hasa Hall (Treasure No. 263), Yaksa Hall (Treasure No. 302), and Yōnsan Hall (Treasure No. 303) among others.

Taehuông Temple

Taehuông Temple is located in Kurim Village, Haenam County, South Cholla Province. After the priest Ado constructed this temple in 544, it was rebuilt and renovated many times up through the Chosŏn period. The largest renovations were made by the monk Chajang in 617 and the National Master Tosŏn in 875. This temple's original name was Taedun Temple. Many disciples of the priest Sôsan, who raised a large volunteer army of monks to resist the aggressors during the 1592 Japanese invasions, are on display in the temple's museum.

The extant relics and structures of the temple include a stone seated Buddha (Treasure No. 48), a bronze-bell now at Tabsan Temple (Treasure No. 88), three-storey stone pagoda in front of Pungmirŭk Grotto (Treasure No. 301), a three-storey stone pagoda (Treasure No. 320) in front of Unjin Hall, two smaller halls (one for the thousand Buddhas and one for the disciples of the Buddha) among other items.

Tongdo Temple

Tongdo Temple is located in Chisan Village of Yangsan, South Kyongsang Province and was constructed by the priest Chajang in 646. This temple is in particular considered a Buddhist National Treasure since the sarira of Sakyamuni are enshrined here. This temple is considered to be one of the Three Jewels of Korean Buddhism along with Haein and Songgwang Temples, and it represents the Buddha in this trinity. Since the sarira of Buddha are enshrined at this site, there is not a statue of Buddha in the Main Hall. The Main Hall (Treasure No. 144), a stupa (Treasure No. 471), a three-storey stone pagoda (South Kyongsang Province Tangible Cultural Property No. 18) and a stone lantern (South Kyongsang Province Tangible Cultural Property No. 70) are among the extant relics and structures.

Wolchông Temple

Wolchông Temple is located in Tungsan Village, P'yŏngchang County, Kangwŏn Province. It was built in 646 C.E. by the Vinaya Master Chajang who, believing Odae Mountain to be a sacred place frequently visited by Buddha, built a hermitage here to await the advent of Manjusri Bodhisattva (Kor. Munsu), the Bodhisattva of wisdom. He also built a prayer hall, Chŏngmyŏl pogung, and enshrined Buddha's sarira in it. Other relics at this temple include an octagonal nine-storey stone pagoda (National Treasure No. 48) and a seated Bodhisattva among others. This temple is considered as one of the twenty-five Head Temples of the Chogye sect.

Kwanŭm Temple

Kwanŭm Temple is located in Kaesŏng City, North Korea. This temple was constructed first in 970 C.E. under the supervision of the National Master Pŏbin and expanded to a larger scale in 1393. Originally there were five buildings, but now only a Main Hall, a nunnery, a seven-storey stone pagoda and the Kwanŭm Cave remain. The Main Hall is a three by three kan structure (one kan = 2.2 square metres) with a hipped and gabled roof.
To the west of the Main Hall, is a seven-storey stone pagoda that measures 4.5 metres high that dates from the Koryŏ Kingdom.

**Pohyon Temple**

Pohyon Temple is located at Hyangam Village, Yongbyŏn County of North P'yŏngan Province in North Korea. This temple was constructed in 1042 and underwent major repairs in 1765. During the Korean War the temple was burnt down. However, the main hall was rebuilt in 1976 and various other buildings in 1979. These are the only structures that still exist.

**Sŏngbul Temple**

Sŏngbul Temple is located in the Chŏngbang Mountains, Hwangju County of Hwanghae Province in North Korea. This temple was constructed during the Greater Shilla Kingdom in 898 and was repaired several times after that. Today there are several buildings and structures remaining, including Kŭngnak Hall, Ungjin Hall and a five-storey pagoda. Of these buildings, Ungjin Hall, which was built in 1327, is notable in that it features a gabled roof design with bracketed eaves projecting to both the inside and the outside.

**Shimwŏn Temple**

Shimwŏn Temple is located at the foot of Chabi Mountain, in Hwangju County, Hwanghae Province in North Korea. The temple is said to have been founded by the National Master Tosan at the end of the Shilla period, but by the end of the subsequent Koryŏ period it had fallen into disrepair. The exact date of its construction is not known, but according to historical sources it was repaired in 1374.

Extant structures include Pogwang Hall, Ungjin Hall, Hyangno pavilion, Chŏngpung pavilion and Chilsŏng pavilion among others. Pogwang Hall is a three by three kan structure with three tiers of brackets projecting to both the outside and inside of the structure above columns using entasis. These eaves, which are bracketed in a tapo (multi cluster style), are the oldest extant in Korea. This is an important building since it is one of the oldest temples still remaining that is built in the style of the Chinese Yuan Dynasty.

**Sŏgwang Temple**

Sŏgwang Temple is at the foot of Sŏlbong Mountain, in Anbyŏn County, South Hamgyŏng Province of North Korea. This temple was constructed towards the end of the Koryŏ Kingdom and originally consisted of fifty-eight buildings, but it burnt down during the Korean War. Now only Puri and Chogae Gates, along with a few structures including Sŏlsŏngdong and Yongbi pavilions remain. Of the buildings destroyed during the Korean War, Ungjin Hall, which was constructed in 1368, was historically very important as it was a place that Yi Sŏnggye (the founder of the Chosŏn Kingdom) frequented.

**Pagodas**

Pagodas and temples in Korea were built concurrently with the introduction of Buddhism from China. Pagodas are generally classified into three types: wood, stone and brick, based on their construction materials. The remains of the wooden pagodas, that were the first built, can be seen at the site of Kŭmgang Temple that dates from the Koguryŏ period. In addition, there are remains at Kunsu Village and Kŭmgang Temples of the Paekche Kingdom. The pagoda at Mirŭk Temple is an early type of stone pagoda and indicative of the period that saw the change in construction materials from wood to stone. By the time of the construction of the stone pagoda at Chŏngnim Temple of the Paekche Kingdom, the form of the stone pagodas was fixed. Brick pagodas are mainly seen in Manchuria which
once was the territory of the Koguryŏ Kingdom. Similar in style to the brick pagodas is the Mojŏnsŏk Pagoda, which is a pseudo-brick pagoda built with brick-shaped andesite blocks at Punhwang Temple.

Stone Pagoda at Mirŭk Temple

Mirŭk Temple was built during the reign of King Mu (r. 600-641 C.E.) of the Paekche Kingdom. The pagoda is on the west end of the temple site, which is located in Kiyang Village of Iksan County, North Chŏlla Province, and has been designated as National Treasure No. 11. It is the one of the oldest stone pagodas in Korea, dating from the early years of King Mu's reign. Its height is 14.24 metres and originally may have consisted of nine storeys, but today only six remain. It is commonly acknowledged as the prototype for Korean stone pagodas, and illustrates the transformation from the stage of wooden pagodas to that of stone.

Five-storey Stone Pagoda at the Site of Chŏngnim Temple

This five-storey stone pagoda, which has been designated as National Treasure No. 9, is located at the site of Chŏngnim Temple in Tongnam Village of Puyŏ County, South Ch'ungch'ŏng Province. It was built during the Paekche Kingdom and rises five storeys to a height of 8.33 metres. The structure and shape of this pagoda, which is typical of stone pagodas in Korea, along with the stone pagoda of Mirŭk Temple marks the change in the chief construction material of pagodas in Korea from wood to stone. When compared to the stone pagoda of Mirŭk Temple it presents a more simplified structure.

The foundation of this pagoda is representative of stone pagoda structures and from it rise the five storeys of the pagoda. The foundation's style is quite similar to that of wooden pagodas. The first storey is higher than that of the other four storeys. Each storey features corner pillars on each side and the body of the pagoda is composed of stone slabs. The stone eaves of each roof gracefully turn upwards and rest upon beams placed atop the corner pillars.

Stone Pagoda at the Site of Punhwang Temple

This stone pagoda is located in Kyŏngju City, North Kyŏngsang Province and is designated as National Treasure No. 30. It is thought that this 9.3 metre high pagoda was built in 634 during the Shilla Kingdom. Although the construction material is andesite the pagoda was constructed in a manner to resemble a brick pagoda. The base of the pagoda is thirteen metres on each side and over one metre high. On each corner of the base is a seated lion, two of these are male and two are female. On each side of the body of the pagoda there is an entrance to the interior, and to each side of these entrances there are relief statues of a guardian diety. In the interior of the pagoda there is a statue of Buddha enshrined, but this is not what was originally inside the pagoda. Presently, only three storeys of this pagoda remain.

Ten-storey Marble Pagoda of Kyŏngjŏn Temple

This ten-storey marble pagoda is presently located on the grounds of Kyŏngbuk Palace in Seoul but was originally constructed at Kyŏngjŏn Temple which is in the Puso Mountain Fortress in Kyŏnggi Province. It has been designated as National Treasure No. 86. During the Japanese colonial period, the pagoda was taken to Japan, but after Korea was liberated in 1945 it was eventually returned and re-erected in 1960. The pagoda is decorated with engravings of Buddhas and Bodhisattvas, along with floral designs on the pedestals of each of its levels.

Ten-storey Stone Pagoda at Wŏngak Temple
This ten-storey pagoda from the early Chosŏn period is twelve metres high and represents one of the few marble pagodas in Korea. It has been designated as National Treasure No. 2 and is now located in Pagoda Park in Seoul. The pedestal and the first three storeys are shaped like a plus sign (+) when viewed from above. From the fourth storey up, the storeys are all square-shaped. In the corners of the body of the pagoda are round sculpted pillars. The pedestal itself is three-tiered.

The pagoda features ornate carvings of dragons, lions, peony and lotus flowers on the lowest tier, human figures, birds, animals, flowers and trees on the middle tier, and on the top tier are the Disciples of Buddha and the Buddhist Saints. The style of this pagoda is similar to that of the ten-storey Kyŏngjŏn Temple pagoda.

**Confucian Architecture**

*Munmyo* (Confucian Shrine)

*Munmyo* are shrines dedicated to the memory of Confucius and are located at the Confucian academies (*hyanggyo*) throughout the country. During the Chosŏn period a *munmyo* was always included whenever a Confucian academy was built. The main *munmyo* is located at the National Confucian Academy (*Sŏnggyun'gwan*) in Seoul and was constructed in 1398. The chief building of the *munmyo* at the National Confucian Academy is Taesŏng Hall in which the memorial tablets for Confucius, Mencius and other exemplary Confucian scholars are enshrined. To the east and west of Taesŏng Hall are the *Tongmu* and the *Sŏmu*, where other memorial tablets to various other Confucian scholars were kept, including eighteen Korean Confucianists. During the height of Confucianism in Korea, there were 132 tablets housed in the three buildings, but later all but thirty-eight tablets were removed. Today the remaining tablets are enshrined in the main hall and *Tongmu* and *Sŏmu* stand empty. Memorial services are still held at the *munmyo* biannually in the second and eighth lunar months.

*Sŏnggyun’gwan* (National Confucian Academy)

The *Sŏnggyun’gwan* was the highest national educational institution during the Chosŏn period and its function was to train Confucian scholars. It is located in Seoul and is to the north of the Confucian shrine, *munmyo*. Myŏngyun Hall is the main building of *Sŏnggyun’gwan*, and all the other buildings were planned around it. Construction on the main buildings began in 1395. *Dongjae* and *Sŏjae*, which served as dormitories for the students, were located in front of the main hall to the east and west.

At present, the extant buildings include Myŏngnyun Hall, Chongyŏng, which served as the library, *Tongmu* and *Sŏmu*, and the Kyojik-sa service quarters. Today the old *Sŏnggyun’gwan* is located on the campus of a modern university that bears the same name. *Sŏnggyun’gwan* still hosts biannual sacrificial rites in the second and eighth lunar months to honour past Confucian scholars such as Confucius.

*Hyanggyo* (Confucian Academy)

*Hyanggyo* were government established institutes which functioned as local Confucian schools during both the Koryŏ (918-1392) and Chosŏn (1392-1910) periods. These schools were built in each county along with a *munmyo* (Confucian shrine). *Hyanggyo* served to both give the students in the provinces a Confucian education and also to strengthen the central government’s ruling apparatus in the provinces. The first *hyanggyo* were established in the Koryŏ period and their numbers grew throughout the Koryŏ and Chosŏn periods. The schools were supported by grants from the government in the form of fields and slaves. This provided both an income and the labour needed to guarantee the
upkeep of the schools.

_Hyanggyo_ were generally arranged with a Confucian shrine in the front of the compound and the facilities for the students to the rear. The shrine at the _hyanggyo_ housed the ancestral tablet of a meritorious vassal to whom Confucian rituals were offered. The lecture hall generally was to the back of this and behind it the other facilities needed for the upkeep of the school were located. To the east and west of the lecture hall were the dormitories for the students. The entire compound was most commonly surrounded by a wall that served to segregate it from the world outside.

There are many extant _hyanggyo_ scattered throughout Korea such as the Naju _hyanggyo_ in South Cholla Province, the Kangnung _hyanggyo_ in Kangwōn Province and the Milyang _hyanggyo_ in South Kyōngsang Province.

_Sōwōn_ (Private Confucian School)

_Sōwōn_ were private Confucian schools of the Chosōn period that featured a shrine that was dedicated to a specific Confucian scholar. Moreover, like _sōdang_ (village schools) they were privately-operated schools which is in contrast to the _hyanggyo_ and the _Sōnggyun'gwang_ which were established by the government. The first _sōwōn_ was the Paeg'undong _sōwōn_ which was established in 1543 by Chu Sebung to honour the Confucian scholar An Hyang. In 1550, the school was given the name of _Sosu sōwōn_ by King Myongjong (r. 1545-1567) and along with this supplied with books and servants by the government. This was tantamount to official recognition from the government.

During their zenith, there were many _sōwōn_ such as _Tosan sōwōn_ , _Todong sōwōn_ and _P'iram sōwōn_ among many others. By 1741 _sōwōn_ and similar institutions numbered near one-thousand. However, by the late nineteenth c. this was reduced to a mere forty-seven by royal edict.

The _Sōwōn_ buildings generally consisted of a main lecture hall, a shrine dedicated to a specific scholar and other structures associated with the upkeep of the facilities and the preparation of food. The premises were usually isolated from the outside by a series of gates.

Royal Palaces

The construction of royal palaces in Korea began during the Three Kingdoms period. In the Koguryō Kingdom, the first royal palace was built in 37 B.C.E., and in 32 B.C.E. Kumsong Palace was built by King Hyokkose of the Shilla Kingdom. After these, many other royal palaces were built during the Three Kingdoms period. Other palaces of note from the Koguryō Kingdom include Kugnaesōng and Changansōng, and from the Shilla Kingdom Wolsōng, all three of which are fortress palaces.

The first royal palace in the Koryō Kingdom was Manwoldae which was built in the capital of Kaesŏng by King T'aejo in 919. The design of the palace took full advantage of the terrain. The foundation follows the contour of the land closely and the layout is very asymmetrical. The laws of geomancy were followed closely in both the design and construction of the palace. Manwoldae served as the main palace of the Koryō Kingdom until 1361 when it was destroyed by an invasion from the north.

The first of the royal palaces of the Chosōn Kingdom was Manwŏldae which was built in the capital of Kaesŏng by King T'aejo in 919. The design of the palace took full advantage of the terrain. The foundation follows the contour of the land closely and the layout is very asymmetrical. The laws of geomancy were followed closely in both the design and construction of the palace. Manwŏldae served as the main palace of the Koryō Kingdom until 1361 when it was destroyed by an invasion from the north.

The first of the royal palaces of the Chosōn Kingdom was built in 1394, the year when its first ruler, King T'aejo, relocated the capital from Kaesŏng to Hanyang (present day Seoul). T'aejo ordered the construction of Kyŏngbok Palace to serve as the main royal palace. Subsequently, King T'aejong (r. 1400-1418) commanded the building of Ch'angdŏk Palace, and then Ch'anggyŏng, Kyŏnghui and Kyŏng'un Palaces were built.
These five palaces are often referred to as the five royal palaces of the Chosŏn Kingdom.

**Kyŏngbok Palace**

Kyŏngbok Palace was the main royal palace and the most magnificent palace of the Chosŏn Kingdom. It was completely destroyed during the 1592 Japanese Invasion and remained in ruins until King Kojong (r. 1863-1907) ordered its reconstruction in 1865. However, after the advent of the Japanese colonial period many of the structures within the palace were destroyed or altered. The Japanese Government-General Building was built directly in front of the palace and obstructed views of it. Moreover, some of the buildings were demolished and their timbers used in construction projects.

Originally the palace was constructed with three general spheres. The first was that of chijo and is the area of the palace affairs of this kingdom. The second sphere was the wojo where the state ministers looked after political affairs. The third area was the yŏnjo where the royal family lived.

Two of the more notable buildings in Kyŏngbok Palace are Kŭnjŏng Hall which was where the king held court, and the pond-surrounded two-storey Kyŏnghoe Pavilion that was used for entertaining diplomatic envoys and banquets. Kŭnjŏng Hall uses tapo style brackets, which are highly decorated and are arranged in clusters, for support of the roof beams. There are three tiers of brackets on the outside and four tiers on the inside. The building has a hipped and gabled roof, and therefore the ceiling hides the roof members. Directly above the throne, clouds and a pair of dragons have been carved into a recess in the ceiling. A passage behind the throne led to the king's bedchamber.

Kyŏnghoe pavilion is accessed by a stone bridge from the east, or if by boat there was a staircase on the west side that served as a boat ramp. The upper storey of the pavilion is supported by forty-eight stone pillars. The entire structure is elaborately decorated with stone and wood carvings. The roof is hipped and gabled, and the eaves are decorated with carvings of dragons and other figures.

In recent years there has been much reconstruction of the various palace buildings and renovations designed to return the palace to its former splendour. In addition, the Japanese Government-General building was demolished in 1996 and thereby the view of the palace is once again unobstructed.

**Ch'angdŏk Palace**

Ch'angdŏk Palace was built in 1405 by King T'aejong (r. 1400-1418), as a detached palace or a royal villa. During the 1592 Japanese Invasion the palace was destroyed by fire. Reconstruction work began in 1607 and was completed in 1610. There was another large fire in 1803 that destroyed some of the major structures, most notably Injong-jŏn, but these were subsequently rebuilt.

After Kyŏngbok Palace was destroyed by the 1592 Japanese Invasion, Ch'angdŏk Palace served as the main palace of the Chosŏn Kingdom for a period of about three-hundred years. Of the five royal palaces of Chosŏn, Ch'angdŏk is often cited as the one that was built in the greatest harmony with the natural terrain of the palace grounds. Many of the original structures are extant, including the main hall (Injong Hall and several gates such as Tŏnghwa and Injong. In addition, to the rear of the palace grounds is the extensive Piwŏn Garden which was a place for the royal family to relax.

**Ch'anggyŏng Palace**
Ch'anggyŏng Palace was built in 1419 by King Sejong (r. 1418-1450) for his father, King T'aejong (r. 1400-1418) who had abdicated the throne to his son to ensure a peaceful transition of the monarchy. When first built, this palace was called Sugang Palace, but later during the reign of King Sŏngjong (r. 1469-1494) it was rebuilt as a detached palace and renamed as Ch'anggyŏng Palace. The palace was destroyed by fire during the 1592 Japanese Invasion, but was rebuilt in 1616 during the reign of King Kwanghae (r. 1608-1623).

In 1909, the Japanese Governor-General ordered a zoo and botanical gardens built within the palace grounds. In addition, in 1911, the ordered the construction of a museum and had the palace renamed Ch'anggyŏng Garden, which served to demote the status of the former royal palace. However, in 1983 reconstruction work was started and the name of Ch'anggyŏng Palace was restored. During the reconstruction, buildings such as Munjong Hall which had been destroyed during the Japanese colonial period were rebuilt. Today the palace has been restored to much of its original splendour and buildings such as Myŏngjong Hall and gates like Myŏngjong and Honghwa can be seen.

Kyŏng'un Palace (Tŏksu Palace)

Kyŏng'un Palace differs from the other four of the Chosŏn royal palaces in that it was not originally built as a palace, but as a private villa for the royal family. Originally King Sŏngjong (r. 1469-1494) built the palace as a villa for his elder brother, Grand Prince Wŏlsan. However, a century later when all of the royal palaces had been destroyed during the 1592 Japanese Invasion, King Sŏnjo (r. 1567-1608) returned to Seoul and took up temporary residence at the palace. With the rebuilding of Ch'angdŏk Palace in 1611, the residence of the king moved to Kyŏng'un Palace. The name of the palace was changed to Tŏksu Palace by Emperor Sunjong (r. 1907-1910) in 1907.

Tŏksu Palace, which is located in the centre of Seoul, has many notable buildings including the main hall of Chunghwa. In 1909 the first Western-style building to be erected on the palace grounds, Sŏkcho Hall, was constructed. The location of the palace across the street from City Hall provides for a peaceful retreat from the bustle of the city.

Kyŏnghŭi Palace

The construction of Kyŏnghŭi Palace began in 1617 when King Kwanghae (r. 1608-1623) wanted to have another palace to replace Ch'angdŏk Palace which he felt was ill-omened. The construction of this palace lasted until 1620 and it was originally named Kyŏngdŏk Palace. After the reign of Kwanghae, the palace was used mainly as the residence for the crown prince. It underwent major repairs in 1693, but in 1829 a major fire destroyed most of the palace. Repairs began slowly, but by 1830 one building had been rebuilt, and by 1860 a major portion of the palace had been restored. Finally, in 190, other parts of the palace were rebuilt.

Even prior to the beginning of the Japanese colonial period, the Japanese began to assert their influence on Korea. In 1907, the Japanese Government General designated the west side of the palace as a middle school. In 1910, after the loss of Korean sovereignty to Japan, the palace became the property of the Japanese government. In 1915 the Kyŏngsŏng Middle School was established on the site of the palace. During this process of the Japanese takeover, the entire palace was again destroyed, except for relics which were transferred to other sites. After liberation, the site was used for the Seoul Middle and High School until 1974 when these schools moved to other sites. In 1986 a public park opened on this site, which is designated as Historical Site No. 271.

Gardens
Gardens of traditional Korea reflected both the mountainous landscape of the country and the aesthetic qualities that the people believed to both be beautiful and propitious. The respect that the Korean people held for nature is evidenced in the fact that they did not attempt to unnecessarily alter the natural topography by damming streams or levelling hills. Moreover, they did not attempt to change the innate beauty of nature by artificial alterations such as extensive pruning and shaping of trees and plants. Generally, Koreans would build their homes on sites that were deemed to be geomantically auspicious. Such a site would require a hill with ridges running up from where the house would be located, and preferably a stream that flowed down from the west ridge. The house would face to the south and the back garden would utilize the hilly terrain, and the front the stream.

Often the back of the house would be left to nature's design. The sought-after effect was not a functional garden that one could stroll through, insomuch as a visually satisfying garden. A key aspect of the garden's function was to provide respite from the worries of the world, albeit for a brief moment. The garden, with its trees, flowing water and stones would allow the inhabitants of the house a moment to enter this utopian world.

The fundamental concept of Korean gardens is based upon the principle of inch'a, which is a way to preserve the natural topography of the garden and then utilize these features in the design without trying to impose artificial structures upon nature. In addition, the structures that are built for the house should blend well with the landscape and provide suitable locales for viewing the garden. This concept is a central tenet of gardens throughout East Asia.

There are differences in the gardens of Korea, China and Japan despite the countries sharing a common guiding philosophy. In China gardens sought to recreate nature in miniature. Mountains, falls, valleys and the like were recreated in small scale in the gardens. In Japan there are many rules and restrictions for creating a garden and therefore, the result is an imitation of nature that is too contrived. In Korea, however, gardens reflect the materials that the gardener is presented with. If there is a hill, the gardener will utilize it in his garden. If there are large stones, they too will become a part of the garden. The fundamental aspect of a Korean garden is its harmonisation with nature.

Soswaewŏn Garden

Soswaewŏn Garden is located in Chigok Village of Tamyang County, South Cholla Province. It was designed by the middle Chosŏn period literati, Yang Sanbo, and is renowned for its natural beauty and the large number of pavilions that overlook its many scenic spots. The garden is located in a valley and is over 1800 m² in area. A number of streams wend their way through, creating several small ponds on their journey. The entrance to the garden is via a narrow path through a stand of bamboo and skirting two small ponds. A stone wall surrounding the garden has two large inlets enabling the mountain streams to trickle through. The garden has long been a source of inspiration for poets and painters, and has been designated as Historical Site No. 304.

Piwŏn Garden (Secret Garden)

The garden behind Ch'angdŏk Palace is popularly known as Piwŏn, or Secret Garden, but this term is relatively new having been coined during the Japanese colonial period. Originally, the garden was called Kŭmŭn (Forbidden Garden) during the Chosŏn period. In addition, since it is located to the north of the palace compound, it was commonly called Pukwŏn (North Garden), and being located to the rear of the palace, it was also called Huwŏn (Back Garden). The garden is composed of low hills, valleys, and flat areas, and is widely acknowledged as the most beautiful of the palace gardens.

Piwŏn Garden dates from early Chosŏn and had pavilions and other structures added to it throughout the Chosŏn period. It occupies about 103 000 p'yŏng (one p'yong equals 3.3
Traditional Housing

The origin of man-made houses in Korea can be found in dugout huts, or umjip. These were built from the Neolithic Era of about 5000 B.C.E. to around 300 B.C.E. These structures could be either round or square in design, and as the name implies were dug into the ground. The floor of the hut would be dug about one metre in the ground from which poles would be erected. The poles were then covered with a thatch of straw, twigs and branches that was designed to keep both the wind and rain out of the interior of the hut. In the centre of the hut a fireplace was located that was designed to both provide warmth and serve as a place to cook the food for the inhabitants. Since living on a dirt floor was not comfortable, the people soon developed walls that went up from the floor to the roof and provided more comfort and warmth to the inhabitants.

From these early dugout huts evolved the later stage of traditional frame houses of Korea. The method used to bind together the columns, rafters and purlins in a building further developed in the houses of the next stage and this is known as a mindori structure. This structure used beams, with or without brackets, to hold up the roof of the structure. Moreover, the spaces between the beams were filled with square wood strips. It is thought that the abundance of trees such as pines in Korea led to the wood frame being the main structural member in traditional housing.

The interior of the traditional house was composed of spaces heated by an underfloor system of flues known as ondol. Ondol is a unique heating system that is designed to heat enclosed rooms in extremely cold climates. The prototype of the ondol heating system is known as kudil and has been found in excavations of homes from the Iron Age (3rd century B.C.E. to 1st century C.E.) in the Suwon area. The ondol system of heating houses was spread throughout Korea, but most widely used in the colder northern and central regions of the peninsula.

In order to combat the heat and humidity of the summer, traditional houses in Korea also employed rooms known as maru. These rooms had wooden floors and were open with no walls between the pillars that supported the roof. The size and number of maru rooms varied depending on the region, but often there would not only be a maru room, but also a maru verandah that extended along the exterior of the house.

The combination of ondol and maru rooms provided a balance between the seasons and the size of each would vary depending upon the region in which a house was located. Colder climates would have a lesser amount of maru rooms and greater amount of ondol rooms, whereas homes in warmer climates would be constructed in an opposite manner. The ondol and maru rooms also provided a contrast between open space and closed space that is characteristic of traditional Korean homes.

Common rooms within the traditional Korean home include dirt-floored rooms such as the kitchen, storeroom and shed, and rooms designed for the men and women of the house. The courtyard or garden of the home generally also included a well, and a terrace on which crocks of soy sauce, red pepper paste, bean paste and other condiments were kept.

The main room of the women's quarters was the anbang. This room is located in the centre of the house and all other rooms are built around it. It served as a sleeping chamber at night, but in the day it was the room from which the lady of the house managed her household. The decor of the anbang would be luxurious and echo the status of the mistress of the house. The anbang in larger homes often was connected to a loft above the
kitchen known as a tarak. The tarak was used to store the valuables of a household and the only access to it was through the anbang. Thus, the financial control of a household was in the hands of the mistress of the anbang.

For the man of the house the sarangbang was the area in which most activities were carried out. This room was generally detached from the main house and served as a room where the master of the house could entertain his male guests and conduct his studies. The decor of the sarangbang generally featured stationery and writing materials along with the books of its occupant. The sarangbang was only found in the aristocratic homes, as a poor family could not afford to maintain such a room. The inclusion of separate rooms for the males and females of each household reveals the strict Confucian mores that restricted the socialization of males and females.

The size and shape of one's house was determined by his wealth and social status. The simplest style was a line of rooms under a single roof beam. A house such as this most commonly was the dwelling of either slaves or peasants. The next step up was a double line of rooms under a single roof beam, which commonly served as the dwelling for a poor farmer. Larger farm houses could either be constructed in a U or L shape. The house of an aristocrat commonly was constructed in a double-L style which was enclosed by a compound wall. However depending on the region, housing styles varied throughout Korea.

The size of houses ranged from the meagre to the grandiose limit of 99 kan for the largest houses (one kan equals about 2.2 sq. m.). In the early Chosŏn Kingdom, houses for commoners were limited to 10 kan, while a house for a prince was limited to 60 kan. However, the interpretation of a kan proved to be so flexible that these guidelines were difficult to enforce and other restrictions were adopted that governed the height of columns, the length of purlins and so on.

In the location and construction of a house, close attention was given to matters concerning the geomantic qualities of an area. Houses would invariably face to the south and be located on sites that were deemed to be auspicious. Despite the official adherence to Confucianism, areas within the housing compound also paid homage to a host of shamanistic deities such as the sŏngju which was the guardian god of the home. These ceremonies were generally conducted by the womenfolk of the house.

Traditional Villages

Yangdong Village of Wŏlsŏng

Yangdong Village is located in Kyŏngju County of North Kyŏngsang Province and has been designated as Important Folklore Material No. 189. For generations, this village, which consists of about 150 large and small traditional houses, has been home for two of Wŏlsŏng County's most prominent clans: the Son clan which originated here, and the Yi clan which originated in Yŏgang. According to historical records, Son So (1433-1484) first settled here and from that time this village was the home of the Wŏlsŏng Son clan.

The village represents a typical yangban (ruling class) village. In addition, Yangdong is recorded as the birthplace of five of Korea's most famous scholars, including Son So's second son Son Chungdon (1463-1529) whose pen name was Ujae, and a grandson Yi onjok (1491-1553), a Confucian scholar whose pen name was Hoejae. The slopes of the mountains surrounding the village have several ravines flowing down their sides creating crevices that provide perfect seclusion for the landlord's house and the surrounding servants' quarters which can barely be seen from the village. The head house of the Wŏlsŏng Son clan is located here.
The village area includes many traditional houses and structures such as Much’öm-dang (Treasure No. 41), Hyangdan (Treasure No. 412), Kwanga-jông (Treasure No. 442), Wolsông Son house (Important Folklore Material No. 23), the Nakソン-dang (Important Folklore Material No. 73), and the Yi Wonbong house (Important Folklore Material No. 74.) among many others.

Hahoe Village

Hahoe Village is located in Andong County of North Kyŏngsang Province and has been named Important Folklore Material No. 122. This village is a yangban village of the Chosŏn period, and is said to have been built upon a site known for its auspiciousness. The Pungsan Yu clan has lived here for many generations, and the founder of the village was Yu Chonghye. In later generations, Yu Sŏngnyong (1542-1607) and his brother Yu Unnyong (1539-1601) who were both noted Confucian scholars were born here.

This village is divided into south and north sections and has distinctive houses in each. In the north section, many of the houses surrounding the Yangjin Shrine are representative of the north and those around Ch’ungenhyo Shrine represent the southern region. There are many traditional structures and the southern section of the village has been designated as Important Folklore Material No. 90, and the north as Important Folklore Material No. 84. The houses in the southern section are characterised by an open method of construction, whereas those in the north feature a closed, square construction style. The area is a popular destination for tourists and provides a glimpse back into the traditional modes of living in Korea.

Sŏngŭp Folk Village

Sŏngŭp Folk Village is located in South Cheju County on Cheju Island and has been designated as Important Folklore Material No. 188. It is located on rise about 125 metres above sea level, and was built in 1423 when the former Chŏngu County Office was moved to this location. This fortress town remained the county seat for almost five centuries until 1914.

The fortress and accompanying town are typical of the Chosŏn period. The fortress itself is constructed in a square shape, but with rounded corners. Inside the fortress are various private homes, government offices and a hyanggyo (Confucian academy). There are also various shrines set up to pay homage to various tutelary deities within the fortress walls. In 1984 in order to preserve the village and its traditional way of life, it was declared an Important Folk Material.

Fortress Architectural Types

Fortress architectural design in Korea is classified into three groups. The first category is that of do or capital fortress. Next is the san or mountain fortress and the last category is that of ūp which are the fortresses built around the towns where the regional government offices were located.

In all the kingdoms of Korea, fortresses fringed the capital cities and were designed to protect the ruling powers from hostile bands. In the Three Kingdoms Period there were capital fortresses built in all of the Kingdoms such as Kugnae and Chang’an in the Koguryŏ Kingdom, Hansan, Kongsan, and Puyŏ in the Paekche Kingdom, and Kŭmsŏng and Wŏlsŏng in the Shilla Kingdom. In the Koryŏ Kingdom, at Manwŏldae located to the south of Sŏngak, Kaesoṅg the capital was built (ca. 919), but an outer fortress wall was not constructed until 1029. During the Chosŏn Kingdom, a government office to supervise the construction of the capital fortress was established in 1395, and the following year saw the building of the Hanyang Fortress (present day Seoul).
Mountain fortresses were designed to protect the country from invasions by securing key passages within the mountains. The safety of these fortresses also served to protect the people who would locate their homes close-by. There are many historically important mountain fortresses including Anshi and Hwando of Koguryŏ, and Samnyōnsan of Shilla, from the Three Kingdoms Period. Mountain fortresses also played a key role in the Koryŏ Kingdom during the Mongol invasions, and in the Chosŏn Kingdom the Namhansan and Pukhansan mountain fortresses that surrounded the capital were also a key to its defence.

The town fortresses were designed to protect the government offices that were located at some distance from the capital. These fortresses also provided the people who lived in the area some protection in times of invasion. It is not clear when town fortresses first appeared in Korea, but they are thought to have been in use by the time of the Samhan Commandaries. Town fortresses were scattered throughout Korea and many are extant.

Nagan Village Fortress

Nagan Village Fortress is located in Sungju County, South Cholla Province and has been designated as Historical Site No. 302. Due to frequent raids by Japanese pirates that had been occurring since the end of the Koryŏ period, in 1397 Deputy Commander-in-Chief, Kim Pin'gil, constructed this fortress of mud. In 1424 a project to rebuild the fortress in stone was commenced, and this work reached a stage of practical completion by about 1450.

The fortress has a circumference of 1385 metres. Originally, there were plans to construct twelve look-outs, but only four were ever built. Access to the interior of the fortress was through three gates, east, west and south. The interior of the fortress features several government office buildings and civilian houses, along with two wells and two ponds. The moat that was to encircle the exterior of the fortress was never constructed.

Nagan Village Fortress provides one of the finest examples of a Chosŏn period fortress, and has many extant traditional structures.

Sungnye Gate

Sungnye Gate, commonly known as Namdaemun (Great South Gate) served as the southern gate of the capital fortress, Hanyang (present day Seoul), and has been designated as National Treasure No. 1. Sungnye underwent major repairs in 1448 and again in 1479 and then, five hundred years later, a major renovation (1961-62).

The gate is constructed using a large arch which is in the centre of a platform built of stone blocks. The gate building itself is two-storey and is covered by a four-storied sloping roof. The style of the eaves construction is known as tapo, which results in the two sets of brackets that support the eaves projecting to both the inside and outside of the lowest-placed roof. The uppermost roof has three sets of brackets projecting outwards and two sets to the interior.

Today, the gate is surrounded by one of the main thoroughfares in Seoul that leads to the main sections of the city such as Myŏngdong and Kyŏngbok Palace. Floodlights illuminate the gate at night and it remains as one of Seoul's principal tourist attractions.

Hŭngin Gate

Hŭngin Gate, commonly known as Tongdaemun (Great East Gate) was built as the east gate to the fortress of Hanyang (present day Seoul) in 1397 and has been designated as Treasure No.1. It was rebuilt in 1452 and then burnt down during the 1592 Japanese
invasion. In 1869 the gate was again rebuilt.

Hùngin has an outer baffle wall that differs from that of Sungnye Gate. However, on this is a platform atop of which is a two-storey gate house and a tiered roof that is quite similar to that of Sungnye Gate. This gate also utilises tapo-style eaves construction and the lower level of the roof has two bracket sets, one that supports the eaves projecting outwards and the other the eaves to the interior. The upper roof has three bracket sets projecting both inward and outward. Since the gate was rebuilt at the end of the Chosòn period, its style is very distinctive of late Chosòn.

Like Sungnye Gate, Hùngin Gate is one of the best known landmarks of Seoul. It is located on a main thoroughfare and there is a large market nearby. It also has had lights added to illuminate the gate at night.

**Royal Shrines (Myo) and Altars (Tan)**

**Chongmyo (Royal Ancestral Shrine)**

*Chongmyo* is located in Chongno-gu of Seoul and houses the ancestral tablets of the kings and queens of the Chosòn Kingdom. It has been designated Historical Site No. 125. The main building of *Chongmyo* is Chông-jôn Hall. Originally Chông-jôn Hall was called T'aemyo since it is where the ancestral tablet of King T'aejo (r. 1392-1398), the founder of the Chosòn Kingdom, is located. After four generations the ancestral tablets in Chông-jôn Hall were customarily transferred to a secondary shrine, Yöngnyöng Hall, where they were enshrined. Also kept in Chông-jôn Hall were the tablets of those kings who had rendered special service to the nation.

*Chongmyo* was constructed in 1395 and rebuilt in 1608 after it was reduced to ashes in the 1592 Japanese invasion. *Chongmyo* is modelled after the Chinese royal ancestral shrines and is located on the left edge of the palace grounds. *Chongmyo* is where the royal family regularly performed ancestral rites during the Chosòn period. Chông-jôn Hall now houses the ancestral tablets of nineteen Chosòn kings and their queens, and Yöngnyöng Hall holds the tablets of sixteen kings and their queens. Chông-jôn Hall has been designated as National National Treasure No. 821.

**Ch'ilgung**

The *Ch'ilgung* is a shrine for honouring the natural mothers of the kings during the Chosòn period. It is located in Chongno-gu, Seoul. The first ancestral tablet was placed here for the mother of King Yöngjo (r. 1724-1776), Lady (sukpin) Ch'oe, in 1725 and the shrine was then called Sukpin myo. In 1753 the name was changed to Yuksang myo. In 1908 five other shrines of Lady Chogyöng, Lady Taebin, Lady Yönu, Lady Sônhui, and Lady Kyöngu, were transferred here. In 1929 the shrine of Lady Tögan was also moved to Ch'ilgung, bringing the total to seven. At this time the name was changed to Ch'ilgung, or the seven shrines.

**Tan (Altar)**

There are many types of *tan*, or altars, which served as places to perform sacrificial rituals to various guardian deities throughout Korea. One of the most prominent of these altars during the Chosòn period was the Sajik Altar which is located in Chongno-gu of Seoul. The Sajik Altar has been designated as Historical Site No. 121. At this altar the king would perform a sacrificial ritual on behalf of the people to the gods of the earth and of grains asking for an abundant harvest. The altar built to the god of the earth was located to the east, and the altar to the god of grains was on the west side. The belief in these deities and the practice of offering sacrifices to them dates from antiquity, as the *Samguk sagi* (History
of the Three Kingdoms) records this practice during the Three Kingdoms Period.

Construction on the Sajik Altar compound was begun in 1395 with the outer altar constructed in 1414 and Sajik Altar being completed in 1432. The entire complex was burnt down during the 1592 Japanese Invasion, but was subsequently rebuilt shortly thereafter.

**Bridges**

P'yongyang Chudae Bridge, built in 413 C.E., is the first bridge recorded to have been constructed in Korea while Pulguk Temple's Ch'ong'un and Paeg'un Bridges, built under the supervision of Kim Taesŏng in 750 C.E., are the oldest extant bridges in Korea. These two bridges are both designed of stone and are arch-type bridges, and in actuality are staircases leading to the main hall of the temple. In addition to these two bridges, the foundation stones of Wŏljŏng Bridges from the Greater Shilla period are still in existence. As for the bridges of the Koryŏ Kingdom, there are Sŏnjuk Bridge, located in Kaesŏng and Komak Bridge, also called Tok-dari Bridge, built by the monk Komak in 1274. There are many extant bridges of the Chosŏn period including the longest bridge of the period, Chŏn'got Bridge, which was built over a period of seventy-three years from 1420 to 1493, and stretches across the Han River. Another representative bridge of the Chosŏn period is the Sup'yo Bridge which crosses Ch'onggye Stream in Seoul. This bridge has two functions, one a bridge, and the other to serve as an indicator of the water level.

The bridges of the Chosŏn period can be classified into two types according the materials used for construction. One category of bridges are those built of wood, and the other are those made from stone. Furthermore, bridges also can be classified accordingly to their structure; the Chosŏn period features both girder bridges and arch bridges.

There are also many types of bridges built in Korea in traditional times that were not constructed by the government or designed for aesthetic purposes. The bridges that spanned the many streams and rivers of Korea and that were built by commoners for the main purpose of crossing a body of water have many forms. Some of the forms are extremely simple such as the placement of stepping-stones across a relatively shallow part of a body of water. There are also bridges that simply use the trunk of a tree balanced on stones on either side of the water to provide passage from one side to the other. Other bridges required more of a communal effort and spanned larger or deeper bodies of water. One of these, the so-called sallae-dari (shaking-bridge), is composed of a branch and thatched roadway balanced upon sturdy tree limbs. The name is derived from the effect of walking across this bridge as it sways to and fro. Finally, Koreans also constructed simple stone bridges over streams and rivers. These were generally located at more heavily travelled locales and were simply constructed of stacks of stone blocks of equal heights covered by a roadway of stone planks. Many of these simple forms of bridges can still be found in rural settings at the present time.

The bridges built in the last century in Korea have also been of many types. In 1900 a truss bridge, the Han'gang ch'ol Bridge, was built over the Han River and is considered to be the first modern bridge constructed in Korea. Another bridge using this technology, Che 1 han'gang Bridge, was erected in 1917. This bridge had a width of 18.4 metres and an overall length of 840.9 metres. Both of the above bridges were designed by Westerners. The first modern bridge designed and constructed entirely by Koreans was Che 2 han'gang Bridge which was built in 1960. Since the construction of these bridges there have been many others built throughout Korea using such advanced designs as the Langer girder and the Nielson arch. Moreover, bridges such as the Olympic Bridge that spans the Han River have come to represent the modern image of Seoul.

Ch'ongun and Paegun Bridges
Ch'ongun and Paegun are two bridges located over the front of a large platform leading to the main hall of Pulguk Temple, in Kyongju City, North Kyongsang Province. They are the oldest extant stone-arched bridges in Korea, having been built in 750 C.E.. These two bridges do not actually cross a body of water, but instead are more like two staircases that lead up to the main hall of the temple. The bridges symbolically allow people to cross from the secular world to the sacred world of Buddha inside the temple. These two bridges have been designated as National Treasure No. 23.

Yŏngje Bridge

Yŏngje Bridge crosses the forbidden stream of Kyŏngbok Palace located in Seoul. This is an arch bridge which has one arch composed of stone. The shape of the handrail is hexagonal, and the support posts are sculpted to appear as one upright and one upside down lotus blossom. The front and the rear of the bridge are protected by four auspicious stone statues of animals. Some of these animals are crawling in the water, while others are crawling out of the water. This bridge dates from the Chosŏn period.

Chŏn'got Bridge

Chŏn'got Bridge was the first bridge to be built across the Han River in Seoul. Construction began on this bridge on the order of T'aejong (r. 1400-1418) in 1420 and continued for seventy-three years until 1493. The bridge is seventy-eight metres long and six metres wide, which made it the longest bridge constructed during the Chosŏn period. It is also known as the Salkkochi Bridge. Its construction used stone pillars topped by a flat stone roadway. It has been designated as Historical Site No. 160.

Architecture of the 20th centrey

With the opening of Korean ports after the Treaty of Kanghwa Island in 1876, many new architectural styles came into the port cities of Pusan, Wŏnsan, Inchi'on and even Seoul. The main force behind the new building styles were the Japanese, but also the sudden advent of foreign consulates in Korea created many new buildings. The building of the Russian, British, French, Belgium and German legations around the end of the nineteenth century, all of which were two-storey, quasi-Renaissance style buildings that marked a major change in Seoul. In addition, the opening of Korea led to a surge of missionaries and with them churches and schools. The Paejae Academy (1886), Chŏngdong Church (1898), Yakhyon Cathedral (1892) and Myŏngdong Cathedral (1892-1898) were all Gothic style buildings.

After the Russo-Japanese War of 1904-05 and the resulting treaty, the major influence in Korea was Japan, which now had begun taking steps to colonise Korea. However, buildings such as the State Council Building (1907) and the Korean Empire National Assembly Building (1908) were built for the new Korean government. During the Japanese colonial period, the Japanese also constructed many buildings in Korea, with the most notable example being the quasi-renaissance style Government General Building built in front of Kyŏngbuk Palace.

After liberation in 1945, activity in architecture was sluggish due to the economic condition of the country and became further slowed with the outbreak of the Korean War in 1950. But while the South Korean Army was in refuge in Pusan, a tower commemorating the faithful spirit of the army was designed. After the armistice agreement that halted the hostilities was signed, activity in architecture gradually increased.

The primary buildings of the 1950s, include the main building of Dongguk University (Song Mingu, 1956), Myŏngbo Theatre (Kim Chungŏp, 1957), the main building of Pusan
University (Kim Chungŏp, 1957), Seoul National University's Agricultural College Building (Kim Hūich''un, 1957), the Science Museum of Chŏngshin Girls' High School (Kim Chŏngsu, 1958), the Hyeohwa-dong Cathedral (Yi Hūit'ae, 1958), and the National Meteorological Observatory (Chŏng In'guk, 1959). These buildings were all built in a general manner patterned after an international style.

In the 1960s, after the May 16 Revolution in 1961, architectural activity became active along with the rapid industrial development that swept Korea. In this period, important buildings include the Seoul Civic Assembly Hall (Yi Chŏnsŏng, 1961), the French Embassy (Kim Chungŏp, 1962), the various buildings Walker hill Hotel (Kim Hūich''un and others, 1962), Myŏngdong Holy Mother Hospital (Kim Chŏngsu, 1963), Hanyang Country Club (Yi Kwangno, 1964), Liberal centre (Kim Sugŭn, 1964), Assembly Hall of the Arts (Kang Myŏnggu, 1964), Kyŏnggi Provincial Office (Kim Hūich''un, 1967) and the Church of the Martyrs (Yi Hūit'ae, 1967). These buildings all revealed a tendency towards an international style and moreover, the buildings manifested the architects' interpretation of how the buildings should express themselves to the public in a characteristic manner.

The distinctive features of the architectural activities of the 1970s were large sized buildings of the major corporations, construction of massive apartment blocks, and a rapid increase in the amount of monumental type architecture. Major projects of this period include the National Theatre (Yi Hūit'ae, 1973), National Assembly Building (Kim Chŏngsu, 1975) and the Sejong Cultural centre (Om Tŏgmun, 1978). These buildings reflected both the influences of modernism and Korean influences in their designs. Major buildings of the corporate sector in this period include the Tongbang Life Building (Pak Ch'unmyŏng, 1976) and the Daewoo centre (1976). The business buildings reveal a tendency towards both a rational and modern design. The many apartment buildings that were constructed during this period reflect both a rational and functional approach in their design that marked a systematic change in their appearance.

The 1980s were characterised by the work of young architects, who had been educated in Korean universities, designing outstanding works. In addition there were other exemplary architects who had studied in America and Europe, now returning to Korea and making their presence known by the design of many buildings. Particularly prior to the 1988 Seoul Olympic Games, there were many design competitions held and many new buildings that were constructed for this monumental event. Images of such grandiose projects such as the main Olympic Stadium were broadcast around the world. Other major projects of the 1980s include the 63 Korea Life Building that reaches sixty-three storeys into the Korean skyline and numerous other major buildings that reflected the new status of Korea as an economic force in Asia. The buildings of this period reflect various styles that range from attempts to blend modernism with the legacy of Korean traditional forms, and such new theories of design as neo-rationalism, deconstructivism and advanced technology.

In the 1990s, the government created massive apartment housing in satellite cities located in the suburbs of Seoul and the other major Korean cities, in an effort to build 2 million new homes. Moreover, with the selection of Taejŏn as the site for the 1994 World Expo, massive construction projects for this international event were carried out. Many public institutions were also constructed during this period, with most holding design competitions to select the model that best suited the project aesthetically and functionally. Other major projects now underway in Korea include the construction of the new international airport on Yongjong Island and the National Museum of Korea. These projects should further enhance the image of architecture in Korea.

Introduction

Prehistory

Neolithic man, who is characterised by the use of polished stone tools and pottery, probably appeared on the Korean peninsula about 4 000 BCE. A thousand or so years later, his pottery began to display geometric designs, often referred to as ‘comb pattern pottery’ (pitsal muni t’ogi), and is considered to be a feature of the Neolithic period. This comb-patterned pottery has a ‘V’-shaped base and the exterior is marked with parallel lines that suggest the use of a toothed tool. The widely-scattered areas in which this pottery is found, stretching from South P’yŏngan province to the present-day Seoul area, reveal that Neolithic man occupied a great deal of the Korean peninsula. Also, pottery with identical designs has been found in many regions, including eastern-Sibeda, the basins of the Amur and Sungari rivers in Manchuria, and in parts of Mongolia. This indicates the wide geographical distribution of the people who made this pottery, as well as their probable southern and eastern migrations.

Art of the Neolithic and Bronze Ages in Korea leaned towards function, but came under the strong influence of the shamanistic religion that dominated the lives of the people. Crude figurines, made of clay, stone, or bone, are thought to have been manifestations of tutelary deities that early Korean man believed would be talismanic against injurious forces. By the advent of the Bronze Age, art had developed considerably from its earliest stages, as witnessed by extant bronze daggers and ornamented bronze mirrors. As in the Neolithic period, geometric patterns continued to be the dominant form of ornamentation, and this is common to many regions of Siberia, Manchuria and Mongolia, thereby indicating a shared cultural background. While this abstract tendency in early Korean art was later dominated by a naturalistic style entering the historical period, it remained the underlying current of Korean art until the end of Chosŏn. Opinion is that the abstract trend in Korean art is a product of the northern origins of the Korean people, while the naturalist tendencies are thought to be a by-product of the influence of Chinese culture on Korea and the change of a
heretofore nomadic people into settled agrarian communities.

Bronze Age art continued to be marked by its close relationship with shamanism. And so the artifacts that have been recovered from this period seem to be largely ceremonial in their use. Elaborately ornamented dagger hilts, bell-clusters, bronze mirrors and a wide array of objects engraved with representations of horses, tigers, deer and other animals reveal the range that early Korean man fashioned from bronze. Given the amount of time needed to make such articles, it is thought that the owners would most likely have used them for ritual purposes and that they were manifestations of the ability to control supernatural forces. Also extant from this period are rock drawings and carvings, which depict either hunting and fishing scenes or geometric designs, which indicate the desire of ancient man to record important events in his life.

The Three Kingdoms

With the advent of the third century CE, the Koreans had extended their art forms to painting, sculpture and architecture. The introduction of Buddhism to the peninsula in the fourth c. also had a major effect on the development of Korean art. From then, the naturalistic tendencies in art began to appear, revealing the beginning of the influence of Chinese culture on Korean civilisations.

Koguryo, by virtue of being the northern-most of the Korean kingdoms, was heavily influenced by Chinese civilisation almost from its inception. Koguryo art, however, retained a distinctive style throughout its existence, and this became even more pronounced in the later periods. Hence, Koguryo art does not have the decorative and graphic qualities of Chinese art, but instead exhibits sharp and angular lines, with dynamic and forceful lines of animal drawings displayed in both bronze and stonework. Particularly of note is the difference manifested in Koguryo and northern Chinese Buddhist images. However, the Koguryo images reveal softer and more rotund faces, with less decorative drapery folds than do their northern Chinese counterparts. Accordingly, we can see the trends of softness in lines and modelling, which lend to the emotions of serenity and harmony, as the essential characteristics of Koguryo art.

Paekche, located in the southwestern region of the Korean peninsula, had the greatest diversity in its contacts with foreign countries, which ranged from Japan to the southern regions of China. The influence of southern Chinese art on Paekche Buddhist art is quite evident as the sculptures and drawings in the Korean kingdom reveal the same smooth and sensuous qualities found in the Chinese models. Perhaps the most famous piece of Paekche art is the gilt-bronze seated Maitreya, which has a serene, round face with just the trace of a smile; elegant feminine fingers that lightly touch the cheek; beautifully formed arms; and an unbroken line of body that together reveal a level of artistic achievement that heretofore had not been even closely approached. There are also extant examples of Paekche art in Japan which display similar qualities. Therefore, Paekche art is denoted by its understanding of the human form, and the elegance and natural manner in which it is represented.

The early art of Shilla reflects the relative isolation of the formative period of the state. Thus, characteristics of simplicity in form and colour, along with a harmony of functional and non-functional implements can said to be manifested in much of the early Shilla art. The desire of Shilla artisans to create objects reflecting the qualities present in nature is best seen in the pottery of the early period. Here, the natural approach is seen in the imperfections present in the pottery and the lack of attention to detail. These imperfect vessels, some not symmetrical and others with ill-fitting lids, were not viewed as being inadequate, but instead as mirroring the conditions found in natural objects, which is exactly what the Shilla artisans desired to capture in their art.

The art of the Korean Three Kingdoms, when compared with that in China, can be said to
have a greater emphasis on natural appearance and human warmth, rather than on precise
detail. While the art of this period may not have the depth of detail as Chinese art does, it
cannot be labelled as inferior in terms of qualities such as sophistication and skill. The
fundamental characteristic in the Korean art of this period was, however, not in detail but
instead in reflecting the beauty of nature.

Greater Shilla and Parhae

The art of Greater Shilla is notable in that it represented the northward expansion of the
Shilla art-style along with an eventual blending of this style with those of the former
Paekche and Koguryob kingdoms. Moreover, during this period the cultural influence of the
Chinese Tang dynasty had a major effect on the art of the Korean peninsula.

There is room for support of the argument that the zenith of Shilla art is to be found in
Buddhist temples such as Pulguk Temple and the Sokkuram grotto, both of which date
from the mid-eighth c. While only the stonework remains from these structures, it reveals
the high level of artistic achievement of the Shilla artisans. The art of this period was more
refined than in former times, and while the styles used are uniquely Korean, they do show
the strong influence of Tang. The sculptures and relief carvings at Sokkuram demonstrate a
great interest in human anatomy and physical beauty, but unlike Chinese or Indian
sculptures, do not display eroticism. Shilla sculpture reflects more than mere physical
beauty; it imparts a sense of spiritual beauty to the viewer. The stone pagodas at many
temples and temple sites provide a linear harmony not present in either China or Japan. As
well, the use of stone in Korea shows marked differences with China and Japan, which
predominantly used bricks and timber respectively.

While there are few remains of art from Parhae, those that have survived, along with
historical records, reveal that the chief influence was from Koguryobo, whose refugees
founded this northern kingdom. Many artifacts of Parhae indicate close ties to the art of
Koguryobo, such as Buddhist statues and the lotus blossom motif with which certain roof
end tiles were decorated. Along with the Koguryob influences, however, there were many
aspects of Tang artistry incorporated into the structures of Parhae, thus creating a more
refined art than that found in Koguryob. Unfortunately, the few remains from Parhae do not
allow a thorough analysis of the artistic qualities of this kingdom.

Together with the disintegration of Shilla in the ninth c., was a proportional breakdown of
sculptural techniques. This change is most notable in the faces of Buddhist images which
lacked emotion and no longer displayed spiritual depth. While this was generally a period
of decline, one distinguishing feature was the popularity of memorial stupas, which were
often erected in honour of monks.

The artistic qualities of these monuments are worthy of note, with their display of dramatic
lines and vigorous swirl-design motifs, which well reflect the tumultuous period in which
they were created.

Koryob

Koryob was not only a period of change in politics, but also one of great movement in art.
With the transfer of the capital from Kyongju to the northern city of Kaesong, a new
vitality was injected into the art of the people. Buddhism remained the central force in art,
but it is the Koryob celadon that best exemplifies the artistic achievements. The upper classes
led luxury-filled lives and this is exemplified not least in the pottery of Koryob.

Koryob celadon is claimed, both by the Koreans and the Chinese, to represent the perfection
of Sung dynasty pottery. While it may have been created by the upper classes of Koryob in
an attempt to emulate the Chinese, the artisans of Cholla Province developed it far beyond
the Chinese exemplar. This excellence is seen first in the beautiful colour of the pottery.
Although some Koryŏ celadon may be yellow-green or yellow-brown in hue, it is the jade green pieces that are most highly prized. Then, the unique and varied designs of Koryŏ celadon took many different forms which expressed the emotions of the artisans; as shown in the exquisitely-shaped incense burners and water-droppers crafted in the shape of lotus flowers; rabbits; turtles; parrots; dragons; lions; tigers; and many other diverse objects. A further feature of Koryŏ celadon is the intricacy and beauty of the engraved or inlaid designs. Included among the many images found on the pottery are cranes; deer; chrysanthemums; willow; bamboo; grapes; and stylised gourds. Koryŏ celadon also continued the tradition of mimicking nature in that there were no uniform or standardised qualities to the pottery, but each piece was individually crafted, likening it to nature, which itself does not create exact copies.

Other noteworthy Koryŏ art includes Buddhist sculpture, primarily between the tenth and twelfth centuries, which revised some of the skills of Shilla. Particularly, the images created were given the warm countenances that graced the Shilla statues, although the figures tended to be more rotund than their predecessors. The advent of the period in which Koryŏ was dominated by the military forces led to a decided decline in artistic traditions and skill, and as a result, the door was opened for new trends in art to emerge during the subsequent Chosŏn dynasty.

Chosŏn

With the coming of neo-Confucian philosophy as the guiding ideology of Chosŏn, Buddhism was subjected to severe suppression by the government and accordingly, lost its position as patron of the fine arts. The yangban ruling class had neither the financial ability nor the interest in acting as patron of the arts, and their artistic inclinations leaned to painting and calligraphy. This is not to say that there was a complete neglect of the arts during Chosŏn, as artisans were unrestricted, resulting in perhaps a more dramatic expression of emotion in art than in former times. Nonetheless, the principles of Confucianism must be to the fore when discussing Chosŏn art.

The combination of the traditional naturalism manifested in Korean art with the Confucian influence clearly created a special type of decoration in Chosŏn art. This is evident in paintings; ceramics; architecture; and even in garden landscapes. Therefore, in architecture, simple buildings that harmonised with the surrounding landscape are the standard, and this is easily seen in structures such as Kyŏngbuk Palace. Gardens were developed using the natural terrain to its full advantage and these were without the artificial features that dominate Japanese landscapes. Even the furnishings of Chosŏn homes reflected this same simple naturalism. Wood-crafted pieces are functional and this enhances the aesthetic qualities of furniture, while the strong lines emphasise the utilitarian features.

Ceramics also hold an important position in the discussion of Chosŏn art. Initially, pieces of a soft blue-green were preferred, but by the end of Chosŏn, the most common colour was white. The lines of Chosŏn pottery were simpler than those of Koryŏ, and the bases of pieces were larger, thereby creating a more practical vessel, which gave a sense of both functionality and sturdiness. As well, the ornamentation was (in keeping with the spirit of Chosŏn) quite simple when compared to that of Koryŏ. In all, the ceramics of Chosŏn well reflect the changes from Koryŏ that were manifested in art as a whole.

As the end of Chosŏn drew closer, ideological changes such as the shirhak (practical learning) movement had their impact on the art world. Realism came into vogue in painting as artists sought to capture the natural surroundings of the countryside, as they saw them. Genre painting, too, became fashionable as artists such as Kim Hong do (1745-?) and Shin Yunbok (1758-?) sought to capture scenes from everyday life in their works. The rise of genre painting is thought by some scholars to be a backlash against the oppressive Confucian ideology, which diminished the importance of human life. Likewise, during late
Chosŏn, ceramics underwent substantial change as the technique for making blue pigment became widely known. Consequently, blue on white porcelain gained widespread popularity, and although these ceramics were more elaborate than those of early Chosŏn, they still emanated the fundamental Korean characteristic of naturalism.

By the close of Chosŏn, many new types of artistic expression had found their way to Korea. Western art, particularly, had the most substantial impact on Korea for the first half of the twentieth c., as Koreans discovered the many artistic avenues of the West. Accordingly, the first half of the twentieth c. was a period of artistic experimentation and discovery. Korean artists did, however, preserve many of the fundamental elements that had long been present in Korean art, creating a synthesis of Western and Korean art. Therefore, when examining representative artwork of this period the influences of both Western and Korean traditions are distinctly evident to the discerning eye.

Art galleries (see under each art gallery)

Asan

Situated in South Ch’ungch’ŏng Province, Asan consists of the town of Yŏmch’i, and the townships of Togo, Tun’o, Paebang, Sŏnjang, Songak, Shinch’ang, Yŏngin, Ümbong, Inju and T’angjŏng. Combining the areas formerly known as Onyang City and Asan County, the city covers an area of 509.75 square kilometres. Mt. Kwangdŏk (699m), Mt. Manggyŏng (600m) and other peaks of the Ch’aryŏng Mountain Range run along the city’s southern border, but most of the city area is low hills and flat land. Numerous reservoirs are found scattered throughout the city, and to the northwest, Asan Bay links the area with the Yellow Sea.

With relatively level land and ample water for irrigation, the city is well-suited for rice growing. In the northern hilly areas there are orchards and cattle farms. Dry-field crops grown in the city include barley, Chinese cabbage, turnip, leek, garlic, cabbage, red pepper, carrot, corn and watermelon. Fruit crops include apple, pear, peach and grape. In addition, speciality crops such as cotton and tobacco are cultivated. Fishing and sea-salt extraction were formerly common in Asan Bay, but the marine products industry went into decline after the creation of the Asan and Sapkyo Stream sea-walls. However, several eel farms are to be found in the area. Factories in the city produce textiles, pulp and other wood products, foodstuffs, ceramics, electronics, dressed stone and chemical products.

Asan’s tourism is centred around its famous hot springs. During Chosŏn, or perhaps before, kings came here to bathe, and the Onyang Hot Spring is acknowledged as one of Korea’s oldest and most popular hot spring resorts. The spring has a high sulphur content and its temperature can reach 50℃. In Togo’s Kigok Village, is the Togo Hot Spring. This has a somewhat lower water temperature than Onyang, but as the bathing can be combined with a number of recreational facilities, including horse riding and golf, it is equally popular with visitors.

Tourists also come to see the various historical sites scattered around the city. Important Buddhist artefacts in the area include a stone pagoda and Buddha statue at Kwanŭm Temple just west of Highway 39, a multi-storey pagoda at nearby Shinshim Temple, an interesting Maitreya statue with features carved in intaglio in Yŏngin’s Shinhyŏn Village, a five-storey pagoda in Yŏngin’s Asan Village and a stupa and a child-like Buddha figure in Onch’ŏn-
dong near the city centre. As for active temples, Ponggok Temple (founded in 887) lies at the foot of Mt. T’aehwa in Songak.

One of the most famous historical sites in the city is Hyŏnch’ungsa, an old ancestral shrine situated at the foot of Mt. Panghwa in Paegam Village. Founded in 1706 in honour of the famous admiral Yi Sunshin (1545-1598), the shrine was rebuilt in 1932. Within the main shrine building is a memorial portrait of Yi, painted by Chang Usŏng in 1953. In the shrine complex one can also see the old house where Yi grew up. Next to the house, there are two gingko trees that are said to be over 500 years old and a range where Yi practiced archery and martial arts.

The city also contains a number of Confucian schools, including Asan Hyanggyo (founded in 1575) just west of Highway 39 in Yongin, Shinch’ang Hyanggyo (restored in 1872) just north of Highway 21 in Sŏnjang, Insan Sŏwŏn (founded in 1610), Chŏngtoe Sŏwŏn (founded in 1634) and Onyang Hyanggyo (founded in 1871) in Úmnae-dong just west of Highway 39. Asan has three universities -- Hoseo Paebang Township, Soon Chun Hyng in Shinch’ang Township and Sun Moon in T’angjŏn Township.

Australia and Korea

In October 1889, prior to the formation of the Commonwealth of Australia, missionaries from Victoria arrived in Korea as a vanguard of what was to become a distinctly Australian presence, a presence that was to continue till expelled by the Japanese in 1941. The first missionaries were the Rev. J. H. Davies and his sister Mary who after staying in Seoul for five months set out for Pusan with the intention of establishing a mission. Before reaching Pusan, however, the Rev Davies contracted smallpox and pneumonia and died on 5 April 1890. Following his death his sister returned home. It was not until October 1891 that replacements arrived in Pusan. The party consisted of Mr and Mrs Mackay with Misses Menzies, Fawcett and Perry of the newly formed Presbyterian Women’s Missionary Union. Due to poor living conditions Mrs MacKay died within three moons of arrival and Mr Mackay fell ill. Although never as large in numbers, nor as wealthy as other “national” missions, the Australians developed a reputation not only for their religious work but also for their grass roots practical activities and common sense approach, establishing schools, a leprosarium, an orphanage, clinics, hospitals, trade and farm institutes and social work.

Under their direction the Ill Shin School (Pusan), the Myoora Orphanage (Pusan), and schools in Chinju (Kwang-nim and Si-wun), Masan (D.M. Lyall, Eui-sin (Ŭishin) and Chang-sin(Ch’angshin)) and Tongnae (J.B.Harper Middle School), were established. On the medical front dispensaries and later hospitals were established at Pusan, Chinju, Masan, T’ongyŏng while the doctors, additional to their own responsibilities, gave of their time to assist at Severance Hospital for short periods each year. By 1939 all mission schools closed as a result of the education registration policy of the colonial government. For the entire period, till they were forced to leave, the Presbyterians who continued to come largely from Victoria were centred in the south, particularly in South Kyŏngsang Province where they eventually undertook responsibility for the whole province. In addition to their responsibility for the province, Australians were also seconded to the staff of the Union Christian College in Pyongyang, the Severance Union Medical College in
Seoul., Australian s were also to serve on the board of managers of the Severance Hospital. Interestingly the a majority of Australian missionaries were single women. The fact that there was a distinct Australian presence allowed them to act in a mediating role within The Comity of Missions, particularly among the “competing” American factions, and in co-operative efforts with Australian members of the Salvation Army in social work, eg girls lured into prostitution in Japan were often stopped in Pusan and sent to Seoul to be cared for by the Salvation Army.

Just prior to the outbreak of the Pacific War the majority of Australian missionaries had fortuitously left for Australia on leave. All remaining missionaries were interned in 1941, sent to Japan in June 1942, returning home in November of the same year. The expulsion of the missionaries brought to a close over 50 years of Australian contact with Korea.

With the end of the Second World War not only did missionary interest in Korea revive but the Australian government itself took an interest in Korea. As part of an expanded foreign policy that was the direct result of its desire to participate in the peace negotiations with the allies as a party principal and a belief that Australia had a right, due to its contribution in the Pacific War, to be fully involved in any final Pacific settlement Australia assumed a more independent and aggressive foreign policy, with a subtle shift away from the UK toward the US. Australia wanted a harsh peace treaty and was willing to push its claim by adopting a higher international profile both at the Peace Conference and at the newly emerging United Nations. To establish its international profile but in line with the internationalist outlook of its foreign minister, later first president of the UN Dr H.V.Evatt, Australia pushed for inclusion in the Moscow Conference. Although not granted a seat at the Conference, Australia was able to have the UK advise the other parties that if the Korean Trusteeship was established Australia would replace Britain as a member. With the transfer of the deadlock on Korea to the United Nations, Australia took a very active role. Australia accepted membership on the United Nations Temporary Commission On Korea (UNTCOK) and its members were participants in the team that were to monitor the first elections.

The United States hoped the elections would allow for the establishment of a Korean government that would be acceptable to the West. It was believed that it would be dominated by the southern sector as the majority of Koreans were living in that half of the peninsula. When it became obvious that the USSR might thwart this possibility the US pushed for elections to be held only in the south, a position at variance with Australia which feared any move that might formalise what was meant to be a temporary division. Even after the elections, the Australians restricted the US sponsored UN resolution aimed at declaring the elections in the south as forming the only legitimate government for the whole Korea. Australia was able to modify the resolution to state that the government, to be formed from the election, was the only legitimate government in that area in which it had been possible to monitor elections. The resolution accepted by the General Assembly on 12 December 1948 not only established a legitimate government but also called for a new commission, The United Nations Commission On Korea (UNCOK) to continue the work of UNTCOK.

Just as Australia had established a high profile on UNTCOK so it dominated UNCOK from the outset with the arrival of Shaw and Jamieson in February 1949. By 15th August 1949, Australia extended diplomatic recognition to the ROK government, it having seen the UN resolution and recognition as separate questions. On November 22nd 1949, Australia in the Political Committee requested the Security Council consider the ROK for UN membership. By May 1950 Australia was the only country to have responded to requests for military observers and it was the Peach/Rankin report delivered to UNCOK on 24th June 1950 that greatly assisted in UN deliberations, the report clearly indicating that the attack came from the north. Although evacuated to Fukuoka on 27th June Jamieson, Peach and Rankin were instrumental in having UNCOK return to Korea on 30th June and
remaining throughout the war.

The Korean War was also to mark the period of greatest direct Australian involvement in Korea. On the 28th June 1950 HMAS’s Shoalhaven and Bataan were put at the disposal of General Macarthur, two days later 77 Squadron was committed and on 26th July the acting Prime Minister A.W. Fadden committed the 3rd Royal Australian Regiment. Australia’s commitment was to continue at roughly this level until the armistice, the last Australian troops finally leaving in 1957. Although involved in many battles the Australian troops are perhaps most remembered for the battle of Kap’yŏng on 24th April 1951. Throughout the Korean War Australia’s casualties were 275 killed, 1034 injured and 37 missing in action.

Between the end of the Korean War and the establishment of an Australian embassy in Seoul in 1962, Australia maintained its presence on the United Nations Commission for the Unification and Reconstruction of Korea (the successor to UNCOK) even though the role of the commission was restricted by its terms of reference and the position of the ROK government. This membership on UNCURK was a quasi diplomatic presence that allowed for Australian-ROK contacts. With the Australian diplomatic presence formalised and the activities of UNCURK scaled down direct bilateral exchanges were very limited for the next decade. In April 1967 H. Holt was the first Australian Prime Minister to visit the ROK with President Park Chung Hae visiting Australia the following year. 1968 also saw the arrival of the first official Korean migrants to Australia, Choi Yung Kil his wife and daughter. The main area that saw any real growth was in trade, which increased twelve fold between 1961/2 and 1971/2. As trade increased Australia and Korea entered into several agreements. In 1965 the first Australia-Korea trade agreement was signed followed three years later with Australia’s first ever agreement, with any country, on annual trade talks at the ministerial level. In an attempt to broaden the relationship a Cultural Agreement came into force in June 1971. Although UNCURK was to continue till 1973, with Australian participation on all commissions, it had outlived its usefulness signalling, however, a formal end at UN attempts to unify Korea and thus Australia’s participation.

The relationship had grown largely as a result of trade and despite minor trade friction was a friendly, though somewhat detached, until 1973 when the Australian move to recognise the Democratic People’s Republic of Korea strained the relationship. The Whitlam Labor government’s intention to extend recognition to the DPRK incensed the ROK as did the ROK’s kidnapping of Kim Dae-jung strain the relationship from the Australian viewpoint. Although the bizarre departure of the DPRK from Canberra in 1974 ended the concerns from the Korean end, human rights were to remain a strain on the relationship for the next fifteen years.

By 1975 it was necessary to renegotiate the bilateral trade agreement and four years later there was agreement on nuclear co-operation and the transfer of materials. Regular meeting were also commenced on raw materials and their processing. These were followed by agreements on shipping(1979), fishing(1979;1983;1984;1985;1986; 1987), taxation(1982),extradition(1990),civil aviation(1992;1993), assistance in criminal matters(1993).

That the expansion of the relationship from the mid 60’s to the mid 80’ s was almost entirely economically driven is clearly illustrated by reference to the trade figures for the period. From 1962 till. 1983 Australian-ROK trade grew from A$3.6million to over A$1.3billion

Main Items of Trade

Australia

The major items of Australian exports to Korea still remain bulk raw materials but there has been and is a concerted effort to diversify into more processed and semi-processed goods. Iron Ore
As the Korean economy developed in the 1970’s so too did the demand for iron ore, a demand Australia was only too keen to fill. By 1990 Australia was the largest supplier of iron ore (A$267million) to POSCO.
Coal
In line with the demand for iron ore so there has been a similar growth in the supply of coal. By 1990 Australia was the largest supplier of coking coal (A$325million) and the second largest supplier of steaming coal (A$247million).
Beef
The Korean beef market was opened, to a limited extent, in 1988. By 1990 Australia was the largest supplier of beef to the Korean market (A$142million)
Aluminium
Exports of aluminium only started in 1980 and were at a very low level. Within ten years, however, Australia was able to capture approximately 50% of the Korean market (A$255million).
Other Raw Materials
By 1989-90 Australia had obtained significant market shares in Korea for the following items
Raw Sugar 43%
Wheat 12%
Cotton 8%
Wool 80%
Gold 99%
Zinc ore 56%

It was not till the mid 1980’s that there was a broadening of the base of Australian exports away from raw materials. Since that time there has been a steady growth in items such as motor vehicle parts, computer related equipment, office equipment, and photographic film. Apart from visible trade growth, receipts from invisibles also began to increase in importance from this time. Australia was increasingly seen by Koreans as an educational destination. Just as there was a blossoming of educational services so was there an explosion in the number of tourist visiting Australia. In 1986 4,800 Koreans visited Australia, increasing to 23,00 in 1991 and 168,000 in 1995 representing 5% of all visitors. The growth in the numbers being the direct result of the liberalisation on travel by the Korean government and the establishment and expansion of direct flights by QANTAS and Korea Air and more lately the addition of flights by Ansett Australia and Asiana.

Republic of Korea

Virtually all Korean exports to Australia consist of manufactured or semi manufactured goods. Although there has been a steady growth in the value of Korean exports to Australia
the growth has not been as rapid as the growth in Australian exports but it has meant a continuing lessening of the trade imbalance from over 5:1 in the 1960's to 1.7:1 in 1990. The major items have included passenger vehicles, footwear, iron and steel products, rubber tyres and cases, textile yarn, musical instruments, man made fabrics, ships and boats, computers, VCRs and other electronic goods.

In addition to the merchandise items, Korea because of its strength in shipping was able to have a favourable balance on invisibles till the mid 1980's but with the influx of tourists to Australia and the sale of Australian educational services the balance has generally moved in Australia’s favour.

Not only was there a broadening of the Australian export base in the mid 1980's but there was a more general realisation that the whole relationship itself needed to be broadened and more formal mechanisms were needed to deal with the developing trade frictions. In general Australia’s complaints related to a perceived tardiness on the part of Seoul with regard to trade liberalisation, particularly in the area of farm products and processed foods while Seoul was concerned with the continuing, though declining, trade imbalance.

Koreans in Australia.

Although it can not be substantiated it is believed that the first Korean resident may have come to Australia in the 1920’s. The White Australia policy ensured that no Koreans were permitted to reside in Australia, although there were a few exceptions such as the Korean wives of an American veteran and an Australian diplomat who served in the Australian Embassy in Seoul. The abolition of the policy in 1966 did not see any initial increase in Korean migration and the first of those who did settle were generally those who had worked overseas for Korean companies. Because of a lack of English and a general lack of formal educational qualifications this first wave of immigrants generally had a difficult time in adjusting to Australian society. Toward the end of the 1980’s a second wave, of younger, more upwardly mobile Koreans with English language skills moved to Australia in search of a better quality of life. This trend has been accelerated through tourists returning to Korea. The newer arrivals also tend to have entrepreneurial and managerial skills. In 1981 there were 4,515 Koreans living in Australia, 9,248 in 1986 and by 1991 there were 20,901 Koreans in Australia with approximately two thirds living in Sydney.

Increased Co-operation.

The results of the desire to broaden the relationship has resulted in increased co-operation between the two countries, not only on a bi-lateral level but there has been joint co-operation in regional matters. The most obvious example of this is Australia’s and Korea’s efforts in relation to Asia Pacific Economic Cooperation (APEC). The initiative was announced by Prime Minister Hawke of Australia in Seoul in January 1989, attracted support from Seoul and both countries have continued to play an active role in the development of the concept.

The visit by President Roh Tae Woo (only the second Korean leader to visit Australia at that time) in 1988 resulted in the establishment of a joint Cultural Commission and an Australia - Korea Forum. The Forum met in Canberra in 1989 and in Seoul in 1991. The result of the meetings was the establishment of a series joint organisations to promote understanding and exchange. The Australia-Korea Foundation was to encourage greater co-operation in education, culture and the media. As a recognition of Korea’s ability to adapt research and Australia’s strengths in basic research a Korea-Australia Science and Industry programme has been established to utilise this complementarity. Another result of the Forums was the development of co-operation between educational institutions, student exchanges and the promotion of Korean studies, including language, in Australia and the introduction of Australian studies to Korean universities. Greater dialogue between the two countries on security and political matters also resulted, eg Korean OECD membership,
drift netting by the ROK, concerns regarding Antarctica.

The realisation of the importance of the relationship has been expressed by an increase in the frequency and duration of visits and the leaders of both countries are at pains to maintain a personal relationship that can be used to solve potential problems. Given the desire by both parties the relationship should continue to grow and strengthen, however given the uncertainty surrounding the DPRK and the various scenarios surrounding possible reunification one can only speculate at the direction and form that relationship might take.

Relations with the Democratic Peoples’ Republic of Korea

Australia’s relations with the DPRK have always been very limited and of little practical importance. After the Second World War the Australian government had viewed Korea as one entity and adopted policies it hoped would ensure unification. Australia was not successful in its’ efforts, despite continued attempts by UNTCOK and UNCOK to engage north Korea in a dialogue. The 1950 invasion of south Korea by the DPRK was to set the tone of the Australian outlook on the DPRK which was maintained by consecutive governments until the Whitlam Labor government came to power and in 1973 setout to quickly recognise the northern state. Contacts up till the change in government had consisted almost solely of a limited trade involvement. The move to recognise Pyongyang deeply worried the ROK who warned of possible consequences to the growing relations between it and Australia, a threat treated lightly by Australia. The change in the political complexion of the government from Liberal/Country Party to Labor was the underlying reason for the change in an established policy wherer the Labor party indicated that it wanted a more even handed approach to the Korean question and the left wing of the party had serious doubts as to human rights issues in the ROK. The DPRK established an embassy in Canberra on 30 December 1974, but, ostensibly in response to Australia’s voting in the UN, suddenly withdrew all its staff on 30th October the next year, expelling the Australians from Pyongyang on 8th November allegedly for misconduct. Although there have been recent attempts by the DPRK to revive the relations, which at the present are classified as interrupted, Australia has given a cool response, citing an unsatisfactory explanation for the departure from Canberra, money owed by the DPRK to Australian exporters, DPRK international behaviour and more recently the nuclear issue. The nuclear issue has proved a serious stumbling block due to Australia’s interest in the restriction of nuclear weapons and adherence to the IAEA conventions. At present there would appear little likelihood of the situation changing until there is a change in the DPRK position as any trade with the DPRK would be insignificant in comparison with trade with the ROK.

Basic Glossary of Korean Studies

Basic Glossary of Korean Studies was compiled by Ki Joong Song (Song Kijung) of The Academy of Korean Studies to provide students of Korean studies and scholars with standardised terminology for historical and contemporary Korean words and names. The glossary was published in 1993 by the Korea Foundation and consists of 338 pages. The first of its kind in Korean studies, the glossary gives each term in Korean and Sino-Korean characters, if applicable, and then gives the English translation of the term. Categories include archaeology; art; education; language; literature; music; dance; philosophy; political science; public administration; and religion. Additionally, the work incorporates many terms for Korean history found in A New History of Korea, written by Ki-Baik Lee (Yi Kibaek) and translated by Edward W. Wagner with Edward J. Shultz. The Basic Glossary of Korean Studies also includes the names and dates of many personages from Korean history.

Basic Glossary of Korean Studies includes a list of explanatory notes and abbreviations; the list of entries arranged by Korean alphabetical order; and appendices listing the names of government and private institutions in South Korea; frequently occurring post-positional mono-syllabic terms; and the dynastic lineages of the Korean kingdoms. It is an extremely useful work for establishing standard terminology for Korean studies. It does, however, have a few faults including some errors in both spelling and dates, and moreover, does not include any of the terminology related to Korean folklore studies because of the difficulty in establishing English language equivalents. Nonetheless, it is valuable for the contribution it makes to the standardisation of terminology in Korean studies.

Bethell, Ernest [United Kingdom and Korea]

Bibliographical Guide to Traditional Korean Sources

The Bibliographical Guide to Traditional Korean Sources is a work of five-hundred and eighty pages by Tai-Jin Kim (as author and editor), published by the Asiatic Research Centre of Korea University in 1976. Kim provides bibliographical notes on some one-hundred and forty-eight Korean sources from Shilla through Choson. He includes a brief description of the authors, content, and the circumstances surrounding these important literary and historical documents. Much of the information contained in Kim’s work was hitherto unavailable to those not competent in Korean.

The Bibliographical Guide to Traditional Korean Sources provides many useful comments on the authors of the various works, and at times gives short biographical sketches on notable people. The work, however, is not error-free, particularly in regard to dates given and in some of its historical information. Nonetheless, for non-specialists particularly, it has opened a door to much useful bibliographical information.

Bibliography

Most European languages have a technical term that has its origin in the term bibliography. In English usage (c. 1814), ‘bibliography’ has historically been used to designate a description of books. In today’s usage, however, it holds the meaning of a list of books or other literature on or relating to a particular subject, and the theory behind these compilations. Moreover, ‘bibliography’ can often vary to a degree, and may include such aspects as the investigation of particulars of the authorship, publication, and printing of a certain work. In the nineteenth c., the term ‘bibliography’ also included the science of the book and the organisation of libraries. This is commonly referred to as ‘historical bibliography’ in contemporary English language scholarship.
In the Korean language, the term sŏjihak is used in the same manner as the English ‘bibliography’. Sŏjihak literally means the ‘study of the records of books,’ which reveals that the aims of this academic discipline in Korea are essentially the same as they are in Western scholarship.

Original Text Bibliographies

The start of bibliography in Korean history can be found during the Three Kingdoms. In this era, books of many kinds were brought from China, and in the process of propagation, these were re-copied. As an integral part of the copying process, any mistaken or confused characters were adjusted, along with the correction of poorly written or erroneous sentences in the original text. In particular, any inconsistencies in the original would be rectified, and in the case of Buddhist texts, discrepancies would be compared with translations of the original in classical Chinese and even with other versions, in order to ascertain the correct word or phrase. With the advent of printing technologies, the need to ensure accuracy of the text became all the more important. An examination of the Dharani Sutra (mugu chŏnggwangdae tarani kyŏng), which is dated 751 C.E.(denoting it as the world’s oldest known printed material), reveals the care in which it was edited. Likewise, the Pohyŏbin tarani kyŏng, which was printed in 1007 at Ch’ŏngji Temple, is significant in that it corrected many of the errors present in the version transmitted from China.

The importance of the individuals who undertook the editing and engraving of woodblocks for the printing of Buddhist scriptures can be seen in both the establishment of the Kyojang Togam (Directorate for Buddhist Scriptures) and also at the end of the works, where the name of the monk who had ensured the accuracy of the work is clearly indicated. Therefore, an examination of an ancient Buddhist text will show the name of the monk, or monks, charged with the proof-reading and editing of the work. The meticulous care given to the correction of mistaken characters, sentences and inconsistencies in the various Buddhist texts is seen in the completion of the P’alman taejanggyŏng (Tripitaka Koreana), which was compiled both from earlier efforts and Chinese sources. There is a thirty-volume record of the many corrections, entitled Koryŏguk shinjo taejang kyojong pyŏllok (Record of the Corrections of the New Carving of the Tripitaka of Koryŏ), written by the monk Sugi. The thoroughness of Sugi is attested in that the P’alman taejanggyŏng carved during Koryŏ is accepted as the most accurate in the world, being almost flawless insofar as omitted characters and erroneous sentences are concerned.

During Chosŏn, procedures for editing and ensuring the accuracy of works before printing were taken to an even higher level than those practised in Koryŏ. Works edited at government offices were assigned to government officials, who completed the corrections. When a book was printed, regardless of whether it was with metal type or woodblocks, the errors in the original were corrected and then noted with a ‘corrected’ (kojjang) stamp. In the case of a book which was to be printed with metal type, a special official at the Office of Compilation and Corrections (Kamgyugwan) was given the task of correcting the work. The ultra-serious attitude in the compilation of books is seen in the legal code of the Taejŏn husongnok (National Code supplement), which prescribed harsh sanctions for errors in a printed work. The government official responsible at the Office of Compilation and Corrections, or any other governmental institution that had participated in the editorial and revision process would be punished by flogging, removal from his post, or by a reduction of pay. Quite clearly, therefore, accuracy in the compilation of books was very important. Consequently, the works printed with metal type during Chosŏn are distinguished by their accuracy and their fine quality.

After Korea’s liberation from the Japanese in 1945, the main thrust of activity in bibliography was expressed in Ch’oe Namsŏn’s revision of the Samguk yusa (Memorabilia of the Three Kingdoms) and in the Society for the Advancement of National Culture (Minjok Munhwa Ch’ujin Hoe), which also published revisions of the Samguk
yusa and the Samguk sagi (History of the Three Kingdoms). Also, at this time, Cho Pyŏngsun compiled Chungsu poju samguk sagi (Supplemented and Enlarged History of the Three Kingdoms). A thesis published on the subject of bibliography is ‘Saero palgyöndoen kop'an pon samguk sagi’ (Newly Discovered Ancient Editions of the History of the Three Kingdoms) by Ch'ŏn Hyebong. There are other other works by Korean scholars which seek to analyse the origins and contents of Korea’s ancient works.

**Bibliography Systems**

The importance of bibliographical techniques in the compilation of books in Korea was traditionally greater than in China, and this was due to the Korean desire to create accurate woodblock-print works. Today, the oldest extant bibliographical examinations are the three volumes of Shinp'yŏn chejong kyojang ch'ongnok (New Catalogue of Buddhist Sectarian Writings) written by Úich'on when he was editing the P'alman taejanggyŏng, and Taejanggyŏng mongnok (Catalogue of the Tripitaka Koreana), which is also in three volumes. In compiling Shinp'yŏn che chon'g kyojang ch'ongnok, Úich'on consulted scriptures, laws, commentaries and other Buddhist writings from Koryŏ, Song China, and Japan, et al, in order to prepare an accurate version of the Buddhist scriptures. Úich'on's work is notable in that it represents the first such work in East Asia and therefore, remains a valuable bibliographical resource to the present-day. The Taejanggyŏng mongnok, which is now kept at Haein Temple, is highly regarded for the study of the compilation process of the later compilation of the P'alman taejanggyŏng in that it deleted the supplements contained by the Shinp'yŏn chejong kyojang ch'ongnok and replaced the original omissions. And so, it provides an accurate record of the editorial process in the compilation of the P'alman taejanggyŏng.

During Chosŏn, with the intent to republish documents printed before the 1592 Japanese Invasion, materials were gathered from every corner of Korea for the Kosa ch'waryo. Serving a similar purpose for works printed after the invasion is Koch'ae an sojae ko (Treatise on the Whereabouts of Ancient Printing Blocks); which is a catalogue of works up until the mid-nineteenth c. Falling between these two works is Sŏ Yugu's 1796 catalogue, Nup'an ko (Treatise of Printing Plates), which is considered the principal authority on bibliography throughout Chosŏn. Other bibliographical catalogues of Chosŏn include, Koso mongnok chipsong (Catalogue of Ancient Books) and Han'guk ch'aekp'an mongnok ch'ongnam (Catalogue of Korean Printing Blocks).

With regard to those bibliographic works that introduce various aspects of Korean scholarly works, Kim Hyu's Haedong munhŏn ch'ongnok (Bibliography of Historical Documents) catalogues various literary records dating from Shilla to mid-Chosŏn. This work, compiled during the reign of King Injo (r. 1623-1649), contains records of some 670 documents. Other works include, Naryŏ yemun chi (Literary Records of Shilla and Koryŏ) and Naryŏ munjŏk chi (Catalogue of Shilla and Koryŏ Documents), which both focus on the early periods in Korea. Other bibliographies from late Chosŏn include those written by foreigners such as the Bibliographie Coreenne (Bibliography of Korea) compiled by M. Courant in four volumes, and Kosen satsufu (Record of Ancient Korean Books) compiled by Maema Kyŏsaku in three volumes. A number of contemporary works have been widely acclaimed for their discussion of bibliographical explanation, such as the eight-volume Han'guk chŏnjŏk chonghap mongnok (Complete Catalogue of Korean Works) published by the Society for the Preservation of National Literary Materials (Kukhak Charyo Pojon Hoe) from 1974 to 1980, and which contains a catalogue of private libraries.

**Present State of Bibliographic Studies**

Today, bibliographical studies in Korea encompass many facets of the discipline. Some of the aspects covered include the development of commentary concerning books, their origin and title changes. The shape and form of the book is also under scrutiny, with
bibliographers looking at the changes in binding types, in printing technology and printing methodology, among other aspects. Their research is highly specialised, with many bibliographers focusing on a particular era or genre of book, thereby making significant contributions to academic research.

Vast areas of scholarship still remain to be thoroughly examined in Korean bibliographical studies, such as an understanding of which particular qualities in Korean literature are uniquely Korean; and which elements of the Korean lifestyle are represented in literature and Korean consciousness, value systems and ideological beliefs. Today, academic enquiry in the field of bibliographical study seeks to find answers to these and other questions, through a deep understanding of Korean literature and its developments over the past 1,500 years.

Bibliography

**Bird-Bishop, Isabella Lucy (1831-1904)**

Isabella Lucy Bird-Bishop was a world traveller of the late nineteenth c. Born in England to a wealthy family she began travelling with her parents at an early age. Her independent adventures began with a trip to the Hawaiian Islands in the late 1860s, and it was in Hawaii that she discovered both her passion for exploring foreign cultures and for horsemanship. As a result of her time in Hawaii, she wrote *The Hawaiian Archipelago* (1886), which established her reputation as both a world traveller and as a writer. On the return journey from Hawaii in 1872, Bird-Bishop stopped in Colorado and became so enamoured with the Rocky Mountains that she stayed there for a period and operated a cattle ranch. In 1881, she married Dr. J.F. Bishop, an eminent Edinburgh physician, but he died a short three years thereafter. After this, she resumed her travels and journeyed to central Asia, China, Japan and Korea, as well as other countries. During this time, she met with the monarchs of many countries, and her writings served to introduce these lands and peoples to many Western readers. Some of her notable accounts include *The Golden Chersonese; The Malayan Travels of a Victorian Lady* (1883); *Korea and Her Neighbours* (1898) and *The Yangtze Valley and Beyond* (1899).

Bird-Bishop visited Korea a total of four times between January 1894 and March 1897, with the intention of studying the ‘Mongolian races’. She pens her first thoughts on Korea as, ‘My first journey produced the impression that Korea is the most uninteresting country I ever travelled in, but during and since the war, its political perturbations, rapid changes, and possible destinies, have given me interest in it; while Korean character and industry, as I saw both under Russian rule in Siberia, have enlightened me as to the better possibilities which may await the nation in its future.’ Her two-volume account of Korea provides the author’s insight to many aspects of the situation that prevailed in Chosŏn in the late nineteenth c. Also notable are the personal contacts she had with King Kojong (r. 1863-1907); the Hŭngsŏn Taewŏn’gun (1820-1898); and Queen Min (1851-1895). Thus, she provides her readers with first-hand knowledge of these major figures in the declining years of Chosŏn. Bird-Bishop was not a scholar nor fluent in the language of any of the Asian countries she travelled in, being dependent on interpreters and accounts given to her by others. Her works, therefore, contain many inaccuracies and misleading statements. But they do provide valuable, albeit small, glimpses of Korea and the other Asian countries she visited.

Broadcasting

History of Korean broadcasting

Radio

Broadcasting under Japanese occupation forces (1910-1945)

Korea's first taste of the new technology of radio came relatively early for such a poor and under-developed country. In 1915, engineers at the Ministry of Communications conducted an experiment in which the Japanese anthem was transmitted via wireless telephone over a distance of 800 metres. In 1924, a radio laboratory was established on an experimental basis. Programs were initially broadcast in Japanese, but with burgeoning public interest, Koreans were invited to participate in limited broadcasts.

On 30 November 1926, Kyōngsŏng Broadcasting Station transmitted its first radio program. The main source of revenue was from listening fees, fixed at two won a month. Rigorous censorship by the Ministry of Information meant that broadcasts in Korean were restricted to entertainment programs, even though programming was increased to sixteen hours a day. The Sino-Japanese War in 1937 and the Pacific War in 1941, suppressed Korean programs to a point where they became a propaganda tool for Japan's expansionist ambitions. Radio soon had as its main purpose the purveyance of bulletins prepared by the Japanese Government-General and Korean broadcasting became little more than an appellation.

Broadcasting under U.S. Military Government (1945-1948)

Following Korea's liberation on 15 August 1945, the Kyōngsŏng Broadcasting Station was placed under the supervision of the United States Military Government in Korea. One reason for this was to fend off the political left's pressure for control of broadcasting.

Broadcasting had to change to integrate with the transformation of Korea into a modern society. Initially, Kyōngsŏng concentrated on programs aimed at restoring and developing a national culture, hitherto shrouded under Japanese rule. It then focused on the novel idea of democracy and on furthering public welfare through educational programs.

Concomitant with relative freedom of news coverage came restrictions on its distribution. The military government dealt harshly with critics of military policy and coerced the closing down of local newspapers as a censorship measure. Nationwide censorship resulted when an article in Haebang Ilbo blatantly criticized the military rule; set aside only when new ordinances circumscribed press activities and a special committee convened to arbitrate conflicts of interest. Significantly, American broadcasting practices predominated in the ensuing reorganization of the KBS and new program formats. In January 1946, Voice of America first broadcast under the name, San Francisco Broadcast. Under strong U.S. influence, the domestic radio station, nominally public, was actually commercial in content and programming.

Broadcasting under the New Government (1948-1953)

Although the military government initially returned the radio station to the Chosŏn Broadcasting Committee (later, Taehan Broadcasting Committee) in June 1948, a reshuffling of government jurisdictions placed Kyōngsŏng under Ministry of Information
control. The station was quickly nationalized, its employees becoming public servants, signifying the beginning of the state-run Korean Broadcasting Station (KBS). Program reorganization brought diversity in news reporting, with programs such as 'Local News' and 'News Parade'.

During the Korean War, KBS came under control of the Ministry of Defence and its broadcasting functions were drastically reduced, partly because of financial stringencies. The American Forces Korea Network (AFKN) was established at this time to serve the needs of its military force. KBS gradually materialized into a public broadcasting station and with its headquarters in Pusan, the temporary war capital, established branch stations in major locales. Strict censorship of newscasts made it increasingly difficult to remain unbiased and pro-government reporting predominated.

Rise of private, commercial broadcasting (1954-1960)

Following the armistice (27 July 1953) all government institutions were located in Seoul. After restoration of damaged plant and some expansion of broadcasting equipment, there was (from 1957) a striking improvement in the general quality of radio programming. Airtime was doubled and the introduction of a transcription reporting system added vitality to radio programs. In addition, telegraph soon permitted the direct reception of foreign news. Thus, despite the emergence of television, the 1950s were still predominantly radio-oriented.

Pusan MBC (Munwha Broadcasting Company), the first commercial radio network in Korea, and the Christian Broadcasting System, were established, relying on advertising to finance operations. Their reporting activities enlightened the public on the merits of co-existence, for competition warranted greater reporting accuracy. Relay broadcasting of international sporting events, production of educational and informational programs of quality focusing on a developing civic consciousness, and the introduction of serial dramas characterized the major improvements of the decade.

The other side of the coin, however, was that the news reporting aspect of broadcasting was severely restricted by political instability and consecutive dictatorships of Syngman Rhee and Park Chung Hee. The two regimes decreed press policies aimed at circumscribing the activities of KBS, whereby fairness and objectivity always played a secondary role to the propagation of government policy.

Commercial broadcasting and the television era (1961-1979)

The 16 May 1961 coup d'état made effective use of broadcasting facilities, especially those of state-run KBS, which was restructured to allow for two extra channels, one for international transmissions and another for AM/FM broadcasting. Park Chung-Hee's administration legislated to permit private ownership of radio and TV stations. The industry underwent significant changes during this period as commercial broadcasting became more conventional, radio and television duelled through intense competition, and communication satellites diffused the innovative idea of relay broadcasting.

Commercial broadcasting, being intrinsically profit-oriented, held a propensity for entertainment programming and cheap imitations of foreign shows. Serial dramas were the most popular. As television's appeal grew, radio's appeal declined. In time, commercial broadcasters challenged official opinion in the public forum. The 1970s brought about social changes which had a direct effect on the industry, significantly Yushin Hŏnpŏp (revitalizing) reform designed to combat domestic and international instability. Yushin imposed severe censorship on the commercial-orientation of television.
The inauguration of the Korean Broadcasting Corporation and MBC-TV's incorporation of all affiliated broadcasting stations under the Munwha Broadcasting network, were major events. MBC also assimilated the Kyunghyang Daily, thereby combining its broadcasting and newspaper functions. When Yushin ended, broadcasting had deteriorated into stereotyped programs of low appeal and law amendments (1973) strictly regulated all material deemed damaging to public morals.

Era of public broadcasting (1980-1990)

Structural change saw a complete shift from commercial to public broadcasting in 1980, leaving in its wake only the two stations KBS and MBC. TBC TV and Radio were integrated into the KBS, as KBS 2 and KBS Radio 3. Dong-A Broadcasting Station (DBS) became KBS 4 (Radio Seoul). In addition, MBC gradually acquired a controlling share interest of twenty-one local stations. The Education Broadcasting System (EBS) which managed to gain independence from KBS 3, came under the bailiwick of the Ministry of Education (and still uses transmitting facilities provided for by KBS.)

Radio - popularity and decline

The first relay station went into operation in Pusan in September 1934, followed by an expansion of district networks as regional stations emerged. The Korean Broadcasting System was reorganized to consolidate control over these stations and with the birth of the Republic the existing network came under direct government control.

KBS introduced Voice of Free Korea radio to its network on 1 December 1955, to contribute to information and cultural exchange within the international community and to convey the message of reunification to North Korea. Short-wave broadcasting across Asia was in Korean, English, French, Chinese, Japanese and Russian. Foreigners in Korea could listen to a daily English broadcast on medium-wave.

The 1960s was a period during which the various radio stations, RSB, (Radio Seoul, later to be known as TBC), KBS, CBS, MBC and DBS, could compete with each other free from the magnet of television. MBC soon expanded into a nationwide network, while DBS, affiliated with Tonga Ilbo, had to endure lack of support and facilities and limit its goals to the Seoul audience. RSB experienced steady growth and rising popularity.

Commercial radio and its ratings competition saw the survival of stations tied to advertising revenue. A significant development was the establishment of Munwha Broadcasting Corporation in Pusan in 1959, which also attracted a wide audience in Seoul. As a private corporation totally dependent on local advertising, MBC pioneered a solid-base advertising industry for Korean products. Its entertainment-oriented programs acquired the highest ratings.

Radio's displacement by television can be seen when the number of TV receivers reached half a million in 1973, only ten years after TV was introduced, while the number of radios remained less than one million some fifty years after its introduction. Radio then had to find program genres which accentuated its traits as a medium, such as convenience and flexibility, while conceding entertainment functions to TV. It turned to spot news, popular music and information segments. In the 1980s, KBS Radio modernized and expanded, concentrating on wide-scope informational programs. Local radio networks also implanted a new image of themselves as instruments of regional development by disseminating local topics to the rest of Korea. This helped to reduce rural alienation, as well as acquainting city dwellers with traditional lifestyles and values. Today, KBS, MBC and SBS attempt to achieve a certain level of specialization and differentiation.

American Forces Korea Network (AFKN)

AFKN began operations in 1950 as a mobile radio station, and broadcast its first TV program in 1957. It has expanded to cover the ROK through a sophisticated cable and microwave system, with twenty-two transmitters.

Primarily for American service personnel and their families, AFKN is also popular with young Koreans. To students wanting to improve their language skills, AFKN-TV offers idiomatic, colloquial English and provides uncensored domestic news, reports from ABC, CBS, NBC and CNN. But critics have denounced AFKN's programming, claiming that the youth of Korea is being inundated with material of a sexual and violent nature. AFKN broadcasts twenty hours a day during the week, twenty-four at weekends. It is advertisement free, but includes community-type announcements.

Christian Broadcasting System (CBS)

The Christian Broadcasting Station (CBS) commenced in 1954 to introduce Christianity to Koreans. However, except for a few religious programs, it did not differ widely from the commercial stations. In 1962, CBS obtained a commercial broadcasting licence, which allowed it to rely, in part, on advertising revenue. It was well-received and a desire to extend its coverage soon became apparent. To achieve this goal it gained the support of the U.S. Audiovisual Committee (one of its biggest financial supporters) to establish local, affiliated stations throughout Korea.

Guidelines regulating CBS news coverage served to emphasize the significance of unbiased reporting. This came through strongly during the 1960 student uprising, when CBS, unlike KBS, fulfilled its public responsibilities through prompt, objective reporting. It also kept Koreans informed on the volatile domestic situation by transmitting 'Voice of America' reports, and editorials printed by major U.S. newspapers.

Educational Broadcasting System (EBS)

EBS offers countrywide FM radio and UHF/VHF television coverage. Programming is based on EBS's founding principles - to improve the quality of school education, to expand educational opportunities, to satisfy educational demands and to strengthen democratic ideals.
International exchanges (e.g. BBC, NHK) have fostered new audience interest in the EBS and improved ratings attest to its success. EBS aims to solidify a special channel identity with programs aimed at broadening international perspectives and by nurturing scientific and modernized thought forms to motivate social development.

Television

Inauguration and development

Television broadcasting in Korea came in 1956 with the inauguration of HLKZ-TV (Korean RCA Distribution) a commercial TV station. Leaning heavily on the practices of American commercial TV and RCA assistance, HLKZ-TV began regular broadcasting for two hours on alternate days. Financially dependent on commercial advertising (at a time when most people could not afford television sets), its distribution plans were increasingly frustrated as entrepreneurs were unwilling to invest in advertising. Despite its attempts to give better service, the station was soon to be taken over by Hankook Ilbo under the name Daehan Broadcasting Corporation (DBC). In turn, following a disastrous fire, DBC-TV was gradually absorbed into the Korean Broadcasting System (KBS) which began operations in 1961.

U.S. influence over the emerging local industry was strongly evident, especially evident in AFKN-TV. RCA, which initially introduced television to Korea, had basically tapped a very lucrative market for its radio and television receivers. Despite Korea’s internal difficulties it became the fourth country in Asia to launch television broadcasting, relying heavily on a longstanding technological relationship with the US.

In 1981, KBS launched a third television channel, KBS 3, justified under the pretext of furthering public interest. Control and manipulation of broadcasters by the government were prevalent phenomena, yet also made possible were large-scale features more attuned to audience tastes. The introduction of colour TV resulted in a marked growth in the number of viewers and CTV sales. The information needs of Koreans became more diverse and expenditures for production and management underwent notable changes.

The end of the 1980s brought stronger realism to TV programming, with investigative reports and live variety shows emerging as stalwarts of prime-time. Table 1 summarizes the distribution of program types by the four television networks.

When the Seoul Broadcasting Station (SBS) made its debut (December 1991), the three established networks were faced with a serious challenge. A full-scale competition war characterized by an incredible preoccupation with ratings was launched. SBS introduced cluster-programming to prime-time by grouping similar types of programs together, a strategy geared towards maintaining audience flow. The four networks now offer four hours of daytime programming beginning at 0600 and from 1800 until midnight. No programs are aired in the afternoons on weekdays, but all have an additional five hours (1300-1800) at weekends.

Although KBS 1, KBS 2 and SBS put some effort into achieving channel differentiation, the norm is to place similar programs in the same time slot. Broadcasting cheap facsimilies of American and Japanese shows, as well as modifying popular formats used by a competitor, is commonplace.

Commercial television (1990-)

The KBS monopoly of television broadcasting was challenged and with new broadcasting laws, came pressure for a commercial broadcasting station. Thus, the Commission on Broadcasting Institutions was formed in 1989, and with it the decision to establish a commercial station, the Seoul Broadcasting Station. SBS began operations on AM radio, but within a year established a TV station. This signalled an end to longstanding KBS-MBC exclusiveness. However, SBS is a local broadcasting station covering only Seoul and its vicinities, but is expected to widen its horizon. With SBS as an example, the government plans to establish private television networks in major cities.

Informational and educational programs

Under the Broadcasting Law, Korean TV networks are required to show programs which hold affinity to diverse cultural or educational pursuits. Such programs focus on promoting a sense of national identity or the teaching of specific skills, languages or crafts. Traditionally, such programs go to air in the morning session.

The fact that fixed, regular programs are obviously quite meagre in quantity and inconspicuous in quality, reflects the lack of investment and motivation in television's information purveying role. The weight placed on a certain program can be quite accurately determined by its time slot. Prime time in Korea is comprised mostly of entertainment shows with an extensive newscast in between, with informational/cultural programs usually deferred to the post-2200 hours slot.

SBS is often cited as the mover behind this trend, for at its outset, many had wondered as
to its survival tactic in the face of relative giants like KBS. Not surprisingly, SBS went all-out in the direction of 'commercial-type' entertainment (foreign imports dubbed in Korean or superficial domestic shows). MBC and KBS are routinely criticized for following suit.

Regulation of the media

Censorship influence

The program content of the media, what it is and what it should be, dominates current dialogue across the broadcasting spectrum. News, current affairs and cultural value programs are only one part of broadcasting; programs with violence, sex and nudity make up the rest. This division justifies censorship influence over media space and time, and thus government is given a plausible reason to interfere.

Broadcasting history has reflected public concern every time a new medium appeared. Government responsibility is to monitor those forces which threaten valued cultural norms, controlling and regulating broadcasting through the statute book and self-regulation through codes of ethics. Also, extra-legal controls operate through pressure groups or lobbying parties. Over its sixty years, Korean broadcasting has experienced tremendous governmental restrictions, first by the Japanese and then by successive Korean governments and the bureaucracy.

Following independence, a public system was favoured over private, thereby ruling out the need for encompassing broadcasting-related laws. The only quasi-legal regulations which existed were concerned more with the administrative aspect of broadcasting, but with the appearance of commercial stations, improving public welfare and cultural standards were cited as broadcasting's primary goals. 'General Broadcasting Standards' were drafted and disseminated to the various stations and served as indices to guide the quality of programs.

Legal protection of broadcasting

When commercial broadcasting burgeoned, the need for legal protection of broadcasting activities was recognized. The 'Broadcasting Law' was thus enacted (16 December 1963), providing for freedom of the press, the establishment of the Korea Ethics Commission on Broadcast (KECB) to safeguard the public interest, and various regulatory measures. Also, the need to diffuse the TV service to the provincial areas resulted in the 'Cable Operations Law' which sought to ensure rapid, accurate delivery of government policy and to promote cultural improvement of rural workers' lives. However, the law which provoked the most controversy and dissent was the 'Basic Law' (31 December 1980); an unconstitutional document and a ramification of the Fifth Republic's dictatorial ways. It stifled the media under the pretext of preventing monopoly and greed for almost a decade before repeal.

Cable television

An experimental CATV broadcasting system covered 8000 households in two densely populated areas of Seoul. CATV is considered to be a separate medium and accordingly outside the scope of the Broadcasting Act. The regulatory agency is the 'CATV Broadcasting Commission' which operates under the umbrella of the Ministry of Information. There are restrictions on the ownership of CATV stations by anyone who owns or controls the licence of a television broadcasting station, a daily newspaper or other means of communication. Religious and political organizations are debarred from CATV ownership.

Licences for providing video programming are controlled by the Cable Television Broadcasting Commission, which limits foreign input to 30 per cent, and enforces strict requirements for the duration and content of advertising. The Commission also has the role
of 'maintaining public responsibility, ethics, and qualitative improvement of the general content of cable television broadcasting.' It has broad censorship powers, but as a regulatory agency, it acknowledges Government control of what is actually shown on CATV.

Socio-cultural contribution

Broadcasting has permeated everyday life to the extent that it is now regarded as the public spokesman. Its valued social roles are to promote public welfare and maintain the national identity and Korean media have produced cultural programs to uniquely serve these functions. A prime example is EBS, which strives to lead the audience down the specific avenues of social, educational and cultural development.

Documentaries on foreign culture and history, or those concentrating on politics, the economy or environmental protection offer Koreans a world formerly unknown. National identity is enhanced by objective comparison with a uniquely different culture, while educational programs help disseminate the dominating ideology of a society. Culture transmission and identity constitution through broadcasting implies that such media are naturally more conservative, and serve to reinforce existing values rather than change them. But the average Korean switches on TV or radio more for quiet relaxation and stress release than for enlightenment. With many programs targeting families as opposed to a specific demographic group, it is not surprising that television's effect on social/sexual roles is a key issue of contention among sociologists today.

TV has also brought about considerable changes in people's perceptions of the older generation. No longer are senior citizens the symbols of patriarchy - venerated beings under Confucianism - especially on contemporary television where their views are neither welcomed or respected. Elementary school students spend most of their leisure watching TV, to which a certain amount of their socialization is attributable. Adolescents, however, watch less TV, due to study workload, but are more vulnerable than adults and succumb more easily to television stimuli. Korean teenagers are also inclined to transfer ideas through television directly into action.

Financial structure

As a state-run broadcasting system, KBS initially relied entirely on government funding. The government used postal-service employees to collect fees, and despite the inefficiencies involved, revenue in 1951 totalled 166 million won. The financial strains of the Korean War severely curtailed network development, but despite funding limitation to KBS, the government appropriated 20 million won for special broadcasting equipment.

Until 1966, KBS-TV remained dependent upon government funding. Then, the total revenue from reception fees jumped to 138 million won as the number of registered TVs increased (to 690,000 in 1967). Criticism arose against the financing structure of KBS which, although a state-run broadcasting company, received funding from both reception fees and through selling advertising time. Responding to public pressure, KBS discontinued its advertising function (5 May 1969). TBC-TV was inaugurated in 1964 and displayed fifty-six 'commercials' in its first broadcast. As the only private TV station in the television advertising market it made every effort to attract a large number of clients by providing quality service. As TBC also operated a radio station, it often marketed joint television & radio advertising packages for big events.

Shortly after KBS discontinued advertising, MBC TV was launched, creating fierce rivalry between it and TBC. As TBC had a five year head start, it held the dominant market share, but could not retain this prominence. TBC then restructured and the quantity of advertisements led to strengthening of the corresponding regulatory framework. The
government first controlled only the number and amount of advertisements with its 1963 broadcasting laws, but by amendments went on to control content (placing this within the ambit of the Broadcasting Ethics Committee).

Today, media advertising is a mammoth industry and the broadcasting sector captures a big share of the market, even though it lags behind that of the newspapers. Table 2 gives the media advertising turnover for 1993 (Source: Cheil Communications Inc./ Korea Annual 1994)

Technological development

The 'Universal and Intelligent Communication Network'

The primary goal of the communications industry in the 21st c. is the implementation of the 'Universal & Intelligent Communication Network'. Broadcasting's version is the 'Integrated Services Digital Broadcasting' which when installed, will allow higher quality programming of wider diversity.

The technology which serves as a foundation for such quality and diversity is comprised of micro-electronics, digital technology, fibre-optic cable, and satellites, which combined with broadcasting, communication and computer technology will lead to the digitalization, systemization and broadening of TV coverage. In order to keep pace with these developments, KBS, MBC, and SBS have formulated medium to long-term plans.

The task of improving production and transmission facilities has been ardently pursued by all stations. In 1992 CBS extended its facilities to a sweeping complex. KBS plans two branch stations in Pohang and Sokch'o to alleviate its space problems. MBC opened its Namwon FM radio and TV stations in 1992. SBS which had initially targeted only Seoul prepares to expand coverage and build two large studios in the new city of Ilsan.

Technology has become a dominant factor in broadcasting, as cable television and satellite broadcasting increasingly rival established networks. Korea has implemented steps to cope with the increased demands of information exchange, including satellite communications, cable broadcasting, and its planned 'Information Highway'.

Satellite broadcasting

Korea's 1995 broadcasting/communication satellite is named Mugungwha, but from January 1992, in order to create a base market for satellite services, and to familiarize itself with satellite administration, Korea Tele Communications began accessing the Intelset Satellite #5a. Mugungwha is a 650 kg satellite in which 300 billion won is invested and is a product of the General Electrics Company.

Cable Broadcasting
Cable television planning targets areas where topographical barriers make normal reception difficult. An expansion of the pilot scheme now operating in Seoul is currently being planned, and it is expected that up to 130 cable broadcasting and 28 production organizations will be approved by 1996.

The Information Highway

The government has an ambitious plan to build a national 'Information Super Highway' system. In its simplest terms this is a network of fibre-optic cables and microwave stations linking every home, business and institution in the Republic. By 2015, a total of US $55 billion will be expended, aimed at upgrading Korea's multi-media information industry to a world-class level.

Plans are in hand to develop 100 public databases every year and distribute 10 million terminals for information distribution. Government finance will flow to the project through sales of Korea Telecom stock, income from communications services, and from the general budget. Following finalization of the masterplan, construction of a pilot project information network will begin, connecting Seoul and Taedok Science Town (approx. 140 km) with fibre-optic cables having a capacity of 2.5 Gbps (at 1 Gbps 4000 pages of newsprint can be transmitted per second).

The masterplan for State and Public information networks is in three phases: Phase 1 (1994-97) divides Korea into five areas of optical cable networks providing basic transmission facilities to inter-connect even small cities. Construction of the Public information network will start in densely populated areas (including large commercial buildings). Phase 2 (1998-2002) will provide an ATM exchange system, enabling voice, data, and video images to be transmitted and received, interconnecting the five areas, expanding the optical cable network and supplying additional services. The Public information network will be extended to small to medium size companies and densely populated areas. Optical transmission devices operating at 10 Gbps, will be in use. Phase 3 (2003-15) allows for data transmission services between super computers, and will become possible by enhancing the speed of the State network to tens of Gbps. The Public information network will become accessible to households via optical cables and microwave networks to provide multimedia services and image information services of high definition TV quality.

High Definition Television

HDTV, having twice as many lines as conventional television, is much talked about but is still not yet a commercial reality. Japan and the U.S. are both readying themselves for the overhaul of the television industry, but first of all, the HDTV sets themselves must be widely available. The second barrier to commercial HDTV broadcasts is that because of increased resolution there is also a huge increase in the requirements of the transmitting system, as the amount of information which must be transmitted increases drastically. Thus, Korea's 'Information Super Highway' is crucial to the operation of its HDTV broadcasting system.

Buddhism in Korea

1. Introduction of Buddhism to Korea (4th to 5th c. CE)

Korea played an active part in a general East Asian civilisation. Moreover, the geographical spread of the Korean cultural area included vast territories beyond the Korean peninsula, and so though ethnically and linguistically very different from the Chinese, after the 3rd c. Koreans were not simply passive receivers of Chinese traditions, but were active participants in the building up of a common East Asian cultural sphere in which Buddhism was an important component. Koreans were thus significant contributors in the transmission, development and preservation of the traditions of Buddhism.

Geo-political events taking place in continental East Asia had significant political and cultural effects on Korea. The cultural and political influence China exercised on Korea was due not simply to geographical contiguity, but also to the fact that some of the tribal confederations and early kingdoms ancestral to the present Korean state occupied vast territories in southern Manchuria. Unlike the Korean peninsula, these continental territories are not secluded from the East Asian heartlands by high mountains and deep rivers, but are a continuation of the broad plains of northern China and Central Asia. Consequently, many of the ancestors of the Korean people were intimately involved with most of the major political and cultural developments which took place between the fall of the Han Dynasty (221BCE-220CE) and the rise of the Tang Dynasty (618-926).

The year 372, when a Buddhist monk was first officially received by a Korean king, is often cited as the date when Buddhism was first brought to Korea. However, tomb murals and a letter from the southern Chinese monk Chihtun (314-366) addressed to a Koguryô monk which date before 372, clearly indicate that there was already a Buddhist presence in Koguryô (?-670). Buddhism’s arrival in Koguryô before 372 probably resulted from the breakup of the Jin empire (265-302) and the subsequent rise of numerous ‘barbarian’ empires. The political disintegration of Jin spread Buddhism into southern China and probably into the former northern marches of the empire as well.

The year 372 is significant, however, as it is when the monk Sundo was sent by Emperor Jian (r. 357-85) of Former Qin (351-394) to King Sosurim (r. 371-383) of Koguryô as part of a cultural exchange which was intended to cement political relations. This year then is important as the date when Buddhism was formally sanctioned by the King of Koguryô. The Emperor Fu Jian recommended Buddhism to King Sosurim for reasons of statecraft -
it offered spiritual protection to the state. Sundo was followed shortly to Koguryo by two other monks, Ado and T'an-shih. Ado was said to have been the son of a Koguryo mother by an official of Northern Wei (386-534).

Some time after the advent of Buddhism in Koguryo, Buddhism spread to the southwestern kingdom of Paekche. It is said that an Indian monk called Mflflananda while resident in the southern Chinese state of Eastern Jin (316-420) encountered a diplomat from Paekche and decided to go to Paekche when the diplomat returned in 384. The king reportedly met the retinue at the gate of the capital and the monk was regally entertained before he began propagating Buddhism. A temple was built for the monk, and ten men were ordained.

The transmission of Buddhism to Koguryo and Paekche was intimately connected with geo-political events and was part of the diffusion of Chinese culture. At this stage, Buddhism was largely confined to the members of the group immediately surrounding the throne. It was not yet the religion of the aristocracy or the elite members of society, much less a popular practice.

Despite a paucity of records for the development of Buddhism after the end of the 4th c. when it was sanctioned officially by the rulers of Paekche and Koguryo, there are two indications that Buddhism continued to grow throughout the succeeding century: the presence of scholarly monks from Koguryo in China, and the transmission of Buddhism to the kingdom of Shilla. Typical of monks who went to China was Súngnang (Ch. Senglang) who is said, probably incorrectly, to have been a student of the great Serindian translator Kumţarajţiva. Kumţarajţiva was instrumental in the introduction of Madhyamika theories into Northern Wei. Buddhism began to spread to the southeastern part of the peninsula during the 5th c. In the reign of King Nulchi (r.417-457) of Shilla, the Haedong kosţung-jšon tells us that two monks came from Koguryo on two separate occasions to spread Buddhism in Shilla. The second monk was called Hűkhoja (Black Barbarian), a possible indication of his Indian or Serindian origin. Hűkhoja was called to the court of King Nulchi to cure his daughter, which the monk did by burning incense, reciting a sutra and making a vow to one of the Bodhisattvas. The successful cure of the princess led to the practice of Buddhism within the court circle.

There is no archaeological or reliable documentary evidence to indicate that there was any kind of Buddhist presence in the area of the Kaya states before their annexation by Shilla in the middle of the 6th c.

During the first stage of Buddhist history in Korea, Buddhism was accepted by the elite of the three ancient kingdoms of Koguryo, Paekche and Shilla for geo-political and thaumaturgic reasons, and was practiced as a cult within the court circle.

2. Later Three Kingdoms Period (6th to 7th c.)

During the 6th and 7th centuries Buddhism in Koguryo and Paekche achieved maturity, and Buddhism in Shilla began to flourish. Five trends characterise this period: the sending of scholar-monks to China for further study of the Buddhist scriptures; the propagation of Buddhism in Japan by Korean monks; the establishment of Buddhism in Shilla; the pilgrimage of Korean monks to the Buddhist holy land in northern India, and the development of Korean Buddhist traditions which were congruent with the autochtonous religion of Korea.

a) Intellectual Trends

Events in Koguryo during this period illustrate these five trends. Monks of scholarly note emerged who were adept not only in the tenets of Buddhism, but who had also studied
Confucianism and a form of metaphysical Daoism called Xuanxue or Dark Learning. The Haedong kosung-jon tells us that amongst these monks was Êiyon who was sent to the state of Northern Qi (550-577) by the prime minister of Koguryô to speak with the Buddhist master Fashang on aspects of Buddhism which had puzzled him. The cognizance by the prime minister of significant intellectual trends and important monks of China shows the degree to which Koguryô participated in the cultural life of East Asia. Although Mahayana Buddhism in particular Sanlun and incipient Tiantai dominated the Buddhist scene in Koguryô in this era, records indicate that some monks were aware of certain Hinayana traditions.

The 6th c. displayed greater intellectual and religious ferment in Paekche than in Koguryô where Daoism was gaining ground. Monks travelled abroad to study, and scriptural studies were conducted. Two prominent monks of this period, Palchong and Hyôn'gwang studied in China. The former is said to have been a student of the Avatamsakasutra while Hyôn'gwang was a student of the doctrines of the Tiantai School and helped to establish the traditions of that school in Paekche. The Nirvanasutra was brought to Paekche by an emissary of King Sông (r.523-554), who was responsible for much of the development of Buddhism within his kingdom.

b) The Transmission of Buddhism to Japan.

The importance of the early Korean kingdoms in the transmission of Buddhism to Japan was not as a passive conduit through which Buddhism passed unchanged from China to Japan. Rather, the early Korean kingdoms were responsible for over 150 years of Buddhist missionary work in Japan. The first monks sent to Japan came from Koguryô. The most important were Hyep'yôn (Jap., Keibin) and Hyech'a (Jap., Keiji). Hyep'yôn was responsible for the conversion of important female members of the aristocracy in Japan, while Hyech'a was the tutor of the crown prince, Shotoku Taishi (573-621) who was responsible for many innovative political changes in early 7th c. Japan. During the reign of King Sông, in 538, 545, and 552, the king sent official embassies to convince the Japanese ruler to adopt Buddhism. This promotion of Buddhist evangelisation in Japan was continued by King Sông's successor, King Widôk (r.554-598) who sent Buddhist religious materials, teaching monks, and temple artisans. These gifts and emissaries continued throughout his reign and must have had an important impact on the development of a Buddhist culture in Japan.

c) Establishment of Buddhism in Shilla

From the middle of the 5th c., Buddhism had been practised by members of the royal court of Shilla but it had not yet been sanctioned as the state religion. Until the early 6th c. there was considerable conflict between Buddhism and traditional religious practices. The Haedong kosung-jon relates that King Pôphûng (r.514-539) wishing to declare Buddhism the state religion, made a pact with one of his courtiers, Ich'adon. Because of his Buddhist fervour, Ich'adon was martyred, ostensibly for attempting to usurp the king's authority. Before he was executed Ich'adon predicted two miracles - that his spilt blood would be white as milk and that his severed head would fly to the top of a hill. These two miracles supposedly led to a dramatic conversion of the leaders and the populace to Buddhism. Certainly, King Pôphûng and his successor Chinhûng (r.539-576) vigorously promoted Buddhism and themselves retired to take up the monastic life. Also, Ich'adon's martyrdom was apparently celebrated as a religious festival from a very early period.

During the 6th c., Buddhism grew rapidly in Shilla, possibly indicating that there was already considerable Buddhist strength in Shilla before it became a state-supported religion. Throughout the century many monasteries were built. During the reign of King Chinp'yông (r.579-631), Shilla, like Koguryô and Paekche, became involved in Buddhist missions in Japan and sent several scholar-monks to China for further study, the greatest of
Whom was Won’gwang.

Won’gwang went to China in 589, returning at the request of the king to Shilla ten years later. He was a student of both the Nirvāṇa-sutra and the Prajñāpāramitā-sutra, but is best remembered for organizing the Hwarang Troop. This was a group of aristocratic youth who were trained in the martial arts. Won’gwang created a disciplined body with its own code of conduct, the Hwarang-do (Way of the Hwarang). This code consisted of five precepts: loyalty to the sovereign; filial piety; loyalty to one’s friends; no retreat in battle; and killing only when necessary. Three of these precepts are Confucian; the remainder the commonsense view of a valiant warrior. None of these precepts are particularly Buddhist; two of them contradict the Buddhist concept of reverence for life. The Hwarang-do is thus one indication of the extent of Shilla’s cultural syncretism. Won’gwang was also noted for his promotion of the special scriptural expository ceremonies called the Paekchwa-hoe, or Assembly of the Hundred Seats.

7th c. Shilla saw the emergence of important Buddhist leaders, including Chajang, Wŏnhyo, and Ŭisang. Chajang was a member of the royal house who had been dedicated to the monastic life at an early age. In later life Chajang resisted the call to take part in government service. He travelled to China in 636 with ten of his disciples and stayed for an extended period at Wutai shan where he apparently had a mystic experience of the Bodhisattva Mañjusrī. He also must have studied carefully the monastic regulations in China for on his return he was responsible for the regularization of the ordination and conduct of monks, their dress, and the regular examination of members of the monastic community on their knowledge of Buddhism. Probably he was also a promoter of some of the esoteric cults focussed on Mañjusrī which were later displaced by those of Maitreya (Miruk), the future Buddha who was assimilated with the native Shilla "dragon" gods or miru, a protective deity.

Wŏnhyo (617-686), often said to be the greatest of the early Shilla monks, was a scholar and original thinker, and a great propagandist of Buddhism among the ordinary people. He was responsible for the popularity of Pure Land Buddhism amongst the masses because he went into the countryside singing Buddhist songs, and frequented wineshops to proselytize the commoners. Although Wŏnhyo was one of the most important Buddhist thinkers of the Shilla period, his Buddhist thought derived as much from his own experience as from scriptural study. When he and his friend Ŭisang were on their way to study in China they took refuge from the rain at night in an earthen sanctuary. During the night Wŏnhyo drank water from what he thought was a broken cup on the sanctuary floor. In the morning the two monks discovered that the 'sanctuary' was a desecrated tomb and that the 'cup' was actually a skull. After his initial revulsion, Wŏnhyo had a moment of enlightenment when he realized that things have no ultimate reality but are only what we think they are. Possessing this insight, Wŏnhyo felt that there was no need to go to China to study. Nonetheless, he became a formidable scholar composing many major Buddhist treatises.

Ŭisang (625-702) eventually completed the journey to China where he studied the Huayan doctrines under the monk Zhiyan at the same time as Fazang (643-712) who became the third patriarch of the Huayan School. Ŭisang abruptly returned to Shilla upon learning about the possibility of a Tang invasion of Shilla. He then went into a six-year period of seclusion in a cave on the east coast of Korea. He emerged to propagate the Huayan doctrines, establishing many temples and acquiring numerous disciples.

d) Buddhist Pilgrimages to India

Pilgrimages to the Buddhist historic sites of northern India began in the 6th c., flourished throughout the 7th and finally tailed off in the 8th c. This remarkable tradition of pilgrimages to India began with the Paekche monk Kyŏmik who went to China and then
on to India in 526. He studied in North India, and returned to Paekche five years or so later bringing with him copies of the *Abhidharma-pitaka*. Upon his return, King Song placed Kyŏmik in charge of a group of twenty-eight monks who were responsible for the translation of the Buddhist scriptures. This 'translation bureau' is one indication of the sophistication of Paekche Buddhism in that Paekche had the only group of translators anywhere in East Asia outside of China.

The 7th c. was the great era for Buddhist pilgrims to India. The Chinese Buddhist pilgrim and recorder Yijing (635-713) in his *Da Tang xiyou qiyu gaoseng zhuan* (Biographies of Eminent Monks of T'ang Who Sought the Dharma in the Western Regions) wrote down biographical information about East Asian monks who made the arduous journey to India. Of those whose names were recorded one-sixth were Korean, by this time mostly from Shilla. Only one monk from Koguryŏ is recorded, and there is no mention of any monk from Japan. Most of these pilgrim monks went to India via Central Asia coming into the subcontinent near Jambudhara where they studied the languages of India. They would then press on to the holy land of Buddhism, visit the historic sites and often study at one of the famous Buddhist academic institutions, especially the famed Nālanda 'university'. Perhaps the most eminent of these monks was Hyŏnjo who probably spent ten years on a study/pilgrimage in India before returning to China. He was then sent back to India by the Chinese emperor as his personal emissary. Following the completion of this duty, Hyŏnjo stayed on in India and is said to have died at the great south Indian Buddhist centre of Amravati.

3. Buddhism in the Greater Shilla Period (670-936)

The peninsular wars of the 660s and 670s involving all three Korean states and Tang China, had ended with Shilla's conquest of Paekche and the peninsular part of Koguryŏ with the remaining area of Koguryŏ passing into the hands of Tang before it again became an independent state called Parhae. Before the peninsular wars there were practising monastic communities and renowned scholar-monks: from the end of the 7th c. true schools of Buddhist thought appeared in Shilla.

a) The O-gyo

Buddhism in Korea has been conventionally classified under the rubric of O'gyo (five doctrinal teachings) and Yang-jong (two lineages of Sŏn 'sects') which supposedly dated to Shilla times. Recent research however, has shown this classification derives from the attempt by King Taejong to restrict Buddhism in 1406, and that the reality was far different.

Up until around 800 the 'schools' were primarily theoretical doctrines without the lineages of teachers and pupils, monastic headquarters or founders necessary to form an 'order'. Wŏnhyo's summary of the essential tenets of the schools (chong'yo) provided the theoretical basis for the foundation of these academic schools in Shilla. Of these many schools, most had nominal existence, few could be termed orders, and fewer still had lasting influence.

Three large 'orders' survived from late Shilla into early Koryŏ: the Sŏn (Chogye-jong), Hwa'ŏm-jong and Yu'ga-jong. A fourth order, the Ch'ŏnt'ae-jong (Ch. Tantai), also known as Powsŏng-jong in Korea, was founded as an order when a monastic headquarters was established in 1097 and was confirmed as such through the activities of Uich'ŏn (1055-1101). Previously it was a scholastic school or philosophical tendency.

Korean Buddhism then is best thought of as divided into tendencies rather than in terms of the anachronistic Ogyo Yang-jong classification. The Yul-jong in fact was neither an academic school nor an order, but specialised in the regulations of monastic life as contained in the *Sifen lu*, a Chinese version of the Dharmaguptika vinaya, which prescribes 250 rules
for monks and 348 rules for nuns. The discipline was vigorously promoted by Chajang to counter a perceived laxity in practice. The Yul-jong was first given a monastery by the founder of the Koryŏ.

The Hwa'om-jong (Ch. Huayan) or Wŏnyung-jong, was introduced by Ŭisang, but it remained an academic school until the early Koryŏ when it became an order following the extensive scholastic works and poetry written by Kyunyŏ (923-973). It taught that all phenomena and principle interpenetrate, so that an understanding of any one phenomena is the understanding of the part and the whole of the corpus of the Buddha. The Haedong-jong, a name that only appears in the early Koryŏ period, was supposedly promoted by Wonhyŏ. It probably taught a synthesis of Hwa'om, Ch'ŏnt'ae and Yuga theories. While Ŭisang insisted on the exclusive use of the Huayan jng (Avatamsaka sutra), Wŏnhyo considered it only as the greatest of sutras and encouraged the study of other scriptures.

The Yuga-jong or Pŏpsang (Ch. Faxiang, Skt. Dharmalaksana), also known as the Ch'antu-jong in later times, was a significant force in Koryŏ times, but its doctrines are not well known. It corresponds to the study of the 'representation only' epistemological theory, according to which mind orders the percepts and marks of the dharmas (pŏpsang) following its storehouse of consciousness instincts and memories such that its representation of reality is called 'consciousness only'. Some scholars suggest that the beginnings of the order came about because Chinp’yo in the 750s gave the theory a practical basis in the performance of repentance. The order virtually disappeared by the 1450s, possibly because it had similar beliefs to the other orders.

Finally, the Yorban-jong (Nirvana School), if it ever existed other than as a scholastic tendency, was probably later incorporated into the Ch'ont'ae-jong. Based on the Mahāparinirvāṇa sutra, it would have taught that all beings have a Buddha-nature (the potential to become Buddha). Ch'ont'ae-jong was the Korean branch of the Chinese Tiantai Order. T'ien-t'ai arose in the 6th c. to resolve the question as to how there could be so many Buddhist scriptures teaching seemingly contradictory doctrines. The founder of the school, Zhiyi (538-597), taught that the historic Buddha preached a doctrine which had developed through several different periods of his life as his hearers gained a deeper knowledge of his teaching, and that the Buddha had taught a different doctrine to more advanced students. Thus Zhiyi divided the entire Buddhist canon into groups of sutras according to an historical chronology and a doctrinal classification. Among the Buddhist scriptures, Zhiyi stressed the centrality of the Lotus Sutra (Saddharma pundarika sutra).

There were also esoteric tendencies during this period. In the early 7th c. Chajang's nephew Myŏngnang went to China to study the esoteric doctrines. After his return to Shilla, Myŏngnang was asked by the king to defend the nation from an impending Tang invasion. This request eventually resulted in the erection of the first temple devoted to esoteric practices, the Sach'ŏnwang-sa or Temple of the Four Heavenly Kings. These celestial figures were important guardian spirits in the esoteric cults of Buddhism. Another monk, Hyet’ong, brought back the teachings of the Zhenyan School (True Word School) from China and supposedly established its counterpart the Chin'gon School. In the 8th c., Chinp’yo went to China where he had a mystical experience of the bodhisattvas Ksitigarbha and Maitreya. It is said that Maitreya gave Chinp’yo a special set of secret commandments, a copy of a book of divination, and 189 divination sticks. Other practitioners of esoteric Buddhism had considerable followings.

Another important figure in esoteric Buddhism was Hyech’o, who went to China to study under the two great Indian masters, Vajrabodhi (d. 732) and his disciple Amoghavajra (704-774). They sent Hyech’o to India for further study. He went by sea and returned to western China by 727. While he was in India he apparently travelled very widely and left us a record of his travels, the Wang och’ŏnch’ukkuk-chŏn which is still partly extant. He apparently never returned to Shilla but spent the remainder of his days in China.
Among the last practitioners of esoteric Buddhism in this period were Tosôn (827-898) and Wŏnp'yo (9th c.). Although he was learned in many aspects of Buddhist philosophy, the Sŏn lineage monk Tosôn is best known for his writings on geomancy, fortune-telling, and prognostication. He is regarded by Korean fortune-tellers as the patriarch of their tradition in Korea, for his theories influenced the location of Buddhist monasteries and the positioning of the capital by Wang Kŏn, the Koryŏ founder. Tosôn’s ideas probably inspired in part the nativist rebellion of the monk Myoch’ong in the 1130s. Wŏnp’yo went to China shortly before the Daoist persecutions of Buddhism under the Emperor Wuzong (r. 840-846). Like many of his predecessors he had a mystic experience, in this case of the Buddha Vairocana, the central figure in esoteric Buddhism. It is said that because he had to leave China during the persecutions he went on to India, which would make him the last known Korean monk of the ancient period to make the journey.

Esoteric or mantrayana Buddhism only ever had a tenuous, fitful or nominal existence in Korea, as an order. It had several names, including Shin’in-jong. Its influence however, was felt in popular practices, ritual, prognostication, art, and some of its ideas were incorporated into Sŏn.

b) The Ch’an Tradition in Shilla

In the 9th c., the Shilla state began to decline politically and eventually disintegrated. Perhaps in response to increasing political and social instability, people took a greater interest in meditative Buddhism which drew them away from the hurly-burly of contemporary society. Consequently the importance of the doctrinal schools began to be surpassed by meditative Buddhism Sŏn (Chinese Chan, Japanese Zen). By the end of the Greater Shilla period, there were a number of groups of monastics practising a form of Chan which it was believed had been brought to China by Bodhidharma (?-c. 530). In mid-Koryŏ these lineages were collectively called the Kusan or Nine Mountains, the number nine derived from Yijing numerology, the mountains from where the principal monasteries were located. Very little distinguished the lineages in either form or practice. Broadly speaking there were two or three traditions of Sŏn Buddhism, one group questionably claiming roots in a Chinese tradition prior to the split into the northern and southern lineages, one group claiming descent from the tradition of the northern lineage but mixing with the southern tradition and the remaining groups claiming their roots in the southern tradition, largely from origins in the teachings of one of the disciples of Ma-tsu. These strands of Korean Sŏn were closely linked, therefore, with the Hongzhou lineage of Chan which in time developed into the Linjhi School. A conflict arose between the scholastic schools and the Sŏn schools which carried over into the next dynastic period, the Koryŏ, in the 10th c. Sŏn Buddhism became the predominant form of Korean Buddhism by the end of the 9th c., a position ostensibly true for the past thousand years.

The influence of Korean Sŏn masters was not limited to the peninsula alone. Many Korean monks of the Sŏn tradition played an important role within the Chan tradition of China, among whom the most important would be Musang (694?-762) who was the patriarch of the Baotang School in Sichuan. He was also the first teacher of Chan techniques known to the Tibetans.

c) The Question of Buddhism in Parhae

For a generation following the destruction of Koguryŏ in 670, the area of that kingdom was nominally under the authority of Tang. However, many places in southern Manchuria never submitted to Chinese rule. Then in 696, a rebellion against Chinese authority in the northeastern regions began which led to the establishment of the state of Parhae (699-926). This state always claimed to be the successor to Koguryŏ both politically and culturally. Unfortunately, very few records regarding this state remain, and not enough archaeological
research has been done.

But Buddhism remained a significant religious force in Parhae. Excavations conducted in the 1930s of the capital Tonggyŏng-sŏng in central Manchuria revealed the presence of four Buddhist temples. Artefacts from these temples clearly demonstrated the continuity of Buddhist artistic traditions from the Koguryŏ period. There are two mentions in the diary of Ennin (794-864), a Japanese monk who travelled to Tang in the 840s, which support the contention that Buddhism in Parhae continued to flourish. On one occasion, Ennin visited a temple in China where there is a poignant lament for the deceased eminent Japanese monk Reisen written by one of his disciples, a Parhae monk called Chŏngso. On another occasion, Ennin mentions encountering a Parhae prince who visited the temple in which Ennin was then living. The prince hosted a lavish maigre feast which Ennin attended. Although slim evidence, it does indicate that Buddhism continued to flourish in the area of the former kingdom of Koguryŏ, and to command the support of the royal family and the elite.

4. Buddhism in the Koryŏ Period (918-1392)

From the end of the 9th c. through to the first quarter of the 10th c., Greater Shilla was torn apart by civil strife, and other dynasties emerged claiming the right to rule the country. With the victory of Koryŏ over its rivals, and with the simultaneous collapse of Parhae, a new state emerged which was confined largely to the Korean peninsula. This state was founded firmly on Buddhism. The first king of Koryŏ, T'aejo (Wang Kŏn r.918-943), issued deathbed instructions to his descendents known as the Hunyo sipjo (Ten Injunctions). These injunctions reflected both the monarch's Buddhist piety and his shrewd evaluation of the problems which could be created by a rich, self-satisfied Buddhist church. His first injunction commanded his descendents to protect Buddhism and to maintain the Buddhist places of worship as Buddhism was vital to the life of the nation. The second injunction, however, advises his descendents not to build any more temples, whilst the sixth injunction enjoins against the addition to or subtraction from the current number of approved Buddhist ceremonies.

The close relation between Buddhism and the state is indicated by the extent to which succeeding monarchs attempted to enhance the social prestige of Buddhism. In the middle of the 10th c. a set of clerical examinations was instituted which paralleled the Confucian civil service examinations. These were graded into six levels and there were two separate sets of examinations, one for the doctrinal schools and the other for Sŏn. In addition, the king could make two special appointments to a super-grade, the wangsas (Teacher to the King) and kusas (Teacher to the Nation). The latter was an accolade for monks of distinction. The former was an important political post as the monk so designated could lecture the king on certain matters.

During the Koryŏ period, Buddhism and Confucianism existed in a state of complementarity and compatability. The Confucian scholar Ch'oe Sŏngno (927-989) expressed this feeling well when he said that Buddhism was for spiritual cultivation and that Confucianism was for the practice of government. Therefore, there was no conflict between the two traditions as they dealt with two different spheres of life.

Koryŏ Buddhism, influenced continental East Asian Buddhism, most notably at the beginning of the Koryŏ dynasty through the Ch'ŏnt'ae School. In the 10th c., this academic school achieved the apogee of its prestige. Because an important text had been lost in China during the tumultous mid-10th c., a delegation of fifty Chinese monks was sent to Korea to ascertain if the text survived there. It did and Ch'egwan (?-970) was commanded in 960 by the king to go to China with specified Buddhist texts. Ch'egwan spent the remaining years of his life in China and composed an important text on the Tiantai doctrines, the Tiantai sijiao yi (Kor. Ch'ŏnt'ae sagyo-ui), Four Doctrines of the
T'ien-t'ai School).

Üit'ong (927-988) was a brilliant scholar-monk who was sent to Song China at an early age and spent the remainder of his life there. A proponent of the Tiantai doctrines, he was elected as the thirteenth (or sixteenth according to another reckoning) patriarch of the school. The work of these two monks in reviving Tiantai in China illustrates the strength of this school in Koryó which led to it being made an order in the time of Üich'on.

Koryó Buddhism was dominated by the various attempts to unify the different strands of Buddhism. The first attempt was made by King Kwangjong (r.949-975) who unsuccessfully attempted to unify the doctrinal and meditative schools through the Ch'ont'ae-jong. The second unsuccessful attempt to unify these two traditions was made in the 11th c. by the monk Üich'on (1055-1101), the fourth son of King Munjong (r.1046-1083).

Üich'on, a scholarly monk, passed the highest level of the doctrinal examinations at an early age. He then studied in Song China returning to Koryó in 1086 when he was made director of the Húngwang Monastery. He amassed a library of 4740 volumes, a collection of Buddhist materials from Song, Liao, and Japan. Üich'on printed many of these books, and had them distributed widely. But his greatest role, perhaps, was in the attempt he made to unify Buddhism through the Ch'ont'ae-jong. The appeal of this school was its balanced method of scriptural study and meditative practice which would have seemed the ideal solution for drawing together the two major strands of Koryó Buddhism. As head of a revitalized Ch'ont'ae-jong, Üich'on was initially successful in gathering together many monks from both the Sôn and the doctrinal schools, especially from the Hwaöm-jong. Unfortunately this very success brought about sectarian rivalry which resulted in the union of the Sôn lineages who remained separate from the doctrinal schools and Ch'ont'ae-jong.

In the 12th c., Chinul (1158-1210), perhaps the greatest monk of the Koryó era, attempted to bring together the various strands of Koryó Buddhism. Chinul's unique vision of merging the doctrinal and meditative sects resulted in the creation of a uniquely Korean school of Sôn, known as the Chogye-jong (named after the toponym of the sixth patriarch of Chan and 'founder' of the Southern Lineage, Huo-nang), which has been the predominant form of monastic Buddhism in Korea since that time.

The son of a Confucian scholar who dedicated his son's life to the Buddha, Chinul took monastic orders at the age of fifteen. He passed the Buddhist examinations at the age of twenty four, but became disturbed by the state of Buddhism. He and a few like-minded friends made a compact to form a new religious society in which it would be possible to pursue a truly religious life. Between 1182 and 1197, Chinul had three significant religious experiences which confirmed him in his course of action. He became fully convinced that he was right in his quest for a purer spiritual community, that there was an ultimate similarity between the aims of the doctrinal and meditative schools, and of a method for sudden enlightenment called hwadu (Ch. huatou). In 1200, Chinul and his friends established the new religious community at the monastery now known as Songgwang-sa where he spent the last ten years of his life building a community which he hoped would both unify and revitalize Buddhism in Koryó.

Chinul made two major contributions to Korean Buddhism; the unification of the various Buddhist traditions, and the introduction of a new form of Buddhist praxis. Chinul's approach to the unification of Buddhism was different from those attempts made by King Kwangjong and Üich'on who tried to create unity through a doctrinal union using the Ch'ont'ae-jong. Chinul's approach to union was not through the scholastic schools, but through the commonality of Sôn practice. Eventually successful, this has created a unique tradition of East Asian Buddhism in which, whilst Sôn practices predominate, scholastic studies form an important of the monastic life.
Chinul's contribution to Buddhist praxis lay in his teaching about the investigation of the 'critical phase' of meditation called hwadu. (Ch. huatou). This practice was brought together with concepts of sudden awakening/gradual cultivation which had been taught by the Chinese master Zongmi (780-841). These teachings were then combined with the Huayan teachings of Li Tongxuan (635-730). Thus, Chinul created a significant synthesis of Buddhist thought and practice. At least seven works of instruction on monastic practice by Chinul still survive. Chinul's disciple Hyeshim (1178-1234) worked to secure the continued acceptance of the Song dynasty Linji School hwadu technique as the characteristic method of Korean Buddhism.

The most important event of the thirteenth century was the publication of a second edition of wood-block printing blocks for the Buddhist canon. An earlier wood-block edition of the canon, known as the Ch’ojo taejanggyöng (First Carving of the Tripitaka), had been created during the reign of King Hyönjong (r. 1009-1031). This was supplemented by Üich’ón in 1090 with the Sok changgyöng (Supplement to the Canon). Both the first edition and Üich’ón’s supplement were destroyed during the Mongol invasion of 1232. King Kojong (r. 1213-1259) vowed to create a new compilation of Buddhist scriptures in order to ensure spiritual protection against the invading Mongols.

Work on the second edition began in 1236 under the monk Sugi and was completed in 1251. The compilers based their edition on the earlier Ch’ojo taejanggyöng, but also compared the Khitan canon and the Song canon (known as the Shuben) along with several Tripitaka catalogues in order to correct the mistakes and lacunae of the first edition. After the best text was chosen and edited, it was carved onto both sides of the wooden printing blocks. The second edition of the Koryö canon consisted of 6 802 volumes carved on 81 258 wooden blocks. This canon, one of the great monuments of east-Asian Buddhism, survives in its entirety in a specially designed repository in Haein Monastery. It was one of the sources for the Taisho Tripitaka created by the Japanese in the 1920s and 1930s.

The most important event of the thirteenth century was the publication of a second edition of wood printing blocks for the Buddhist canon, commonly referred to as Koryö taejanggyöng (Tripitaka Koreana). An earlier wood-block edition of the canon, known as the Ch’ojo taejanggyöng (First Carving of the Tripitaka), had been cut during the reign of King Hyönjong (r. 1009-1031). This was supplemented by Üich’ón with the Sok changgyöng (Supplement to the Canon) in 1090. However, the entire first edition and Üich’ón’s supplement were destroyed during the Mongol invasion of 1232. In order to ensure spiritual protection against the invading Mongols, King Kojong (r. 1213-1259) vowed to create a new compilation of Buddhist scriptures in order to ensure spiritual protection against the invading Mongols.

Work on the second edition began in 1236 under the monk Sugi, and was completed in 1251. The compilers based their edition on the earlier Ch’ojo taejanggyöng, but also compared it to the Khitan canon and the Song canon (known as the Shuben), along with several Tripitaka catalogues in order to correct the mistakes and lacunae of the first edition. After the best text was chosen and edited, it was carved on both sides of the printing blocks. On its completion, the second edition of the Koryö canon consisted of 6 802 volumes, and used 81 258 wood printing blocks. This canon, one of the great monuments of east-Asian Buddhism, survives in its entirety in a specially-designed repository in Haein Monastery. It was one of the sources for the Taisho Tripitaka created by the Japanese in the 1920s and 1930s.

During the final phase of Koryö Buddhism, three monks were outstanding in their contribution to Buddhist life; Taego (1301-1382), Na'ong (1320-1376), and Muhak (1327-1405). Taego who had studied in Yfiuan and received transmission into the Linji School of Chan Buddhism, upon his return to Koryö made attempts to merge the remaining Sön lineages into the dominant Chogye-jong. The latter two monks were students of
Dhyānabhadra (usually called Zhigong in Chinese, Kor. Chigong), a 'Chan' monk from India who exercised a considerable influence on Buddhist life in Yfiuan (Mongol) China. Dhyānabhadra had gone to China in the early 14th c., paying a visit to Koryŏ in 1328. He was much sought after by students in China and Korean monks went to China to seek him out. The Indian monk was held in such high esteem that following his death in 1363, King Kongmin had some of his relics brought to Koryŏ which are now kept in Silsang Monastery. All three of these great Koryŏ monks were granted the title wangsa which gave them an extraordinary ability to influence the king.

Throughout the Koryŏ period, numerous Buddhist seasonal festivals were celebrated. Among these were Wo<n-il on the first day of the first lunar month, the Yŏndŭng-hoe or Lantern Festival held on the fifteenth day of the first month, Ch'op'a-il or Buddha's Birthday on the eighth day of the fourth month, and the Palgwan-hoe which had a variable date of performance and was celebrated as a rite for the dead. There were other festive dates as well which created a rich ceremonial life throughout the year. Buddhism reached the apogee of its social development and influence during the Koryŏ period. The monasteries and temples were amply endowed. Buddhism added richness and colour to the general life of the society. Unfortunately, the Buddhist 'Church' had become so wealthy and corrupt that it was brought into conflict with the Confucian literati.

5. Buddhism in the Chosŏn Period (to 1876)

The rise of the Chosŏn dynasty in 1392 saw not only the emergence of a new state but a change in the relationship between the state and Buddhism which created a situation from which Korean Buddhism has not recovered to this day. Scholars of the Neo-Confucian school of Zhu Xi (1130-1200) in late Koryŏ times associated Buddhism with corruption within the court circle and with the Mongol ascendancy which had damaged the economic fabric of the nation. Whereas in the early Koryŏ period Buddhism and Confucianism were seen to be complementary, by the end of the Koryŏ dynasty, the relationship had changed to one of hostility. The new government of Chosŏn adopted Neo-Confucianism as the state ideology and attempted to control and later suppress the practice of Buddhism. None-the-less, these far-ranging and long lasting changes did not happen all at once. During the first century of the new dynasty the monarchs might officially attempt to control Buddhism for reasons of state, but quite often personally were pious Buddhists.

The assault on Buddhism began with the Confucian scholar Chŏng Tojon (1337-1398) who wrote a diatribe against Buddhism called the Pulssi chappyŏn which attacks the philosophical and ethical positions of Buddhism and compares them very unfavourably with Confucianism. His arguments became the basis for the suppression of Buddhism which was to typify the attitude of the Chosŏn government throughout most of its history. Although the first king of Chosŏn, T'aejo (r.1392-1398) was a pious Buddhist, he instituted the tochŏp-che, which was a system for the registering of the names and addresses of monks. The control of Buddhism intensified under T'aegŏng (r.1400-1418) who abolished the titles of wangsa and kuksa, and closed all but 242 monasteries. Under his son, the great 'sage monarch' Sejong (r.1418-1450), the suppression was at its greatest. The various schools of Buddhism were merged into two orders, the kyo or doctrinal school, and the S<on or meditative school. All but 36 monasteries were permitted to remain open; each of the schools given 18 monasteries.

The official suppression of Buddhism was in great contrast to the personal piety of the royal family. The founding monarch, whilst controlling Buddhism, sought advice from the monk Muhak on such matters as the location of the capital of the new dynasty and granted him the title of wangsa. Within the precincts of the royal palace he also erected a Buddhist shrine, causing an uproar among the Confucian literati class. Similarly King Sejong who is regarded as the exemplary Confucian sage ruler, could find no solace in the metaphysics of an abstruse Confucian philosophy at the end of his life, and turned instead to the personal
practice of Buddhism. Like his grandfather T'aejo, he built a court chapel. He, who had ordered the creation of the Korean alphabetic script (*Han'gul*), used it to transcribe Buddhist scriptures and works on Buddhism into the Korean language. He these these books printed and widely disseminated. Sejong's son King Sejo (r.1455-1468) was the last monarch until the 18th c. to hold to Buddhist teachings. He had worked with his father on the project of the dissemination of Buddhist materials in *Han'gul*. However, when he was prince regent for his nephew he had the boy murdered so that he could ascend the throne. This created a *cause célèbre* which shook the foundations of the dynasty. The king became a leper later in his reign and it is believed that the erection of the *Won'gak* temple - in contravention of the rule forbidding temple construction in the capital - was to atone for his act of regicide.

The attenuated patronage of the royal family disappeared completely under the reign of King Yônsan (r. 1494-1506), who abolished the Buddhist examination system altogether, and lowered the social status of monks to the very bottom of society, along with butchers, prostitutes and slaves. Although Buddhism briefly gained royal patronage under the regency of Queen Munjông (r.1546-1553), it was withdrawn upon the ascendency of her son to the throne. One indication of this great decline in the position of Buddhism was the reputed lack of any significant scholars or practitioners amongst the monastic community. From the time of Muhak in the early 15th c. to the late-16th c. only two monks stand out, Huyujong Sôsan Taesa (1520-1604) and Yujong Samyông Taesa (1544-1610). Author of a book on Sôn practice, the *Sôn'ga kugam* (Guide to the Sôn School), Huyujong attempted to reconcile Buddhism with Taoism and Confucianism by stressing the essential similarity of the teachings of the three schools. This position was an implicit recognition of the precarious social position in which Buddhism existed in Chosón Korea. Huyujong's disciple Yujong was involved with the military actions of a band of warrior monks during the Japanese invasions of Korea in the 1590s. Such actions, however patriotic, contradict one of the essential teachings of Buddhism about the reverence for life and are a further indication of the ways in which Buddhism had to gain favour with the Confucian establishment simply for the survival of the Buddhist community. Thus a 'righteous monk army' also fought the Manchu invaders in 1627 and 1636.

The Confucian persecution of Buddhism continued throughout the remainder of the dynasty. Possibly the most severe attempt to eradicate Buddhism was the decree of 1659 which forbade anyone from taking monastic orders, an attempt to eliminate Buddhism within a generation. Shortly after this decree monks were forbidden to enter the capital and throughout the 1660s attempts were made to destroy monasteries or to convert them to use as Confucian academies. The single bright period during the late Chosón dynasty was during the reign of King Chôngjo (r.1776-1800) who became the first monarch since the late-15th c.to publicly display his Buddhist piety. On behalf of the distressed spirit of his father, the king erected a Buddhist mortuary shrine near his tomb.

Buddhism, however, continued to be practised on the popular level. The popular practices of the time were partly drawn from the Pure Land tradition and a mixture of Buddhism with local cults such as the worship of the Sansin, the god of the mountains. Within Sôn vigorous scholastic debates were initiated Paek'a Hwansôn (1767-1852) over the various sorts of Sôn and their relation to the different capabilities of people. Even eminent scholars such as Kim Ch'usa (1786-1856) were drawn into the polemics. Buddhism also exercised an influence on literature and had an attraction for those who had come to question or indeed reject Confucian orthodoxy. Perhaps the best known of these Buddhist-influenced authors is Kim Manjung whose *Ku'un-mong* (The Cloud Dream of the Nine) is rich in Buddhist imagery, and is an indication of the human spirit's search for knowledge beyond that which can be found in Confucian philosophy.

6. Buddhism in the Modern Period (1876 - )
The decline of the fortunes of Korean Buddhism has been reversed rather remarkably during the last century for three principal reasons. Firstly, when Choson Korea signed Western-style diplomatic treaties with the Western powers and Japan, it was no longer possible for the Confucian establishment to maintain a policy of religious suppression. Secondly, the dramatic growth of the Protestant churches in Korea acted as both a model for the revival of Buddhism's fortunes and as a competitive stimulus to growth. Thirdly, because of the sudden development of Christianity in Korea, the Japanese Government-General which ruled Korea from 1910 to 1945 saw in this growth and in the Church's associations with Korean nationalists a threat to their imperial rule of Korea. The Government-General had a deliberate policy of supporting Buddhism, ostensibly for the purpose of reform, but in actuality for the purpose of control of the religion itself and to produce a religious counterforce to Christianity.

The modern history of Korean Buddhism may be said to have begun in 1895 when the regulation forbidding the entrance of Buddhist clerics into the capital was lifted, probably as a result of pressure from Japanese Buddhist groups active in Korea. Since the signing in 1876 of the Kanghwa Treaty between Choson and Japan, Buddhist groups from Japan had been operating in Korea to minister to Japanese there. Their activities spread from the resident Japanese community to the Korean population. Therefore, these Japanese Buddhists wanted to see restrictions against religious propagation lifted. Christian missionaries in Korea would have been an added pressure for the lifting of such restrictions on religious propagation.

There is a tangled relationship between Korean and Japanese Buddhism during the early part of the 20th c. because Japan represented both a developed progressive nation and an occupying imperial power. Various attempts were made to unify the several Buddhist groups; in 1889, again in 1902, in 1906, 1907, and 1908. The 1908 meeting finally created a unified Buddhist order called the Wôn-jong. The Supreme Patriarch of this sect then tried to merge his group with the Japanese Zen order, the Sôtôshu. The result was a split amongst those who wished to merge and those who saw merger as conniving with the imperial power. The Japanese Government-General tried to resolve this problem by creating a unified order in 1911, which again resulted in the creation of a counter-group in 1912. Feuding between the pro-Japanese community and the anti-Japanese group continued throughout the colonial period.

The great growth of the Buddhist church in the 20th c. has been the result of two movements: the movement to purify monastic practice, and movements incorporating the laity. One of the most remarkable features of contemporary Korean Buddhism is the extent to which the laity have come to play an active role in the revival of Buddhism's fortunes. This can be traced back to the 1920s with the emergence of various youth and lay groups which were patterned on and were a reaction to the YMCA. These organizations had their inspiration in the work of the radical monk Manhae, Han Yong'un (1879-1944). The principal source of support for these lay movements, Manhae wrote voluminously, explaining the nature of Buddhism and was responsible for the creation of several Buddhist magazines, which were a way of reaching out to the general Korean populace. Among these latter publications were Yusim, and Hûk'ûng (Black Wind). Manhae's work of proselytization was aided by his ardent nationalism. A signer of the Declaration of Independence from Japan in 1919, he was imprisoned in the 1930s and 1940s for his nationalistic activities.

Although the lay movements developed throughout the Japanese period, the monastic community was weakened by the Japanese Government-General's attempts to control them and alter their traditions. One example was the law promulgated in 1926 permitting monks to marry and to eat meat. Although the proposal for the marriage of monks had been made by Manhae to modernize Korean Buddhism, this law was seen as subversive of traditional Buddhist values. The final restructuring of Buddhism in the colonial period came in 1941.
with the creation of the Chogye-iong. Under the authority of a traditionalist monk, the order lasted until liberation from Japanese rule in 1945. In a free Korea, the order was once again re-organized but still suffered from the internal conflicts of the colonial era. A final major re-organization took place in 1954 under the aegis of the Christian president of the Republic of Korea, Syngman Rhee (1875-1965). He was appalled by the presence of married priests and called a conference of Buddhist clergy. This conference resulted in a split of Korean Buddhism into two major groups, the Chogye-jong which practised clerical celibacy, and the T'aego-jong, which permitted the clergy to marry.

During the past hundred years, four Buddhist clerics have been responsible for the revitalization and growth of Korean Buddhism; Manhae, Kyŏnhŏ, Song Tong'uk (1849-1912), Hyobong (1888-1966), and Kusan (1909-1983). Manhae represented the modernizing trend, the attempt by certain Buddhist clerics to harmonize Buddhist forms and practices with contemporary society and culture. One radical means Manhae and his followers used to modernize Buddhism was the development of strong lay movements based on the example of Protestant organizations. This strengthened the role of the ordinary believer. Another means adopted by the modernizers was the use of modern media, newspapers and magazines. Modernization also applied to issues of clerical practice, such as marriage.

Against these trends were figures such as Kyŏnhŏ who worked strenuously during the late 19th and early 20th centuries to purify monastic practice. He lectured widely to the clergy and laity, and helped to initiate lay study groups dedicated to the examination of Buddhist scriptures and to the practice of meditation. Kyŏnhŏ was much influenced in his attitudes by the Tang Chan master the Sixth Patriarch Huineng (638-713), and by Chinul and T'aego. Hyobong, another traditionalist, had been a judge during the colonial era, but had become so upset by having to sentence Koreans for performing patriotic acts that he resigned and became an itinerant pedlar. At the age of thirty-nine he entered the monastic life and was noted for the austerity of his meditative practices. Latterly he became the Supreme Patriarch of the Chogye-jong.

If Kyŏnhŏ and Hyobong represent the revival of traditional monastic practice, Kusan represents the re-emergence of a missionary tradition in Korean Buddhism. Kusan was a disciple of Hyobong. The son of a rich farmer, he had married and had had a family. At the age of 29, Kusan left his family to search for truth. He finally became a disciple of Hyobong and underwent a strenuous period of meditation at Haein-sa. Although Kusan was noted for his austere meditative practices, and held various positions of authority in Buddhist circles, his major contribution to modern Korean Buddhism has been the creation of the International Meditation Centre situated in his home temple of Songgwang-sa. Kusan vigorously propagated Buddhism in the West and in parts of Asia, bringing his students back to Songgwang-sa to study. As a result of his efforts, Buddhist centres have been set up in many of the countries of Asia, Europe and North America.

The fortunes of Buddhism have greatly revived over the past century. One hundred years ago, Buddhism would not have been considered an important or even a worthy component of the Korean religious scene. The opposite is true today. Orthodox monastic Buddhism in South Korea is perhaps the most vibrant form of monastic Buddhism in East Asia. The lay movements of Buddhism are strong. Buddhism is numerically stronger than the total Christian population of Korea. The future will continue to be bright for Buddhism if it can continue to adjust to the challenges of the new urban, industrial state which South Korea has become.

Bibliography

The Buddhist Canon

The first Buddhist canons are believed to have been orally preserved and codified, shortly after the death of Buddha. These were later written down in Pali, Sanskrit and some other languages. Soon after the introduction of Buddhism to China, the Chinese compiled their own translations of the Buddhist canons and these were gradually introduced into the Korean peninsula, from around the fourth c. C.E. With the development of xylographic printing techniques, a wood-block canon was developed in China during the tenth c.

First Koryō Edition of the Tripitaka

A similar project was undertaken in Korea between 1011 and 1087. Taking more than seventy years to complete, this canon was known as the Ch’ojo taejanggyông (First Carve of the Tripitaka) or the Ch’op’an kobon taejanggyông (First Publication of the Old Edition of the Tripitaka). In 1090, Uich’on led a team in the carving of the extensive Sok changgyông (Supplement to the Canon). Both the Ch’ojo taejanggyông and the Sok changgyông were stored in Puin Temple in Taegu, but were largely lost by fire during the Mongol invasion of 1232. All that remains of the Ch’ojo taejanggyông canon are 1715 volumes in Kyoto’s Nanrei Temple, Japan, while a few miscellaneous texts from the Sok changgyông are distributed between Songgwang Temple in South Cholla Province; Korea University library in Seoul; and at two locations in Japan - at Tōjō Temple in Nara and Shinfuku Temple in Nagoya.

Background of the Second Edition

Between 1236 and 1251, a second wood-block edition of the canon was carved, but this time without Uich’ön’s supplement. This huge project began on Kanghwa Island, where the Korean court had taken refuge from the Mongol invaders. The project served several purposes. First, it was important for the systematisation of the vast corpus of Buddhist scriptural material. Secondly, it was believed by King Kojong (r. 1213-1259) and others that the successful completion of the project would enlist the spiritual force of Buddhism to bring peace to the country.

Production of the Second Edition
The new edition, often referred to as the *Tripitaka Koreana*, consisted of 6,802 volumes on 81,258 wood-blocks, carved on both sides with mirror-images of Chinese characters, (which would, of course, appear normal when printed). The timber for the blocks, carefully cured and treated, was imported from China. After carving, the blocks were coated with lacquer. Each block contained two pages of text, generally with twenty-three lines to each page and fourteen characters per line. This edition is often referred to as the *P'alman taejanggyŏng* (Eighty-thousand [block] Tripitaka). Although the editors of the *Tripitaka Koreana* based their work on the *Ch'ojo taejanggyŏng*, they also compared the Song and Khitan editions of the *Tripitaka* along with several *Tripitaka* catalogues in order to correct any mistakes and lacunae of the earlier edition. Since the second Koryŏ edition was based on the first edition, it is also referred to as the *Chaejo taejanggyŏng* (Reproduced Tripitaka).

**The Second Edition During Chosŏn**

The second edition was initially kept in its own repository on Kanghwa Island, but was later moved to Kanghwa’s Sŏnwŏn Temple. In 1398, the wood-blocks were temporarily stored at Seoul’s Chich’ŏn Temple before being moved to Haein Temple in North Kyŏngsang Province, where they are today. For centuries after they were carved, the blocks were used on many occasions to print editions of the canon for Korean monasteries, and for export to Japan. During King Sejong’s reign (1418-1450), the Korean court even considered giving the *Tripitaka Koreana* to the Japanese as a royal gift.

**Modern Significance**

The second edition of the Korean Buddhist canon is famous both for its beautiful calligraphy and its accuracy. As one of Korea’s most-prized cultural artefacts, the wooden printing blocks have been designated National Treasure No. 32, while the buildings which contain them are National Treasure No. 52 Haeinsa Changgyŏng P’an’gŏ. Complete sets of prints from the wood blocks are kept at Haein Temple, T’ongdo Temple and Kŭmsan Temple. In December 1995, the wood-blocks for the second edition were designated as a World Heritage treasure by UNESCO. In order to make the content of the edition more accessible, the Samsung Foundation of Culture has sponsored a project to translate the edition into English.

**Busan National University**

Busan National University (Pusan Taehakkyo) is situated in Changjŏn-dong in Pusan. Founded as Kungnip Pusan Taehak (Pusan National College) in May 1946, the new school incorporated Pusan Susan Chŏnmun Taehak (Pusan Fisheries Junior College); however, the latter was again separated in the following year, becoming Pusan Susan Taehak (Pusan Fisheries College). In September 1953, Pusan National College became a university consisting of the Colleges of Liberal Arts and Science, Commerce, Industry, Law,
Medicine and Pharmacology and in the following year, a master's degree program was initiated.

In February 1956, the school was moved to its present location in Kumjong District. In the same year, the College of Pharmacology was incorporated into the Medical College and the university became affiliated with a hospital in Ami-dong. In the years that followed, the university continued its expansion.

At present, the PNU consists of twelve colleges and seventy-seven departments with over 8000 students and over 800 professors. The university also has seven post-graduate schools: i.e., the Graduate School, and the Graduate Schools of Education, Environment, Industry, International Studies, Management and Public Administration. University publications include Pudae shinmun (PNU Newspaper) in Korean and The Budae Times in English.
Calligraphy

Until modern times, classical Chinese, much like Latin in Europe, has been the preferred language of scholarly discourse throughout north-east Asia. In Korea, Chinese writing has been in use since the Three Kingdoms Period. Although Korean and Chinese are distinctly different languages from different language families, Korean scholars throughout history have attained great mastery of classical Chinese. However, in traditional Korea, it was not enough merely to be familiar with the language and ideas of the Chinese classics: a true gentleman also had to be adept at the art of calligraphy.

Calligraphy has been a highly prized art from early times in Korea. Even today, originals and prints of calligraphy can be seen hanging in frames in both homes and businesses throughout the country. Although some Korean calligraphers copy long passages (such as from Buddhist sutras), most examples consist of terse phrases from Confucian or Buddhist texts.

Korean calligraphy is traditionally done with a brush, the brush size depending on the width of the writing required. Ink is made on the spot using an ink stone, and the ink is applied to traditional Korean paper or (more rarely) to silk. Unlike painting, characters are written spontaneously, without any retouching. Great attention is paid to the spacing between the strokes of each character. Indeed, calligraphy primers often show the exact proportions that should exist between each of the character’s elements. As with composition in Western painting, the strokes of each character must be balanced. The art form allows for a great deal of freedom of artistic expression, and a great number of distinct styles have developed.

Three Kingdoms and Greater Shilla Period

Due to frequent wars and invasions, very few examples of early Korean calligraphy on paper have survived to the present. Knowledge of early writing styles has come from examining steles and memorial tablets, such as the Stele (located in Tonggou, Manchuria) of King Kwanggaet’o (r. 391-413), the Paekche stele in Puyŏ and the Stele of Inspection by King Chinhŭng (540-576) on Mt. Pukhan.

With its proximity to China, Koguryŏ was the earliest of Korea’s Three Kingdoms to adopt Chinese writing. Relatively few examples of Koguryŏ calligraphy are extant, but the existing steles show the influence of China’s Northern Dynasties. A great variety of styles have been found, including the simplified square style (yesŏ), square printed style (haengsŏ) and the cursive style (haeso). The Koguryŏ steles show a writing style that is both vibrant and forceful.

Paekche had access to China via the Yellow Sea, and was therefore initially influenced by the elegant calligraphy styles of China’s Southern Dynasties. Later writings, however, show influence from both the Southern and Northern Dynasties. As with the Koguryŏ Kingdom, scholars must rely on steles and monuments for information about Paekche calligraphy.

Shilla was the last of the Three Kingdoms to accept Chinese cultural influences, thus Buddhism and Chinese writing did not take root until some time around the early sixth century C.E. After Shilla unified the three kingdoms, there was a major effort to import Chinese culture. Large numbers of scholars and Buddhist monks went to China to study and witness the glorious period of Tang Chinese art. It was during this period that the cursive style (haeso) of calligraphy became firmly established in Korea.

Early Koryŏ Period

In the Koryŏ Period, King Kwangjong (r. 949-975) established a civil service examination
system in 958. Unlike the Shilla examinations, which had tested on knowledge of the classics, the Koryŏ examinations also tested on composition. In addition, there were specialist examination subjects (chapkwa) that included a calligraphy test. Inclusion of calligraphy as a subject in the civil service exams helped to spark interest in the art. Calligraphy was also important to those students taking the composition examination, since an elegant writing style tended to enhance the evaluation of a composition. In fact, composition was the most valued of the three examination subjects, an indication of how composition, and the related art of calligraphy, were highly esteemed by the Koryŏ upper class. The calligraphy of early Koryŏ, like that of the Shilla Period, is mostly in the style of the famous Chinese calligrapher Ou Yangxun. However, during the mid-Koryŏ Period, the monk T'anyŏn, breaking with the Ou Yangxun tradition, started an innovative style based on the Chinese calligrapher Wang Xizhi (307-365).

Late Koryŏ Period

Calligraphy went into a period of stagnation during the early twelfth c. In the late Koryŏ Period, the calligraphic style of the Chinese Zhao Mengfu began to assert an influence on Korean calligraphers such as Yi Kunhae and Yi Chehyŏn (1287-1367). In fact, Zhao's influence continued through the first two-hundred years of the Chosŏn Period. As a result, a compilation of Zhao's calligraphy became a favorite primer during this time. Koryŏ's Yi Kunhae, in particular, mastered Zhao's 'pine-snow' (songsŏl) style. During the Chosŏn Period, the talented painter and calligrapher Yi Yong also developed an original interpretation of this style.

Early Chosŏn Period

In spite of these new movements, the Chosŏn Period was characterized by a general decline in calligraphy in both China and Korea. By the mid-Chosŏn Period, the 'pine-snow' style had definitely lost vitality. A new impetus was clearly needed. At the time, neo-Confucian literati were calling for a return to classics. Attempting to keep in tune with the spirit of the times, writers searched for examples of the oldest extant writing styles. The calligraphy of Wang Xizhi, the famous calligrapher from Eastern Jin, was thus chosen as the preferred style. Scholars began studying calligraphy collections showing Wang's writing style. However, these collections were either forgeries showing inferior work, or were from printing blocks that had been copied so many times that they were no longer accurate.

Han Ho (1543-1604), styled Sŏkpong, developed a style based on one of these forgeries. His calligraphy, known as the Sŏkpong style, was studied as the new standard. Highly skilled in the different calligraphy forms, Han Ho's spread as far as China. However, many felt that in spite of its technical excellence, this new style lacked vitality.

Late Chosŏn Period

During the late eighteenth century, Confucian scholars took a more critical attitude towards the classics in order to ascertain the original meanings of terms. In a similar fashion, scholars discovered earlier Chinese examples of the cursive style (haeso) or square printed style (haengsŏ). During this period, Kim Chŏnghŭi (1786-1856), the greatest calligrapher of the Chosŏn Period, shocked the calligraphy world with his original style. Kim was a member of the Shirhak (Practical Learning) movement. Kim felt that calligraphy should be based on the simplified square style (yesŏ) of China’s Former Han dynasty. Despite initial reservations, the world of Korean calligraphy gradually embraced this daring new style, known as the ch'usa style.

Modern Period

In the late nineteenth c., Korean schools began to adopt Western education. This resulted in
less emphasis on the classics, which had been written in classical Chinese, and it also led to the use of pens or pencils instead of brushes. With these changes, many scholars no longer possessed the classical background required for traditional calligraphy; hence, there arose a need for professional calligraphers. As a result, the fields of scholarship and calligraphy were distinctly separated for the first time in Korean history.

During the Japanese occupation, Korean schools were forced to teach in the Japanese language, and a number of Korean scholars studied in Japan. As a result, Korean calligraphy was heavily influenced by Japanese calligraphy during this period. On the other hand, numerous Korean educators, voicing nationalist sentiments, began to promote the extensive use of the Korean phonetic script (han'gül) because of its uniquely Korean origins.

After liberation, educators searched for examples of writing to be used as the basis for han'gül calligraphy. Han'gül, traditionally looked down on by scholars, had been used by ladies in the ruling class. As a result, the new movement in han'gül calligraphy was based on letters written by ladies of the court. This ‘palace style’ (kungch'e) was elegant but neat, had clear lines and was often cursive or semi-cursive. However, early han'gül calligraphy lacked stylistic diversity. From the 1950s, Korean calligraphers have therefore coined many new styles in order to allow for greater freedom of artistic expression.

Case of the One Hundred Five (paegoin sagŏn) [History of Korea]

Catholic University of Taegu-Hyosung

Situated in Kyŏngsan in North Kyŏngsang Province, the Catholic University of Taegu-Hyosung (Taegu Hyosŏng Kat'ollik Taehakkyo) was founded in December 1994, when the Juridical Foundation of the Taegu District Church and the Sun Mok Educational Foundation agreed to a merger of Hyosung Women's University (Hyosŏng Yŏja Taehakkyo) and Taegu Catholic University (Taegu Kat'ollik Taehakkyo).

Of these two universities, Hyosung Women's University (Hyosŏng Yŏja Taehakkyo) has a longer history having been founded in April 1952 as the two-year Hyosung Women's Junior College (Hyosŏng Yŏja Ch'ogŭp Taehak), with Reverend Cheon Suk Jae (Chŏn Sŏkchae) as its first chancellor. In February 1953, The college was upgraded to a four-year college and in 1956, it was moved from Taegu's Taemyŏng-dong to a newly-built campus in Pongdŏk-dong. In January 1972, the Graduate School was established and a doctoral program began in December 1979. The college became a university in 1980, with six colleges and thirty-five departments. The Reverend Chen Suk Jae served as the university's first president. In 1984, four of the university's colleges were transferred to the Hayang Campus and by 1987, the university had been completely relocated to the new site. The Graduate School of Education opened in 1989.

Taegu Catholic College was founded as Sun Kok Theological College in December 1981 with Reverend Lee Jong Heung as its first head. In October 1984, it was renamed Taegu Catholic College. In 1990, a pre-medicine school opened, followed by a medical department in 1992. The college gained university status in 1993, with Kim Young Hwan as its first president.
In 1994, Hyosung Women's University and Taegu Catholic University were merged to become the Catholic University of Taegu-Hyosung, with Reverend Kim Kyung Hwan as president. In 1995, the university signed an agreement of cooperation with Samsung Commercial Motors and in the same year the Graduate Schools of Business Administration and Health and Environmental Science were established.

Today, the university has three separate locations. At the Hayang campus in Kyongsang, are twelve colleges (the Colleges of Economics and Commerce; Education; Engineering; Fine Arts; Foreign Studies; Home Economics; Humanities; Law and Politics; Music; Natural Sciences; Pharmacology; and Social Sciences), and five graduate schools (the Graduate School; and the Graduate Schools of Design; Health Environment; Small Business Administration; and Social Welfare). At the Namsan-dong campus in Taegu are the Graduate School and the College of Theology, and at the Taemyong-dong campus in Taegu, the Graduate School and the School of Medicine are located. Research institutes at the university include the Catholic Education Institute (Kat’ollik Kyoyuk Yon’guso); Korean Women’s Problem Institute (Han’guk Yosong Munje Yon’guso); and the Modern Thought Institute (Hyondae Sasang Yon’guso).

Central National Library

Located in Seoul, the Central National Library (Kungnip Chungang Tosogwan) was founded by the Japanese in November 1923 as the Choson Ch’ongdokpu Tosogwan (The Chosen Government-General Library). It operated exclusively for the Japanese. In addition to Korean books, the library’s collection included numerous works on Manchuria, Mongolia and Siberia, such material being a ready aid to Japanese military expansion in northeast Asia.

With Korea’s liberation in 1945, the library was renamed Kungnip Tosogwan, and Yi Chaeuk was appointed as chief librarian. However, the early administration and development of the library was hindered by post-liberation political turmoil, followed by the Korean War.

In 1963, the library acquired its present name and in the following decade its collection expanded as the number of users increased. In order to meet space demands, the library was moved from Sogong-dong (the present site of the Lotte Hotel) to its current location in Sŏch’o-dong. In May 1988, it opened in a newly-built facility at the Sŏch’o-dong site. Today, the collection contains over 1.3 million volumes. As part of its modernisation program, the Central National Library maintains a comprehensive internet site with general information on its collection, as well as abstracts from theses and journals.

Ceramics (see also Science and Technology)

Prehistoric Era

In Korea, the manufacture of bowls from clay dates back to the neolithic era (6000 - 1000 B.C.) Comb-pattern (ch’almun) pottery dating from around 5000 B.C. has been excavated from sites in Seoul’s Amsa-dong, Pusan’s Tongsam-dong, etc. After this early period,
pottery was often made without the use of designs. Further developments in kilns and calcination techniques led to the manufacture of stoneware around the third century B.C. The high firing temperatures (around 1300 degrees centigrade), made these pieces extremely hard while creating an ash-blue or dark grey finish.

Along these early styles, which continued to be produced up through the Greater Shilla Period, stamped pattern pottery (inhwa-mun) and other simple decorative styles were also manufactured. In addition, the high bottoms of the early vessels gave way to various new pottery shapes.

**Greater Shilla Period**

Prior to the Greater Shilla Period, ceramics were not used by the common people. Archeological finds at Kyŏngju’s Anap Pond and the Mirŭk Temple site indicate that commoners used only earthen or metal bowls. Ceramics were reserved for royalty, aristocrats and Buddhist monasteries.

During the Greater Shilla Period, a number of pottery and glaze techniques were in use. In addition to the high-temperature glazes such as grey glaze and feldspathic glaze, there was ware utilizing a low-temperature lead glaze. Around the end of the Greater Shilla Period, increased trade with China led to the introduction of advanced ceramic manufacturing techniques from China and the manufacture of celadon and white porcelain in Korea.

**Koryŏ Period**

During the Koryŏ Period, exquisite metal work and ceramic ware were treasured by the royal family and monasteries. In early Koryŏ, various reforms were instated in order to strengthen the power of the monarchy. The resultant political and social stability set the stage for an increase in both the output and quality of celadon (ch’ŏngja).

Manufacturing Sites

As mentioned above, celadon manufacture in Korea began around the end of the Greater Shilla and the beginning of the Koryŏ Period. From this time, celadon was primarily manufactured in the south-western coastal areas.

During the Koryŏ Period, special administrative districts were established for the manufacture of pottery. Kangjin in South Chŏlla Province and Puan in North Chŏlla Province were representative of this new trend. Large concentrations of celadon kilns existed in both of these areas. The exquisitely formed celadon crafted in this area is covered with a beautiful jade-green glaze. In terms of artistic style, this celadon shows Chinese influence. It was used by the royalty and aristocrats living around the capital.

In Inch’ŏn’s Kyŏngsŏ-dong or in Haenam in South Chŏlla province, on the other hand, coarser celadon was manufactured with green-brown or green glazes. This “green celadon” is thought to have been used by regional officials and aristocrats. As before, the common people mostly used clay and bronze ware.

Celadon (Ch’ŏngja)

Types of Celadon

There are many types of celadon, i.e. inlaid celadon, celadon in relief, incised celadon, celadon with openwork decorations, and celadon with white slip designs. Iron or copper glazes are also used for either the background or designs on some celadon.
Early celadon was usually plain, in relief, incised or with openwork. There were also pieces with white slip designs or with iron glaze. After the advent of inlaid celadon, this inlaid style became the most common along with the occasional copper-glaze celadon.

Jade-green Celadon and Representational Celadon

In China, jade-coloured celadon had been created in imitation of jade bowls. Koryŏ craftsmen took the craft one step further, producing celadon with an even subtler and deeper jade hue. This jade-green celadon, as representative of the plain style, is typical of early Koryŏ, while inlaid celadon, popular from the twelfth century on, is the characteristic style of the late Koryŏ Period.

The jade colour of jade-green celadon comes from the 1 - 3% iron content in the glaze. When celadon is fired, ferric oxide transforms into ferrous oxide. As the ferric oxide deoxidises, the piece takes on a jade hue. Archaeological finds suggest exquisite jade-green celadon was produced in Korea from around the eleventh century.

As Korean craftsmen developed elegant jade-green pottery, they started to make a large number of representational pieces in the shape of humans (i.e. bodhisattvas, monks, Taoist hermits, and acolytes) and plants (i.e. gourds, bamboo, lotus flowers, melons, peaches, ducks, lions, dragons, tortoises, fish, pheonixes, and other mythical beasts). In addition, there were incense burners, pitchers, vases and kundikas (water droppers used in Buddhist rituals), along with implements for every day use such as bowls, plates and jars.

Korean celadon had, by this point, developed a style distinctive for its use of soft lines. Jade-coloured celadon reached its apex around the twelfth century, but then began to disappear as inlaid celadon, with its thin, clear glaze, grew in popularity.

Populatity of Inlaid Celadon Ware

Inlaid celadon was made by hollowing out a design and then filling it in with red ochre containing white clay (to make white inlay) or iron (to make black inlay). Initially, inlaid celadon was made with black inlay designs over a limited area. The design motifs chiefly consisted of clouds and cranes, lotuses, peonies, willows, reeds and ducks. The inlay process had originally been used on lacquer ware and metal crafts. Koryŏ craftsmen were the first in the world to apply this process to celadon.

Archeological finds suggest that inlaid celadon originated around the tenth century. It is believed that after inlaid celadon’s jade colour was standardized (from the eleventh century onward), the form became more and more refined. The move from plain celadon to inlaid celadon was probably driven by changes in the tastes of the royal house and aristocracy. King Úijong (r. 1146-1170), in particular, is said to have had much more extravagant tastes than the more austere King Ínjong who proceeded him; hence, he naturally preferred the decorative inlaid celadon.

As inlaid celadon gained in popularity, the content and structure of the designs changed. The line separating the main motif from the secondary decorations was clearly demarcated. Moreover, the main design and the external decorations were clearly differentiated in terms of content. Unlike the standardized motifs popular in the contemporary Northern Sung Dynasty of China, the Koryŏ inlaid celadon was decorated with pictoral scenes reminiscent of oriental brush paintings. This is perhaps the most distinctive feature of Koryŏ inlaid celadon. Archeological relics suggest that inlaid celadon reached its highest degree of refinement during the reign of King Úijong.

Decline of Celadon
The Mongol invasion of 1231 led to the decline of inlaid celadon as the designs no longer resembled leisurely pastoral scenes, but were instead reduced to standardized motifs. Especially during the last half of the thirteenth century, there was a great increase in the number of bowls and plates with inlay or white slip inscriptions of calendaric signs. In addition, patterns were increasingly imprinted on the ware in a repetitive and mechanical manner by means of a stamp.

On bowls, the soft, delicate lines became rigid and blunt, as the walls became thicker and seemed to lack vitality. The glaze became dull and turbid becoming greenish-grey or even brown as pottery skills declined.

At this time, Korean ceramics were also influenced by those cultures at the western end of the Mongol empire. As a result, flattened vases, foreign arabesques and phoenix motifs began to appear. In addition, a new type of gilded celadon was produced.

Celadon's most drastic decline occurred in the late fourteenth century. During King Kongmin's reign (1351-1374), factional disputes led to a weakening of the monarchy. Coastal raids by Japanese marauders further exacerbated the problem. The celadon from this era, with its half-finished designs, uneven surfaces and poor glaze work, reflects the troubled times. During this period, Korean ceramic ware lost its flowing lines, while the spouts on the pitchers became more exaggerated like those of China. Although inlaid celadon declined as an art, it served as the stepping stone to the punch'ŏng of the Chosŏn Period.

**White Porcelain (Paekcha)**

Koryŏ's white porcelain style first appeared around the ninth century, during the Greater Shilla Period. White porcelain was produced in the plain style, in relief, incised or inlaid with iron-rich red ochre.

White porcelain kilns existed at Idong Township in Yongin County of Kyŏnggi Province (the Sŏ Village kilns), and in Poan Township in Puan County of Northern Cholla Province (the Yuch'ŏn Village kilns). Unlike the Yuch'ŏn Village kilns, which only produced a small amount of white porcelain, the Sŏ Village kilns produced white porcelain exclusively.

**Iron-brown Underglaze, Iron Glaze and Marble Pattern Porcelain**

In addition to celadon, which was the main ceramic style of the Koryŏ Period, white porcelain, iron glaze and marble pattern porcelain were also manufactured. Iron glaze ware gets its name from the heavy iron content of its glaze. On this style of ware, the glaze itself turns dark brown or black. For this reason, it is also known as ash glaze or ash-brown glaze.

Around the thirteenth century, Korea became influenced (via the Mongols) by the pottery styles of northern China. In particular, Koryŏ artists learned to make porcelain painted in iron-brown underglaze or ash glaze. In addition to these two new glaze styles, the Koryŏ Period saw the introduction of marble pattern porcelain. To create the marble-like appearance, white clay, celadon clay and red clay were mixed and shaped, and clear celadon-glaze was applied. The marble pattern style was chiefly used to make glasses. Very few examples are extant.

**Porcelain Craftsmen**

During the Koryŏ Period, craftsmen attached to central or government departments or specially designated zones were in charge of pottery manufacture. These craftsmen were of the slave, lowborn or freeborn classes. However, the management of these craft centers proved difficult. From the twelfth century to the early Chosŏn Period (fifteenth century),
there was an exodus of commoners from the special manufacturing zones. As a result, fewer skilled potters were available to work the kilns.

**Chosŏn Period**

During the Chosŏn Period, the Koryŏ tradition of simple and inlaid celadon was continued. In addition, the poorly-made celadon ware of the late Koryŏ developed into stamped and inlaid *punch’ŏng*. White porcelain was also actively produced becoming the diverse and innovative style of the new dynasty.

**Proliferation of Pottery Workshops Further Inland**

At the end of the Koryŏ Period, frequent coastal raids by Japanese pirates disrupted pottery manufacture. In addition, a weakening central authority made it possible for many commoners to desert the special craft zones. At the start of the Chosŏn Period, the formation of a new dynasty led to an increase in the consumption of pottery for both ritual and everyday use. For these reasons, during the Chosŏn Period, many new pottery centers for *punch’ŏng* and white porcelain were established further inland. These new manufacturing centers were especially concentrated in the Cholla, Kyŏngsang and Ch’ungch’ŏng Provinces.

**Celadon**

The transitional period between the late Koryŏ and early Chosŏn Periods was characterized by the coexistence of conservative and creative trends. On the one hand, Koryŏ celadon continued into the new dynasty. On the other hand, craftsmen were experimenting with a new style that came to be known as "*punch’ŏng*.”

Archeological evidence of pure and inlaid celadon during the Chosŏn Period indicates that these older styles continued to exist along with the newer *punch’ŏng* style. Chosŏn celadon belongs to three categories: plain celadon, inlaid celadon, and celadon and white porcelain hybrid styles. As with Koryŏ pottery, pure celadon was made in a plain style (without designs), with incised patterns, etc.

**Punch’ŏng Porcelain**

*Punch’ŏng* marks the transition from the poor quality inlaid celadon of the late Koryŏ period to the distinctive ceramics styles of the Chosŏn Period. “*Punch’ŏng*” (powder-blue) is an abbreviation of “*punjang hoech’ŏng sagi*” (powder-decorated grey-blue porcelain).

**Types of Punch’ŏng**

*Punch’ŏng* is made with an extra process by which a layer of white slip is applied between the clay vessel and the glaze. There are many design techniques used with *punch’ŏng* such as: inlay, stamped pattern, *chohwa-mun*, *pakchi-mun*, iron pigment, brushmark and slip-covered. In addition to these, a unique style called grey-blue ware has also been discovered. Unlike typical *punch’ŏng*, grey-blue ware is not painted with white slip. It is thought to have been manufactured in the early fifteenth century.

As the successor to Koryŏ celadon inlay, *punch’ŏng* inlay initially consisted of lines of inlay portraying lotuses, willows, fish, etc. Eventually, advances in technique allowed for fluid depictions made up of inlay covering the entire surface of the design. During the late Koryŏ Period, a pottery tool resembling a seal had been used on some celadon. The Chosŏn Period saw the development of a *punch’ŏng* style by which the entire surface of a piece was covered with stamped designs.
Chohwa-mun and pakchi-mun, on the other hand, allowed for more freedom in terms of form and composition. Chohwa-mun pieces were covered with white slip. The design was etched in lines. On pakchi-mun pieces, an additional process was added whereby the slip in the background area outside of the design was scraped off. On these pieces, a clear grey-green glaze was used to bring out the contrast between the background and the design. Iron pigment punch’ong, on the other hand, was made by applying iron pigment on top of white slip. The process was ideally suited for both simple abstract designs and realistic designs. In addition, there were slip-covered punch’ong with the entire surface covered with white slip, and brushmark punch’ong made by leaving distinct brushmarks on the surface of the slip.

Chohwa-mun, pakchi-mun, iron pigment, brushmark and slip-covered punch’ong allowed for a great deal of artistic freedom and abstraction in contrast with stamp pattern punch’ong’s relatively fixed form.

Origin and Development: Early Fifteenth Century

Archaeological artifacts for late Koryó and early Chosón indicate that there were two distinct styles of punch’ong: lotus pond inlay style and stamped chrysanthemum style. Both of these styles were based on the inferior celadon of the late Koryó. From the late fourteenth to early fifteenth centuries, pieces of these styles tended to be disorganized in terms of composition and the glaze-work was crude; however, both styles underwent refinement during the reign of King Sejong (r. 1418-1450). As mentioned before, grey-green ceramic ware was also made until the beginning of the Chosón Period, but with the advent of punch’ong, this transitional style disappeared.

Unlike inlaid punch’ong, stamped punch’ong, with its standard patterns, was often used in the palace or in government offices. As a result, this style of punch’ong was often stamped with seals bearing an office title. During Sejong’s reign, the name of the craftsman was also written on the bottom of ceramic ware — an innovation aimed at improving the quality of Chosón ceramics.

Refinement: Mid-fifteenth Century

Based on refinements during Sejong’s reign, punch’ong reached its highest development during the reign of King Sejo (r. 1455-1468). Stamped punch’ong, in particular, underwent a great deal of refinement. On both the stamped celadon of the late Koryó Period and the stamped chrysanthemum punch’ong of the early Chosón, the patterns had been spaced widely apart; however, in King Sejo’s reign, the patterns were stamped closely together, at times overlapping so as to obscure one another.

In the 1470s, the Chosón royalty became fascinated by the blue and white ceramic style transmitted from China. As interest in punch’ong waned, the government set up official kilns devoted to blue and white ware and white porcelain. Lacking royal support, punch’ong went into sharp decline.

Potter Seals

Potter seals were more frequently used on punch’ong than on celadon or white porcelain. The content of the seals can be classified as follows:
1. name of craftsman
2. name of government department
3. region of manufacture
4. date of manufacture
5. place of use, quality rating, etc.

The name of the government department was stamped on pieces to guard against theft of
official property. Inscriptions bearing the name of the craftsman were an innovation of King Sejong's, although such inscriptions are in fact more common on pieces from the subsequent reign of King Sejo. Seals showing the region of manufacture are most common on pieces from Kyŏngsang Province. These were often combined with the name of the affiliated government department.

Establishment of Punwŏn: Decline of Punch'ŏng and Popularity of White Porcelain

Around 1467 and 1468, official kilns were established in Kwangju in Kyŏnggi Province. Overseen by the Saongwŏn (the government office in charge of tribute and meals for the royalty), these kilns, called punwŏn, were exclusively charged with the production of white porcelain for the royalty. Kwangju was selected for several reasons. First of all, it was near the capital (present Seoul) and thus in close proximity to the royal palaces. In addition, the site was already famous for the production of high quality white porcelain. Moreover, the site had an abundant supply of fuel woods as well as high quality clay.

Regional kilns around the nation continued to make punch'ŏng, but the quality was declining. An interesting innovation at this time was the iron pigment punch'ŏng. This style used a crude glaze and clay with a rough finish. In order to conceal the rough surface of the clay, a thick layer of slip was applied. The craftwork was so rough, marks from the sand firing supports were sometimes visible on the bottom of the pieces. Since many kilns at the base of Kyeryong Mountain manufactured iron pigment punch'ŏng, the style is also known as "Kyeryong Mountain punch'ŏng."

From the late fifteenth to the mid-sixteenth century, brushmark and slip-covered punch'ŏng came into vogue; however, from the mid-sixteenth century, these styles disappeared entirely. Regional kilns also existed, providing the common people with white porcelain for every day use, but the quality of the work tended to be poor.

White Porcelain

Types of White Porcelain

Chosŏn's craftsmen, influenced by the hard white porcelain being produced in China's Jiang-xi Province around the end of the Koryŏ and the beginning of the Chosŏn Period, began making their own white porcelain. During the Koryŏ Period, white porcelain was usually an ivory-coloured, soft ceramic ware. In the Chosŏn Period, on the other hand, the high quality pieces were made of white clay covered with a bluish, clear glaze. However, depending on the era and place of manufacture, the glaze could also be greyish white, snow-white, bluish-white, etc.

During the Chosŏn Period, pure white celadon was produced in relief, incised, using openwork or plain (without designs). In addition, Koryŏ design styles such as inlay, iron pigment, copper glaze or in rare cases, stamped pattern were also utilized on white porcelain. In addition, craftsmen, influenced by the Mongols and the Ming, began to make blue and white porcelain using blue cobalt pigment. Potters also used red ochre to produce iron pigment designs or under-glaze brown designs, by which part or all of the surface was covered. Iron pigment glazes were also used to create iron glazes that turned dark brown or reddish-brown.

White Porcelain Styles During the Fifteenth and Sixteenth Centuries

The Koryŏ style of white procelain was manufactured until the fifteenth century. Chosŏn style white porcelain begins with a crudely-crafted sarira container made for Yi Sŏnggye in 1391. However, the general Ming style white porcelain characteristic of the Chosŏn style probably was not produced until the reign of Sejong.
During the reign of King Sejo, the increased use of white, and blue and white porcelain throughout the palace necessitated increased production of these pottery styles for both ritual and everyday use. Eventually, white porcelain came into use by even the common people.

Although some of the Chosŏn blue and white ware utilized the standard arabesque of Ming China, most pieces were decorated with imaginative scenes and designs unique to Korea. From the reign of King Sungjong, production of exquisite white porcelain and blue and white ware continued to increase, driven by the tremendous demand for luxury goods by all sectors of society. From the sixteenth century, amidst a weak monarchy and frequent power struggles, Chosŏn’s policies and laws dealing with pottery production and restrictions on consumption were in complete disarray. As a result, white porcelain production increased in quantity from the late fifteenth or sixteenth century; nevertheless, it stagnated as an art form.

White Porcelain Styles From Seventeenth to Mid-eighteenth Centuries

In the devastating Hideyoshi invasions beginning in 1592, many kilns throughout the country were damaged or destroyed. Craftsmen found it impossible to make quality pottery during the chaotic period. Records from the era indicate a dramatic drop in both quantity and quality of ceramic ware.

During the seventeenth century, the cobalt used in blue and white ware was unavailable due to destruction of kilns and the general climate of disorder. As a result, kilns produced a large amount of white porcelain using iron pigment, which was more readily acquired. The iron pigment pieces from this era often have crude decorations depicting comic dragons with bodies that fade into the background, or clearly defined, abstract floral patterns. Beginning with the late seventeenth century, faint blue pigment was used to depict orchids on pieces of blue and white ware. In the eighteenth century, on the other hand, there was an increase in white porcelain decorated with copper pigment. On these pieces, the abstract red designs, painted over the white background, produced a striking effect. During the mid-Chosŏn Period, there was an increase in pottery kilns through Korea. These kilns mass-produced white porcelain for everyday use by the common people. Needless to say, these articles show cruder craftsmanship.

White Porcelain Styles From Mid-Eighteenth to Nineteenth Centuries

In 1752, the official kilns were moved to Punwŏn Village in Kwangju. These kilns, representative of the late Chosŏn Period, produced white porcelain in the Kumsa Village tradition. As time went by, the quality of this ware declined. From the mid-nineteenth century, the site produced crude, ill-formed white porcelain. In 1884, with the privatization of the site, official kilns could no longer serve as the guiding force behind Chosŏn ceramics.

During the late Chosŏn Period, a great number of pottery techniques were employed. At the same time, the shapes of pots and vessels became more diverse. Both square bottles and round, flattened bottles were produced. Porcelain was made using iron glaze, or with blue cobalt (sometimes combined with copper pigment). In addition, a great number of innovative designs came into use. Yet, the majority of pieces were much like those commonly used today.

In addition, water droppers (used with ink stones) were crafted in the shape of numerous animals and plants, i.e. frogs, toads, turtles, rabbits, mythological beasts, peaches and so on. Pen and paper holders, along with various ritual vessels were also common. Pieces were also decorated with motifs from folk art, such as the magpie and tiger. In addition, pieces decorated with red ochre came into everyday use at this time.
Special Characteristics of Kwangju’s White Porcelain Kilns and Excavated Artifacts

Judging from geographical names of the Kwangju kilns, the sites seem to have straddled the Han River. The early Chosŏn kilns produced mostly hard white porcelain, but they also seem to have produced some of the softer variety. According to excavations, inlaid and pure white porcelain were produced along with smaller quantities of blue and white ware, celadon, etc. Bowls, bottles and vases were made, and the characters for, “heaven,” “earth,” “purple,” and “yellow” were inscribed by scraping the glaze on the bottom of white porcelain bowls and plates. At sites such as the sixteenth century Kwanŭm Village or Chŏngji Village kilns, shards of white porcelain decorated with iron pigment have been discovered. Characters such as “left” or “right” (denoting rank) are incised on the bottom of some of these pieces.

Designs on the blue and white ware from the Kwangju kilns can generally be divided into Korean and Chinese styles. The former employs many forest motifs such as pine and bamboo, or twisted branches with the moon and stars. On pieces of the latter style, the surface was filled with detailed dragon motifs or fairly crude arabesques. Glaze work on the former was elegantly done compared to the latter pieces. The latter style works show that Korean craftsmen were in the process of mastering the Chinese blue and white ware style, but had not yet fully transformed it into an indigenous art form.

During the seventeenth century, the Sŏndong Village kilns produced white porcelain with a greyish or light-blue hue. In addition to plain white porcelain, the kilns also made pieces decorated with iron pigment or blue cobalt. Some of this blue and white ware had the character “ceremony” inscribed on the inside, and the pieces were decorated with dragons, bamboo, orchids, grapes, plum flowers, etc.

The Kŭmsa Village kilns, on the other hand, manufactured the snow-white porcelain typical of the mid-Chosŏn Period. High bottoms on the ritual vessels are the characteristic feature of pottery from this site. The official kilns were eventually moved from Kŭmsa Village to Punwŏn Village. White porcelain from Punwŏn Village tends to be of poor quality. The character such as “ceremony,” “longevity,” or “good fortune” appear on the inside of the ritual vessels, along with special characters used as designs.

Porcelain Craftsmen

In the early Chosŏn Period, craftsmen were generally of the lowborn class, but from the reign of King Sŏngjong (r. 1469-1494), there was a gradual increase in freeborn craftsmen. Some of these were government craftsmen working under the jurisdiction of public offices, while others were privately employed. From the reign of King Sŏngjong, government craftsmen gradually started to desert their posts. By the reign of Yŏnsan, there were not enough government craftsmen for even the manufacture of pottery for the royal house; hence, private craftsmen had to be employed. There were a number of reasons for this exodus of official craftsmen, i.e. a lack of government funds, the weakening of the monarchy under King Sŏngjong and government neglect. Moreover, pottery manufacture had become a large-scale operation no longer manageable by the current government structure.

As a result, even the remaining government craftsmen took private orders in order to supplement their meagre incomes -- a practice that was tacitly accepted by the government. By the late Chosŏn Period, the exodus of government craftsmen had become such a common occurrence that the official kilns were no longer under de facto control of the Saongwŏn, but were instead managed by merchants on a profit basis. Finally in 1884, with the official privatization of the kilns, Chosŏn pottery entered a state of decline.
Social Class of Consumers

The history of Korean ceramics is characterized by a gradual increase in the availability of pottery to people of lower social standing. Celadon had been available to only the priveleged classes during the Koryo Period. During the reign of Choson’s King T’aejo (r. 1392) and T’aejong (r. 1400-1418), ceramics were primarily utilized by the royalty and officials of the central government. During Sejong and Sejo’s reign, white porcelain, white and blue ware, as well as the top quality punch’ong were used by the king, the aristocrats affiliated with the royal house, and throughout the palace complex. Thus, punch’ong was already in use by everyone from the king to the common people during the early Choson Period.

After the establishment of the official kilns in Kwangju, these kilns concentrated on the mass production of high-quality white porcelain. Legally, the white ware from these kilns was solely for use by the royal house, but frequent proclamations to this effect during the reigns of King Sejo and Sŏngjong suggest that a significant portion of this ware made it into other hands. In support of this supposition, archeological finds show that the official kilns also produced crude white porcelain that was intended for use by central government officials or private citizens. Moreover, there is evidence that even officials and even commoners were illegally using white porcelain and blue and white ware during the reigns of King Sejo and Sejong -- an indication that royal statutes were being ignored and government control of official kilns was already weakening. This turn of events also shows how a preference for white porcelain was evident throughout Choson society from early on.

**Bibliography**

**Ch’a Ch’ŏllo (1556-1615)**

Ch’a Ch’ŏllo was a scholar official of mid Choson. His family’s ancestral home is in Yŏnan, his courtesy name was Pogwŏn and his pen names include Osan, Kyuls’il and Ch’ŏngmyo kŏsa. Ch’a was born in Songdo and was the disciple of Sŏ Kyŏngdŏk (1489-1546). In 1577 he passed the military section of the Royal Visitation Examination (Alsŏng shi) and was appointed as Education Officer (kyosu) of Kaesŏng. In 1583 he was successful in the civil service examination, but in 1586 while serving as a regulator for the civil service examinations he was exiled to Myŏngch’ŏn as a result of improprieties concerning the examination of an acquaintance from his hometown. He was reinstated in 1588 and in the following year was dispatched on an embassy to Japan along with Hwang Yun’gil (1536-?). During his time in Japan, and to the delight of Japanese literary men, Ch’a composed some four to five thousand pieces of poetry. His literary fame even reached to Ming China where he was honoured with the title of ‘Literary Man of the Eastern Country’ (tongbang munsa). Ch’a continued to serve Chosŏn in various official positions and during the reign of Prince Kwanghae (r. 1608-1623) he served in the Office of Sacrificial Rites (Pongsangshi).

Ch’a is highly praised for his fine skills in poetry and is counted among the premier literary men of his age. His *kasa* and other writings have been transmitted to the present day in his literary collections *Osan chip* (Collected Works of Osan) and *Osan sŏllim* (Literary
Ch’adae, King

Ch’ae Manshik (1902-1950)

Born in Okku, North Cholla Province; Attended Waseda University in Tokyo, Japan; Worked as a reporter for Dong-a Ilbo (Tonga Daily), Chosun Ilbo (Chos<On Daily), and Kaebyok Publisher.

Ch’ae Manshik (styled Paengn<ung) made his literary debut by publishing a short story, "Toward the Three Paths~" in 1924. But it was after the publication of the two superb stories, "An Intellectual and a Flat Rice Cake" and "A Ready-made Life" that he attracted critical attention and became famous. Ch’ae was by no means a prolific writer, but nearly all of his fiction is marked by a satirical vein.

In "A Ready-made Life," for instance, Ch’ae relentlessly portrays the defeat and despair of an alienated intellectual in a colonial society, who could not find the meaning of his own existence. But "A Ready-made Life" is not a simply gloomy story, but a hilarious one saturated with black humor and satire. The protagonist of "A Ready-made Life" is a surplus man situated in the margin of a colonial society. Once an ambitious intellectual, he is now reduced to a helpless lumpen proletariat, a failure not being able to get a job. It is an account of a social misfit who agonises in frustration and despair, victimised by hostile environment. It is a sad story, to be sure, and yet, it invites cheerful laughter, though nihilistic to a certain extent. Ch’ae’s novel, The Muddy Current, delineates various types of people in a seaport as well as in urban ghettos in the 1930’s. The novel, dealing with Japanese exploitation of Korean agriculture, is a powerful indictment of the Korean society during that period based on gross injustice and corruption. The Muddy Current is certainly a representative novel of Ch’ae but it was Peaceful Reign that helped Chae establish himself as a prominent novelist. Peaceful Reign is a family Saga a chronology of the Yun family. This novel dealing with four generations of the Yun family explores the conflict between the generations and traces the social history of Korea from the 1900’s to the 1930’s.

Yun Yonggyu who belongs to the first generation is a man who manages to make himself a millionaire somehow during the chaotic era in late Choson Dynasty. Although he succeeds in making his family ascend to a higher social class he is killed by a bandit during the ptocess - another outcome of the chaotic period. The second generation is represented by Yun Chikgw<On who aspires to have not only fortune but also fame. He abhors the chaotic period that has caused the death of his father completely forgetting the fact that the very chaos has enabled his family to be rich and desires stability and serenity. That’s why he is so pleased to live under the Japanese occupation which he calls the "peaceful reign." Thus social change is the last thing he wants. In order to maintain the stability for his family, he even wants his grandsons to become either a mayor or a police commissioner. Meanwhile he buys out the "Yangban" (aristocracy) title so that he can marry off his children to Yangban class.

Yun Changshik who represents the third generation is a prodigal indulged in dissipation and degradation-a typically spoiled son who has rich father. Ann Chong-su too who belongs to the fourth generation squanders his family’s fortune. However Yun Chonghak who also belongs to the fourth generation participates in the socialist movement and as a result is arrested. At last the Yun family disintegrate. Portraying the rise and fall of the four generations of the Yun Family Ch’ae Manshik explores the social political and historical changes and landscapes of Korea in the early twentieth century.
Around the Liberation Ch'ae published such stories as "A Story of Rice Field," "Mr. Pang," "Officer Maeng," and "A Sinner before His People." "A Story of Rice Field" deal with the history of land in Korea which immediately intertwined with the lives of the Korean people. It was in "Mr. Pang" and "Officer Maeng" that Ch'ae's brilliant sense of satire and parody luminates. "Mr. Pang" is an account of an ignorant country man named Pang Sambok who happens to learn English a little and thus becomes an interpreter for the U.S. military government in Korea right after the Liberation. As the pro-Japanese recede, the pro-American gain the power now. Pang savers the power and audaciously tries to grab all the opportunities to make the money it entails. Making an unexpected mistake, however, he falls down and eventually loses everything. Reading this story, the reader chuckles at the author's poignant satire and admires Ch'ae's profound insight into and powerful criticism of the chaotic change in Korean society occurred immediately after the Liberation. "Officer Maeng," too, satirises the chaotic period in Korea right after the Liberation. His works ainclude The Muddy Current (T'angnyu), 1986; The Complete Works of Ch'ae Manshik, 1989.

Lee Chaesun

Ch'ae P'aengnyun (1669-1731)

Ch'ae P'aengnyun was a late Chos'on scholar-official. His family's ancestral home is in P'yönggang, his courtesy name was Chunggi and his pen names were Hùiam and Únwa. His father Ch'ae Shisang was a magistrate (small county, hyönggam). In 1687 Ch'ae P'aengnyun became a literary licentiate (chinsa) and in 1689 was successful in the Augmented Examination (chungwang shi). He was then appointed as Third Diarist (komyo) in the Office of Royal Decrees (Yemun'gwan). At this time, Ch'ae received an order from King Sukchong (r. 1674-1720) to compose five and seven syllable regulated verse form (yulsli) poems, which brought him fame for his compositional abilities. In 1691 he was appointed to the Crown Prince Tutorial Office (Seja Shigangwón) and in 1694 served as Fourth Censor (chongon). After this time, Ch'ae retired from official life and concentrated on lecturing his disciples. However, in 1724 when Yöngjo (r. 1724-1776) became king, Ch'ae returned to officialdom and served as Royal Secretary (sungi), in addition to holding other offices. By 1730, he held the concurrent appointments of Second Minister (ch'amp'an) of the Board of War (Pyöngjo), Third Magistrate (tongissa) of the State Tribunal (Uigiimbu) and First Counsellor (pujehak) of the Office of the Special Counsellors (Hongmun'gwan). Ch'ae's literary collection Hùiam chip (Collected Works of Hùiam) is extant, and contains many examples of his poetic skills, as well as other pieces.

Ch'angnyöng County

Ch'angnyöng County

Situated in the northern part of South Kyöngsang Province, Ch'angnyöng county includes the towns of Namji and Ch'angnyöng, and the townships of Kilgok, Kyesöng, Koam, Toch'ôn, Taegi, Taehap, Pugok, Sündan, Yöngsan, Yuö and Ibang. The county covers a total area of 532 sq. kms., and 1989 statistics show that its population was 89 653. Mt. Subong (593m), Mt. Chöngwang (619), Mt. Kwannysong (740m) and other peaks of the Pisiil Mountain Range rise up in the northeast, while the Naktong River runs along the county's western and southern borders.

In former times, the county's western plains frequently suffered flood damage. In 1925, however, an extensive project was undertaken to repair the area's waterways. This was
followed by another project in 1976 during which marshland and flood plains were reclaimed for agricultural use. The success of these projects increased the county's arable to 30 per cent. Of this, about 98 sq. k.ms. grows rice and about 64 sq. k.ms. is used for dry-field crops.

With a long stretch of the Naktong River as well as numerous mountains and reservoirs, the county offers a large number of scenic attractions. The Pugok Hot Springs, in Pugok Township just south of Mt. Togam, are one of the county's top tourist destinations. With water temperatures from 58ºc to 78ºc, these springs are among the hottest in Korea. Discovered by Shin Hyønt'aek in 1973, these sulphureous springs release 6 000 tons of water daily. In addition to sulphur, the springs contain chlorine, calcium and iron. The water is said to cure both respiratory ailments and and skin diseases. Situated in a picturesque natural setting, the springs have been developed extensively as a tourist attraction. Located here is ‘Pugok Hawaii’, an extensive complex containing indoor and outdoor swimming pools, a huge bath house, a theatre, a botanical garden, a zoo and golf links.

In nearby Yōngsan Township near Mt. Hambak, is the Yōngsan Mineral Spring. The water here is said to be efficacious in treating such diverse ailments as chronic stomach disease and ringworm. Records show that the spring was discovered by a woodcutter during the reign of Shilla King Kyōngdök (742-765).

As well as its scenic attractions, the county contains a number of ancient sites and relics. Historically, the most important temples are Kwannyong Temple at the foot of Mt. Kwanggyong in Ch'angnyŏng, and Kwanum Temple between Highway 5 and the Kuma Expressway in Toch'on Township. Confucian schools in the area include Ch'angnyŏng Hyanggyo (county public school) in Ch'angnyŏng's Kyo Village, Yōngsan Hyanggyo in Yōngsan Township, Kwansan Sŏwŏn (private school) and Sogok Sŏwŏn in Koam Township, Kwangsan Sŏwŏn west of Mt. Sŏngi (200m) in Yuŏ Township, and Tŏkpong Sŏwŏn east of the Pugok Hot Springs. In Yuŏ Township's Migu Village, is P'allakchŏng (Eight Pleasures Pavilion), which was originally built as a lecture hall in 1580 by Chŏng Ku, a famous scholar of the late 16th and early 17th centuries. In 1852, the dilapidated structure was repaired to become the building seen today. The pavilion gets its name from ‘eight scenic wonders’ found in nearby locations.

In order to promote and preserve the area’s traditional culture, a number of festivals and rites are held here every year. On 1 March (Independence Movement Day), the Yōngsan Cultural Festival takes place. The festival commemorates the active role that local people played in the 1919 movement for independence from Japanese colonial rule. During the festival, visitors can witness a number of traditional folk events and ceremonies as well as traditional games. Many cultural and art performances, competitions and exhibitions are also held at this time.

Ch’angwŏn

Situated in the southern part of South Kyŏngsang Province between Masan and Kimhae, Ch’angwŏn is a planned city, which was modelled after Canberra, Australia’s capital. As part of the city’s development, 15 sq. k.ms. have been set aside for the creation of parks and there is an continuing effort to plant trees throughout the city. Unlike most Korean cities, Ch’angwŏn has wide roads and its lanes and alleyways are not clogged with street vendors. Ch’angwŏn-daero, a 50-metre wide road running through the city centre, has a 12.5 km. straight stretch, denoting it as one of the longest in Korea.

Ch’angwŏn was created in the 1970s as part of a government plan to promote the development of heavy industry, including chemical and defence. The site for the city was chosen because of its proximity to the industrial cities of Masan and Pusan. It was also felt
that since the city was situated in a basin surrounded by mountains, the area would be relatively safe from a North Korean attack.

South of Ch’angwŏn-daero road lies the Ch’angwŏn Industrial Complex, which houses 330 companies. Factories here produce a wide variety of machines for various industries as well as machine parts and spares. Conglomerates located here include Korea Heavy Industry, Samsung Heavy Industries, Daewoo Heavy Industries, Hyosung Heavy Industries, Lucky-Goldstar and Hyundai. On the southern side of the Chungang-dong rotary lies the Industrial Complex Management Corporation. Established in 1974, this provides general management for the plants within the complex. During the 1980s, Ch’angwŏn’s population burgeoned as people came to work in the city’s numerous factories. With numerous employment opportunities, Ch’angwŏn has attracted many young workers, so that today almost half of the population is aged between twenty and thirty years.

In addition to its factories, the city is home to a number of research centres and schools. Within the Ch’angwŏn Industrial Complex, is the Korea Institute of Metal and Machinery, the Korea Electricity Research Institute, the Korea-Belgium Vocational Institute and Ch’angwon Mechanical High School. In 1976, the Korea Electrotechnology Research Institute (KERI) was also established here. This R and D centre helps manufacturers upgrade productivity of heavy electronic appliances. In addition to research, the institute performs quality assurance tests of electronic apparatus as a government authorised inspection centre. Colleges in the city include Ch’angwon Industrial Masters College, Ch’angwon College, Ch’angwon Junior College and Ch’angwon National University in Sarim-dong. Ch’angwŏn has also benefited from the influx of government agencies. In 1983, the South Kyŏngsang provincial government was moved to Sarim-dong, and in the years since, over fifty provincial organisations have moved into the city.

There are a number of important historical sites in the area. Ancient tombs and dolmens have been found to the south of Yongsan Reservoir. Buddhist artefacts in the area include a three-storey pagoda (South Kyŏngsang Province Tangible Cultural Asset No. 26) on the grounds of Chigwi Primary School in Chigwi-dong, a stone Vairocana statue (Treasure No. 436) in Taebang-dong, Ilchumun (one-pillar gate) at Pulgok Temple, Sŏngju Temple’s three-storey pagoda and Main Buddha Hall (South Kyŏngsang Province Tangible Cultural Assets No. 25 and 134), a Shilla-era carving in relief of a seated Buddha (South Kyŏngsang Province Tangible Cultural Asset No. 98) at Samjŏngja-dong and a Koryŏ-era seated Buddha figure near Yonggang Tunnel. Old Confucian schools in the area include Ch’angwŏn Hyanggyo, which was moved to its present location east of Yonghwa Temple in 1749, Sahwa-dong’s Unam Sŏwŏn founded in 1702 and Tobong Sŏwŏn to the west of Yongsan Reservoir.

The Mt. Magŭm Hot Spring is just south of the Naktong River in Shinch’on Village.

Ch’ansongga [Music]

Ch’egwan (?-971)

Ch’egwan (also pronounced Chegwan) was a Koryŏ monk best known for his study of Ch’ont’ae (Ch. Tiantai, Jap. Tendai), an influential school of Buddhist thought founded by the Chinese monk Zhiyi (538-597). Prior to Ch’egwan, originals of the early Tiantai teachings had disappeared from China as a result of the Anlu and Shisi Rebellion (755-761), the Huichang Persecution (845-847) and waning royal support. As a result, King Zhongyi of Wuyueh invited Ch’egwan to China to reintroduce the Tiantai scriptures. While in China, Ch’egwan wrote the Ch’ont’ae sagyo iŭ (Chin. Tiantai sīqiao yī, Outline of the Tiantai Fourfold Teachings). In this terse work, Ch’egwan provides a systematic summary of the Tiantai teachings. The work is structured on Ch’egwan’s system of sutra
classification by which he divides the various Buddhist teachings into the Five Periods and Eight Teachings, a classification based on that of Zhanran (711-782), the Sixth Patriarch of Tiantai.

Although this work was not disseminated during Ch’egwan’s lifetime, it later went on to have a tremendous influence throughout East Asia. In particular, it had a major impact on developments within the Japanese Tendai Sect. From the time of Ennin (792-862), the development of esoteric transmissions of Tendai beliefs in Japan had made it increasingly difficult to ascertain the fundamental teachings of the school. As a result, Japanese came to rely on Ch’egwan’s text as an authoritative summary of Tendai beliefs. As evidence of its continuous influence over the years, more than two-hundred commentaries and sub-commentaries have been written on the text and the entire work has been translated into English.

Ch’ilbo Mountain

Mt. Ch’ilbo (906 metres) is situated in North Hamgyŏng Province, east of Kilchu. Where the mountain meets the East Sea, waves pound against cliffs several hundred metres high. According to legend, seven mountains once stood together here, like seven gems (ch’ilbo), but six of the mountains sunk down into the sea leaving only Mt. Ch’ilbo behind. With spectacular pinnacles of rock, numerous caves and crystal clear streams, the mountain is considered one of the eight wonders of North Hamgyŏng Province. In particular, the valleys and peaks around Kaeshim Temple are renowned for their spectacular beauty.

Ch’ilch’ul (seven grounds for expulsion of a wife) [Society]
Ch’ilgŏ chi ak [Women]

Ch’ilgok County

Situated northwest of Taegu in North Kyŏngsang Province, Ch’ilgok County has the town of Waegwan and the townships of Kasan, Kisan, Tongmyong, Puksam, Sokchŏk, Yangmok and Chich’ŏn. Mt. Ka (902m), Mt. Todŏk (660m), Mt. Paegun (713m) and Mt. Yuhak (839m) rise in the eastern half of the county, while Mt. Yongam (782m), Mt. Piryong (576m) and Mt. Ponghwa (468m) stand near the western border. The Naktong River flows through the county’s western sector.

Rice is cultivated in the fertile lowlands along the Naktong River. In addition, green vegetable, apples, and garden plants are grown for sale in the Taegu and Kumi markets. Stock breeding and sericulture are other commercial activities. In recent times, small factories have been established to do subcontracting work for the textile and electronics factories in Taegu and Kumi.

The county’s tourist industry is primarily centred around the area’s scenic mountains, the Naktong River and the historical sites. Located in Tongmyong Township’s Kudŏk Village, Songnim Temple is one of the county’s top tourist attractions. This ancient monastery is believed to have been founded during the reign of Shilla’s King Naemul (r. 356-402). The five-storey pagoda found here, unlike most ancient pagodas, is in excellent condition with even the finial portion intact. Sarira and reliquaries have been discovered inside the pagoda. Other ancient monasteries include Yonghwa Temple in Yangmok Township and Hŏngguk Temple in Waegwan.

There are a number of Confucian schools in the area, including Sayang Sŏwŏn in Chich’ŏn Township; Soam Sŏwŏn in Kisan Township; and Pongyang Sŏwŏn in Sokchŏk Township. In Yangmok Township’s Namgye Village is Sungmusa. Built in December,
1980, this shrine commemorates General Shinyu who lived during the reign of King Sukchong (r. 1674-1720).

The county's location northwest of Taegu and on the Naktong River, has made it the hub of the many important battles fought during both Choson and in modern times. In Kasan Township on the rugged Mt. Ch'onsaeng, there is a fortress where Kwak Chaeu and a group of guerilla fighters successfully repelled Hideyoshi’s forces in a pitched battle. In Mt. Ka Provincial Park, there is another stone fortress that was built after the Hideyoshi Invasions (1592-1598). The area is also famous for battles fought during the Korean War. In Kasan Township’s Tabu Village, there is a monument commemorating a southern victory in a decisive battle against invading North Korean forces.

Ch'ilgung Shrine

Ch'ilsŏ ŏnhae

Ch'ilsŏ ŏnhae is a han’gul rendering of the Three Classics and Four Books of Confucianism, which was ordered by King Sonjo (r. 1567-1608). This work was begun in 1586 and completed in 1588. The Four Books of Confucianism represented are Taehak ŏnhae (Great Learning-Korean Annotation) which is one volume and one fascicle, Chungyong ŏnhae (Doctrine of the Mean-Korean Annotation) which is also one volume and one fascicle, Nono ŏnhae (Analects-Korean Annotation) which is four volumes and four fascicles, and Maengja (Mencius-Korean Annotation) of fourteen volumes and seven fascicles. The Three Classics are the Chuyok ŏnhae (Book of Changes-Korean Annotation) composed of nine volumes and five fascicles, Shigyong ŏnhae (Book of Songs-Korean Annotation) of twenty volumes and ten fascicles, and Sojon ŏnhae (Book of Documents Annotated Version-Korean Annotation) of five volumes and five fascicles.

The original version of this wood-block print work was destroyed in the Japanese Invasion of 1592 and is not extant. However, after the Invasion, Sonjo again ordered the work to be published, in 1601. Subsequently, it was republished under King Kwanghae (r. 1608-1623) in 1611 and in 1631 a wood block edition was published. There were also many other printings of this work throughout Choson. Ch'ilsŏ ŏnhae now serves as a valuable source for examining the changes in the Korean language throughout the last half of the Choson Kingdom.

Ch’ima

Ch'odong (Woodcutters)

Ch’oe Ch’iwŏn (857-?),

Ch’oe Ch’iwŏn (styled Koun) a scholar of the late Shilla period, was from the Saryang district of Kyŏngju, the Shilla capital. He is said to have shown an early aptitude for learning, and at the age of twelve (868) he was sent to study in China. His father is reported to have said to him, "If you cannot pass the examination in ten years, you are not a worthy son of mine. Go and study hard!" It seems clear that he was an apt and diligent student, as he succeeded in passing the Tang dynasty civil service examinations at the early age of seventeen.

In the same year (874) Ch’oe was appointed Chief of Personnel (or Comptroller) in Piao Shui District, Xuan Zhou County. Five years later he was made Secretary and Censor in the same district and received "a purple pouch with a golden fish tally". At that time the Huang Chao rebellion broke out and Kao Pien (d.887) was made Circuit Field Commander and dispatched to quell the uprising. Kao appointed Ch’oe as his secretary, and the
memorials, letters and Manifesto that Ch'oe wrote at that time are still extant. His writings in Chinese were well-known, and reference is made in the New History of the Tang Dynasty to a collection of twenty of his literary works entitled Kyewŏn Pilgyŏng chip.

At the age of twenty-eight Ch'oe made known his wish to return home. On hearing of this, Emperor Hui Zong (873-888) sent him to Korea as his envoy with an imperial edict in 885. He was then appointed Royal Lecturer, Hallim Academician and Deputy Minister of Military Affairs in the Shilla court. Ch'oe had profited greatly from his studies and experience in China and, upon returning to Korea, was anxious to put his knowledge into practice. He and two other influential scholars, Ch'oe Sungu and Ch'oe Shinji, were active in the reform movement during this period, and Ch'oe Ch'iwŏn had some specific ideas as to how to correct problems in the bureaucracy. In particular, he wished to see the old Bone Rank System (kolp'um chedo), which rewarded bloodline rather than merit, changed to enable men of ability to prosper. He wrote a letter to Queen Chinsŏng entitled "Ten Issues of the Day" describing what he considered the most important matters for the government to address.

However, his suggestions were not taken seriously, possibly due to the fact that he was regarded with suspicion and envy in the court, and also because of the general decline and turmoil of the Shilla dynasty in the late ninth century. By 887, during the reign of Queen Chinsŏng, rebellion had broken out in several areas due to the ineffectiveness of the government in dealing with problems in the countryside. These uprisings led to the formation of the Later Paekche Kingdom in the southwest and the Later Koguryŏ Kingdom in the north central region, and were said to have been either started or supported by prominent men returning from training in China. Ch'oe was regarded as one of this group, but unlike many of his contemporaries, he did not take part in violent revolution in order to bring about change. He became magistrate of Taesan county (present T'aein, North Cholla Province) for a time, but eventually left the government service and retired to Haein Temple northwest of the Shilla capital of Kyŏngju. In retirement he taught a growing number of disciples who became the well-trained nucleus of government service in the new Koryŏ court. It is believed that Wang Kŏn, the founder of the Koryŏ dynasty, corresponded with Ch'oe, who refused to serve the court himself, but many of whose students brought Confucian ideas into the new administration. The last part of Ch'oe's life is shrouded in mystery and it is not known when, where or how he died. He was the second man to be enshrined in the Confucian Hall of Worthies at the National Academy, and is also considered the founder of the Kyŏngju Ch'oe lineage, which includes almost everyone named Ch'oe in Korea today. Official records state that in 1023 King Hyŏnjong (r. 1009-1031) granted him the posthumous title of Marquis of Literature.

Ch'oe Ch'ung (984-1068)

Ch'oe Ch'ung (styled Munhon kong) was a Confucian scholar and administrator during the Koryŏ Dynasty. A descendant of the Haeju lineage of the Ch'oe family, he was responsible for the establishment of a new system of private education.

Achieving first ranking in the civil service examination of 1005, he commenced service as a government official, and among his first duties was the recompilation of books which had been destroyed during war with the Khitans. These works included the Ch'ildae Shillok (Annals of the Seven Kings) and the Hyŏnjong Shillok (Annals of King Hyŏnjong). As Chief Minister of State Affairs, he established a new criminal law system. Serving in numerous government posts, he also made contributions to the defence of the country (and in particular, the north-east border area) as head of the Supreme Council of Defence Matters.

However, his most important contribution lay in his establishment of a private education system. During this period, the introduction of the civil service examination had made it
necessary for those seeking positions as government officials to possess a sound knowledge of Confucianism and Chinese history and literature. However, a stable national education system was not yet in place, and Ch'oe, as the grand preceptor and secretary-general of the Royal Secretariat, sought to partially rectify this problem through the opening of his own private school in the capital city, Kaesong. The school quickly gained popularity, and Ch'oe himself came to be called Haedong Kongja (the 'Confucius of Korea'), his enthusiasm for expanding the education system being likened to that displayed earlier by Confucius in China.

Divided into nine academies, his school was known as Kujae Haktang (Nine Academy School). In preparation for the civil service examinations, students were educated in literature and in the the nine Confucian classics and the three histories, Shiji (Records of Grand Historian), Han shu (History of the Former Han) and Hou Han shu (History of the Later Han). The institution played a significant role in the development of Chinese classical studies in the Koryo Dynasty. Due to his reputation and influence, Ch'oe was able to invite certain prominent scholars and high-ranking officials to come and teach his students, and competitions were even arranged between the visiting teachers and the students. His students were able to pass the civil service examination and gain government posts with relative ease, and they retained their distinct identity as Munhŏn Kongdo (Lord Chancellor Ch'oe's Disciples) even after moving on to public life.

The success of the Nine Academy School led to the establishment of a private education system, and eleven other distinguished Confucian scholars founded their own schools following Ch'oe's model, the twelve schools coming to be known as the Sahak Shibido (Twelve Assemblies).

**Ch'oe Ch'unghŏn (1149-1219)**

Ch'oe Ch'unghŏn was a prominent general during the Koryô Dynasty. Ch'oe established military rule under the Ch'oe House and consolidated his power through the suppression of peasant and slave revolts, notably those led by Man'gi (1170) and Manjŏk (1198). During his life, Ch'oe was responsible for the dethroning of three kings (Myŏngjong, Shinjong and Hŭijong) and the enthroning of four others (Shinjong, Hŭijong, Kangjong and Kojong).

The 1170 coup, masterminded by Chŏng Chungbu, brought about a radical change in the Koryô power structure, and military officers gained control of government from civilian officials. However, disputes among generals led to a deterioration in political and social conditions, and it was in this atmosphere that Ch'oe revolted and established a new order through which he dominated the kingdom. The Ch'oe family's domination of Koryô government continued with his son U, grandson Hang and great-grandson Ui, ending with the latter's death in 1258.

Shortly after gaining power, Ch'oe presented a document known as the Ten Injunctions to King Myŏnjong (r.1170-1197). This document contained a series of recommendations aimed at eliminating corruption among government officials and reducing the power of Buddhist monks. Ch'oe also called for the return of unrightfully seized land to its rightful owners and the fair collection of land rent, however he later used the traditional land system to gain revenue to pay his personnel and thereby increase his authority. In effect, the Ten Injunctions encapsulated Ch'oe's broader goal of creating a revitalized dynasty centered on the Ch'oe House's authority.

The following year, Ch'oe imprisoned the king for his failure to implement the reforms contained in the Ten Injunctions, and further consolidated his power. However, he had to deal with a dispute within his own family which seriously threatened his power base. This dispute originated from the attempt by his younger brother Ch'ungsu to have his daughter
marry the crown prince, a plan strongly opposed by the elder brother. The older Ch’oe argued that Ch’ungsu’s plans would break up the crown prince’s existing marriage and that such a marriage would not be suitable, given the original humble lineage of the Ch’oe family. Although initially convinced by his elder brother’s argument, the younger Ch’oe later changed his mind once again, and this dispute eventually led to a fight between forces led by the two brothers. As all of the generals had sided with the elder Ch’oe, Ch’ungsu had little chance of victory, and he was finally pursued and killed by the former’s troops.

Ch’oe’s power structure was centered on two private organizations which effectively overshadowed the authority of the existing Koryo court. These were the Kyojong Togam (Directorate General of Policy Formation) and the Chongbang (Personnel Authority). The former body was concerned with the coordination of the enactment of decrees for the Ch’oe house, while the latter body, which included numerous scholars who had passed the civil service examination, was concerned with civil personnel matters. The core of Ch’oe’s military organization was the Tobang (Personal Security Force), a corps which had been originally established by another strongman, Kyong Taesung, and which was further strengthened by Ch’oe. This corps effectively acted as Ch’oe’s bodyguard, however he also built up a large private army, further expanded by son U, which later replaced the regular dynastic force.

**Ch’oe Chaeso (1908-1964)**

Ch’oe Chaeso (Choe Jaisou) was an outstanding literary critic and English literature scholar. He was born in Haeju of Hwanghae Province and his pen name was Sŏkkyŏng. Ch’oe received his undergraduate and graduate degrees with high honours from Keijō (Seoul) Imperial University, acquiring the graduate degree in 1933. He served as lecturer at Keijō Imperial University, Posŏng College and Pophak College, until Korea’s liberation in 1945. He was then appointed professor at Yonsei (Yonse) University, a post he held from 1949 to 1960. Ch’oe was Dean of the Graduate School of Dongguk (Tongguk) University in 1960 and 1961, and following that, professor at Hanyang University.

During his academic life, and until his death in 1964, Ch’oe added a multi-faceted and voluminous amount to the literature of his day. Whatever doubts contemporary Korean readers are left with about his loyalty to his county, there is no denying the important pioneer role that he played in the development of modern Korean literary criticism. His critical mind and perfectionism helped to launch the first school of systematic literary criticism in the modern period. In this he was greatly influenced by the modernist movements in both Europe and America.

Ch’oe started his career in literary criticism with his article, ‘Misukhan munhak’ (Immature literature) in which he introduced Gog Magog by A.C. Bradley, in the fifth issue of the magazine Shinhŭng (New Arising). He followed this with many works including ‘Kumi hyŏndae munhak kaegwan: Yŏn’guk p’yŏn’ (An Outline of Modern European and American Literature: England; Yŏn’guk hyŏndae sosŏl ŭi tonghyang’ (The Trend of Modern English Novels); Hyŏndae chujijuii munhak iron ŭi könsŏl’ (The Founding of Intellectualism as a Mode of Literary Theory); and ‘Pip’yŏng kwa kwahak’ (Criticism and Science) all of which were published in editions of the Chosŏn ilbo newspaper in 1933-34.

Through these expositions he introduced modernism as a literary mode based on the works of writers such as T.E. Hulme; T.S. Eliot; Herbert Read; and I.A. Richards, in which he established an informed, essentially anti-Romantic, ‘analytical criticism.’ that focused attention on the work of art itself. From its origin in 1914 through to 1965, modernism developed and became predominant as a literary mode. Disparate as many of the writers and movements of the period were, in hindsight, they seem to have shared most of the fundamental assumptions about art, humanity, and life itself that are embraced in the term ‘Modern’.
Of particular note is the literary journal that Ch’oe founded in 1939, *Immun p’yŏngnon* (Criticism of Culture). This journal served to introduce diverse literary critics to Korea. Ch’oe also presided over the establishment of the literary magazine, *Kungmin munhak* (National Literature) which was founded in 1941.

As well as his literary criticism, Ch’oe wrote extensively on themes designed to introduce English literature to Korea. His linguistic ability enabled him also to produce some very high quality translations. He was a profound student of English literature and particularly in his later years maintained a keen interest in William Shakespeare’s works. *Chuhong kulssi* (The Scarlet Letter, 1953); *Haemlit* (Hamlet, 1954); *Yŏngmunhak sa* (History of English Literature, 1959); and *A.E. P’ou tanp’yŏnjip* (Prose Tales of Edgar Allan Poe, 1961); are only a few of the many English works Ch’oe translated into Korean. *Shakespeare’s Art as Order of Life* was published in the United States in 1965, a year after Choe died. His works also include *Munhak kwa chisŏng* (Intellectualism in Literature, 1938), *Chŏnhwan’gi ū chosŏn munhak* (The Turning Point of Korean Literature, 1943), *Munhak wŏllon* (Literary Theory, 1960) and *Ch’oe Chaeso p’yŏngnon chip* (Literary Criticism Collection of Ch’oe Chaeso, 1961). Ch’oe’s contribution to the field of literary criticism and its development in Korea is highly acclaimed by modern scholars.

**Ch’oe Cheu (1824-1864)**

Ch’oe Cheu (styled Suun) was the founder of the movement called *Tonghak* (Eastern Learning), in 1860. This emerged as the largest indigenous religion in late Chosŏn Korea and was succeeded by Ch’ondogyo. (see Indigenous Religion)

Ch’oe carried the social stigma of being the son of a concubine, although his ancestor of some six generations, Ch’oe Chilip had been the Minister of War, and his line could be traced through many centuries to the famous Shilla scholar, Ch’oe Chiwŏn (857-?). Ch’oe Cheu was married at the age of thirteen to a girl of the Pak family from Ulsan, and following his father’s death four years later, he began to rove around the countryside, interesting himself in the medical arts, divination and witchcraft.

In his early thirties and suffering a shaman’s sickness, Ch’oe began to implore the supernatural and was eventually, so it is said, spoken to by an immortal and given a mandate from Heaven. He was offered a numinous talisman and after a revelation from *Sangje* (Emperor on High) on 5 April 1860, *Tonghak* was born. He called his teaching *Heavenly Way* (*ch’ondo*) or *Tonghak* (Eastern Learning) to contrast with Christianity (Western Learning) and its spiritual message contains many of the fundamentals of the Ch’ondogyo religion which was to succeed it. Previously devoting time to the study of Confucianism, Buddhism, Taoism and Christianity, Ch’oe borrowed from their dogma to rationalize his experience.

Ch’oe was acutely aware that Korea’s domestic and international situation had become very precarious. The Arrow War (1856-58), a trade-related conflict involving Britain, France and China, had revealed the weakness of the Asian nations, as demonstrated by the Treaty of Tientsin which China was forced by Britain and France to sign. Ch’oe committed himself to following his ‘Heavenly Way’ and his broad-brush principles were to free the rural people from poverty and the country from political and social instability. In 1861, Ch’oe’s doctrine gained a following among country-dwellers, but not without the criticism of Confucian scholars. The withdrawal of foreign powers from the region went some way to meeting the *Tonghak* ideal for realistic national stability and security. But it was now time for the Chosŏn government to suppress *Tonghak* and by the end of the year Ch’oe was forced into hiding.

However, *Tonghak* continued to grow and by 1863 there were over 3,000 followers of
Ch’oe’s doctrines and thirteen established gathering places. Ch’oe knew that the government wanted to detain him, so in July 1853 he met Ch’oe Shihyŏng his disciple and passed all his knowledge to him. Ch’oe and thirty followers were apprehended on 20 November 1863 and he was charged with heresy. He was executed in March 1864 in his forty-first year.

While in isolation towards the end of 1861, Ch’oe wrote his treatise on Tonghak. His beliefs were expressed partly in Chinese prose, like the ‘Bible of Tonghak Doctrine’ (Tonggyŏng taejŏn), and also in Korean kasa verse such as ‘Hymns from Dragon Pool’ (Yongdam yusa). It was around these writings that his followers shaped their religion.

The popularity of Tonghak resulted from a mixture of traditional Eastern philosophies with some Western precepts (Catholicism) and native religious beliefs and deities. Ch’oe believed in the unity of man and God - that the spirit of man was a replica of God, so that by serving man one was also serving God. But Tonghak was more than a religious movement, for it also stressed heavily the need for social improvement. It was this millenarian aspect of Tonghak that caused the government alarm and Ch’oe his death. Many of the tenets that Ch’oe stressed can be found today in Ch’ŏndogyo, the modern successor to Tonghak.

Bibliography

Ch’oe Han’gi (1803-1879)

Ch’oe Han’gi (styled Hyegang) was a scholar of Shirhak (Practical Learning) during the late Chosŏn Dynasty. Ch’oe passed the civil service examination in 1825, and his eldest son Pyongdae also entered the government through success in the examination. However, little is known of the former’s official career, except that he held a low government position for a while.

Throughout his entire life, Ch’oe devoted himself to writing books which aimed to introduce Western scientific knowledge to Korea. He seems not to have maintained strong relations with other Shirhak scholars, and his only friend among this group was Kim Chŏngho. However, another prominent Korean Shirhak scholar, Yi Kyugyŏng records Ch’oe as being a great scholar and prolific writer. During his life, Ch’oe wrote approximately one thousand treatises on a variety of subjects, including astronomy, geography, agriculture, medical science and mathematics, however only eighty now remain. These were collected and published (photo-reproduction) under the title of Myŏngnamnu ch’ŏngsŏ (The Collected works of Ch’oe Han’gi) in 5 volumes in 1971.

Ch’oe’s ideology is considered to be unique among Shirhak scholars in that, while recognizing the importance of certain Confucian concepts such as ki (material force) and li (principle), it explores them from a novel perspective. The neo-Confucian Zhu Xi, a Chinese scholar who had greatly influenced Shirhak philosophy, had argued that these two forces should be regarded as separate entities. However, in common with his predecessor Yu Hyŏngwŏn, Ch’oe diverged from Zhu Xi’s philosophy in proposing that principle be regarded simply as the pattern of material force. Although holding respect for Confucius and his teachings, Ch’oe’s personal philosophy was based on an extremely rigorous experiential approach termed ‘evidential learning’, and he even argued that Mencius’ four virtues (humanity, integrity, propriety and wisdom) were not innate properties of human beings, but could only be obtained through prior sensory experience. He proposed that all knowledge is gained through experience, and that such experience is only possible through
the sensory organs which connect experience itself with its subject, the human mind.

Ch'oe further proposed that all living things contain the same *ki* (material force) and that they contain different *shin'gi* (vital force), but that it is the fundamentally common nature of this spiritual force which allows people to communicate with each other. Arguing that such convergences of *shin'gi* are also possible between man and nature, he proposed that it is the sensory organs which allow the transfer of *shin'gi* from one person to another. He also claimed that one's *shin'gi* becomes increasingly clearly defined as one accumulates experiences using the sensory organs. In such cases, the greater number of sensory experiences by which knowledge is gained, the more certain that knowledge will become.

Ch'oe argued that people broaden their range of thinking using the memories built up through experience, and further proposed that knowledge can be expanded by inference from past experiences. Ch'oe's methods of inductive and deductive reasoning can be divided into the following categories:

(i) estimation of *ki*
(ii) inference of individual nature from emotion
(iii) inference of the nature of fixed states by observing movement
(iv) making inferences about others based on examination of oneself
(v) estimation of the nature of objects using water

It is not yet clear to what extent Ch'oe's experientalist methodology was influenced by Western thought, however he strongly supported the introduction of Western scientific technology to Korea. In addition, the works in which he explained his academic methodology, *Ch'uch'ungnon* (Record of Inferential Thinking) and *Shin'git'ong* (Operations of Vital Force) include numerous examples from Western science.

Ch'oe developed a progressive view of history and an active reformist philosophy, and was confident that mankind would enjoy a better life in an enlightened world. He was critical of the present situation, and advocated structural reform. His practical philosophy is reflected in the voluminous work completed near the end of his career, *Injong* (Government). This book dealt with four sectors of professional life, 'assessing people', 'educating people', 'selecting people' and 'employing people', and emphasized his philosophy of inferential reasoning based on experience. He further argued against the influence of class in the Korean social system despite his own origins in the gentry class and the fact that the national examination which he had passed tended to favor this class, insisting that good government could be achieved through the recruitment of officials from various social backgrounds (gentry, peasants, artisans and merchants) without discrimination.

He also insisted on the establishment of active social relationships with Westerners, with the proviso that such relationships be based on equality. His 1857 publication, "World Almanac", urged Korea to abandon its policy of isolation, a policy which had been maintained throughout the Chosön Dynasty and continued to be enforced by the present-day government.

Although many of his books were translations or revisions of books published in China, Ch'oe was responsible for the introduction of much Western knowledge to Korea. The above-mentioned 1857 publication presented detailed information about the history, culture, people, science and industries of Western nations, and also included the theory of Copernicus. His later (1866) work introduced Western medical science, including anatomical concepts, and astronomy was explained in his 1867 book.

Although Ch'oe was relatively isolated among his Shirhak contemporaries, his ideas hold a distinct place among the group's works, and were inherited by proponents of the *Kaehwa* (enlightenment) movement during the late nineteenth century.
Ch'oe Hyŏnbae (1894-1970)

Ch'oe Hyŏnbae (styled Woesol) was a scholar who developed the modern Korean language system. After receiving an education in the Chinese classics at a sŏdang (elementary school), Ch'oe moved to a monotheist school in his native Ulsan, where he was taught according to the new education system introduced by the Japanese colonial government. Graduating from Hansŏng High School in Seoul, he crossed to Japan in 1915, where he enrolled at Hiroshima Teachers' College. He later majored in Education at Kyŏto Imperial University, graduating in 1926. Ch'oe returned to Korea that year, and commenced duties among the academic staff at Yŏnhŭi College (later Yŏnsei University). During his period at the college, he participated in the development of the Korean Language Society, which was established for the purpose of promoting the Korean language in response to threats posed by Japanese language policies. He continued working at the college until the time of his dismissal in 1938 in relation to the Hŭngŏp Club incident. Reinstated at the same college in the position of librarian worker in April 1941, he was again dismissed in October of the same year, this time in relation to the Chosŏn Hakhoe (Korean Research Society). He subsequently spent four years in prison until Liberation in 1945. Ch'oe was invited by the US Army military government to assist in the development of Korean language education, and served twice (1945-48, 1951-54) as chief of the Pyŏnsu Kuk (Textbook Compilation Bureau) in the Ministry of Education. In 1954, he took up duties as professor at Yŏnhŭi University, serving as Dean of the School of Humanities and as Vice-President of the University. Upon his retirement in 1961, he became an Emeritus Professor of Yŏnhŭi University, and was a professor at Dong'a University in Pusan for two years from March 1964.

Ch'oe was engaged in the study of the Korean language and in developing Korean language policy throughout his life, and served as chairman of the Hangŭl Hakhoe (Korean Language Society) for twenty years from 1949. His passion for his native tongue may be ascribed to the influence of Chu Shigyŏng, a pioneering scholar of the Korean language who gave periodic lectures on this subject in 1910. Ch'oe's two most significant works were Urimalbon (Our Grammar, 1937) and Hangŭlgal (The Study of the Korean Language, 1941). The former was a vast study of Korean grammar studied from the time of Chu Shigyŏng. The latter was divided into two parts, the first relating to the history of the Korean writing system in the fifteenth century and the second including a glossary of Korean words which had fallen into disuse since that time.

Throughout the process of establishing Korean language policy, Ch'oe insisted on using only native Korean letters, as opposed to a system using a combination of these and Chinese characters. His efforts resulted in the introduction of textbooks with horizontal text using exclusively Korean script, and this policy remains controversial to this day. Aimed at purifying the language from the strong influence of the Japanese language and Chinese characters, his initiative was based on his nationalist spirit. From the period of Japanese occupation, he urged fellow Koreans to develop their own national identity in opposition to Japanese rule, and he was responsible for a series of nationalist works, Chosŏn minjok kaengsaeng ūi to (Path to the Revival of the Korean People, 1930), Nara sarang ìi kil (The Way to Patriotism, 1958) and Nara kŏnjį núi kyoyuk (Education as the Foundation of Nation-Building, 1963).

Ch'oe Ikhyŏn

Ch'oe Inho (1945-?)

Ch'oe Inho is a novelist, born in Seoul and with a bachelors degree in English from Yonsei (Yŏnse) University He has received numerous awards, including the Sasanggye Prize for New Writers in 1967, the Hyundai Munhak New Writer’s Prize in 1972, and the Yi Sang...
Literary Award in 1982. His literary debut was in 1967 with the short work Kyŏnsŭp hwanja (The Apprentice Patient) that was published in the Chosŏn ilbo newspaper.

Ch'oe has been an extremely prolific writer from the late 1960s, and his work, always of high quality, enjoys widespread popularity among Korean readers. Much of it has a serious thread in which Ch'oe broaches issues of the social problems that have been resulted from Korea's industrialisation. Works such as Sul kkun (The Boozer) and Mobŏm tong hwa (The Tale of the Model Children) features child protagonists who have discovered the chaos and apostasy of society and thus can look only to an abject future. In particular, in Sul kkun, Ch'oe reveals the plight of a child with no family, who has been roughly shoved aside by an uncaring society, and whose solace is found only in alcohol. This work exposes the uncaring face of a Korean society concerned only with personal fulfilment. Other works by Ch'oe such as Kyŏnsŭp hwanja and T'ain ŭi pang (The Other's Room) have pitiable themes that centre on alienation in an industrial society.

There are other works by Ch'oe, however, that have lighter and more humorous themes. Noteworthy in this regard is his novel Pabo tŏl ŭi haengjin (March of the Fools) that revolves around the problems of two college students who have to contend with various societal issues during their adolescence. The author's approach in this novel is quite light-hearted, although he still manages to present a serious side. Thus, Ch'oe's works cover a wide range of subject matter and themes, and this undoubtedly accounts for his lasting popularity among his readers.

Ch'oe Inhun (1936-?)

Ch'oe Inhun is a writer of the contemporary period, born in Hoeryŏng of North Hamgyŏng Province, who was once a student at the Law School of Seoul National University. Ch'oe has received numerous literary awards for his work, including the Dongin Literary Award in 1966, the Korea Cinema Art Award in 1977, and the 1979 Seoul City Cultural Award. His works include novels, dramas, short stories, and critical essays.

Ch'oe's often employs literary devices such as dreams and fantasies to reveal the inner world of intellectuals. Many of his works, such as Ch'ŏngdok ŭi sori (Messages of the Governor-General), utilise surrealism to portray the innermost desires of the protagonists. Ch'oe uses literary techniques such as dreams to expand his fictional world, and his thorough exploration of the intrinsic nature of his characters. Moreover, his works often use allegory and metaphor to address issues in Korean history. Notable among his publications are Kwangjiang (The Square) and Sosŏl ka Kuposi ŭi iril (A Day in the Life of the Novelist Mr. Po). In particular, Kwangjiang addresses topics surrounding the partition of the Korean peninsula.

Ch'oe's works can be largely categorised by three major features. First, he rejects techniques of traditional realism and instead opts to use 'fantastic realism' in his writing. Thus, the combination of dream-like sequences and life itself are often incorporated in his novels to create a rational understanding of Korean society. A second feature of his works is the protagonist's sense of alienation that is often manifested. Third, Ch'oe uses past traditions of Korea to criticise the empty acceptance of foreign customs in contemporary Korean society. He shows that modern Korean culture is striving to set its course in a transitional period, and in the process creating turmoil in the ideals and goals of the Korean people.

Ch'oe Kinam (1586-?)

Ch'oe Kinam (styled Kugok) was a poet of the middle Chosŏn Dynasty. He was the palace slave, and during periods spent under the tutelage of Shin Ikŏng, his poetic talents were noted by Shin's father, Shin
Hüm. Word of his talent spread among the gentry, and in 1648, he followed Yun Sunji to Japan, where he achieved literary fame. Possessing an honest character, he lived a modest life, seeking neither fame nor fortune. He was also an avid reader of the sutras, using copies he had directly transcribed himself.

Little is known of his official career, however he assisted in the compilation of Hyŏnjong Shillok (Annals of King Hyŏnjong) when he was around seventy years old. In 1660, at the age of 75, he edited Yûkka chabyŏng (Miscellaneous Songs of Six Poets), which include works by several of his wihang (Literature of the townspeople) poet contemporaries. He commanded great respect among the members of this school of poetry, and was responsible for teaching many of them. His verse is often compared to that of Tang poet Tu Fu.

Ch’oe’s sons, Sŏngdae and Sŏngju, were also renowned poets, and Ch’oe’s influence in the development of wihang literature during the latter part of the Chosŏn Dynasty was considerable. His published works include the two-volume Kugok chip (Collected Works of Kugok), which contains the only example of his prose in one semi-autobiographical chapter and 440 of his poems in the remainder of the work.

Ch’oe Kyŏngch’ang (1539-1583)

Ch’oe Kyŏngch’ang was a mid-Chosŏn poet. His family’s ancestral home is in Haeju, his courtesy name was Kaun and his pen name Kojuk. He was born in Yŏnam of Cholla Province; he was the student of Pak Sun, and also studied under Yang Ungjong along with Paek Kwanghun (1537-1582) and Yi Hubaek (1520-1578). There is a story told about Ch’oe that during a Japanese pirate raid (Ulmyo waebŏn) in 1555 he encountered a group of Japanese marauders and played such a melancholy tune on his flute that the pirates became overwhelmingly homesick, stopped their plundering and sailed away.

In 1568, Ch’oe passed the literary portion of the Augmented Examination (chunggwang shi) and was appointed to an official position. Subsequently, he held positions on the Board of Rites (Yejo) and the Board of War (Pyŏngjo), before promotion to the post of Fourth Censor (chŏngŏn) at the Office of the Censor-General (Saganwŏn) in 1575. In 1576 Ch’oe was appointed to an office in Yŏnggwang County of Cholla Province, but the pangs of living away from the capital were too much for him and he resigned from official life. However, the hardships of leading a life with no means of support were even more heartrending, and in the following year he returned to officialdom. At the age of fifty-three, in 1582, he was about to take a post as Magistrate (pusa) of Chongsŏng, but because of unfounded charges laid against him, there were problems with his appointment. Instead, he became a lecturer (Chikkang) at the National Academy (Songgyun’gwan).

Ch’oe was highly praised for his compositional ability. He is perhaps best known as one of the ‘Three Tang Talents of Korea’, along with Yi Tal and Paek Kwanghun. This was indeed attribute to his skill in composing the Tang-style poetry that was popular among literati during early and mid-Chosŏn. Moreover, he was a skilled prose writer, and along with Yi I (1536-1584) and Song Ilp’il (1534-1599), was known as one of the eight best prose writers of the time. Ch’oe’s literary collection, Kojuk yugo (Posthumous Collection of Kojuk), is extant.

Ch’oe Kyuha (see Choi Kyu-hah)

Ch’oe Myŏnggil (1586-1647)

Ch’oe Myŏnggil was a mid-Chosŏn scholar-official. His family’s ancestral home is in Chŏnju, his courtesy name was Chagyŏm and his pen names Chich’ŏn and Ch’angnang. His father, Ch’oe Kinam, was the Magistrate (pusa) of Yŏnghŭng and his mother was the
daughter of the Second Minister (ch’amp’an) Yu Yongnip. From an early age, Ch’oe studied under the tutelage of Yi Hangbok along with others such as Yi Shibaek and Chang Yu. In 1605 he passed the Classics Licentiate Examination (saengwon shi) with the highest mark and in the same year successfully sat for the literary portion of the Augmented Examination (chunggwang shi). Ch’oe then commenced his career in officialdom, serving as Librarian (chOnjok) at the National Academy (Sônggyun’gwan), as well as in some other positions. In 1614, he became Assistant Section Chief (chwarang) at the Board of War (Pyôngjo), but his work was criticised, arising from particular circumstances in the relations between Ming China and Chosôn, and he was removed from office and exiled. The period of his exile was a tumultuous one in national affairs, with the deposition of the mother of Prince Kwanghae (r. 1608-1623) and then, in 1623, the monarch himself. However, with the ascension of King Injo (r. 1623-1649) the personal political fortunes of Ch’oe were restored.

As Ch’oe had assisted with Injo’s accession, he was rewarded by the sovereign with a special appointment. He re-entered government service, concurrently holding the position of Second Minister (ch’amp’an) of the Board of Personnel (Ijo) and as a member of the Border Defence Council (Pipyônsa). Ch’oe held other official positions until the 1627 Manchu Invasion (chôngmyo horan), when he was removed from office because of controversy over the defences of Kanghwa Island and the transfer of the royal family to the island. However, he was reinstated and by 1632 became Minister (p’ansô) of the Board of Personnel, and concurrently Director (taejehak) of both the Office of Special Counsellors (Hongmun’gwan) and the Office of Royal Decrees (Yemun’gwan).

The period surrounding the fall of Ming and the rise of the Qing dynasty not only created turmoil in China, but also in Chosôn. Chosôn officialdom was largely divided into two camps: one faction supported the Ming and felt that Chosôn should heed her requests for military assistance against the barbarous Qing, and the other realised that the power base in China had moved and that Chosôn should now submit to Qing or face another invasion. The prevailing force in Chosôn of the mid-1630s, however, supported Ming, and thus, as a consequence, the second Manchu Invasion (pyôngja horan) occurred, in 1636. Ch’oe had consistently advocated the commencement of peace negotiations with the Qing, but his plea was initially ignored by King Injo. The royal family was sent to Kanghwa Island for sanctuary, but when Injo went to join them his passage was blocked by the Manchu army. Hence, the royal party retreated to Namhansan Fortress, to the south of Seoul. Meanwhile, the invaders had captured the royal family members who had sought refuge on Kanghwa Island, thereby forcing Injo to surrender to the Qing army. The terms of surrender were harsh, requiring that Crown Prince Sohyon and his younger brother, the future King Hyojong (r. 1649-1659), be held hostage in China, that the Chosôn army support the Qing in its war against Ming and most distasteful of all, that Chosôn pay homage to Qing as the suzerain power.

Ch’oe had foreseen the rise of Qing and thus understood the implications of resisting this militarily-superior power. However, the common sentiment among those in the ruling hierarchy of Chosôn was one of disdain for the Qing, who they felt were no more than northern barbarians. The result of the defeat and forced submission to the Qing created a great deal of hatred among the Chosôn people and this in turn gave rise to plans for an attack, in concert with the remaining Ming forces, against the Qing. Notable among these plans was that of General Im Kyôngôp (1594-1646), which had the widespread support of many segments of Chosôn society.

After the invasion, Ch’oe served in various capacities, including that of Chief State Councillor (yônggûjong) and as envoy to Qing. However, when the Qing became aware of the plot of Im Kyôngôp to join the Ming against them, Ch’oe and another high-ranking Chosôn official, Kim Sanghôn (1570-1652) were held hostage to ensure Chosôn’s compliance. Upon Ch’oe’s return to Chosôn in 1645, he continued to serve as an advisor to
Injo until his death in 1647. There are two extant collections of Ch'oe's writings, the nineteen-volumes of Chich'ón chip (Collected Works of Chich'ón) and Chich'ón chuch'a (Official Papers of Chich'ón).

Ch'oe Namsón (1890-1957)

Ch'oe Namsón (styled Yuktang) was a renowned poet, historian, and cultural nationalist. He was born in Seoul, the second son of a prototypical chungin, Hyon'gyu. After a spell at gyongsông School, in October 1904 he was in a group chosen by King Kojong (r.1864-1907) to study in Japan. There, Ch'oe entered the Second Tokyo Prefectural Middle School. However, he returned to Korea within four months. In March 1906 he again went to Japan, this time financing himself. He studied at Waseda University in the department of geography and history of the high school education division (Kōtō Shihang-bu). In June 1906 he joined a group of Korean students who gave up their studies and returned to Korea in protest because of the argument they had listened to in a mock legislature of the annexation of Korea. The following year at the age of seventeen he established a publishing company called Shinmun'gwan, whose aim was the enlightenment and education of the Korean people. In 1908 Ch'oe published the magazine Sonyón (Youth) projected at the mobilisation of Korean youth, whom he believed had the task of revitalising the nation. Appearing in the magazine was his famous poem, 'Hae egeso sonyón ege' ('From the sea to the youth'), which is generally held as the first modern poem in Korean literary history.

The other event for which Ch'oe is most remembered is his composition of the proclamation of independence read out on 1 March 1919, from which a full-scale independence movement was launched. Ch'oe was imprisoned and even after his release subjected to constant surveillance and pressure to collaborate with the Japanese authorities. In a complete change of political direction, he became associated with the pro-Japanese Korean history group, the 'Korean History Compilation Committee', and held a teaching post at the Manchuria National Foundation University. Towards the end of the Second World War he gave speeches in support of the Japanese war campaign. After liberation he was imprisoned for his crimes of collaboration. He died in Seoul in 1957.

Apart from his participation in the Independence Movement, Ch'oe is well-known for his literary and scholarly activities. He published many magazines in addition to Sonyón. At first he concentrated on poetry. Previously only Yi Kwangsu had written a so-called new-style poem but Ch'oe soon surpassed him in both quantity and quality. He is credited with a major role in the reform of the written language to correspond with spoken speech. Finally, as a historian, geographer, and folklorist, Ch'oe was at the vanguard of the cultural nationalist movement and its attempts to rediscover Korean tradition and identity. Through various organizations he was instrumental in republishing traditional Korean works. Later he undertook the compilation of a Korean language dictionary, which was later completed through his collaboration with the linguist Pak Sungbin. On the geographical side he researched not only the peninsula itself, but the Korean people's roots in Manchuria and Mongolia. Although he began his literary career writing new-style poetry he later turned to shijo, believing it to be at the heart of a native Korean tradition. He started a shijo revival movement, publishing collections and theoretical writings. His research on Korean folklore focused on the mythic founder Tan'gun, understanding him as a religious figure in the East Asian shamanistic tradition, rather than a mere ancestor.

In 1975 his collected works were published, comprising an exhaustive fifteen volumes. They are a tribute to his monumental achievements in the study of Korean culture.

J Poole

Ch'oe Rin (1878-?)

Ch'oe Rin was an independence activist and one of the thirty-three national representatives that planned the March First 1919 Independence Movement. His pen names were Kou and
Toho, and he was born in Hamhung of Hamgyŏng Province. He was the son of Ch’oe Tŏgon, a Privy Councillor (*uigwan*) of the Privy Council (*Chungch’ubu*) of the Great Han Empire (1897-1910), which represented the final years of the Chosŏn dynasty. Ch’oe learned the Chinese classics as a boy and at the age of eighteen travelled to Seoul. Shortly thereafter, he converted to Buddhism, going to Changan Temple in the Kŭmgang Mountains where he studied. As a result of his conversion to Buddhist beliefs, he could no longer return to his home. By 1902, Ch’oe had journeyed to Japan where he entered military school and at this time he joined the Ilshin Hoe, a Korean organisation that sought to bring about reform to the Korean government. However, Ch’oe was forced to leave Japan and return to Korea where he served as a clerk at the Ministry of Foreign Affairs (*Oebu*). In 1904, Ch’oe again travelled to Japan as a student and this time he organised and led a Korean students’ association. By 1906, he had entered the Law Department of Meiji University and on graduating, returned to Korea in 1909. Upon his return, Ch’oe converted to the Ch’ondogyo Religion, under the influence of Son Pyŏnghŭi (1861-1921), and at that time was appointed director of Posŏng Normal High School.

Ch’oe now became more deeply involved in Korean political issues. At the urging of An Ch’angho (1878-1938) he joined a clandestine political organisation, the New People’s Organisation (*Shinmin Hoe*), thereby becoming part of the anti-Japanese movement. In 1918, the conclusion of World War One saw many European colonised states gain their independence, following the proclamation of President Woodrow Wilson’s tenet on the right of nations for democratic self-determination. This fuelled the desire of Korean patriots for their own independence. The members of the Ch’ŏndogyo religion, led by Son Pyŏnghŭi, saw the Paris Peace Conference as a chance to establish the Korean case for independence. Accordingly, in February 1919, Ch’oe Rin and others, such as Song Chinu (1889-1945), Hyŏn Sangyun (1893-?) and Ch’oe Namsŏn (1890-1957), met at the Chungang School and planned activities for an independence movement. These leaders realised the need for unity among the various religions in Korea and with Son Pyŏnghŭi at the head of the Ch’ŏndogyo group, Yi Sŭng hun (1864-1930) representing the Christian contingent and the Buddhists led by Han Yongun (1879-1944), achieved their aims. Ch’oe Rin, along with Ch’oe Namsŏn, Song Chinu and Hyŏn Sangyun played important roles in strengthening this unity among the religious organisations and in securing their aid in the independence movement.

The leaders of the independence movement, Ch’oe among them, decided upon a plan of action that called for non-violent demonstration, a declaration of independence, and petitions to Tokyo and the American President. The declaration itself was drafted by Ch’oe Namsŏn and was signed by twenty-nine of the thirty-three national representatives who had gathered at a restaurant in central Seoul for that purpose. A copy of the declaration was sent to the Japanese Governor-General and the police were notified of the forthcoming demonstration in Pagoda Park. From these actions, the March First Independence Movement unfurled with more than one million Koreans throughout the peninsula taking part in this appeal for independence.

Ch’oe was arrested shortly afterwards, along with other signatories of the declaration, and was sent to prison for three years. However, on his release he maintained his links with Ch’ŏndogyo. He also travelled to the United States and Europe, visiting some thirty countries in 1927. In 1934, in a complete about-face, he betrayed his commitment to the independence of Korea and joined the Central Council (*Chungch’uwŏn*) of the Japanese Governor-General as a minister. In 1937, he was appointed president of the Governor-General’s propaganda mouthpiece, the *Maeil shinbo* newspaper, and continued his pro-Japanese activities until Korea’s liberation in 1945. Thus, the former patriot and supporter of Korean independence became a traitor to his country through his collaboration with the Japanese authorities. Ch’oe is known to have been kidnapped by the North Korean Army during the Korean War and it may be presumed he was later executed for his ties with the Japanese and his disloyalty to Korea during the colonial period.
Ch'oe Rip (1539-1612)

Ch'oe Rip (Kani) was a literati official of the middle Chosŏn Dynasty. Born into a poor household, he nevertheless demonstrated academic potential from an early age, passing the civil service examination (the licentiae level) at his first attempt at the age of seventeen and achieving first ranking in the triennial examination. After serving in several provincial government posts, he travelled to Ming China in 1577 as a member of the Embassy of Occasional Reports. In 1581, as magistrate of Chaeryŏng county, he was awarded a royal gift after helping to alleviate starvation, and in the same year again traveled to Ming China in a diplomatic role. Further trips to Ming China as a diplomat were made in 1592 and 1594. Later becoming a judge, he rose to the position of hyŏngjoch'amp'an (Second Minister of the Board of Punishments), from which he retired to P'yŏngyang.

Ch'oe's skills in composition were widely recognized, and he was responsible for the wording of many diplomatic documents related to Sino-Korean relations. While visiting China, he met Wang Shi-zhen, the most prominent figure in the Chinese literary world of that time, with whom he discussed matters relating to composition. Ch'oe also received praise from Chinese scholars for his composition skills. He produced a work of prose based on the theme of forty types of grass, wood, flowers and stone, and two volumes on divination, including Chuwŏkbonŭi Kugyŏlbsŏl (Additional Commentary on the Original Meaning of the Book of Changes). His writing, together with the poetry of Ch'a Ch'o'llo and the prose of Han Ho, were collectively known as the Sŏngdo sanjŏl (Three Greatest in Sŏngdo). His compositions leaned towards the style of the Wang Shi-zhen school in being both elegant and concise, and his work was highly praised as being appropriate for legal purposes. However, as he was highly skilled in neo-Classical writing which imitated the Han style in poetry and that of Chin in prose, his compositions were far from simple, and he was criticized for it.

Also an accomplished calligrapher, Ch'oe established a school of calligraphy in the songsŏlch'e (sung-hsueh) style originated by Chao Meng-fu. Among Ch'oe's publications are the book of writings Kan'i chip (Collected Works of Kan'i) and the poetic works Shipka kūnch'eshi (Modern-style Verses of Ten Poets) and Hansa yoljon ch'o (Extracts from Lie zhuan in Han shu [Biographies, the History of the Former Han]).

Ch'oe Shihyŏng (1827-1898)

Ch'oe Shihyŏng (Haewŏl) was successor to the leadership of the Tonghak religious movement founded in 1860 by Ch'oe Cheu. Ch'oe was responsible for the creation of a formal organization and its ethical code and scriptures, and the systematization of the religion's doctrines. With Chŏn Pongjun, he led peasant uprisings against the government and foreigners.

Born to a poor family in Kyŏngju, both of Ch'oe's parents died during his childhood. After working at a paper mill, he spent several years farming. In 1861, he converted to Tonghak, and learnt its doctrine directly from its founder, Ch'oe Cheu. Following several years spent training and propagating Tonghak beliefs, he became second-in-charge of the movement. The execution of leader Ch'oe Cheu in 1864 meant that the movement could not operate in the open for some time, and Ch'oe went into hiding and continued the propagation of his group's philosophy in Kyŏngsang province.

The two volumes, Tonggyŏng Taeǰŏn" (Tonghak Scriptures) and Yongdam Yusa (Anthology of Ch'oe Cheu's Hymns) were compiled under his leadership, and he organized his followers more efficiently as government suppression weakened in the aftermath of the Kapshin political disturbance of 1884. Commencing in 1892, he launched a campaign to clear the name of executed Tonghak founder, Ch'oe Cheu, and several
thousand members gathered at Samnye station in Ch'ŏnju, Ch'ŏlla Province to demand to the governors of the province and of neighboring Ch'ungch'ŏng Province that he be posthumously exonerated, and that the suppression of the movement be ended.

The following year, Ch'oe launched his second campaign in the capital. As the government subsequently moved again to suppress the movement, the third campaign was organized at Po'ın in Ch'ungch'ŏng Province. Members erected barricades, hoisted banners and called for a "crusade to punish venal officials in the government and expel the Japanese and Westerners". The Tonghak crowds were later dispersed when the government dismissed corrupt officials. At this stage, Ch'oe opposed the calls for insurrection among his colleagues, as he believed that the time was not yet ripe. When Chŏn Pongjun instigated armed struggle in Kobu, Ch'ŏlla Province, Ch'oe persuaded him to abandon the policy of using armed force.

However, as the situation worsened, he came to agree with Chŏn's plan, and ordered general insurrection, his 100 000 soldiers uniting with Chŏn's army at Nonsan in Ch'ungch'ŏng Province in 1894. Despite early successes, the Tonghak forces were eventually defeated in a series of battles in Kongju and Changsu against government forces and the Japanese army. After this military failure, Ch'oe continued to propagate Tonghak ideology underground. In 1897, Son Pyŏnghŭi succeeded Ch'oe as leader of the movement. The following year, Ch'oe was arrested in Wŏnju, Kangwŏn Province, and was brought to Seoul to be hanged. In 1907, he was posthumously exonerated by a special royal order.

Ch'oe Such'ŏl (1958-?)

Ch'oe Such'ŏl is a contemporary novelist. He was born in Ch'unch'ŏn of Kangwŏn Province and graduated from Seoul National University with his B.A. in 1981 and his M.A. in 1984, both in French literature. He was awarded the Yun Tongju Literary Award in 1989 and the Yi Sang Literary Award in 1993.

The works of Ch'oe focus upon experimentalism and thereby make common things appear strange. He projects his unrealistic views through disclosing the inner side of reality by deliberately lengthening and extending reality before dissecting it and reassembling it in his own vision. A notable work in the use of this technique is the 1985 Paegwang kwa yun'gwak (Background and Outline), which tells the story of a novelist while dissolving the boundary between fiction and non-fiction. Ch'oe achieves this effect by projecting the narrator of the novel as being the writer of the novel; thus the author creates a new relationship between the characters in a work, the reader and the writer. Innovative techniques such as this have resulted in widespread critical acclaim for Ch'oe's works. Other works of Ch'oe include Malch'ŏrŏm twinin mal (Words Galloping Like a Horse, 1990) and Pyŏkhwa kūrinŭn namja (A Man Painting a Mural, 1992).

Ch'oe Sŭngno (927-989)

Ch'oe Sŭngno was a Confucian scholar, literati official and reformist during the early Koryŏ Dynasty. The son of a Shilla aristocrat, Ch'oe moved to the Koryŏ court with his father upon the accession to the throne of King Taejo. Ch'oe so impressed the king with his knowledge of the Analects of Confucius at the age of twelve that he was given an academic appointment, and rose to become one of the kingdom's most prominent statesmen by the time of King Sŏngjong's reign (r.981-997). It was during the latter part of this king's reign that Ch'oe consolidated his status as an active reformist, his goal being the creation of an aristocratic society with a centralized power structure. In 982, King Sŏngjong ordered all of his officials above the fifth ranking to submit discussion papers relating to government administration. Ch'oe's memorial was most prominent among these. It consisted of a chronology of the first five reigns of the Koryŏ Dynasty and a
twenty-eight point reform package. The chronology praises the achievements of King T'aejo, however contains various criticisms of his four successors. Ch'oe argues that King Sŏngjong should grasp the opportunity for dynastic restoration through learning from the mistakes of the past and strengthening central government. His reform package includes both a discussion of the contemporary abuses of power to which Ch'oe urged the new monarch to give special attention and a critique of Buddhism. A committed Confucianist, Ch'oe recommended adherence to Confucian norms of frugality and social responsibility, the maintenance of a strict social hierarchy, and further emphasized the central role of Confucianism as state ideology. He also suggested restricting the role of superstitions and limiting the practice of shamanism, and included a proposal for a defence strategy against China.

Following the submission of his memorial, Ch'oe was selected as a counselor to King Sŏngjong, and his suggestions formed the basis of widespread reforms in the fields of administration, defence, education and finance. In 988, he was promoted to a high-ranking position in the Chancellery for State Affairs, and the following year was accorded the title of Lord of Ch'ŏngha, overseeing a seven-hundred household property. Following his death in 989, he was posthumously conferred the title of t'aesa (Grand Tutor), and enshrined in the same shrine as King Sŏngjong.

Chʻoe U (? - 1249)

Chʻoe U was a military strongman of Koryŏ. His family's ancestral home is in Ubong and he was also known by the name of Chʻoe I. His father was Chʻoe Chʻunghŏn (1149-1219), the soldier hero who had helped to put down the rebel Cho Wi-ch'ong and who then eliminated all competitors in his successful bid for personal military rule of Koryŏ. Chʻoe U followed in his father's footsteps and even more strongly consolidated the structuring of military rule of the Chʻoe house over Koryŏ.

When his father died in 1219, Chʻoe took the headship of the Directorate of Decree Enactment (Kyojŏng Togam), the ruling apparatus of the Chʻoe military dictatorship. He moved to consolidate his somewhat tenuous position by presenting gifts of precious metals and jewels to King Kojong (r.1213 -1259), returning to farmers lands that his father had plundered, and by appointing impoverished scholars to official posts. In 1221, after consolidating his domestic power, Chʻoe took appropriate measures against a possible invasion by the Mongols from the north. He provisioned his forces, erected fortresses on the northern border, repaired Nasŏng Castle in Kaesŏng, mobilised his personal army and even built a thirteen-storey pagoda at Hŭngwang Temple to invoke Buddha's protection. Chʻoe also improved the military units that his father had relied upon for his personal power. These units, which amounted to a private army, were known as the Three Elite Patrols (sambyŏlch'o), and though they were originally created to protect Chʻoe, they eventually replaced the Koryŏ regular army and functioned both as police and combat forces. The Three Elite Patrols were maintained with public funds, yet served as the private army of Chʻoe.

The Chʻoe regime also controlled matters relating to civil appointments and the accompanying bureaucratic structure. For this purpose, the Personnel Authority (Chŏngbang) was created by Chʻoe in 1225 to handle such matters. Moreover, in 1227 he further established the Household Secretariat (Sŏbang), formed of scholars who acted as the personal retainers of Chʻoe. Thus, Chʻoe had not only surrounded himself with the military power of the Three Elite Patrols, but also with two bodies to control administrative functions. From this, it is clear that the Chʻoe family was more than just a military dictatorship, but also a motive force behind civil matters. Consequently the Chʻoe house can be viewed as having strong control of both military and civil affairs in thirteenth c. Koryŏ.
Relations with the Mongols to the north had been poor since the early part of the thirteenth c. The Mongols considered themselves as the benefactors of the Koryŏ State since 1219, when they had helped Koryŏ defeat a Khitan army near P'yŏngyang, and demanded a yearly tribute. This tribute, however, proved difficult for Koryŏ to meet and was often neglected, angering the Mongols. In 1225, when their envoy was killed on his return to Mongolia, the Mongols used the incident as a pretext to invade Koryŏ in 1231. Ch'oe had no intention of surrendering to the Mongol invaders and instead moved his capital from Kaesŏng to Kanghwa Island, in which he hoped he would be secure, because of the Mongol aversion to crossing stretches of sea. Therefore, while the Mongols pillaged the Koryŏ mainland, the ruling elite continued to lead lives untouched by the ravages of war, on Kanghwa Island -- separated from their Mongolian foes by only a few hundred metres of shallow sea.

Ch'oe continued his defiance in staying on Kanghwa Island until his death in 1249. Even after his death, his kinsmen continued to resist the Mongols until they were overthrown in 1258. At this time, Koryŏ sued for peace, and after a few brief attempts by new military strongmen to take over the power structure that the Ch'oe family had built, completely abandoned the struggle in 1270. Ch'oe is a good example of the contempt that the military men of Koryŏ had for the Mongols and their desire to maintain a state independent of Mongol domination. This determination for independence, however, completely disregarded the plight of the common people.

Ch'oe Yŏng (1316 - 1389)

One of the many famous generals of the Koryŏ Dynasty, Ch'oe Yŏng was a talented leader and respected by the Korean people. He engineered and led military expeditions into China to help quell rebellion, while at home he controlled piratical attacks around the country's seaboard. Through his efforts many northern territories were returned to Korean control. His fierce loyalty to the declining Koryŏ Dynasty would ultimately cost him his head when the Chosŏn Dynasty, under the leadership of his former subordinate, Yi Sŏnggye, displaced the Koryŏ Dynasty at the end of the fourteenth century.

Ch'oe hailed from Ch'ŏrwŏn in Kangwŏn Province. His beginnings were humble and his lifestyle can be best described as spartan. Of exceptional physical strength, strong willed, honourable and untainted, he gave little heed to his own clothes and meals and eschewed fine garments or other comforts, even when he became famous and could have easily enjoyed them. He disliked men who relished expensive articles and he viewed simplicity as a virtue. Such a man was well-endowed for a commander's role and Ch'oe quickly gained the confidence of his men and the accolade of his king during numerous skirmishes with Japanese pirates who began seriously raiding the Korean coast around 1350.

At thirty-six years old he became a national hero when he successfully put down a rebellion by Cho Ilshin who had surrounded the palace, killed many officials, and proclaimed himself premier. Just a few years later, in 1355, a rebellion erupted in Yuan Dynasty China (1279-1368), which was already experiencing great internal turmoil itself. Ch'oe was sent to help the Mongols quell that rebellion and his success in twenty-seven battles helped him win even more favour and fame at home. Upon returning to Korea, he dutifully reported the internal problems of the dying Yuan Dynasty which gave Koryŏ King Kongmin (r.1351-74) the notion that the time was right to recover some of the northern territories previously lost to the Mongols. Again, Ch'oe fought to recover various towns west of the Yalu River to the delight of the king. For the next few years, Ch'oe turned his attention again to the marauding Japanese pirates against whom he fought unceasingly. He served a brief stint as the Mayor of P'yŏngyang where his efforts at increasing crop production and decreasing hunger won him even more attention as a national hero. He was made chief secretary of the Supreme Council (Ch'ansŏngsa ), and was in that office when in 1363, a high ranking government official named Kim Yong tried to take control of the government.
Ch’oe was forced to battle a Mongol force of 10,000 which attacked Koryo in conjunction with the rebellion. Just a year after he defeated the Mongol force, fate took a strange turn for Ch’oe, which almost completely ruined his life.

King Kongmin had a terrible dream, one night in 1365, that someone would try to stab him and a Buddhist monk would intervene to save his life. The king awoke relieved but could not forget the face of the monk. Astonishingly, some time later he met a monk named Shin Ton, who closely resembled the monk in his dream. The king promoted the monk to high position and allowed him considerable influence. Shin Ton was ruthless and corrupt, however, and Ch’oe, who relentlessly exposed corruption in the kingdom, became at odds with him. Shin Ton engineered accusations of misconduct against Ch’oe that brought the great general uncomfortably close to the death penalty and secured him a punishment of six years in exile. When Shin Ton died, Ch’oe was restored to his former position of Ch’ansŏnsa and commanded to prepare a fleet to fight the Japanese pirates and eliminate the remaining Mongol forces on Cheju Island. He first engaged the Mongols, who fought tenaciously, but his forces eventually freed the island. Ch’oe continued to fight the Japanese pirates who would unfortunately remain a menace, long after Ch’oe’s death, to the end of the century. In 1375, King Kongmin died and was succeeded by King U (r. 1374-88) who many believe was actually a son of the monk Shin Ton. In that year, Ch’oe was appointed Minister of Finance (Pan Samsa sa).

Another great general, Yi Sŏng-gye, was rising through the ranks during this period. Like Ch’oe, Yi’s relentless warring with the Japanese pirates, especially during the late 1370’s and early 1380’s, also brought him great fame and favour. Ch’oe remained the senior officer throughout both their careers but he and Yi were in frequent disagreement over the direction of national policy and the use of military force. Their disagreements finally came to a head over how to deal with Ming Dynasty’s move into Koryo’s northern territories.

Ming China had risen out of the old Mongol Yuan Dynasty (1279-1368). The Mongols were basically down but not out, and for some time Koryo vacillated between the two forces taking advantage where they could. When the Ming encroached on Koryo’s northern territories however, King U ordered an expedition in 1388, to drive them out. At seventy-two years of age Ch’oe was made commander-in-chief, but the younger Yi Sŏnggye was put in command of the actual force. Yi argued against the plan claiming it was suicidal to attack the much stronger Ming forces and to attempt it in the worst season for military operations. The king would tolerate no disagreement, however, and Yi initially set out with his force but, after encountering heavy rains, made the daring decision to turn around and take control of his own country instead of warring with the Chinese. When Yi returned Ch’oe put up a gallant fight at the palace but was overwhelmed. Subsequent events are unclear. Ch’oe was arrested by Yi Sŏnggye, exiled to Kobong County (present Koyang) but later was imprisoned in Kaesŏng and finally beheaded.

R Saccone

Ch’ogo, King (? –214)

King Ch’ogo was the fifth king of Paekche and ruled from 166 to 214. He was also known by the titles of King Sogo and King Sokko, and was the eldest son of King Kaeru (r. 128-166). At the end of Kaeru’s reign several retainers in Shilla planned a revolt, but were discovered and fled to Paekche. As a result, the relations between the two states became strained over the question of returning these men to Shilla for punishment. Thus, by the time of Ch’ogo’s accession, there were on-going struggles between Shilla and Paekche. In 188, Paekche troops attacked Shilla’s Mosan Fortress, but in the following year the Paekche army was defeated by Shilla troops in battle at Kuyang (present day Okch’ŏn in North Ch’ungch’ŏng Province). Again, in 190, Paekche attacked Wŏnsanhyang (present Yonggung Township of North Kyŏngsang Province) on the southern border of Shilla and this was followed closely by a series of bloody battles. Thus,
Ch’ogo’s reign is marked by the continuing warfare between the two kingdoms, that raged along the Sobaek mountain range dividing the Honam and Yongnam regions. As a consequence of these struggles, Paekche reinforced her defences to the north along the Han River to prevent invasions by the Shilla cavalry.

**Ch’ölchong, King (r.1849-1863)**

Ch’ölchong (1831-1863) was the twenty-fifth king of Chosŏn. His personal name was Pyŏn, courtesy name Tosŏng and pen name Taeyongjae. His grandfather, Prince Unŏn, was the younger brother of King Chongjo (r. 1776-1800). When King Honjong (r. 1834-1849) died without an heir, Ch’ölchong was acclaimed king at the age of nineteen. Because of his youth, Dowager Queen Sunwŏn acted as regent at the commencement of his reign. Ch’ölchong represented the last of a series of kings dominated by their royal in-laws (sedo chŏngch’i), which had begun with the reign of King Sunjo (r.1800-1834). Like Sunjo, Ch’ölchong’s queen was from the Andong Kim clan and thus his reign marked a return to power for this clan. Ch’ölchong began to take his own decisions in 1852 and soon instituted a series of reforms to the Three Administrations (samjong) which controlled land allocation, military service and the grain loan system. However, local official corruption and the unchecked greed of the royal in-laws made these reforms ineffective. What followed was a tide of dynastic decay that Chosŏn could not stem.

As the economic burden on the peasantry increased, so did the frequency of peasant uprisings. During the reign of Ch’ölchong the most severe was the Chinju Uprising of 1862, which was led by Yu Kyech’un in reaction to the excesses of the local military commander. Important to this period, as the number of peasant insurrections increased, was the rise of Ch’oe Cheu (1824-1864) and the Tonghak religion. Many were drawn to this millenarian movement, which advocated betterment of social and economic conditions. Ch’oe’s activities resulted in his arrest and eventual execution. Hence, the reign of Ch’ölchong was one of political and social turbulence that typifies the twilight years of Chosŏn. After a fourteen year rule, Ch’ölchong died at the age of thirty-three, leaving Chosŏn in a state of disarray, similar to the situation when he became king in 1849.

**Ch’ollima Campaign**

**Ch’ŏn Kaesomun (see Yŏn Kaesomun)**

**Ch’ŏn**

Situated in the northeast corner of South Ch’ungch’ŏng Province, Ch’ŏn consists of the towns of Sŏnggŏ and Sŏngwŏn, and the townships of Kwangdŏk, Tong, Mokch’ŏn, Puk, Pyŏngch’ŏn, Sŏngnam, Sushin, Ipch’ang, Kwangdŏk, Chiksan and P’ungsŏ. Recently expanded to include the areas formerly known as Ch’ŏn County, the city now covers an area of 636.68 square kilometres. Mt. Kwangdŏk (699m) and Mt. Manggyŏng (600m) in the southwest are the area’s highest peaks, followed by Mt. Sŏnggŏ (579m) near the centre of the city.

Almost 20,000 hectares of the city area are arable, of which about three-fifths grow rice and the remainder dry-field crops. In addition to being the leading producer of red pepper in the province, the city accounts for forty per cent of South Ch’ungch’ŏng’s tobacco farm acreage. Various fruit crops are grown, including apple, pear, melon and grape. In Kwangdŏk, walnuts are produced on a commercial scale. Taking advantage of Ch’ŏn’s proximity to Ch’ongju and Seoul, numerous dairy farms have developed, especially in the hilly areas of Sŏngwŏn. Gold is mined in the area, and Chiksan, in particular, was famous for its alluvial gold. However, its deposits are now almost exhausted. Factories in the city produce textiles, chemical products, ceramics, farm machinery, dairy products,
electronics, fabricated metal, aluminium and paper.

Ch‘onan’s tourism is centred around its historical sites and monuments. Buddhist sites include the old site of Ch‘onhung Temple in Sŏnggŏ, nearby Manil Temple just west of Mt. Sŏnggŏ and Kwangdŏk Temple east of Mt. Kwangdŏk. The latter was founded by Chajang during the reign of Shilla’s Queen Chindŏk (r. 647-654). In addition to the artefacts found at these sites, there is a rock carving of a Buddha in P‘ungse’s Samt‘ae Village and a standing Buddha figure at Yonghwa Temple in Mokch‘on’s Tong Village.

Confucian schools include Chiksan Hyanggyo in Chiksan’s Kunso Village, Mokch‘on Hyanggyo in Mokch‘on’s Kyoch‘on Village and Ch‘onan Hyanggyo in Yuryang-dong just east of the downtown area. The former was founded in 1398 and was moved to its present location in 1588. Both Chiksan and Mokch‘on Hyanggyo were reconstructed after being destroyed during the Hideyoshi Invasions (1592-1598). Modern educational institutions in Ch‘onan include Chonan University in Anso-dong, Korea University of Technology and Education in Pyŏngch‘on and Nazarene University in Ssangyong-dong. Every year, a ritual is held on the twelfth day of the tenth lunar month to commemorate the death of Yu Kwansun (1904-1920). A native of Ch‘onan, Yu took an active role in the 1 March Movement (1919) against the Japanese occupation. Arrested as one of the leading ‘conspirators’ in the local protest, she died in prison, becoming a martyr in Korea’s independence movement. The house where she was born can still be seen in Pyŏngch‘on’s Pyŏngch‘on Village. Other important monuments in the area include Independence Hall in Mokch‘on’s Hamhwa Village and Manghyang Tower in Songgo’s Yobang Village.

Ch‘ŏndogyo (see New religions)

Ch‘ŏndogyo kyŏngjŏn (Scriptures of the Ch‘ŏndogyo)

Ch‘ŏndogyo kyŏngjŏn is a collection of the scriptures, hymns and doctrines of the Ch‘ŏndogyo religion and is chiefly composed of the two mid-nineteenth c. works Tonggyŏng taejŏn (Bible of the Tonghak Doctrine) and Yongdam yusa (Hymns from the Dragon Pool). In 1952 Paek Semyŏng first combined these two works and published the collection under the name of Ch‘ŏndogyo kyŏngjŏn, and likewise the Ch‘ŏndogyo Church also combined the two works with various hymns used in Ch‘ŏndogyo services and published this in 1956. Enlarged and supplemented in 1961, by 1984 it had been further expanded to its present form. This work is notable in that both of its two main components, i.e., Tonggyŏng taejŏn and Yongdam yusa, were written by the founder of the Tonghak Religion, Ch‘oe Cheu (1824-1864), which is the antecedent to the Ch‘ŏndogyo Religion.

Ch‘ong Wa Dae (Ch‘ongwadae)

Ch‘ong Wa Dae is the office and residential complex of the President of the Republic of Korea. It is popularly called ‘Ch‘ong Wa Dae’ or ‘The Blue House’ because the main building has a blue-tile roof. The location of Ch‘ong Wa Dae was first used as the site of a royal villa in what was then Namgyŏng (the southern capital). It was built by King Sukchong (r. 1095-1105) of Koryŏ in 1104, the ninth year of his reign. In addition to the capital city of Kaesŏng, Koryŏ maintained a western capital, Sŏgyŏng, in P‘yŏngyang, an eastern capital, Tonggyŏng, in Kyŏngju; and the southern capital, Namgyŏng, in Hanyang, which is now Seoul.

After Chosŏn moved its capital to Hanyang, Kyŏngbok Palace was built in 1395, the fourth year of the reign of King Taejo (r. 1392-98) as the main palace, and the land on which the royal villa stood became the back garden of the palace.
Following Japan's annexation of Korea in 1910, the Japanese colonialists used the Kyŏngbok Palace grounds for the government-general building. In 1939, Japan built an official residence-office for the governor-general on the site of Ch'ŏng Wa Dae. Rhee Syngman, the inaugural president of the Republic of Korea, in 1948, called the building 'Kyŏngmudae', which was the name of one of the few old buildings there. He used it as his office and residence. President Yun Po-sŏn of the Second republic changed the name to Ch'ŏng Wa Dae in 1960. Presidents Park Chung Hee (Pak Chŏnghŭi), Choi Kyu-hah (Ch'oe Kyuhua) and Chun Doo Hwan (Chŏn Tuhwan) occupied Chong Wa Dae both as their office and official residence. While Roh Tae Woo (No T'äeu) was president, a new official residence and office building, as well as a press centre, called Ch'unch'gwan, were built.

In 1993, President Kim Young Sam's (Kim Yŏngsaam) government ordered the demolition of the Japanese governor-general's residence and office in the Ch'ŏng Wa Dae compound, so as to remove a major symbol of the Japanese colonial occupation. Geomancers have long considered the area in which Ch'ŏng Wa Dae is located as fortuitous, a view supported by an inscription on a stone wall found behind the official presidential residence during the construction of a new building in 1989, which reads, 'The Most Blessed Place on Earth'.

To the north of Ch'ŏng Wa Dae is Mt. Pugak, flanked by two mountains, Nak-san, symbolizing the Blue Dragon, on the left and Inwang-san, symbolizing the White Tiger, on the right. To the south is Nam-san the protective mountain of the capital and in front flows the Ch'ŏnggye stream and the Han river. Today, Ch'ŏng Wa Dae consists of the official presidential residence, the Yŏngbin'gwan or guest house, the main office building, the Ch'unch'ugwan press hall, and the secretariat buildings. The land area of the complex is twenty-two and three-quarter hectares (fifty six acres).

Ch'ŏngbunshil sŏmok (Catalogue of Books at Ch'ŏngbunshil)

Ch'ŏngbunshil sŏmok marks the first attempt to evaluate and catalogue the old books in various parts of the Kyŏngsang provinces. Yi Inyŏng undertook this monumental work which lasted from 1937 until 1944. The original publication consisted of nine fascicles in one volume and was published in 1944. The sources evaluated date from 1222 until the beginning of the twentieth century, and in all total some 3,097 fascicles and 1,444 volumes. Since Yi evaluated each book's historical value, Ch'ŏngbunshil sŏmok is of great value to scholars in traditional Korean studies for assessing the worth of historical documents. The work was reissued in 1968 by Poryŏn'gak as a 543-page single volume.

Ch'ŏngdo County

Situated in the southern part of North Kyŏngsang Province, Ch'ŏngdo County comprises the towns of Ch'ŏngdo and Hwayang and the townships of Kangnăm; Kakp'uk; Kŭmch'ŏn; Maejŏn; Unmun; ḹiso and P'unggak. The county is enclosed by mountains, with Mt. Munbok (1,014m), Mt. Kaji (1,240m), and Mt. Unmun (1,188m) rising on the eastern border; Mt. Pisŭl (1,084m) to the west, Mt. Sŏnŭi (756m) and Mt. Sangwŏn (670m) to the north and Mt. Ch'ŏlma (630m) to the south.

Only about seventeen per cent of the county can be farmed, because of the rugged terrain. Rice cultivation is generally limited to the low-lying land around Tongch'ang Stream and Ch'ŏngdo Stream. Apples and pears are grown, and Ch'ŏngdo persimmons are the area's speciality crop.

With spectacular mountain scenery and numerous historical sites, the county offers a number of tourist attractions. As the most southerly peak of the T'aebaek Mountain Range, Mt. Unmun is a popular hiking destination. In addition to the mountain's temples and
hermitages, there is the picturesque Unmun Valley through which flows Tongch’ang Stream. The region is also famous for its waterfalls and mineral springs. On Mt. Hwaak, there is the 36-metre long Yaksu Waterfall, which is also a popular source of mineral water (yaksu), and on Mt. Kaji, one finds the 40-metre long Haksodae Waterfall.

Historically, the county’s most important monastery is Unmun Temple, located in Unmun Township. Originally founded in 557, the temple houses a stone lamp (Treasure No. 193), a three-storey pagoda, a stone pillar engraved with the images of the Four Heavenly Kings (Treasure No. 318) and a stele commemorating National Master Wǒnǔng (Treasure No. 316). At nearby Naewŏn Hermitage, there is a famous mineral spring.

In addition to Buddhist sites, there are a number of Confucian schools, including Ch’ŏngdo Hyanggyo founded in 1568 in Hwayang, Chagyŏ Sŏwŏn in Isŏ Township, Sŏnam Sŏwŏn in Kŭmch’ŏn Township, Kŭmho Sŏwŏn in Kŭmch’ŏn Village, Namgang Sŏwŏn in Kakpuk Township, Hwanggang Sŏwŏn in Kŭmch’ŏn Township, Pongyang Sŏwŏn in P’unggak Township and Ch’asan Sŏwŏn in Ch’asan Village.

Several old houses in the region have been preserved, among them the Un’gang residence, located in Kŭmch’ŏn Township’s Shinji Village. This was built in 1726 by Pak Suk. It was expanded by Pak’s great-great-grandson Un’gang in 1824 and brought to a standard of good repair in 1905. In Hwayang’s Tongch’ŏn Village, there is a stone ice-storage cellar (Treasure No. 323). Built in 1713, the building is 14.75 metres long, 5 metres wide and has substantial stone arches to block-out the sun’s warmth. The cellar (up to the arches) was covered with earth after its construction. The sloping floor runs off water from the melting ice.

Ch’ŏnggang chip (Collected Works of Ch’ŏnggang)

Ch’ŏnggang chip is an anthology of Chosŏn scholar-official Yi Cheshin (1536-1584). It is composed of six volumes and two fascicles, and is a woodblock-printed work. Yi’s son Myŏngjun published it posthumously in 1610. The title of the work is taken from Yi’s pen name, Ch’ŏnggang. The first four volumes of this work contain many different style poems written by the author and the last two volumes contain writings of others that pertain to Yi.

This work contains valuable historical data in that its contents serve as a record of the mid-Chosŏn period, from the view of the author who was a government official. Notable in the work are the accounts of how troops under the command of Yi managed to repel the armies of Nit’anggae who was attacking Chosŏn from the north.

Ch’ŏnggu yŏngŏn (Enduring Poetry of Korea)

Ch’ŏnggu yŏngŏn is a shijo collection that was compiled by Kim Ch’ŏnt’aek in 1728. It is a calligraphed work that consists of one volume and one fascicle. This work along with Haedong kayo (Songs of Korea) and Kagok wollyu (Sourcebook of Songs) are considered as the most important song collections of Korea. In the title of this collection ‘ch’ŏnggu’ refers to Korea, ‘yŏng’ means everlasting and ‘ŏn’ denotes words. Since this is a transcribed work, many different versions of it have come into being through the processes of adding and subtracting from the original. At present there are six different versions, and among these it is the ‘Chin-pon’ (original version) edition of 1728 that is oldest.

The work is arranged as follows: In the beginning there is a preface written by Chŏng Yun’gyŏng and this is followed by the original text that is divided into thirteen sections. The first section lists various musical styles and provides an example of each category. The second, which is entitled ‘Yŏmal’ contains six works from the end of the Koryŏ
period. The third, ‘Ponjo’ contains 203 works that were composed by forty-one different writers. ‘Yōlsōngōje’, the fourth section, contains five songs that were composed by three kings. The fifth section, ‘Yōhang yugin’ is composed of sixty-five works by six composers, while the sixth, ‘Kyususamin’, has just five works by three writers. ‘Yōndae kyōlgo’, the seventh section has three compositions by three writers, and the eighth, ‘Mumyōngssi’ has a total of 104 works included in it. The ninth section, ‘Samsaktaeyōp’, has fifty-five works, the tenth, ‘Nak shijo’, ten works and the eleventh, ‘Chanjinju’, has but one work in it. ‘Maengsanggun ka’, the twelfth section also has one work only and the thirteenth section, ‘Manhwoeng ch’ōngnyu’, has a total of 116 works.

Of the various versions of this work the ‘Hongssi-pon’ displays highly skilled calligraphy and contains 310 works in its seventy-four pages. Its contents are divided into those works by known and unknown authors. The ‘Karam-pon I’ edition is quite similar to the ‘Chin-pon’ edition except that it has no preface or epilogue and that it has an additional section entitled ‘P’ayang’ that holds nine works. ‘Karam-pon II’ is also very close to the ‘Chin-pon’ edition. The ‘Yuktang-pon’ is titled Haedong kayo rok (Record of the Songs of Korea) and contains 999 shijo and 17 kasa. This edition has many composers and works that are not included in the other editions. However, there are also a considerable number of errors by the compiler. The ‘Yōnssi-pon’ contains 257 works and at the end the kasa, Sok ābusa (Songs of the Fishermen Continued), is recorded. This edition also is marred by many errors.

Ch’ōnggu yōngōn is valued as a tremendous collection of shijo that displays some of the most beautiful verse and melodies of Korean literati, kings and even kisaeng (female entertainers). It is highly valued as both a historical record of the thoughts and emotions of the writers contained in it, as well as for its aesthetic qualities.

Ch’ōngja ware [Ceramics]

Ch’ōngjin

Located in the northwest region of North Hamgyŏng Province, the city of Ch’ōngjin covers a total area of 275 sq. kms. Ch’ōldan Peak (571m) is the highest point on the city’s northeast border and Mt. Samjol (410m) is its counterpart in the southwest. Ch’ōngjin has a maritime climate, with an average January temperature of -5.3c., and an average August temperature of 14.9c.

Throughout the Russo-Japanese War the Japanese used the city’s port to transport soldiers and military supplies and in 1908, Ch’ōngjin was recognised as an international trading port. During the Japanese occupation of Korea, the Hamgyŏng and Ch’ōnghoe railways were built, linking the city with points to the north. Once the improved transport and communication facilities were in place, Ch’ōngjin’s port was used to import and export goods to and from the Qiandao region in Manchuria. To meet the city’s burgeoning commercial needs, the port facilities were modernised, beginning in 1921. In the 1930s, Ch’ōngjin was transformed into an industrial city, with the construction of manufacturing, canning, and fish-oil plants, as well as three steel mills. In this period, the port facilities were again expanded to include special docks for the local fishing fleet and the steel industry. By 1943, Ch’ōngjin had become one of the four largest cities in Korea.

Several historical artefacts of importance have been found in the area. In 1956, archaeological excavations revealed a shell mound dating from prehistoric times. Within the mound, researchers discovered animal bones as well as tools carved of bone. In Nong’p’odong and Sammae village, stone-built graves dating from the Bronze Age have been discovered.

Ch’ōngju
Ch'ŏngju is located in the western part of North Ch'ungch'ŏng Province. The city covers a total area of 153.62 sq. kms. and as of 1990 had a population of 463,944. Sangbong Ridge (404m) rises in the east of the city and Miho Stream runs along the northwestern border. As an inland region, the area’s climate is denoted by sharp fluctuations in temperature. Ch’ŏngju has an average temperature of 11.4 deg. C. and receives 1,171mm of rainfall annually, about sixty per cent of which falls in summer.

About thirty-seven per cent of the city area is arable land. Of this, some twenty-seven sq. kms. is used for rice cultivation and about seventeen sq. kms. for fruit growing and a variety of vegetables. Beef and dairy farming are major undertakings here which, together with poultry and pig farming, are important income producers for the city. Ch’ŏngju’s manufacturing sector is in the Songjŏng-dong and Poktae-dong.

Famous as an educational and cultural haven, Ch’ŏngju attracts tourists throughout the year. One of the most popular local sites is the picturesque Myŏngam Reservoir in Myŏngam-dong. Built in 1921, the reservoir has recently been reduced in size, in order to build apartment complexes in Kŭmch’ŏn-dong and Yongam-dong. Ch’ŏngju’s best known dish is olgaeungi (a kind of marsh snail) soup, a piquant dish seasoned with soy bean paste, hot peppers and garlic.

The city abounds in Buddhist sites. At Posal Temple in Yongam-dong, is a five-storey pagoda; a pair of Buddha statues; a scroll painting of a Buddha; and a stele with an account of the temple’s reconstruction. In Uam-dong, is Yongam Temple, a monastery belonging to the T’aege sect. Although the temple’s history is clouded, it is thought to date from Greater Shilla. At the temple there is a seated Vairocana figure (North Ch’ungch’ŏng Province Tangible Cultural Asset No. 23) which was carved during the ninth century. The seated Buddha in the Main Buddha Hall was brought to the temple from Pŏpchu Temple in 1952. It was carved during Chosŏn from a single block of granite.

In Unch’ŏn-dong can be seen the old site of Hŭngdŏk Temple, where the Chikchishim kyŏng (Directly Pointing to the Mind Sutra) was made. Printed in 1377, this Buddhist text is the world’s oldest work printed with metal type. The original copy is held in a museum in France, but a copy can be seen at the Ch’ŏngju Early Printing Museum. This museum also safe-keeps the Mugu chŏnggwang taedarani kyŏng. Printed in 751, this Buddhist scripture is the world’s oldest book printed with woodblocks. There are also displays of mannequins re-enacting the carving of the Tripitika Koreana, and in the museum’s Chosŏn hall, mannequins demonstrate how wooden printing blocks and metal type were made.

Confucian schools found in the city include Ch’ŏngju Hyanggyo established in the Chosŏn in Taesŏng-dong; Ch’ŏngan Hyanggyo, Shinhang Sŏwŏn (founded in 1570) in Yongjŏng-dong; Songgye Sŏwŏn at the juncture of the Chungbu Expressway and the Ch’ungbuk rail line; and Kugye Sŏwŏn just east of Highway 17. Near Kugye Sŏwŏn in Moch’ung-dong is Moch’unsa, a shrine commemorating over seventy officers and enlisted men who died while trying to suppress the Tonghak Rebellion. Modern educational institutions include Chung Buk National University in Hŭngdŏk District; Chongju University in Sangdang District; Seowon University in Hŭngdŏk District; and Chongju National University of Education in Hŭngdŏk District.

Ch’ŏngju National Museum

Ch’ŏngju National Museum (Kungnip Ch’ŏngju Pangmulgwan) is located in Ch’ŏngju in North Ch’ungch’ŏng Province. Construction, which began in 1982, took five years and the museum opened its doors in October 1987. Since the Ch’ŏngju area comprised the strategic border region of the Koguryŏ, Paekche and Shilla kingdoms during the Three Kingdoms era, the museum’s collection contains numerous artefacts from each of these
domains. The museum also exhibits prehistoric artefacts, Koryŏ printing and Chosŏn handicrafts. In addition to managing its exhibitions, the museum conducts research on items in its collection.

Ch'ŏngsan Island

Located twenty kms. S.E. of Wan Island, Ch'ŏngsan Island is part of Ch'ŏngsan Township in South Cholla Province's Wando County. The island covers an area of 33.28 sq. kms. and has a 42-km.-long coastline. Mt. Taebong (379m) rises in the north of the island and Maebong Peak (385m) stands in the southeast. The island has a tolerable winter climate, with an average January temperature of 1.0c., and a hot summer, with August temperatures averaging 27c. Ch'ŏngsan has an average annual rainfall of 1 322mm.

About one-quarter of the island is tillable, with about 3.7 sq. kms. used for rice and about 4.5 sq. kms. for dry-field crops such as barley, sweet potato, bean, garlic and sesame. Local marine products include Spanish mackerel, anchovy, bream, croaker, hairtail, filefish, eel, octopus, oyster, clam and laver. Most of the villages are situated in the relatively flat central and western areas.

There are four primary schools and two junior high schools on the island. There is a passenger ferry service to both Wan Island and Mokp'o. With its picturesque scenery, Ch'ŏngsan attracts large numbers of tourists. In order to protect the area's natural resources, the island has been included in Tadohae National Marine Park.

Ch'ŏngsan pyŏlgok (Song of the green hills) [Literature]

Ch'ŏngsŏng County

Situated in the eastern part of North Kyŏngsang Province, Ch'ŏngsŏng County includes the town of Ch'ŏngsŏng and the townships of Punam, Pudong, Andŏk, Chinbo, P'ach'ŏn, Hyŏndong and Hyŏnsŏ. The Sando Mountain Range, an offshoot of the Pohyon Mountain Range, runs through the centre of the county. With only 940mm of rainfall annually, the county is relatively dry, but it has sharp fluctuations between summer and winter temperatures.

Approximately 83 per cent of the county is forest and under 12 per cent is arable land. Due to the area's rugged terrain, most farms cultivate dry-field crops including grain, tobacco, red pepper, garlic and a variety of herbs. Red-pepper production, centred in Chinbo Township, is the highest in the province. Some land is sat aside for cattle raising. During Chosŏn, white porcelain for everyday use was produced in Ch'ŏngsŏng, but the tradition has not survived. The county's industrial sector is mainly limited to traditional cottage industries producing silk, hemp, rice-paper and pottery, although there is some mining and quarrying in the area, for fluor spar and clay.

Ch'ŏngsŏng County's tourism is centred around Mt. Chuwang National Park in the northeast (See Chuwang Mountain), Talgi Valley's spa attracts many, as does the Ch'ŏngsŏng Cultural Festival held every year in October. Located east of central Ch'ŏngsŏng, the Talgi spring is famous for its bubbly water that is both odourless and colourless. When sugar is added to the water, it becomes almost like a proprietary soft drink, and when it is used to cook rice, the rice takes on a bluish hue due to the water's high iron content. The spa water is said to cure anaemia, stomach ailments, rheumatism, nervous disorders, heart disease and female disorders.

Most of the area's historical sites are concentrated in the area around the town of Ch'ŏngsŏng. There are several temples, including Pogwang Temple in Ch'ŏngsŏng, Taejon Temple in Pudong Township and Sujŏng Temple in P'ach'ŏn Township. In Chinbo
Township's Ich'on Village, there is a five-storey pagoda. Confucian sites in the county include several pavilions -- Ch'anggyongnu in Ch'ongsong, Manseru in Tök Village and Panghojöng in Andök Township. In Chinbo Township's Kwangdök Village is Chinbo Hyanggyo (county public school), which has been designated North Kyongsang Province Tangible Cultural Asset No. 201.

Ch'ongwadae (see Ch'ong Wa Dae)

Ch'ongwŏn County

Located in North Ch'ungch'ŏng Province, Ch'ongwŏn County consists of the townships of Kadŏk, Kangnae, Kangoe, Nami, Namil, Namsŏng, Munŭi, Puyong, Pugi, Pugil, Och'ang, Oksan and Hyŏndo. The county covers a total area of 817 sq. kms. and as of 1990, had a population of 116,779. Mt. Midong (558m), Mt. Sŏndu (527m) and other peaks of the Sobaek Mountain Range rise in the eastern part of the county, Miho Stream run through the east and Taech’ŏng Lake lies in the south. The Chungbu Expressway links Ch'ŏngju in the centre of the county with Taejon to the south. As an inland area, the county’s climate is characterised by sharp fluctuations with an average yearly temperature of 11.5 deg. c. and an average yearly rainfall of 1,246mm.

Approximately 245 sq. kms. of the county area are tilled, both for rice (144 sq. kms.) and dry-field crops (101 sq. kms.) such as barley, bean, potato, ginseng, mint and tobacco. The rice crop, which is grown mainly in the plains along Miho stream, accounts for twenty-five per cent of the province’s total production. Stock breeding and sericulture also contribute to the local economy. Mineral resources exist, with fluor spar from Pugil and zircon from Och’ang. Naturally-carbonated water (used in soft drink manufacture) is found in both Pugil and Puyong.

On Kuryong Mountain in Munŭi’s Kuryong Village lies Yong (Dragon) Cave. About two kms. from the entrance, the cave branches off into a maze of passageways and beyond this point, there is a cavern. A tunnel has been excavated, connecting this cavern with the surface. Speleologists have also located a water-filled cave which feeds a large pond, at a depth of about one hundred and fifty metres. Stalactites can be seen here and there around the cave. Residents of the Kamul area come to the cave to perform kiuje (ritual of praying for rain).

The area offers some historical sites of importance. In Hyŏndo’s Hasŏk Village near Taech’ŏng Dam is Hyŏnam Temple, founded by Grand Master Sugyŏng during the reign of Shilla’s Queen Sŏndŏk (r. 632-647) In Nami’s Sadong Village is Anshim Temple, founded by Vinaya Master Chinp’yo in 775. The Main Buddha Hall (Treasure No. 664) of Anshim has remained in good repair since its overhaul in 1672. Within the hall are several altar paintings that date from the late nineteenth c. and a hanging scroll painting from 1652. Other artefacts include a seated Buddha from Shilla, a stupa from late Chosŏn which purportedly contains the sarira of the Buddha, and a stele which gives an account of the stupa.

Confucian schools in the area include Munŭi Hyanggyo founded by Yi On’gi in 1683 in Munŭi’s Mich’ŏn Village; Tŏch’ŏn Sŏwŏn in Kadŏk’s Nodong Village; Ch’ehwa Sŏwŏn in Namil’s Kasan Village; Chukkye Sŏwŏn founded in 1738 in Pugi’s Yonggye Village; Kŏmam Sŏwŏn founded during the reign of King Sukchong (r.1674-1720) in Kadŏk’s Pyŏngam Village; Songch’ŏn Sŏwŏn in Oksan’s Yangji Village; nearby Kiam Sŏwŏn just west of the Chungbu Expressway; Sŏgye Sŏwŏn founded in 1717 in Miwon’s Okhwa Village; Kukkye Sŏwŏn founded in 1701 in Pugil’s Kuktong Village; Kûmdan Sŏwŏn next to the Kûm River in Puyong; Nobong Sŏwŏn west of Taech’ŏng Dam, and the recently reconstructed Ponggye Sŏwŏn founded in 1760 in Oksan’s Hwanhŭi Village. In Kadŏk’s Inch’a Village lies Kubong Yongdang, a shrine built in honour of Shin Sukchu, a
famous government minister during the reign of King Sejo (r.1455-1468). The shrine houses a memorial portrait of Shin, made around the time the shrine was built. Rites are performed at the shrine every spring and autumn by the Koryŏng Shin clan. Modern educational institutions include Han’guk Kyoyuk Taehakkkyo (Han’guk University of Education) just east of Miho stream in Kangnae.

Ch’ongyang County

Located in the central area of South Ch’ungch’ŏng Province, Ch’ongyang County consists of the town of Ch’ongyang, and the townships of Taech’i, Mok, Pibong, Un’gok, Changp’yŏng, Chŏngsan, Ch’ŏngna and Hwasŏng. The county covers a total area of 469.35 square kilometres and as shown by 1989 statistics, a population of 53 999. Mt. Ch’ilgapp (561m) and other mountains of the Ch’aryong Mountain Range run through the centre of the county, while the Kum River flows along the southeastern border. As an inland mountainous area, the county’s climate is characterised by sharp fluctuations in temperature with an average yearly temperature of 12.0°C and an annual rainfall of 1 196mm.

Almost three quarters of the population is employed in agriculture. Of the county area, 11 780 hectares comprise arable land, with about 7 700 hectares devoted to rice and over 4 000 hectares to dry-field crops, such as barley and tobacco. Mineral resources are limited to small amounts of tungsten, silica and talc. Gold was also found here, but the economically-viable reserves are now extinguished, with the celebrated Kubong Gold Mine closing down in 1971.

Local tourism is centred around the picturesque Mt. Ch’ilgapp Provincial Park. Several hiking trails ascend the mountain to its peak and to nearby Samhyŏngje (Three Brothers) peak. At the western foot of the mountain lies Changgok Temple, one of the county’s most important Buddhist sites. Founded by Sŏn Master Pojo during the reign of King Munsŏng (r. 839-857), the temple houses two seated Bhaisajyaguru figures, one made of iron (National Treasure No. 58) and one made of gilt-bronze (Treasure No. 337), as well as a number of old buildings.

Confucian sites found in the area include Ch’ongyang Hyanggyo (county public school) in Ch’ongyang’s Kyowol Village and Chŏngsan Hyanggyo in Chŏngsan’s Sŏjong Village. Both of these schools are said to have been founded during early Chosŏn. Shrines include P’yŏcholsa in Un’gok’s Mogok Village, built in honour of four military leaders who died trying to retake Seoul during the first Hideyoshi Invasion (1592), and Modŏksa in Mok Township’s Songam Village, built in honour of the scholar and patriot Ch’oe Ikhyŏn (1833-1906).

Each year on 13 April, the Myŏnam Ch’unch’u Taeŭi Festival is held at Modoksa to commemorate Ch’oe Ikhyŏn, who was styled Myŏnam. Ch’oe raised a guerilla army to protest the Protectorate Treaty of 1905 (Ŭlsa poho choyak) which Japan forced upon Korea. The ritual is accompanied by various events, including a procession of men dressed in the style of Ch’oe’s guerilla band and a writing contest. Another popular event is the Ch’ilgap Cultural Festival, which was started in 1984 by local residents. Held each year in October, the festival includes a sanshinje (Shaman ritual to worship the deity of the mountain) as well as traditional games and sports.

On the night of the fourteenth day of the first lunar month in Chŏngsan’s Songhak Village, a tonghwaje (village fire ritual) is held. During the ritual, a piece of firewood is brought from each of the participant’s houses and put in a bundle on a platform to burn. It is said that the direction that the burned-out bundle falls foretells which villagers will have good fortune. The ritual is believed to ensure the village’s peace as well as an abundant harvest for the coming year.
Ch’ónin

In former times, the Korean population was composed largely of the ch’ónin (low-born) class and the yangin class (free-born commoners). Collectively, they are sometimes referred to as the yangch’ón, and the formation of these social divisions emerged with the consolidation of a strong central governing authority and the formation of a privileged ruling class.

Slaves formed the largest component of the ch’ónin, which had existed in Korean society since the earliest state, Ko Chosŏn. The first historical record of the ch’ónin is found in the Samguk sagi (History of the Three Kingdoms), which recounts the command of King Munmu (r. 661-681), to the effect that the families of insurgents were to be reduced to members of the ch’ónin class as slaves. Nevertheless, it is highly speculative that there existed clear distinctions between the yangin and ch’ónin classes at this point in Korean history. Most likely, the strict kolp’um chedo (bone-rank system) that dominated Shilla society drew one clear social boundary, which demarcated the ruling, hereditary aristocratic classes and the low classes, all of which were grouped together.

By Koryŏ, the class distinctions in society had become much clearer. Early legislation clearly delineated the yangin and ch’ónin classes, and various laws, including those concerning marriage prohibitions among members of these groups appeared. Large groups of peasants from the Koryo region were designated as the paekch’ŏng, which was composed of those who were not eligible to enter Koryo officialdom. Below the paekch’ŏng were the ch’ónin, constituted mostly of slaves. There were further different rights and duties attributed to the ch’ónin and yangin and these differences were substantial. With the ch’ónin slaves were those peasants attached to special administrative districts such as hyang, pugok, so, yŏk, chin, and kwan. The hyang and pugok were farming communities comprised of lowborn people assigned to farm labour; the so were concentrations of labourers directed to mining operations, or the making of silk, paper, or pottery; while the chin (ferry) and yŏk (post stations) were the transportation facilities established on various routes throughout the country. The kwan were inns, with those who were allocated to these facilities having a very low social standing indeed.

Below the lowborn were the slaves who served in the special administrative districts, and these were largely divided into privately-owned and government slaves. The latter performed various duties at official offices and facilities, as well as being assigned to civilian and military officials. Private slaves belonged to members of the royal family, the ruling class and the temples, and they carried out many different functions for their masters.

The status of all slaves was hereditary, and they could be bought or sold at their master’s will. There were also ‘out-resident’ slaves, who worked their owner’s lands, retaining a portion of the harvest as reward for their labour. In some respects these slaves resembled freeborn tenant farmers, and in mid to late Koryo many of them amassed large personal fortunes and were able to buy their freedom, thereby joining the yangin class. A further component of the ch’ónin were the social outcasts, such as butchers, wicker-workers and travelling entertainers. Although the individuals in these occupations were freeborn, they were scorned by society because of their occupations and thereby, were afforded the same treatment as slaves.

The one avenue that did offer some ch’ónin a chance to elevate their social standing was military service. Early in Koryo, paekch’ŏng and ch’ónin men filled the ranks of the army. The end result of ch’ónin service, however, was a decline in the social status of the military. While the paekch’ŏng were technically eligible to sit for the government service examinations during Koryo, the ch’ónin were denied this right, one also denied the offspring of apostate monks. Hence, it is clear that the status of the ch’ónin was hereditary.
and as such not easy to divest.

The situation of the ch’önin did not change a great deal in Chosŏn. The majority remained as slaves, divided largely into government and private slaves, as was the case during Koryŏ. Government slaves were further distinguished between those who performed labour services and those who paid a tax in lieu of service. Private slaves were also, by and large, classified along these same lines, with household slaves performing duties in the master’s house or on his adjacent lands, and out-resident slaves who paid an annual fee to their masters. A person’s status was determined by that of his mother, and thus any children born to a slave woman became the property of her master. While few household slaves formed their own households, out-resident slaves did, and led lives that were comparable to those of freeborn tenant farmers.

The social outcasts of the ch’önin during Chosŏn included the previously-mentioned butchers, wicker-workers and travelling entertainers, plus tanners, shamans, kisaeng (female entertainers), and monks. The individuals engaged in these largely hereditary occupations, lived in isolated villages and were in general despised by society. In an attempt to assimilate the members of these occupations into mainstream Chosŏn society, King Sejong (r. 1418-1450) granted them land and they were taught how to work it, with the aim of converting them to the lifestyle of peasant farmers. Therefore, from early Chosŏn, this class became known as the paekchŏng, a term heretofore reserved for the freeborn peasantry. However, despite the attempts of King Sejong to eliminate these lowborn occupations by turning them into farmers, they continued their hereditary occupations on the fringes of Chosŏn society as ch’önin.

The position of the ch’önin during Chosŏn, while still depressed, was an improvement over the previous Koryŏ era. Slaves had better economic opportunities in Chosŏn and in 1801 the government freed all of its slaves, thus making them members of the yangin class. Those engaged in lowborn occupations, while still disdained by society, had at least been legally defined as commoners, and the special administrative districts of Koryŏ were abolished during Chosŏn. While these processes were carried out over hundreds of years, and real change was therefore extremely gradual, the situation in Chosŏn does represent a marked improvement over that prevailing during Koryŏ.

Bibliography

Ch’ŏnma Mountain

Mt. Chŏnma is situated in Kyŏnggi Province in the northern area of Kaesŏng. Its highest peak (762 metres) is called Manggyŏngdae. The mountain is closely associated with the founding of the Koryŏ Dynasty. In fact, the Taehŭng Fortress, built during the Koryŏ Period, still stands. The ancient Buddhist monasteries on the mountain, such as Kwanŭm, Kaesŏng, Unhŭng and Taehŭng Temple, are also imbued with historical significance. In addition to its ancient sites, the mountain, in spite of its small size, is full of spectacular scenery. Due to its rock formations, the area has also been called ‘the Diamond Mountains of Kaesŏng’ or ‘the Lesser Diamond Mountains’ (Sogŭmgang). Numerous tourists visit the mountain to see the beautiful Pagyŏn Waterfall, or Kudam and Yongdam Lake.

Ch’ŏnt’ae Sect [Buddhism]

Ch’op’a-il [Buddhism]

Ch’ŏrwŏn County
Situated in northwest Kangwŏn Province, Ch’ŏrwŏn County is comprised of the towns of Kalmal, Kimhwa, Tongsong and Ch’ŏrwŏn and the townships of Kŭnnam and Sŏ. The area has been known as Ch’ŏrwŏn County since the reign of King Kyŏngdŏk (742-765). The DMZ runs across the centre of this mountainous county, and the Hant’an River flows down to the west of Kimhwa. A lava plateau, about 200 to 500 metres in elevation, stretches across the northwest portion of the county. As an inland mountainous region, the area’s weather is characterised by sharp differences in summer and winter temperatures and heavy rainfall.

Agriculture plays a leading role in the county’s economy. Rice is cultivated on the relatively flat lava plateau in the northwest, and several dry field crops, such as corn, beans and leafy vegetables are also grown here. Mining also contributes to the local economy. Diatomite and feldspar are excavated in Kalmal, while silica is mined in Kimhwa.

Ch’ŏrwŏn County boasts great natural beauty. In particular, the granite cliffs that line the Hant’an River gorge are known for their majestic splendour. Other sites include the picturesque Sambūyŏn Waterfall near Kalmal’s Shinch’ŏl Village and a pond built by Kim Kwanju during the reign of King Yŏngjo (1724-1776) in Kŭn’an Village. Kim, who cured his sickness by eating the Water Shielded (Brasenia schreberi) that grew here, named the site ‘Sundam’ (Water Shielded Pond).

In addition to its natural beauty, a number of important historical relics and sites are scattered around the western half of the county. Excavated relics from both the Neolithic Period and the Bronze Age indicate that humans have inhabited this area since prehistoric times. Dolmens have been found in Kalmal, Shinch’ŏrwŏn Village, Chip’o Village and Munye Village.

In addition to these prehistoric sites, there are a number of important Buddhist relics in the area. At Top’ian Temple in Tongsong, there is a seated Buddha figure made of iron (National Treasure No. 63) and a three-storey stone pagoda (Treasure No. 223). South of the Hak Reservoir in Tongsong Village, there is a Buddha figure carved in relief. Extant temples in the area include the Top’ian, Anyang, Pokhye, Shimwŏn, Changan, Puyŏn, Ilgwang and Poyŏn temples.

In spite of its natural beauty and numerous sites of historical interest, the county’s tourist industry is relatively underdeveloped, due to its inaccessible location. In addition, since the county is situated in close proximity to the demilitarised zone, some areas are off limits to civilians. Many of the small towns in the area cater to the needs of the military personnel and their dependants.

Ch’ŏyong

Ch’ŏyong is a legendary figure from the reign of the Shilla king Hŏn’gang (r. 875-886) who appears in ‘Ch’ŏyong ka’ (Song of Ch’ŏyong) recorded in the Samguk yusa (Memorabilia of the Three Kingdoms). As well the record in the Samguk yusa, there is an account of Ch’ŏyong in the Koryŏsa (History of Koryô). The legend regarding Ch’ŏyong provided in the Samguk yusa is as follows.

King Hŏngang was returning home from Kaeunp’o (present day Ulsan) when he became lost in heavy fog created by a dragon. At the suggestion of his adviser, he commanded that a temple be erected in honour of the dragon, and soon afterwards the fog dissipated. The dragon of the East Sea then appeared, accompanied by his seven sons, playing music and dancing. The dragon was pleased with the offering of the king and in his pleasure presented one of his sons, Ch’ŏyong, to the king as adviser. The king was well-satisfied with the service of Ch’ŏyong and gave him a beautiful wife, as well as a high government position.
However, the God of Pestilence coveted Ch’oyong’s wife and transformed his image so that he could spend the night with her in Ch’oyong’s house. When the master of the house returned he was shocked to see two people in his bed. Quickly, he left the room singing ‘Ch’oyong ka’ (Song of Ch’oyong) and dancing. This in turn caused the God of Pestilence to reveal his identity, whereupon he prostrated himself in front of Ch’oyong and begged forgiveness. The spirit pledged to never enter a home that bore the likeness of Ch’oyong, since he was greatly impressed by the husband’s unruffled demeanor. As a result of this confrontation, the people are said to have drawn the likeness of Ch’oyong and placed it on their doors. By so doing they were able to drive away misfortune.

Although there are various theories on Ch’oyong and his role in the Shilla Kingdom, the one most prevalent is that he was a shaman who was naturally well-versed in shaman song and dance. Since one of the duties of Ch’oyong was to assist the king in controlling rain, it is thought also that Ch’oyong may have been a shaman who donned a dragon costume while performing incantatory rain rituals. However Ch’oyong ka’ is not a rain dance, but one imbued with properties to expel the baneful presence of the God of Pestilence. Moreover, the fact that the image of Ch’oyong was used as a talisman reveals that he was believed to be a supernatural force, capable of repelling injurious spirits. The belief in Ch’oyong’s power of good was reinforced with the expansion of the lyrics of ‘Ch’oyong ka’ during Koryo and a ritual dance performance that was held in the women’s quarters of the palace at the end of the first lunar month. This ceremony ceased with the coming of Chosŏn.

The myth surrounding Ch’oyong and the protective powers that he possessed did not, however, disappear after Koryo. Instead, these beliefs moved to the sphere of the shamanistic religion of the common people. Although records of the religious practices among the commoners are scant until the twentieth c., there are accounts of ‘Ch’oyong ka’ recorded in Chosŏn historical documents such as Sejong shillos (Veritable Records of King Sejong). Also, in surveys of Korean shamanism conducted in the early years of the twentieth c., there are manifestations of legends surrounding Ch’oyong. Perhaps the most notable of these accounts is of Óbi taewang that recounts the history of a founding deity of shamanism in Korea. This record reveals that the name of Ch’oyong was also pronounced ‘Ôbi’ or ‘Ebi’ in regional dialects, and that the people would call out his name in the belief that their cries would drive away baleful spirits. The wife of Ch’oyong, who had slept with the God of Pestilence, was also a shamanistic deity, Pari kongju (Princess Pari), who had the power to transverse the realms of the sacred and profane. Thus, these two deities were seen as the founders of Korean shamanism, since Ch’oyong was skilled in incantatory dance and song, and Princess Pari was vested with the powers of the gods. Accordingly, the legend surrounding Ch’oyong is closely linked to the narrative shaman song (muga) Pari kongju, and continues to play an important role in Korean shamanistic practices to the present day.

Bibliography

Ch’unch’ŏn

Situated in the western part of Kangwŏn Province, Ch’unch’ŏn is comprised of the town of Shinbuk, and the townships of Nam, Namsan, Tongnae, Tong, Tongsan, Puksan, Sabuk, Sŏ and Shindong. The area is famous for the large reservoirs which have been created by three dams. Ch’unch’ŏn Dam is situated to the north of the city on the north fork of the Han
River. Soyang Dam is located to the east of Ch’unch’on on the Soyang River. The north fork of the Han River and Soyang River meet and flow past the city. The Ùiam Dam, situated to the southwest of the city, blocks the expanded north fork of the Han, creating Ùiam Lake. With three large dams, Ch’unch’on has the highest output of hydro-electric power in the nation.

In addition to its lakes, the city is surrounded by numerous mountains such Mt. Odae, Mt. Taeryông, Mt. Samak and Mt. Kubong. Mt. Pongüi (302 metres) rises prominently near the downtown area, across from Mt. Hyangno (315 metres) on the city’s southwest end. Due to the surrounding mountains and large bodies of water, the city has a distinct climate, characterised by sharp fluctuations in temperature, heavy fog and frequent rain. Its yearly average temperature is 10.5 C.

Ch’unch’on has a long history of human habitation. Archaeological finds on Mt. Pongüi indicate that human beings have lived in the area since Neolithic times. Prior to the Three Kingdom’s period, the area is believed to have been occupied by the Maek people. In the fifth century, the area became part of Koguryo territory before falling into Shilla’s hands during the early seventh century. In 637, Queen Sŏndŏk called the area Usu-ju or Udu-ju (both meaning ‘Ox-head State’) and assigned a military overlord to the area. After Shilla unified the Three Kingdoms, the name was changed several more times. In 940, the area was called Ch’un-ju. In 1413, after the rise of the Chosŏn Kingdom, the area was known as Ch’unch’on County. Ch’unch’on County and the municipal area were combined to become the present Ch’unch’on City in 1995.

Many of the area’s artefacts were destroyed during the Korean War, but, a few remain intact. Dolmen dating from the Bronze Age have been discovered in Soksa-dong, Chungdo-dong and other areas. As for Buddhist relics, there is a seven-storey stone pagoda (Treasure No. 77) on Soyang Street, and a pair of banner-pole support pillars (Treasure No. 76) in Kūnhwa-dong. There are also a number of Buddhist monasteries in the area, including the Pongüi, Ch’ŏnun, Yongch’on, Myŏngbul, Soyang, Taewŏn and Pongdŏk temples. In addition, Ch’unch’on Hyanggyo (Confucian academy) in Kyo-dong has been designated Kangwŏn Province Tangible Cultural Asset No. 98. On Soyang Street, there is the Soyang Pavilion (Kangwŏn Province Cultural Property No. 1), and in Údo-dong, there is Choyang Pavilion.

With one of the highest ratios of students to population in Korea, Ch’unch’on is an important educational centre. Kangwon National University, Hallym University and Chunchon National University of Education are all located in the city, along with several smaller junior colleges. In addition to its role as an educational hub, the city draws large numbers of weekend visitors from Seoul. These visitors come by train or car to hike on nearby Mt. Odae or Mt. Samak, or to see the picturesque Kugok Waterfall. Special fishing docks have also been set up on many of Ch’unch’on’s reservoirs. In order to meet the demands of tourists and students, Ch’unch’on has a large number of restaurants. The area’s culinary specialty is makkuksu (buckwheat noodles) and takkalbi (chopped chicken fried in hot sauce).

Since the Han River, which flows through Ch’unch’on, is a major source of Seoul’s water supply, there has been little industrial development in the area in order to protect the water from pollutants. On the outskirts of the city, rice and dry field crops are cultivated. There are also a number of livestock farms which raise pigs, dairy cattle and chicken. However, agricultural land has been reduced recently as the city has expanded.

Ch’ungch’ŏng Province, North

Overview
Province located in the south-central part of the Korean Peninsula, bounded to the east by
Kangwŏn and North Kyŏngsang Provinces, to the west by South Ch'ungch'ŏng Province and Taegŏn Special City, to the south by North Chŏlla Province, and to the north by Kangwŏn and Kyŏnggi Provinces. North Ch'ungch'ŏng Province is the only landlocked province on the Korean Peninsula, and ranks second-smallest in area after Cheju. Occupying a strategic location near major transportation routes, this territory changed hands between several times during the Three Kingdoms Period, coming under the administration of Koguryŏ and then Shilla monarchies before being assimilated into the Koryŏ Kingdom in the tenth century.

Geography and Climate
With the exception of the extreme western section of the province, North Ch'ungch'ŏng contains relatively few lowlying areas, although numerous basins are found throughout upland regions in the east. The Sobaek Range in the southeast and the Ch'aryŏng Range in the northwest of the province form natural barriers with neighboring provinces, while terrain characterized by alternating plains and low hills in the west of the province facilitates transportation links with South Ch'ungch'ŏng Province. The former range contains several peaks with elevations greater than 1,000 meters, including the highest in the province, Mount Sobaek (1,440m), which straddles the boundary with North Kyŏngsang Province in the far northeast. A spur of the Sobaek Range in the center of the province divides the catchment areas of the River Kŭm to the southwest and the Han River to the north, forming a geographic boundary between the two principal economic regions of the province centered on Ch'ongju and Ch'ungju respectively. Forests account for approximately half of the province's total land area, and are home to a variety of unique species of flora and fauna. North Ch'ungch'ŏng Province experiences a typical continental climate, characterized by long, cold, dry winters and hot, humid, wet summers, while average temperatures exhibit seasonal variations of thirty degrees. Southern districts generally experience higher average temperatures and higher precipitation than northern districts, and suffer occasional flood damage due to the fact that over half of precipitation is concentrated during the summer months.

Agriculture and Industry
Although much of the province is mountainous, and cultivated land accounts for only one-fifth of the total land area, agriculture has traditionally played a dominant role in the local economy, however secondary and tertiary sectors have undergone significant growth during the past two decades. Approximately equal proportions of the total cultivated land area are devoted respectively to the cultivation of rice and grains, and rice is the dominant crop in lowland areas of the province. Principal grains and cereals include barley, wheat, millet, corn and buckwheat, while nut cultivation is concentrated around Ch'ongwŏn, Chewŏn and Tanyang. Improvements in transportation and growth in urban markets have led to the rapid development of horticultural activities, and the province is a major producer of apples and pears, in addition to garlic, ginseng, peppers and yellow tobacco. Recent years have also witnessed significant developments in livestock raising and dairy farming in certain parts of the province. As North Ch'ungch'ŏng Province is landlocked, fishing plays a comparatively minor role in the local economy, and activity is restricted to freshwater fishing in the province's rivers and lakes. Gold, iron ore, tungsten, molybdenum, talc, fluorite, limestone and coal are the most common minerals; limestone production is centered on Tanyang, while iron ore production is centered on Ch'ungju. Industrial development is concentrated on the Ch'ungju region in the north of the province and the Ch'ŏngju region in the south. The former is characterized by heavy industries producing fertilizers, talc, cement, carbide, lime and nitrolime, while the latter is home to a variety of light industrial enterprises producing textiles, machinery, electronic goods, leather, clothing, pharmacuticals, alcohol, tobacco, foodstuffs and plastics.

Tourism
North Ch'ungch'ŏng Province has a complex cultural legacy, having been administered by several rulers during its history, and is host to a wide variety of cultural events, of which
the annual North Ch'ungch'öng Arts Festival is the most prominent. Further tourist attractions include Mount Sobaek, Mount Wol'ak and Mount Songni National Parks (the latter including historic Pŏbchu Temple), the Eight Scenic Wonders of Tanyang and Suanbo Hot Springs.

General Information
Area: 7 438 square kilometers; population: 1 372 000 (1995 est.); provincial headquarters: Ch'ŏngju. Other major centers include Ch'un'gju and Chech'ŏn.

Ch'ungch'öng Province, South

Overview
Province located in the central west part of the Korean Peninsula, bounded to the east by North Ch'ungch'öng Province and Taejon Special City, to the west by the Yellow Sea, to the south by North Cholla Province and to the north by Kyŏnggi Province. Part of Mahan territory in ancient times, this region later became the cradle of the Paekche Kingdom (18BC-660AD), its capital located at Puyŏ and briefly at Ungjin (present-day Kongju). Following the fall of Paekche, this territory was annexed by the Shilla Kingdom, and came under the administration of the Later Paekche and Later Koguryo monarchies before being annexed by the Koryo Kingdom in 931AD.

Geography and Climate
South Ch'ungch'öng Province is comprised of three lowland regions aligned in a northeast-southwest direction, separated from each other by three upland regions in the south-east, center and west. The central part of the province is dominated by the Ch'aryŏng Range, which rises to 699m at Mount Kwangdŏk, however the higher elevations are found in the southeastern corner at the province, notably at Mount Taedun (878m), which straddles the border with North Cholla Province. Much of the province's population is concentrated on the plains between the central and southeastern highlands in the catchment area of the River Kum and around the major transport junctions of Ch'onan and Onyang in the north. The coastline is highly indented, particularly in the case of the expansive Taean Peninsula in the far west, and marked tidal variations are experienced. The province also includes 155 islands.

South Ch'ungch'öng Province experiences a generally warm climate, although continental influences on weather patterns are strong. There are few natural barriers to block the northwesterly winds prevalent in winter, and consequently temperatures during this season tend to be lower than those on the East Sea coast, while northern coastal areas generally experience high snowfall. Coastal areas tend to experience milder winters and cooler summers than mountainous inland regions, and most regions receive average annual precipitation of between 1 150 and 1 350mm. Occasional flooding occurs during the late summer typhoon season.

Agriculture and Industry
Although the past two decades have witnessed a growth in the secondary and tertiary sectors of the local economy, industrial development has been relatively slow. Agriculture continues to play a dominant role in the province, although there has been a gradual decline in the farming population in recent decades. Although rice is the principal crop, cultivation of grains, fruit and vegetables is also widespread; other agricultural activities include cultivation of tobacco, cotton, flax and sesame, and livestock raising. The province is comparatively well-endowed with forests, and forestry products include timber (mainly processed in Taejon), firewood, charcoal, compost material, medicinal herbs and p'yogo mushrooms. The province has a 993-kilometer coastline and contains 258 islands, and adjoining waters offer favorable conditions for a variety of fishing activities, however operations are curtailed during the winter months due to the effects of prevailing northwesterly winds during this season. Common fish varieties include croaker, pike, hair-tail and cod, and fish farming is relatively well-developed. The province's waters are also
home to oysters, clams and other shellfish, while seaweed production and salt manufacturing constitute other important elements of the coastal economy. South Ch'ungch'ŏng Province contains deposits of coal, tungsten, limestone, talc, silica and asbestos, and boasts the nation's largest gold mine at Ch'ŏn'gyang. Industrial development in the province is concentrated in the districts adjoining Taejŏn Special City and in the centers of Kongju, Nonsan, Chŏn'gan, Shint'angan, Changhang and Yongi, and major products include ferrous and non-ferrous metal goods, heavy equipment textiles, chemical products, tires, fertilizer, ceramics, clothing, leather, foodstuffs, beverages and tobacco.

Tourism
South Ch'ungch'ŏng Province contains numerous historical sites connected to the ancient Paekche Kingdom, concentrated in the vicinities of its former capitals at Puyŏ and Kongju. Other tourist attractions include Mount Kyeryong National Park, Taean Peninsula Maritime National Park, Mount Taedun and Mount Sudŏk Provincial Parks, Taechŏn Beach, hot springs at Puyŏ, Togo, Yusŏng and Onyang, the mountain fortress at Kongju, Independence Hall at Chŏn'gan, Onyang Folk Musŭm, and numerous temples.

General Information
Area: 8 368 square kilometers; population: 1 847 000; provincial headquarters: Taejŏn. Important cities include Chŏn'gan, Kongju and Onyang.

Ch'ungju

Situated in North Ch'ungju Province, Ch'ungju consists of the town of Chudŏk, and the townships of Kangû, Kŭmga, Noûn, Tongnyang, Sanch'ŏk, Salmi, Sangmo, Sot'ae, Shinni, Yangsŏng, Ŭmjŏng and Iryu. Recently expanded to include the area formerly known as Chungwŏn County, the city now covers an area of almost 997 sq.kms. Ch'ungju lies in a basin which is surrounded by the Ch'aryŏng Mountain Range in the northwest and the Sobaek Mountain Range in the southeast. The extensive Ch'ungju Lake lies in the southeast and the Namhan River extends from the lake to the northwest border with Kangwŏn Province.

Nearly half of the city area's arable land is used for rice cultivation. Rice growing is common in the areas along Yodo Stream and Tal Stream. Other crops grown include barley, beans, sesame and red pepper. In addition, the city is one of South Korea's leading producers of apples and tobacco. Minerals, including iron, talcum, gold, copper, tungsten, lime and fluor spar are mined and quarried commercially here. Talc from Salmi accounts for over eighty percent of Korea's total output. With its location along the Namhan River, the Ch'ungju area was historically a key commercial centre, but its importance waned after Korea acquired a modern transport system.

One of the most popular scenic areas is Choryŏng Valley, often called the Alps of North Ch'ungch'ŏng Province. Near the valley in Sangmo's Onch'on Village lie the Suanbo Hot Springs. This popular resort offers a number of recreational facilities, including a golf course and ski slopes. Other famous scenic attractions include nearby Songgye Valley, Mansu Valley and Suok Waterfall. In Sanch'ŏk's Myǒngsŏ Village, there is the Samt'an Resort, an area renowned for spectacular rock formations and the picturesque Chup'o Stream.

In 557, the Ch'ungju area became one of Shilla's sogyŏng (secondary capital). Shilla Buddhism flourished from this time and the area continued to be a Buddhist mecca during Koryŏ, as can be seen from the countless Buddhist artefacts throughout the city. In Sangmo's Mirik Village are the remains of a temple in a stone grotto. The temple, which was the subject of excavations in 1977, 1978 and 1982, dates from early Koryŏ. Outside the grotto are a number of artefacts, including a Koryŏ three-story pagoda, a five-story pagoda, a standing Buddha figure and a stone turtle which served as support for a stele. In
Sočae’s Oryang Village lies Ch’ŏngnyong Temple, a monastery of the Ch’ŏnt’ae Sect. Legend has it that the temple was founded during Koryŏ. Upon the death of National Master Pogak in this location in 1392, King T’aejo ordered a massive reconstruction of the monastery. The present temple stands to the north of the old temple site. Artefacts at the old site include a pagoda (National Treasure No. 197), a stele (Treasure No. 658) and a stone lantern with a lion motif (Treasure No. 656) commemorating National Master Pogak. In Chik-dong, lies Ch’ungju Fortress. This stone fortification was the scene of a successful battle against the Mongols in the middle of the thirteenth c.

Chosŏn sites include Nuam Sŏwŏn (private school) founded in 1695 in Kangmul’s Ch’angdong Village, Hagang Sŏwŏn built in 1786 in Kŭmsa’s Hadam village and Ch’unggunsan in Kŭmsa’s Osŏk village. The latter is a shrine commemorating Yi Yŏn’l, a scholar-official from the time of King Injo (r. 1623-1649). In Chudŏk’s Tŏngnyŏn village stands the picturesque Samnyŏnjŏng, a pavilion built around 1930 in honour of the Chosŏn scholar Yi Yŏn’l.

Ch’unhyang chŏn

Ch’unhyang ka

Ch’usŏk

Ch’wibari

Ch’wit’a

Chach’o (1327-1405)

Chach’o (styled Muhak) was an eminent fourteenth c. monk. Born into the Pak clan in Samgi (presently Samga Township in South Kyŏngsang Province’s Hapch’ŏn County), Chach’o entered the Buddhist monastic order in 1344 under the auspices of Soji. Residing at Pudo Hermitage, he studied Buddhism under National Master Hyemyong. In 1346, he had an awakening experience while reading the Suramgama sutra (Kor. Nungom kyŏng).

In 1353, Chach’o travelled to Yuan China. There he met the Indian monk, Dhyanabhadra (Chigong, ?-1363), who recognised his spiritual attainment. In the following year, Chach’o went to Faquan Temple where he met the famous Korean monk Naong (1320-1376), who was also in China at that time. Naong also recognised Chach’o as someone with great spiritual capacity. Chach’o later spent several years studying under Naong, who subsequently acknowledged Chacho’s awakening.

In 1356, Chach’o returned to Korea, as did Naong two years later. When they met in 1359, Naong gave Chach’o a staff as a symbolic endorsement of his former pupil as a spiritual heir. In 1371, Naong reconfirmed this recognition by bestowing upon Chach’o a robe and alms bowl. Five years later, Naong offered Chach’o the position of head monk at Hwaam Temple, but Chach’o was unyielding in his refusal, preferring to maintain the lifestyle of a recluse. Likewise, he refused attempts by King Kongyang (r. 1389-1392) to appoint him as royal preceptor (wangsa).

In 1392, Chach’o finally buckled under the pressure and accepted an appointment as royal preceptor to King T’aejo (1392-1398). Attempting to ward off the deepening ideological rift which threatened society, Chach’o stressed agreement between Confucianism and Buddhism. In his instructions to the king, he taught T’aejo that ren (Kor. in; benevolence), Confucianism’s basic virtue, and compassion, the Buddhist principle, are actually identical.
when seen in terms of function (yong). He also advised the king to watch over his subjects as a father watches over his children. As a practical measure, Chach’o successfully persuaded the king to grant a general amnesty, giving those who were incarcerated an opportunity to start a new life. In the following decade, Chach’o (as one of the most respected monks of his time) presided over the country’s key Buddhist functions. In his last years, he resided at the Yongmun and Hwaam Temples and Chinbul Hermitage before his death at Kŭmgang Hermitage in 1405.

To a large extent, Chach’o’s renown stems from his close relationship to Yi Sŏnggye (King T’aejo), the founder of Chosŏn. Chach’o is said to have interpreted a dream presaging Yi’s accession, and he was also influential in persuading the king to move the capital to Hanyang (present Seoul). Writings attributed to Chach’o include Pulcho chongp’a chi do, Muhak pigyŏl, In’gongi1m and Muhak taesa Ꮦro. The first two works are extant, but the Muhak pigyŏl is believed by some to be an apocryphal text. Chach’o’s most illustrious disciple was Kihwa (1376-1433), an important Buddhist thinker who also advocated reconciliation between Confucianism and Buddhism.

Chaebŏl

Chaeryŏng River

Beginning around Mt. Chinam (623m) in Hwanghae Province, the 129-km.-long Chaeryŏng River flows through the Chaeryŏng Plain before merging with the Taedong River. With Un’pa Stream, Sŏhŭng River and Sŏ River as tributaries, the river is able to maintain high water levels throughout the year. This water is utilised for irrigation on the Chaeryŏng Plain, the largest plain in Korea. Crops grown on the plain include wheat, bean, cotton and tobacco. According to historical record, rice from this fertile region was traditionally used as a local tribute to the king. About 38.0 kms. of the river is navigable, allowing vessels of up to 300 tons to transport ore from the Chaeryŏng Mine.

Chamsang

Chajang (590?-658)

Chajang, surnamed Kim, was an influential Buddhist monk of the Shilla dynasty. He was a native of Chinhan, and was the son of Murim, an official classified as Rank 3 of the True Bone class, who had held many positions in government service. At his birth Chajang was named Sŏnjongnang, and in his early years his father encouraged him to study and practise Buddhism. As a young man, he renounced his wife and family, donated his property to a monastery, and withdrew to a mountain retreat to live an ascetic life. Although repeatedly summoned to take office at court, he refused, and was eventually permitted to be ordained as a monk.

He then retired deep into the forests for a time, later returning to preach in villages and towns. In 636 he received royal permission to travel with ten of his disciples to Tang China. After arriving in China he is believed to have received a vision of Manjusri in Chingliang Mountain. He spent three years at Yunji Monastery on Zhongnan Mountain and then returned to the Tang capital where he received imperial favours. In 643 Queen Sŏndŏk requested Chajang’s repatriation. The emperor Taizong gave his consent and Chajang returned to Shilla bearing gifts. He was sent to Punhwang Monastery where he
was generously provided for. He continued to teach and earned the respect of both the court and the people as a spiritual leader. By royal order Chajang was appointed Great National Overseer (taegukt'ong), with the responsibility of regulating the practices of all monks and nuns, and he used this opportunity to propagate Buddhism in the capital and beyond. He was also influential in having the Chinese calendar and Chinese dress adopted by the Shilla court.

In his later years, he moved to Kangnung prefecture and founded the Suda Monastery, where he lived, and during his lifetime he established monasteries and stupas at ten different sites. He had many followers who willingly worked on these buildings, the most notable of which was the nine-storey stupa at Hwangnyong Monastery, which was believed to have supernatural powers in repelling enemies of the state. Chajang contributed significantly to the institutional development of Buddhism and the consolidation of Buddhist thought in the Shilla period. He also systematised the belief that Shilla was the land of the Buddha, a land supposedly chosen and blessed by former Buddhas.

Chang Myŏn (1899-1966)

Educator turned politician, Chang Myŏn (Dr John M. Chang) was Prime Minister in the Second Republic (1960-61) after the overthrow of President Rhee (1960) and up until his removal from office in the coup d'état of then general Park Chung-hee (1961).

Chang Myŏn was born in the port city of Inchŏn, and graduated from high school in 1917 in Suwon, south of Seoul. He then spent two years studying English in Seoul, until 1919, when he travelled to the U.S. and attended Manhattan College in New York, graduating in 1925. Back in Korea he lived in P'yŏngyang and became involved in the Catholic church there. He returned to Seoul in 1931, as principal of a boys' school and remained there until the Liberation in 1945.

After the war, the U.S. military government in Korea was looking for capable people to serve in government. In 1946, Chang was appointed to the Interim Legislative Assembly established by the U.S. military authorities to start the self-governing process in Korea. This body was composed of forty-five elected and forty-five appointed members. Chang was selected as a man who had been educated in America and who could make a positive contribution to the political process. The expectations were realised and he soon became a prominent member of the Assembly. This was emphasised when he was appointed to head the three man committee that appeared before the United Nations general assembly to address the problem of Korea. As a result, the United Nations later formed a temporary commission to observe and facilitate elections in Korea, which were held on 10 May 1948. The National Assembly which resulted and in which Chang was an elected member wrote the Constitution and made Rhee Syng-man the first president of the new Republic.

Rhee's administration saw Chang appointed to one of the most important positions, that of Ambassador to the United States. He served his country well and also received his Ph.D. from Fordham University during his tenure in Washington D.C. Shortly after the Korean War began (June 1950), Chang returned to Korea and by November 1951, was appointed Prime Minister by President Rhee, joining the displaced government in Pusan during the war years. However, Chang resigned in April 1952 when he perceived a real chance to be nominated as a presidential candidate in the forthcoming elections.

Although not nominated in 1952 he did appear as an opposition party vice-presidential candidate against President Rhee and his candidate for vice-president, Yi Ki-bung. Rhee won the presidential election but Chang beat Yi in the vice presidential race. Rhee, feeling betrayed by Chang's decision to challenge his former sponsor, moved to limit Chang's power. The ill-feeling materialised publicly a few years later when, on 28 September 1956, a Rhee supporter tried to assassinate Chang, but succeeded only in superficially wounding
him. Chang was defeated by a Rhee and Yi ticket in 1960, after some very suspect election results. Soon afterwards, countrywide student demonstrations against the elections forced Rhee from office, and an interim government was formed. Yun Posŏn became president of the Second Republic from 15 August 1960 and Chang was elected Prime Minister. In this new government the power of the president had been reduced almost to ceremonial terms and the Prime Minister held most of the power and responsibility. Chang’s administration was plagued by factionalism between New Democrats (Chang) and Old Democrats (Rhee), indecision and weak leadership, in stark contrast to the twelve years of Rhee’s autocratic rule. Between September 1960 and May 1961 Chang modified his cabinet three times still without significant gains in effectiveness or popularity. He held his last Cabinet meeting on 18 May 1961, formally resigning to hand over government to Lt. General Chang Toyŏng, the head of the Military Revolution Committee (Kuns'a Hyŏngmyŏng Wiwŏnhoe), and acknowledging his moral and political responsibility for the situation which had led to the military revolution. Chang was detained and banned from all political activity, spending most of the remainder of his life in seclusion in his home.

Chang’s health deteriorated from a chronic liver complaint and he died in June 1966, at his home in Myŏngnyun-dong, Seoul. He was buried at a Catholic cemetery in P’och’ŏn-gun, some fifty kilometres north of Seoul after a large funeral service at Seoul Stadium followed by a procession through the streets of the capital, attended by thousands of mourners.

Chang Myŏn left a legacy of integrity in politics. He was respected for his contribution to democracy and his service to Korea. Under his counsel plans were initiated for the investigation and prosecution of illicitly accumulated wealth of the previous regime, as well as long-term economic development plans. But it was the military regime which had ejected Chang that implemented these two measures.

Chang Pogo (?-846)

Adventurer and trade baron, Chang Pogo (Kungp’a) was the prominent force in Korean maritime dominance in East Asian commerce from his combination garrison and trading base on Ch’ŏnghae, now Wan Island (on the extreme south-west of the peninsula), to Chinese and Japanese ports. The son of a Wan Island fisherman, Chang went to Tang in his youth, and there acquired military skills. His prowess advanced him to the rank of captain during his military service in Xuzhou in the lower Huai River region.

During this period, many Koreans living along the East coast of China were conducting trade with regions as far-flung as the Middle-East and Japan. The trade routes across the Yellow Sea were bedevilled with pirates, compounding the hard economic times in both Tang and Shilla. Pirates not only kidnapped the Shilla coastal people to sell as slaves in China, but also targeted the trade vessels crossing the Yellow Sea.

In 828, Chang returned to Shilla and appealed to King Hŭngdŏk (r.826-36) to place Ch’ŏnghae under arms in order to control the Chinese pirates. This was sanctioned and the Ch’ŏnghae-jin (garrison and trading base) was established there. The king bestowed on Chang the special title, Ambassador of Ch’ŏnghae-jin, which goes to confirm that Chang ran his independent unit of 10 000 men more like a personal force than a national one. The western seaboard (Yellow Sea) was now free of pirate raids and Chang’s force kept open the sea lanes.

The trading ships were under the direct control of Chang and he soon established himself as the conduit for international trade between Tang, Shilla and Japan. Not satisfied with economic power per se Chang tried to move into the political arena by sending delegations to both Tang and Japan. His name and power were celebrated, for the eminent Japanese monk Ennin asked him to safeguard his return journey to his homeland. Chang built several temples and supported the monks who worshipped in them. Furthermore, he
marketed a large quantity of rice, grown on his extensive lands.

Since his power was to a degree independent of the Shilla government in Kwangju (South Cholla Province), Chang held a unique role in court politics of the time. When King Ujing, King Shinmu (r.839), was displaced in a power struggle for the throne, he fled to Chang on Wan Island. A short while later, with Chang’s backing, Kim was able to attack Kwangju and recover the throne. From this, Chang continued his bid for power in the Shilla court, an extraordinary feat for someone born a commoner. When he tried to marry his daughter to Shinmu’s son, King Munsŏng (r. 839-857), he caught the wrath of the Shilla aristocracy. The marriage alliance had probably been cast during the king’s exile, and on his untimely death in 839, Chang aimed to force King Munsŏng himself to honour the bargain made with his father. This proved to be Chang’s downfall and he is said to have died by the hand of an assassin in 846, although there is thought that his death may have occurred a few years earlier.

In 851, Ch’ŏnghae-jin was shut down, thus ending the maritime ‘kingdom’ of Chang Pogo, and with it Shilla’s brief dominanance of the East Asia sea lanes. The following is the brief obitual record of Chang in the Samguk Sagis (History of the Three Kingdoms):

‘Chang Pogo (or Kungbok or Kungp’a) was a man of Shilla whose clan site and ancestors were unknown. He fought a good battle. He went to Tang, where he became Wu Ning-chun hsiao-chang, and he was peerless in horsemanship and wielding a spear.’

Chang Tŏksu (1895-1947)

Chang Tŏksu was an independence activist and a politician of colonial Korea. His pen name was Sŏlsan and he was born in Chaeryŏng of Hwanghae Province. His close associates included Kim Sŏngsu (1891-1955) and Song Chini (1889-1945). Chang was born into a poor farming family and when he was ten his father died so he lived with his mother and struggled to obtain an education. However, Chang was persistent and eventually travelled to Japan where he graduated from Waseda College with a degree in political economy. Although his teacher advised him to take a position in the bureaucracy of the Japanese colonial government, Chang rejected this, holding that he did not struggle to acquire an education merely to serve a foreign master. Thus he fled to Shanghai and became an integral part of the movement which aimed at regaining Korea’s lost independence.

Around the time of the March First Independence movement in 1919, Chang returned to Korea but was apprehended by the Japanese and sent to live on Haăi Island of the coast of Cholla Province. After this in 1920 he founded the Tonga ilbo newspaper and additionally served as the first editor-in-chief of the paper. In 1923 Chang travelled to the United States where he attended Columbia University and subsequently graduated with a doctorate in economics. He returned to Korea where he assumed a position as instructor at Posŏng College. In 1936 he returned to the Tonga ilbo as a vice-president, and when the Japanese closed the paper he quietly waited until liberation.

After liberation he, along with Song Chini and Kim Pyŏngno (1887-1964) founded the Korean Democratic Party (Han’guk Minju Tang) and he served in various capacities of this standard bearer for the conservative faction in post-liberation Korea. However, in 1947 he was assassinated for his political views.

Chang Yu (1587-1638)

Chang Yu was a scholar-official of mid Chosŏn. His family’s ancestral home is in Tŏksu, his courtesy name was Chiguk and his pen names included Kyegok and Mukso. His father, Chang Unik was a minister (p’ansŏ) in the Chosŏn government, and his daughter became the queen of King Hyojong (1649-1659).
After passing the civil service examination, Chang entered Choson officialdom. However, in 1612 he was implicated in slanderous charge against Kim Chikchae and dismissed from his post. After the dethronement of Prince Kwanghae (r. 1608-1623) and King Injo’s (r. 1623-1649) accession he was reinstated and held various posts on the Board of Rites (Yejo), Board of Personnel (Ijo) and in the Office of the Inspector-General (Sahŏnu). In 1624 when the Yi Kwal (1587-1624) Rebellion broke out he personally attended to the King and princess and thus was enfeoffed as Duke of Shinp'ung in the following year. He also served as Second Minister (ch'amp'’an) of the Board of Personnel and as Inspector General (taesahŏn) among other positions. In 1627 with the outbreak of the Manchu Invasion he accompanied the king to Kanghwa Island. The years after the first Manchu Invasion and the second (1636) proved to be turbulent not only for the nation but also in court politics. Chang was demoted in 1629 to Magistrate (moksa) of Naju, but in the next year was reinstated and held several high offices simultaneously including Minister (p’ansŏ) of the Board of Personnel and the Board of Rites, and also Inspector General. By 1636 Chang had been appointed as Third State Councillor (uiuijong), but his mother died shortly thereafter and he left office to handle funeral matters. In only a matter of months he himself succumbed to illness and died in 1638.

Early in his life Chang came in contact with the so-called yang-ming scholarship, based on the teachings of the Ming scholar Wang Yangming, that moved away from the narrow confines of neo-Confucian ideology. The yang-ming ideology criticised neo-Confucianism as being burdened with a fall into moral obligations without a true heart, and thus drawing one into the pursuit of false teachings. Conversely, yang-ming ideology centred on the unity of knowledge and action. By advocating this philosophy, Chang was not always at the centre of Choson scholarship, but nonetheless was respected as a moral and astute scholar. He is known as one of the Four Great Men (sadaega) in Choson ideology along with Yi Ik (1681-1763), Yi Chonggu (1564-1635) and Shin Hum (1566-1628). There are additionally extant literary works of Chang including Kyegok manp’il (Jottings of Kyegok) and Kyegok chip (Collected Works of Kyegok).

Changhŏn, Crown Prince (Crown Prince Sado)

Changhŭng County

Situated in South Cholla Province, Changhŭng County is comprised of the towns of Kwansan, Taedŏk and Changhŭng, and the townships of Pusan, Annyang, Yongsan, Yuch’i, Changdong, Changp’yŏng and Hoejin. The county covers an area of 613.99 square kilometres and as of 1989, had a population of 77 745. Mt. Cheam (807m) and Mt. Saja (666m) rise in the eastern part of the county; Kuksa Peak (613m) and Mt. Puyong (609m) are to the west; Mt. Chŏn’gwan (723m) is in the south; Mt. Pongmi (506m) is in the north and Mt. Yongdu (551m) stands in the centre.

The county is surrounded by Yŏngam County and Hwasun County to the north; Kangjin County to the west; Posŏng County to the east and a seaboard to the south. Due to the warm coastal currents, the weather is mild, with an average yearly temperature of 0.11°C and an annual rainfall of 1 552 mm. In a severe monsoon season, however, the annual rainfall can exceed 2 000mm, often causing considerable damage to the area’s crops.

Changhŭng County provides 14 909 hectares of arable land, of which about two-thirds is used for rice cultivation and one-third for dry-field crops. Rice is grown mainly in the fertile plains along the county’s rivers and streams, and on reclaimed land along the coast. Speciality crops include tobacco, mushrooms, ginseng, cotton and rape. Along the coast are shellfish farms laver (kim) is gathered off-shore. Changhŭng laver is particularly well-known for its delicious flavour. Commercial fishing boats bring in catches of anchovy, gizzard shad and grey mullet.
With numerous mountains and a picturesque coastline, the county offers visitors many scenic attractions. Sumup’o Beach in Annyang is a popular vacation spot in the summer, and is easily accessible via Highway 18. For those who prefer mountains, Mt. Ch’ŏn’wan (723 m) in the south offers a number of hiking holidays. One popular trail begins in Kwansan and leads past the small village of Tangdong to the summit. On the way down, the trail goes past Ch’ŏn’gwan Temple to Yongjŏn Village. Hikers allow about four hours to complete the 11.8-kilometre walk.

Ch’ŏn’gwan Temple, initially built by the monk Yŏng’chong, is one of the most famous monasteries in the area. On the temple grounds, one finds an old three-storey pagoda, a five-storey pagoda and a stone lantern. At the other end of the county to the southwest of Mt. Kaji (510m) stands Porim Temple. Artefacts found here include a three-storey pagoda, a stone lamp, a seated Vairocana figure, a pair of stupas, a pagoda and stele commemorating Sŏn Master Pojo and a number of old buildings.

In addition to Buddhist sites, there are some Confucian schools in the county. Changhŭng Hyanggyo, established in 1398, was the first educational institution in the region. Along the road from Changhŭng Hyanggyo is Yeyang Sŏwŏn, which was built in honour of Shin Cham in 1610. In Changhŭng’s Wŏndo Village is Yŏn’gok Sŏwŏn. Established in 1698 in honour of the brothers Min Chŏngjung and Min Yujung, the complex houses a piece of calligraphy and wooden printing blocks that Min Chŏngchung received as a gift while in China in 1669. In Yuch’i Township’s Wŏlch’ŏn Village can be seen Kangsŏng Sŏwŏn, which was founded in 1643 in memory of Mun Ikkŏm. Rites are performed at the school every year on the 9th day of the 9th lunar month.

The county’s cultural heritage is being preserved by a number of festivals and celebrations held on a regular basis. One of the most important local events is the Porim Cultural Festival, which takes place on 9 May each year. The festival includes a lantern parade, fireworks, a traditional poetry exhibition, a kugak (traditional music) contest and various traditional contests.

Changsŏgak [Libraries]

Changsŏng County

Situated in the northern part of South Cholla Province, Changsŏng County includes the town of Changsŏng and the townships of Nam, Tonghwa, Pugi, Pugil, Pukha, Samgye, Samsŏ, Sŏsam, Chinwŏn and Hwangnyong. The county covers a total area of 513.55 square kilometres and as of 1989, had a population of 71,169. High mountains rise up on the county’s western, northern and eastern borders. In the northern part of the county lies Changsŏng Lake, an artificial reservoir created by the 36-metre-high and 603-metre-long Changsŏng Dam.

Most of the county’s residents are employed in agriculture. With numerous rivers and streams as well as several large reservoirs, the area has an ample supply of water for irrigation. Of the county’s 14 hectares or thereabouts of cultivated land, about 10 are used for rice cultivation and about 4 for dry field crops. Strawberries and cut-flowers are also grown commercially. The region is famous for its dried persimmon. With numerous sericulture operations in the mountainous areas, Changsŏng County enjoys the distinction of being South Cholla Province’s leading producer of silk. Approximately 90 per cent of local silk is exported. With an abundance of mulberry trees and clean water, the area has been a longstanding manufacturer of hanji, and this traditional paper is still produced in small cottage industries in the area. Also, there are several quarries in the area. In
particular, limestone is excavated by the Kusan Mine in Yongch’ŏn Village, the Yut’ang Mine in Yut’ang Village and the Tŏkchin Mine in Tŏkchin Village. The limestone found here is locally-processed to make cement. As well as processed silk, the area produces processed silk, gelatine and alcohol.

The county’s tourism is centred around Mt. Naejang National Park in the north. Here stands Mt. Paegam (730m), which is famous for its spectacular views and its numerous hiking trails. At the southern base of the mountain lies Paegyang Temple, founded by Yŏhwan in 632 (See Paegyang Temple). Mt. Paegam is also home to the Kukki Festival. During the festival, a rite is performed to the spirits residing in nature in order to ensure the peace and prosperity of the nation and people. Since the festival was revived in 1983, it has been held each year on 1 November.

There are several Confucian schools in the area, including Changsŏng Hyanggyo just east of the Honam Expressway in Changsŏng, Pongam Sŏwŏn just west of the Honam Expressway in Changsŏng, P’iram Sŏwŏn in Hwangnyong, Chungnim Sŏwŏn and Songgye Sŏwŏn in Pugi. First constructed in 1590, P’iram Sŏwŏn houses the memorial tablets of Kim Inhu (1510-1560), an official of the Office of Special Counsellors. A collection of various old manuscripts (Treasure No. 587), more than 60 books and some wooden blocks for printing are housed in Changp’an’gak, an old building just outside the northeast gate.

Changsu County

Situated in the eastern part of North Chŏlla Province, Changsu County consists of the town of Changsu and the townships of Kyenam, Changgye, Kyebuk, Pŏnam, Sansŏ and Ch’ŏnch’ŏn. The county is surrounded by Muju County to the north, Hamyang and Kŏch’ang to the east, Ch’inan and Imshil to the west and northwest and Namwon to the south. Covering a total area of 530.56 square kilometres, the county’s population was 37,123 in 1989. With the Sobaek Mountain Range running through the eastern part and the Noryŏng Mountain Range in the west, the county is made up of rugged terrain. The area has mild summers and an annual rainfall of 1,300mm. With its high elevation, the county receives heavy snow falls during the winter months.

Most of the region consists of steep slopes and dense forests. As a result, only 16 per cent is arable land. Although some rice is grown, most of the local agriculture is devoted to barley, tobacco, mushrooms, medicinal herbs, ginseng, alpine vegetables and persimmon. As for industry, Changsu is famous for its stone cookware made of pagodite.

The area has a number of scenic attractions. Mt. Changan (1,237m), located near the county’s eastern border, is frequented by tourists throughout the year who come to see its interesting rock formations, lush forests, waterfalls and clear streams. Here one finds the picturesque Tŏksan Valley and Yongso (Dragon Pond), a deep pool of water along the stream that winds through the valley. In order to preserve the area’s natural beauty, the mountain was designated a regional park in 1986. Other scenic areas in the county include T’ook-dong Valley in Mt. Togyu National Park; Piak Waterfall in Changs’u’s Nogok village, and Ponghwadae (Phoenix Heights), in Ch’ŏnch’ŏn’s Yŏn’p’yŏng village. Ponghwadae is a series of spectacular cliffs that run along Chôn Stream.

In addition to natural scenery, the area contains a number of important historical sites. Confucian schools found here include Changggye Sŏwŏn established in 1789 in Changs’u’s Sŏnch’ang village, Apkye Sŏwŏn in Sansŏ’s Haksŏn village and Changsu Hyanggyo which was founded in 1407 and moved to its present location in 1686.

The area’s traditions are upheld by festivals and rituals held throughout the year. On the 9th day of the 9th lunar month, the Non’gae Festival takes place in commemoration of
Non'gæ, a female entertainer who was born in this county and who jumped to her death from a cliff-top into a river, with her arms locked around a Japanese admiral. Since the establishment of Ëiam Temple in 1954, local residents have also conducted a large-scale memorial service on 7 July, the day Non'gæ died.

Changsu Mountain

Situated in Chaeryŏng County of Hwanghae Province, Mt. Changsu forms part of the Myŏrak Mountain Range. Pojŏk Peak, at 747 metres the mountain’s highest point, is connected with the subsidiary Pojang and Kwan Peak. With interesting rock formations, deep gorges and picturesque waterfalls, the mountain is sometimes referred to as ‘the Diamond Mountains of Hwanghae Province.’ In particular, the gorge on the mountain’s west side is famous for its spectacular scenery. Consisting of twelve bends, this granite gorge is lined with numerous, oddly-shaped boulders and pinnacles of rock. At the entrance to the gorge, steps have been carved out of the granite leading up to Hyŏn (Suspended) Hermitage, which was founded by Master Iam. To the west of the hermitage lie Shimp’ok and Yaksu (Medicinal Water) Waterfall. Made up of spring water from the Yaksu Cave, water from the 10-metre high Yaksu Waterfall is famous for its restorative powers. In addition to Hyŏn Hermitage, the famous Myŏun Temple is located on the mountain. The temple, destroyed during the Tonghak Uprising (1894), has since been rebuilt. Due to the large number of pheasant that lived in the area, the mountain used to be called Mt. Chiak (Pheasant Peak). During the Hideyoshi Invasions (1592-1598), many refugees survived by fleeing to the area; hence, the mountain’s name was changed to Mt. Changsu (Long Life).

Chapcho kisöllyu kisa saegın

(Index to Categories of Miscellaneous Writings, memoirs and Collected Essays)

Chapcho kisöllyu kisa saegın is an index of nearly six-thousand sets of collected works compiled by Yun Namhan and published by the Academy of Korean Studies in 1982.

The work’s two-thousand four hundred and eighteen pages contain about one million items classified by author, title of work, period and subject, thus making it indispensable for research in the category of munjip (collected works) in Korean literature.

Chaun Island

Situated 41.3 kilometres northwest of Mokp’o, Chaun Island is part of Chaun Township in South Ch’olla Province’s Shinan County. The island has an area of 52.02 sq.kms. and as shown by 1985 statistics, had a population of 7 123. Chaun has a relatively mild climate, due to its southern location, with January temperatures averaging 0.8c. and August 26c; an annual rainfall of 1 320mm and only a light snowfall. As a partially submerged ridge of the Noryŏng Mountain Range, the island consists of hilly terrain with plains in the south, where the shallow tidal flats have been reclaimed.

About 34.0 per cent of the island area is arable land. Of this, about 9.0sq. kms. grows rice and an equal amount for the cultivation of dry-field crops such as barley, garlic, bean and peanut. Local marine products include eel, shrimp, octopus, oyster, clam, seaweed and sea-salt. In addition, high quality silica is quarried.

There are four primary schools and one junior high school on Chaun Island. Two passenger ferries run daily between the island and Mokp’o.

During Koryŏ the island was used as a naval base. Remnants of stone fortifications can be
seen on Mt. Tubong (364m). During Chosŏn, Cha’ūn was used to breed horses and during the Japanese occupation it served as a naval base.

Cultural sites include Pongnyong and Tomyŏng temples, both located at the foot of Mt. Tubong.

Che Ch’ŏnsa

Chech’ŏn

Located in North Ch’ungch’ŏng Province, Chech’ŏn city incorporates the town of Pongyang, and the townships of Kūmsŏng, Tŏksan, Paegun, Songhak, Susan, Ch’ŏngp’ung and Hansu. With its boundaries recently extended to include the area formerly known as Chewŏn County, the city now covers an area of 867 sq. kms. The terrain of Chech’ŏn is hilly to mountainous, with Munsu Peak (1 162m) rising in the southeast, Mt. Kūmsu (1 016m) in the east and Mt. Paegun (1 087m) in the northwest. The extensive Ch’ungju Lake is in the city’s central area.

Of the city’s arable land, about one-third is used for rice cultivation and the remainder for dry-field crops such as bean, barley, millet, hot pepper and garlic. Tobacco and medicinal herbs are also cultivated. Mineral resources include tin, gold, silver, copper, lead, lime, silica and molybdenum and fluorspar. Cement and silk production also make significant contributions to the local economy.

With part of Mt. Wŏrak National Park in the south (See Wŏrak Mountain) and the scenic Ch’ungju Lake, the city offers a large number of scenic attractions. In Susan’s Sangch’ŏn Village is Paegun Valley’s Yongdam Waterfall, with its thirty-metre-high, triple cascade of water. Other popular attractions include the winding Nūng River Valley on the southern slopes of Mt. Kūmsu in Susan, the Tohwa Village area in Ch’ŏngp’ung, and Chŏmnul Cave in Songhak’s P’ojŏn Village. Just north of the city centre lies Ùirim Pond. In picturesque scenery, the man-made pond is said to have been built during the reign of Shilla’s King Chinhŭng (r. 540-576). Two pavilions, Yonghojong (built 1807) and Kyŏnghoru (built 1948), stand next to the pond.

When the Ch’ungju Dam and Ch’ungju Lake was formed, many artefacts were moved to the safety of the Ch’ŏngp’ung Cultural Assets Area or to local museums. There are a number of old Buddhist temples in the city, such as Muam Temple southwest of Mt. Chaksŏng (820m) in Kūmsŏng; Paengnyŏn Temple on Mt. Kamak (886m) in Pongyang; and Tŏkchu Temple and Shinnŏk Temple in Mt. Wŏrak National Park. Confucian sites in the area include Ch’ŏngp’ung Hyanggyo (county public school) and Chech’ŏn Hyanggyo. The former was established during the reign of King Ch’ungsuk (r. 1313-1330, 1332-1339) and was moved to its present location east of Ch’ŏngp’ung’s Mt. Pibong (531m) in 1779. The latter was built by Kim Sujŏn is 1389 and was moved to its present location in Kyodong in 1590.

Modern educational institutions include Semyŏng Taehakkyo in Shinwŏl-dong.

Cheju

Situated on the northern coast of Cheju Island, Cheju City serves as the main port of entry for most of the island’s visitors. Numerous streams run down from Mt. Halla (1 950 metres), which marks the city’s southern boundary, through the city into the sea. The area is characterised by mild weather and frequent rainfall.
According to legend, in ancient times three demigods named Ko Úlla, Yang Úllu and Pu Úlla sprang out of three holes in the ground at the site of present-day Cheju City. They then met three princesses from the kingdom of Pyōngnang who gave them cows, horses and seeds and taught them how to farm. The demigods and women got married and their descendants became the Ko, Yang and Pu clans. The three holes (Historical Site No. 134) associated with the legend can be seen in Ido-dong. Early prehistoric artefacts discovered between Cheju City and Hallim indicate that this area is indeed one of the earliest sites of human habitation on the island.

Agriculture, tourism and fishing are mainstays of the local economy. The area grows a number of crops, including sweet potatoes, barley and mandarin oranges. In order to protect the island’s abundant natural resources, strict limits have been put on industrial development. Even so, there are some factories producing such items as textiles, leather goods, wood products and local products for sale in the island’s booming tourism industry.

There are a number of tourist sites in the city. Approximately 2.5 kilometres from the central city area lies Moksuk Garden. Here, strangely-formed driftwood and weathered basalt stand in unique arrangements. Yongdu (Dragon Head) Rock is located on the coast in Yongam-dong. This ten-metre high rock formation resembles a dragon emerging from the sea. Women divers (haenyō) can often be seen working in this area.

There are also several centres for the study of Cheju history. In particular, Cheju Folklore and Natural History Museum, opened in 1984, consists of a Natural History room, two Folk History rooms, a special exhibition hall and an outdoor exhibition ground. Items on display demonstrate the unique customs and religion of the island.

During the Chosŏn period, there were a number of educational institutions in the area. The Cheju Hyanggyo (Confucian school) was founded in 1392 in modern-day Yongdam-dong. The Kyullim Sŏwŏn (private school), founded by Ch’oe Chinnam in 1665, was another well-known school. In 1534, the magistrate Shim Yŏnkwŏn founded the Hyang Haktang (school) along with several other schools. Two centuries later in 1736, Kim Chŏng founded a number of sŏdang, including the Samch’ŏn Sŏdang. As the first modern schools on the island, the Cheju Public Common School and Ulishin School were founded as an elementary and middle school respectively. In modern times, Cheju National University in Ara-dong and Cheju National University of Education in Hwabok-dong serve the needs of higher education for people living on or near the island.

**Cheju Folklore and Natural History Museum**

Located in Cheju City, the Cheju Folklore and Natural History Museum (Chejudo Minsok Chayŏnsa Pangmulgwan) preserves, exhibits and studies the cultural heritage and folklore of Cheju Island. Opened in 1984, the museum covers over 39 000 sq. metres. The inner display area (2 205 sq. m.) consists of a natural history room, two folk art rooms and a special exhibition hall. There is also an outdoor exhibition area. Items on display demonstrate the unique folk customs, religious practices and the natural wonders of Cheju Island.

**Cheju Folk Museum**

The Cheju Folk Museum (Cheju Minsok Pangmulgwan) is situated in the city of Cheju on Cheju Island. Founded in June 1964, the museum displays over 3 000 pieces, including clothing, articles related to food and liquor, agricultural, fishing, woodwork and stonework implements, weapons, toys, musical instruments and various ritual articles used in wedding ceremonies and Buddhist and Confucian rites. A research institute known as the Cheju Minsok Yŏn’gusŏ has been established in connection with the museum.
Cheju National University

Cheju National University (Cheju Taehakkyo) is located in the city of Cheju on Cheju Island. Its beginnings are found in the Cheju Taehagwon, an institute established in 1951 with the lecture hall of Cheju Hyanggyo (county public school) as its classroom. Within a year, it became Cheju Provincial Junior College (Cheju Ch’ogüp Taehak) with four departments: Korean Language and Literature, English Language and Literature, Law and Animal Science.

In 1955, the college was upgraded to a four-year college, and in March 1962 it became Cheju National College with two divisions: Law and Science and Agriculture. The latter division was transferred to Sogwip’o in 1964. In 1971, the Division of Fisheries was added. In order to allow for the school’s expanding academic program, construction of a new campus began in 1977. The Graduate School and the Graduate School of Education opened in 1979.

In 1982, the college became Cheju National University, with five colleges, thirty-nine departments, and two graduate schools. Dr. Pyong-Hyo Hyun was its first president. Three years later, the College of Science and Technology opened for enrolments. In March 1988, the College of Social Sciences was reformed as the College of Law and Political Science and the College of Economics and Commerce. This was followed by reorganisation of the College of Science and Technology into the College of Natural Sciences and College of Engineering.

In the 1990s, the university continued its expansion, and academic exchange programs were commenced with a number of foreign universities -- Purdue; Nebraska-Lincoln; Ryukyus; Bonn and Tubingen. As of 1996, Cheju University consisted of eight colleges, four graduate schools and sixteen research institutes, including the Tamla Culture Research Institute.

University publications include the Chedae shinmun (newspaper) in Korean and The Islander in English.

Cheju pangŏn yŏn’gu (A Study of the Cheju Dialect)

_Cheju pang’ŏn yŏn’gu_ is a collection of fifteen studies by Hyŏn P’yŏnghyo on the dialect of Cheju Island. The work includes six articles on morphology, three on vocabulary, four on phonology, and a general introduction of the distinctive dialect of Cheju Island. It was published by both T’aeahaksa and Iu Ch’ulp’ansa in 1985.

Cheju Province

Overview

Southernmost province in Korea, consisting of the main island of Cheju-do and approximately fifty small islands (including U-do, Sangch’uja-do and Hach’uja-do) located in the East China Sea approximately 75 kilometers south of the mainland. Cheju is the nation’s smallest and least populous province. Settled since prehistoric times and until 1211 AD known as Tamna, this territory served as a vassal state to the Paekche and Shilla Kingdoms before becoming incorporated into the Koryŏ Kingdom during the twelfth century. Conquered by the Mongols in the late thirteenth century, the island also experienced periods of rule by the Chinese Yuan administration, and its tradition of horse-breeding and characteristic stone walls date from this period. The island formed part of South Cholla Province between 1864 and liberation from Japanese colonial rule at the end of the Second World War, formally achieving provincial status in its own right in 1946.

Geography and Climate
Cheju Island was formed in five stages by volcanic activity during the late third and fourth Pleistocene Eras, and its landscape is dominated by the cone of the dormant Mount Halla (1 950m) at the center of the island, the highest peak in South Korea. Basalt rock dating from its last eruption in 1007 AD covers 90% of the island's surface, which contains numerous caves formed from cracks in solidifying lava. Most of the island's population is concentrated in coastal districts, largely due to the relatively plentiful supply of artesian water in these areas and the absence of significant water sources in the hinterland. Coastal districts of Cheju Island enjoy the mildest climate of any region in Korea, however the shielding effect of Mount Halla creates notable differences in seasonal temperature and precipitation levels between northern and southern parts of the island, and conditions also vary markedly according to altitude. Average winter and summer temperatures (6°C, 26.9°C) are approximately 1°C higher and annual average precipitation (1688mm) is approximately 250mm higher at Sŏgwip'o on the southern coast than at Cheju City in the north, and the former center lies within the warmest and wettest region of Korea. Climatic conditions on the island are highly favourable for the cultivation of a variety of crops, and land use patterns are relatively clearly delineated according to altitude. While cereal growing is predominant on the relatively flat lower slopes (below 200m), the upper slopes (200-600m) are largely devoted to pastureland. Forested areas are found at higher elevations (600-1 700m), while the steeply-sloping zone around the peak of Mount Halla is largely devoid of vegetation, except for occasional shrubs.

Agriculture and Industry

The provincial economy has traditionally been largely dependent upon agriculture, however tourism development during the past three decades has led to rapid growth in the tertiary sector. A decline in the cereal and livestock farming has paralleled steady growth in the cultivation of cash crops, especially mandarin oranges, due to favorable climatic conditions, government subsidies and improvements in facilities, farming techniques and transportation links. Extensive livestock farming is practiced on the mid-level slopes of Mount Halla, although the traditional Korean beef cattle and Cheju horses have been replaced by beef and dairy cattle, pigs and chickens. Forested areas account for approximately half of the total land area of the island, and forest products include p'yogo mushrooms, timber, manure and wild edible greens. A branch of the warm Kuroshio Current divides into the weak Yellow Sea Current and the stronger East Korean Current just south of Cheju Island, and the effects of these currents and the existence of a relatively high continental shelf combine to create bountiful fishing grounds in adjacent waters. Common varieties include hairtail, red snapper and mackerel, while seaweed production also plays an important part in the local marine economy. Its land formations dating from the relatively recent late third and fourth Pleistocene Eras, Cheju Island contains no local mining industry. General industrial development is severely limited by regulations protecting its scenic environment, although food processing plants are found in coastal centers.

Tourism

Cheju Island is one of Korea's most famous tourist destinations, and has enjoyed particular popularity among honeymooners during the postwar era. The central part of the island is occupied by Mount Halla National Park, which includes several hiking trails to the edge of the volcanic crater at the summit containing Paengnoktam Lake. Other attractions include the annual Halla Cultural Festival, the Sunrise Peak at Sŏngsan, Sŏngap Folk Village, diverse flora and medieval ruins on the island of Ko-do, the female divers (for shellfish, seaweeds, pearls, etc) known as haenyo, Chŏngbang and Ch'ŏnjiyŏn Falls at Sŏgwip'o, Manjang Caves (measuring almost seven kilometers and the longest of their kind in the world) and Chungmun beach resort.

General Information

Area: 1 827 square kilometers; population: 519 000 (1995 est.); provincial headquarters:
Cheju. The only other major center is Sŏgwip'o.

Chemulp’o Choyak (see Shufeldt Treaty)

Chesung pangryak

The Chesung pangryak, authored by Kim Chongsŏ (1390-1453) in the early Chosŏn dynasty, is a compilation of the strategies used by the dynasty to defend itself against the Nüchen Tartars living along its boundaries.

The most important national policy of the Chosŏn dynasty was the reclamation of the remote northern regions. By subjugating the Nüchen Tartars, the kingdom intended to expand its borders, and to achieve this it established the Yukchin (Six Garrisons).

Some villages of the Nüchen Tartars living in Manchuria established diplomatic relations with Korea, but others encroached upon the northern parts of the kingdom and plundered Korean villages. It was for the campaigns against these incursions that the dynasty, in its early years, compiled the original book of military strategies.

Later, in the reign of King Sŏnjo in 1588, the book was properly edited and supplemented by Yi Il (1538-1601), the military commander in North Hamgyŏng province. It came out as a two-volume work in one fascicle. The supplement is the Yŏlchín pangŏ and is larger than the original Chesung pangryak itself. In the Yŏlchín pangŏ each garrison is described in detail as to geographical position, signal torches, defences, ambushes, scouts, etc. Also described are the villages of the Nüchen Tartars who surrendered, their chiefs and the number of houses. In the last half of the work tactics and plans are described. These strategies and operational plans were prepared by Yi Il and given to each unit.

The work was later published by Yi Sŏn, a descendant of King Sejŏng and a devoted student of Song Shi’yŏl, in 1670. Yi Sŏn was a military officer in Hamgyŏng Province. He had been banished to North Hamgyŏng Province because of an error he made in compiling a history book, but was later called back to the Office of Historical Compilation. The preface of the reproduced edition describes how the work was compiled and how the reproduction was carried out.

Only two copies of the Chesung pangryak are extant. They are in the Central Library of Seoul National University as part of the Kyujanggak collection. In 1936 the work was photographed and published by the Compilation Committee for Korean History as No.12 of the Series of Korean Historical Materials.

Chewang un’gi (Rhymed Record of Emperors and Kings)

This two-volume work by Yi Sŏnghyu (1224-1300), a well-known scholar of the Koryŏ dynasty, is written in poetic forms of the type first used in China in the Tang dynasty. The first volume which relates to Chinese history is written in the form of seven character poems, and the second on Korean history is in five and seven character poems. These poems were designed to be chanted, and due to the brevity of the style, many explanatory footnotes were added. Much detailed historical information can be derived from these footnotes.

The second volume deals with Korean history from earliest times up to the reign of King Ch’’ungyŏl of the Koryŏ dynasty, and is notable for the system of chronology which it applies to Korean history. It begins with the geographic position of Korea in relation to China, followed by sections on Chon-Chosŏn, or Former Korea, Hu-Chosŏn, or Later
Korea, Wiman Chosŏn (Wei Man’s State), Hansa-gun (Four Chinese Commanderies), the Three Han States, Shilla, Koguryŏ, Hu-Koguryŏ, Paekche, Hu-Paekche (Later Paekche), Parhae-guk, and Koryŏ up to King Ch’ungyŏl.

The Chewang un’gi provides some interesting comparisons with other works as, for example, in the story of Tan’ gun, which shows some variation from the version given in the Samguk yusa. The second part of the second volume contains what is regarded as a distorted account of the ancestry of the Koryŏ imperial household by relating imperial descent to King Su Zong of the Tang dynasty and General Shen Gu. This account was based on earlier works now regarded as fabrications.

The first edition of the Chewang un’gi was published by royal order in 1295-1296, the second by An Kūgin, governor of Kyŏngsang province, and the third was issued in 1417. A photographic reproduction of this third edition was produced in 1939 by the Kosŏ Kanhaenhoe, together with the anthology of the author, under the title Tongan kŏsa munjip. A second edition of the Tongan kŏsa munjip was also published in 1939. This work is valued as one of the few poetic anthologies of the Koryŏ period to have survived.

Chi Ch’ŏngch’ŏn (1888-1959)

Chi Ch’ŏngch’ŏn was an independence activist and politician of colonial and modern Korea. His pen name was Paeksan and Taehyŏng was his given name. He was born in Seoul and was educated in Korea and Japan. On graduation from Tōkyō Rikugung Yōnen Gakkō (Tokyo Military Preparatory School) Chi was commissioned first lieutenant. However, six years later (in 1919) he deserted to Manchuria and began to lead the anti-Japanese activities among the Korean refugees there. He also oversaw the training of the Independence Army in Manchuria, and later became the executive member of the Manchurian Military Government, within the Provisional Korean Government. The Korean forces carried on an unceasing struggle against the Japanese in Manchuria and in 1920 Chi, along with Sŏ Il and Kim Chwajin, organised the Korean Independence Army Corps (Taehan Tongnip Kundan) in which he took personal command of a battalion. At this time he began using the name Chi Ch’ŏngch’ŏn. In June 1921 the Korean Independence Army Corps clashed with the Soviet Red Army (Hŭkha sabyŏn) and Chi was taken prisoner. He escaped from his captivity in northern Manchuria and then organised the Koryŏ Revolutionary Army (Koryŏ Hyŏngmyŏng Kun). Chi continued his guerrilla activities against the Japanese in Manchuria until liberation in 1945 and was involved in the constant merging and reshaping of the Korean forces in this region.

After liberation in 1945, Chi returned to Korea and established the Taedong Youth Party (Taedong Ch’ŏngnyŏn Tan), serving as head of this group. He was also a member of the National Assembly of the new Republic of Korea. Chi is well-remembered for his unceasing commitment to regaining Korean independence from Japan, and in 1962 was honoured by the government of the Republic of Korea with the Order of Merit for National Foundation.

Chi Island

Chi Island is situated about 4 kms. north of the bridge connecting Kŏje Island with the mainland. Administratively, the island is part Yongnam Township in South Kyŏngsang Province’s T’ongyŏng City. The island covers a total area of 1.43 sq. kms. and has a coastline of 5.5-km. The entire island is comprised of a crescent-shaped hill with an apex of 139 metres. Its southern location and the warm currents of the southern sea guarantee Chi a temperate climate, with an average January temperature of 2.3c. and an average August temperature of 26 deg. c. The average annual rainfall is 1 500mm and the island receives only a light snowfall.
Almost half of the island is arable land. Of this, 0.194 sq. kms. grow rice and 0.439 sq. kms. dry-field crops such as barley, garlic, red pepper, sesame and semi-tropical plants. Commercial fishing vessels operating off the island’s coast bring in catches of anchovy, pollack and other fish. Oyster farming also makes a significant contribution to island income.

There is one elementary school on Chi Island. A daily ferry service connects to the mainland.

**Chi Sŏgyŏng (1855 - 1935)**

Scholar, medical doctor, and philanthropist, Chi was a man dedicated to improving the health and welfare of Korean people through his knowledge of medicine and his belief in the value of education. He was most famous for his efforts to eradicate smallpox in Korea.

Born in Nagwŏn-dong, in central Seoul, little is written about his youth, growing up in the capital. He was influenced by an educated man, Pak Yongson, who became Chi's teacher and mentor. Pak was the translator to Kim Kisu, who led an official Korean mission to Japan in 1876 to learn as much as possible about Japan's modernisation. Pak's stories of Japan, especially their advances in Western medicine, must have interested young Chi as he decided to travel to Pusan and study medicine at the Japanese Naval Hospital in 1879. There he learned the benefits of vaccination to the overall health of people and prevention of disease.

In December of 1879, Chi returned to his wife's hometown of Tŏksan-myŏn, Ch'ungju, North Ch'ungch'ŏn Province, to provide vaccinations and medical treatment to local villagers. In 1880, he expanded his services to include Seoul and continued to apply Japanese knowledge, of how to manufacture and administer vaccinations, to the medical problems in Korea.

The spread of Japanese influence in Korea, in the late 1800s, was troubling for many citizens and by 1882, a military revolt erupted, known as Imo Kullan (the Soldiers' Riot of 1882), which ultimately resulted in the Taewŏn'gun (Prince Regent Yi Ha'ng) taking power. The Taewŏn'gun took advantage of the revolt to encourage a wave of anti-Japanese agitation which resulted in the persecution of many pro-Japanese thinkers including Chi. Because of this environment, and the threat of arrest, Chi fled south to the countryside. By September of 1882, the governor of Cholla Province requested Chi help initiate vaccination programmes in Chŏnju and other cities. Chi set up a vaccination bureau in Cholla Province and was active in teaching vaccination theory and instructing methods of administering vaccinations to the needy. The following year he set up a similar programme in Kongju, South Ch'ungch'ŏng Province.

In 1883, Chi passed the government civil service examinations and continued his work and research in medicine. Two years later, he finished his book, *Udu shinsŏl* (New Theories About Vaccination, 1885), and was well on his way to becoming recognized for his extensive work in this field. Tragedy struck his career, however, when in 1887 he was identified with a pro-Japanese, anti-government political party and exiled to Shinjido, an island in Cholla Province. He remained there until his release in 1891. In that year, he returned to Seoul and established a small school, teaching about vaccination. Because of his talent and reputation, and the fact that he had previously passed the civil service examinations, he was eligible for government service. He received an appointment as magistrate of Tongnae Magistracy (*Tongnae pusa*) near the port city of Pusan on the south-east coast of Korea.

In 1899, Chi returned to Seoul and became the Foundation Dean of the Medical School (Ŭi Hakkyo) for some ten years. From this post he became interested in the spread of literacy.
and was a proponent of using the Korean alphabet (han'gul) over Chinese characters. Chi believed in a wider use of han'gul in official documents that had traditionally been prepared in Chinese characters. He went on to establish a han'gul institute, Kungmun Yŏn'guso, in Seoul, in 1908, for study of the Korean language. Within a year, he wrote the Chajŏn Sŏgyo, which is a dictionary of the Korean language, much needed at that time. Chi continued his work until his death in 1935.

He is remembered as a man who gave much of himself in devotion to others. His tireless dedication to the health and education of needy Koreans improved the lives of many fortunate individuals and made him one of the most well-known figures in modern Korean history.

R Saccone

**Chibong chip** (Collected Works of Chibong)

Chibong chip is the anthology of the Choson scholar-official Yi Sugwang (1563-1628). The work, which takes its title from the pen name of Yi, is composed of thirty-one volumes and a supplement of three volumes. It is a wood-block printed work and was published posthumously by Yi’s sons, Sŏnggu and Min’gu in 1634. The content of the work is as follows:

The first seven volumes of this collection contain the poetry of Yi, which was widely acclaimed among the critics of the day for its subtle description and appropriate usage of words. The eighth volume is entitled ‘Annam sashin ch’anghwara rok’ and relates the conversations that Yi had with an envoy of the Annam Kingdom (present day Vietnam) in Beijing during his trip as an envoy of Choson in 1598. The ninth volume contains similar conversations with the envoys of the Ryukyu Kingdom whom Yi also met in Beijing as part of an official mission in 1611. The tenth volume describes Yi’s journey to and from Ming China in 1598, the eleventh contains verse he wrote while travelling to greet a Chinese envoy in ëiju in 1602, and the twelfth and thirteenth volumes contain prose he wrote while serving as magistrate in Anbyŏn and Hongju. The fourteenth to twentieth volumes of this collection contain verse that Yi wrote. The twenty-first to twenty-third volumes are filled with miscellaneous writings such as royal messages, memorials to the throne, epitaphs and private letters. The twenty-fourth to thirty-first volumes cover various aspects of Neo-Confucian philosophy such as the theories of the ancient sages and Confucians of the Sung and Ming Dynasties, and Yi’s own thoughts on the principles of heaven and the cosmic forces. The three supplemental volumes contain the author’s biography, memorial compositions to the author and poetry composed to mark the passing of Yi.

This work, along with Yi’s Chibong yusôl (Topical Discourses of Chibong), is valued in the history of Korean literature since it served as a forerunner to the later shirhak (practical learning) writings that helped change the fundamental way of scholarship in the Choson Kingdom. Moreover, this work serves as a record of the turbulent period in which Yi lived and provides insight into the workings of the Choson government during this age of invasions, factional politics and the deposing of King Kwanghae (r. 1608-1623). In 1964 this work was republished by the Taedong Munhwa Yŏn'gugwŏn of Sŏnggyun’gwan University with a preface written by Kim Sanggi.

**Chibong yusôl** (Topical Discourses of Chibong)

Chibong yusôl is an encyclopaedic collection of literary works compiled by the scholar-official Yi Sugwang (1563-1628). It is composed of twenty volumes and is a wood-block printed book. The work was published after Yi’s death in 1634 by his sons Sŏnggu and Min’gu. At the beginning of the first volume there is a funeral ode written by Kim
Hyŏnsŏng for Yi, and Yi's own preface to the work. The final volume contains an epilogue written by Yi Shik. There had been other literary collections before Chibong yusŏl that contained writings on various topics such as science, government and literature, but none were as extensive as this work. The contents of each volume are as follows:

Volume one contains information regarding astronomy, the seasons and calendar, and natural disasters. Volume two details the geography of Chosŏn and of other countries. The third volume discusses the kingship, and military organisation and strategy. Volume four is devoted to descriptions and duties of various government positions. The fifth to seventh volumes deliberate the qualities of Confucianism, the Chinese classics and Chinese characters. Volumes eight to fourteen are devoted to various literary writings. Volume fifteen discusses various personages, upright moral behaviour and physical appearance. The sixteenth volume is devoted to language, and the seventeenth to human and miscellaneous affairs. In volume eighteen the arts and moral affairs are presented, and in volume nineteen palaces, dress customs and food are discussed. The twentieth and final volume relays information concerning plants, animals and insects.

The work contains a total of 3,435 articles divided into twenty-five main categories and further sub-divided into 182 headings. As outlined above, the works covers a broad number of topics that heretofore had not been accomplished in a single work. Moreover, Chibong yusŏl marks a trend in Chosŏn academics towards practical study as opposed to empty theoretical works that dominated this time. The structure of this work served as the foundation for later works that continued the practical approach to scholarship such as Sŏngho sasŏl (Insignificant Explanations) written by Yi Ik (1682-1764), Sunoji of Hong Manjong (1643-1725), Kogun sŏngnim (Past and Present Glossaries) by Yi Uibong (1733-1801) and Mulmyŏng yugo (Categorical Explanations of Names and Things) written by Yu Hŭi (1773-1837).

Chikchi Temple

Situated on Mt. Hwangak in North Kyŏngsang Province, Chikchi Temple, a monastery of the Chogye sect, was originally founded in 418 by Ado. ‘Chikchi’ means ‘directly pointing.’ There are several theories on how the temple acquired this name. According to one legend, the monk Ado pointed directly at Mt. Hwangak and declared that it was a suitable site to build a large monastery. Another legend states that when the monk Nŭngyŏ reconstructed the temple at the beginning of the Koryo Period, he did not use any measuring devises, but instead directly pointed out where the buildings were to be constructed. Others claim that the name comes from the popular motto describing Zen as the teaching that, ‘does not establish words or letters, but directly points to man’s mind so that one sees one’s nature and achieves Buddhahood.’

In 645, the temple was reconstructed by Chajang, and in 930, repairs were made by Chŏnmu. Six years later, Nŭngyŏ, with support from King T’aejo (r. 918-943) made a major restoration. Further construction and repairs were undertaken in 1399 and 1488. In 1596, Hideyoshi’s armies set fire to the temple, destroying most of the buildings as well as a large, five-storey wooden pagoda. During the 17th century, the temple was slowly rebuilt. However, in the 19th century, the temple suffered from neglect that continued until 1966 when a fifteen year restoration project was undertaken.

The temple houses several important artefacts. There is a seated Medicine Buddha figure carved in relief. Designated Treasure No. 319, the 161-cm. high figure is shown in the ‘touching the earth’ mudra. In front of the Main Buddha Hall, there is a pair of three-storey, stone pagodas which have been designated Treasure No. 606. In front of the Piro (Vairocana) Hall, there is a similar three-storey pagoda (Treasure no. 607). The nearby Unsu and Paengnyŏn Hermitage are affiliated with the temple.
Chin Island

Chin Island is situated in the southwest corner of the Korean peninsula. Administratively, the island is part of Chindo County in South Cholla Province (See Chindo County). With an area of 319 square kilometres, it is Korea's third largest island after Cheju and Køje. A bridge crosses a narrow strait to connect the island with Haenam County on the mainland. As part of the Hwawŏn Mountain Range, a branch of the Sobaek Range, the area contains a number of peaks, including Mt. Ch'omch'al (485m) in the east, Mt. Yŏgwi (457m) in the south, Mt. Chiryok in the west and the rocky Mt. Kŭmgol in the north. Most of the area's residents are employed in either farming or the fishing industry. Due to the area's rugged terrain, most of the area's agriculture is devoted to dry field crops.

The island is famous for the Chindo dog, a breed native to Korea. The dog has a strong hunting instinct and is known for its good behaviour and intelligence. Also famous for its unswerving loyalty to its owner, the dog makes an excellent pet. Chindo dogs are classified according to the colour of their coats, which can be white, ash, ochre yellow, or black and grey with spots. A purebred has a triangular face, sharp slanting eyes and ears that are slightly pointed forward. Adult males are approximately 50 to 55 centimetres tall and weigh between 20 and 32 kilograms. In 1982, the International Kennel Club officially recognised the Chindo as an authentic purebred.

Chikchŏn (office-land taxes) [Taxes]

China and Korea

Introduction

Throughout recorded history, China has influenced Korea on many levels. As Korea's closest neighbour and erstwhile protector and patron, China has been the source of much of Korea's higher culture and has provided patterns for many of Korea's systems and institutions. The two countries have always had a steady, if sometimes troubled, relationship, but for the most part it has served the interests of both sides.

The institution that best embodies the spirit of the Sino-Korean relationship over time is the tributary relationship, whereby Korean kings paid tribute to the Chinese emperor in exchange for protection, non-interference, and material gifts. The tributary relationship required Korea to assume an inferior position vis a vis China, but having done that, the Koreans then were essentially autonomous within their own territory. Their pledge to China, in return, was to enter into no alliances with China's enemies, real or potential, and to refuse relations with other large states.

Korea's acceptance of Chinese suzerainty, a tradition known as sadae juŭi ('serving the greater') in Korean, was not particularly shameful in the context of the Confucian world order, where it was assumed that there was a hierarchy of states, and that China was the centre of civilization and qualified to serve as patron and protector of lesser states, whose loyalty it commanded and deserved. The system required Korea to submit anew to new Chinese dynasties as they rose to power and to seek their recognition in return. The system created obligations on the Chinese side to defend Korea from invaders, as in the war with Japan in the 1590s. It also required the Koreans to refuse overtures from outsiders such as the nineteenth-century European and American traders who sought trading opportunities. The international isolation created by these arrangements prompted Westerners to call Korea a 'Hermit Kingdom' before the country was finally 'opened' in the 1870s.

When China lost the Sino-Japanese War in 1895 and acknowledged its loss of suzerainty over Korea, Japan was quick to assert its hegemony over the Korean peninsula,
culminating in the annexation of Korea as an outright colony in 1910. Although many Chinese continued to reside in Korea and Koreans migrated and travelled into China, Japan's colonial domination eclipsed the old Sino-Korean relationship. After Korea's liberation in 1945, the Cold War division of Korea put the northern zone in close proximity to the emerging People's Republic of China. The division and the ensuing civil war, however, created two dramatically different zones of Chinese influence in Korea. North Korea, many of whose leaders had served with Chinese Communist armies during World War II and which received direct military aid from China during and after the Korean War, remained 'as close as lips and teeth' to China (in Kim II Sung's memorable phrase), while South Korea's isolation from the mainland was nearly total. South Korea, however, shared anti-communist ideology with the exiled Guomindang regime on Taiwan and maintained close ties. In 1992, when diplomatic relations were established between Seoul and Beijing, these relationships were revised somewhat. In the 1990s, however, South Korea has become a major player in the economic development of the mainland even while the Communist regime in Pyǒngyang continues to rely on the People's Republic of China for essential economic and diplomatic support.

Sino-Korean Relations: The Early Phase

Since early times, China has influenced Korea through travellers and migrants, beginning with the Chinese nobleman Jizi (Kor. Kija) who came to Korea in the year 1122 B.C.E. and founded a state called Ko-Chosǒn with its capital at Pyǒngyang. Elements of the Kija story are no doubt apocryphal, but historians agree that it signifies at least a major wave of Chinese migration and influence during the Bronze Age. Later, during the Han dynasty in China, a Han commandery was established at Pyǒngyang and a colony established that was named Luolang (Kor. Nangnang), and through this colony there was another wave of Chinese cultural influence. Remnants of Ko Chosǒn include Kija's tomb, near Pyǒngyang, and art work and artifacts from tombs of the Lolang colony, which lasted until 313 C.E. The early Chinese colonies in Korea and the steady migration of Chinese over the centuries, have been the main conduits of Chinese influence in Korean life, and to this day many Koreans trace their ancestries back to China.

A second arena for early Sino–Korean contact was border relations. The Korean state of Puyǒ in Manchuria, sent embassies to the Han capital in the first century C.E. Friction in Manchuria between ancestors of the Korean people and frontier elements of the Chinese empire is a constant theme. Yet the *Hou Han shu*, or 'History of the Later Han Dynasty', assesses the Koreans as better and more civilized than other, wilder neighbours. The establishment of the Luolang colony, in essence, was the integration of the northern part of the Korean peninsula into the Han imperial system despite resistance by local peoples. It signifies a phase of Sino-Korean relations during which the Chinese actually tried to integrate the Koreans into their civilization.

The Korean state of Koguryǒ, in territory both north and south of the Yalu River, was shaped by the constant need to defend against Chinese pressure. The tributary system that eventually defined Korea's relationship with China was shaped in the frontier conflicts of this period, as Koguryǒ sought to protect itself from Chinese dominance and China sought to maintain hegemony in the Liaotung region of southern Manchuria and northern Korea. China lost control of this area during the Period of Division (trad. 220–581 C.E.); but with the reunification under the Sui, it tried to reclaim it. At that point it encountered a much more highly developed Korean civilization which was capable of much more effective resistance.

In the mid–seventh c., however, the course of Sino–Korean relations was continually plagued by warfare. The Chinese continued to claim Liaodong and the emperor Daicong continued to dream of a hegemonic empire that would include non-Chinese around the borders. To help him defeat Koguryǒ, he made alliances with Paekche and Shilla and
period the ideals of good government were Confucian ideals, and Confucian officials formed a powerful reform element in the government. Numerous academies were founded for the study of the classics and preparation for the examinations. Song-style woodblock printing spread the use of printed literature in Korea and extended the influence of reform ideas. A National Academy promoted Confucian scholarship. Confucian scholars, disgusted by the inordinate influence of Buddhism at court, promoted Confucian thought as an alternative state philosophy. Confucian writers of history sought moral lessons in the chronicles of the past. Confucian scholars travelled to China to study at the source. The Mongol invasions of the thirteenth c. slowed the momentum for change, but the gradual Confucianization of Korea continued nevertheless.

The rise of the Mongols in East Asia was a disaster for the Koreans just as it was for so many others. The first Mongol invasion of Koryō took place in 1231; and although the Koreans put up a determined resistance during which the royal court retreated to Kanghwa Island in the Han-Imjin estuary where the Mongol cavalry was unable to follow, Mongol cruelties on the peninsula eventually broke the people's resistance. A second invasion in 1254 led to Korea's complete subjugation to Mongol rule. There followed a century during which the state of Koryō served as a vassal to the Mongol Yuan empire in China and suffered a major loss of the autonomy that was normal under the Chinese tributary system. The Mongols forced Korea to join in their ill-starred invasions of Japan by using the forests of Cheju Island for wood to build ships and turning the island into pastureland for cavalry horses. They reduced the Koryō monarchy in several ways: by investing Korean kings with submissive titles; by maintaining a collateral lineage of the Koryō royal family in Manchuria as a threat, in case it became necessary to punish a Koryō king by making a substitution; and by marrying Mongol princesses to Korean kings. Raising Koryō princes at the Mongol court instead of in Korea meant that new kings ascended the Koryō throne as Mongol agents, the Beijing-raised grandsons of Yuan emperors. Mongol forces established a field headquarters in Korea, ostensibly to oversee the invasions of Japan but afterward to oversee the subjugation of Koryō. The Yuan court looted the Korean economy through levies for tribute items including gold, silver, cloth, grain, and other commodities, and most degrading of all, for virgins and eunuchs.

Despite this intimidation, when the Yuan state began to falter in China, Mongol control also began unravelling in Korea. In the 1350s, King Kongmin ordered an end to the wearing of Yuan-style costumes and hair styles at court, abandoned use of the Yuan calendar, and set out to recapture Korean territory near the Yalu River which the Mongols had allowed to fall to Jurchen control. When the Mongols were expelled from China in 1368, however, they retreated into Manchuria, maintaining sufficient strength to punish Koryō if it should attempt to open relations with the newly-established Ming court in China. The Ming court demanded submission, however, and for a time Koryō attempted to keep up good relations with both. The emperor Taizu, founder of Ming, demanded single-minded loyalty, however, and applied irresistible pressure to force the Koreans to submit to the Ming and break all ties with the Mongols. When Ming garrisons were established on the Korean border and it appeared that the Chinese might be planning to reassert control south of the Yalu, the Koryō court ordered its armies to attack Ming forces in Liaodong. The commanding general of the Koryō army, General Yi Sŏnggye, mutinied while enroute to engage the Ming forces, turned his army around, and took control of the Korean capital. For four years he ruled through puppet kings and then, in 1392, took the throne for himself and founded the Chosŏn dynasty (1392-1910).

Sino-Korean relations were only one element of the political situation that led to Yi Sŏnggye's usurpation of the throne in 1392. Indeed, the usurpation itself proved to be a problem when the Ming emperor refused to invest General Yi as king and thereby undermined his claim to the throne. Ming-Korean relations were only stabilized through the investiture of the third Chosŏn dynasty king, T'aejong, by the Yung-lo emperor in 1403. Even then there remained a difficult security issue to solve: the Koreans' need to maintain
attempted to create a unified military command under Chinese generals. Tang armies fought Koguryŏ repeatedly during the 640s. During these engagements, Paekche took the opportunity to threaten Shilla, driving Shilla into an ever-closer alliance with the Chinese. This alliance ultimately proved decisive on the Korean peninsula. It enabled a combined Tang-Shilla force to destroy Paekche in 660 and then to destroy Koguryŏ in 668, creating a united Korean state of Shilla centred, not in the north in P'yŏngyang or on the Yalu River, but in the southeast, on the Shilla royal capital of Kyŏngju.

Although China intended to use the Tang-Shilla alliance to reassert control over the Korean peninsula, Shilla managed to escape Chinese domination by deft combinations of diplomacy and non-cooperation. A short-lived Tang outpost in P'yŏngyang was withdrawn to Liaodong, leaving Korea under Shilla control. The rise of a new Korean kingdom, Parhae, further complicated the situation in Manchuria and frustrated Tang designs on the region. Though it also thwarted the possibility of northward expansion by Shilla, the region south of P'yŏngyang in Korea was successfully defended from further Tang attempts at control and the Chinese settled for accepting Shilla as a tributary state. The pattern of Korean tribute missions to China but autonomy within its own borders was firmly established by the end of the eighth c. China meanwhile invested the ruler of Parhae and maintained tributary relations with it for the remainder of the Tang period.

Many Koreans from the kingdom of Shilla visited Tang China, trading and returning with information. Korean monks studied Buddhism at Tang monasteries and planted Korean branches of Chinese Buddhist sects in their homeland, among them the Pure Land and Huayan (Kor. Hwaôm) sects. Confucian classical learning also became popular in Shilla, along with other kinds of Chinese literature. A lively maritime trade grew up between southwestern Korea and the Shantung Peninsula, notably under the Korean merchant Chang Pogo from his combination garrison and trading base on Wan Island.

**Development of Tributary Relations**

While Korea and China were communicating across the Yellow Sea, the Liaotung region saw the rise of a new power, the Khitan, in the tenth c. The Khitan succeeded in conquering Parhae in 926, just as Shilla was succumbing to the emerging Koryŏ kingdom in Korea. Koryŏ, based in west-central Korea at Kaegyŏng (modern Kaesŏng), immediately came into conflict with the Khitan state in southern Manchuria, which demanded tribute. Armed conflict included Khitan invasions in 993 and again in 1018, when the Koreans won a decisive victory. Koryŏ then built a wall across the Korean peninsula running from the mouth of the Yalu River south-east to the vicinity of modern Hamhŭng on the east coast. The wall was meant as a defence against the Khitan and a new enemy, the Jurchen tribes, who rose in place of Parhae to harry north-eastern Korea from their homeland in eastern Manchuria. Like the Khitan, the Jurchen preceded their thrust into China by putting pressure on Korea: and as they were founding the Chin state in north China, forcing the Sung empire to retreat southward, they forced Koryŏ into tributary relations. Koryŏ then had to walk a tightrope between pleasing the Southern Sung court and mollifying the Chin emperor in north China. Political relations were strained. However, merchants continued to trade across the Yellow Sea, and it was during this period that Koreans developed the beautiful celadon pottery that was inspired by Sung craftsmen but for which Koryŏ potters are so well known.

Celadon pottery was just one of the Chinese cultural imports during the Koryŏ period. Confucianism, which spread when Shilla reformers used it as a weapon against the hereditary social caste system, achieved an institutional foothold in Koryŏ when King Kwangjong adopted the civil service examination system in the year 958. Tang and Song government institutions were used as models for the central government offices and ministries of the Koryŏ state. Bureaucratic recruitment by examination started slowly and took many years to overcome the tradition of hereditary aristocracy; but by the late Koryŏ
contact with the Jurchen tribes of Manchuria who were potential invaders of the Korean northeast. The Ming court adamantly demanded that the Koreans cease contact with the Jurchen, and their refusal to do so was a calculated effort to maintain their own border security. Concern over the Jurchen was well founded, for it was the Jurchen, ultimately, who rose to invade Korea and shortly thereafter to overthrow the Ming in the seventeenth c.

The fact that Ming concern over possible Korean disloyalty was misplaced may be seen from the policies adopted by the early Chosón kings in pressing the Confucian transformation of Korea that had begun before the Mongol invasions. In addition to promoting the examination system and the emphasis on Confucian classical learning, the state of Chosón adopted the Ming legal code, Ming–style administrative and judicial procedures, dynastic history writing (the Koryŏsa (History of Koryŏ), and the publication of handbooks of correct family behaviour and proper official conduct. Princes in the palace were tutored in Confucian principles and kings sponsored Confucian studies in special institutes such as King Sejong's Chiphyŏnjŏn (Hall of Worthies), whose pragmatic studies in the Korean language led to the invention of the Korean alphabet han'gul in 1446.

In the fifteenth c., under the Chosón dynasty, Sino-Korean tributary relations assumed their most complete form. In a typical year, Korea would send three tribute main missions to Beijing: on New Year's Day, on the emperor's birthday, and on the birthday of the heir-apparent. These were congratulatory missions, but there were others as well, to offer thanks, condolences, special gifts, and to present special communications to the emperor. Some of the embassies went only as far as Liaoyang, to deal with border matters. All conveyed gifts, and the types of tribute desired by the Ming were specified in the Ming code, the Da Ming huidian: (Collected Statutes of the Ming) gold, silver, woven mats, animal skins, various kinds of cloth, decorative objects, paper, calligraphy brushes, ginseng, and horses. Early in the Ming period the Chinese continued the practice of requisitioning young women and men for the court that had been so resented by the Koreans under the Yuan, a practice that was abandoned by 1450.

Korean embassies were comprised of high officials as envoys and retinues which sometimes numbered several scores of individuals including junior officials, secretaries, guards, and porters. Often they carried privately-owned commodities for to trade along the way or in the Beijing market. The opportunities for enrichment helped compensate for the rigours of the trip, which often took several months. The land route went through Pyŏngyang and across the Yalu to Liaoyang and Shenyang and then turned south towards Beijing through Shanhaikuan. An alternate route employed a sea crossing from Chŏl'san, near the Yalu, via the island of Kado across the Yellow Sea to Tengchou and then by land to Beijing. In Beijing the Koreans stayed at hostellries maintained for visiting tribute envoys, and all their expenses were covered by the Chinese side. They were subjected to training in how to behave during an imperial audience, and on the appointed day they prostrated themselves before the dragon throne in the ritual kowtow in the tribute-presentation ceremony itself.

In return, the Ming emperor gifted the Korean envoys with gifts for their king: luxury items, for the most part, including court costumes and jewelry, musical instruments, jade ornaments, and fine brocade. Korean embassies normally returned with books also, and medicines from the Beijing market. The gifts for the king went to the court. The entourage kept some of the trade items. Apart

from the general benefits of Chinese suzerainty over Korea as a whole, very little benefit from the tribute trade ever trickled back to the actual providers of the goods that were sent to Beijing.

Between 1392 and 1450 there were 95 Ming embassies to Korea, far fewer than the 391 Korean embassies that journeyed to the Ming court during the same period, reflecting the
fact that the most important business in the relationship was transacted in Beijing. The visit of a Ming ambassador was a great occasion in Korea, necessitating special communications, an elaborate greeting at the 'Welcoming Grace Gate' outside the city, feasts and ceremonies, and often considerable dread, since Chinese envoys sometimes came on unpleasant errands, such as the early ambassadors who came to recruit the young women who were to be offered as potential concubines to the emperor or young men to be offered as eunuchs.

The iron test of the Ming-Korean tributary relationship came in the 1590s with the Japanese invasions that were launched by Toyotomi Hideyoshi against the mainland via Korea, after Hideyoshi's unification of Japan. The Japanese objective was China, and the Koreans were aghast at Hideyoshi's audacity in thinking of an attack on the centre of civilization. In the fifth month of 1592, a Japanese force of 150,000 men invaded Korea at a point near Pusan and advanced northward along three routes toward Seoul, overcoming the best defences the Koreans could muster and forcing King Sonjo (r.1567-1608) to abandon his palace for the safety of the Chinese border. Bad weather, strained supply lines, inadequate communications, and rearguard actions by Korean militia and naval forces then combined to halt the Japanese advance at Pyōngyang, while King Sonjo's court appealed to the Ming for intervention.

The Ming-Korean resistance to the Japanese invasion was an awkward effort hampered by Chinese attitudes toward the Koreans, whom they accused of incompetence, and egregious mistakes on the part of both the Chinese and Koreans on the land. The Chinese were mauled in their first encounter with the Japanese near Pyōngyang in the eighth month of 1592. Thereafter, the Chinese launched a counter-attack with a much larger force under Li Ju-sung, which was effective in forcing the retreat of the main Japanese commander, Konishi Yukinaga. By the summer of 1593 the Japanese had pulled back to the southeast corner of the peninsula and King Sonjo had returned to his capital. There followed many months of fruitless negotiations between Ming representatives and Japanese commanders. In the meantime, disaffected Korean peasants and Korean local militia constantly skirmished with the Japanese, bringing terrible reprisals. In one of the bloodiest episodes of the war, the Japanese capture of the city of Chinju on the south coast, 60,000 Korean soldiers and townspeople reportedly lost their lives.

In 1597, Hideyoshi launched a second invasion of Korea with an army slightly smaller than the first. This assault made little progress up the peninsula but it secured control of many counties, ports, and inlets across the southern provinces and created a presence that was very difficult to dislodge. Bitter fighting under Ming command finally forced a final Japanese evacuation from the southern coast in the face of superior Ming Korean naval forces, notably the kōbuksōn (metal-clad 'turtle ships') of the great Korean admiral Yi Sunshin. The most important naval engagement took place when Konishi tried to rescue his troops at Sunch'ūn with the protection of his Pusan-based Japanese fleet. Allied ships under the Ming Admiral Chen Lin met the Japanese ships in the Battle of Noryang Straits, during which Chen's vessels became trapped. Admiral Yi, seeing Chen's predicament, sailed in to effect a successful rescue but was killed by a Japanese arrow. Though he gave his life in the battle and his men went on to inflict devastating losses on the retreating Japanese the episode created bitterness in the Ming-Korean relationship because Chen Lin took credit for the victory.

Hideyoshi died in 1598 and all Japanese forces were withdrawn, defeated, by the following year. The Ming–Korean victory, however, came at a terrible cost. The war drained the Ming treasury which was already depleted by the Wan-li emperor's palace and tomb constructions. It also diverted Ming forces assigned to control the Jurchen in Manchuria, creating an opportunity for the Jurchen chieftain Nurhachi to organize his forces and preparations for the conquest of China which was to follow in the 1640s.
The costs to Korea were of a different kind. The war humiliated King Sonjo and the Korean government and brought about the loss of much of Korea's priceless heritage of people and property. A significant part of Korea's intellectual heritage was also lost in the form of skilled craftsmen and artists who were taken to Japan. The nation's economic system suffered simultaneous disruptions of farming, trade, and the tax and land tenure systems. Koreans lost their families and homes. And in terms of their relations with China, Koreans endured a war in which it was sometimes difficult to tell the difference between their Chinese allies and their Japanese enemies. Both armies conscripted Koreans, killed them with abandon, and looted their property. Ultimately the only winners were non-participants who rose to power in the aftermath: Nurhachi in Manchuria and Tokugawa Ieyasu in Japan, whose political position was strengthened by the weakening of the daimyo of western Japan who bore the brunt of Hideyoshi's Korean campaign.

The debt created by Korea's need for Ming defence against Hideyoshi obliged Korea to assist the Ming in an ill-conceived attempt to reassert hegemony on China's frontier with the Manchus in Manchuria. To eliminate Korea as a threat on their southern flank, the Manchus answered by invading Korea twice, in 1627 and 1636, reducing it to vassal status. When the Manchus ousted the Ming and occupied China later in the seventeenth c., they demanded and got Korean tribute on the old pattern, notwithstanding Korean shame at serving usurpers whom they considered barbarians. Koreans resisted in small symbolic ways, such as perpetuating use of the Ming calendar and wearing Ming-style clothing long after the fall of the Ming. In fact, however, they were obliged to maintain the tributary relationship with the Manchus in China for reasons of realpolitik and also because, by doing so, they protected themselves from Manchu interference.

**Sino–Korean Relations in Modern Times**

Toward the end of the nineteenth c., Korea's ancient relationship with China underwent a revolutionary change. With the signing of the Kanghwa Treaty with Japan in 1876, there began a period of competition between Japan and China for influence in Korea. China stationed resident advisors in Korea in an effort to keep the Korean court on the traditional path. Japanese military power and direct political interference, however, swayed the court and Korean reformers with ties to Japan further undermined Chinese policy. In 1894–95, the Sino-Japanese War ended China's suzerainty over Korea and Japan eclipsed China, not as suzerain but as hegemony.

During the Japanese colonial period, 1910–1945, Chinese political influence in Korea was non-existent except in the way China hosted exiled Koreans and gave them shelter in Shanghai and later, in Zhongjing. Koreans migrated by the hundreds of thousands to Manchuria to settle and farm. Korean leftists developed a major following in this Manchurian Korean community and joined the Chinese Communists in their struggle against Japan and the Guomindang. Further south, Chinese Nationalists helped organize the Korean Kwangbok (Independence) Army in hopes of using it to fight the common enemy. On a cultural level, there was considerable travel and communication between Korea and China, and modern Chinese literature influenced Korean writers during the Japanese occupation. There was also conflict between Koreans and Chinese. For example, when Chinese farmers at Wanpaoshan in Manchuria attacked Koreans for diverting scarce water resources in 1931, Chinese residents in Korea were subjected to violent reprisals. The Japanese were using Koreans to extend their control in Manchuria at the time, and the Wanpaoshan affair turned out to be a way for them to diminish an unwanted Chinese minority in Korea as well.

China remained preoccupied with its own civil war after Japan's surrender and Korea's occupation by the allied powers. The anti-Communist regime of Syngman Rhee in South Korea briefly flirted with the idea of an alliance with the defeated Guomindang in exile on Taiwan in 1950. However, the outbreak of armed hostilities between North and South
Korea in June 1950 and the intervention of the United Nations on South Korea's behalf opened a significant new chapter in the relationship between Korea and China. First, in the days following the North Korean invasion of the South, United States naval forces moved into the Taiwan Strait to block the Chinese Communists from moving on Taiwan as they had been expected to do, interrupting what many thought was a natural process of final victory for the regime of Mao Zedong. Second, in the winter of 1950, with United Nations forces approaching the Manchurian border, the Chinese Communists entered the war on North Korea's side, fighting until the armistice more than two years later. The sacrifices endured by Chinese forces in Korea (including the death of one of Mao Zedong's sons) created a Chinese stake in the survival of the Democratic People's Republic of Korea no less important than the stakes created for the West by the sacrifices of United Nations troops in defence of the South. Chinese representatives were a party to the 1953 armistice, along with the U.N. (represented by the United States) and the North Koreans. Though Chinese forces withdrew from North Korea by 1958, their support of the Kim II Sung regime from positions just over the border has always been an important factor in North Korean defence.

South Korea, for its part, maintained close relations with the Republic of China on Taiwan for decades. By the early 1980s, however, a clandestine trade had sprung up between South Korea and the PRC. By the end of the decade, South Korean industrialists were openly arranging trade deals with firms in mainland China, pursuing a de facto two–China policy. As relations between Seoul and Beijing warmed, Kim Il Sung sought Chinese reassurance. However, in 1991 China dropped its opposition to the admission of South Korea (and then North Korea as well, as a separate state) to the United Nations. South Korea and the PRC opened diplomatic relations in 1992, causing the rupture of relations between Seoul and Taipei but forcing North Korea to accept China's two–Korea policy. At the same time China announced that it would no longer accept barter as payment for exports to North Korea, further stressing a North Korean economy already hard-pressed by the loss of economic support from the former socialist bloc in Europe.

As China emerges as a major world power, Korea will have to make accommodations. No doubt relations between China and Korea, whether united or still divided, will grow closer but not necessarily warmer. The history of Korean submission to China will not repeat. More likely is a strong Korean defence based on a strong modern economy and an economic and cultural relationship based on modern international practice.

Bibliography

Chinan County

Situated in the northeast area of North Cholla Province, Chinan County consists of the town of Chinan and the townships of Tonghyang, Maryŏng, Pugwi, Paegun, Sangjŏn, Sŏngsu, Anch’ŏn, Yongdam, Chŏngch’ŏn and Chuch’ŏn. The county covers a total area of 788.78 sq. kms. and in 1989, had a population of 50 680. In the northeast lies the Chinan Plateau with an elevation greater than 300 metres. Mt. Unjang (1 126m), Mt. Mandŏk (762m), Mt. Kubong (919m) and other peaks of the Noryŏng Mountain Range rise in the northwest, while Mt. P’algong stands in the southeast corner of the county. Chinan receives 1 300 to 1 400mm of rain annually and has an average temperature of 12 to 13C. The county’s mountainous areas receive heavy snowfalls during the winter.

Due to the rugged terrain and thick forests, only 15 per cent of the county’s land is arable. Of this, 56 per cent is used for rice cultivation. Tobacco is grown in the townships of Tonghyang, Sŏngsu and Anch’ŏn and alpine vegetables and mushrooms are cultivated in Maryŏng, Paegun and Yongdam. In Pugwi and Chinan, land is used for a number of stock breeding operations. Ginseng is grown in the northern part of the county.

The county’s key tourist attraction is Mt. Mai (See Mai Mountain), which consists of two solid mounds of granite that resemble a horse’s ears (mai). Next to the mountain is the fascinating T’ap Temple with its numerous cairns. Mt. Unjang in the northwestern part of the county, is another popular tourist destination. This 1 126 metre peak is the highest of the Noryŏng Mountain Range in the Cholla area. Here can be seen the picturesque Taebulch’ŏn Valley. Several hiking trails traverse the area, one of the most popular being that at Kallyong Village in Chŏngch’ŏn, which passes through Ch’onhwang Temple Valley via the Ch’ŏnhwag Peak and on to Mt. Kubong.

As well as its natural attraction, the area has a number of important historical sites and relics. During Greater Shilla, scores of Buddhist monasteries were built here. Chŏngchwang Temple in Chŏngch’ŏn Township and Kumdang Temple in Maryŏng Township are two of the most famous Shilla-era temples in the area. In addition to the artefacts at these temples, there is a three-storey pagoda at Chinan’s Unsan Village, another stone pagoda at Sangjŏn Township’s Chup’yŏng Village and a five-storey pagoda at Maryŏng Township’s Kangjong Village (North Cholla Province Tangible Cultural Assets No. 10, 72 and 73 respectively).

Confucian schools found here include the picturesque Yongdam Hyanggyo which was established in Yongdam’s Okkŏ village in 1391; Chinan Hyanggyo established in 1414 in Chinan’s Kunsang village and Yŏngye Sŏwŏn founded in Maryŏng’s Kangjong village in 1649. Near Yŏngye Sŏwŏn lies Susŏnnu, a pavilion built during the reign of King Sukchong (1674-1720) by Song Chinyu and his three brothers for their father and his friends.
A number of celebrations and rituals are held on a regular basis, which assist in preserving the county’s cultural heritage. Since 1984, the Mai Festival has been held in Chinan every year on 12 October. The date is significant as the day that King T’aejong (r. 1400-1418) visited the mountain in 1413. On the eve of the festival’s main ritual, a sanje (mountain ritual) is held on Mt. Mai, to pray for peace and an abundant harvest. The main ceremony is conducted the next day, followed by the Miss Ginseng Pageant; a ‘farmer’s music’ (nongak) competition; sporting events, and a performance of the Mong kümch‘ŏngmu, a dance peculiar to this region and which is said to have originated from a dream of King T’aejo (r. 1392-1398). In the dream, the king received a golden ruler (kümch‘ŏk) from an old man on a horse-ear (mai) shaped mountain.

Chinch’ŏn County

Located in the northwestern part of North Ch’ungch’ŏng Province, Chinch’ŏn County consists of the town of Chinch’ŏn, and the townships of Tŏksan, Mansŭng, Munbaek, Paekkol, Iwŏl and Ch’op’yŏng. The county area is 406 sq. kms. and as shown by 1989 statistics, had a population of 52,324. The Charyŏng Mountain Range traverses the western part of the county and Mt. Tut’a (598m) rises on the eastern border. The county has an average temperature of 10.9°c. and an annual rainfall of 900 to 1300mm.

Of the county’s 12,000 hectares of arable land, two-thirds grow rice and one-third dry-field crops, such as barley, bean, tobacco and ginseng. The most common orchard crops are apple, persimmon and pear. Stock breeding and sericulture are other sources of income. In Ch’op’yŏng’s Kāmgŏk Village, stone is quarried to make the area’s famous ink-stones and small amounts of gold and silver are excavated from Chinch’ŏn Mine in Munbaek. Industrial estates have been established in Chinch’ŏn and Mansŭng.

The county’s scenic attractions include the picturesque Ch’op’yŏng Reservoir in the southeast and Chinch’ŏn Reservoir near Mt. Sang. These are popular holiday resorts and fishing spots. Another well-liked tourist destination is the 10km.-long Yŏng’gok Valley that begins in Chinch’ŏn’s Sasŏk Village and winds its way to Mt. Mannoe (612m). Here are two historic sites – Kyeyang Village, the birthplace of the famous Shilla general Kim Yusin (595-673) and Ch’imadae (Dashing Horse Heights) where Kim is said to have ridden his horse. Remnants of an old stone fortification can also be seen in the locality.

Buddhist artefacts in the area include a three-storey pagoda; a stele (Treasure No. 404) and a Vairocana figure in Chinch’ŏn’s Yŏng’gok Village; a Koryŏ-era rock carving of a seated Buddha and a three-storey pagoda in Munbaek’s Oksŏng Village; a weathered rock carving of a standing Buddha in Chinch’ŏn’s Sagok Village; a seated Buddha statue and a stone carving of a standing Buddha in Ch’op’yŏng’s Yongjŏng Village; a wooden Avalokitesvara figure in Chinch’ŏn’s Yongju Hermitage, and a standing Buddha figure (North Ch’ungch’ŏng Province Tangible Cultural Asset No. 138) at Yonghwa Temple.

Confucian sites include Kilsangsa (a shrine commemorating Kim Yusin) in Chinch’ŏn’s Pyŏgam Village, and Chinch’ŏn Hyanggyo (county public school) in Chinch’ŏn’s Kyosŏng Village. Near the Hyanggyo stands the picturesque Sungnyŏlsa, a shrine built in 1972 to commemorate Yi Sangsŏl (1871-1917). In 1907, Yi went as King Kojong’s envoy to the Hague convention to express Korea’s opposition to the Japanese occupation.
the town of Chindo, and the townships of Kogun, Kunnae, Ùishin, Imhoe and Chisan. The county, which consists of 42 occupied and 184 unoccupied islands, covers an area of 414.03 square kilometres and as of 1989, had a population of 70,582. The warm sea currents temper local weather conditions, but even so, the county has slightly colder winters than neighbouring Wan Island since it is exposed to northwesterly winds. The average yearly temperature is 13.8°C and the county receives an average yearly rainfall of 1,350mm. In the spring, the region is often subject to heavy fog.

Since over 70 per cent of the county is mountainous, there is relatively little arable land. However, cultivated land has steadily expanded as land has been reclaimed along the county’s shallow coastal waters. Irrigation water is provided by the Tunjön and Sach’ón reservoirs. About half of the cultivated land grows rice, the other being used for a variety of dry-field crops. The county is also well-known as a leading producer of kugijja (Lycium chinense), the fruit of which is used in a traditional tea drink known as kugijach’a. Fishing is another important source of local income. Boats operating out of the area bring in catches of yellow corbina, hairtail, croaker and anchovy. Most of the catch is sold through the port of Mokp’o. In addition, laver, brown seaweed, crab, oyster and salt are marketed. There are also several mining operations here which excavate limestone, pagodite, clay and alumite. The area’s industry is generally limited to hulling, milling and brewing operations centred around the town of Chindo.

The county boasts a large number of tourist attractions. Southwest of Chin Island lie Hajo Island and a number of smaller islands which are known for their picturesque scenery. In order to preserve the area’s natural environment, these islands along with the southern tip of Chin Island have been included in the Tadohae National Marine Park. Tourists come to see the island’s interesting historical sites. In Kunnae’s Yongjang Village, one finds Yongjang Fortress, which was used by the Three Elite Patrols (Sambyöch’o) in their struggle against the Mongols. The Three Elite Patrols held out against the Mongol invaders for some time, but were eventually overcome by a combined Koryô-Mongol assault in mid-1271. Most of the central figures who resisted the Mongols were killed at this time. Those who survived fled to Cheju Island, which fell to the Mongols two years later.

Historically, the area’s most important Buddhist site is Ssanggye Temple on the western slopes of Mt. Ch’omch’al (485m). The temple houses several ancient stupas and the Main Buddha Hall has been designated South Cholla Province Tangible Cultural Asset No. 121. Other Buddhist relics in the area include the five-storey pagoda (Treasure No. 529) in Kunnae’s Tunjön Village and a seated stone Maitreya figure with attendants (South Cholla Province Tangible Cultural Asset No. 17) at Yongjang Temple in Kunnae’s Yongjang Village. See also Chin Island and Mo Island.
**Chingbi rok** (Record of a Timely Warning)

*Chingbi rok* is a record of the Japanese Invasion of 1592 that was written by Yu Sŏngnyŏng (1542-1607). It consists of sixteen volumes and seven fascicles, and this wood-block print work has been designated as National Treasure No. 132. *Chingbi rok* was published in 1647 by the Yu’s grandson Cho Suik. The work is divided into the first two volumes that comprise the main text of ‘Chingbi rok’, the third to fifth volumes which are ‘Kŭmp’o chip’, the sixth to fourteenth volumes which are known as ‘Chinsa rok’ and the final two volumes which are entitled ‘Kunmun tungnok’.

The first two sections of this work detail the 1592 Japanese Invasion and thereby provide excellent data for the study of the actual circumstances in Korea during this event. In ‘Kŭmp’o chip’ there are various memorials to King Sonjo (r. 1567-1608), and in ‘Chinsa rok’ the conditions of the people are recorded for the years 1592-1594. The final section of this work holds royal decrees and official letters. This work is valuable in the study of the actual conditions of the country and the people during the tumultuous years of the Japanese Invasion and also in that it records the author’s own experiences during this time. This work has been republished in recent times first as a part of Yi Minsu’s Hyŏndaehunhak (Modern Korean Literature) in the late 1950s, and then a translated version by Yi Tonghwan was published under its original name of *Chingbi rok* in 1975.

Chindŏk, Queen [Women]

**Chinhae**

Chinhae is a coastal city situated in the southern part of South Kyŏngsang Province. The city covers a total of 110.53 square kilometres and as of 1989 its population stood at 122 102. Mt. Yong (703m), Mt. Pulmo (802m) and Mt. Kuram (662m) rise on the city’s northern border. Rainwater run-off from these peaks forms the Taejang, Sosa and Tong streams. The relatively flat central area consists of reclaimed land.

Kŏje Island, located off the city’s coast, calms incoming waves, thus creating Chinhae Bay’s placid waters. In addition to being well-protected, the bay is deep and it provides Korea’s largest naval base As part of the southern coastal region, the city’s weather is characterised by warm temperatures and high precipitation. Chinhæ’s forests consist of both deciduous trees and pines. In particular, there is a large number of cherry trees here, which were planted in 1930 when the central city was built.

Because of the rugged terrain, Chinhæ’s agricultural sector is relatively underdeveloped. The area’s fishing industry, on the other hand, makes an important contribution to the local economy. Anchovy, flatfish, cod and other fish are caught in the warm currents off the coast. However, the fishing industry has been adversely affected by pollution from the city’s large chemical factories and by the over-fishing of the coastal waters. Further industrial development in Chinhae is inhibited by the government’s plan to turn the city into a major tourist destination. The large naval presence involves an estimated seventy per cent of the workforce, either in public service operations or in service industries catering to the military forces.

In addition to Such’i Beach and other scenic spots along the coast, Chinhae offers many more scenic attractions. At the end of Ch’angbok Tunnel which connects Masan and Chinhæ lies Mt. Changbok Park. From here, there is a panoramic view of central Chinhae and the placid Chinhæ Bay. The park was established in 1979 as part of a restoration project after a landslide occurred in the area. The Taewang and Chinhŭng temples are situated near the park and thick pine tree forests and more than 10 000 cherry trees surround the area. Within the park, one finds Chinhae Park Land, an amusement park and Citizens'
Hall.

Mt. Chehwang Park, next to city hall, is another popular destination. From the top of Mt. Chehwang, there is a panoramic view of the southern coast, the surrounding mountains and the city centre. The mountain is particularly popular with spectators who come to see the city's colourful festivals. Yongch'u Waterfall in Mach'ŏn-dong is another famous tourist attraction in the area.

The Kunhangje Festival (Naval Base festival) is held here in April each year to honour Admiral Yi Sunshin. At this time tourists flock to the area to see the city's famous cherry blossoms. Other cultural traditions that can be seen here include a mock navy parade of the Chosŏn Dynasty, the Sungjŏnmu (Dance of Victory) and the Kŏmmu (Sword Dance). In addition, more than fifty folk activities, such as the Cherry-blossom Princess Pageant, fireworks, Lantern Parade and Kanggangsuwollae (a country circle dance) can be seen at the Cherry-blossom Carnival, which is held at night. Tourists also come to Chinhae to listen to the local nongak (farmer's music).

The most famous rituals held here are the sŏnghwangje (Shaman ritual to worship the deity of the soil) of Chedŏk village and the tangsanje (Shaman ritual to worship the deity of the mountains) of Sudo village. At Chedok village, services for the local spirits are held every lunar New Year's Eve. The host and hostess of the service are chosen from among the village's model couples, and the selected couple must be celibate and remain so for three months after the service.

Many of the area's historical sites are associated with the Hideyoshi Invasions (1592-1598). In Nammun-dong is the Ung Stream Japanese Fortress and the Ung Stream An'gol Village Fortress, both built by the Japanese. This area is known as the site of a famous naval battle in which Yi Sunshin's forces routed the Japanese armada.

**Chinhŭng, King** (r. 540-576)

King Chinhŭng (534-576) was the twenty-fourth monarch of Shilla and reigned from 540 to 576. He was of the Kim family and his names included Sammaekchong and Shimmaekpu. He was the grandson of King Chijiing (r. 500-514) and the son of the younger brother of King Pŏphŭng (r. 540-576). His mother was the daughter of King Pop hung and his queen was Lady Sado of the Pak family. When he was only seven years old he ascended to the throne with the Dowager Queen Kim acting as his regent. Chinhŭng is remembered as the king who greatly expanded the territory of Shilla.

In the twelfth year of his reign, Chinhŭng ended the period of his regency and began to rule independently. At this time he established a new name for his reign and began to pursue his policies of increasing the territorial size of Shilla. In 551 Shilla attacked the Koguryŏ stronghold in the Han River basin in concert with King Sŏng (r. 523-554) of the Paekche Kingdom. Shortly afterwards the large area of land in the upper Han River basin came into Shilla's possession, and soon thereafter the Paekche forces were driven from the lower Han River basin, thus securing the entire area for Shilla. The Paekche monarch King Sŏng then launched an assault on Shilla but was killed in battle at Kwansan Fortress (present day Okch'ŏn) and this event marked the end of the 120-year long Shilla-Paekche alliance. The possession of the Han River basin provided Shilla with much needed human and material resources in addition to providing a passageway through which to conduct communications with China to the west. Chinhŭng continued his expansionist activities and in 562 defeated Greater Kaya (Tae-Kaya; the modern day Koryŏng area), thus taking the whole of the Naktong River basin for Shilla. He also expanded Shilla's territory to the northeast, taking much of the Hamhŭng plain of present day North Korea. To commemorate the territorial expansion of Shilla, Chinhŭng personally toured the newly conquered areas, and to mark the new boundaries of
Shilla, monument stones were erected. A stele at Ch’angnyöön (Koryöng area) marked the southern expansion against Paekche and Greater Kaya, a marker at Pukhan Mountain (present day Seoul) designated the western augmentation, and the monuments at Hwangch’o and Maun passes indicated the Shilla expansion into the present day Hamhung area of northern Korea.

King Chinhung is not only known for his territorial ambitions and his conquests, but also for his domestic political activities that assisted the consolidation of the political and governing apparatus of Shilla. First of all he ordered Koch’ilbu to compile the Kuksa (National History) in 545, which provided a record of the events of Shilla. Chinhung also accelerated the advance of the Confucian governing ideology in Shilla and safeguarded the position of Buddhism that had been formally adopted by Shilla during the reign of King Póphung. Buddhism greatly expanded during the reign of Chinhung with the construction of temples and the importation of Buddhist scriptures. Perhaps one of the most important domestic activities of Chinhung was the founding of the Hwarang (Flower of Youth) that is thought to have occurred at an early point in his reign. The Hwarang, aristocratic youths trained in the military arts, became an important element in the eventual unification of the Three Kingdoms by Shilla.

Bibliography

Chinju

Situated in the southwestern part of South Kyöngsang Province, Chinju is comprised of the town of Munsan and the townships of Kümögok, Kumsan, Nadong, Taegok, Taep’yöng, Myöngsökö, Mich’ön, Sabong, Sugok, Ibansöng, Ilbansöng, Chöngch’ön, Chisu, Chinsöng and Chipyöön. The present city was formed when Chinju expanded to include those areas previously known as Chinyang County. Geographically, the city consists of low hills, with the Nam River flowing east to west through it. To the west of Chinju stands Namgang Dam. Built in the 1960s, the dam has created Chinyang Lake, a popular resort. As for transportation, the Namhae Expressway and Kyöngjon railway line link Chinju to other cities in the region, and an expressway connecting Chinju with Taéjöön is presently under construction. In addition, there is an airport with flights to Seoul and Cheju Island.

Historically, Chinju has had a productive agricultural sector. Although rice is cultivated in the level areas adjacent to the Nam River, most of the area’s farming is devoted to dry field crops. Orchards here grow persimmons, pears, peaches and chestnuts, and green houses are used to produce melons and pineapples. In the Nam River Basin, there are numerous bamboo thickets. Traditionally, local residents produced bamboo handicrafts as a means of supplementing their income from farming. In the city centre, there is a large industrial park. Here Taedong Industries, Korea’s largest producer of farming machinery, produces tractors, engines and mechanised ploughs.

Tourism is an important part of the local economy. With numerous reservoirs, the city attracts sports fishermen and tourists from the nearby area. Chinju’s culinary speciality is a raw fish dish made from Kköchöogi (Coreoperca kawamebari), a fresh-water fish of the perch family. Anglers catch the fish in the clear water of the Töck’ön River. The city is also famous for Chinju pibim pap, a dish of rice mixed with fresh vegetable greens, shredded and grilled beef etc.

Chinju boasts a large number of historical sites. At the beginning of the Three Kingdoms period, the Chinju area was part of Kaya, a tribal federation that was eventually annexed by the Shilla kingdom. Near the CBD, a number of large tombs have been discovered, indicating that this area was politically powerful during the Three Kingdoms period.
Judging from rare Kaya artefacts excavated from the Okpong-dong tombs, scholars believe that this area belonged to Koryŏng Kaya.

In Kumsan Township’s Yonga Village, one finds Kumhoji, a small man-made lake built during the Shilla period. Southeast of the temple lies a picturesque valley that cuts through a dense forest. At the top of the valley stands Changgok Temple, an ancient monastery founded by Tosŏn during the Shilla period. Here one finds a three-storey stone pagoda, a bronze incense holder created in 1397 and a holder for the large scroll paintings that were hung outside Korean temples during ceremonies. The temple’s Main Buddha Hall, rebuilt in 1612, has been designated South Kyŏongsang Province Tangible Cultural Asset No. 51.

In Ibarsŏng Township’s Yongam Village one finds the old site of Yongam Temple. Artefacts at the site include a Koryŏ-era stupa (Treasure No. 372), a stone Buddha figure (South Kyŏongsang Province Tangible Cultural Asset No. 4) and a stele commemorating Hongja, who served as National Overseer of Monks (kukt’ong). At Kosan Hermitage in Sugok Township, there is an exquisitely carved Buddha statue from the Koryŏ period. Unlike most statues from this period, the stone backdrop, depicting the Buddha’s aura, is still extant. At Samsŏn Hermitage in Sangbong-dong, there is a large bronze bell which has been designated South Kyŏongsang Province Tangible Cultural Asset No. 55.

Chinju also contains numerous relics and shrines associated with the Hideyoshi Invasions (1592-1598). In Namsŏng-dong, one can see the remains of Chinju Fortress. The walled fortification that once stood here is believed to have been originally built during the Koryŏ period, but was partially destroyed during the first Hideyoshi Invasions (1592-1593). It is believed that approximately 70,000 Korean soldiers and civilians lost their lives in the battles fought here at that time. In 1605, the provincial commander-in-chief Yi Suil rebuilt the fortress. Chinju Fortress underwent further restoration in 1970. Within the fortress walls, one finds Chinju National Museum, which houses a good collection of Kaya artefacts.

Overlooking the Nam River stands Ch’oksongnu, a pavilion originally built in 1368. Known as one of the three great pavilions of Korea, the structure, burnt down during the Korean War, has recently been rebuilt. Below the pavilion on the river bank lies Ui (Righteousness) Rock. The site is associated with Non’gae, a kisaeng (female entertainer) famous for her patriotism during the Hideyoshi Invasions. When Japanese troops attacked the area, they fought a particularly bloody battle over Chinju Fortress. After their victory, Non’gae lured the Japanese commander to the bank of the Kum River. With her arms around the commander’s neck, Non’gae is said to have jumped into the water, drowning both herself and the general. Upriver from the rock stands Ch’ungnyŏlsa, a shrine commemorating the Korean soldiers who gave their lives in the battle for Chinju Fortress.

In addition to historical sites, there are a number of Confucian schools in the area including Namak Sŏwŏn on the north slopes of Mt. Pongdae (409m), Yonggang Sŏwŏn in Chisu Township and Chinju Hyanggyo in Okpong-dong. There are also numerous modern schools in the area, such as Gyeong Sang National University in Kajwa-dong, Gyeong Sang Medical College in Ch’iram-dong, Chinju National University of Education in Shinan-dong, Chinju Nursing College and Chinju Technical College.

**Chinju National Museum**

Chinju National Museum (Kungnip Chinju Pangmulgwan) is located in Namsŏng-dong in Chinju. Opened in November 1984, the museum is home to Kaya artefacts recovered from the lower and middle reaches of the Naktong River. Items in the collection include earthenware, jade jewellery, metalware, carved bone, weapons, lacquerware, woven goods, calligraphy and paintings. Most of the Neolithic and Bronze Age items in the collection are from the southern part of South Kyŏongsang Province. In addition to
managing exhibitions, the museum participates in archaeological excavations in the local area.

**Chinjung ilgi** (Front Line Diary)

*Chinjung ilgi* is a late Chosŏn work that records the suppression of the 1811 Honggyŏngnae Rebellion. It is composed of two volumes and two fascicles and is a calligraphed work. The author of this work is not known.

The Honggyŏngnae Rebellion started when Hong Kyŏngnae, a yangban who had failed the civil service examination and could not begin an official career, conspired with others in the region against the government. They wanted to ensure that the discrimination that plagued those from P'yŏngan Province would end and gathered discontented farmers, merchants and others from the area and rose up against the government forces. They soon controlled the entire area north of the Ch'ŏngch'ŏn River, but were subsequently defeated by government forces that crushed the rebellion. Hong was eventually killed in a battle for control of Chŏngju City.

Of the historical records of the Honggyŏngnae Rebellion, *Chinjung ilgi* is widely acclaimed as providing the most extensive and thorough account of the struggle. In recent years the work has been included in various collections of historical records including the 1986 *Han'guk minjung undongsa charyo chip* (Historical Records of the Korean People's Movement) published by Yŏgang Ch'ulp’ansa. The *Chinjung ilgi* provides a valuable record of both the turmoil that occurred in the waning days of the Chosŏn Kingdom and also of the social discrimination that those in the northern provinces of Korea faced in this period.

**Chinnanp’o (Namp’o)**

Commonly known as Namp’o in North Korea, and as Chinnanp’o in South Korea, this seaport is located in the southwest corner of South P’yŏngan Province.

Originally a small fishing village, Chinnanp’o held strategic importance during the Sino-Japanese War (1894), with the Japanese navy making full use of the port. After the war, the Japanese called for the opening of the port to foreign merchants, but their diplomatic initiatives were blocked for a while by Karl Waeber, the Minister of the Russian Legation in Seoul. The port was first opened to foreign traders in October 1897. From this time, Japanese and Chinese merchants competed for influence in the area. When the Russo-Japanese War commenced, Namp’o became a major supply base for Japanese naval operations.

Chinnanp’o was given city status in 1945, and later changes to the administrative boundaries resulted in an expansion to eventually include the former counties of Kangsŏ and Yonggang. The city is administered by the central government. Covering an area of 1,000 sq.kms., Chinnanp’o has a population of about 750,000.

The area consists mostly of low hills with a great deal of level land. It is ideally suited to rice growing and slightly less than half of the total arable land is used for this purpose. The remainder grows dry-field crops including corn; varieties of bean; wheat; sorghum; Chinese cabbage; turnips; eggplant; garlic; and red pepper. Apples, peaches, pears and grapes are also grown here. Local fish catches include yellow corbina; hairtail; flatfish. Clam and brown seaweed (*miyŏk*) are harvested. The city’s main industries are glass making; machinery and machine parts manufacture; and shipbuilding.

The city’s climatic range is from an average low of minus 6.8 deg.C. in January, to an
average high of 25.1 deg.C in August. Annual average rainfall is 702 mm.

Chinŏn Sect  [Buddhism]

Chinsa  [Confucianism; Education]

**Chinsŏng, Queen** (r. 887-897)

Queen Chinsŏng (? –897), the fifty-first monarch of Shilla, ruled from 887 to 897 and was the last of the three female rulers of the kingdom. Her family name was Kim and given name Man. Chinsŏng’s father was King Kyŏngmun (r. 861-875), and her brothers were King Hŏn’gang (r. 875-886) and King Chŏnggang (r. 886-887).

Directly after her accession, Chinsŏng gave her subjects tax exemptions for a period of one year, as well as decreeing other measures designed to gain popular support. In 888, however, after her husband and chief retainer Kim Wihong (? –888) died, the political situation quickly deteriorated. Coupled with the political problems then prevalent, the loss of other key men in the government, (such as Wang Kŏin, arrested for alleged anti-government writings), and the lack of tax revenues which put undue pressure on the treasury, the situation became critical. The Shilla government sought to overcome its financial problems by the forced collection of taxes in 889, but this resulted in even greater unrest and uprisings by the peasants. (The peasant class was saddled with double taxes since they already had to pay their dues to the local gentry families that controlled the countryside.) At this time, the government was unable to subdue an uprising in Sabŏl (present Sangju), and seizing the opportunity, brigand bands roved unchecked and pillaged at will. Many rebellions took place across the country, one (in 891), led by Yanggil erupted at Pugwŏn (present Wŏnju), who then sent his lieutenant Kungye (? –918) to sack Myŏngju (present Kangnum). After this, Kyŏnhwŏn (? –936) led an insurgency in present Chŏnju that resulted in him forming the Later Paekche Kingdom. Further, as well as the rebellions which swept Shilla’s diminishing territory, in 896 the so-called ‘Red Trousered Banditti (chŏkkŏjŏk), a large and powerful force of brigands, took control of the area southwest of the capital.

Into this turbulent situation, Ch’oe Ch’iwŏn (b. 857) returned from Tang China and presented his proposals to Queen Chinsŏng for reforms of government that would help to quell the uprisings. His reforms for strengthening the monarchy, however, were not accepted by the chingol aristocracy-dominated court, and Ch’oe therefore retired from public service. In the sixth month of 897, as Queen Chinsŏng saw the situation further deteriorate, she abdicated her throne to the son of her brother, King Hŏn’gang, thus ending her reign. Shilla’s demise, at this point, was inevitable as the Later Paekche and Later Koguryŏ kingdoms gained strength. However, Queen Chinsŏng did not see the fall of Shilla as she died at the end of 897.

**Chinul** (1158-1210)

Chinul styled Moguja, was born in Sŏhŭng in Hwanghae Province. As a young boy, Chinul had a weak constitution and was continually ill. His father prayed to the Buddha that if his son were cured, he would send him to a Buddhist temple. When the young Chinul suddenly recovered, the parents had him ordained. Thus, Chinul took the monastic precepts under Master Chonghwŏn of the Sagul branch of Sŏn.

At the age of twenty-five, Chinul called on his peers to join in the creation of the Samadhi and Prajna Community (Chŏnghye Kyŏlsa), a group that would reject fame and gain in order to focus on spiritual cultivation involving textual studies, worship and manual labour. Chinul was disillusioned with the ceremonial Buddhism of his day. He sought to create a
reform movement emphasising the basic message of Buddhism. In spite of a positive initial response, the community was not formed immediately.

Deciding to leave the secular concerns of the capital behind, Chinul went to southern Cholla Province where he spent the next three years focusing on his own cultivation. His first religious breakthrough occurred while reading the Platform Sutra of the Sixth Patriarch. Chinul became ecstatic when he read the passage, 'The Self-nature of Suchness gives rise to thought. Although the six organs see, hear, perceive and know, [you are] not stained by the myriad images and the True Nature is always free.' Notably, Chinul’s sudden-enlightenment did not occur as a result of meeting a living Sŏn master. The catalyst for the experience was a text. Perhaps for this reason, the positive role of the written teachings came to be a characteristic feature of Chinul’s subsequent thought.

In 1185, Chinul continued his self-cultivation in Kyŏngsang Province. At this time, he became concerned with the conflict between Sŏn (Meditation) and Kyo (Doctrine). Chinul perused the vast body of Buddhist literature looking for a solution. While reading the Avatamsaka Sutra, Chinul had his second illumination as he realised that there was a basic unity underlying the teachings of Sŏn and Hwaŏm (Chin. Huayan). Yet, Chinul still had questions about the ‘initial gate of entrance in faith’ discussed in the Hwaŏm teachings. These doubts were answered, however, when Chinul read Huayan thinker Li Tongxuan’s interpretation of faith. According to Li, one realised Buddhahood at the very beginning of one’s cultivation, with the arousal of faith.

After this realisation, Chinul devoted his energies once more to the establishment of the Samadhi and Prajna Community. The community was initially based at Kŏjo Hermitage, but as it grew, the burgeoning movement was moved to Mt. Songgwang. On his way to the new site, Chinul stopped at Sangmuju Hermitage on Mt. Chiri to do a retreat. At this time, Chinul had his final religious breakthrough while reading the writings of Dahui Zonggao (1089-1163), a Chinese Chan (Zen) master of the Linji lineage. Chinul was particularly impressed with Zonggao’s kanhwa method of meditation.

As a theoretic basis for the unity of the Sŏn and Kyo schools, Chinul advocated sudden-enlightenment gradual-cultivation (tono-chŏmsu). This approach was primarily derived from the Sŏn thought of Zongmi (780-841) and the Huayan thought of Li Tongxuan. Chinul felt that sudden-enlightenment ensured that the practitioner perceived the underlying unity of Buddhas and sentient beings at the beginning of practice. However, even after sudden-enlightenment, the practitioner had to undergo a gradual course of training aimed at eliminating the habit-energies (sūpki) - latent defilements that still obscured consciousness.

Chinul’s vision of the natural correspondence between Sŏn and Kyo (the practical and theoretical orientations to practice, respectively) has had a pervasive influence on virtually all subsequent Korean Buddhist thinkers. He trained hundreds of disciples, including Ch’ŏnjin, Hwagyŏn, Suu, Inmin, Kahye and Hyeshim. In addition, Chinul wrote: Sushimgyŏl (Secrets on Cultivating the Mind), Wŏndon sŏngbun non (The Complete and Sudden Attainment of Buddhahood), Kanhwa kyŏrŭi non (Resolving Doubts About Observing the Hwadu), Chinshim chiksŏl (Straight Talk on the True Mind), Pŏpchip pyŏraehang nok chŏryo pyŏngip sagi (Special Practice Record with Personal Notes) and Hwaŏm non chŏryo (Excerpts from the Exposition of the Avatamsaka Sutra). Chinul was posthumously named National Master Puril Pojo.

Bibliography

Chiri Mountain

Mt. Chiri is actually the name for an extensive, mountainous area situated on the border of North Cholla, South Cholla and South Kyongsang Province. Designated Chiri-san National Park, this area is the largest park in Korea covering approximately 450 square kilometres. Ch’ŏn’wang Peak, the mountains highest point, rises 1,915 metres above sea-level, giving Mt. Chiri the added distinction of being the highest mountain on the South Korean mainland. To the west of Ch’ŏn’wang Peak, there is Ch’ilsŏng Peak (1,576 metres), Tŏkp’yŏng Peak (1,522 metres), Myŏngsŏn Peak (1,586 metres), T’okki Peak (1,534 metres), Panya Peak (1,732 metres) and Nogodan (1,507 metres). To the east lie Chung Peak (1,875 metres), Ha Peak (1,781 metres) and Ssŏri Peak (1,640 metres). The main ridge is almost vertical to the Kaji Ridge. Both ridges are between 700 to 1,300 metres high, providing excellent views to visitors who hike up the mountain’s numerous trails. The main ridge splits Mt. Chiri into two sectors: the area south of the ridge being known as Outer Chiri and the area to the north as Inner Chiri. The source waters of the Nakdong and Sŏmjin River flow down from Mt. Chiri, carving out deep valleys.

Abundant plant life is found in the park, with variations depending on elevation. Up to 500 metres, there are Japanese oaks (Quercus serrata), hornbeams (Carpinus laxiflora) and chestnut trees. The forests from 500 to 1000 metres are characterised by dogwoods (Cornus controversa), pines, Japanese oaks and hornbeams. From 1000 to 1,400 metres, one finds silver firs (Picea jezoensis), Korean firs (Abies koreana), Mongolian oaks (Quercus mongolica) and rhododendrons (Rhododendron Schlippenbachii), whereas the area from 1,400 to 1,900 metres contains Sasüre Trees (Eurya japonica) and birches (Betula Ermanii). Mt. Chiri is also a haven for wildlife with 165 bird species and 41 mammal species. In fact, the rare Korean bear is believed to inhabit this area.

The mountain has been known by a number of names. Most of these are ultimately derived from the pure-Korean word ‘turae,’ which simply means ‘mountain.’ According to the Shiji (Historical Records), there were three sacred mountains to the east of the Yellow Sea: Mt. P’eng-lai, Mt. Ying-chou and Mt. Fang-chang. These three mountains are thought to be Mt. Kŭmgang, Mt. Halla and Mt. Chiri, respectively. Sometimes, Mt. Myohyang was added to this list, which thus became the four sacred mountains, or Mt. Kuwŏl was added, bringing the number to five.

Traditionally thought of as a holy place, Mt. Chiri contains a large number of religious sites. The artifacts of Inner Chiri tend to be associated with Shamanism or Taoism, while those of Outer Chiri are usually connected with Buddhism. In Kurye County lies Hwaŏm Temple, the area’s most famous Buddhist site. The original temple was built in 544 by the monk Yŏn’gi. The temple houses a great number of national treasures. Over ten other temples are found at the foot of the mountain, many containing important historical artifacts.

The mountain is also important for its natural resources. Kaolin, silica, gold, silver, nickel and molybdenum are mined in this area. In addition, this area contains about one-fifth of South Korea’s total forest cover. Mt. Chiri’s mineral wealth, combined with its rich historical and religious heritage, make it one of Korea’s most important park areas.

Bibliography

HMMS, vol. 21.
Cho Chōngnae (1943- )

Cho Chōngnae is a novelist. He was born in Seoul and attended Dongguk University with a major in Korean literature, graduating in 1966. Cho worked as a high school teacher from 1970 to 1972 and then on the editorial staff of the magazine Wolgan munhak (Monthly Literature) for the next three years. Subsequently he served as chief editor of Han'guk munhak (Korean Literature) from 1984 to 1989. Cho has received numerous literary awards including the Hyundai Munhak Literary Prize in 1982, the Korean Literature Prize in 1982, and the Best Novel Award in 1984.

Cho’s works have largely dealt with themes surrounding the partition of Korea and the Korean War and describe the social and ideological conflicts that have resulted from the breakdown of the traditional class and social systems. Perhaps his two best known novels are Yuhyŏng ūi ttang (The Land of Exiles) and T’aebaek sanmaek (T’aebaek Mountains), which were both written in the 1980s.

Yuhyŏng ŵi ttang is set during the Korean War and depicts the tragedy of people enmeshed in the social agitation caused by the War, which is presented by Cho as a synthesis of inhumane barbarity, false political ideologies, social discord and historical inconsistencies. The death of the protagonist of this work is the result of class prejudice and poverty that were magnified by the War.

T’aebaek sanmaek is considered to be the most representative work of Cho. This ten-volume work centres on Korean history and ideological conflicts. Although the novel is set in the period from liberation in 1945 until the outbreak of the Korean War in June 1950, Cho retreats to the end of the Chosŏn period and wends his way through the colonial period, in order to explain the historical precedents that led to the Communist Yosu Rebellion (Yŏsu pallan) of 1948. This work is thoroughly researched and thus enables the author to recreate the activities of the partisan refugees who sought sanctuary in the Chiri Mountains from government forces. In addition, Cho describes the ideological confrontations that eventually led to the partition of Korea.

Cho is widely acclaimed as one of the finest modern Korean novelists for his vivid descriptions and the development of his characters. A further multi-volume work - Arirang - is under way.

Cho Chun (1346-1405)

Cho Chun was a civil official of the late Koryŏ and early Chosŏn periods. His family’s ancestral home is in P’yŏngyang, his courtesy name was Myŏngjun and his pen names included Ujae and Songdang. His father, Cho Tŏkyu, was a high-ranking official in the Koryŏ government. His son, Cho Taerim, married Princess Kyŏngjŏng, the second daughter of King T’aejong (r. 1400-1418), thus revealing the close position that Cho enjoyed with the royal family of Chosŏn.

Since none of Cho’s five brothers passed the civil service examination his mother was greatly saddened. As a result, Cho studied diligently from an early age and in 1374 he passed the higher civil service examination (kwagŏ shi) and was appointed Third Deputy Commander (hogun) in the Division of the Left and Right (Chwauwi) in addition to other official duties. Subsequently he was appointed as Naval Deputy Commander (allyŏmsa) of the Kangnung area and his leadership qualities were recognised by both the people and his superiors in the Koryŏ officialdom. He continued his rise in the Koryŏ government but
retired from government life in 1388. It was at this time that he became acquainted with Hŏ Kŭm, Chŏng Chi and others of that ilk.

The final years of Koryŏ proved to be increasingly filled with turmoil and political infighting as those around the throne fought for a share of power. King U (r. 1374-1388) was able to take the throne due to the backing of General Yi Inim (?-1388). However, Yi was the true power in Koryŏ and abandoned the pro-Ming policy of King Kongmin (r. 1351-1374), in its stead adopting a pro- Yuan foreign policy. Many in the Koryŏ government opposed this including Yi Sŏnggye (King T'aejo, r. 1392-1398) and Chŏng Mongju (1337-1392). Cho was among this faction that contested the pro-Yuan policies. The situation was not resolved and in 1388 the Ming announced their intention to establish a commandery in the southern part of Hamgyŏng Province, which would have been tantamount to annexing the whole of northeastern Korea. It was at this time that the Yi Inim faction was driven from power and Yi Sŏnggye and Ch'oe Yŏng (1316-1388) seized power. Ch'oe was determined to attack the Ming and gained the approval of King U. An army was raised and an expedition was launched to the north. Yi Sŏnggye, however, had other plans and marched his army back from Wihwa Island on the Yalu River and attacked Ch'oe and King U, thus seizing power for himself.

Cho was a major supporter of Yi Sŏnggye and helped the new power behind the Koryŏ throne consolidate his political base. Cho and Chŏng Tojon (1342-1398) assisted in the process of deposing King Ch'ang (r. 1388-1389) and installing King Kongyang (r. 1389-1392) on the throne. Cho was instrumental in carrying out sweeping land reforms in 1389 and was accordingly promoted to higher positions. In 1391 he travelled to Ming China on an embassy marking the emperor's birthday. However, in the following year he, along with Chŏng Tojon, was the object of denunciation by the Chong Mongju faction and was arrested. Yet shortly after this in 1392, Chŏng was driven from power by Yi Sŏnggye and Cho was appointed to a position in the Council of State (Ch'o'miibu) and the Finance Office (Samsa).

After the founding of the Chosŏn dynasty in 1392, the true political power centred on Chŏng Tojon, with whom Cho had differences of opinion. In matters surrounding the nomination of the crown prince, Chŏng favoured Yi Pangsok, the youngest son of King T'aejo, while Cho supported Yi Pangwŏn (King T'aejong, r. 1400-1418) who had contributed mightily to the founding of Chosŏn. Yi Pangwŏn proved to be superior to his brothers in contesting for the throne as he had Pangsok assassinated and held true power even after his brother Yi Panggwa (King Chŏngjong, r. 1398-1400) ascended to the throne. Two years later Pangwŏn took the throne and the political fortunes of Cho likewise escalated. Cho was appointed as Second State Councillor (chwauijŏng) and then as Chief State Councillor (yŏngŭijŏng), in addition to his position as the royal in-law.

Cho was important in the establishment of the governmental structures of the fledgling Chosŏn State. In collaboration with Chŏng Tojon he compiled Kyŏngje yukchŏn (Six Codes of Governance) the administrative code that would guide the early years of Chosŏn and serve as the basis for the subsequent Kyŏngguk taejŏn (National Code) promulgated in 1471. Another accomplishment of Cho was his role in the establishment of the Rank Land Law (kwajŏn pŏp) which helped to secure a financial basis for the official class that would come to dominate the government. The Rank Land Law provided the foundation that would enable the neo-Confucian literati to come to the forefront of Chosŏn society, and thus pave the way for the many changes that this period brought about. Cho was also known for his literary talents, which are revealed in his collected works, Songdang chip (Collected Works of Songdang). He is further remembered as one of the meritorious elite that were instrumental in helping T'aejo found Chosŏn, and additionally in stabilising the dynastic succession after his death.

Cho Hŏn (1544-1592)
Cho Hŏn was a middle Chosŏn period scholar, Confucianist and leader of volunteer forces in the 1592 Japanese Invasion. His family’s ancestral home is in Paech’ŏn, his courtesy name was Yŏshik and his pen names included Chungbong, Towŏn and Huyul. Cho was born in Kimp’o of Kyŏnggi Province and was the son of Cho Ungji. He was also the disciple of Yi I (1536-1584) and Sŏng Hon (1535-1598).

Cho’s family was quite poor and thus he was plagued with hardship while growing up, but still managed both to serve his parents and pursue his studies. In 1565 he entered the National Academy (Sŏnggyun’gwan) and two years later passed the military section of the Triennial Examination (Shingnyŏn shi). The following year he entered Chosŏn officialdom and by 1572 had been elevated to a position at the Office of Editorial Review (Kyosŏgwan). Cho continued his climb in the Chosŏn bureaucracy, although at times he was beset with problems stemming from his opposition to certain policies. He was appointed to an embassy to Ming China to mark the emperor’s birthday (sŏngjolsa) and from 1575 served as Assistant Section Chief (chwarang) of the Board of Taxation (Hojo) and the Board of Rites (Yejo), and as Librarian (chŏnjŏk) of the National Academy. However, while he was serving as Magistrate (small county, hyŏngam) of T'ongjin in Kyŏnggi Province he was censured for not properly controlling the slave population and suffered exile to Pup yŏng for three years. When he returned to government service he served as Assistant Section Chief of the Board of Works (Kongjo) and as Inspector (tosa) of Cholla Province among other positions. Cho continued to have a somewhat chequered career as a government official; he was recognised as an excellent official and was appointed to various positions; however, he was also exiled several times for diverse offences and for political reasons. Nonetheless, Cho did play an important role in the negotiations with Japan and Ming China before the outbreak of the 1592 Japanese Invasion.

In the fourth month of 1592 after the Japanese forces had invaded Chosŏn, Cho and fellow-yangban Yi U, Kim Kyŏngbaek and Chŏn Sŏngŏp gathered a volunteer force of about 1,600 men in Okch’ŏn of Ch’ungch’ŏng Province. In the eighth month of the same year Cho combined his volunteer forces with those of Yŏng Kyu and routed the Japanese forces at Ch’ŏngju Fortress. However, due to interference from the military officials in Ch’ungch’ŏng Province the volunteer forces were dispersed and primarily as a result of his weakened force, Cho was killed when his troops launched an assault on the Japanese at Kumsan. Cho was posthumously honoured by the Chosŏn government several times for his loyal and courageous leadership of volunteer forces during the crisis resultant from the Japanese invasion. In 1734 he was posthumously awarded the title of Chief State Councillor (yŏnguijong) and memorial services were held to commemorate him at various sŏwŏn (private Confucian academies) including the Ujŏ Academy in Kimp’o and the Songgok Academy in Kŭmsan.

Cho Island

The area formerly known as Cho Island has now been connected, through land reclamation projects, to Mijo Township in South Kyŏngsang Province’s Namhae County. The island covered a total area of 0.32 square kilometres and as of 1985, had a population of 231. It was mountainous with a maximum elevation of 96 metres and had a rugged coastline. Due to its southern location, the area’s climate is mild, with an average January temperature of 1.2 deg. c. and an average August temperature of 25.8 deg. c. The area annually receives an average of 1 100mm of rainfall and 20mm of snowfall. Most of this area’s farming land is used to grow sweet potatoes, beans and garlic. Local marine products include eel, crab and seaweed.

Cho Kwangjo (1482-1519)
Cho Kwangjo was an early Chosŏn scholar official. His family’s ancestral home is in Hanyang, his courtesy name was Hyojik and his pen name Chŏngam. He was born in Hansŏng, the capital of Chosŏn, which is now present-day Seoul. He was a fifth-generation descendent of Cho On, who was one of the meritorious subjects that assisted in the founding of Chosŏn, and the son of Cho Wŏnggang a Bailiff (kamch’al) of the Office of the Inspector-General (Sahŏnbu). With the Purge of 1498 (muo sahwa) Cho’s father was exiled to Huich’on, and while domiciled there Cho studied under the eminent neo-Confucian scholar, Kim Koeng’i1 (1454-1504). Cho studied the neo-Confucian doctrines with vigour, and eventually succeeded Kim, (who had carried on the teachings of Kim Chongjik (1431-1492)), in assuming leadership of the Sarim Faction. Cho passed the Literary Licentiate Examination in 1510 and then entered the National Academy (Sŏnggyun’gwan).

With the accession of King Chungjong (r. 1506-1544), the situation of the neo-Confucian literati improved considerably. The new monarch, unlike his deposed half-brother Prince Yŏnsan (r. 1494-1506), was receptive to the input of the literati in the administration of the state and so the literati came to play a major role during his reign. Cho was particularly favoured by the king and rose rapidly through the hierarchy of Chosŏn officialdom. He held the political aim of establishing a government guided by strong moral ethics, and was especially imbued with Confucian ethics and social mores. His major contribution to the administration of the Chosŏn governing apparatus was the implementation of the Village Code (hyangyak), which established a type of self-government in the villages, supplemented with a commitment to justice and mutual assistance in times of need. Moreover, Cho advocated the translation into han’gul and publication of the basic Confucian doctrines, in order to spread the ethical content of these works among the common people, and as a way of eliminating the injurious effects of the shamanistic and Buddhist beliefs that prevailed outside the sphere of the literati. Another change Cho made to the Chosŏn administration was in advocating the so-called ‘examination for the learned and virtuous’ (hyŏllankkwa), which allowed the recruitment of capable men into the bureaucracy by means of a simplified examination. Thus, increasing numbers of neo-Confucian literati were able to enter the Chosŏn government and of course, this greatly increased their power.

As the standing of the faction led by Cho increased, so he concentrated his efforts on eliminating the influence of those who had helped Chungjong assume power, and in particular sought to reduce the rewards they were then enjoying. He was successful in removing seventy-six of the recipients, which represented almost three-quarters of the list of merit subjects compiled thirteen years earlier. This, however, was Cho’s downfall, as the wrathful merit subjects now convinced Chungjong that his own position was jeopardised and induced him to purge Cho and his faction. Consequently, Cho was executed in the ensuing Purge of 1519 (kimyo sahwa) and this brought about a temporary abatement of the growing power of the neo-Confucian literati.

Cho received a series of posthumous accolades, including titles bestowed by the king and the establishment of sowŏn (private academies). Cho represents an important link in the establishment of the neo-Confucian tradition that stemmed from late Koryŏ literati Chŏng Mongju (1337-1392) and Kil Chae (1353-1419). His writings are preserved in Chŏngam chip (Collected Works of Chŏngam).

Cho Manshik (1882-1950)

Cho Manshik was an independence activist and politician of the colonial period. His family’s ancestral home is in Ch’angnyŏn, his pen name was Kodang and he was born in Kangsŏ of South P’yŏngan Province. When Cho was young he learned the Chinese classics from his father and by the age of fifteen had begun to work, and thus his childhood
passed quickly. At the age of twenty-three he entered Sungshil Middle School in P'yŏngyang and at the same time embraced Christianity. In 1908 he travelled to Japan for study and learned English, among other subjects. In 1910 he entered the Law Department of Meiji University and while attending he founded the combined Presbyterian and Methodist Chosŏn People's Church (Chosŏnin Kyohoe) together with Paek Namhun and Kim Ch'ongshik. Cho also formed a nationalist movement that was modelled after the principles of non-resistance that were advocated by Mahatma Ghandi (1869-1948). In 1913 he returned to Korea after graduation and began work at Osan School, which had been founded by a former classmate Yi Sŭng hun. After two years he was appointed as principal of the school, but in 1919 resigned from his position to join the March First Movement. Shortly thereafter he was arrested by the Japanese police and incarcerated for one year.

On being released from prison, Cho resumed his duties as principal at Osan School, but due to harassment from Japanese officials soon resigned. He then returned to P'yŏngyang where he held a position as director of general affairs for the P'yŏngyang Christian Youth Association (P'yŏngyang Kidokkyo Ch'ongnyŏn Hoe) and concurrently served as an elder of the Sanjonghyo Church. At about this same time Cho and his lifelong acquaintances Shim U and O Yunsŏn, founded the Korean Products Promotion Campaign (Chosŏn Mulsan Changnyŏ Hoe). It was through this organisation that Cho carried out a nationwide promotion of buying Korean products in collaboration with Yi Kwangsu (1892-?), Yŏm T'aegi, et al. This nationwide movement for buying Korean products formed an unusual coalition of businessmen, students, journalists and independence activists, and thus was important in the independence movement. Others who played notable roles in this movement include Kim Sŏngsu (1891-1955) the publisher of the Donga ilbo newspaper and Kim Tongwŏn who owned a textile company.

Cho was also active in other aspects of the independence movement such as the one promulgated to form a Korean college. This, however, was a failed attempt due to its oppression by the Japanese. He continued his educational activities and served as principal of the Sungin Middle School, as well as forming other educational groups. In 1927 Cho participated in the activities of the New Korea Society (Shin'gan Hoe), a nationalist organisation that sought to present a united front of both communists and nationalists, but this group failed too, due to Japanese persecution. By 1932 Cho was serving as vice-president of the Chosŏn ilbo newspaper and through this organ carried out his nationalist activities. Throughout the colonial period Cho carried on pro-Korean activities in the P'yŏngan region based upon the Ghandian ideology of peaceful resistance and this resulted in his both gaining respect from his countrymen and suspicion from the Japanese.

After liberation in 1945 Cho remained active in the politics of the northern part of Korea, which was now dominated by the Soviet Union. Cho advocated a middle line in his approach to the political turmoil that surrounded the post-liberation period. The Soviets soon made it clear that they intended the Communist Party to be the predominant political organisation, but since the organisation was so weak in Korea they were forced to cooperate with the nationalists. In particular, no Korean communist could command the popularity and respect that Cho had with the people of the region. The Soviets recognised Cho's popular appeal and asked him to support their plans for Korea. Cho even gave an introductory speech to present Kim Il Sung (Kim Ilsŏng) to the Koreans after he returned from the Soviet Union. However, Cho was not a communist. He would not accept Soviet demands for Korea and thus was seen as a threat by Kim Il Sung and the Soviets. Shortly after Kim Il Sung delivered a speech attacking the past works of Cho, Cho disappeared from public view. Although it is not certain when or how he met his end, there are rumours that he was killed by the Communist authorities just before or during the Korean War.

Cho is widely praised for his peaceful resistance to the Japanese colonial occupation and his attempts to form a united front of all political ideologies in the struggle against the
Japanese. He is highly acclaimed as the ‘Korean Ghandi’ for his support of the ideologies of non-violence and peaceful resistance. He is further remembered as a devout Christian who sought to help post-liberation Korea find a middle path that was free of foreign intervention.

Cho Manyŏng

[History of Korea]

Cho Pongam (1898-1959)

Cho Pongam was a politician and independence activist of this century. His family’s ancestral home is in Ch’angnyŏng, his pen name was Chuksan and he was born in Kanghwa of Kyŏnggi Province to a poor farming family. Cho was a student at the YMCA (Young Men’s Christian Association) at the time of the March First 1919 Independence movement, but he left school to join the movement. As a result of his participation therein, the Japanese imprisoned him for one year. After being released, Cho travelled to Japan where he enrolled in the political and economic department of Chūo University. While in Japan, Cho organised a Korean students’ association in Tokyo for socialists, anarchists, and the like and carried out activities with this group. Eventually he left school in Japan and returned to Korea where he joined the labor movement. During this time he became closely involved in the formation of the Korean Communist Party and by 1925 was selected as a deputy delegate to travel to Moscow and ask the Comintern for official recognition of the Korean communist groups. The Soviets conferred approval on the Korean groups, thus officially sanctioning the Koreans. Moreover, Cho was charged with the responsibility of arranging a Korean student-training program in Moscow, which had heretofore not been conducted in a systematic manner. Cho additionally helped organise communist groups such as the Chosŏn Kongsandang (Chosŏn Communist Party), and was also active in Manchuria and China.

The communist movement in colonial Korea can be characterised by the manifold factions that emerged, but with the late 1920s policy of the Comintern of ‘one nation, one party’, this was to some extent changed. At this time Cho joined the Chinese Communist Party and carried out anti-Japanese activities with this organisation. By 1932 Cho had been apprehended by the Japanese consular police in Shanghai, following which he was convicted and sentenced to seven years gaol. After being released from prison, Cho returned to his hometown where he married Kim Choi. The couple moved to Inch’ŏn where Cho went into seclusion. Since he was on the Japanese police’s surveillance list, it was difficult and dangerous for him to conduct political activities. Nonetheless he did, and as a result was arrested by the Japanese military police in February 1945, and again imprisoned for his anti-Japanese activities. Cho remained in prison until the liberation of Korea in August 1945.

After liberation Cho once again became involved in political activities, and in particular with the communist parties in the southern half of Korea. At this time the United States-Soviet Joint Commission was established to bring about a Korean unification and the various political elements, left, right and moderate all struggled for supremacy. The leader of the communist movement in the south at this time was Pak Hŏnyŏng, and he was the target of Cho’s anger at being excluded from the decision making circles due to his denunciation of communism while in prison. Thus, Cho wrote a lengthy letter to Pak that voiced his complaints. This letter, however, was obtained by the Donga ilbo newspaper and published in May 1946, much to the chagrin of the communists. In it, Cho asserted that the tactics of the Korean communists were turning the popular masses of the south against them and that this was due to Pak’s mismanagement of the Party. Additionally, he warned against accepting the leadership of Kim Il Sung (Kim Ilsŏng) or Mu Chŏng of the north Korean communist groups. Finally, he accused Pak of splitting the nation by pursuing destructive factionalist policies. This letter marked the end of Cho’s association with the communist groups.
Cho’s political career did not end at this point, as he became a leading figure in the South after the partition of the Korean peninsula. He now entered the politics of the ‘right’ and was elected to the National Assembly in 1948. After this, President Syngman Rhee (Yi Sŏngman) appointed him as Minister of Agriculture and in 1950 he was re-elected to the National Assembly and served as Speaker of the legislative body. In 1952 he ran against Rhee for the presidency but was defeated soundly by the incumbent. In the subsequent 1956 election, however, Cho fared considerably better as he garnered more than thirty per cent of the vote and ran second to Rhee. The results in 1956 were most likely aided by the sudden death of the major opposition candidate, Shin Ikhi, shortly before the election. Later in the same year Cho began organising the Progressive Party (Chinbo Tang), which advocated as one of its main policies peaceful reunification with the North. Subsequently, Cho and a number of his associates were charged with violation of the National Security Law and of conspiring with the communists. Cho was convicted of the charges and executed on July 31, 1959.

Cho Pyŏngok (1894-1960)

Cho Pyŏngok was an independence activist and politician. His given name was Pyŏnggap, his pen name Yusŏk and he was born in Mokch’ŏn (present-day Ch’ŏnan) of South Ch’ungch’ŏng Province. He graduated from Sungshil Middle School in 1909 and in 1914 graduated from Yŏnhŭi College. In 1918 Cho graduated from Wyoming University and in 1925 received his doctorate in economics from Columbia University. He then returned to Korea and began teaching at Yŏnhŭi, while at the same time becoming deeply involved with the nationalist organisation -- the New Korea Society (Shin’gan Hoe). Because of his involvement with the New Korea Society; the Kwangju Student’s Uprising of 1926 (Kwangju Haksaeng Undong) and other anti-Japanese organisations, he was imprisoned for five years. Upon his release in 1931 he took a position with the Chosŏn ilbo newspaper as managing director. From this time until liberation in 1945, Cho led a much quieter life.

In 1948 with the formation of the Republic of Korea, Cho served as a special envoy for the nation and visited friendly nations in rapid succession. With the outbreak of the Korean War in June 1950, Cho distinguished himself in the defence activities around the Taegu perimeter. After the War, Cho pleaded with the increasingly dictatorial President Syngman Rhee (Yi Sŏngman) for reforms that would lead to a true democracy being founded in the South. As a result of opposing the release of the anti-Communist prisoners of war by the south in 1953, Cho was subjected to hardships and a prison sentence by the Rhee government. Nonetheless, after his release he was elected to the Third National Assembly, and in 1955 he organised the Democratic Party (Minju Tang) and was appointed its leader. In 1958 Cho led the struggle of the Democratic Party against the corrupt political machine of Rhee, but saw the incumbent elected to his third term as President. In 1960 Cho was nominated as the presidential candidate for the Democratic Party to oppose Rhee in his bid for a fourth term. However, one month prior to the election, Cho died following a heart attack.

Cho is remembered and praised for his righteous attitude in politics. He strongly opposed the dictatorship of Rhee Syngman and sought to establish a true democracy in Korea. His writings Minju juŭi wa na (Democracy and Me) and Na ŭi hoegorok (My Reminiscences) reveal the upright character of Cho. He was honoured by the government of the Republic of Korea in 1962 with the Order of Merit for National Foundation.

Cho Sehŭi (1942- )

Cho Sehŭi is a novelist of the contemporary period. He was born in Kap’yŏng of Kyŏnggi Province and graduated from the Korean Literature Department of Kyŏnghŭi University. Cho is counted as one of the foremost protest writers of the 1970s who portrayed the
injustice resultant from a rapidly industrialising Korea.

Cho is best known for his 1978 collection of short stories entitled Nanjangiga ssoa ollin chaqūn kong (A Small Ball Tossed By A Dwarf). This work centres on the short story by the same title that features the struggles of a dwarf and his family that live on the periphery of Korean society. The Korea depicted in this work is one of tremendous contradictions between those who are in the mainstream of society and those who are struggling to eke out an existence on the dregs left for them. Nanjangiga ssoa ollin chaqūn kong had an immense impact on Koreans of the late 1970s as it revealed the small and marginalized people that had been excluded from the advancement of Korean society. Moreover, in a period of military dictatorships it was a strong protest against the injustices and malignancies of a government that seemingly did not care about the lives it destroyed in its attempt to create a ‘modern’ state. The impact of Nanjangiga ssoa ollin chaqūn kong is heightened by the cohesion of the stories in the collection with characters reappearing in subsequent stories, thereby revealing the hopelessness of an entire community of societal misfits.

Cho subsequently published a novel Shigan yōhaeng (Time Travel) in 1983 that featured a fantasy-like escape from poverty and hardships via space travel. This work, while displaying the creativity of the author, had nothing of the impact of Cho’s previous work. However, Cho’s Nanjangiga ssoa ollin chaqūn kong continues to provide a graphic view of the lives of those who built modern Korea with their labour in the process of industrialisation.

Cho Sŏk

Cho-heung (Chohŭng) Bank

Cho Wi (1454-1503)

Cho Wi was a scholar-official of the early Chosŏn period. His family’s ancestral home is in Ch’angnyŏng, his courtesy name was T’aehŏ and his pen name was Maegye. His father, Cho Kyemun, was the Magistrate (hyŏllyŏng) of Uljin County. In 1472 Cho Wi passed both the Literary Licentiate Examination (chinsa shi) and the Classics Licentiate Examination (saengwŏn shi) and in 1474 after success in the Triennial Examination (shingnyŏn shi) he held official positions as Second Copyist (chŏngja) at the Office of Diplomatic Correspondence (Sûngmun’gwan) and Third Diarist (kŏmyŏl) at the Office of Royal Decrees (Yemun’gwan). When King Sŏnjong (r. 1469-1494) reconstituted the Sagadoksŏ, an institution for the development of talented young scholars, Cho was the first appointed. From then on Cho continued his rise in Chosŏn officialdom and served as Fourth Counsellor (ŭnggyo) in the Office of the Special Counsellors (Hongmun’gwan); Third Tutor (munhak) in the Crown Prince’s Tutorial Office (Seja Sigang’won) and as Fourth Inspector (chip’yŏng) at the Office of the Inspector-General (Sahonbu). However, to support and care for his aged mother he then accepted a position outside of the central government as Magistrate (large county, kunsu) of Hamyang. Later, Cho returned to the central government and served in a succession of positions including, Second Minister (ch’amp’an) of the Board of Taxation (Hojo) and as Governor (kwanch’alsa) of Ch’ungch’ŏng Province.

In 1498 Cho was appointed to an embassy to Ming China to mark the emperor’s birthday (sŏngjŏlsa). At this time, however, the purge of 1498 (muo sahwa) occurred, when Kim Ilson (1464-1498) included an essay (written by his teacher Kim Chongjik (1431-1492)) in the official records of King Sŏnjong, which was deemed to be critical of King Sejo’s (r. 1455-1468) usurpation of the throne, Thus, Prince Yŏnsan (r. 1496-1506) was incited by his retainers to punish the literati of Chosŏn officialdom. Although Cho’s life was
spared, he was sent into exile where he eventually died.

Cho was quite close to Kim Chongjik and is also considered to be a representative member of the early neo-Confucian literati whose rise to power enabled the early Chosŏn period to prosper. While Cho served as Magistrate of Hamyang, he prepared the Hamyang chido chi (Geography of Hamyang) which is extant. Moreover, while in exile he compiled Maegye chip (Collected Works of Maegye) which is also extant.

Cho Yŏngsŏk (1686-1761)

Cho Yŏngsŏk was a scholar-official and painter of late Chosŏn. His family's ancestral home is in Haman, his courtesy name was Chongbo and his pen names were Kwanajae and Sŏkkye sanin. He was the disciple of Yi Hŭijo. In 1713 he passed the Literary Licentiate Examination (chinsa shi) and entered into officialdom holding various positions such as Second Minister (ch'amp'an) of the Board of Personnel (Ijo). In 1742 he revised Ōgye chip (Collected Works of Ōgye), the literary collection of Cho Rya (1420-1489) one of the so-called 'six loyal subjects' (saeng yukshin). Cho also has left behind his literary work, Kwanajae ko (Treatise of Kwanajae).

Cho was recognised by his contemporaries as a painter of unusual talent who dedicated himself to not only the pursuit of artistic excellence, but also to literary theory. Cho was talented in both the painting of landscapes and in the portrayal of people in their everyday activities. Among his extant paintings, Kangsang choŏ to (Angling on the River) -- a work hung in the National Central Museum, reveals his artistic excellence and ability to capture the essence of his subject.

Chŏgori

Chogye Mountain

Mt. Chogye (884 metres), originally called Mt. Songgwang, is situated in Sŏngju County of South Chŏlla Province, next to the famous Songgwang Temple. The name Chogye comes from Mt. Cao-qi in China. As the famous mountain where Hui-neng, the Sixth Patriarch of the Chinese Chan (Kor. Sŏn, Jap. Zen) tradition resided, Mt. Cao-qi was associated with the orthodox Chan transmission from earliest times. Just as Cao-qi became a byword for Hui-neng - China’s leading Chan master, Mt. Chogye has been associated with Chinul (National Master Pojo, 1158-1210) - the leading thinker of the Korean Sŏn tradition. Even Korea’s largest Buddhist order has adopted the name Chogye.

As one of the biggest monasteries in Korea, Songgwang Temple has been home to sixteen National Masters. Even today, the temple serves as an important training centre for young monks. There are numerous affiliated hermitages up the mountain from the temple, including Kwangwŏn, Kammŏ and Ch’ŏnja Hermitage. On the eastern base of the mountain lies the picturesque Sŏnam Temple. The gentle trail between Sŏnam and Songgwang Temple is popular with hikers and Buddhist devotees who visit the area. In order to preserve the area’s important religious sites and natural environment, the mountain was designated Chogye-san Provincial Park in 1979.

Cholla Province, North

Overview
Province located in the southwest of the Korean Peninsula, bounded to the west by the Yellow Sea and separated from South Kyongsang Province to the east by the Sobaek Range, from South Chungch'ong Province to the north by the Kum River, and from South Cholla Province to the south by the Noryong Range. The province formed the heartland of the ancient Paekche Kingdom (18BC-660AD), which was incorporated into the Unified Shilla Kingdom in the seventh century and the Koryo Kingdom in the tenth century.

Geography and Climate
The province can be broadly divided into two geographical regions, the coastal plain in the west centered on the lower reaches of the Mangyong and Tongjin Rivers, where most of the province's population is concentrated, and the relatively sparsely-populated mountainous area in the east including parts of the Noryong and Sobaek Ranges. Apart from the relatively hilly Pyonsan Peninsula in the far west, the former region is largely low-lying, while the latter region contains numerous peaks of elevations greater than 1000m interspersed with basins and tablelands. Coastal districts experience tidal variations of up to six meters, and numerous land reclamation projects have been undertaken, while the construction of a dam on the upper reaches of the Sŏmjin River has improved irrigation throughout the western plain.

North Cholla Province experiences a relatively warm climate with high precipitation, although there are marked differences in conditions within each of the two major geographical regions noted above, and mountainous eastern districts experience greater seasonal temperature variations and higher annual precipitation than the coastal plain. Approximately two-thirds of annual precipitation in both regions is recorded during the four months from June to September inclusive.

Agriculture and Industry
Economic development in North Cholla Province has tended to be concentrated along the axis formed by Kunsan, Iri and Ch'o nju, and these three centers together are home to almost half of the province's population. Although the industrial sector has developed significantly since the 1960s, the pace of growth has been much slower than in other regions of the country, and agriculture continues to form the mainstay of the local economy. Rice cultivation is dominant throughout the coastal plain, while cereals predominate in hilly eastern districts. Fishing operations are concentrated on the ports of Kunsan and Ch'ulp'o, however the fishing population is relatively small. Coastal waters are home to hair-tail, shrimp and numerous other varieties of fish and shellfish, and cultivation of clams and other shellfish is found on the islands of Wi-do and Kogunsan yŏl'tto, however environmental factors such as shallow water, extreme tidal variation, and a high accumulation of sandy sediment present numerous obstacles to further development of this sector of the economy. North Cholla Province contains numerous mineral deposits, although limestone and silica dominate local production, and the majority of mines are
concentrated in mountainous northern and eastern districts. The province's industrial sector is largely dominated by small and medium-scale operations, including production of foodstuffs, beverages, tobacco, textiles and clothing, however the development of a coastal industrial zone centered on Kunsan and the nearby port of Changhang (in South Ch'ungch'ŏng Province) should lead to a further diversification of the local economy.

**Tourism**
North Choll'a province is home to a wide variety of cultural events, of which the Choll'a Arts Festival, Chŏnju Folk Festival and Ch'unhyang Festival (in the southern town of Namwŏn) are particularly popular. The province's tourist attractions include Mount Naejang, Mount Tŏkkyu, Mount Chiri and Pyŏnsan Peninsula National Parks, the uniquely-shaped peaks of Mount Mai Provincial Park, and numerous historical sites connected to the Paekche Kingdom.

**General Information**
Area: 8 042 square kilometers; population: 1 884 000 (1995 est.); provincial headquarters: Chŏnju.
Other major centers include Iri and Kunsan.

**Choll'a Province, South**

**Overview**
Province located in the southwestern corner of the Korean Peninsula, separated from South Kyŏngsang Province to the east by the Sŏmjin River and the Sobaek Range, from North Choll'a Province to the north by the Noryŏng Range, and bounded to the south and west respectively by the East China and Yellow Seas. The province also completely surrounds Kwangju Special City, location of the provincial headquarters. Originally part of the Paekche Kingdom, this region was incorporated into the Unified Shilla Kingdom in the seventh century, becoming part of the Koryŏ Kingdom in the early tenth century following the brief rule of the Latter Paekche monarchy.

**Geography and Climate**
While western districts are relatively low-lying, northern and eastern parts of the province are dominated by spurs of the Noryŏng and Sobaek Ranges respectively, the latter including the western slopes of Mount Chiri (1 1915m), the highest mountain in mainland South Korea. Submerged coastal ranges account for the province's highly-indented coastline and numerous islands, the largest of which is Chindo. Due to its complex topography, the province contains only two major waterways, the Yŏngsan and Sŏmjin Rivers, and the catchment area of the former is particularly prone to drought and flooding, a problem which has been partially alleviated in recent years by the construction of numerous dams and embankments. Coastal districts along the Yellow Sea experience marked tidal variation, and land reclamation projects have been undertaken in several areas.

Summer conditions in South Choll'a Province are largely influenced by its proximity to the ocean, while continental high pressure systems dominate winter weather patterns. Although average annual precipitation throughout the province is high, the relatively mild climate of western and southern coastal districts contrasts with the marked seasonal temperature variations found in inland mountainous areas. Southern coastal regions experience typhoons up to five times per year between July and September, and suffer severe damage every three or four years.

**Agriculture and Industry**
Agriculture has traditionally played a dominant role in the provincial economy, however the industrial sector has experienced rapid growth during the past two decades. Although initiatives such as the Yŏngsan River Development Project have led to improvements in
farming conditions in recent years, agricultural activities in the province continue to be hindered by a relatively rugged terrain, frequent flooding and droughts and a rapid decline in the farming population. Principal agricultural products include rice, beans, grains and cereals, although there is a tendency towards a decline in cultivation of these traditional crops and an increase in production of horticultural products such as fruit and vegetables, and in livestock raising. Measuring 6,379 kilometers, South Cholla Province's coastline represents 36.9% of the national total, and the province contains approximately two thousand islands, or almost two-thirds of the national total. Home to anchovies, hair-tail, mackerel and numerous other varieties of marine life, the waters of the Yellow and East China Seas provide ideal conditions for various kinds of fishing operations. Oysters and other shellfish are plentiful on the wide tidal flats which characterise coastal districts, and farming operations have also been developed in many areas, while the province accounts for approximately 80% of the nation's laver production. South Cholla Province contains deposits of gold, silver, kaoline and feldspar, and its deposits of non-ferrous metals (including algalmatolite and silica) account for half of the national total. Although the province has traditionally suffered from an imbalance between the agricultural and industrial sectors in favor of the former, the development of an industrial zone in Kwangju in 1969 marked the beginning of a period of rapid growth, during which additional complexes were established in regional centers such as Mokp'o, Yŏch'ŏn and Sunch'ŏn.

Tourism
South Cholla Province is renowned as one of the most picturesque districts of Korea, and its mountains and scenic coastline offer numerous attractions to tourists. Popular destinations include Mount Chiri, Mount Wŏlch'ul and Mount Naejang National Parks, the Hallyŏ and Tadohae (Sea of Many Islands) Maritime National Parks (notably the remote islands of Hong-do and Hŭksan-do), and the Wan-do land-bridge, and numerous relics and sites connected to the Japanese invasions of the sixteenth century can be found in the town of Yŏsu and in other coastal districts.

General Information
Area: 11,858 square kilometers; population: 2,189,000 (1995 est.); provincial headquarters: Kwangju.
Major centers include Mokp'o, Yŏsu and Yŏch'ŏn.

Chŏmp'iljae chip (Collected Works of Chŏmp'iljae)

*Chŏmp'iljae chip* (Collected Works of Chŏmp'iljae) is the collected works of the early Chosŏn scholar Kim Chongjik (1431-1492), and is composed of twenty-five volumes in seven fascicles. The work was compiled a year after Kim's death by his disciple Cho Wi (1454-1503) under orders from King Sŏngjong (1469-1494), but with the monarch's death it was subsequently not permitted to be published due to political circumstances arising during the reign of Prince Yŏnsan (r. 1494-1506). Kim was posthumously blamed for the inclusion of an inflammatory piece by another of his disciples Kim Ilson (1464-1498) in the official records of Sŏngjong that was interpreted as being critical of the usurpation of the throne by King Sejo (r. 1455-1468) and his subsequent execution of his nephew, the boy King Tanjong (r. 1452-1455). This event brought on the Purge of 1498 (*muo sahwa*), which not only resulted in Kim's writing being banned but also the death of many of the literati. The work was preserved in manuscript form and eventually published by a thirteenth generation descendent of Kim, Kim Shik, in 1869, and the balance was then compiled and published in 1892 by a fourteenth generation descendent of the author.

*Chŏmp'iljae chip* contains some 1,200 poems of Kim and many other writings such as memorials to the throne, letters and compositions honouring previous kings and queens. Additionally, the work is supplemented with other writings that describe the author's life and the political circumstances that resulted in the purge of 1498 (*muo sahwa*) and then the purge of 1504 (*kapcha sahwa*). Thus, the work is highly valued not only for its literary
content, but also for its historical value as a record of the turbulent times surrounding the reign of Prince Yōnsan.

Chôn Pongjun (1855-1895)

Chôn Pongjun was a late- Chosŏn leader of the Tonghak Uprising. His family’s ancestral home is in Chŏn’an, his courtesy names were Ch’omyŏng and Myŏngsuk, and his pen name Haemong. Of diminutive stature, he was also called Noktu (mung bean), and in his later life, General Noktu. His father was a minor government official who was put to death by flogging, for voicing his opposition to the corrupt and tyrannical Cho Pyŏnggap, the Magistrate (kunsu) of Kobu County. This event in itself was to have a major influence on Chôn’s vision for social reform. The family became impoverished, and Chôn began to sell medicine to maintain the household. At this time he learned various Daoist arts. Eventually, he moved to Tonggok Village and farmed a small area of land. In his spare time, he taught the village children to read and write.

In 1890, Chôn entered the Tonghak (Eastern Learning) faith and became closely linked to Ch‘oe Shihyŏng (1827-1898) who was the second leader of the Tonghak Movement. Chôn was appointed as District Head (chŏpchu) of the Kobu area by Ch‘oe. Chôn was faithful to Tonghak principles and spread the faith to many others. The social reforms of the Movement were closely linked to the desires of the peasant farmers of this period and thus the interests of each were easily combined. The source of much of the hardship that plagued farmers in Kobu County was none other than Cho Pyŏnggap, who had executed Chôn’s father. This corrupt magistrate was notorious for his exploitation of the peasants and extorted heavy taxes from them for a variety of purposes outside the law, such as erecting a cover for his father’s grave. Perhaps his worst impost was that of charging farmers for water drawn from the Mansŏkp'o Reservoir, which had been built with peasant labour. This proved too much for the farmers and they rose up against Cho, under the leadership of Chôn, in the twelfth month of 1893. At first, the peasants petitioned Cho to remove the taxation injustices, but their pleas were ignored. So, in the first month of 1894, over one thousand peasants occupied the county office, seized weapons, distributed the illegally collected rice and breached the Mansŏkp'o Reservoir. When the news of this incident reached the central government a special inspector was dispatched to investigate. This, however, further enraged the peasants as the inspector held the Tonghak members responsible and had a number of them arrested and executed. He provoked further animosity by burning a number of peasant dwellings. Denied even simple justice, the peasants rallied around Tonghak leaders such as Chôn, Kim Kaenam (? -1894) and Son Hwajung (? -1896) and began a full-scale uprising.

The Tonghak issued a proclamation of their demands and pushed northwards as far as Paeksan, where regrouping took place. The ranks of the Tonghak were now greatly swelled, and it was at this point that Chôn took overall command. His army was led by a banner with the motto: ‘Sustain the nation and provide for the people’ (poguk anmin) and this became the battle cry of the Tonghak. The Tonghak army, now with over ten thousand troops, soon overwhelmed the numerically inferior government force sent to confront it. Soon the Tonghak had taken control of the country as far north as Chŏnju. The Tonghak army’s success, however, was to bring dire consequences, as Chinese and Japanese troops were now despatched to Korea to quell the uprising. But the Chosŏn government wanted to resolve this matter without outside help, and thus sought to negotiate with Chôn. The Tonghak leader saw this as a way to achieve his aims without further bloodshed and agreed to negotiate with government officials. Essentially, Chôn demanded that government misrule be halted and that the yangban cease their exploitation of the peasants. If these conditions were met, hostilities would also end.

After reaching a settlement with the Chosŏn government, the Tonghak army withdrew from Chŏnju and its soldiers returned to their homes. Local Tonghak offices charged with
correcting the abuses of government were established throughout the Cholla and Ch'ungch'ŏng regions, and a headquarters was established in Chŏnju, with Chŏn in command. The Tonghak offices sought to rectify the oppressive treatment of the peasantry and also demanded an end to the discriminatory treatment based on social status and punishment for those who had abetted the Japanese in their encroachments in Chosŏn. The Tonghak program was well received and supported by the peasantry in increasing numbers. Offices were established throughout the nation as reforms were planned.

The cessation of hostilities had, however, allowed the government forces to regroup and this soon led to fighting between Chinese and Japanese forces then in Korea. Thus, the Sino-Japanese War of 1894 was a direct consequence of the Tonghak Rebellion, and Japan's victory in this struggle gave her a virtual monopoly over all domestic security matters in Chosŏn. By late 1894, the Tonghak had again taken up arms and begun their march to the north with the intent of expelling the unwholesome Japanese presence. However, by this time the government troops, supported by a Japanese contingent, crushed the Tonghak army at T’aerin. This loss resulted in the capture and execution of many Tonghak leaders including Chŏn, and thus greatly weakened the Tonghak Movement.

In essence, The Tonghak Movement was a mass revolutionary movement of the peasantry against the oppressive yangban dominated Chosŏn society. The movement sought to overturn the many injustices systematically imposed upon the peasantry by the corrupt upper classes. It was centred on the Tonghak faith, although the armed struggle led by Chŏn was against the wishes of Ch’ŏe Shihyŏng, the Tonghak leader who advocated non-violence. A further goal of the Tonghak was the elimination of the Japanese presence in Chosŏn, which it saw as exploitative. The Tonghak movement, however, was not equipped to handle the modern weaponry of the Chosŏn government and Japanese forces and thus was doomed to failure in battle. Moreover, the uprising itself brought additional Japanese and Chinese troops on Chosŏn soil, and thereby hastened the loss of Korean sovereignty.

**Chonbuk National University**

Situated in Chŏnju in South Cholla Province, Chonbuk National University (Chŏnbuk Taehakkyo) evolved in October 1947 from the provincial college, Iri Nonggwa Taehak. In 1951, the college became Chonbuk National University with five colleges and sixteen departments. Kim Tuhŏn was the school's first president. In November 1952, a graduate school was opened and a doctoral program was established in 1958.

Today, the university is made up of a separate Graduate School, together with Graduate Schools of Agricultural Development; Business Administration; Education; Environmental Studies; Public Administration; Industrial Technology; Information Science; and Occupational Health; and thirteen colleges (Agriculture; Arts; Commerce; Dentistry; Education; Engineering; Home Economics; Humanities; Law; Natural Sciences; Social Sciences; Medicine; and Veterinary Medicine). In all, there are ninety-four departments staffed by about 750 academics. Student enrolment exceeds 20 000.

The university has a total of twenty-nine research institutes, thirteen of which are government sanctioned. The school's Institute of Semiconductor Physics (Pandoch’e Yŏn’guso) has been recognised for its degree of excellence by the Korea Science and Engineering Foundation (KOSEF). The SPRI works to promote semiconductor physics
research by forming links between facilities and personnel. At the Institute of Bio-Safety Studies, researchers look for ways to avoid the harmful effects of industrialisation. The institute’s work is divided between six departments: General Toxicology; Special Toxicology; Environmental Contamination; Soil and Water Contamination; Pathogenic Organism Infection; and Laboratory-Animal Control.

The university also administers a hospital and a museum. Situated in Kūn'am-dong in Chŏnju, the Chonbuk University Hospital was established in 1951 and was officially attached to the university’s College of Medicine in February 1975. The university’s museum specialises in folk-art objects of late Chosŏn. University publications include the weekly Chŏnbuktae Shinmun in Korean and The Chonbuk University Herald in English.

Chŏng Ch’ŏl (1536-1593)

Chŏng Ch’ŏl was a middle Chosŏn period civil-official and literary man. His family’s ancestral home is in Yŏn’il, his courtesy name was Kyeham, his pen name Songgang, and he was born in Seoul. When he was young, due to his eldest sister being a concubine of King Injong (r. 1544-1545) and another elder sister becoming the wife of Yu, the Duke of Kyerim, he frequented the palace and became friendly with Prince Kyŏngwŏn, the future King Myŏngjong (r. 1545-1567). When Chŏng was ten in 1545, the Duke of Kyeiim was involved in the Purge of 1545 (ŭlsa sahwa), and as a result of Chŏng’s family being related to the Duke, his elder brother was flogged to death and his father was exiled. Therefore, Chŏng followed his father to his places of banishment. In 1551, his father was reinstated and they moved an area below Tangji Mountain in Cholla Province. Here Chŏng remained for ten years until he successfully passed the civil service examination in 1561.

While living around Tangji Mountain, Chŏng learned poetry from Im ìkyŏngg̊o, studied under Kim Inhu, Song Sŏn and Ki Taesŏng, and he further developed close relationships with Confucianists such as Yi I (1536-1584), Sŏng Hon (1535-1598) and Song Ikp’ŏl (1534-1599). When he reached seventeen years of age, he married the daughter of Yu Kanghang and had four sons and two daughters with her. In 1561 when he was twenty-six, he passed the Literary Licentiate Examination (chinsa shi) with the highest score and in the next year he also placed first in the literary section of the Special Examination (pyolshi). Chŏng then entered into Chosŏn officialdom as a Fourth Inspector (chip’yŏng) in the Office of the Inspector-General (Sahonbu) and subsequently served in a variety of other positions. Chŏng continued his rise in the bureaucracy of Chosŏn serving in such positions as Secret Inspector (amhaeng osa) of Hamgyŏng Province. When Chŏng reached thirty-two years he began studies with Yi I, while continuously holding various official positions. In 1575 he retired from officialdom and returned to his hometown, but three years later he was appointed to the Bureau of Music (Changag’won) and returned to government service. After this Chŏng continued to rise in the Chosŏn government, but due to a bribery incident concerning Yi Ŝu, who was Magistrate (kunsu) of Chindo County, he was impeached by the rival Easterners (Tongin) faction and again returned to his hometown. By 1580 he had been reinstated and was appointed Governor (kwanch’alsat) of Kangwŏn Province and at this time displayed his literary talent in both shijo and kasa literature with the composition of sixteen pieces including Kwandong pyŏlgok (Song of Kwandong) and Hunmin ka (Song of Instructing the People). After this time, Chŏng also served as Governor of Chŏlla Province and then of Hamgyŏng Province, Second Minister (ch’amp’an) of the Board of Rites (Yejo) and in a variety of other positions. By 1583 he was promoted to the position of Minister (p’ansŏ) of the Board of Rites and in the next year he was appointed as Inspector-General (taesahŏn). However, he was again impeached by the Easterner faction and thus returned to his hometown where he remained for four years.

After returning to his hometown in exile, Chŏng composed many kasa such as Samiin kok (Mindful of my Seemly Lord), Sokmiin kok (Again Mindful of my Seemly Lord) and Sŏngsan pyŏlgok (Little Odes on Mount Star), which are counted among the finest
examples of this literary form of the Chosŏn period. In 1589 in the aftermath of the Chŏng Yŏrip (? -1589) insurrection, he was appointed as Second State Councilor (chwaŭijŏng) and as the leader of the Westerner (Sŏm) faction he extracted some revenge on members of the Easterner faction, expelling many from their official positions. In the following year he was promoted to Chief State Councilor (yŏngŭijŏng). In 1591 there arose a question of whom to nominate as the Crown Prince, and Chŏng along with the head of the rival Easterner faction, the Chief State Councilor Yi Sanhae, planned to put forth Prince Kwanghae. However, Yi reneged on this plan at the last minute leaving Chŏng to alone propose Kwanghae. King Songjo (r. 1567-1608), who favored Prince Sinsong for the position, was greatly angered at Chŏng and stated: "Since he gives himself up to wine and women as a minister, it is only natural that he should spoil national affairs," and then dismissed Chŏng from his post. However with the 1592 Japanese Invasion he was reinstated, met the King in Pyŏngyang and escorted the King to Uiju. While the Japanese enemy occupied the areas below Pyŏngyang, he served as commander of the forces in Kyŏnggi, Cholla and Ch'ungch'ŏng provinces and in the following year he traveled to Ming China as an envoy to express gratitude for their help. However, he once again was forced to resign due to a slanderous plot of the Easterner faction and temporarily stayed in Songjŏng Village on Kanghwa-do Island where he died at the age of fifty-eight.

As far as Chŏng's literary works are concerned, there are the four kasa of Kwandong pyŏlgok, Samin kok, Sokmiin kok and Sŏngsan pyŏlgok, and 107 shijo poems transmitted to the present time. Of his shijo, the three pieces of Chumundap, sixteen of Hunmin ka, thirty-two of Tan'gajap p'yŏn and others are recorded in the second volume of Songgang pyŏljip ch'urok yusa (Collected Works of Songgang with Addendum). Although there are many works that overlap, there are also quite a few shijo that were written for another work, Songgang kasa (Kasa of Songgang). Other writings of Chŏng's are found in Songgang chip (Collected Works of Songgang). Along with Yun Sondo (1587-1671) and Pak Illo (1561-1642), Chŏng is considered as one of the three great composers of shiga (poem-songs) of the Chosŏn period.

Chŏng Chisang (? -1135)

Chŏng Chisang was a Koryŏ scholar-official. He was born in Sŏgyŏng (the Western Capital, present day P'yŏngyang), his childhood name was Chiwon and his pen name Namho. In 1114, he passed the government service examination. He was appointed to a position in the Chancellery for State Affairs (Munhasŏng) in 1127 and is credited with assisting Ch'ŏk Chun'gyŏng (? -1144) in the removal of Yi Chagyŏm (? -1126), who had sought to usurp the Koryŏ throne. However, Chŏng soon fell out of favour and was exiled. He held a deep interest in both politics and the Daoistic Yi-Yang and Fire Elements theories. He, along with the monk Myoĉ'ŏng (? -1135) and Paek Suhan (? -1135) were known as the 'three sages' of Koryŏ.

Since Chŏng's birthplace was Sŏgyŏng, he faced discrimination in the ruling circles of Kaesŏng. In particular, he had a confrontational relationship with Kim Pushik (1074-1151) and the Confucian-centred, China-orientated faction that revolved around him. Thus, Chŏng sought to overcome this bias against him in Kaesŏng by convincing King Injong (r. 1122-1146) to move the capital to Sŏgyŏng. In particular, Chŏng, Myoĉ'ŏng and Paek tried to convince Injong that the auspicious geomantic qualities of Kaesŏng had been depleted and the only way to restore the lustre and vigour of the kingdom was to relocate the capital to Sŏgyŏng, where the geomantic energies were abundant. However, the three conspirators truly sought to move the capital to Sŏgyŏng where they would be able to assume power. Following the lead of Myoĉ'ŏng, the trio convinced Injong to build a palace in Sŏgyŏng and further tried to persuade him to take the title of emperor, thus asserting the equality of Koryŏ with the Sung and Chin Chinese states. However, the king balked at this and Myoĉ'ŏng and his followers then declared their own kingdom in Sŏgyŏng. This move was answered by an attack from government forces led by Kim
Pushik, who crushed the rebellion, killing the three co-conspirators.

Chŏng is also remembered for his literary accomplishments, particularly his poetry. His works also reflect his belief in Buddhism as well as his interest in the I Ching (Book of Changes). One of his best known poems is ‘Taedong kang’ (‘Taedong River’) that is composed of quatrains of seven characters. Other works of Chŏng that have been transmitted to the present include ‘Shinsŏl’ (‘New Snow’) in Tongmunson (Anthology of Korean Literature) and ‘Western Pavilion’ contained in Tonggyŏng chapki (Eastern Capital Miscellany).

Chŏng Chungbu (1106-1179)

Chŏng Chungbu was a military commander of Koryŏ and a leader of the successful military insurrection in 1170 that wrested power from the monarch and civil officials. Chŏng’s family’s ancestral home was in Haeju.

The reign of King Uijong (1146-1170) was a period in which official disdain for the military reached its zenith. Uijong was far more concerned with his pursuit of aesthetic pleasures and enjoying a sumptuous lifestyle than governing the kingdom. The civil officials who administered the kingdom seldom missed an opportunity to slight the military. One such incident occurred when Kim Tonjung, the son of Kim Pushik (1074-1151), set Chŏng’s beard afire. The situation was becoming untenable for the military and it was only a matter of time before they would revolt.

In 1170, King Uijong was travelling to Pohyŏn Temple, when Chŏng, Yi Ŭibang (? -1174) and Yi Ko (? -1171), the commanders assigned to escort the royal retinue rebelled. Other officers and soldiers accompanying the party united around these leaders and with astonishing speed and took control of the kingdom. Uijong was deposed and replaced with his younger brother Myongjong (1170-1197). The military then carried out a bloody purge of those civil officials who had wronged them. Kim Tonjung, of course, was singled out by Chŏng and met his fate in this massacre, along with many other literati. Subsequently, the civil official Kim Podang (? -1173) attempted to restore Uijong to the throne, but this attempt ended in failure and as a result set off another round of executions of civil officials.

Political power among the military was initially shared by the trio that had instigated the uprising, and they ruled through a Council of Generals (Chungbang). These military leaders, however, were too hungry for personal power and began to struggle among themselves for complete control of the state. Before long, Yi Ŭibang had assassinated Yi Ko, and attempted to consolidate his power base by marrying his daughter to the crown prince. Yi was then killed by Chŏng who took complete power for himself in 1174. Chŏng’s rule became increasingly tyrannical and in 1179 he also was assassinated, by a young military officer, Kyŏng Taesŭng (1154-1183). This means of increasing personal power among the military leaders continued until 1196, when the brothers Ch’oe Ch’ungson (1149-1219) and Ch’oe Ch’ungsŏn (? -1197) seized power and thus established the long period of rule of the house of Ch’oe.

Chŏng Chuyŏng (see Chung Ju-yung)

Chŏng Hyŏnjong (1939-)

Chŏng Hyŏnjong is a contemporary poet, born in Seoul. He holds a degree in philosophy from Yonsei University (Yŏnse) University (1965). Chŏng has received many literary awards, including the 1978 Literature Award for Korean Writers; the 1990 Yonam Literary Award; and the 1992 Isan Literature Prize. He worked as a journalist for the Seoul Shinmun and Chosŏn Ilbo newspapers, and has held a professorship at Yonsei. He made his literary
212

debut in 1964, writing in the magazine *Hyŏndaemunhak* (Modern Literature).

Chŏng’s poetry can be divided into two main periods: one that continued through the late 1970s and early 1980s, when Korea was embroiled in rapid industrial and economic growth and repressive political regimes; and the other being the years that followed, up to the present-day. In reading his early anthologies, such as *Samul ŭi kkum* (Dreams of Inanimate Objects), 1972, and *Naniun pyŏl ajössi* (I am Mr. Star), 1978, it is apparent that Chŏng is exploring some difficult concepts. He is considered, along with Hwang Tonggye and others, as a ‘metaphorical dissenter’ and his early work can be allied with that of the ‘protest poets’ Ko Un, Kim Chīha et al.

Chŏng’s first period poetry is particularly etched with a philosophical slant, possibly by attachment to his studies at Yonsei. However, in his later works, such as *Ttŏrōjyŏdo twiŭn kong ch’ŏrŏn* (Like a Bouncing Ball), 1984, he uses simpler, direct language to express his feelings, and so his work is much easier to comprehend and enjoy. His poems reveal a maturity of outlook on life and a positive attitude towards the relationship existent between all beings. More recent works include, *Saram tŭls saie sŏmi itta* (There is an Island Between People), 1991, and *Han kkossongi* (A Single Flower), 1992.

**Chŏng Inbo (1892-?)**

Chŏng Inbo was a scholar and educator. His family’s ancestral home is in Tongnae, his childhood name was Kyŏngshi, his courtesy name Kyŏngŏp and his pen names include Tamwŏn, Miso-sanin and Widang. Chŏng was born in Seoul and was from a long lineage of Chosŏn civil officials. At a very young age his father instructed him in the Chinese classics and when he became thirteen he studied under Yi Konbang. In 1910, with the Japanese annexation of Korea, Chŏng went to Shanghai, where he became acutely aware of the international situation. After visiting Korea and returning to Shanghai in 1912, he helped to organise the Mutual Assistance Society (Tongjesa) along with Shin Ch’aeho (1830-1936), Pak Ûnshik (1859-1926), Kim Kyushik (1881-1950) and others. This society worked towards providing educational enlightenment for the Koreans living in China, in such spheres as politics and culture. However, Chŏng’s wife died suddenly and so he was compelled to return to Korea to care for his aged mother.

After returning to Korea, Chŏng witnessed the unfolding of the independence movement and was among those arrested by the Japanese police. After his release, he worked as an instructor of history and the Chinese classics in various schools in the Seoul area. He strove to provide his students with the best possible education, albeit with a nationalistic flavour, and he also contributed articles to the *Tonga ilbo* and *Shidae ilbo* newspapers that sought to awake in Koreans the spirit of nationalism. Chŏng served as an instructor at various educational institutions, such as Ehwa Women’s College throughout the 1920s and 1930s, and did not let-up on his writing. He published on topics that sought to preserve the traditions and history of Korea, and thereby to infuse the people with a sense of Korean pride and import. His noteworthy contributions are, ‘Chosŏn kojŏn haëje’ (Annotated Bibliography of Korean Classics), 1935), and ‘Yangmyŏnghak yŏllon’ (The Teachings of Wang Yangmin, 1933), both of which appeared in the *Tonga ilbo*. With the outbreak of the Second World War and the then totally-oppressive assimilation policies of the Japanese, Chŏng was prohibited from teaching subjects which expounded even a slight degree of national pride. He went into retirement and lived in Chunggi Village in North Chŏlla Province.

With liberation in 1945, Chŏng returned to Seoul and resumed his teaching duties, with a renewed vigour for propagating Korean culture. In 1946, he published *Chosŏnsa yŏn’gu* (Research of Korean History). This work is particularly notable in that it presents Korean history from a nationalistic perspective and was dedicated to preserving Korea’s unique cultural heritage. In this aspect, it resembles the works of Chŏng’s old associate, Shin
Ch'aeho. In 1947, Ch'ong was appointed as dean of Kukhak College and there he sought to resurrect Korean studies that had been driven underground by the Japanese colonial policies of assimilation and cultural obliteration. With the foundation of the Republic of Korea in 1948, Ch'ong was appointed to the government of President Syngman Rhee (Yi Sungman, 1875-1965). However, he found himself at odds with government policy and resigned in the following year, returning to his studies. After the outbreak of the Korean War in 1950 and the battles for Seoul, Ch'ong was kidnapped by the communist forces and taken to North Korea, where it is presumed he died.

Ch'ong is praised as a scholar who sought to assert the Korean national identity during the Japanese colonisation of his country. His works such as Chos'on kojon yon'gu cast the history of Korea in a new and nationalistic light that invited the considerable interest of scholars of the post-liberation generation.

Ch'ong Inji (1396-1478)

Ch'ong Inji was an early Chosön scholar-official. His family's ancestral home is in Hadong, his courtesy name was Paekchô and his pen name Hagyöchkæe. In 1411 he passed the Classics Licentiate Examination (saengwon shi) and after three years he was successful in the Triennial Examination (shingnyon shi), passing with the highest marks. He then entered the Chosön government bureaucracy. In the early years, his official positions included, Assistant Section Chief (chwarang) of the Board of Rites (Yejo) and of the Board of War (Pyöngjo). Ch'ong continued his rise in the Chosön bureaucracy and by the time of King Sejong's accession (r. 1418-1450) he was Section Chief (ch'ongnang) of the Board of Rites and the Board of Personnel (Ijo). In 1424, King Sejong appointed him to the Hall of Worthies (Chiphyönjon) where he was again promoted. By 1427, after he had passed the literary portion of the Special Erudite Examination (mun'gwa chungshi) with the highest score, he was further promoted to the position of Second Deputy Director (chikchehak).

Among Ch'ong's duties at the Hall of Worthies was the development of the new han'gül alphabet that he contributed to, along with fellow scholars Song Sammun (1418-1456) and Shin Sukchu (1417-1475), under orders from Sejong. The first publication of a work in han'gül was in 1443, and was entitled Hunmin chongum (Correct Sounds for the Instruction of the People). Ch'ong wrote the preface for this work. He also contributed to the first poetical work written in the han'gül script, Yongbi och'on ka (Songs of Flying Dragons), which was published in 1447. Further, together with Kim Chongsô (1390-1453) Ch'ong compiled the one hundred and thirty-seven volume Koryoša (History of Koryö), the dynasty replaced by Chosön. From these works, it is apparent that Ch'ong and other scholars of the Hall of Worthies had gained considerable prestige during the reign of King Sejong.

Ch'ong continued his rise in Chosön government and even after the usurpation of the throne by King Sejo (r. 1455-1468) held important positions. The meritorious elite holding political power at that time included, Ch'ong, Ch'oe Hang (1409-1474), Shin Sukchu and Sò Köjong (1420-1488). These scholar-officials had loyally served their rulers and they themselves had now come into high office, possessed large landholdings and held considerable personal power. Therefore, much of the successful policy and innovation of early Chosön must be attributed to the contributions of these men. Ch'ong is noteworthy among them, for his part in the development of han'gül and for his acclaimed work on Koryö. The afore-mentioned works of Ch'ong are extant, as are his collected works, Hagyöchækæe chip (Collected Works of Hagyöchkæe).

Ch'ong Monju (1337-1392)

A prominent member of the literati, statesman and Neo-Confucian scholar of late Koryö,
Chŏng Monju (styled P’o’ûn) is considered as the first great Neo-Confucian metaphysician. There is scant record of his early life, but at the age of twenty-three he passed the civil service examination. He served in the Ministry of Rites as a bureau chief and concurrently held appointment as professor in the Songgyun’gwan (National Confucian Academy) from the sixteenth year of King Kongmin (r. 1351-74).

Chŏng was acclaimed by the sages for his deep knowledge and interpretative skills of the only classics to have reached Korea at that time - the Collected Commentaries of Zhu Xi and Hu Pin-wen’s (1250-1333) Ssu-shu t’ung (Encyclopaedia of Four Classics). The famous scholar Yi Saek (1328-1396) extolled Chŏng’s prowess and exalted him as the founder of Neo-Confucianism in Korea. He was instrumental, along with Yi Saek and other scholars, in establishing Chinese classics and the core curriculum, placing an emphasis on the work of Zhu Xi. It was to be expected that his scholarship would bring him to the notice of the court, but it also won him its respect, too.

The Neo-Confucian ideas inspired both scholars and government officials of late Koryŏ with reforming zeal. They could see the violation of Confucian principles on every hand and were concerned that the king was being mesmerised by Buddhism, which ran contrary to Confucian ideals. At this time immense problems assailed the dynasty. Internally, the economy was weak and bankruptcy was clearly seen on the horizon. From the sea, incursions by Japanese pirates became increasingly menacing. On land, to Koryŏ’s west, the Mongol Yuan dynasty in China had been overthrown, but the Mongols still maintained forces strong enough to attempt a return to power. This caused a division in the Koryŏ court between the pro-Ming and the pro-Mongol factions. On the death of King Kongmin (r.1351-74), the new king, U (r.1374-88) was not immediately recognized by Ming China, but the Mongols were quick to do so, in the hopes of strengthening their own cause by enlisting Koryŏ assistance. It followed that anti-Ming forces within the Koryŏ government quickly gained force, while pro-Ming officials such as Chŏng Mongju were removed from office.

With this anti-Ming backlash in Koryŏ increasing, and the added complication of the murder of a Ming emissary on his way back to China, diplomatic relations were strained to the limit. Eventually, Chŏng was recruited to head a delegation and this time the attempt at reconciliation succeeded. It was, however, the most troubled of times, with Koryŏ being called upon by the Ming to render assistance as a countermeasure to the mobilization of Mongol forces in the north. The commitment of a Koryŏ force in 1376 depleted the internal defences and the Japanese pirates became bolder, advancing inland to capture the city of Kongju.

Again, it was Chŏng who was called upon, this time travelling to Japan to appeal to the Shogun for help in eliminating the pirates. He succeeded where no one else could, making a favourable impression on the Japanese, and receiving a promise of assistance. Unfortunately, the support given to Koryŏ was not very effective and it fell to two famous Koryŏ generals, Ch’oe Yong and Yi Sŏnggye to rid their country of the invaders.

In 1386, after further overtures by Chŏng on behalf of Koryŏ, the Ming Emperor formally recognized King U. This was a short-lived peace, however, for in 1388 the Ming moved to acquire some northern Koryŏ territories. King U ordered a military expedition against the Ming, but the commanding general, Yi Sŏnggae, en route to the north, decided to turn his forces around and use them to oust the Koryŏ government. Chŏng did not convert his loyalties to the new regime, his allegiance remaining strongly with the displaced dynasty. Seen by Yi Sŏnggye as a hindrance to progress, in 1392 Chŏng was attacked and killed by five men on the Sŏnjukkyo Bridge in Kaesŏng, following a party held in his honour by Yi Sŏnggye. This bridge has become a memorial to Chŏng, and legend has it that a brown stain on one of the stones which pave the bridge turns blood-red when it rains.
Thus ended the life of a great personage in late Koryŏ, unfailing in his support of the dynasty to its demise. Chŏng was not only recognized as the foremost Neo-Confucian scholar of his day; he was a statesman and an accomplished mediator - one whose fidelity to the Koryŏ rulers never wavered.

**Chŏng Pyŏnguk (1922-1982)**

Chŏng Pyŏnguk was a scholar of Korean classical literature. His pen name was Paegyŏng and he was born in Namhae of South Kyŏngsang Province. He graduated from the Department of Liberal Arts of Yŏnhŭi College and then from the department of Korean Language and Literature of Seoul National University. He received his doctorate in Korean literature from Seoul National University and then held professorships at Pusan and Yonsei (Yŏnse) universities. Following these appointments, he served for twenty-seven years in the Korean Classical Literature section of the Department of Korean Language and Literature, Seoul National University. His works cover a wide range of Korean classical literature, including ancient poetry and novels, p'ansori, and Sino-Korean literature.

Chŏng’s many works include, *Han’guk kojŏn shiga ron* (Theories of Classical Korean Poetry), 1976, *Han’guk kojŏn ŭi chaeinshik* (Re-appraisal of Korean Classics), 1979 and *Han’guk ŭi p’ansori* (The P’ansori of Korea), 1981. In addition, he compiled some 2 376 shijo poems, with annotations, which were published in *Shiŏ munhak sajŏn* (Encyclopaedia of Shiŏ Literature), 1966. He wrote an annotated version of *Kuunmong* (Nine Cloud Dream), and a combined annotated edition of *Paebijang chŏn – Onggojip chŏn* (The Story of the Attendant Pae -- Story of the Stubborn, 1974). As well classical novels and poetry, Chŏng published a translated and annotated version of the travel record *P’yohae rok* (A Record of Drifting Across the Sea), in 1979.

His impressive scholarship brought him high acclaim, including invitations from universities such as Harvard, and an invitation to write the Korean literature section for the *Encyclopaedia Britannica.* He was instrumental in promoting Korean literature in the United States, France, Japan, and other countries.

Chŏng received many literary awards, including the Writer’s Award (Chŏjak Sang) in 1967 and the Samil Culture Award (Samil Munhwa Sang) in 1980. He is praised and well-remembered for his contribution to the development of studies in Korean classical literature.

**Chŏng Sain (1881-1958)**

Chŏng Sain was a musician and composer. He was born in Seoul and in 1902 became the first Korean to join a Western-style military orchestra. Chŏng received his training from the German composer, Franz Echert (1852-1916), who had arrived in 1901 to direct a court band modelled on German-Japanese practice, and who trained a number of early composers, including Chŏng, to whom he also taught the flute. One of Chŏng’s compositions is *Nae kohyang* (My Hometown), and he wrote a great number of other songs, both before and after liberation. He was also a talented singer.

Chŏng was the wind instrument instructor at Songdo Normal High School from 1916 until 1930. His musical style was greatly influenced by Eckert, and he in turn played a role in the modernisation of Korean music and in trying to popularise Western music.

**Chŏng Tojŏn (1337-1398)**

Chŏng Tojŏn was a statesman and scholar of late Koryŏ and early Chosŏn. His family’s ancestral home is in Ponghw’a, his courtesy name was Chŏngji and his pen name Sambong. Chŏng came from a family with a history of excellence in government service. Some of his
contemporaries include Chŏng Mongju (1337-1392), Pak Sangch'ung (1332-1375), and Yi Sungin (1349-1392). In 1360 Chŏng passed the examination for the National Academy (sŏnggyun shi) and after two years was also successful in the Literary Licentiate Examination (chinsa shi). He then entered government service and in 1370 was appointed Reference Consultant (paksa) at the National Academy. There, he continued his Confucian studies with Chŏng Mongju and others. In 1375, he joined a group led by the powerful courtier Yi Inim (? –1388), to oppose the pro-Yuan, anti-Ming policy of Koryŏ, a move which resulted in his exile. In 1377, he was able to return to his home, where he served as a teacher. In 1383, he met Yi Sŏnggye, the future King T'aejo (r. 1392-1398); a fortuitous meeting which decided his destiny. In the following year, he served as an envoy to Ming, along with Chŏng Mongju, and held a variety of official positions. After this, through the good offices of Yi Sŏnggye, he was appointed headmaster (taesasŏng) of the National Academy.

The end of Koryŏ featured the struggles of different factions vying for power over the crumbling kingdom. Chŏng was closely allied with Yi Sŏnggye and provided support for the future founder of Chosŏn in his attempts to consolidate his power base. In 1389, Yi, together with Chŏng Tojon, Chŏng Mongju, Shim Tŏkpu, Sŏl Changsu and others overthrew King U (r. 1375-1388) and seized power, placing King Kangyang (r. 1389-1392) on the throne. At this time, the literati of Koryŏ, led by Chŏng Tojon, carried out the sweeping reforms they had long advocated. Land reform was crucial to their plans in order to remove the power base of the powerful families and Buddhist temples, and this, of course, did much to assist the rise of the new literati class that would come to dominate Chosŏn. However, the rise to power of Yi Sŏnggye was not without its difficulties, not least because of the longing of other groups for power. In 1391, with Yi temporarily disabled from injuries received in a hunting accident, Chŏng Mongju and his supporters attempted to eliminate the Yi faction and as a result Chŏng Tojon was gaol ed for conspiracy. This situation was short-lived though, as Yi Pangwŏn (King T'aejong; r. 1400-1418) assassinated Chŏng Mongju, thus striking down the last adversary to the Yi Sŏnggye faction. Yi then forced Kangyang to abdicate and thus the Chosŏn dynasty was founded.

After the founding of the new dynasty, Yi Sŏnggye moved the capital to the location of present-day Seoul and named his new state Chosŏn. This was sanctioned by the Ming and the new state embarked on a series of reforms led by the neo-Confucian literati, of which Chŏng was in the vanguard. The state was now immersed in neo-Confucian ideology, and Chŏng and many others completely rejected Buddhism as being destructive to the foundations of the nation. Thus, the roots of Chosŏn policy suppressing Buddhism and supporting Confucianism can be found in this period, and in particular in Chŏng's work, Pulssi chappyŏn (Miscellany of Mister Buddha) that criticised Buddhist doctrines from a Confucian perspective. Chŏng established a nascent legal code with his compilation of Chosŏn kyŏngguk chŏn (Administrative Code of Chosŏn). This work formed the basis for the subsequent legal code of Chosŏn.

Another feature of early Chosŏn was the establishment of the Privy Council (Top'yŏnggūisasasa), a deliberative body that held the political power of the new state. The Privy Council was primarily composed of the so-called ‘Dynastic Foundation Merit Subjects’ (kaeguk kongshin) comprised mostly of the literati that had assisted Yi Sŏnggye in his rise to power. Chŏng was among the leaders of this group and thus had a strong influence in establishing the course Chosŏn would take. This arrangement proved satisfactory to the founding king, but with his death in 1398 and the struggle among his sons for the throne, the Privy Council exerted an undesirable influence. In particular, Chŏng supported Prince Pangšŏk, the youngest son of T'aejo, who had been designated by his father as his successor, as the next king of Chosŏn. This, however, did not please Yi Pangwŏn, T'aejo's fifth son, who sought the crown for himself. Accordingly, he assassinated his younger brother and Chŏng too. He then placed his elder brother, Yi
Panggan (King Chongjong; r. 1398-1400), on the throne pro trempore, prior to his own accession.

Chong Tojon is remembered as being one of Yi Sŏnggye’s most loyal supporters and also as one of the literati that helped build the foundations of Chosŏn policy. His scholarship is unquestionable, as the compilation of *Koryŏ kuksa* (National History of Koryŏ) shows. This was the groundwork for his *Koryŏsa* (History of Koryŏ). Chong was also an accomplished poet and his lyrical poem (*akchang* Shindo ka) represented a link in the establishment of new literary traditions in Chosŏn. Chong’s collected works are preserved in *Sambong chip* (Collected Works of Sambong).

**Chong Yagyong** (1762-1836)

Chong Yagyong was a late Chosŏn period scholar-official and *shirhak* (practical learning) scholar. His name as a child was Soja, his courtesy name was Miyong and his numerous pen names included Saam, T’agong, T’aesu and Tasan. He was born in Kwangju of Kyŏnggi Province and his father was Magistrate (*moksa*) of Chinju. Chong married at the age of fifteen and had a total of nine children with his wife. His life can largely be divided into three broad divisions: first his life in Chosŏn officialdom, second his long years in exile, and finally his life of leisure while in retirement.

Chong began his studies as a child learning not only the Confucian classics but additionally Chinese literature and history. Moreover, he also read and became enamoured with the works of Yi Ik (1681-1763) who served to institutionalise the *shirhak* ideology. Chong had a great interest in Western learning and institutions and thus sought out books on Christianity, astronomy, mathematics, maps and Western ideology. He became well versed in various Western customs also. As he acquired this Western knowledge he became acutely aware that the neo-Confucian ideology that had dominated Chosŏn since its inception was inadequate for the actual management of the state and of people’s lives. Thus, he desired to bring about major changes in the ideological approach of Chosŏn. Chong applied his knowledge constructively such as in the design a floating bridge over the Han River in 1789 and fashioning a crane-like apparatus that he employed in the building of Suwŏn Castle in 1793.

Chong’s talents were recognised by King Chongjo (r. 1776-1800) and he served in a variety of official positions. He served with righteousness and would not tolerate the abuse of power among his fellow officials. This trait resulted in him becoming very much respected by the people, but conversely created a great number of enemies for Chong within the Chosŏn bureaucratic hierarchy. As a result he soon was relegated to posts in the provinces where he was far from the ruling powers of the day. One such posts was as Town Magistrate (*pusa*) of Koksan in Hamgyŏng Province where he served for two years. Despite the conscientious service that Chong provided to the government he soon fell into deep trouble. Chong, who had converted to Catholicism as a young man, was a target of the Catholic Persecution of 1801, which resulted to him being sent into exile for a period of nearly two decades.

During his long exile, Chong devoted his full efforts to the development of the *shirhak* ideology. Particularly during this period Chong wrote many works that expounded on his interpretation of *shirhak* doctrines. In *Kyŏngse yup yo* (Design for Good Government) he detailed his views on government structure, *Mongmin shinsŏ* (Admonitions on Governing the People) is concerned with local government reform, and in *Hŭnhŭm shinsŏ* (Towards a New Jurisprudence) Chong applies his views to reform of the penal administration. Other works by Chong deal with his further proposals for reforming the government and social systems of his day. A primary consideration of Chong’s was the reform of the land and cultivation systems of Chosŏn. He advocated a system of land use that would grant each farmer a portion of the total harvest based upon the actual labour that they contributed to the
production of the crops. This would in effect create an ideal society of independent farmers who worked their own lands. Of course this idealistic view was in tremendous contrast from the actualities of Chosôn, and moreover greatly opposed to the interests of the ruling class.

Chŏng further contributed other writings to the development of shirhak scientific thought in Chosôn society. His Makwa hoet'ong (Comprehensive Treatise on Smallpox) approaches the control of smallpox from a scientific viewpoint and analyses numerous Chinese writings on the subject in an attempt to thoroughly understand this disease and its symptoms. He also compiled Kangyŏk ko, which was a historical geography of Korea. In addition to his works that introduced Western scientific thought to Korea, Chŏng also re-examined the Confucian classics such as those works by Confucius and Mencius in a new innovative manner. Thus his writings during his exile and subsequent retirement helped create a remarkable body of scholarship for subsequent shirhak scholars such as Yi Kyugyŏng (1788-1856) and Kim Chŏnghŭi (1786-1856).

After being released from his lengthy exile, Chŏng returned to his hometown of Kwangju and led a life of scholarly leisure. He refused all government positions offered to him and instead remained in retirement. The tremendous breadth of the scholarship of Chŏng can be realized in his immense collected works, Tasan chonjip (Complete Works of Tasan) that was originally composed of some 250 volumes and covered a vast array of topics. Chŏng is praised as bringing the shirhak movement to its maturity in Korea and creating the foundation for reforms. The shirhak movement, however, never realized its potential due to the onslaught of Western culture at the close of the nineteenth century.

**Chŏng Yŏch'ang (1450-1504)**

Chŏng Yŏch'ang was an early-Chosôn scholar official. His family's ancestral home is in Hadong, his courtesy name was Paeguk and his pen name Ildu. His father, a government official, died when Chŏng was young, so for a time he had to conduct his own studies. Then, with Kim Koeng' il (1454-1504), he studied under Kim Chongjik (1431-1492), thereby becoming a link in the neo-Confucian tradition of early Chosôn. Chŏng did not have a particularly distinguished civil career, concentrating instead on his studies of neo-Confucianism. He did however, serve in positions such as magistrate (small county, hyŏngam) of Anŭn county, where he was known for his benevolence.

In 1498, an incident occurred regarding the compilation of the Sŏngjong shillok (Veritable Records of Sŏngjong) in which Kim Ilson (1464-1498), also a disciple of Kim Chongjik, included a passage by his mentor that was perceived by some to be critical of King Sejo's (r. 1455-1468) usurpation of the throne, in the records of King Sŏngjong (r. 1469-1494). This disturbed the meritorious elite, who were already at odds with the neo-Confucian literati, to the extent that they provoked Yŏnsan (r. 1494-1506) to carry out a major purge of the literati. This event, known as the Purge of 1498 (muo sahwa), resulted in a great number of the literati being executed and others exiled. Chŏng was among the more fortunate as he kept his life, but was banished to Kyŏngsang Province. However, a second purge, the Purge of 1504 (kapcha sahwa), resulted in an even greater number of literati being executed or banished. This time Chŏng did not escape the carnage and was executed.

Chŏng was pardoned posthumously and given the title of Third State Councillor (uuijong) during the reign of King Chungjong (r. 1504-1544). In addition, several sówŏn (private academies), including Tosan Sŏwŏn and Nam'gye Sŏwŏn, offered rites to Chŏng. His literary collection, Ildu yujip (Posthumous Collection of Ildu) is extant.

**Chŏngak**

[Music]

**Chŏngdok Library**
Chöngdok Library (Sŏul Shirip Chöngdok Tosŏgwan) is situated in Sogyŏk-dong in Seoul’s Chongno Ward. Easily accessible by bus or via the An’guk subway stop, the library is popular with students and researchers. For these, the library maintains nine study halls with over 1,700 seats. In October 1996, a multi-media facility was opened, offering on-line access as well information on computers and the internet. In addition, there is a room devoted to works on Korean genealogy, which has 5,000 volumes. One room is dedicated to children’s books and magazines. The library also runs reading programs for adults and special reading groups for fourth to sixth-grade primary school children. It also conducts classes on a wide range of subjects, including calligraphy and English.

Chöngjo, King (r. 1776-1800)

King Chöngjo (1752-1800) was the twenty-second king of Chosŏn and ruled from 1776 to 1800. His given name was San, courtesy name Hyŏngun and pen name Hongjae. His father was the second son of King Yongjo (r. 1724-1776), Crown Prince Changhŏn, his mother was Lady Hong of Hyegyŏng Palace, and his queen, Hyoui, was the daughter of Kim Shimok. In 1759, he was named heir to the crown prince, and with the combined tragedies of his father’s death in 1762 and the untimely death of Yongjo’s other son, he became next in line for the throne. With the death of Yongjo in 1776, Chöngjo became king at the age of twenty-five.

Soon after his accession, Chöngjo commenced national reform, and inter alia established the Kyujanggak Library at the palace, which served not only as a library, but as a research institute also. Chöngjo’s reign marks the zenith of shirhak (practical learning) scholarship, whereby the influx of Western knowledge had a substantial impact on Chosŏn society. The popularity of shirhak is seen an extension of the reign of Yongjo, when a great number of works influenced by this philosophy were published. In the hundred years or so which spanned the reigns of these two kings, major works such as Sok oryeŭi (Supplement to the Five Rites), Chŏngbo munhŏn pigo (Reference to the Old Books, Enlarged with Supplements), Taeŏn tongp’yon (Comprehensive National Code), Munwŏn pobul (Exemplar of Documents and Letters of State), Tongmun hwigo (Documents on Foreign Relations), and Oryun haengshil to (Illustrations of Stories Exemplifying the Five Confucian Virtues) were all published. These works, and many others, helped in the revision of previous legal codes and rituals, and moreover, established new fields of scholarship in their day.

Along with the shirhak ideology that entered the peninsula via China, came Catholicism which was to create many problems for Chosŏn society. Catholicism initially found its support in Chosŏn mostly among the disaffected scholars who were long out of political power, such as members of the Namin (Southerner) Faction. The religion offered an alternative to those who were oppressed by the rigid Chosŏn society, which was dominated by a handful of powerful lineages, and thus it attracted support from not only out of power yangban, but also from members of the lower classes. Chöngjo realised the danger of the Catholic ideology and had it branded as heresy, proscribing it in 1785, by banning the importation of books from China relating to Western religion. Chöngjo was, however, moderate in his persecution of Catholicism, since his court had members of the Namin Faction that supported the religion, such as Ch’ae Chegong. After the king’s death, persecution of Catholics commenced in earnest and there were several bloody purges during the reign of his son, King Sunjo (r. 1800-1834).

Chöngjo also continued his grandfather’s policy of impartiality (t’angp’yŏng ch’ae) in regard to the appointment of officials without regard to their faction, and this policy allowed the political scene during his reign to remain relatively stable. Hence, during the reigns of Chöngjo and Yongjo, the power of the monarchy increased and was largely able to rise above the factional politics that had previously dominated the Chosŏn court. Further, Chöngjo helped to create a more equal society by appointing men of talent from illegitimate
lineages to positions in the Kyunjanggak Library, and this was to have a continuing impact on Choson society, in not only introducing talented men to the state bureaucracy, but also in helping to breakdown the distinction between legitimate and illegitimate lines of descent. Consequently, it is not surprising to find men of illegitimate descent at the fore of the shirhak movement and the Catholic faith, since these ideologies both stressed ability over lineage. The disintegration of distinctions between legitimate and illegitimate lineages did, however, led to increasing social turmoil in the nineteenth c., as the rise of heretofore lower-class men in the Choson government resulted in the entrenched yangban class becoming increasingly conservative and defensive in their philosophy of government.

Chongjo is praised as an enlightened monarch whose patronage of the scholars at the Kyujanggak Library allowed many changes in Choson society. His adoption of Yŏngjo’s policy of impartiality also allowed for continuation of an era of stable politics, and thus one of relative prosperity. Upon his death at the age of forty-nine in 1800, and the accession to the throne by his ten-year old son Sunjo, Choson entered a period dominated by factional politics and governance by powerful in-law families, all of which hastened the decline of the kingdom.

**Chonggamnok**

[New religions]

**Chŏngjo, King** (r. 1776-1800)

King Chŏngjo (1752-1800) was the twenty-second king of Choson and ruled from 1776 to 1800. His given name was San, courtesy name Hyŏngun and pen name Hongjae. His father was the second son of King Yŏngjo (r. 1724-1776), Crown Prince Changhŏn, his mother was Lady Hong of Hyegyŏng Palace, and his queen, Hyoŭi, was the daughter of Kim Shimok. In 1759, he was named heir to the crown prince, and with the combined tragedies of his father’s death in 1762 and the untimely death of Yongjo’s other son, he became next in line for the throne. With the death of Yŏngjo in 1776, Chŏngjo became king at the age of twenty-five.

Soon after his accession, Chŏngjo commenced national reform, and inter alia established the Kyujanggak Library at the palace, which served not only as a library, but as a research institute also. Chŏngjo’s reign marks the zenith of shirhak (practical learning) scholarship, whereby the influx of Western knowledge had a substantial impact on Choson society. The popularity of shirhak is seen an extension of the reign of Yŏngjo, when a great number of works influenced by this philosophy were published. In the hundred years or so which spanned the reigns of these two kings, major works such as *Sok oryeui* (Supplement to the Five Rites), *Changbo munhŏn pigo* (Reference to the Old Books, Enlarged with Supplements), *Taejŏn t'ongp'yŏn* (Comprehensive National Code), *Munwŏn pobul* (Exemplar of Documents and Letters of State), *Tongmun hwigo* (Documents on Foreign Relations), and *Oryun haengshil to* (Illustrations of Stories Exemplifying the Five Confucian Virtues) were all published. These works, and many others, helped in the revision of previous legal codes and rituals, and moreover, established new fields of scholarship in their day.

Along with the shirhak ideology that entered the peninsula via China, came Catholicism which was to create many problems for Choson society. Catholicism initially found its support in Choson mostly among the disaffected scholars who were long out of political power, such as members of the Namin (Southerner) Faction. The religion offered an alternative to those who were oppressed by the rigid Choson society, which was dominated by a handful of powerful lineages, and thus it attracted support from not only out of power yangban, but also from members of the lower classes. Chŏngjo realised the danger of the Catholic ideology and had it branded as heresy, proscribing it in 1785, by banning the importation of books from China relating to Western religion. Chŏngjo was, however, moderate in his persecution of Catholicism, since his court had members of the Namin
Faction that supported the religion, such as Ch’ae Chegong. After the king’s death, persecution of Catholics commenced in earnest and there were several bloody purges during the reign of his son, King Sunjo (r. 1800-1834).

Ch’ongjo also continued his grandfather’s policy of impartiality (t’angp’yŏng ch’aek) in regard to the appointment of officials without regard to their faction, and this policy allowed the political scene during his reign to remain relatively stable. Hence, during the reigns of Ch’ongjo and Yŏngjo, the power of the monarchy increased and was largely able to rise above the factional politics that had previously dominated the Chosŏn court. Further, Ch’ongjo helped to create a more equal society by appointing men of talent from illegitimate lineages to positions in the Kyunjanggak Library, and this was to have a continuing impact on Chosŏn society, not only introducing talented men to the state bureaucracy, but also in helping to breakdown the distinction between legitimate and illegitimate lines of descent. Consequently, it is not surprising to find men of illegitimate descent at the fore of the shirhak movement and the Catholic faith, since these ideologies both stressed ability over lineage. The disintegration of distinctions between legitimate and illegitimate lineages did, however, led to increasing social turmoil in the nineteenth c., as the rise of heretofore lower-class men in the Chosŏn government resulted in the entrenched yangban class becoming increasingly conservative and defensive in their philosophy of government.

Ch’ongjo is praised as an enlightened monarch whose patronage of the scholars at the Kyujanggak Library allowed many changes in Chosŏn society. His adoption of Yŏngjo’s policy of impartiality also allowed for continuation of an era of stable politics, and thus one of relative prosperity. Upon his death at the age of forty-nine in 1800, and the accession to the throne by his ten-year old son Sunjo, Chosŏn entered a period dominated by factional politics and governance by powerful in-law families, all of which hastened the decline of the kingdom.

Ch’ongjŏn (Equity Land System) [Economy]

Ch’ongjŏng yŏnp’yo

Ch’ongjŏng yŏnp’yo is a chronology of Ō Yunjung, a statesman of the late Chosŏn period, and covers twenty-six years of his life in Chosŏn officialdom. In 1930 a kinsman of Ō’s, Ō Ikソン, provided an original manuscript to the Chosŏnsa P’yŏnsuhoe (Korean History Compilation Committee) where it was reproduced. The work has also been more recently published as a part of a collection in 1958, and under its own title in 1971. The content of this work covers Ō’s life during the turbulent final years of Chosŏn. Specifically, it covers the period from the seventh month of 1868 to the third month of 1893. Ō entered government service after passing the civil service examination in 1869. He served in both Japan and China and his career mainly revolved around his efforts to conclude trade agreements with China in an attempt to help Chosŏn modernise. Ch’ongjŏng yŏnp’yo contains records of historically important events such as the Military Mutiny of 1882 (Imo kullan) and the Coup d’État of 1884 (Kapshin chŏngbyŏn) along with other records that provide many details of Ō’s service as Sŏbuk Kyŏngnyaksa (Diplomatic Commissioner of the Northwest Region). Therefore, this work is considered as a valuable source of firsthand information for many of the major events that surrounded the end of Chosŏn.

Ch’ongju University

Ch’ongju University (Ch’’ongju Taehakkyo) is a private university situated in Ch’ongju in North Ch’ungch’ŏng Province. The college was initially established as Ch’’ongju Sanggw’a Taehak in November 1946 by two brothers Kim Wŏn’gŭn and Kim Yŏng’gŭn. Kim
Hyöndae served as the college’s first president. In 1951, the name was changed to Ch’ôngju Taehak (Chongju College). A graduate school was added in 1954 and three years later, the college was moved to its present location in Naedŏk-dong.

In October 1980, Chongju College became a university, with six colleges and a graduate school offering both master’s and doctoral programs. Kim Myŏnghŭi served as the university’s first president. Today, Chongju consists of seven colleges: the Colleges of Arts; Education; Humanities; Law; Social Studies; Science; and Engineering. Post-graduate students are enrolled in the Graduate School, as well as in the Graduate Schools of Education; Industrial Engineering; Business and Public Administration. University publications include the Ch’ôngdae Shinmun in Korean and the Chong Dae Times in English.

Chongmyo Shrine

Chŏngnim Temple Site

Situated in Puyŏ County in South Ch’ungch’ŏng Province, Chŏngnim Temple was a Paekche monastery. Nearly all remnants of the ancient temple have disappeared; however, a tile with an inscription bearing the temple’s name has been discovered. At present, a five-storey pagoda (National Treasure No. 9) stands at the site. Archaeological excavations have also turned up fragments of statues.

Chongno Library

Located at the foot of Mt. Inwang in Seoul’s Chongno District, Chongno Library is accessible via Sajik Road or the Kyŏngbuk Palace subway stop. The library has a varied general collection. There are five reading rooms and a theatre where both domestic and foreign films are shown.

Chŏngshindae

Chŏngsŏn County

Situated in southeast Kangwŏn Province, Chŏngsŏn County includes the towns of Chŏngsŏn, Kohan, Sabuk and Shindo, and the townships of Imgye, Nam, Puk, Pukp’yŏng and Tong. Approximately 100 000 people live in this area which is surrounded by the high peaks of the T’aebaek Mountain Range. Mt. Noch’u (1 322m) rises in the north, Kojŏktae (1 254m) in the northeast, Mt. Hambaek (1 573m) in the southeast and Mt. Kariwang (1 561m) in the northwest. Due to the area’s high elevation, the winters tend to be long and the crop-growing season short.

Only about twenty per cent of the county is arable land. Due to the rugged terrain and cool climate, mostly dry-field crops such as alpine vegetables and medicinal herbs are grown here. Sericulture, cattle breeding and bee-keeping are important sources of local income. Sabuk and Kohan contain some of Korea’s largest mines. Kohan’s Samch’ŏk Mining Company produces one and a half million tonnes of coal annually and Sabuk’s Tongwŏn Mining Company two million. In addition, lime is mined in Shindong and Nam Township, gold and silver in Imgye Township, iron in Nam Township, zinc in Shindong, and clay is quarried in both Shindong and Chŏngsŏn. Although a railway line links the county with Chech’ŏn and T’aebaek, no major roads traverse this remote area.

Because of the county’s relative isolation and lack of industrial development, the area’s natural sites have been well-preserved. Much of the local tourism is centred around the four-kilometre long valley connecting the Hwaam and Murŭn villages. Here, just east of
Mt. Kunui, is the Hwaam mineral spring. Discovered in 1910, the spring is said to be good for gastroentric ailments as well as eye and skin diseases. Hwaam Cave, located just north of the spring, is one of the county's top tourist attractions. Discovered by coal miners in 1934, the cave has a 2800-square metre chamber, making it the largest limestone cave chamber in Korea. Fascinating stalagmite and stalactite formations are to be seen here, including a giant eight-metre high stalagmite. The cave is believed to be 400 to 500 million years old, and artefacts found here show that it was occupied by human beings during the stone age. Other scenic spots in the area include Kwangdae Valley and Somi Waterfall.

In addition to its picturesque scenery, the area boasts a number of important historical artefacts and sites. Chongam Temple, located in Kohan, is one of the most important Buddhist sites in the area. Founded by Vinaya Master Chajang during the Shilla period, the temple houses the beautiful Sumano Pagoda (Treasure No. 410). This nine-metre high structure with an intact finial was built during the Koryo period. Confucian sites in the area include Chongsön Hyanggyo (county public school) which was founded in 1110 and Kumijǒng, a pavilion built on the bank of Imgye stream by Yi Cha during Chosön. The county is also famous for the Chongsön Arirang, a famous folk song that is said to have originated in Puk Township. Legend has it that a maiden from Yoryang Village fell in love with a man from Auraji across the river. Saying that she was going out to pick camellia flowers, the maiden secretly slipped-away. However, there was a flood that prevented the ferry from crossing the river. The maiden expresses her longing for her lover in a song which has become known as Chongsön Arirang. Since 1976, the Chongsön Arirang Festival has been held for three days each autumn in commemoration of the legend.

**Chǒngūp**

Situated in the southwestern part of North Cholla Province, Chǒngūp comprises the town of Shint’aein and the townships of Kamgok, Kobu, Tŏkch’on, Puk, Sannae, Sanoe, Sosŏng, Yangwŏn, Ongdong, Ip’yŏng, Ibam, Chŏngu, Ch’iilbo and T’a’ein. Chǒngūp covers a total area of 692 square kilometres and in 1989 its population was 155,920. Kuksa Peak (655m), Yongdu Peak (552m), Changgun Peak (780m) and other peaks of the Noryŏng Mountain Range rise in the southeastern part of the city while Mt. Sangdu (575m) and Kuksa Peak (543m) run along the northeastern border. The rest of the city consists of relatively flat terrain. The Tongjin River traverses the city, and the level areas adjacent to the river form part of the Honam Plain, one of Korea’s key rice producing regions. With fertile plains and ample water supply, the city grows large quantities of rice. Other crops, such as barley, bean, sweet potato, radish and Chinese cabbage, are also cultivated here. In the hilly areas, orchards produce apples, peaches and persimmons. Although thought of as a secondary means of income, there is a sericulture industry, especially in the Ibam and Sosŏng townships. Ibam has most of the city’s factories, while the city’s electricity generating plant is located in Ch’ilbo In Ondong, sukchihwang, an important medicinal herb, is grown.

The city offers the visitor a number of attractions. On Mt. Yongdu, in Sanoe Township’s Chǒngnyang Village, is Yonggul (Dragon Cave). This limestone cave got its name from the legend that a dragon once lived in Yongso (Dragon Pond) at the far end of the cave. Previously, the cave’s entrance was blocked by a 4-metre-high boulder, which hindered entrance to the cave, was removed in 1973. The cave has some interesting stalactite formations and the constantly dripping water has created lines on the walls. Unfortunately, over the years, the cave has suffered significant damage.

In addition to lovely scenery, there are a number of important historical sites in the city. Buddhist temples found here include the Porim, Tusŭng, Yonghwa, Chŏngt’o, Okch’ŏn.
and Sőkt' an temples, and there are standing Buddha figures in Kobu Township's Yonghŭng Village (North Chŏlla Province Tangible Cultural Asset No. 97) and Sŏsŏng Township's Pohwa Village (Treasure No. 914). Old Confucian schools in the area include Kobu Hyanggyo (moved to its present site in Kobu Township's Kobu Village in 1597), T'aein Hyanggyo (established in T'aein Township's Taesŏng Village in 1421), Namgo Sŏwŏn (established in Puk Township's Porim Village in 1577 in honour of Yi Hang and Kim Ch'ŏn'il), Togye Sŏwŏn (established in Tŏk' ch'ŏn Township's Togye Village in 1673) and Musŏng Sŏwŏn in Ch'ilbo Township's Musŏng Village. This latter school was one of the 47 sŏwŏn to survive Taewŏn' gun's reforms of 1871.

In 1894, the Chŏngŭp area, then known as Kobu County, became the focal point of the famous Tonghak Uprising. At this time, local peasants were outraged by the tyrannical actions of Cho Pyŏnggap, the county magistrate. After appeals to the government failed to resolve the issue, the peasants took up weapons under the leadership of Chŏn Pongju, head of the county's Tonghak parish. After a number of daring victories against government forces, the Chosŏn government, with backing from Chinese military forces that had been sent in to help, managed to defuse the crisis through negotiations.

To commemorate the area's leading role in the rebellion, the Kabo Tonghak Festival is held in Tŏk'ch'on Township's Shinwŏl Village each year on 28 March. Begun in 1968, the festival features a marathon for the General Noktu (Nickname of Chŏn Pongju) championship flag, visits to the Hwang'ŏhyŏn Monument, a folk music festival, an archery championship, and an essay contest.

Chŏngyŏk

Chŏnju

Situated in the centre of North Chŏlla Province, Chŏnju is surrounded by Wanju County, Kimje and Iksan. The city covers a total area of 187.08 square kilometres, and as of 1989, it had a population of 514 000. Mt. Moak (794m) rises in the south. This provides a catchment for Chŏnju Stream which flows through the centre of the city. Soyang Stream is on the northeast border and joins Kosan Stream which then, along with Chŏnju Stream, flow into the Man'gyŏng River.

With flat terrain and irrigation water from the Paeksŏk and Ajung reservoirs, the area is well-suited for rice growing. About 18 per cent of the city's land is used for housing and only 3 per cent for industry. Unlike most Korean cities, Chŏnju's industry was slow to develop, and as a result, the city did not experience the population boom of many other Korean cities. The area's factories produce foodstuffs, cigarettes, timber and furniture products, and there are processing plants for non-metallic minerals. In the late 1960s, Chŏnju Industrial Park was set up in P'albok-dong. More than 10 000 people are employed in this 58-acre complex, in about one hundred and twenty factories, producing paper, textiles, machinery and foodstuffs. Hansol Paper Company, one of the first companies to move into the complex, has become a major industry that accounts for 60 per cent of the domestic market. Chosun Brewery is another large company located in the city.

As for traditional handicrafts, the city is famous for its hanji (Korean paper), hwasŏnji (paper used in calligraphy), sedge products, kayagûm (Kaya zither) and stoneware. The area is famous for its hand-held fans, which were formerly sent in tribute to the royal palace and were included in gifts sent to China. Along Highway 17, there is a folk-craft village where traditional handicrafts are made and sold.

Chŏnju boasts a number of tourist attractions. In Tŏkch'in Ward is the scenic Tŏkch'in Park. In addition to a large lotus pond, Chŏnju Zoo and various recreational facilities, the park contains the tomb of Yi Han, the progenitor of the Chŏnju Yi clan. Yi Han was the
twenty-first generation ancestor of Yi Sŏnggye, the founder of the Chosŏn kingdom. Chungnim Hot Spring, located on the road between Chŏngju and Namwŏn, is another popular tourist attraction. Opened in October 1993, the facility features a sodium carbonate/sulphur hot spring with a measured alkalinity pH 9.43. The spring is said to be remedial for skin disease and neuralgia. Exploratory drilling located the spring based on its mention in the diary of Yi Samman, one of the leading calligraphers of Chosŏn. In his diary, Yi mentions stories he had heard about women washing their hair in the hot waters which flowed from streams in the Chungnim Village area.

Chŏngju cuisine is renowned because of the generous number of side dishes that are served with each meal. The most well-known food here is pibim p'ap (mixed rice and vegetables served with an egg) and k'ŏngnamul kŏk (bean-sprout soup) served with rice. The city is a haven for artists, especially musicians. Chŏngju Taesasup, a performing arts festival started in 1784, is still held around October every year. Many famous p'ansori singers have made their debut at this festival. The Provincial Classical Music Institute in Tŏkchin Ward also actively promotes traditional Korean music. The institute also offers classes in traditional music.

Most of the city's historical sites are located near the city centre. Buddhist temples include Hakso Hermitage (founded by Kwanghye in 1786) and Tonggo Temple. In the southern part of the city just west of Highway 17 lies the old site of Namgo Temple which was established by the monk Myŏngdŏk in 668.

Since Koryŏ times, Chŏngju has been famous for its tile-roof houses. The Kyo-dong area, which has many of these, is designated as a protected zone. In Chungang-dong can be seen the Chŏngju Kaeksa (guest house, Treasure No. 583). Built during Chosŏn, the building was used in times of official mourning and celebration, and for services in honour of reigning monarchs on the first and fifteenth day of each lunar month. It was also used by local administrators to host important visitors.

Old Confucian schools in the area include Chŏngju Hyanggyo (founded during the Koryŏ period and moved to its present location in Kyo-dong in 1603), Hwanggang Sŏwŏn in Hyoja-dong, Pan'gok Sŏwŏn in Tongsŏhak-dong, Ch'ŏngha Sŏwŏn in Chungin-dong, Hwasan Sŏwŏn (founded in 1658), Yŏbong Sŏwŏn (founded in 1649), Han'gye Sŏwŏn (founded in 1695) and Sŏsan Sŏwŏn (founded in 1586). Modern educational institutions found here include Chonbuk National University in Tŏkchin Ward, Chonju National University of Education in Wansan District and Jeonju University in Wansan District.

Chŏngju Municipal Museum

Located in P'ungnam-dong in Chŏngju, the Chŏngju Municipal Museum (Chonju Shirip Pangmulgwan) opened in October 1963. The museum primarily houses Paekche artefacts from the Chŏngju area. Important items in the collection include twenty-six Chinese-style bronze swords (excavated from Sangnim Village in Wanju), a stone dagger and various items excavated from tombs in the region. In addition to managing exhibitions, the museum conducts archaeological surveys and publishes research data.

Chonnam National University

Chonnam National University (Chŏnnam Taehakkyo) is located in Yongbong-dong in Kwangju. The university was founded in January 1952 as the amalgamation of four colleges: Torip Kwangju Ùigwa Taehak (Kwangju Provincial Medical College); Torip Kwangju Nonggwa Taehak (Kwangju Provincial Agricultural College); Torip Mokp'o Sanggwa Taehak (Mokp'o Provincial Commercial College) and Taesŏng Taehak (Taesŏng College). Ch'oe Sangjae was the first president. At first the university consisted of six colleges: agriculture; commerce; industry; liberal arts and science; medicine; and he
graduate school. It has expanded into fourteen colleges with ninety-two departments and over seventeen-thousand full-time students. University publications include Chǒndae shinmun (The CNU Newspaper) in Korean and The Chonnam Tribune in English.

Chordophones

Choryŏng Mountain

Situated west of Mun’gyŏng on the border of North Ch’ungch’ŏng and North Kyŏngsang Province, Mt. Choryŏng (1,017 metres) is connected with the Sobaek Mountain Range. The mountain is characterised by rugged terrain. In order to take advantage of the area’s rocky landscape, a long stone fortress was built on the mountain in 1708; however, only 200 metres of the wall now remain. Many tourists are attracted to the mountain because of its historical sites and its close proximity with the Suanbo hot springs and Wŏrak-san National Park.

Chōsen tosho kaidai (Annotated Bibliography of Korean Books)

Chōsen tosho kaidai (Kor. Chosŏn tosŏh haeje, Annotated Bibliography of Korean Books) is a 578-page work compiled by the Japanese Government General in 1932. It is an annotated bibliography of the Korean books that were in the possession of the Japanese Government General and is classified according to the traditional Chinese system of Confucian Classics (kyŏng), histories (sa), writings of various authors (cha) and collected works (chip). There are also biographical notes provided on the authors in this collection.

Chosŏn (see History of Korea)

Chosŏn ch’ogi sahoe kujo yŏn’gu (A Study of the Social Structure in Early Chosŏn)

Chosŏn ch’ogi kujo yŏn’gu is a collection of studies on the official posts, military duties and the land system in early Chosŏn. This work was written by Yi Chaeil and published by Ilchogak Publishers in 1984. It is 288 pages in length.

Chosŏn ch’ogi sahoe kujo yŏn’gu (Social Structure in the Early Chosŏn Period)

Chosŏn ch’ogi sahoe kujo yŏn’gu (Social Structure in the Early Chosŏn Period) is a 288-page work written by Yi Chaeil and published by Ilchogak Publishers in 1984. This work is a collection of studies on the structure of the governing apparatus, military system and land systems of early Chosŏn.

Chosŏn cho’gi yangban yŏn’gu (Research of the Yangban Class in Early Chosŏn)

Chosŏn cho’gi yangban yŏn’gu is a 424 page book written by Yi Sŏngmu. This work examines the status of the yangban class during early Chosŏn in connection with their official positions, military duties and the land allocation policies that affected them. Ilchogak Publishers published this work in 1980.

Chosŏn chŏn’gi kiho sarimp’a yŏngu (A Study of the Kiho School of Literati in Early Chosŏn)

Chosŏn chŏn’gi kiho sarimp’a yŏngu is a work that investigates the members and characteristics of the literati of the Kiho School in early Chosŏn. In particular, this work
places an emphasis on the reform policies that these literati advocated for the civil service examination system. This 302-page book was written by Yi Pyönghyo and published in 1984 by Ilchogak Publishers.

**Chosŏn hanmunhaksa** (History of Sino-Korean Literature)

*Chosŏn hanmunhaksa* is the first comprehensive study of Sino-Korean literary activities in Korea, and was written by Kim T’aejun. The foundation of this work was taken from the graduation thesis of the author from Keijō Imperial University, and an enlarged version was first published by the Korean Language and Literature Society (Chosŏn Ōmunhak Hoe) in 1931. The work is largely divided into three major divisions of the Three Kingdoms, Koryŏ and Chosŏn, and each period discusses the influence of Chinese literature, renowned writers, and literary styles, among other topics. It covers each of the various forms of Sino-Korean literature used in Korea, such as poetry, composition and novels, and is acclaimed for bringing about the formal study of this important aspect of Korean literary history.

**Chosŏn hugi nonghaksa yŏn’gu** (A Study of the History of Agriculture Studies in the Late Chosŏn Period)

*Chosŏn hugi nonghaksa yŏn’gu* is an examination of the studies of agriculture in late Chosŏn. This 472-page work was written by Kim Yongsŏp and published by Ilchogak Publishers in 1988.

**Chosŏn hugi sahoe pyŏndong yŏn’gu** (A Study of Social Changes in the Late Chosŏn Period)

*Chosŏn hugi sahoe pyŏndong yŏn’gu* is a study on the social changes in the latter half of Chosŏn, written by Chŏng Sŏkchong. The data in this work is based upon investigation of the trial records in criminal proceedings, the spread of belief in the Maitreya Buddha among the common people, the Purge of 1694, the social status of the middle class (chungin) and merchants, slave records and other documents from this period. This work is in 342 pages and was published by Ilchogak Publishers in 1983.

**Chosŏn hugi sang’ŏp chabon ūi paltal** (The Development of Commercial Capital during Late Chosŏn)

*Chosŏn hugi sang’ŏp chabon ūi paltal* is a 220-page work written by Kang Man’gil and published by Korea University Press in 1973. This work analyses the economic situation in Korea immediately before the country was opened to foreigners. The author focuses on the activities of those merchants who dominated production activities, the processing problems of the Kaesŏng merchants, and the commercial activities of the Kyŏnggang merchants who controlled trade on the Han River.

**Chosŏn ilbo**

The *Chosŏn ilbo* (Korea Daily) is a widely-circulated newspaper printed in Seoul and has the earliest established date of newspapers currently published in the ROK. The first issue was dated 5 March 1920 and consisted of only four pages. The second issue, which was a special edition commemorating the foundation of the paper, was eight pages. Its first president was Cho Chint’ae, and he relied on financial support from the Taishō Industrial Friendship Society (Taishō Jitsugyō Shinbokukai). Other members of staff included Ch’oe Kang, who served as chief editor; Sŏ Mansun; Ch’oe Wŏnshik; Ch’oe Nam; Pang Hanmin; and Ch’oe Kukhyŏn. The *Chosŏn ilbo* was initially launched with the self-proclaimed goal of ‘advancing new culture.’
The early years of the newspaper were marked by restrictive publication measures enforced by the Japanese, but nonetheless, it still sought to establish itself as a mouthpiece of the Korean people. From its earliest days, the *Choson ilbo* was closed for varying periods by the Japanese Government General for publishing material perceived as anti-Japanese. Regardless of such setbacks, the staff of the newspaper continued to fulfil their stated mission by keeping the content of the newspaper both frank and educational.

The management and publication of the newspaper underwent various changes, with Namgung Hun, Yi Sangjae, An Chaehong and Yi Sanghyop serving in various management capacities in the early and mid-1920s. In the 1930s, An Chaehong, Yu Chint'ae and Cho Manshik were among those who served as its president, thus bringing the greatest talent available to the newspaper. However, shutdowns of the newspaper’s production continued by the Japanese authorities, some lasting for up to one year, and this, *inter alia*, led to serious financial difficulties. The *Choson ilbo* did regain it standing, however, when Cho Manshik handed the presidency to Pang Úngmo. Under Pang the *Choson ilbo* was transformed to a modern-style newspaper, aided by the construction of a new building and the purchase of modern equipment, such as a high-speed rotary press and communication apparatus. Despite unceasing oppression by the Japanese, the *Choson ilbo* still managed to let the voice of the Korean people be heard.

The *Choson ilbo* continued to undergo changes from the liberation of Korea in 1945, with repeated modernisation of its facilities and production techniques. It journalists have covered a myriad of major events of the past fifty or so years, including the Korean War; the April 1960 students’ rebellion that brought down Syngman Rhee (Yi Siingman); the 16 May 1961 coup d’état of Park Chung Hee (Pak Chonghui); Park’s assassination in October 1979; and more recently, the presidential elections of Kim Young Sam (Kim Yongsam) and Kim Dae Jung (Kim Taejung). The outlook of the newspaper has changed from the anti-Japanese and nationalistic ideology of the colonial period to the more conservative and mainstream newspaper that is published today. The *Choson ilbo* remains a strong manifestation of the power of the freedom of the press in the ROK, and is highly respected for its journalistic integrity.

*Choson kajok chedo yön’gu* (A Study of Choson Family Structure)

*Choson kajok chedo yön’gu* (A Study of Choson Family Structure) explores the structure of families during Choson, and was written by Kim Tuhen and published by Eul Yoo Publishing Company in 1949. This work is considered the starting point for Korean research into the organisation of the family. The first publication consisted of 772 pages in nine chapters. It was published also by Seoul National University Press in 1970 using modern typeface and horizontal printing techniques, thus ensuring that a new generation of scholars would be able to use this groundbreaking work.

Among the many topics that *Choson kajok chedo yön’gu* encompasses are family names, ancestral rites, marriage, divorce and remarriage, family composition, terminology for various relations, and mourning practices, as well as other related matters. The work has received accolades for its analysis of the historical structure of the Korean family and the diverse social structures that were created to preserve the Confucian model of the family. Moreover, the work is quite useful in comparative studies since it does not simply concentrate on the Korean family, but further incorporates models from elsewhere in the world that enable comparison.

Choson kwahaksa (History of Korean Science)

Chosōn kwahaksa is a summary of Korean scientific history written by Hong Isop and published by Chongumsa in 1946. This work represents the first comprehensive history of both scientific thought and technological developments in modern Korean research, and is thus highly acclaimed as establishing a foundation for scholarship in this field. The author initially had this work serialised in the magazine Chogwang (Morning Light) in 1942 and then subsequently published in the Japanese language in 1944. After liberation, Hong translated the work into Korean and it was republished in Korea.

Choson kwahaksa covers a great number of topics concerning Korean science and technology, ranging from ancient times until the end of Choson in 1910. It not only discusses scientific theory, but also the application of technology, for example, in such categories as the history of how the people lived and and under what conditions and how technological advance has affected the Korean people. Thus, this work enables the reader to gain a clear understanding of the evolutionary processes that occurred in the technological developments in Korea, making it essential for any research of Korean scientific history.

Choson kyŏngguk chŏn (Administrative Code of Choson) [Literature]

Choson Mulsan Changryŏ Hoe [History of Korea]

Choson munjon (Korean Grammar)

Choson munjon is the first grammar of the Korean language produced in Korea, and was written by Yu Kilchun (1856-1914) between 1897 and 1902. (There is doubt as to the actual date). The book is modelled after Latin-style grammar texts and five different versions are in existence. It is thought to have served as the foundation for Taehan munjon (Grammar of the Greater Han Empire), published in 1909.

Choson munjon has two major sections, covering speech and syntax, and an appendix that discusses various phenomena in the Korean language, such as voice change and lateralisation. The parts of speech are divided into the eight categories of nouns, pronouns, verbs, adjectives, adverbs, suffixes, connectives and exclamations, and syntax is composed of subject, explanatory, objective and modifier. The work appears to have been heavily influenced by the Japanese Nihon bunten (Japanese Grammar) written by Nakane in 1874, itself based upon Western grammars. Choson munjon is worthy of note since it is the first Korean grammar.

Choson muncha kŭp ŏhaksa (History of Korean Script and Studies on Korean)

Choson muncha kŭp ŏhaksa is a vast collection of information related to the Korean language, which was written by Kim Yun'gyŏng and first published in 1938. The work has been republished on four occasions, the last being in 1954. The contents cover a wide range of topics, from theories on the connection between the Korean language and the Ural-Altaic language family, fragmentary records of the languages and scripts used in ancient Korean kingdoms found in historical sources, and commentaries on the Korean grammar books written at the beginning of the twentieth c. While the work is now outdated, it is still valuable for its historical import.
Chosŏn musokko

Chosŏn musokko, written by Yi Nŭnghwa, is a thesis on Korean shamanism that was published in 1927 in the nineteenth volume of the magazine Kyemyŏng. This work covers the history of the shamanistic religious and ideological beliefs of the Korean people in a detailed and thorough manner. Historical documents such as the Samguk sagi (History of the Three Kingdoms), Samguk yusa (Memorabilia of the Three Kingdoms) and the Chosŏn wangjo shillok (Veritable Records of the Chosŏn Dynasty) are consulted along with various other literary documents.

In all, the work is divided into twenty sections as follows: The first section explains the origins of Korean shamanism, the second to fourth sections discuss shamanism during the Three Kingdoms, the fifth section Koryŏ and the sixth section covers Chosŏn. In particular, the section on Chosŏn is minutely detailed. The seventh section covers the demeanour of Korean shamanism and the eighth records the state of activities of mudang (shamans) as registered at government offices. The ninth section explains the taxes levied on mudang, the tenth the organisation of mudang and the eleventh records the rules and regulations prohibiting the shrines and altars of the shamanistic religion. The twelfth section describes the expulsion of mudang from the capital in the Chosŏn period. In the thirteenth to eighteenth sections the organisation of shamanistic deities is described along with their various attributes and roles. In the nineteenth section the variations seen in regional shamanistic practices is described and in the twentieth characteristic traits of Chinese shamanism are discussed.

This work is appraised as very important in the study of Korean shamanism and represents one of the first comprehensive works on shamanism in Korea. In particular it is of great value for studies concerning the shamanistic practices in the Seoul area of this period. In 1986 it was included in the second volume of Munhwa illyuhak charyach’angso.

Chosŏn pokshikko (A Survey of Korean Costume)

Chosŏn pokshikko was written by Yi Yŏsŏng and published by Paegyang Tang in 1946. It is a work that examines the traditional costumes of Korea and includes nine plates and forty-five drawings, illustrating the costumes discussed. First written in Japanese, after Korea’s liberation in 1945 it was translated into Korean. Changes in Korean costume from the ancient kingdoms to the end of Chosŏn are examined, using a variety of sources, including historical documents and extant artefacts. Chosŏn pokshikko helped to establish a foundation for studies into the traditional costumes of Korea, but the author did not produce supplemental studies as he crossed to North Korea shortly after Korea’s liberation.

Chosŏn sahoe kyŏngjesa (A Socio-Economic History of Korea)

Chosŏn sahoe kyŏngjesa is a 353-page study of the Korean economy written from a Marxist perspective. It was originally written in Japanese by Paek Namun in 1933, translated into Korean by Pak Kwangsun and republished by Bumwoo Publishing Company in 1989. The author examines the socio-economic structure of Korea during the ancient and medieval periods and is critical of the colonial view of history held by many Japanese scholars who argued that Korea was incapable of sustaining economic development without external assistance.

Chosŏn Sahoe Tang

Chosŏn sanggosoa (Ancient History of Korea)
Chosŏn sanggosa was written by Shin Ch’aeho and is an account of Korean history from the time of Tan’gun to the fall of the Paekche Kingdom. The work was serialised in the Chosŏn ilbo (Korea Daily), beginning in 1931, and later was published as a single book by Chongno Sŏwŏn in 1948. Originally this was a part of Shin’s Chosŏn sa (History of Korea), but when this portion of the work was completed it was referred to by the title Chosŏn sanggosa.

The contents of the book are as follows: The first chapter provided a general outline of the work, and the second chapter that discusses the tribal states of the ancient Korean peninsula follows this. The third chapter covers the three Chosŏns (Tan’gun, Kija and Wiman) and the fourth details the contention and battles of the small states as they strove for supremacy. The fifth chapter is devoted to the age of flourishing Koguryŏ, while the sixth details the conflicts between Koguryŏ and Paekche. The seventh chapter covers both the offensive and defensive struggles of Koguryŏ, the eighth the struggles among the Three Kingdoms, the ninth Koguryŏ’s battles with Sui China, and the tenth the battles of Koguryŏ with Tang China. The eleventh chapter details the flourishing of Paekche and the machinations of Shilla.

This work is notable in the study of Korean history for several aspects. Firstly, it raised among the Korean people an increased consciousness of their history during the colonial period when Korean history had been oppressed by the Japanese. The work sought to establish a lineage from Tan’gun, Kija, Wiman, the Samhan and the Three Kingdoms to those in the present era. Moreover, it established a succession from Tan’gun Chosŏn to the subsequent Kija Chosŏn and Wiman Chosŏn states, and then to Puyŏ and finally to Koguryŏ that revealed the links between these ancient states. Secondly, the work showed the extent of the ancient Korean states that reached far into Manchuria. Shin sought to change the conception of Korea that had been established from the time of Kim Pushik’s Samguk sagi (History of the Three Kingdoms) which essentially ignored the accomplishments of the ancient Korean states. Thirdly, Shin demonstrated that Koguryŏ had been the dominant kingdom in Korea for over seven centuries and that only through the external power of Tang was Shilla able to unify the Three Kingdoms. The result of the outside intervention was the loss of much of Koguryŏ’s territory, which was never to be regained by the subsequent Korean kingdoms.

Chosŏn sanggosa reveals a different interpretation of ancient Korean history and places a great deal of stress on nationalistic themes in Korean history. Moreover, there are efforts on the part of Shin to stress certain points in Korean history at the expense of others, which leaves the book open to criticism in places. However, in light of the age in which this book was written, it must be seen as having great value in establishing a strong national consciousness among Koreans.

Chosŏn sanggosagam (Examination of Ancient Korean History)

The Chosŏn sanggosagam is a two-volume study of ancient Korean history written by An Chaehong. The author projects his analysis of Korean history from a nationalistic viewpoint, a study which he completed during the colonial period. His dedication to the cause of Korean nationalism occasioned frequent arrest and incarceration by the Japanese authorities for his participation in various independence activities, such as the March First Independence Movement in 1919 and the New Korea Society (Shin’ganhoe). Although An began this work in the 1930s, it was not published until after liberation because of the fear of Japanese censorship. The first volume was published in July 1947, and the second in the following April.

The contents include An’s examination of the Kija Chosŏn Kingdom; ancient Korean capitals such as Asadal and P’yŏngyang; the circumstances surrounding the foundation of
Koguryo and its government structures; the foundation of Shilla and its governance; and the Samhan; all in the first volume. The second volume covers topics such as the history of Puyō, the history of Paekche, and the geography and cultural systems of the ancient Korean kingdoms, among other entries. Chosŏn sanggosagam is quite similar to Chosŏn sanggosasa (Ancient History of Korea) by Shin Ch’aeho (1880-1936). and also Chosŏn sa yŏn’gu (A Study of Korean History) written by Ch’ong Inbo. This even extends to an incorporation of the same citations and the frequent use of linguistical methodology in An’s research. It does, however, exhibit the author’s individuality in respect to modern social science methodology used in the analysis of historical data. It is also notable in introducing a theory of the developmental processes that ancient Korean society underwent, and this served as a starting point from which later scholars developed their own research.

**Chosŏn sangshik** (General Knowledge on Korea)

Chosŏn sangshik is a 1948 work by Ch’oe Namson that seeks to explain Korean history and traditional culture from a practical, ‘commonsense’ viewpoint. It is in three volumes, and was published by Tongmyŏngsa. Chosŏn sangshik first appeared in serial form on the literary page of the Maeil shinbo newspaper.

The volume dealing with traditional customs includes sections on seasonal customs; rituals; costumes; traditional food (and other entries). The second volume, on cultural geography, analyses the physical features of Korea -- its mountains and waterways Korea’s civilisation; and the names of the various Korean kingdoms. The third volume is dedicated to social systems and encompasses discussions on household duties; duties outside the home; military organisation; and the civil service examination, among other topics. Chosŏn sangshik remains as an excellent reference source and as an aid to understanding traditional Korean society. It was published in a single volume by Kungmunsa in 1953.

**Chosŏn sangshik mundap** (General Knowledge On Korea)

Chosŏn sangshik mundap is a 1946 study by Ch’oe Namson dealing with Korean customs and social systems. Originally, it was serialised in the Maeil shinbo newspaper in some one-hundred and sixty instalments, beginning on 30 January 1937. The serialised version covered four-hundred and fifty-six topics under sixteen main headings. National territory; seasonal customs and folk customs were included, and there were many other tropics. It was not until after the liberation of Korea that the serialised articles were condensed into the Chosŏn sangshik mundap The book contains one-hundred and seventy-five topics, arranged in ten sections.

The main headings are: Confucianism; cultural geography; folk customs; history; language and literature; the national name; national holidays, organised religions; products of Korea; and religious beliefs. Ch’oe sought to elevate national consciousness among the common people by promoting Korean traditional culture. From the viewpoint of seeking to a further understanding of the fact that the culture of Korea had traditionally centred on the common people, Ch’oe’s work is of significance.

**Chosŏn sosŏlsa** (The History of the Korean Novel)

Chosŏn sosŏlsa was written by Kim T’aedun and represents the first systematic study of the history of the Korean novel (sosol). It was published in 1933 by Ch’ongji Sogwan as a 206-page work. Quite extensive in its coverage of the subject, it begins with an analysis of the historical precedents for the novel in Korean legend. From this point it progresses to the development of the novel as a literary genre in Korea and cites early major works such as Kŭmo shinhwaa (New Tales from Mount Kŭmo) and Hong Kildong chŏn (The Tale of Hong Kultong). Kim also includes an inquiry into the novels written during the turbulent
period from the 1592 Japanese Invasion through the Manchu invasions of 1627 and 1636, and the works of Kim Manjung (1637-1692). The author also examines late Chosŏn novels such as  Ch' onhyang chŏn (The Tale of Ch' onhyang) and Changhwa hongnyŏn chŏn (Rose Flower and Pink Lotus) -- works that represented the evolution of the novel into a more complex form of literature. Finally, Kim discusses the novels of the enlightenment period at the end of the nineteenth century.

Chosŏn sosŏlsa was republished in 1939 by Hagyesa, but without any substantial differences. The work is praised for providing a foundation for the scholarly study of the Korean novel, and has thus served as a starting point for many later scholars.

Chosŏn susukkeki sajŏn (Korean Riddle Dictionary) [Literature]

Chosŏn tosŏ haeje (see Chosen tosho kaidai)

Chosŏn wangjo shillok (Annals of the Dynasty of Chosŏn)

From the beginning of the Koryŏ dynasty until the end of Chosŏn there were two established institutions to which historians and scholars were assigned to keep records of daily events. They were the Office of Annals Compilation (Ch'unch'ugwan) and the Yemun'gwan. The records kept were called Shijonggi. When a King passed away, a temporary office called Shillok ch'ŏng was instituted, at which the Shijonggi of the deceased King's reign and other government documents were assembled for the compilation of the Annals and these were kept in a Sago (archive). The Annals compiled during Chosŏn comprise 1 893 volumes of 888 fascicles, covering the twenty-five reigns between King T'aejo and King Ch'ŏlchong. Their compilation was begun in 1413, in the thirteenth year of King T'aejong's reign (1400-1418).

Additional copies of the Annals have been made during the course of history in an attempt to preserve this rich collection of Korean culture but over the centuries some copies of the records have been destroyed as a result of war or natural disaster. For example, the Annals kept in the archives of Ch'unghu and in the Ch'unch'ugwan were completely destroyed during the Hideyoshi Invasions of 1592-1598. A reprinting was completed in 1606. In an attempt to secure their preservation, four copies were secreted in remote mountain repositories. During the Japanese occupation copies were moved again. A draft set from the Odaesan Archives was taken to Tokyo University Library but was destroyed in the devastating earthquake of 1923. Another set was moved to the Royal Kyujanggak Library where it remained until the outbreak of the Korean War. It was taken to the temporary capital, Pusan, only to be lost in the great fire of 1953. Two sets, the T'aebaek Mountain and the Ch'ongjok Mountain copies were moved finally to the Central Library of Keijō Imperial University, now Seoul National University. These are the only two copies of the Annals of the Chosón dynasty which remain today.

These chronological records of daily life and historical events covering a 472 year period are the basic materials not only for the study of the Chosón period of Korean history, but also for research on Asian history in general. Many consider they exceed the Annals of the Ming and Qing dynasties of China in terms of scope and content.

Keijō Imperial University, during the period 1929-1932, undertook the publication of the Annals in photostat form. Thirty copies were printed, most of them being distributed to Japanese institutions. Because few copies remained in Korea, the Compilation Committee for Korean History (Kuksa P'yŏn'ch'an Wiwŏnhoe), Republic of Korea, published the Chosón wangjo shillok in forty-eight volumes of photostat between 1955 and 1958.

Chosón yŏn'gŭksa (The History of Korean Drama)

Chosón yŏn'gŭksa was written by Kim Chaech'ŏl and covers the history of drama in Korea. It was first published by the Korean Language and Literature Society (Chosŏn Ŝŏmunhak Hoe) as a part of the three-volume Chosŏn Ŝŏmunhak ch'ŏngsŏ (Collection of Language and Literature), in 1933. There is a preface by Kim T'aеjun, which is followed by Kim Chaech'ŏl's biography; the main text; and an appendix containing transcripts from kkoktugakshi (puppet drama) performances. It is based largely on Kim's graduation thesis from Keijo Imperial University. The main body of the work is divided into three main sections, with the first concentrating on the history of masked drama (kamyŏn kŭk); the second on puppet drama (inhyŏng kŭk); and the third section covering classical drama (ku kŭk) and new drama (shin kŭk). Chosŏn yŏn'gŭksa is notable for its treatment of kkoktugakshi, and reveals the author's deep interest in this area.

Chosŏnô Hakhoe (see Korean Language Society)
Chosŏn Yŏn'guhoe (see Society for Research in the Korean Language)

Chosun University

Chosun University (Chosŏn Taehakkyo) is a private university situated in Sŏsŏk-dong in Kwangju. Founded as a night school (Kwangju Yagan Taehagwŏn) by Pak Chŏrung in September 1946, the school initially consisted of twelve departments. In November of that year, the school's name was changed to Chosŏn Taehagwŏn. In May 1948, the school became Chosun College with seven departments. By 1950, the college had expanded to twelve departments and over 1,800 students. In 1953, the college gained university status, with three colleges and fourteen departments. In 1955, a doctoral program was inaugurated. The university continued to expand, with the addition of further colleges and departments.

Today, Chosun University consists of the Colleges of Business; Computer and Information Sciences; Dentistry; Education; Engineering; Fine Arts; Foreign Studies; Humanities; Law; Medicine; Natural Science; Pharmacology; Physical Education; and Social Sciences; the Graduate School; and the Graduate Schools of Education; Environment and Health; Industry; Medium; and Small Industries and Policies. University publications include the Chosŏndae hakpo in Korean and The Chosun Academy in English.

Christian Broadcasting System (CBS) [Broadcasting companies]

Christianity in Korea

1. The Roman Catholic Church

Although there had been a significant Nestorian presence in China and Central Asia since the middle of the seventh century, and in spite of medieval Roman Catholic contacts with China, there would not appear to be any evidence to confirm Christian contact with Korea prior to the middle of the Chosŏn Dynasty (1392-1910). With the initiation of Jesuit missions in China from the end of the 16th C., Roman Catholics tracts and other materials explaining Christian doctrines began to circulate throughout China. From the 17th c. on, the collected works of various Korean Confucian literati indicate that they were aware of Roman Catholic Christianity, its teachings, and of general knowledge about Europe itself. This information was obtained in one of two ways, either from travels to China or through the reading of some of the literature produced by the early Catholic missionaries. In spite of this awareness, there is no evidence that there existed a gathered community of Christian believers in Korea before the last quarter of the 18th c.

a) The Early Church

In 1777, a group of young scholars who belonged to the circle of Yi Ik (1681-1763), a leading member of the so-called Shirhak School, gathered to discuss the teachings of the Jesuit religious tracts. This group maintained their interest in the subject and in 1784 were able to send one of their number, Yi Sŏngmun (1756-1801) as part of a diplomatic mission to China where he was able to meet with one of the missionaries in Beijing. He was baptized and returned to Korea to propagate the faith amongst his fellow scholars and their families. Based upon what Yi Sŏngmun had seen in Beijing, in 1787 these young aristocrats began to build an ecclesiastical structure complete with a bishop, and priests. Advice from the Bishop of Peking in 1789 made them desist from this practice. Further advice received in 1790 that Christians were to be discouraged from participating in the Confucian ancestral rituals because of their perceived idolatrous nature led to the defection of a number of the early converts.
When Father Zhou Wenmu (1752-1801) was sent as the first Catholic missionary to Korea in 1795, he was amazed to learn that there was a gathered community of 4,000 Christians already waiting for him. The political establishment was gravely concerned not only by the great growth in the church largely amongst the members of a Confucian political faction currently out of power, but also by their refusal to perform the ancestral ritual. Not only was there an implied political threat by the faith of the early adherents, but their refusal to perform the ancestor rites was seen to undermine a pillar of Confucian morality.

Although there was conflict between Catholics and the Confucian establishment which resulted in a few deaths, the generally moderate views of King Chǒngjo (r. 1777-1800) held off the possibility of a full-scale persecution of the fledgling church. With the king’s early death in 1800, a massive persecution of the church began which was to continue on and off for the next three-quarters of a century. There were five large-scale persecutions of the church, in 1801, 1815, 1827, 1839, and 1866-1871. These persecutions had two effects, to drive the church underground and to change the class character of the church. Early members of the church who escaped execution, sought refuge in remote areas of the country and hid themselves amongst the members of the lowest and most outcaste members of late Choson society. The Catholic Church changed from being the church of a certain section of the aristocratic class to the church of the outcaste class. In addition to these major persecutions, throughout the first three-quarters of the nineteenth century, there were minor local persecutions. During the final Great Persecution of 1866-1871 alone when the Prince Regent attempted to wipe out Christianity once and for all, 8,000 Koreans and 9 French missionaries were killed. The severity of the persecutions of the 19th c. created a ghetto mentality within the Catholic community from which it did not emerge until the 1960s.

Although the first missionary to Korea was Chinese, the principal missionary organization in Korea during the early period was the Societe des Missions Etrangeres de Paris. The church in Korea was under the authority of a missionary bishop who held a papal appointment and was a member of the missionary society. The theological character of the Catholic Church was coloured by its experience of suffering. Evidence shows that much emphasis in prayer was placed on the Passion of Christ and the Sorrows of Mary. Although there were materials printed on the Mass and Catholic doctrine, there was no translation of the Bible available in Korean.

b) The recent century

In the last quarter of the 19th c., the condition of the Roman Catholic Church improved considerably with the signing of Western-style diplomatic treaties with Japan and various Western powers. It was now no longer possible to conduct a full-scale persecution of the Church and maintain significant diplomatic relations with the Western world. In the generation between 1876 and the annexation of Korea by Japan in 1910, the Catholic Church grew institutionally, and in terms of numbers. The first church was erected in the capital in 1893, and the cathedral was completed and dedicated in 1898. Additional clergy and an order of nuns arrived and began work. By 1910, there were 73,000 Catholic adherents. Unlike their Protestant counterparts, Catholic missionaries did not have the same degree of interest in social outreach and did not found schools and hospitals.

During the Japanese colonial period, the church continued to grow numerically, but not in percentage terms within the national population. New organizations, especially lay organizations were founded. The most surprising event of the colonial period was the position of the Catholic church on the attendance of Catholic Christians at Shinto shrine worship. Permission was granted on the basis of its nature as a patriotic act, which was not only offensive to Korean nationalism, but ran counter to the position on idolatrous worship taken by the Catholic church in the late 18th and 19th centuries. It is possible that because of the severity of the persecutions, the leadership of the church wished to protect the
community from further persecution. By the end of the colonial period there were 183,000 adherents.

Following Liberation in 1945 from Japanese colonial rule, the church was split in two due to the creation of Soviet and American zones to take the surrender of the Japanese forces. The situation of the Church in the two halves of Korea has been very different. Since the establishment of the North Korean state in 1948, the church has been very rigidly controlled. As all associations free of government or party control have been eliminated, there is very little information available about the life of the church. In 1988, and undoubtedly as a result of the need to have wider commercial contacts with the Western world, the first Catholic church since the late 1940s was opened.

In the south, on the other hand, there has been significant institutional growth and remarkable growth in the size of the church's membership. In 1962, the first Korean hierarchy with its own archbishop was created. Catholic institutional social outreach has increased and the political involvement of the church has become a prominent feature of the institutional church's activities as well. The church now numbers over two million members, representing perhaps five per-cent of the Korean population.

There are two reasons for the emergence of an evangelical movement within Catholicism which has resulted in the dramatic increase in church membership since the end of the Korean War. These are, the rapid growth of the Protestant churches which had the effect of destroying the ghetto mentality of the Catholic church; and the Second Vatican Council of the 1960s which enunciated a more open attitude towards other Christian denominations and provided an impetus towards greater evangelism.

The significance of the church and its history of suffering was recognized by Pope John Paul II when he visited Korea in 1984 to celebrate the church's bicentenary. A million people attended the ceremony when he canonized 103 of the Korean martyrs, the largest number of persons canonized at one time, and the first canonization ceremony ever held outside Rome.

2. The Protestant Churches

Like the Catholic church before it, the development of Protestantism in Korea antedates the appearance of foreign missionaries in the peninsula. In 1882, John Ross (1842-1915), a missionary of the United Presbyterian Church of Scotland based in Shenyang, Manchuria, translated the New Testament into Korean.

The circulation of the New Testament throughout the Korean communities on the Manchurian side of the Yalu River and in the northwestern part of the peninsula resulted in the formation of numerous Christian communities before the arrival of the first Protestant missionaries in Korea in 1884/1885. Since the earliest period, the Protestant churches have been characterized by a spirit of self-evangelisation, and self-support. Ross's translation also had a tremendous effect on the church after the arrival of the first missionaries as, (a) it was the only complete translation of the New Testament available until 1900, (b) because it introduced key theological terms, including the word for God, Hananim, which are still in use today, and (c) because it was written exclusively in the Korean alphabet, Han'gul.

The first Protestant missionaries to come Korea were Horace N. Allen (1858-1932) and Horace G. Underwood (1859-1916), representing the northern Presbyterian church in the USA, and Henry G. Appenzeller (1858-1902) representing the northern Methodist church of the USA. Although these missionaries were quickly joined by representatives from other denominations and countries, Protestant missions in Korea were largely American and Presbyterian. Because of restrictions which were initially in force about direct
evangelisation, and because of the missionaries' own social concerns, the foundation of schools and hospitals were among the very first works which the missionaries undertook. These institutions became the foundation of Korea's modern educational and medical systems. Three of the five most prestigious universities in Korea have a Christian foundation.

Korean church growth from the first proved to be extraordinarily rapid. By the time of the annexation of Korea by Japan, one per-cent of the population was Protestant. There are three reasons for this rapid church growth. First, Korea had been dominated for five hundred years by Zhu Xi's form of Neo-Confucian philosophy which had reached such a state of rigid orthodoxy that it had become intellectually and spiritually moribund. This spiritual vacuum joined with the obvious economic and political decline in the Korean state led many young intellectuals to reject Confucianism and to search for a new Truth. This attitude predisposed them towards accepting Christianity. The social concerns and firm moral code of the missionaries would also have commended Christianity to the young elite as it resonated with their own Confucian ethical code, however different. Second, from the beginning the missionaries from the first pursued a policy of creating a self-evangelizing, self-supporting, self-governing church a policy which became enshrined in the so-called Nevius Method named after John Nevius (1829-1893), a missionary to China. The burden of developing the church was placed on the Korean Christians themselves, a feature which began with the distribution of the Ross translation. A third reason for the growth of Protestantism may be found in the use of the Korean alphabet, rather than Chinese characters, in the Ross translation. This made the Christian message accessible to anyone, and did not limit Christian knowledge only to the elite who had mastered the Chinese script.

Following the Japanese annexation of Korea, the church was singled out as a potential threat to Japanese rule. In 1912, 124 persons were accused of involvement with an attempt to assassinate the Japanese Governor-General Terauchi Masatake (1852-1919). Of these men, 98 were Christians. Because the church was a well-organized group not directly under Japanese control, it appeared to be a challenge to Japanese rule. Also by this time, it was apparent that many young patriotic Koreans had become members of the churches and that their influence could hinder the Japanese attempt to control Korea. Although the charges were dismissed against all but six of the accused, the aura of nationalism has enveloped Protestantism ever since.

Two events, in particular, have reinforced this association between Korean patriotism and Protestantism. First, on 1 March 1919, the Declaration of Independence from Japanese rule was read out. Of the 33 persons signing the Declaration, 16 were either Methodists or Presbyterians. The course of the nation-wide uprising against Japanese rule was moulded by the Christians' insistence that the movement must be non-violent. The role of the Christians in the organization of the movement and its brutal suppression by the Japanese reinforced the patriotic image of Protestantism. It is an important distinction between the Protestant churches in Korea and in other parts of the world that the Korean Protestant churches have never had to answer the question of their relationship to imperialism, because the imperial power was Japan.

The effect of the Japanese suppression of the 1 March 1919 uprising for Korean independence was to split the Protestant churches into two supra-denominational camps, one camp which was socially active, and one camp which was conservative and stressed evangelism without relation to the social context. During the 1920s and 1930s, the churches still continued to grow numerically, but failed to increase their per-centage within the population, remaining steadily at about 3 per-cent of the population.

A second event which reinforced the patriotic image of Protestantism was the controversy during the 1930s over the Shinto Shrine Question. In 1925, the Governor-General of Chflosen had erected a central shrine for Korea in Seoul. With the rise of a militaristic,
highly nationalistic regime in Japan, there was a greater demand for Koreans to conform to metropolitan Japanese practice with regard to attendance at Shinto rites. Consequently, in the 1930s, school-children and many mature Koreans were required to attend these Shinto ceremonies which were classified by the government as 'patriotic' but not 'religious' rituals. Many ministers and ordinary Christians went to jail and a few were killed over their refusal to participate in these Shinto rites. Several missionaries were jailed or deported over this issue. The Presbyterian missions closed their schools rather than have their students forced to attend the rites at the Shinto shrines.

Before Japan's defeat in 1945, attempts were made to 'Japanize' the churches by bringing in a Japanese church leadership or to amalgamate the churches with their Japanese counterparts. Finally, the Governor-General forced a merger of all the churches in Korea into a single unified denomination on 25 June 1945. This merger came apart following Japan's defeat on 15 August.

The church lived in turbulent times following the defeat of Japan. The next decade saw the imposition of American military rule in the south and Soviet indirect rule in the north until 1948, then the formal division of the nation, followed by a terrible civil war. Following Liberation in 1945, the churches were rent by dissension over the question of who had or who had not succumbed to pressure over the Shinto Shrine Question. During and following the Korean War in the 1950s, the church was concerned with helping to rebuild the nation by dealing with the problems of refugees and displaced persons.

From the 1960s, Korean Protestantism began the process of rapid growth which has become its best known characteristic to the outside world. By the early 1990s, there were over eight million Protestants accounting for about a fifth of the Korean population. These statistics mean that the Republic of Korea is, apart from the Philippines, the most Christian country of East Asia. There are several reasons which may be given to explain this development. The first explanation for this growth is that Protestant Christianity had a sound foundation which had been established before and during the Japanese colonial period. In a period of national spiritual crisis, the church was strong and available.

Second, from the 1960s onwards - in less than a generation, Korea underwent the most thorough and rapid industrialization of any nation in history. Now easily ranking within the top ten industrial nations, the Republic of Korea has shifted from being principally a rural, agrarian nation to being principally an urban, industrial nation. The social and cultural dislocation caused by this process of rapid industrialization created a great spiritual need, a need to explain the meaning of what was happening around them. Buddhism had been thoroughly suppressed during the Choson dynasty; Confucianism had been well-nigh discredited; Catholicism was too weak. Therefore, the Protestant churches alone were available for people to turn to.

A third reason for the appeal of Protestantism since the 1960s is the re-emergence of a tradition of social critique which had lain dormant since the suppression by the Japanese of the March First Movement of 1919. The re-emergence of social criticism within the church coincided with the rise of the new urban industrial state and the emergence of a conservative dictatorial policy by the government. The various movements for economic justice for the working class and for the construction of an equitable, democratic political system have come from Christian, largely Protestant, circles. This trend has reinforced the patriotic and nationalistic aura of the Protestant churches in Korea.

3. Characteristics of the Church Today

The number of church buildings in modern Korea is a remarkable feature of the rural or urban landscape giving eloquent evidence to the widespread character of Protestantism. Christians in Europe are surprised not only by the number of churches, but also by their
size, and by the size of the congregations. This phenomenon stems from the fact that the 
Korean church is largely conservative in theological outlook and strongly evangelical. 
However, rapid growth has also brought many problems, not the least of which is the 
emphasis on the virtue of large congregations. Two particular theological problem areas 
have emerged, *kibok sinang*, and the *kido-won*. *Kibok sinang* is a belief in the power of 
prayer to obtain blessings. It has taken root amongst many Christians who believe that God 
will provide material blessings upon request and that riches or material success are likewise 
signs of God's favour. The *Kido-won*, originally retreat centres for spiritual refreshment, 
have become centres for the performance of faith healings. Revival meetings likewise are 
often used to perform acts of spiritual healing. This appropriation of foreign institutions for 
faith healing ceremonies represents an amalgamation of Christian practice with the 
shamanistic folk religion, an important element of which was the curing of disease.

Since the late 1970s, an indigenous Korean form of Liberation theology has emerged called 
*Minjung shinhak* (Theology of the Masses). This theology was originally articulated by 
foreign-trained Korean theologians who had been active in the movement for political 
reform and democracy. More conservative Christians felt that because of their background 
and political activities, the *Minjung* theologians got rather too much coverage in the foreign 
press. *Minjung* theology has now become very popular amongst theological students in 
Korea and has established a genuine place for itself in Korean Christianity. A radical 
theology, *Minjung* theology takes the part of the oppressed members of society, the *minung* 
whose lives are said to be full of *han* or anger and resentment. This theology argues that 
God's Salvation History is a working out of his commitment to the poor and the oppressed.

Although Protestantism has been highly successful numerically, it is still true to say that it 
has had very little cultural impact on Korean society. Buddhism at a similar stage in its 
development had a far greater impact on ancient Korean culture. There has been very little 
digenization of hymns, styles of worship, and ecclesiastical buildings. The next stage of 
Christian development will have to be the emergence of a truly Korean Christian culture.

**Chu Shigyong** (1876-1914)

Chu Shigyong was a member of the movement which expounded the use of the Korean 
language during the Japanese encroachment. His family's ancestral home is in Sangju, his 
childhood name was Sangho and he also used aliases such as Hanhinsaem and Paekch’ŏn. 
Chu was born in Pongsan of Hwanghae Province, and studied the Chinese classics under 
both his father and his adoptive father from an early age. In 1887, he went to Seoul where 
he continued his studies until his eyes were opened to Western-style education. In 1894 he 
entered Paejae School where he remained until he was selected by Sŏ Chaep’il (1866-1951) 
to join the clerical staff of the *Tongnip shinmun* newspaper. Chu devoted his full efforts to 
the production of this first exclusively Korean (*han’gul*) newspaper and in order to provide 
it with a standardised orthography, founded the Society for the Standardisation of Korean
Writing (Kungmun Tongshik Hoe). Concurrently, he was involved with Sŏ Chaep’il’s Independence Club (Tongnip Hyŏphoe). Chu continued his education and graduated from Paejae Normal School in 1900, but since his appetite for modern education was already whetted, he pursued his studies until he was thirty-four years of age. As well as being a student, Chu instructed at many schools, including Ehwa (Ihwa) School and Paejae Academy. He was also a votary of the enlightenment, Korean language and Korean language research movements that existed in the early twentieth c.

Chu was indeed a pioneering scholar in the Korean language field and published works such as Kugŏ munpŏp (A Korean Grammar, 1905) and Mal ŭi sori (A Phonology of Korean, 1914), which had tremendous influence on the scholarship of the Korean language. His other works of note include, Mal (Speech, 1908) and Kungmun yŏng’u (Research of the Korean Language, 1909). The effect of his works on the subsequent generation of Korean language scholars can be seen in the establishment of the Society for Research in the Korean Language (Chosŏn Yŏn’gu Hoe) founded by his disciples in 1921. This society changed its name to the Korean Language Society (Chosŏn Hakhoe) in 1931 and to the Han’gǔl Society (Han’gǔl Hakhoe) after the liberation of Korea. It continued the work of Chu in creating a standardised orthography for modern Korean.

Chu Yohan (1900-1979)

Chu Yohan was a poet, essayist and politician of this century. His numerous pen names included Songa, Pŏlkkot and Nagyang. He was born in P’yŏngyang and his father was a minister. Chu was educated in P’yŏngyang before travelling to Japan where he entered Meiji Academy in 1918. He continued his studies until 1925 when he graduated from Hujiang College in Shanghai. After returning to Korea he worked on the staff of both the Tonga ilbo and Choson ilbo newspapers. After liberation Chu served in a variety of roles up until his death in 1979. He was a member of the National Assembly, president of the Taehan ilbo newspaper, Minister of Commerce, Minister of Reconstruction and president of the Korea Maritime Transportation Corporation.

Chu is best known for his role in introducing modern, free-style poetry to Korean audiences. His poem ‘Pul nori’ (Fire Play), which was published in the first issue of the literary magazine Ch’angjo (Creation) in 1919, represents arguably the first free-style poem by a Korean writer. Chu was not, however, only a modern-style poet as he also contributed to the revival of the shiijo form that came to prominence in the 1920s. Chu’s works also promoted the elevation of the nationalistic spirit of the Korean people during the oppressive Japanese colonial period, and is thus counted with other patriotic literary men such as Kim Sowŏl (1902-1934), Ch’oe Namsŏn (1890-1957) and Kim Tonghwan (1901-?) in this aspect. Chu has two major poetry collections, Arŭndaun saebyŏk (Beautiful Dawn, 1924) and Pongsa kkot (Flowers of the Blind, 1930), along with other collections of critical essays including Chayu ûi kurım tari (Bridge of Freedom, 1959) and Puhung nonŭi (Treatise on Reconstruction, 1963).

Chuch’e sasang (see Juch’e Ideology)

Chuhŭl Mountain

Mt. Chuhŭl (1 106 metres) is situated in Mun’gyŏng in North Kyŏngsang Province. Together with Mt. Sobak (1 440 metres), Munsu Peak (1 162 metres), Mt. Songni (1 058 metres) and Mt. Hwangak (1 111 metres), it makes up the border between North Ch’ungch’ŏng and North Kyŏngsang Province. During the Three Kingdoms Period, it marked the border between Shilla and Koguryŏ. At the foot of the mountain lies Hyejuk Temple, which was founded by National Master Pojo (1158-1210).

Chumong [Mythology]

Chun Doo Hwan (1931-)

Chun Doo Hwan (Chôn Tuhwan) was a former general of the armed forces, a politician and the fifth president of the Republic of Korea. He grew up as the sixth of nine children in a farming family in South Kyôngsang Province. As a boy, Chun was tutored by his father in the Chinese classics, but when the family moved to Taegu he attended elementary school there. By 1951, Chun had graduated from technical high school and with the Korean War then raging, he entered the Korean Military Academy in Chinhae. He was part of the notorious eleventh class of the institution, which was the first to complete a four-year program. After graduation, Chun began a long military career that saw him rise through the ranks of the Korean Army and eventually gain the presidency of the ROK.

Chun's first military duties were on a junior officer level as platoon leader, and he went to the United States for further training. After Park Chung Hee (Pak Chŏnghŭi) took control of the ROK in 1961, Chun was given the opportunity to serve in government positions. He met with Park frequently and from his association with the president was appointed Capital Garrison Commander in 1967. In 1968, when thirty-one North Korean commandos infiltrated South Korea in an attempt to assassinate the president, Chun's troops undertook a highly-successful search and destroy mission, thus earning him credit. After serving as the senior aide to the Korean Army Chief of Staff in the following year, Chun was promoted colonel and given command of an ROK unit in Vietnam. He distinguished himself on active service and was awarded a Bronze Star by the United States Army. On his return to Korea, Chun served as a senior staff officer on the Presidential Security Force and by 1978 had been promoted to brigadier. His command again performed admirably as it discovered the North Korean infiltration tunnels being prepared under the Demilitarized Zone (DMZ), and on this occasion Chun received a presidential citation. Subsequently, he was promoted to a two-star general and assigned as commander of the Defence Security Command, in March 1979. This command proved to be of great importance to Chun's future as it placed him in a position of power at the time of Park's assassination in October 1979.

After the death of Park and the resultant turmoil, the new government under Choi Kyu Hah (Ch'oe Kyuha) became increasingly unstable. In these circumstances, Chun began to consolidate his power in the military sphere and then launched a coup d'état. Essentially, there were two steps to his thrust for power. The first occurred in the evening and early morning of 12-13 December. The ROK army mutinied as Chun ordered the arrest of the Army Chief of Staff and head of the Martial Law Command, General Chŏng Sŭngʼhwa, on the grounds of his involvement in Park's assassination. Concurrently, Major General Roh Tae Woo (No T'aeu) brought his Ninth Division, which had been guarding the approaches to Seoul, into the capital and seized strategic points. Then a bloody struggle took place at the ROK Army Headquarters and the neighbouring Ministry of Defence which resulted in the army being placed under Chun's control. Chun appointed Lieutenant General Yi Hŭisŏng as Army Chief of Staff and Martial Law Commander; Roh was given command of the capital garrison and another conspirator, Major General Chŏng Hŏyŏng, was made Special Forces Commander. Thus, Chun had direct control of the South Korean military machine.

The second step in Chun's seizure of power was to take control of the civilian power structure. In April 1980, acting President Choi Kyu Hah appointed Chun as head of the Korean Central Intelligence Agency (KCIA), an unconstitutional appointment that now allowed Chun to control not only the military but also the most powerful civilian organisation, and this appointment touched off massive protests by students and others.
The student demonstrations in Seoul alone involved upwards of one-hundred thousand students, causing opposition leaders Kim Dae Jung (Kim Taejung) and Kim Young Sam (Kim Yongsam) to fear the intervention of the military, a situation which prompted their calls for a halt to the protests. This was too late, however, as Chun had already brought into existence the puppet government of Choi. The Martial Law Decree No. 10, closed down the National Assembly, all colleges and universities, banned labour actions, and prohibited all political activities nationwide. This mandate was followed by a wave of arrests of political opponents.

At this point, students in Kwangju of South Cholla Province began demonstrating for the release of their local leader, Kim Dae Jung, who had been arrested in the purge. On 18 May, the student demonstrations were confronted by a regiment of paratroopers who used extreme physical force in an attempt to gain control. After two days of indiscriminate violence by the troops, the citizens of Kwangju supported the students and began their own concentrated opposition to the paratroopers. This unison of students and citizens drove out the airborne regiment beyond the city limits. After a one-week or so stand-off between the military outside Kwangju and the citizens and students within, reinforcements from the army's Twentieth Division were sent to the city to impose martial law. What followed was the massacre known as the Kwangju Incident, as the regular army took control of the city. Official reports gave the number of deaths as being about two-hundred. However, human rights organisations record a significantly higher number, in the order of two-thousand. Chun had thus demonstrated to the Korean populace that he would not allow any group, political or otherwise, to stand in the way of his personal struggle for power.

After Kwangju, Chun moved quickly to consolidate his gains. Within three months, Choi had resigned as president and Chun had replaced him. After a few months Chun was formally installed as President, bringing with him a new Constitution and National Assembly. Thus, the Fifth Republic of the ROK came into being. Chun's government was similar to that of Park's in many respects, as the ROK's armed forces played a significant role in guaranteeing the stability of the nation. Moreover, political opponents were detained, and so Chun and his political party enjoyed unfair advantage that saw his decrees 'rubber-stamped' by the legislative body. While Chun continued to employ a system much like Park's Yushin (Revitalisation) system, he did permit some basic rights to the people, such as the abolition of the curfew and a relaxation of student-uniform policies. These gave the impression of greater civil liberty, but underneath the facade of liberalisation, Chun continued to exert oppressive force on his political opponents and did not permit challenge to his dictatorial rule.

While Chun strove to emulate his forerunner Park, he fell far short of the latter's attainments in the office of president. Despite the fact that Park had come to power in a military coup d'état and exercised authoritarian control over the Korean state, he was widely recognised as a man who had the economic insight which saw South Korea's rise from an impoverished country to one of relative affluence. Moreover, Park was seen as being receptive of expert opinion and as a personally honest and upright individual. Chun, on the other hand, was seen as a dull, arrogant and corrupt leader, and by the end of his rule in 1987, was probably detested by most Koreans. As well as his arrogance and other personality traits that made him unattractive to the people he ruled, was the barbarous way in which he had seized power. Unlike Park's almost bloodless take-over, Chun used a degree of savagery without precedence in modern Korean history. He had without hesitation, set the military against the Korean people, and further, had refused to acknowledge responsibility for the Kwangju Incident, which had been officially labelled a 'communist revolt'. Thus, questions of legitimacy surrounded Chun for the duration of his presidency.

It is accepted that South Korea did make some notable advances under Chun's control, such as further economic growth and securing the rights to host the 1988 Summer
However, the 1980s in Korea were a time underlined by serious social unrest as the people sought to free themselves from their president’s oppressive regime. Chun’s fundamental mistake was in assuming that the Korean people would continue to accept him as a virtual dictator. By 1987, public distaste for Chun’s regime peaked and when he announced that all discussion of revising the nation’s Constitution and electing a new president would have to wait until after the Summer Olympics, widespread demonstrations took place. The situation deteriorated with the death of a student at the hands of the National Police, and the appointment of Roh Tae Woo as head of the ruling political party. Roh, however, stunned the nation and outwitted Chun by announcing a series of reforms that included direct presidential elections, reinstatement of political rights and other liberalisation measures, and further stated that he would resign from public life if Chun did not accept these measures. After two days, Chun accepted the proposals that paved the way for the election of Roh Tae Woo as president in December 1987, thereby ending his bloody and unpopular rule.

After Chun left presidential office he continued to be plagued by questions of impropriety in financial matters and for his part in the Kwangju Incident. In November 1988, Chun made a public apology for misdeeds during his presidency and removed himself from public gaze for two years to a remote Buddhist monastery in Kangwon province. On his return to Seoul in December 1990, he kept a low profile amidst calls by student and other movements for investigations into his wrongdoings. During the presidency of Roh, Chun remained largely out of reach of the public’s anxiety for justice, but when Roh handed over the reigns of the presidency to Kim Young Sam in 1993, public outcry reached new heights. By late 1994, Chun was arrested for corruption on charges that while president he had taken two-hundred and seventy six million US dollars or thereabouts in bribes. He was placed on trial not only for his corruption, but also for his part in the Kwangju Incident. In August 1996, he was fined an amount which corresponded to the proceeds of his corruption and sentenced to death for his direction of the bloody coup d’etat and the Kwangju Incident. Impeached with Chun was Roh Tae Woo, who was also fined heavily for bribe-taking and sentenced to twenty-two years in prison for aiding Chun to snatch power. The once arrogant Chun now humbly accepted the sentence of the court. However, in 1997 with the presidential election of Kim Dae Jung, an opponent Chun had once sentenced to death, a wave of compassion swept Korea. As a result, both Chun and Roh were pardoned by the special edicts of president-elect Kim Dae Jung and the outgoing Kim Young Sam. Thus, with the election of arguably his greatest enemy, Chun was able to return in safety to his home and family in Seoul.

Chung Buk National University

Situated in Ch’ongju in North Ch’ungch’ong Province, Chung Buk (Ch’ungbuk) National University was founded in September 1951 as the junior college Torip Ch’ongju Ch’ogap Nonggwa Taehak. In January 1953, it became the four-year Ch’ongju Nonggwa Taehak with Cho Hyønha as its first president. Several years later, in April 1956, a name-change gave it the title, Torip Ch’ungbuk Taehak.

In 1962, a merger took place with Ch’unghnam Taehakkyo in Taegøn and a national university was formed, known as Kungnip Ch’unghch’ong Taehakkyo. The university’s Taegøn campus consisted of the Colleges of Engineering and Physics while the Ch’ongju campus contained the College of Agriculture. Management problems arose from the location of the two campuses in separate provinces and as a result, the colleges reverted to their former status as separate institutions in March 1963.

The college’s undergraduate curriculum was expanded and in 1968, a master’s degree course commenced. This was followed by a doctoral program in 1973. In December 1977, the college gained university status, consisting of the Colleges of Engineering; Agriculture; Social Sciences; and Education. In the following March, Chøng Pømмо was appointed as
the university's first president. Since that time, new colleges, graduate schools and research centres have been added.

Today, the university consists of twelve colleges and six graduate schools: the Colleges of Agriculture; Commerce & Business Administration; Education; Engineering; Home Economics; Humanities; Law; Medicine; Natural Sciences; Pharmacology; Social Science; and Veterinary Medicine; as well as the Graduate School and the Graduate Schools of Business Administration; Education; Industry; Legal Affairs; and Public Administration. Chung Buk has a museum with over three-thousand artefacts, including bone carvings, metal work and jade jewellery.

**Chung Ju-yung (1915- )**

Chung Ju-yung (Chŏng Chuyŏng) is the founder of the Hyundai business group. He was born in Ansan of Kangwŏn Province to a farming family. His father taught him Chinese characters when he was young and then Chung underwent a normal primary school education of about five years. This constituted the extent of his formal education. As a young man he held numerous temporary jobs before opening an auto repair business in Seoul, at the age of twenty-five. He continued developing this business after the liberation of Korea and renamed it the Hyundai Auto Repair Company. He also wanted to diversify into the construction industry and in 1950 founded the Hyundai Construction Company. The construction side grew rapidly, Chung having earned the trust of President Syngman Rhee (Yi Siingman). His company completed several major projects, including a bridge over the Han River in Seoul. The presidency of Park Chung Hee (Pak Chŏnghŭi), saw Chung increase further the range of his business, and he built dams, highways and major power plants. Notable among these projects is the Seoul-Pusan Expressway that links the two major industrial and population centres of South Korea. He then sought construction contracts in the Middle East, where Hyundai Construction soon gained international stature.

Chung also launched companies in shipbuilding, automobile manufacture and electronics, which saw Hyundai established as one of the world's largest industrial firms. He established, in 1977, the Asan Foundation, which provides funds for health care in underprivileged areas. Holding political aspirations, Chung founded the National Unification Party. and ran as a candidate in the 1992 presidential elections, but was an also-ran to Kim Young Sam (Kim Yongsam). In the years following, Chung handed over the reigns of the Hyundai Group to his son and retired from public life.

**Chung Nam National University**

Situated in Kung-dong in Taejŏn, Chung Nam University (Ch’ungnam Taehakkyo) was accredited in May 1952. The campus dates from June 1953 and initially it consisted of three colleges and seven departments. It lies at the foot of Mt. Pomun. The undergraduate curriculum was expanded over a few years, and in 1957 a master's degree program was established.

In 1962, a merger with Torip Ch’ungbuk Taehak in Ch’ŏngju established a national university called Kungnip Ch’ungch’ōng Taehakkyo. The newly-formed Taejŏn campus had the Colleges of Engineering and Physics, while the Ch’ŏngju campus contained the College of Agriculture. However, the location of the two campuses in separate provinces led to serious management problems. The solution lay in the merged schools reverting to their former status as separate institutions in March 1963. In that year, Chung Nam University instituted its doctoral program.

The university continued to grow with the opening of new colleges and research institutions. Today, it consists of twelve colleges: the Colleges of Agriculture; Arts & Music; Economics & Management; Engineering; Humanities; Home Economics; Law;
Medicine; Natural Science; Pharmacology; Social Science; and Veterinary Medicine. For post-graduate studies, Chung Nam has the Graduate School as well as the Graduate Schools of Business Management; Education; Industry; Public Administration; and Public Health. University publications include the *Ch'ungdae Shinmun* in Korean and the *Chungdae Post* in English.

One of the school's more prominent research centres is the Paekche Yŏn'guso, which is affiliated with the College of Humanities. Founded in 1971, this research institute undertakes studies of Paekche history as well as the traditional culture of South Ch'ungch'ŏng Province. In addition to its research, field work and publications, the institute holds an international conference on Paekche history every other year.

**Chung-ang University**

Chung-ang University (Chungang Taehakkyo) is a private university located in Hüksŏk-dong in Seoul. Its beginnings are found in the Kindergarten Teacher Certificate Program established at Chung-Ang kindergarten in 1922. This was followed, in 1928, by the opening of Chung-Ang Normal School (Chungan Poyuk Hakkyo), a technical school for girls. In 1932, Dr. Louise Yim (Im Yongshin) became principal of the school and transferred it to its present location. The school became co-educational when it was accredited as Chung-Ang College in 1947. By 1953, it had become a university, with four colleges and a graduate school. In 1955, a branch was opened in Iri, only to be shut down in 1960.

In 1965, the College of Liberal Arts and Sciences was reorganised into the Colleges of Liberal Arts, Sciences and Education. At the same time, a demonstration kindergarten, a primary school, middle school and high school; and a girls' middle school and high school were established in association with the College of Education. In 1967, the Graduate School of Social Development opened its doors, followed by the College of Agriculture and College of Business Administration a year later.

In 1974, Seorabol Art College merged with the university, becoming the College of Arts. In 1979, a second campus was founded in Ansong in Kyŏnggi Province, along with the Graduate School of International Management, and in December of that year, the Graduate School of Education was established. The university continued to expand in the 1980s, with the creation of the Graduate School of Mass Communication in 1980; the College of Foreign Languages, College of Social Science and College of Home Economics in 1981; the College of Music in 1982; the Graduate School of Construction Engineering in 1984; the reorganisation of the College of Liberal Arts and Science into the College of Liberal Arts and College of Sciences in 1987; and the Graduate School of Industrial Management in 1989. By 1995, the University consisted of ten graduate schools and sixteen undergraduate colleges encompassing five faculties and seventy departments. School publications include the *Chungdae shinmun* in Korean and *Chungang Herald* in English.

Chungang Chŏngbo Pu  
[Government and Legislature]

**Chungbo munhŏn pigo** (Enlarged Bibliography of Korean Materials)

*Chungbo munhŏn pigo* is an encyclopaedic collection that was compiled by royal decree from 1903 to 1908. This work consists of 250 volumes in sixteen categories and was printed with movable metal type. Originally, a royal decree in 1769 ordered this work to be compiled and it was published in 1770 under the title of *Tongguk munhŏn pigo*. (Bibliography of Korean Materials) The original collection contained thirteen categories including astronomy, rites, geography, music, military affairs, law, land-taxes, population, civil service structure, and education among others, and totalled one-hundred volumes. Shortly thereafter, in 1782, Yi Manun was appointed by King Chŏngjo (r. 1776-1800) to
revise the work and this was completed for the time in 1790. However, there were many omitted items and as a result the work of revising and expanding this collection continued until the time of Yi Manun’s death in 1797. At this time the work included seven additional categories of unusual phenomena, palaces, the genealogy of the royal family, clan names, foreign affairs, arts and literature, and posthumous titles, and now was composed of 146 volumes. However, the work was never published. In 1903 the work was ordered to be revised by royal decree and a group of over thirty scholars contributed to the effort. The work was reorganised into sixteen categories and 250 volumes and published in 1908.

The categories of the work are astronomy (12 volumes), geography (27 volumes), imperial lineage (14 volumes), rites (36 volumes), military affairs (10 volumes), law (14 volumes), land-taxes (13 volumes), national expenditures (7 volumes), population (2 volumes), market affairs (8 volumes), selection of officials (18 volumes), official envoys (13 volumes), education (12 volumes), governmental hierarchy (28 volumes), and literature and arts (9 volumes). Chungbo munhon pigo is an important document for historical research on the Choson Kingdom as it contains a wide spectrum of data that covers many aspects of life during this period. In addition the work is valuable to track changes in the Choson Kingdom after its original publication in 1770 since all of the materials added after that time are denoted by the Chinese character po (supplement), thereby enabling changes to be readily observed.

Chunggyŏng chi

Chunggyŏng chi is an anthology of regional history, geography and customs of the Koryŏ and early Choson periods that was compiled by Kim Ijae in 1824 and enlarged and published by Cho Pyŏnggi in 1855. It is a total of eleven volumes and six fascicles, and is a woodblock-printed book. Kim desired to create an anthology of upchi, a collection of regional history, geography and customs, and at this time renamed this genre of literary works as ‘chunggyŏng chi’. This work centres on the so-called three capitals of Kaesŏng, Hanyang and P’yŏngyang and details the important qualities of each in turn. This work is based upon the Songdo chi of the Koryŏ period and incorporates this prior work into its contents.

The first volume of Chunggyŏng chi contains a record of the origins of the Koryŏ Kingdom and the second volume records information concerning the boundaries of the country, county names, dimensions of the fortresses, names of the people and population figures among other items. The third volume lists famous mountains and rivers and other scenic spots and the fourth volume covers palaces and royal gravesites. The fifth volume lists schools, shrines and altars, while the sixth volume includes military organisation and duty stations. In the seventh volume ancient remains are discussed, and the eighth volume presents examples of loyal vassals, filial sons, virtuous women and other historic personages. The ninth volume is a supplement and the tenth volume discusses the literary and military arts among other topics. The eleventh volume discusses various official positions.

This work is a valuable source of information for the Koryŏ and early Choson periods, with most of the material being from the Koryŏ period. The extant portion contains some fifty categories of data from these periods and covers a wide spectrum of issues. It should be noted, however, that the data concerning Kaesŏng is simply reproduced from the earlier works. The work is now stored at the Kyujanggak Library at Seoul National University.

Chungin

The appellation chung’in class, or the ‘intermediary class,’ refers to the social class in Choson which lay between the ruling yangban class and the yangin (freeborn commoners) class. The term also applied to the official positions held by members of this class, being
mostly medical officials, technicians in the offices of astronomy and meteorology, accountants, translators and law clerks. The chungin class is a Choson phenomena, and there are no records from Koryo that reveal such a class. In the Koryosa (History of Koryo) there are records that reveal social classes such as yangban, yangin and chonin (lowborn), but none relating to chungin.

There are two cases for the use of chungin. First, it is used to indicate the various officials who filled professional positions in the Choson officialdom in central Seoul, such as medical officials (ligwan), interpreters (ylkwan), accountants (san’gwans), legal clerks (ylgwans), official scribes (sajagwan), court painters (hwawon) and officials at the office of the calendar (yokkwan) among other professional positions which were filled by the many illegitimate offspring of yangban (sdl). Second, it is used to indicate those who filled positions such as local functionaries (hyangni), petty clerks (sori), local civilian officials (t’ogwans), military officers (changgyos), officials of post stations (yongnis) and the supervisors of government stockbreeding establishments (mokchao), among others.

Examining the origins of the narrow sense of the term chungin, it is thought that it came into use since those that filled the professional positions in the Choson bureaucracy lived in the central districts of the capital, hence the term ‘middle people.’

The structure of the chungin class, when compared to the other social classes of Choson, is quite complex. Of the chungin class, part reflected the social status of the yangban class that was above them, while the other part was quite similar in social status to the ch’6nin class below them. This is due to the innumerable variety of occupations they occupied, giving them different social standing which, assessed with their remuneration, accorded them varying social status. In Choson, although social position was determined under the premise of a person’s occupation, conversely it was the regulations attaching to such occupation that determined social position. Thus, the organisation of the chungin class was quite involved, as the differences in social position among its members were substantial. For example, there were various limits on how high a position the different occupations could reach in officialdom, with some professionals being able to achieve the fifth official rank and local civilian officials able only to reach the seventh grade. Moreover, positions such as local functionaries, officials of post stations and the supervisors of government stockbreeding establishments did not have any civil rank whatsoever. Therefore, it is clear that a wide range of sub-classes existed within the overall composition of the chungin class.

The higher positions among the chungin class were those in the central area of the Choson bureaucracy, obtainable by passing the Miscellaneous Examinations (chap kwaj) for technical specialists, foreign languages, medicine, astronomy (that included both geomancy and meteorology), and law. Those successful in their examinations could then take positions in government offices such as the Bureau of Interpreters of Foreign Languages (Sayogwons); Palace Medical Office (Chumigam); Office for the Observance of Natural Phenomena (Kwansangso); and the Ministry of Punishments (Hyongjo). Further, the training of specialists was also managed by these agencies. The literati of Choson regarded the foregoing positions as being undisciplined and as such, unworthy of members of the yangban class. Thus, it fell to the chungin class to perform these functions and as a result, they became largely hereditary occupations.

By the late eighteenth c. the social position of the chungin class began to improve, as they encroached upon the domain of the yangban. The key to their improved situation was the contacts they enjoyed with Qing China, which enabled them to become exposed to advanced Western culture and to also amass large personal fortunes through trade. So the increased economic power of this group resulted in an increase in social prestige, particularly in contrast to the so-called ‘fallen’ yangban, who had effectively lost their social status. The chungin class readily embraced ideologies such as shirhak (practical learning) and Catholicism, both of which offered equality and the promise of change in the yangban-
dominated social structure of Chosŏn. As well, their mastery of technical skills made them indispensable to Chosŏn society, and further elevated their position. It is not surprising, therefore, to find many members of the chungin class not only at the head of the reform movements which emerged during the late nineteenth c., but often the motive force for implementing reformation.

While the chungin class as such had ceased to exist by the end of Chosŏn, the legacy of its members remains in extant writings. Since they were not of the yangban class, it proved difficult for their literary works to be published, but this was overcome with several collections by chungin class writers, such as the 1857 compilation P'ungyo samsŏn (Third Selection of Poems of the People). Also, there were various literary circles founded among members of the chung'in and the lower classes that sought to provide members with outlets for their works. Chief among these was the Jade Bridge Poetry Association (Okkyo Shisa), which was centred on the medical officials of the central Seoul area.

Bibliography

Chüngjong kyorin chi

Chüngjong kyorin chi is a Chosŏn period book that covers the foreign policy of Chosŏn. It is composed of six volumes and two fascicles and was printed with movable type. Kim Kŏnsŏ along with Yi Unhyo and Im Sŏmu compiled the book in 1802. It details the foreign policies of Chosŏn with Japan and other neighbouring countries, with the exception of China. The compilers undertook the work at their own expense and on completion it was presented to King Sunjo (r.1800-1834). T'ongmun'gwăn chi, a similar book, but focusing chiefly on China, had been compiled in 1720 by Kim Kŏnsŏ's grandfather, Kim Kyŏngmun. Chüngjong kyorin chi greatly enlarged on the treatment given to neighbouring countries in the earlier work and also included details of new treaties and official protocol towards these countries.

The foreign policy of Chosŏn was centred on the principle of sadae (serving the great) towards China and of equal relationships with other friendly nations. The friendly nations that surrounded Korea at this time included the nations of Japan, Jurchen and Ryukyu, among others. Most important in these relations was the Japanese Island of Tsushima, which served as point of entry for Japanese envoys and trade missions to Korea. Tsushima acted as the central point from which relations between Korea and Japan were conducted. Chüngjong kyorin chi contains much information concerning the protocol, treaties and diplomatic affairs between Korea and Japan, particularly as to the role of Tsushima in this exchange. The manner in which to greet envoys from Japan, the types of goods brought to Korea from Japan and other details of the diplomatic intercourse between the two countries are included in this work.

Chüngjong kyorin chi was again updated and published in 1865 after new trade treaties were formalised between Japan and Korea. The new edition is composed of six volumes and three fascicles. Chüngjong kyorin chi is a highly-valued record of how diplomatic relations were conducted between Korea and Japan in the late Chosŏn period. Moreover, it details the unique role of Tsushima in the regulation of trade and diplomatic exchange between the two nations. The original copy of the Chüngjong kyorin chi is now kept at the Kyujanggak Library of Seoul National University.

Chūngsan'gyo  (see New religions; Indigenous religions)

Chuul Hot Spring
Chuül Onch’ŏn (hot spring) is situated in North Hamgyŏng Province’s Kyŏngsŏng County. The first syllable of onch’ŏn actually comes from Chuŭron, the Jurchen name for the site. Chuŭron Township, the old administrative name for the area, reflects the original Jurchen name. Chuül Hot Spring is located about thirteen kms. northwest of the Chuül Railway Station at the village of Chuülonbo which lies between Yŏndu Peak (952m) and Ch’ŏnggye Peak (551m). With a daily flow of eight thousand litres and a temperature of 58°C, the spring is one of Korea’s hottest and largest. Records indicate that the spring was discovered during mid-Chosŏn. Close-by stands Chuŭron Fortification, which was built during Chosŏn to resist the Jurchen invaders.

Chuwang Mountain

Situated to the east of Ch’ŏngsong in North Kyŏngsang Province, Mt. Chuwang (721 metres) is part of Chuwang-san National Park. With massive granite pinnacles and clear streams, the mountain is sometimes called the ‘Lessor Diamond Mountains of North Kyŏngsang Province.’ The mountain is made up of volcanic rock which has been shaped into spectacular cliffs and gorges. The picturesque Chubang Stream runs to the south-west just north of the peak. A popular trail follows the stream up to three waterfalls. Several Buddhist temples are located in the area, including Paengnyŏn Hermitage, Chuwang Hermitage and Taejŏn Temple. Numerous famous figures underwent spiritual training at Taejŏn Temple, including Ch’oe Ch’iwŏn, Naŏng, Tosŏn, Pojo, Muhak, Sŏ Kŏjŏng and Kim Chongik. The temple is also famous as the place where the monk Samyŏng trained an army to fight against the Japanese during the Hideyoshi Invasions (1592-1598).

Clothing

Pokshik, the Sino-Korean word for costume is a combination of two characters pok and shik. Pok stands for garment, and shik represents headgear, footwear, belts and other decorative accoutrements. Throughout Korea's long history the basic form of Korean costume has remained intact. For instance, the triple combination of trousers (paji), vest (chŏgori), and overcoat (turumagi), has constituted the core of Korean dress, and changes have been confined to modification of their incidental features.

The combination of separate vest and trousers has been the characteristic feature of the costume of the Altai race. In the beginning women did not have gender-specific trousers. However, later they began wearing skirts which distinguished their costume from that of men. Korean people are known as the white-clad race, because from ancient time to the late Chosŏn dynasty, white was the everyday colour of the common people. The officials, of course had their robes of diverse colours which were emblematic of their position and power in the society. The charm of Korean dress lies chiefly in the beauty of its natural curve, its flowing supple lines. For instance, Tangilı jacket with sharp angles at each corner emphasizes the beauty of undulating curves. It was modelled after Chinese jacket of Ming dynasty, and worn by court ladies during the Chosŏn period. Besides, the Korean costume beautifully articulates aesthetic points of colour by not just painting colourful pictures on clothes, but by spinning fabrics of various natural colours into the texture of costumes.

Ancient Costume

Fragmentary records of ancient Korean costume can be found in the Chinese historical text Sanguozhi which relates that in such places as Sukshin and Okcho people wore clothes made of leather. In addition the people of the areas around present-day Cheju Island wore leather apparel, however they only had vests - the lower part of the body being naked. This is the only definitive record of Korean costumes in ancient times. Nonetheless, it appears that the Korean men wore an upper garment called yu above a pair of trousers. It is also surmised that they produced such fibres as hemp, silk and ramie. From the wall paintings of the Koguryŏ tombs of the 5th and 6th centuries we learn that early Korean costumes comprised two separate items, the vest and the trousers. From these murals it can be seen that the cuffs, collars and hems of the clothing of the people of Koguryŏ were laced with fabric of different colours.

The gold crown of the traditional Korean costume appears to be the most representative illustration of the Korean character. It is believed that because its resemblance to the headgear of shamans, the crown symbolised the shamanic prerogative of Korean kingship, a tradition which presumably came to Korea from the Skitai area. Belts were once made of either leather or hempen cloth, and were essential for tying long overflowing vests at the waist. Additionally, the royal clan wore such ornaments as necklaces, bracelets and rings, as well as padded socks (pŏsŏn), and even leather shoes. In later centuries, influenced by
China, the Korean costume underwent profound changes. The basic form, nonetheless, remained unchanged.

Koguryŏ period

The costume of Koguryŏ lent itself to a wide spectrum of diversity depending on the social status of the wearer or user. Headgear was a clear marker of social stratification, and decorations and material used in it distinguished the aristocrats from the commoners. Similarly, in dress a person’s place in the hierarchy was recognisable by such aspects as length and width of sleeves of vests, width of trouser-legs and length of skirts. Color and decorative variations were also used as a means to show one’s designated status in the stratified society of the times. Based on the Chinese records and the Koguryŏ wall paintings one can delineate the following picture of the costume of Koguryŏ.

Crown and caps: Officials and commoners wore chŏlp’ung, a peaked hat, while the aristocracy wore crowns decorated with precious stones. People generally inserted birds’ feathers in their peaked hats. Women covered their hair with scarves (kon’gwik).

Dress: Men and women both wore vests which reached down to their hips. Beneath these vests they wore trousers or skirts. It is assumed that the higher the status of a person the wider the legs of their trousers (which were called taegugo). They also wore p’o, a coat, the cuffs, collars and hems of which were laced with fabric of multi-coloured stripes. Since neither the vest nor the coat had strings to tie them, people used a belt to fasten their clothes at the waist. Commoners used belts made of hemp, while the belts of the social elite were made of various materials including gold, silver and leather.

Shoes: The people wore shoes which resembled boots. Shoes were made of various materials such as leather, straw and hemp.

Women’s dress: Basic components of the normal female attire were similar to those of men—trousers, vest and coat. However, on ceremonial occasions they would wear skirts. There were skirts with stripes of different colours as well as those with fine lines. It seems that people’s social status was reflected in the length of their skirt.

Paekche period

Paekche developed its costume by integrating elements of the costume of Mahan and Chinhan with those of Koguryŏ, and in Paekche emphasis on costume as a definite index of social stratification was more pronounced than in the neighbouring kingdoms. However, unlike Koguryŏ whose tomb murals throw valuable light on its culture of dress, and its ancient records are forthcoming on the subject, data available about Paekche costume is woefully meagre. According to the contemporary Chinese accounts, the Paekche king wore a coat or p’o with big sleeves of violet, his shoes were black, and his silk crown was embroidered with flowers of gold. This distinct decorative feature of the Paekche crown is corroborated by the archaeological evidence of the tomb of King Muryŏng which was excavated in 1971. Again, we have on the evidence of Zhigungtu (Portrait of Tributary Envoys) of the Liang dynasty that an envoy of Paekche had his headgear decorated with a feather, his robes full at the hem laced with fabric of different colour, and his trousers were not tied at the ankles—perhaps because of the weather. It is said that in the 27th year of the reign of King Koyi (260 A. D.) Paekche established a system of dress and colour. Nonetheless, the record seems to be of dubious provenance. The status of a person appears to have found expression in Paekche through the colours of the clothes and belt. We possess very little data on women’s clothes, but it seems that their costumes were similar to those of Koguryŏ. In daily life they wore a vest and trousers, whilst on ceremonial occasions a skirt was worn over trousers. It is said that the coiffure of unmarried women of Paekche was plaited at the back and dressed in a ponytail. Married women, on the other
hand, put up their hair in two braids and rolled and rounded them up into a hood.

**Shilla period**

It is said that in the beginning, the costume of Shilla did not possess any distinctive features and was similar to that of Koguryo and Paekche. In the 7th year of his reign King Pophung promulgated dress code with the attendant colour regulations to denote the rank of the wearer. The colours of official robes were violet, red, blue and yellow in order of seniority, while the dress of the common people is assumed to have been either white or black. According to the *Tangshu* (Records of the Tang Dynasty) the people of Shilla covered their heads with black scarves known as *poktu*. It is apparent that Shilla emulated the colour regulations of China, but its system of costumes remained anchored in its indigenous traditions. Later in 648 A.D. the Chinese system of dress requirements for officials was adopted and enforced with effect from the following year which in fact inaugurated a period of continued co-existence of the Chinese system of official robes and the indigenous Korean system. The costumes of Shilla can be reconstructed along the following lines:

**Men’s Clothes:** It seems that ushering in the middle period of the Shilla dynasty the headgear *poktu* was unicolour. People wore an upper garment or *yu*, then draped themselves with a jacket called a *p’oui* which was tied with a belt at the waist. As a lower garment they wore trousers. They also wore socks and shoes of various kinds. These shoes were invested with symbolic meanings to reveal one’s wealth or status. The shoes of the aristocracy reached up to the ankle, and were quite ostentatious.

**Women’s clothes:** Trousers and a vest formed the core female garb. Above these they wore an inner and an outer skirt. A blouse was also worn beneath the long upper garment (*panbi*). Under the influence of Tang China, the practice of wearing a short-sleeved garment (*panbi*) and a sleeveless garment called *paedang*, which resembled the modern-day vest, was introduced. They also wore neckscarves (*p’o*) which dangled to the breast. They wore floral bands on their heads, as well as peaked hats decorated with jade, gold, silver, bronze or iron. Their coiffures were adorned with hairpins made of jade, sea-turtle shell or horns of animals, and they wore necklaces, earrings, bracelets and rings. This traditional Shilla costume was inherited by the Koryo with features surviving in the contemporary styles of Korean dress.

**Koryo period**

The costumes of Koryo can be divided into four periods. The first period is represented by the initial few decades of the unalloyed adoption of the Shilla tradition. The second period is marked by the span of three centuries of the influence of Shilla costumes, a phase which ended with the surrender of the court to the Mongols. The third period is represented by a century of Mongol influence when people imitated Mongolian hairstyles and adopted the Mongolian dress *chilson*. The fourth phase commenced when the Chinese Ming dynasty costumes were imported in 1386, a tradition which continued until the beginning of the Choson dynasty. Such a classification is premised on the enforcement of official dress codes during these periods. The common people continued to dress as their forefathers in the Shilla period. An upper garment or *yu* and trousers remained in vogue. Only in the third period did the common people start using Mongol dress, a practice which apparently filtered down to the ranks of the commoners. Nevertheless, the Mongolian costume was not radically different from the Korean costume in its essentials. The Mongolian influence was confined to hairstyle and headgear.

The first Phase: This period can be called a transitional phase and lasted for no more than twenty years after the founding of the Koryo dynasty. It emulated all aspects of the Shilla costume.
The second phase: This period commenced with the decree of four colours for official robes along with a new dress code. Emulating the system of Song China the court of Koryó established a mourning robe, court robes, an official robe, a sacrificial robe and a general robe. The four types of royal dress corresponded to the following chart:

<table>
<thead>
<tr>
<th>Type of dress</th>
<th>Crown</th>
<th>Belt</th>
<th>Jacket</th>
<th>Comment</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mourning robe</td>
<td>Black silk cap</td>
<td>Violet colour deep gold colored jacket</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Court robe</td>
<td>Poku</td>
<td>soktae</td>
<td>Worn when granting audience to officials and common people</td>
<td></td>
</tr>
<tr>
<td>Official robe</td>
<td>Poku</td>
<td>jade belt</td>
<td>Worn when meeting Chinese envoys</td>
<td></td>
</tr>
<tr>
<td>Sacrificial robe</td>
<td>Myollyugwan</td>
<td>white jacket made of ramie cloth</td>
<td>Same as that of the common people</td>
<td></td>
</tr>
</tbody>
</table>

A distinct feature of the royal robe was that kings wore golden-coloured overcoats. This differentiated the Korean royal costume from the robes of the Song and Ming emperors as well as appearing more majestic than the violet-coloured robes of the Chosón royalty.

**Headgear**: The sacrificial robe, court robe, official robe and mourning robe of the royalty were each of the respective officially designated colors. We do not have detailed information about the sacrificial robe or court robe. The scant record which is available about official royal dress reveals that during the reign of king Óijong, the colour of officials' robes differed according to their rank. Civil officials of the fourth rank and above wore maroon robes with golden ḍdae (official markers of rank) as fasteners. Those of the fifth and sixth ranks wore a red robe and silver ḍdae, while those between the seventh and ninth ranks wore yellow robes. The ḍdae was a fish-shaped mark of identification which was broken into two. One was held at court and the other was carried by officials on their person. Officials were required to show their ḍdae on entering the royal palace, and were allowed inside only when the two broken halves fitted to make a genuine marker. Since traditional Korea accorded respect to literati and looked down on military officials, military uniforms declined in significance in the course of time. Provincial officials had their own official robes. Their overcoats or sam were of violet, red and green.

**Women's clothes**: The traditional combination of trousers, skirt, and p'o was retained during the period with one innovation: women started wearing a black hood. The hood was called a mongsu and was made of three strips which were draped over the head and trailed to the ground. This costume remained prevalent amongst the elite of Korean society until the 18th century. The shirt or hansom reached to the hip and was fastened with a belt at the waist. An outer skirt made of eight strips was also worn over an inner skirt. Unlike the ancient period, trousers were not worn as underwear but were worn on many occasions as a replacement for the skirt as a lower garment. Trousers of the period were beautifully lined with silk.

The Third Phase: This phase represents a span of over a century commencing from the reign of King Ch'ungnyǒl to that of King Kongmin when the structure of Korean dress was revolutionised under the influence of the Mongols. During this period every male member of Korean society from King down to commoner adopted the Mongolian hairstyle by shaving the frontal hair and wearing a pigtail. The practice of shaving the frontal hair lasted for a century while the pigtail survived until the beginning of the twentieth century. Korea was introduced during this period to the Mongolian coat chilson. The chilson had a straight collar and narrow sleeves, tailored as it was to the needs of a predominantly horse-riding
population. Korea was introduced at the time to the Mongol-style headgear **pallip**, as well as the **chokturi**(a black crown-like headpiece), which people started tying on their heads, and the **chobawi** which was used to protect oneself from the cold. These are all illustrations of the Mongolian influence. The fact that the word **chogori** is derived from the Mongolian word **Chogotokch'i**, and that the words for overcoat (**turumagi**) in provincial dialects humae and hurigae can be traced to the Mongolian **hurumakch'i** further confirm the immense influence of the Mongols on Korean costumes of the Koryô period.

Fourth Phase: This phase comprises a period of a few decades commencing with the reign of King Kongmin and ending with the establishment of the Chosôn dynasty. As this period witnessed a decline of the power of Yuan China established by the Mongols, Korea was moved to revive its lost customs and reform its system of dress. The tradition of shaving the front hair and wearing pigtails was reformed, and a new institution was introduced whereby people wore hats with decorations on the top with such precious stones as crystal and jade which were commensurate with the wearers' official positions. In the twelfth year of the reign of King **U** (1386) an embassy was dispatched to Ming China, petitioning the Ming emperor to issue dress for the king and officials of Koryô. The following year, when Envoy Sôl Changsu returned to Koryô wearing the headgear **samo** and the coat **tallyông**, the dress code was re-formulated in accordance with the Ming (Chinese) system. According to this code officials holding first to ninth ranks wore **samo** and **tallyông**. Their belts, however, differed in accordance with their rank. **Samo** and **tallyông** featured in the official robes of the Song dynasty, and their revival during the Ming can be attributed to the ideological affinity between the two dynasties ruled by the Han race.

Chosôn period

Costumes of the Chosôn dynasty can be classified into three phases. The first phase is marked by the inheritance of the Koryô lineage of dress. This gave way to the second phase when Korea was faced with the major national crises of the Hideyoshi invasion of 1592 and the Qing invasion of 1636. The third phase started in the era of reforms of the late nineteenth century. There are three remarkable features which characterise the Chosôn dynasty costume. First, no major change in the structure of the costumes was introduced during the entire period of the Chosôn dynasty rule. Second, a typically Korean system of costume (though exclusive of official robes) seems to have crystallised during the period - most commoners wore the traditional coat, trousers and vest. As has been pointed out earlier, tenacious adherence to the basic structure of costumes from the dawn of history is one of the most remarkable attributes of the culture of dress on the Korean peninsula. The third feature of the period which needs to be noted is that while China changed its system of dress when the Manchus established the Qing dynasty, Chosôn Korea was unaffected and continued to abide by the Ming-style system. The system of dress during the Chosôn dynasty can be summarised as follows.

Royal robes: There were three categories of royal robe—the **konbok** to be worn with the crown **myölliyu kwan**, the **kangsa p'o** which was worn with the **wônyu kwan** and the **kollyong p'o** with the **iksôn kwan**. The first was a ceremonial and sacrificial robe bearing the royal insignia. The **Konbok** comprised of an **i** (black coat), a **sang**, consisting of seven strips and resembling a screen, exhibiting innumerable folds at the waist, a **chungdan**, a white garment to be worn on the upper body, a p'esul, which the king wore on his knees, belts (**taetdae** and **p'aebae**) to be tied at the waist, a ceremonial decorative article called **su**, a padded sock (**mal**), a shoe (**sôn**) and a jade baton (**okkyu**) which the king wielded in his hands. The Chosôn dynasty kings wore **wônyu'gwan** and **kangsap'o** when they received the ceremonial obeisances of their ministers. **iksôn' kwan** and **kollyong p'o** were every-day wear for royalty. Kings wore coat-like garments known as **tapho** or **ch'ômni**, beneath which were worn the traditional trousers and vests. It appears that the robes of the Chosôn rulers were imported from Ming China. Nevertheless, the fundamentals of the royal costume were not much different from those of the early Koryô
period. Every time a king ascended the throne, Ming China sent royal robes. With the fall of the Ming, however, the practice ceased and the Korean costume style differed from that of China under the Qing.

**Dress of the Crown prince:** The early Choson dynasty rulers unsuccessfully petitioned the Chinese court for official robes for the crown prince. As every-day wear, the crown prince of the Choson court wore *iksón' kwan* headgear and a dragon-embossed robe or *kollyong p'o*. In his study he wore *hongjingnyong* and *ch'omni*, red coats with a straight collar.

**Officials' Dress:** Although the uniform of Choson officials was basically patterned on that worn by officials of Ming China, there were certain subtle differences in detail. The Ming model of the Choson dynasty costumes was a ceremonial outfit which officials wore over the traditional Korean trousers, *chôgori*, *chungdan*, *tapho*, *ch'angüi*, and overcoat (*turumagi*).

**Court Dress:** Official dress of the Choson dynasty comprised embroidered black hats known as *yang kwan* or *kam kwan* with ornamental hairpins known as *mokch'am*. Numbers of vertical lines called *yang* on the garments denoted the rank held by the official. Officials wore vests(*chôgori*), trousers and *tapho* covered by a blue coat (*ch'ongsam*). Two additional layers of clothes, namely *sang* and a red coat called *hongsam* were also worn.

**Sacrificial Robe:** This comprised the *yang kwan* headgear and the same robe as for court dress; the only difference was that the *hongsam* was replaced by a *ch'ongsam*.

**Mourning Robe:** People wore *tallyông* over the traditional Korean trousers, vest and coat, and the *samo* headgear. Perhaps due to the neo-Confucian emphasis on ancestral rites and ritual mourning dress was accorded supreme significance during the Choson dynasty. In the second year of the reign of King Tanjong (1454) the state decided to adopt the *hyungbae* system already in use in Ming China. *Hyungbae* is an embroidered emblem that was attached to the front and back of officials' dress to signify their rank and position. Designated colouring of the *tallyông* was another mode of demarcation between officers of different ranks.

**Every-day wear of the literati:** The Choson literati wore every-day wear below their official uniforms which were of various kinds. The *turumagi* or overcoat represents a uniquely Korean style of outer garment, and has been transmitted from Koguryô, Shilla and Koryô down to the present day. *Chingnyông* was one of the various styles of jacket, and was popular with both the literati and commoners during the early Choson dynasty. The style emerged during the Koryô period as a consequence of the Mongol influence. Before the Hideyoshi invasion it was pleated at the armpits and worn by both men and women. The *Ch'omni* was a common wear shaped on the top like a vest, and below like a skirt. This was commonly covered by a *tapho*. *Chungdan* was a garment worn with official dress, which later appears to have developed into the *top'o*. The *Top'o* emerged during the reign of King Chungjong (1506-1544) and continued to be in vogue amongst the literati as an every-day outer garment until the end of the Choson dynasty. The *Samüi* seems to have derived its initial impulse from the prevalence of the Confucian code of ethics during the Choson dynasty and developed as a garment of the gentry. It was a connected piece with vest at the top and a skirt-like undergarment below. The *Ch'angöi* was designed in the era prior to the sixteenth century as an intermediary form of garment between the *turumagi* and the *top'o*. *Ch'angöi* were worn with both long sleeves and short sleeves. They consisted three strips, and if sewn on both sides, they resembled a *turumagi*.

**Common people's dress:** The common people always wore the basic traditional Korean dress, namely *pafi* (trousers) and *chôgori* (vest). However, the government
imposed various restrictions on commoners whereby they were forbidden to wear silken, coloured or embrodered dress. As a result, white became the most predominant common attire, and as noted above, the Korean people became widely known as the 'white-clad people'. Commoners wore a headgear called *p'yŏngnamja*, as well as such clothes as *chin'gyŏng* and *ch'ŏmni*.

**Women's dress:** Women of the Chosŏn period preserved the basic structure of vest, trouser and skirt which was handed down from the Shilla times. While men's clothes demonstrated the transmission of a parallel tradition in the form of official robes imported from China, women's clothes exemplified mostly indigenous tradition. The queen was the only exception. In daily life she wore traditional Korean dress, but on ritual occasions in the palace she wore officially sanctioned dress imported from Ming China. In general the vest and skirt formed the core of the feminine ensemble, and though changes in different periods of history affected their length, width or other marginal features, this basic structure remained almost intact. Worthy of note in a discussion of women's appearance and dress are various accessories which were used for decoration of the head. On outings, women would wear such veil-like clothes on their heads as the *nŏul*, the *ssŭgaech'i'ma* and the *changot* for covering the face. In the early Chosŏn period a wig named *k'ŭnmŏri* was in vogue. However, this was banned by a royal edict during the reign of King Yongjo (1724-1776), and all traces of it were erased from history. Another garment, the *Tangui*, similar to modern-day vest was devised after the Qing invasion. Additionally, there was a ceremonial garment called *malgun* which ladies of the aristocratic families wore over their skirts when riding horses. It disappeared during or before the twilight years of the Chosŏn dynasty. Notwithstanding their low social status, female entertainers of the Chosŏn dynasty were allowed to lead a life of luxury. They were permitted to wear silken clothes and have them gilded or silver plated.

**Modern development, 1876-**

The era of reform in Korean history refers to the period between 1876 when Japan forced the Kanghwado treaty on Korea and 1910 when the nation was colonised. During this period Korea shed off its isolationist policy and opened its doors to embrace western civilization. At the time the influence of egalitarian ideals led to the simplification of dress styles. The dress reform initiated in 1884 stipulated black for officials, and it was no longer the dress but *hyungbae* which signified official rank. The sleeves of official dress were also narrowed and according to the reform of 1895, use of *tapho* was proscribed, and both officials and commoners were instructed to wear black *turumagi* (overcoats). The 1895 reform was an unprecedented and epoch-making event in the history of Korean costume whose inspiration can be traced to the consciousness of equality between officials and commoners, as well as to a quest for a convenient lifestyle unencumbered by ceremonial paraphernalia. A 'Dress code for Civil officials' was proclaimed in April 1904 and stipulated adoption of the Western-style suit as the formal attire of officials. The western-style dress of Korea was modelled on that of Japan which in turn had appropriated the dress of the British court for its officials. The western-style dress of Korea was modelled on that of Japan which in turn had appropriated the dress of the British court for its officials. On major formal occasions officials were required to wear a frock coat and trouser of the same colour with a bicorn hat. Dress for lesser occasions was a frock coat, trousers of a different colour and a silk hat. After 1910 there was a shift in emphasis away from the dress culture of the court to that of the common people. An explanation of the rapid Westernisation of the Korean culture of dress can be found in the contemporary historical reality, for it was closely related to the imperialist agenda of Japan which had westernised its institutions much earlier than Korea. By enforcing westernisation of Korean costume Japan sought to achieve its political objective of the annihilation of traditional Korean culture and its economic goal of the transformation of Korea into a supplier of textile goods.

After the liberation of Korea in 1945 when the American forces were deployed in Korea
and many Koreans who lived in exile in the U. S. A. returned the use of Western dress became increasingly widespread. The growth of the popularity of western dress in the post-liberation era stemmed from the realisation amongst the Korean people of its functionality in a working environment. The mechanism involved in the spread of western-style dress at the time was based on voluntary adoption, and therefore it was essentially different from the previous era of Japanese imperialism when it was not grounded in popular consensus. In this era the younger generation demonstrated warm enthusiasm for western-style dress compared to the older generation which showed an inclination for the traditional Korean dress. The last five decades of liberation have witnessed some variations and modifications in the dress of both men and women which involved, for men, shortening and lengthening of coat collars and trouser cuffs, and for women, diversification of form and style in line with the latest trends in the world of fabric.

Communications

In ancient times communication in Korea was achieved as in most places in the world. Various methods such as word of mouth, signals and signal fires were utilised to facilitate the transfer of information. With the development of written language, communication was also accomplished by the employment of couriers to carry written messages from one location to the next. Of course, the development of paper made the delivering of written messages even easier. The evolution of the processes involved in communication developed side-by-side with the progress of human civilisation.

In Korea the first records of efforts to manage long distance communications in a more efficient manner are found in the Shilla Kingdom. According to records in the *Samguk sagi* (*The History of the Three Kingdoms*) in 487 CE Shilla established post stations in each of the four directions. The post system (yǒkeχ' am) enabled messages to be transferred by way of couriers who would carry these from one outpost to the next. In the following Koryŏ period, this system of posts was extended greatly and allowed communications with outlying areas. The total number of posts in the Koryŏ period is recorded in the *Koryo sa* (*History of Koryo*) as being 525, which were connected by twenty-two post roads. By the subsequent Chosŏn period, the communication systems were further improved due not only to the growth in the size of the nation, but also because of situations that required rapid communications such as frequent invasions. Notable among the communication systems in the Chosŏn period was the arrangement of beacon fires that served to signal urgent information to the capital. For more detailed information, a network of post-stations was maintained, and this was utilised for most government communications. These methods were far from perfect and barely managed to satisfy the needs of government demands. Private communication systems were not institutionalised and did not blossom until late Chosŏn.

Postal Services

Due to the isolationist policies of Chosŏn, relations with foreign nations other than China and Japan did not occur until the waning days of the Kingdom. However by the mid 1880s, some innovative thinkers within the Chosŏn government had begun to embrace the systems of the West. One of the areas that these new ideas were incorporated into was that of communications. In December 1882 the Chosŏn government established the Board for General Control of Diplomatic and Commercial Affairs (*T'ongi k'yŏsŏp t'ŏngsang samu amun*) to handle matters of communication such as postal services, diplomatic communiques and telegraphic services. This office was under the charge of Hong Yŏngshik, who in the following year travelled to both Japan and America for an inspection of their communication facilities. In New York, Hong was deeply impressed by the American system, and in Japan he stated that Korea needed to establish a postal system as in Japan, and he requested that Japan provide three individuals to help establish the system in Korea. In 1884 the Postal Administration (*Ujongguk*) was established in Korea by order of King Kojong, and Hong was made Vice-Minister in charge of its operation. However, later that same year while Hong hosted a banquet for government officials and foreign diplomats, conspirators carried out a *coup d'état* (*Coup d'Etat of 1884; Kapshin*)
chŏngbyŏn) which although it ultimately failed, brought about great reforms. One of the consequences of the coup was the collapse of the postal service.

In 1895 a new post office (Uch'esa) was created first in Seoul and then Inchŏn, and by 1899 every county and town in Korea was able to send and receive mail. By 1900 the postal service undertook for the first time exchange of mail with foreign countries. However, by the time of the Russo-Japanese War, this service fell under the jurisdiction of the Japanese. The sphere of communications was deemed an essential area by the Japanese in Korea and after the Protectorate Treaty of 1905, there was little that the Koreans could do but watch as the Japanese seized many of the fundamental industries in Korea. In the Colonial period, the postal services in Korea were expanded and spread throughout the country. However, like all else in Korea during this tumultuous period, the postal service was subject to strict control and geared towards maximum benefit for the Japanese.

With liberation from Japanese rule in August 1945, the postal system was paralysed. Despite the nation suffering from shortages of manpower and resources, the need for a functional postal system was evident and the government made the establishment of a modern postal system a priority. With the establishment of the Republic of Korea in 1948, a postal system was implemented under the management of the Ministry of Communication (Ch'eshinbu). The Ministry of Communication was given autonomy in its operations, the communication industry was equipped and expanded, and a post office was established in each township. These ensured that the post office would function properly and all Koreans would benefit from its establishment.

The efficiency of the Korean post office was greatly improved with the introduction of five digit postal codes in July 1970 and the standardisation of envelope sizes in January 1974. The postal codes in Korea were revised in February 1988 to six digits, which enabled the system to become even more highly mechanised. Presently, additional mechanisation is underway including such advanced technology as optical scanning machines to further increase the efficiency of the mail delivery system. As of 1995, South Korea boasted a total of 3 455 post offices and 53 724 mailboxes across the nation. The postal system handled about 2.72 billion pieces of domestic mail in 1995, which was an increase of 10.4 per cent from 1994. International mail accounted for 21.62 million items in 1995 which was up 5.6 per cent from the prior year. Incoming international mail was numbered at 36.44 million pieces in 1995.

Since 1991 the government has been executing a comprehensive plan for the computerisation of the nation’s post offices. This plan consists of five stages beginning with the complete computerisation of domestic and international operations in 1992. The second phase was the computerisation of the domestic parcels sector, which was begun in December 1993. In July 1994, the government completed the third stage by computerising the international parcel post by linking 1 575 post offices. According to this master plan, all of the nation’s post offices are to be linked and will provide a variety of services for consumers, including such items as air and train reservations.

Telegraphic Communications

The telegraph came into East Asia in the latter half of the nineteenth c. Japan was the first in 1869 with its Tokyo-Yokohama line, and China followed in 1881 with the Shanghai-T'ieinchin line. Korea followed her two neighbours in 1885 with a line that linked úiju and Inch’ŏn and was built by the Chinese. úiju is located at the mouth of the Yalu River and the line was soon extended to reach deep into Manchuria, where it could facilitate the perceived need of both the Korean and Chinese governments for rapid communications. However, this line was completely under the control of the Chinese and was merely a link in their aggressive designs on Korea. The second line was the Seoul-Pusan line that was built by the Japanese in 1888. This line was then linked to Japan by an undersea cable. This
second line was initially under the auspices of the Korean Bureau of Telegrams (Chosŏn chŏnbo ch'ŏngguk) but after the Russo-Japanese War it came under the control of the Japanese Government. After the advent of the colonial period, the telegraph facilities in Korea, as all other modes of modern communication, fell under the jurisdiction of the Japanese Government-General.

During the colonial period, telegraph facilities became widespread throughout Korea. In the forty years (1905-1945) that Japan controlled the communications network in Korea, the telegraph system accomplished the following: 1) it provided a convenient facility for Japanese residents in Korea; 2) it assisted the oppression of Koreans by the Japanese government; 3) it linked Korea to the continent of Asia; 4) it served the Japanese war-effort in Asia. As with most other modernization in Korea during the colonial period, the benefit to Korean people was minimal. This is witnessed in the 1941 decree that banned any telegraphic transmissions in han'gul.

After liberation the telegraph industry in Korea was first devastated by a lack of capital, and then by the Korean War. However, in the aftermath of the War, the Korean government directed great resources into the development of a modern communication network throughout the country. As a result, by the 1970s there were telegraph facilities across the nation which served to make communications easier for those living in rural areas. Now, the importance of the telegraph system has diminished, as home, office and mobile telephones have become widespread and replaced the telegraph as the chief means of communication.

Telephone Services

Telephone technology arrived in Korea relatively soon after its invention in 1876 by Alexander Graham Bell. In March 1882 the first telephone was introduced in Korea and an experimental connection was made. However, a telephone service in the modern sense did not begin for another twenty years when the first public phone service was introduced in Korea, on 20 March 1902. In May of the same year a line was established connecting Hansŏng (modern day Seoul) to Kaesŏng, and in June city telephone exchange facilities were established in Hansŏng. In the following year, despite interference from the Japanese, a telephone exchange facility was established in Inch'ŏn and then service from Kaesŏng to P'yŏngyang, and Hansŏng to Suwŏn were established shortly thereafter. The first phone registers in Korea (Kakchŏnhwa soch'ŏngwŏn inp'yŏ) revealed four numbers in 1902, and by 1905 had expanded to eighty people including their addresses.

The Japanese seized control of the telephone industry in April 1905. Expansion of telephone lines and capabilities continued throughout the colonial period, but like much else the benefit of these improvements was for the most part realized by the Japanese. After liberation, development of telephone facilities was given priority, but due to economic hardships, the Korean War and lack of resources not many gains were realized.

The actual basis for the development of the Korean communications infrastructure was provided in 1961 with the first of the Five-Year Telecommunications Plans, which were a part of the First through the Fourth Five-Year Economic Development Plans. The infrastructure facilities in Korea were first expanded with the opening of a land subscription wireless mobile telephone in 1961, which was followed by the introduction of the semi-electronic switching system M10CN in 1978. The second phase saw the establishment of two land-based satellite communications stations, the first in 1970 and the second in 1977. The third phase was marked by a coaxial carrier circuit, a type of long-distance communication network, being opened between Seoul and Pusan. The most urgent need of the telecommunications industry in Korea through the mid-1980s was to provide a communications service that met the demands of the rapidly expanding Korean economy. This period was marked by chronic backlogs of calls and corresponding numbers of
consumer complaints regarding poor service.

To better regulate the telecommunications industry and to provide more efficient and modern telephone service for Korean consumers, the Ministry of Communication was charged with resolving all of the obstacles that arose in creating a technologically advanced, modern communications network. It created two telephone companies to manage the business operations, while the Ministry itself took charge of policy-making and long-term development plans. The Korea Telecommunications Authority (Korea Telecom: Han'guk chôn'gi t'ongsin kongsa) was created in 1982 and the Data Communications Corporation (DACOM) was established in 1991.

The separation of the planning and business operations proved to be successful and the telephone service in Korea has advanced markedly. At the end of 1995, the R.O.K. had 21,474,791 telephone lines and 18,299,916 subscribers. This is a ratio of 40.8 units to each one hundred people, being an increase from 39.6 units per one hundred people in 1994. Seoul boasted the largest number of subscribers with 5,093,789 followed by Pusan at 1,510,441. Moreover, the number of public telephones nationwide stood at 319,071 by November 1995.

South Korea also has vast long-distance and international networks in place. At the end of 1995, Korea Telecom had almost 1.4 million long-distance communication lines. In addition, it had 15,815 international lines consisting of 7,465 satellite lines and 8,350 undersea lines as of October 1995. DACOM adds another 3,170 to the total of international lines. South Korea has long distance connection capabilities with 231 countries using international direct dialing (IDD).

Research and Development

Research and development in the communications industry has brought about many positive changes to communications in Korea. The Ministry of Communication is seeking to bring about changes in the local telephone industry such as improving call quality and replacing mechanical switching equipment with digital equipment in order to construct intelligent communications networks. In addition, work is underway to replace paper insulated cable with foam-skin cable, which has superior transmission qualities, in order to improve the quality in subscriber lines. In the long-distance sector, items such as the digitalization of toll switching facilities, installing optical cable transmission lines among administrative organizations and constructing optical cables near highways is either planned or currently underway.

The Korean government is also vigorously pursuing a satellite communications network. Korea has leased satellite service through INTELSAT in the past and now is relying on the domestic satellite Mugunghwa for satellite communications service. The funding for the 300-billion won Mugunghwa satellite was provided entirely by Korea Telecom. This satellite was the first in the history of the nation and made Korea the twenty-second nation in the world to possess a multi-function, commercial satellite. Future plans for increasing satellite capabilities and future launchings are being approached with the Ministry of Information and Communications charged with the planning and establishing basic policies, Korea Telecom responsible for the execution of the plans, and the Korean Electronics and Telecommunications Research Institute (Han'guk chônja t'ongsin yônguso) conducting the research and development. There are currently plans underway for the launching of subsequent communications satellites to meet the future needs of Korea.

Other communication requirements of Korea are also being met through state-of-the-art communications technology. There are now earth stations that are linked to the INMARSAT satellite network that allow direct communications with vessels in the Indian Ocean, and plans to construct like stations for communications with air ships. Moreover, in
addition to satellite communications, marine optical cable is being largely expanded in order to augment international transmission lines. Other plans call for the digitalization of the communications network to not only provide improved telephone service, but also to accommodate the transmission of images for television. The construction of an Integrated Services Digital Network (ISDN) will allow cable television service, phone service and computer connections to the internet to all be achieved through a single connection.

The future direction of the communications industry is bound to bring about many unanticipated changes, but can largely be summarized into the following three categories:

1) efforts are being directed at both modernizing and expanding service areas for various composite media.
2) the privatization of communications made possible by the development of micro-cell mobile communications has brought increased capabilities and technological advances to mobile communications along with more favourable circumstances for consumers through additional competition. This sphere of communications will undoubtedly continue to grow and expand rapidly into the twenty-first century.
3) the development of intelligent communications networks will allow consumers to receive various services and accomplish many tasks.

New Communication Technologies

At the leading edge of new communications technologies in Korea is the advent of the so-called ‘computer age’. With the goal of ‘having an information and communications terminal in every house’ by the year 2000, the government has been pushing to supply ten million computers since 1991. Of this projected ten million computers, the bulk are expected to come from private industry with Korea Telecom supplying about 500,000 units. Computer communication services are being expanded to meet an increasing market, from a low 627,000 subscribers as of November 1995. The Korean government is also focusing on supplying computer training and access to those who live in the nation’s rural areas. To help correct the imbalance that exists between the technological levels of those in the urban and rural areas, the government introduced rural computer training centres in 1988. The number of these centres has steadily increased over the past few years and as of 1995 it stood at forty-five.

A high-speed information network is envisioned for Korea that will bring all of the resources of the vast internet to the citizens of Korea. Under Kim Young-sam, the government promulgated a plan to harness the power of the Internet by preparing a new infrastructure, thereby allowing citizens to participate fully and benefit accordingly in this computerization and the advance of the information industry. The plan calls for 45 trillion won to be invested by 2015 and this huge project is expected to generate a total of 100 trillion won in production, create over 500,000 new jobs and to expand the gross national product of Korea by 22 per cent. The program of implementing this high-speed information network is to be conducted in two phases. First a network available to major groups such as public organizations, research centres and universities will directly impact the competitiveness of the nation. The second phase, which will be readied by 2015, will be available to private individuals.

Communism

The Korean Communist movement (1918-1945)

Korea, which became a colony of Japan in 1910, possessed the social background (intellectuals, students and the newly-born working class) sufficient for response to the
ideas of Communism. Interest in these ideas was facilitated by the failure of the long and tortuous struggle for national freedom and progress, and this convinced Koreans of the necessity of new ideas and approaches. The colossal protest energy accumulated in Korean society since 1910 brought about a mass uprising in March, 1919 and led to important changes in the liberation movement.

Korea's first acquaintance with the Communist teaching happened supposedly at the beginning of the 20th c. in Korean emigrant circles in Russia, China and Japan. However, the main impulse came from the October Revolution of 1917 in Russia, which influenced the March First Movement of 1919 in Korea. The defeat of the latter demonstrated the ineffectiveness of the nationalist leadership and its slogans, and forced the radical wing of the Korean liberation movement to turn to Communist ideology and practice. No doubt, the doctrinal basis of Communist teaching attracted much less attention; the research-based theories of Communism were understood as symbols of faith and irrefutable dogmas. The Communist pathos of social transformation and liberation struggle was what really mattered. It was looked upon as the only way to the immediate liberation of Korea, to the annihilation of the colonial yoke and of poverty and backwardness. Information about the revolutionary changes in Russia also stimulated such hopes.

In Russia, by 1917 the Korean community had emerged as a significant force, based mainly in the Far East where about 100,000 Koreans lived, the majority as poor and exploited workers and peasants. Hence many of them supported the Soviet power and defended its cause during the civil war, and the most active of them joined the Bolshevik Party. Thousands of Koreans travelled annually to Russia for seasonal jobs and brought home the news of the birth of a new life in the neighbouring country. The Korean people were especially sympathetic to the Red Army, since it fought against the Japanese, and dozens of Korean organisations participated in the fighting. There was, no doubt, significant propaganda work among the Koreans by the Russian Communist Party and the Far East Bureau of the Communist International, but one has to admit that it met with an enthusiastic response from Koreans in both Russia and Korea itself.

The Japanese colonial regime had deprived the Koreans of the possibility of developing an organized liberation movement in Korea. It was not by chance that the main centres of Korean political activity were established outside Korea. Of course, the first organizations of Korean Communists appeared in Soviet Russia, the centre of the revolutionary turmoil of that epoch. The first organization of that kind arose due to the efforts of the well known liberation fighter Yi Tonghwì, a former officer of the imperial guard who took part in anti-Japanese resistance and in cultural and enlightenment activities and then became an emigré in Russia. There he tried to combine Communism and the liberation movement of the Korean people. In April 1918 he organized the Union of Korean Socialists in Khabarovsk. He was supported by A.P.Kim-Stankevich, a leader of the Khabarovsk Bolsheviks. The Union was not long-lived. In the summer of the same year, Khabarovsk was captured by the anti-Soviet forces. Many members of the Union were killed (including Kim-Stankevich); Yi Tonghwì and some others managed to escape.

In May 1919, the surviving members of the Union and a fraternal organisation established an underground Korean Socialist Party (Chosôn Sahoe-dang) near Vladivostok, under the leadership of Yi Tonghwì. The Party announced its decision to join the Communist International and sent a delegation to Moscow, but only Pak Chinsun succeeded in passing through the front lines of the civil war. He arrived in Moscow and spoke at a meeting of the Executive Committee of the Communist International. In April 1920, the Japanese occupied Vladivostok and crushed all Korean organizations based there, including the Korean Socialist Party. Some of its members joined the guerrillas, and others, like Yi Tonghwì, went to China. In China Yi Tonghwì joined hands with the Korean radical emigrés and for some time he led the Shanghai-based Provisional Government of Korea.
The first Communist organization in Korea itself was supposedly established in Seoul in 1919. The people's uprising forced the Japanese to liberalise their regime and to allow Koreans some limited political autonomy. As a result, workers, peasants and youth organizations mushroomed, with the support of the underground Communist groups. The Korean Communist organizations in Russia were naturally more active, especially in the Far-East and in Siberia. By the end of 1920 there were 16 organisations with a total of 2,300 members. General supervision of these organisations was first performed by the Korean Section of the Far-East Bureau of the Russian Communist Party, and after 1921 by the Far-East Secretariat of the Comintern. The Korean representatives participated in all congresses of the Comintern. The Executive Committee many times discussed the problems of the newly born Korean Communist movement, not always taking into consideration the concrete conditions in Korea.

The aspiration of the Korean Communist organizations in Russia to unite was headed by the most powerful of them, the Irkutsk organization. In 1920, they held a congress in Irkutsk. The delegates from the Korean Communist groups in Russia found it premature to establish a separate party, but to prepare themselves for it and to lead the work among the Koreans in Russia and other countries, as well as in Korea itself. They elected the Central Committee of Korean Communist Organizations. The Central Committee published a newspaper, opened a school for party cadres and engaged in preparations for establishing of party.

In 1921, two Communist Parties of Korea were born at the same time; but since their names were also the same, they are known as the 'Shanghai faction' and the 'Irkutsk faction'. This fact reflected the self-contradictory nature of the Korean Communist movement of the period. To a significant extent the reason was in the different conditions in which both parties were founded. In Russia, the Korean Communists were closely connected with the Bolsheviks, they considered themselves to be a part of the forces of world revolution, and tried to act in union with them. The way to the liberation of Korea was, according to them, in the victory of Soviet power. In China, the Korean Communists were more connected with the local Chinese nationalists. They were concerned with the rise of the liberation struggle and the patriotic forces in Korea itself. They were unhappy with the excessive, in their opinion, involvement of the Russian Bolsheviks in the leadership of the Korean Communist movement. So their revolutionary internationalism was less pronounced. A significant role in these developments was played by the ambitions of the Irkutsk and Shanghai leaders, who contested the claim for exclusive leadership and the title of the only true and orthodox Marxists.

The nucleus of the Shanghai faction was a small group of Korean Socialist Party members led by Yi Tonghwi, who had very soon become disillusioned with the emigré Provisional Government. In May 1921, they held their congress in Shanghai, attended by 20 delegates from different places in China, Korea and the Russian Far East. The congress reorganized the Socialist Party as the Communist Party of Korea. Its Central Committee was chaired by Yi Tonghwi. Among the party founders was Pak Hŏnyŏng, who was one of the outstanding leaders of the Korean Communist movement up to the mid-1950s. In 1922, he went to Korea to take part in underground work and very soon found himself in gaol. The Shanghai faction had some 6,000 members and candidate members, and had branches in Seoul, P'yŏngyang and other cities in Korea, as well as in Beijing, Harbin, Qilin, San Francisco, and in the Russian Far-East.

The congress in Irkutsk in May 1921 was attended by 85 delegates from 26 Korean Communist organizations in Korea, China and Russia. B. Shumyatsky, the representative of the Comintern, as a guest of honour, guided the deliberations of the congress. The congress proclaimed the formation of the Communist Party of Korea, and elected its Central Committee led by Nam Manch'un, a noted military activist and journalist. The Irkutsk party had 8,730 full and candidate members in 32 branches, including three in Korea and three in China.
The formation of the two Communist Parties demonstrates the growth of the Korean radicals' political maturity and their developing contacts with the world revolutionary process. Their activities facilitated the spread of Communist ideas in Korea, but neither of these parties emerged as a truly mass party, as a pan-Korean organization breaking through the barriers of the narrow emigré circles.

The very fact of the formation of the two parties testified to the weaknesses of the liberation movement in Korea, lack of unity and organization, theoretical defects, lack of political experience, and a tendency to inter-group strife contrary to the general interest. The programs and tactics of both parties shared the shortcomings of the Communist movement of that epoch: the purposes and aims proper to the developed countries (e.g. socialist revolution, proletarian dictatorship, Soviet power) were mechanically attributed to Korea; sectarianism led to non-cooperation with the national business class; peasants and agrarian problems were looked down on or neglected altogether, and an over-estimated need to pursue militant forms of struggle. These shortcomings were also characteristic of the later Communist movement in Korea.

Shortly after they came into being the two Communist Parties began to fight among themselves. Each declared itself the only true party and criticised the other. These contradictions transferred to Korea and facilitated the split of the Communist groups there. The Comintern and the Bolshevik Party, however, assisted both parties and tried their best to prevent confrontation. Not all efforts in this direction were conscientiously made, the Far East Secretariat of the Comintern, for instance, preferring the 'Irkutskians'. In November 1921, a group of Shanghai Party members was received by Lenin. The group was led by Yi Tonghwi, and Lenin promised support to the Korean revolutionary movement. This fact strengthened the Shanghai faction's ambitions, though the meeting with Lenin was but a natural step dictated by Lenin's desire to know more about the Korean Communists outside Russia. Information on the latter was much less available to Lenin compared to information on the 'Irkutskians'.

The confrontation of the two parties forced the Communist International to look for means to make peace. A Special Commission led by O.V. Kuusinen recommended a merger of the two parties and to hold a congress to effect this. Before the congress, the Provisional Central Committee (four members representing each party) was supposed to supervise the actions of the Korean Communists. But the conflict continued in this provisional organ also. Its membership was reduced on two occasions, but to no avail. However, in October 1922, the joint congress of the Korean Communist Parties was held in Verkhne Udinsk (now Ulan Ude, Russia). 181 delegates from both parties attended, as well as members of the Communist organizations in Korea, China and Japan. Despite all efforts to keep the deliberations on a calm and constructive footing, fierce debate on organizational questions closed the congress down.

This failure made it necessary to move the centre of the movement to Korea, where Communist groups were growing both quantitatively and qualitatively. Most important among them were the Tuesday Society (Hwayohoe), led by Kim Chaebong, the Seoul Youth League (leader Kim Saguk), and the North-Wind Society (Puk'unghoe: leader Kim Yaksu). The first two were connected respectively with the Irkutsk and Shanghai Parties, and the third was organized by Korean students in Tokyo and was linked with Japanese Communist organizations. All these factors influenced the work and mutual relations of the organizations.

With the assistance of the Communist Youth International, Komsomol (Young Communists) groups appeared in Korea. The Korean Komsomol was established in 1924, prior to the formation of the Party itself. The leader was Pak Hŏnyŏng who had been released from prison in 1924 and had joined the Tuesday Society. Meanwhile, in November
1923, the Comintern decided to establish the Party in Korea itself. The Korean Bureau was formed with this aim, in the Far East Branch of the Comintern, with seven members (two members each from the Irkutsk and Shanghai Parties and the Seoul groups, and one from the Japan-based Korean Communists). A representative of the Comintern was sent to Korea and commenced preparatory work to unite the groups, but the never-ending feuding made the Korean Bureau ineffective. In February 1924 the Bureau was closed.

On 17 April 1925, in a Seoul restaurant, a secret meeting was held by the representatives of the Korean Communist groups. Nineteen persons attended, from the Tuesday Society, the North Wind Society and some minor groups. The Seoul organization, however, refused to attend. Those present announced the formation of the Korean Communist Party (Chōsŏn Kongsan-dang), elected a Central Executive Committee with Kim Chaebong at its head, and discussed the program and tactics of the party. Later on, these questions were discussed in the illegally circulated Manifesto of the Korean Communist Party. As a cover organization for Party activities, the True Friends' Society (Chōngu-hoe) was established. The Seoul group established the Advance Society (Chŏnjin-hoe) with the same purpose in mind. Both cover organizations of the Korean Communists are sometimes mentioned in literature under the above names.

In September 1925, the establishment of the Korean Communist Party was discussed by the Secretariat of the Executive Committee of the Comintern. The decision was to facilitate the unity of all Communist organizations under the leadership of the KCP. The emigré parties and groups were declared to be dissolved, and their members were to join the Communist organisations in their countries of residence. The only exception was made for the Jiandao region of Manchuria, where many Koreans lived. The organisation formed there was declared a part of the KCP but advised to work in contact with the Communist Party of China. All former emigré groups were to function only as support groups. The newly-born KCP (with about 200 members) failed to emerge as a united, monolithic and well-organized party. The member groups tried to preserve their sovereignty and fought for dominance. Discussions sometimes ended in brawling. The separatist Seoul group spared no effort to prevent the KCP from assuming leadership.

Only by the end of 1926 was this group incorporated in the KCP, but this never helped Party unity. The rivalry of the foreign-based groups failed to stop after the Comintern decree and in fact had an adverse effect. Since the KCP was based on the 'Irkutskians', the Shanghai-linked groupings opposed it and insisted on the formation of a new party based on the Seoul group. The lack of political experience of the KCP leadership, and ignorance of the mores of this dangerous underground work also played its part. As a result, in November 1925, the Japanese police arrested the members of the Executive Committee, including its leader Kim Chaebong. Time was needed to organize a new Central Committee and the leading role in the party began to be performed by the Seoul group, on the foundation of which the Marxist-Leninist Group was established.

Despite its shortcomings, the KCP emerged as a factor in the development of the Communist movement in Korea. Its members led many protests, strikes, agrarian campaigns and demonstrations. Communists illegally took over leadership of many public organizations, and declared them to be of socialist orientation. Many workers, peasants and youth organizations held public meetings on the revolutionary and Soviet holidays, where they gave lectures on Lenin and the USSR. These activities were not always suppressed by the Japanese administration, which after its failure of intervention against the USSR was interested in establishing better relations with that country.

A crucial event in the national liberation struggle in Korea was the anti-Japanese demonstration in Seoul in June 1926. The pompous ceremony of the late emperor Taishō's funeral, which was intended by the Japanese to symbolize the reconciliation of the Koreans and the Japanese, turned out to be an anti-colonial manifestation. Communists were among
its organizers and acted in cooperation with the radical members of the Ch'ondogyo (Religion of the Heavenly Way). This fact testified to the elements of cooperation between the Communist and left nationalist forces, which corresponded to the current Comintern policy of anti-imperialist consolidation. Many participants in the demonstration were arrested. Members of the KCP Central Committee found themselves in gaol and the committee had to be re-established for the third time.

In May 1927 the New Korea Society (Shin'gan Hoe) was formed on the initiative of the KCP. The Society united organizations of workers, peasants, students, the patriotic-minded bourgeois and members of diverse religious groups. It had more than 10,000 members and about 100 branches throughout Korea. The New Korea Society played a definitive role in the development of the liberation movement, but failed to emerge as its vanguard and to facilitate the formation of a unified national front. The leadership was in the hands of the reformist nationalists. The KCP failed to take the leadership reins and to ensure the militant and consolidated character of the organization.

The Japanese police left no stone unturned to suppress the liberation movement; first and foremost the Communists. News came constantly of the crushing of Communist groups and allied organizations, and the arrests of envoys from the Comintern and other international bodies. The gaols were packed, and many patriots fell victim to torture and disease. The arrests of subversives were everyday occurrences. The greatest was the arrest of one-hundred and one persons in Seoul, in the period September 1927 to February 1928. The accused Communists behaved with courage. Pak Hŏnyŏng delivered a passionate speech against colonial oppression. Eighty-four persons were sentenced. Twelve were vindicated due to the lack of evidence against them, but others died or became psychologically-disabled during the process. Pak Hŏnyŏng succeeded in escaping from gaol and found refuge in the USSR. After some years of study there he returned home clandestinely and remained underground in Korea until 1945.

New fighters replaced their martyred or gaolled comrades, and the crushed organizations were in most cases re-established. But the strength of the party was undermined by police terror, since it was telling heavily on the ablest and the bravest. The atmosphere within the KCP, however, seemed almost designed to help the repression. Unprincipled factional struggles weakened the party and created favourable conditions for police agents and provocateurs to penetrate the party ranks. The police were easily able to prevent the activities planned by the party and to isolate such activists in time.

The fate of the KCP was decided by the Comintern in a peculiar way at the 6th Congress held in the summer of 1928. On the one hand, the preceding documents of the executive organs were confirmed by the Congress, and the KCP, as a section, was thus officially admitted into the Comintern. But on the other, this decision was followed by one which stifled the admission. The rival factions sent their envoys to the Congress and once again each claimed exclusive leading status. The Congress refused to recognise and support any of them. In effect, this decision meant the dissolution of the KCP.

It has been suggested in many accounts that the KCP was dissolved by the Comintern. This is not the case, since no decision to the effect was officially taken by the Comintern. Moreover, even after 1928, the directives of the Comintern sometimes mentioned the KCP, though it had already ceased to exist (to some extent this demonstrates the lack of adequate information on Korea in the Comintern). The liquidation of the KCP was facilitated by massive police terror against it and non-stop faction feuds within it. The decision of the 6th Congress dissolved the KCP as an independent political organization of the Korean Communists. Now, after the passage of so many years, this measure seems to be somewhat questionable, seen against the background of the development of a Communist movement in Korea which had lost impetus as a result.
The 6th Congress of the Comintern adopted the 'Theses on the Colonial Question' with a special mention of Korea. In its turn the Political Secretariat of the Executive Committee of the Comintern in December 1928 worked out elaborate theses on the situation in the Korean Communist Party. In January 1929, the Executive Committee published its message 'To the revolutionary workers and peasants of Korea'. O.V.Kuusinen, a noted figure in the Comintern, made a special statement on the problems of the Korean Communist movement. All these documents reflected the aspiration to make the struggle of the Korean Communists more effective and organized, and contained some useful recommendations. At the same time, they reflected the policy direction of the 6th Congress, which had prescribed total independence of the workers' movement and confrontation with the bourgeois nationalist movements, accused of collaboration with imperialist forces and sometimes even branded as their agents. This wrong course negated the previously adopted tactics of the united anti-imperialist front and caused great harm to the liberation movements in Korea and elsewhere.

Despite the dissolution of the KCP the Korean Communist movement continued to develop as a source of great trouble for the colonial administration. The official documents of the epoch describe it as a result of the Comintern's subversive activities. This attitude should not be totally rejected but at the same time not accepted without qualification. Many foreign Comintern representatives or Korean Communists sent from Moscow, as well as the directives and propaganda materials they brought, were seized by the police shortly after their arrival in Korea. After the Japanese invasion of Manchuria and the rapid deterioration of Soviet-Japanese relations, access to Korea became very difficult. Thus, the main stimulus for the development of the Communist movement in Korea was the colonial regime.

The Communists participated in the general strike of the Wonsan workers in 1929 - the mightiest in the history of the Korean workers' movement; in the massive students' protests in Kwangju (1929), and in other popular movements. In the 1930s also, they took part in many forms of social and national protest. Numerous trials of Communists, with Japanese and Korean press accounts of the crushing of Communist units in factories, educational institutions and villages, and the widespread arrests of Koreans suspected of Communist activities testify to the wide range and zeal of the Communist movement of the 1930s.

Following the sectarian policy laid down by the 6th Congress of the Comintern, the Korean Communists engaged themselves, from the late 1920s, in the formation of 'red' workers' and peasants' unions, and associations of teachers, students and intellectuals. Led, as a rule, by Communists, these organisations were militant, active and well-guided. But by acting independently in the demonstrations, strikes and agrarian campaigns, the 'red' unions cut themselves off from other mass organizations, especially those led by bourgeois nationalists. After 1923, the Communists refused to make contact with the 'Society of Rebirth' and in 1931 the latter ceased to exist. These steps were less than useful to the Communist cause.

Meanwhile, the guerrilla struggle, which had never ended in the northern area of Korea and in the bordering territories of Manchuria, grew in the beginning of the 1930s due to the Japanese invasion. Many Korean guerrilla groups were led by Communists, and one of the most able was the group led by the young Kim Il Sung. When, after 1937, the war moved to central China, the Korean Communists there also joined the guerrilla struggle. In Manchuria and in China they were members of the Communist Party of China and fought under its guidance. But they struggled for the liberation of their motherland and tried their best to keep in touch with Korea. Sometimes the guerrillas succeeded in making a breakthrough into Korean territory, but they always had to retreat under heavy pressure from the Japanese forces. The struggle against the aggressive imperialist policy of Japan emerged as an important dimension of the Communist movement in Korea.

After 1928, the re-establishment of the Communist Party remained a crucial problem. The
Comintern stressed this necessity in its documents and secret messages despatched to Korea. This necessity was felt even more by the Korean Communists themselves. Not only in Seoul but in other places, underground preparatory committees were being formed. But they lacked experience and means, the communications between them were weak and vestiges of the old factional feuds still remained. The Japanese police quite easily suppressed these preparatory committees.

Trying to create a theoretical and organizational base for the re-establishment of the Party, an 'initiative group' of Korean Communists (supposedly USSR-based and supported by the Comintern) published, in 1934, a 'Platform of the Activities of the Communist Party of Korea', in which the main guidelines of the world Communist movement were formulated in connection with the Korean situation. The Platform was followed by an open letter 'To all factory and village Communist groups of Korea, on the factional struggle and the tasks of the Communists in opposing the factional groups'. It appealed to Communists to overcome internal conflicts and to establish a centralized, disciplined and mass-based underground party. But these documents, given all their significance, failed to combat the disunion of the Korean Communists. The main obstacle was the police terror. According to Comintern data, in the first half of the 1930s more than 6,000 Communists were jailed in Korea. The problem of re-establishing the Party was solved only after the liberation of Korea.

Several years after the 6th Congress of the Comintern, the world Communist movement started to learn from bitter experience (especially after the fascists took power in Germany) and revised the sectarian policy. The 7th congress held in Moscow in 1935 re-oriented the Communists towards strengthening the unity of the working class organizations and their political allies. It reinforced the necessity of the wide anti-reactionary people's front and the unity of all those opposing fascism and the impending war. Raising premature slogans like 'workers' and peasants' revolution' or 'Soviet government' in the colonial countries was criticized. The Communists there were called upon to centre their efforts on the national liberation movement and the unifying of all patriotic forces into an anti-imperialist front.

The Korean Communists fighting as guerrillas in Manchuria were familiarized with the Congress decisions by the Chinese Communist Party. In February 1936, they formed the Fatherland Restoration Association (Choguk Kwangbok Hoe) which was supposed to be a nucleus for the anti-Japanese front. Kim Il Sung, Kim Ch'aek, Ch'oe Yong-gon and other prominent guerrilla commanders were among the organizers. To further the program of the Society (supposedly authored by Kim Il Sung) and to organise branches, a group of political workers was sent to Korea. It succeeded in having some underground groups connected with the Association and in forming some new ones. The Association influenced the liberation movement to a certain extent but failed to unite and lead it. The latter also depended upon the nationalists of Korea, who refused to oppose the colonial regime actively and leaned more and more to collaboration and support of the Japanese invasion plans.

After the war with China began in 1937 the Japanese took active measures to crush the liberation movement. By the beginning of the 1940s, the Japanese army had repelled the guerrillas and forced Kim Il Sung's group and others to retreat into Soviet territory. The surviving Communist units went deep underground, minimizing their activities. The number of strikes and rural protests also decreased. Progressive papers and organizations were suppressed. Nevertheless, during World War II the Korean Communists circulated anti-war leaflets, and organized some sabotage of Japanese military installations.

Modern Stage (1945-1995)

In August 1945, Korea was liberated from the colonial yoke, facilitated by Japan's defeat in World War II. The Soviet Army alone fought in Korea against the Japanese, and paid a
heavy price (1,963 killed and wounded) for the withdrawal of the invaders from Korea. The US Army landed in Korea only on 8 September when the fighting had ceased. Of the allied forces, the Soviet Army was welcomed by the Koreans as a liberator, both in the North where it was supposed to remain according to the Allies' decision, and in the South. The fact that it was the army of a Communist-ruled country from the first helped the reanimation of the Communist movement in Korea.

The news of the Japanese surrender reached Korea on the 15th of August (this day is celebrated in both the North and the South as Liberation Day). The following day the release of political prisoners began, and the surviving Communists came out of their hiding places. They grouped around Pak Honyong, the only Korean Communist leader with more than 20 years experience of underground fighting for the Communist cause. Under his guidance an organizing committee was formed, to call a party conference urgently. The conference, held in Seoul, discussed the situation in the country and the most immediate tasks and prospects for the Communists. The elected Central Committee (28 members) was headed by Pak Honyong. Thus, in August 1945, the Communist Party of Korea finally came into being.

The party preceded the formation of other parties and emerged as an important factor in liberated Korea's stormy political life. The development of the new party, not at all free from the now traditional contradictions, was facilitated by the organizational work of Pak Honyong and his dedicated co-workers. In September 1945 they circulated the Central Committee's 'Appeal on the Present Situation and Our Tasks' which supplied the Communists with necessary political and practical guidelines. By November 1945, there were more than 3,000 members of the Communist Party in the south of Korea, including 342 in Seoul. The Communists played an active role in the formation and functioning of the People's Committees, spontaneously developing organs of democratic self-government. These numbered over 140. The government of the Korean People's Republic, proclaimed by the left on the 6 September, two days before the US Army's landing in Korea, was influenced by the People's Committees. The US military authorities in Korea refused to recognize these organs of power and made it impossible for them to function. The US administration relied mostly on anti-Communist nationalist leaders, headed by the rightist politician Syngman Rhee, who had just returned from exile in the USA.

In the North, the Soviet military administration at first cooperated with the nationalists led by the noted religious activist Cho Manshik. But measures were taken to the effect that in all representative organs of power Communists replaced the nationalists step by step. This was made easier after the return to Korea of the guerrillas led by Kim II Sung in September 1945. At the same time, experienced party organisation workers and administration and economic management specialists of Korean origin began to arrive from the USSR. The most well-known among them was Ho Kai, secretary of a District Committee of the CPSU. At the end of 1945 a large group of Korean freedom fighters led by Kim Tu-bong returned from Central China (the 'Yanan group').

The division of Korea into two zones of occupation made it necessary to organize a separate Communist leading organ in the North. In October 1945, the North Korean Organizing Bureau of the CPK was established. Kim Yong-bon, an active Communist since the 1920s, who had studied in the USSR in 1927-31 and then worked underground in Manchuria and Korea, was elected Secretary. In December 1945, he was replaced by Kim Il Sung, who was actively supported and promoted by the Soviet administration as the chief political figure of the North.

The Communist ranks in the North grew rapidly. By the end of 1945 there were six provincial and 10 district party organizations with 6,000 members. By August 1946, membership had grown to 160,000. This rapid growth came mostly from the poorest peasants (workers constituted less than one-third), and this influenced the organizational
and ideological level of the party ranks. The North Korean Party unit was a nominal part of the CPK and its Bureau was subordinate to the Central Committee in Seoul, but in reality the tables were soon turned since, with Soviet assistance, the North was emerging as the centre of the Communist movement or, as party documents stated, the basis of the Korean revolution. In the divided country communications with Seoul became increasingly difficult. Thus, by the summer of 1946 there was an independent Communist Party in the North.

Under Communist guidance in the North, trade unions and youth and women's organizations developed, along with unions of artists and the creative intelligentsia. Similar organizations in the South were likewise influenced by the Communist Party. Learning from their experience of the national liberation struggle, both parties paid great attention to uniting the fraternal political forces around themselves. On the initiative of the Communists two independent United Democratic National Fronts emerged in the North and in the South in 1946. They developed, especially in the North, as significant elements of the political system.

The old feud between Communists and Nationalists which had to some extent decreased in intensity after the liberation flared anew at the beginning of 1946. The Moscow meeting of the Foreign Ministers of the USSR, USA and UK (December, 1945) decided to establish a 'great power' trusteeship over Korea, and this split Korea into two hostile camps. The right wing Nationalists led by Syngman Rhee were categorically opposed to the trusteeship decision, which they estimated as a form of humiliating protectorate. The Communists and allied left forces supported the trusteeship as the allied powers' assistance to the development of Korean democratic statehood. Thus the Communists and their allies were labelled as 'national traitors', harassed in the press and terrorized throughout the South.

In the North, Cho Manshik and his group also protested against the decision and were forcibly removed from the political scene. This allowed the Communists to assume power in the North with the help of the Soviet military administration. The Provisional People's Committee of North Korea, established in February 1946, was headed by Kim Il Sung; Communists occupied leading posts in it. To strengthen their political system, they carried out some important reforms (such as agrarian reform and nationalization of industry). Great attention was paid to the establishment of the national army and the security force. Assisted by the Soviet Army all attempts to resist the policies of the new power were suppressed.

The tasks of further reform in the North, and the growing confrontation with the South where an opposed political system was being formed, necessitated the unification of the political forces grouped around the Communist Party. Closest in spirit was the New People's Party led by Kim Tubong. In August 1946, this party merged with the Communist Party during the Constituent (First) Congress, and together they constituted the North Korean Workers' Party. Kim Tubong was elected Chairman, and Kim Il Sung one of the Vice-Chairmen. The Workers' Party emerged as the leading force, pushing out all other political organizations. Its ranks grew rapidly. In March 1947, it had more than 600,000 members, and by January 1948, more than 750,000.

In the South, the Communist Party had about 3,000 members in 1946. In November 1946, it merged with comparatively minor allied parties, the People's and New People's Parties, and formed the South Korean Workers' Party. Hồ Hôn, a noted lawyer and well-known freedom fighter, was elected Chairman; Pak Hônyông, the real leader of the party, was elected Vice-Chairman. The founding of the South Korean Workers' Party coincided with a period of aggravating internal strife in the South, which sometimes led to armed clashes, for which the Communists were held responsible. From the end of 1946, the 'semi-legal' Workers' Party was under threat. Some of its units were dissolved, and a number of leaders were gaoloed. Still, for some time, the Workers' Party continued to oppose the administration of the separate state in the South. Its members were leaders and active
participants in the guerrilla movement of 1948-1949. This movement was suppressed by the government, with the assistance of the US Army, on the eve of the Korean war.

In the North, the Workers' Party, assisted by the USSR, took active measures for the development of the Korean national economy and culture. Of great importance was the fact that in 1946-1947 the USSR handed to the North Koreans the industrial enterprises and property of the Japanese. Between the end of 1946 and the beginning of 1947 the first local elections in the history of Korea took place. They strengthened the position of the Workers' Party (57 per cent of all elected candidates). The Congress of the People's Committees of North Korea, held in P'yongyang in February 1947, elected the People's Assembly, the highest organ of state power. In its turn, the People's Assembly elected the Presidium, headed by Kim Tu-bong, and founded the People's Committee, the highest organ of executive power, headed by Kim Il Sung. At the same time the first economic development plan was adopted, and became the foundation of the planned economy in the North. The modern historiography of the PDRK considers the People's Committee to be the first executive organ of the proletarian dictatorship which signified North Korea as entering the transition period to Socialism (for tactical reasons Socialist aims were not stressed before the Korean war).

The division of Korea, which had begun in 1945 with the formation of the Soviet and American occupation zones, deepened with the aggravation of the Cold War. The leaders of both the North and the South were involved in it and contributed their utmost to its development. They refused any contact, compact or compromise, claimed exclusive authority to represent the Korean nation and to decide upon its fate, and held ideological affiliation in more esteem than the national interest. As early as 1946, Syngman Rhee laid claim to the necessity of the separate state in the South. Power systems emerged in both parts of the country which facilitated the partition and the formation of the two separate states. The refusal of the USSR and the North Korean leadership to cooperate with the United Nation's (UN) over the Korean question, led to the UN's decision of November 1947 to hold separate elections in the South. The threat of the formation of the separate state in the South was now clearer than ever before.

The plans to hold separate elections caused a storm of protest in the South. The idea was opposed even by some right-wing politicians who considered it to be a step leading to the final split of the country. They insisted that elections should be held simultaneously with elections in the North. Of course, the latter was not passive either. The question was so important that it was discussed at the 2nd Congress of the North Korean Workers' Party. Having analysed the Party's internal affairs and the economic targets, the Congress turned to the crisis situation in Korea.

The Congress worked out a policy aimed at the preservation of Korea's integrity and proposed the simultaneous withdrawal of the Soviet and US armed forces from Korea, along with general elections to establish a united and democratic state. The state was projected as the People's Democratic Republic. This target was to be achieved by the consolidation of patriotic forces and the strengthening of the united democratic national front. To work out concrete measures for opposition to the separatist elections in the South, it was proposed to call a meeting of political parties and organizations from both parts of Korea.

Such a meeting was held in P'yongyang at the end of April 1948. A significant group of politicians from the South attended (including Kim Ku and Kim Kyushik, all in all 395 persons). The meeting appealed to South Koreans to boycott the separatist elections and asked the governments of the USSR and USA to pull out their armies from Korea, promising to take adequate measures to avoid civil war. The meeting also mapped some important measures to rebuild and re-unify the country.
But it was too late. On the 10th of May, 1948, separate elections were held in South Korea; on the 15th of August the Republic of Korea was proclaimed.

Fighting against the separate elections in the South, the North simultaneously tried to implement its own scenario for the formation of the unified Korean state. As early as 1947, the decision had been taken to work out the Constitution of the future state. In February-April 1948, a draft Constitution was presented to the people for discussion and then approved by special session of the People's Assembly. In April 1948, the Central Committee of the Workers' Party proposed pan-Korean elections to approve the Constitution and form a central government. Legal ratification of this decision was achieved during the second meeting of the Northern and Southern political leaders and parties (the latter was rather more narrow in who it included) in Pyongyang in late June to early July 1948. On 9 July, the People's Assembly enacted the Constitution in the North and decided to hold the pan-Korean elections to the Supreme People's Assembly on 25 August.

According to the official data, the elections were held in the North and also were held illegally in the South. More than one-third of the deputies elected were members of the Workers' Party. At the first session of the Supreme People's Assembly (at the beginning of September 1948) the Constitution was finally adopted, the Presidium was elected (under Chairman Kim Tubong), and the Cabinet was formed with Kim II Sung as its head. Pak Honyong was appointed Deputy Prime Minister and Foreign Minister. Workers' Party members held most of the important posts in the government. On 9 September 1948, the People's Democratic Republic of Korea was proclaimed. Thus two states emerged on the Korean peninsula. Neither of them considered the other as legitimate; both spared no effort, including extreme measures, to establish sovereignty over the whole of the country.

This aim required further concentration of political forces. First and foremost this concerned the Workers' Party, the existence of which in two separate units, in the North and in the South, became a nonsense. In June 1949, a unified plenary meeting of the two Central Committees was held which decided to merge the two parties into the Workers' Party of Korea. The two Central Committees also merged. This decision was not made public, and even Party members learned about the merger only after some time. The unification congress, scheduled for September 1949, never took place. Kim II Sung was elected Chairman of the Central Committee, and Pak Honyong Vice-Chairman. Yi Sungyop, Secretary of the Central Committee, was responsible for work in the South. According to Soviet data, by the beginning of 1950 the Workers' Party in the North had 825 600 members. In the South there were 714 500 members, 238 500 of them active participants in party work. The data for the South may, however, be exaggerated.

At the same time there was a merger of the national democratic fronts of the North and the South. On this basis, the Democratic Front for the Unification of the Fatherland (DFUF) was founded. It included more than 70 parties and organizations from the North, the South and overseas. The DFUF worked under the guidance of the Workers' Party. Kim Il Sung, Pak Honyong, Kim Tubong, Hō Hōn and others were members of its Presidium. It was mainly through this organisation that the Party's unification policies were carried out.

During the Korean War (1950-1953), the Workers' Party made a tremendous effort to organize resistance, strengthen the army and mobilize all resources for the needs of the front. The Party itself suffered heavy losses. During the first year of the war only, more than 70 000 of its members lost their lives. Some Party members, however, evaded their responsibilities or were expelled due to collaboration with the enemy or other misdeeds. In the South, the Party units were totally destroyed. After the liberation of the Northern territories occupied in the first stage of the war by US and South Korean troops, the Party quickly rebuilt its organisational structure. From the end of 1950, after the breakthrough by the North Korean and Chinese armies, there was a mass influx of new members to the
Party. By September 1952, its membership had grown to one million, and continued to grow. Such rapid growth inevitably told on the qualitative content. Many qualified party workers were killed and replaced by less experienced cadres. Among the leaders of base level Party organizations 97 per cent had primary education only, or were semi-literate.

The war, with its tragic consequences for the whole of Korea, heightened the contradictions within the Workers' Party leadership. Prior to the war there were four rival factions: the 'guerrilla faction' led by Kim Il Sung, the 'local faction' (i.e. those who were active in Korea before the liberation), led by Pak Hŏnyŏng, the 'Soviet faction' led by Hŏ Kai and the 'Yenan faction' led by Kim Tu-bong. The war facilitated the increasing influence of the 'guerrilla faction'. It succeeded in pushing aside the hitherto most powerful 'Soviet faction', whose leader Hŏ Kai was responsible for the organizational aspect of Party work. Hŏ Kai was removed from his post in 1951 and in 1953, according to the official version, he committed suicide. Soon the turn of the local faction came. It was accused of treacherous contacts with the US, deliberate undermining of the revolutionary forces in the South, and preparing to mount a coup against the government. In 195, Pak Hŏnyŏng, Yi Sungyŏp and other South Korean activists were expelled from the party and all were removed from their posts. Within a short time the majority of them had been executed.

From the end of the Korean war the Workers' Party centred its efforts on the economic and cultural rebirth of the country. The main tasks were determined and planned by the Plenary Meeting of the Central Committee at the beginning of August 1953. One year was considered necessary for assessment of the havoc inflicted on the national economy and for preliminary recuperative measures. In 1954 (to 1956), the 3-year plan for the rebirth of the economy was to be implemented. After that, the first five-year plan for economic and cultural development was to be fulfilled. Due to substantial help from the USSR, China and other friendly countries, the North Korean people succeeded in a very quick (3-4 years) reconstruction and elimination of the most serious consequences of the war. Thus, the groundwork was done for the further progress of the republic.

After the mid-1950s, the Workers' Party became step by step involved in the contradictions and conflicts within the world Communist movement, as well as in the relations between the ruling parties of the Socialist countries. The North Korean Party leadership tried its best to remain independent and to block any influence from outside; it grew and more reluctant to follow the advice of the 'big brothers'. With the passage of time, the selfless assistance of the countries friendly to North Korea began to be hushed up. All victories were attributed to the Korean leadership only; the personal authority of Kim Il Sung was quickly developing into a personality cult.

A significant step in this direction was made by Kim Il Sung's address titled 'On the elimination of dogmatism and formalism, on the est'. This address was delivered at the Party workers' meeting of December 1955. In it the ideas of chuch'e were for the first time fully expounded, to be from then on the basis of the ideological work of the Party and the whole social life of North Korea. The essence of chuch'e is as follows: the Korean people are proclaimed the masters of the revolution and the unification struggle; there is a negative attitude to the use of any other country's experience; strictly exclusive consideration of the country's national interests and traditions; independence in all questions and situations; full self-reliance. At first the chuch'e ideas were styled only as a creative development of Marxism-Leninism in Korea, but gradually this thesis was replaced by the notion of 'Kim Il Sungism' in Party propaganda. Kim Il Sungism was declared to be the highest stage of Communist ideological development, a teaching relevant to all mankind. The introduction of the chuch'e ideas was accompanied by a campaign directed against grovelling before the great powers, meaning the USSR and China.

The North Korean leadership was among those who refused to support the anti-Stalinist stand of the 20th Congress of the CPSU, as well as its policy of acceptance of the peaceful
coexistence of countries with different social systems. An attempt to condemn the Kim Il Sung personality cult, undertaken by a group of high Party officials under the influence of the 20th Congress during the August 1956 Plenary Meeting of the Central Committee was crushed by Kim Il Sung. Kim Il Sung not only succeeded in defeating those attempting to overthrow his leadership, but with the help of his followers he destroyed both the Soviet and the Yenan factions. By the end of the 1950s, the Workers' Party had emerged as a strictly centralized, monolithic party centred around the sole leader of both Party and state - Kim Il Sung.

In April 1956 the 3rd Congress of the Party took place. By that time Party membership exceeded 1 100 000 members. The congress summed up the results of the reconstruction work and decided to build the basics of socialism in Korea. An industrialisation program was also adopted. The concrete targets for the first stage were set out in the 'Directives on the Creation of the Five-Year Plan for Economic Development (1957-1961)' adopted by the Supreme People's Assembly. Congress also published the declaration 'In the Name of the Peaceful Unification of the Fatherland', which expounded the North's position concerning the unification of Korea. Having discussed organizational problems and ideological work, Congress worked out the Party Rules, which also contained the program guidelines of the Party. The KWP has no modern program in the form of a separate document.

During the five year plan, Socialist reforms were carried out in North Korean industry and trade, from which private capital was totally excluded. Rapid 'cooperativisation' was implemented in agriculture, and related changes took place in other spheres of life.

Despite all specific features, in most cases outward ones, the model of Socialism as projected in North Korea followed Soviet patterns. The energetic measures taken by the Workers' Party and the government brought about significant progress in the spheres of economic, cultural and social life. By the end of the 1950s, the North was apparently ahead of the South in its rate of economic growth. In September 1961, the 4th Congress of the Workers' Party discussed the results of Socialist construction. By that time the Party had more than 1 300 000 members. The Congress declared that due to the successful implementation of the five year plan the basics of Socialism had been achieved, and proclaimed the transition to full-scale Socialist construction. This process is still on-going and has passed through successive economic plans. The first of them was the seven year plan for economic development adopted by the 4th Congress (1961-1967) which set out significant steps in industrialization, technical modernisation and cultural policy.

When the military regime headed by Park Chung-hee came to power in the South, the tension on the Korean Peninsula grew considerably. In the North, a plenary meeting of the Central Committee of the Workers' Party was held in December 1962 and announced a policy of parallel economic and defence construction. This inevitably resulted in slowing down the realization of the development targets. In October 1966, this policy was reaffirmed by the Workers' Party Conference. Taking the situation into consideration, the Conference decided to re-schedule the seven-year plan; now the completion date was set for 1970. Shortly after this, the Plenary Meeting of the Central Committee abolished the post of Party chairman and introduced the post of General Secretary. Kim Il Sung was elected General Secretary of the Workers' Party.

In November 1970, the 5th Congress of the Party was held. By that time it had more than 1 700 000 members. As usual, Congress discussed the results of the preceding plan, and then proclaimed North Korea to be transformed into a Socialist industrial state. Further economic targets were set out by Congress in the Directives on the Six Year Plan (1971-1976). After the official period of implementation of the plan was over, a 'regulation period' was necessary; that is, in reality, more time was needed to fulfil the plan. Similar 'regulation periods' were necessary after the formal fulfilment of the second (1978-1984) and third (1984-1993) seven-year plans.
The 6th Congress of the Party took place in October 1980. The Party had by that time more than 3,200,000 members. Further information on membership is not available. The strategic targets for the 1980s were proclaimed as follows: the construction of the solid material-base necessary for fully victorious socialism, and significant improvement of the people's material and cultural well-being. The 10 projected tasks of economic construction, formulated by Kim Il Sung, became the basis for the third seven-year plan, which, as the Plenary Meeting of the Central Committee noted in December 1993, was not fully implemented due to the collapse of the world Socialist system and the loss of important trade partners like the USSR and the East European countries.

During the 6th Congress Kim Il Sung put forward a full-scale program on North-South rapprochement, for the sake of the unification of Korea and the formation of a confederate state. This program is still the core of the North Korean unification policy. Congress also adopted Party Rules which are still enforced today. During the Congress, Kim Chong Il was adopted as the official heir apparent and elected to all governing bodies of the party. Kim Chong Il, the eldest son of Kim Il Sung, had worked in the machinery of the Central Committee of the Party since 1964 and he emerged as second highest ranked officer in both state and Party. Since 1980 no Congresses or conferences of the Party have been held.

According to its Rules, the Korean Workers' Party is a Marxist-Leninist revolutionary party of the chuch'e type, founded by the great leader Comrade Kim Il Sung. The Korean Workers' Party declares the revolutionary thought of the great leader Comrade Kim Il Sung, the chuch'e principle, to be its sole guiding principle. The most immediate task of the Party, as stated by the Rules, is 'the achievement of the full victory of Socialism in the Northern part of the Republic, and the fulfilment of the tasks of national liberation and the people's democratic revolution in the country as a whole. The final target is the restructuring of the whole society on the basis of chuch'e and the construction of a Communist society'.

The transition to a fully-fledged Socialist society requires, according to the North Korean leaders, a period of unremitting class struggle. The revolution must thus continue until the building of Communism is accomplished. To these leaders, the revolution proceeds in three fields: ideological, technical and cultural, the first being the most significant. The central role belongs to the leader - 'the great leader of the revolution', 'the hub of the unity and integrity of the toiling masses', who leads the country through the working class party, 'the headquarters of the revolution'. The people's power, which has to be constantly strengthened, may fulfil its functions only under the guidance of the party leader. The Socialist democracy is of class character and linked to the workers' dictatorship over the class enemies.

The transition to Socialism is considered to be the inevitable law for all mankind. Thus the defeat of Socialism in the USSR and some East European countries is looked upon as a temporary phenomenon. According to Kim Chong Il, this happened 'due to the plotting and collaboration of the imperialist and counter-revolutionary forces, as the result of the cultural and ideological expansion of imperialism and the corroding influence of right wing opportunism'.

The main reasons for the failure of world Socialism, in the North Korean leaders' view, were that the attention of the ruling parties was not centred on the people; that the people were not educated in the Communist spirit; that the state and society were managed by privileged circles separated from the masses; and that the unity of the people and their consolidation around the party was broken. Of negative effect also, was the dogmatic approach to Marxism, which, despite all its historical merits, was not devoid of significant limitations.
Expressing the North Korean attitude to the fate of world Socialism, Kim Chong Il was especially outspoken in his opposition to pluralism, meaning ideological liberalization, as well as to the multi-party system and the plurality of property forms, since all of these, according to him, are incompatible with Socialism. The North Korean model of Socialism was declared to be the best. Its merit and proof of durability was considered to lie in the fact that the North Korean people had a really great leader, the succession problem was solved, and that the society had a consolidated will and a single ideology, that of the great leader. But there are serious reasons to suggest that the socio-economic system of North Korea caffies in itself a number of factors similiar to the ones that caused such deep shocks in other Socialist societies. The prevention of the destructive influence of these factors will depend on the depth and objectivity of the leadership's insight concerning the necessary reforms to be carried out in time and the energy applied to these reforms.

In July 1994, Kim II Sung passed away. He was the undisputed leader of the country and the ruling party, determining both internal and external policies for nearly half a century. The levers of power have passed into the hands of his son and official successor Kim Chong II, now styled as the 'great leader'.

In his work, Socialism is a Science, published in November 1994, Kim Chong Il states that, 'today our party and people face an important and honourary task to carry on, from generation to generation, and to fulfil, until victory, our great cause of Socialism, which had been started and guided by the great leader Comrade Kim II Sung'. One may draw the conclusion that the new North Korean leadership will follow the chuch'e ideas, strengthen the existing regime and develop the Korean model of Socialism - that is, follow the path laid down by Kim II Sung. But it does not mean that no changes can be forseen in the North. The premises for change have been prepared during the preceeding decade by state measures to improve economic management, to invite foreign investment, and to bring the country closer up to date with world technical progress. One can suggest that under favourable internal and external conditions North Korea will go the same way as China and Vietnam in all specific features and strategies in the tempo, scale and forms of change in the Socialist system.

Confucian Gentlemen and Barbarian Envoys

Confucian Gentlemen and Barbarian Envoys is an examination of the opening of Chosôn at the end of the nineteenth c. Subtitled The Opening of Korea, 1875-1885, the author is Martina Deuchler and the publisher the University of Washington Press. The work was published in 1977 and comprises 310-pages of twelve chapters, with two appendices detailing the major protagonists of the Min clan and a listing of the leading members of the Enlightenment Party.

The work begins with an examination of the situation in Chosôn before its opening, and then details the processes that unfolded over the next decade with the onslaught of foreign culture and politics. Essential to the work is the transformation of the heretofore isolationist
Chosŏn government to one that entered into treaties with Japan and the Western powers, and the consequences of this change. The international predicament of Chosŏn is discussed as the former China-orientation of Chosŏn shifted to one which leaned towards the West and Japan. Other topics explored include the various reform initiatives, both inside and outside the government; the effects of the trade conducted in the newly-opened ports; the power struggles among various factions in the Chosŏn government; and the consequences of the failed coup d’État of 1884.

Confucian Gentlemen and Barbarian Envoys gives a clear examination of what the author deems the most crucial decade in the events that led to the eventual collapse of the Chosŏn dynasty and the advent of the colonial period. The changes that occurred, along with those that did not transpire during this period, had major repercussions on Korea insofar as modernisation; the acceptance of Western thought; and political reforms for the remaining years of Chosŏn are concerned. Hence, this work provides valuable material for an understanding of the process of modernisation in Korea.

The Confucian Transformation of Korea

The Confucian Transformation of Korea, subtitled A Study of Society and Ideology, is an exhaustive examination of the processes involved in the transformation of Korean society from Koryŏ to late Chosŏn. This 439-page work was written by Professor Martina Deuchler and published by Harvard University Press in 1992. The author has divided her work into six chapters and has also included a select bibliography and an extensive glossary of terms used in the work.

Deuchler examines the processes involved in the transformation of the relatively equal Koryŏ society, insofar as the rights of women and men in the family are concerned, to the male-dominated, patriarchal society of mid and late Chosŏn. Of special interest is the presentation of the institutional aspects of Koryŏ society, in which women held economic security in their own hands. The movement of society in Chosŏn towards a patriarchy is seen as a consequence of the widespread acceptance of the neo-Confucian ideology and its emphasis on agnation and ancestor worship. Hence, women were systematically marginalized by society over time, and by late Chosŏn this was a fundamental aspect of society manifested in all social strata to varying degree. There are chapters on mourning and funerary rites, and inheritance practices, which are essential for an understanding of Chosŏn society. The sixth chapter details the situation of women during Chosŏn, including marriage; divorce; remarriage; the indoctrination of women; and secondary wives and concubines; making Professor Deuchler’s work a comprehensive study of women during the dynasty.

The Confucian Transformation of Korea enables its reader to gain a thorough understanding of the impact of the neo-Confucian ideology on Chosŏn society and the changes that it brought about to Korean culture as a whole. The bibliography provides a wealth of sources for further study.

Confucianism

Part A. History - ideas, development and acceptance

Historical background

It has been argued that there is no distinctively 'Korean' Confucian philosophy, since the Korean literati largely confined their philosophical thinking to commentary on the Chinese Confucian classics. It is true that the conservative atmosphere of Confucian society, where ancestral veneration and respect for seniors were regarded as overarching duties, made the direct expression of original ideas tasteless and unacceptable. Nonetheless, a tradition which demands homage to the wisdom of the past does not necessarily preclude the need
for adaptation to changing circumstances, and as in China, the urge for innovation found satisfaction, and acceptance, in the subtle but cumulative modification of old modes of thought. In the time-honoured spirit of 'discovering the new through familiarity with the old' the Confucians of Korea became proficient not only at adapting old concepts but at times, in a more subversive sense, introducing new ideas in the clothes of ancient concepts and modes of expression.

Confucian ideas gradually filtered into the Korean peninsula through the medium of Chinese script several centuries prior to the official introduction of Buddhism in 372. In the same year one of the so-called 'Three Kingdoms', Koguryo which shared a large border with China, established a T'aehak or National Confucian Academy to educate the sons of the aristocracy. Koguryo's example was shortly followed by the kingdom of Paekche. Following its unification of the country in the seventh c. the kingdom of Shilla established a Kukhak or National Confucian College in 682 to train the large number of bureaucrats needed to rule its expanded territory.

In all these institutions the Five Confucian Classics formed the heart of the curriculum, and at least in Shilla, familiarity with the Analects of Confucius and the Book of Filial Piety was a prerequisite for high public office. Knowledge of Confucian ethics had also filtered down to the aristocracy of Shilla, as illustrated in the precepts of the 'Flower Corps' or Hwarang of Shilla which combined Confucian teachings on filial piety and loyalty with elements from Buddhism and Daoism.

Although Buddhism continued to wield enormous influence on the culture and general populace during the Three Kingdoms and the succeeding Koryo Dynasty, Confucianism, on the strength of its well-developed political philosophy, steadily consolidated itself as the backbone of formal education for the ruling elite, and concomitantly, political thought and institutions. Shortly after the foundation of the Koryo dynasty in 958 a civil service examination system was instituted based on the Confucian Classics, and the reign of Sŏngjong (981-997) saw the foundation of Confucian schools in all regions of the country.

The Assimilation of Neo-Confucianism

In the light of the evidence that remains, it was in the late Koryo dynasty that Korean Confucian philosophy began to flourish, if by 'philosophy' we mean consistent attempts to understand the human condition, including human nature itself and the relationship between man and the universe.

These philosophical activities were achieved on the basis of a growing familiarity with the Chinese classics, and stimulated by the introduction of Neo-Confucianism, the teachings of the Song philosophers Zhu Xi and the Cheng brothers, by the scholars An Hyang (1243-1306) and Paek Ijong (1247-1323) in the late Koryo period. Zhu Xi in particular had grounded the practical ethics of Confucius and Mencius in a new cosmology to rival that of Buddhism in terms of sophistication and breadth of scope. He had also introduced a new, more clearly defined theory of self-cultivation which provided a viable Confucian alternative to the Buddhist promise of enlightenment that had attracted so many to the temples. Armed with the new philosophical system, Korean Confucian scholars, led by the influential reformer Chŏng Tojŏn (1337-1398), began to vigorously criticize Buddhism. During the Koryo period the steadily increasing wealth and influence of the temples was perceived as a threat to central government, and the new critiques reinforced efforts to consolidate the power of the State. The founder of the Chosŏn ruling line was well aware of these advantages when he instituted Cheng-Zhu Neo-Confucianism as the exclusive ideology of the new dynasty, granting the Neo-Confucian scholars unprecedented status, and enshrining the doctrines of Zhu Xi as the core of a well-organized civil examination system.

The Schools of T'oegye and Yulgok
Following a period of several centuries during which understanding of the new orthodoxy gradually matured, Korean Neo-Confucian philosophy flowered in the writings of its two greatest exponents, Yi Hwang (Yi T'oegye 1501-70) and Yi I (Yi Yulgok 1536-84), and in the sophisticated debates that ensued as they and their followers sought to defend their respective interpretations of Zhu Xi's doctrines. Partly on account of its ambitious scale, Zhu Xi's innovative cosmology posed a host of new questions. In particular, hints of dualism within his system, in conjunction with his ambiguous responses when questioned on the subject by his followers, provided abundant room for elaboration and debate. Like Cheng Yi and Zhu Xi, Chosŏn scholars, and particularly the schools of T'oegye and Yulgok, showed great interest in the question of human nature, a natural outcome of their traditional Confucian preoccupation with ethics. They were particularly interested in the implications of the new metaphysics for this area. They struggled to clarify grey areas and resolve tensions in Zhu Xi's view of human nature with regard to the two metaphysical concepts of \( I_i \) (principle) and \( qi \) (material force), and the closely related question of good and evil. But it was to the role of the emotions in this context that they paid unparalleled attention, and where they made a distinctive contribution to the development of East Asian philosophy.

T'oegye is generally regarded as the greatest Korean exponent of Zhu Xi's Neo-Confucianism, both on account of his familiarity with Zhu's life and philosophy, and his unwavering faithfulness to his teachings. He vigorously criticized the philosophy of Wang Yangming, the main alternative Neo-Confucian school of thought, and thus contributed in making the Korean Zhu Xi school even more exclusive than it had been in China.

The most celebrated and protracted philosophical debate in Korean history, which revolved around the intricate relationship between \( I_i \), \( qi \), and the emotions, began in the correspondence between T'oegye and a friend of his, Ki Taeung (Kobong, 1527-72). This was coined the 'Four-Seven Debate' because it dealt with the 'Four Beginnings' and 'Seven Emotions'. The 'Four Beginnings', originally described by Mencius, refer to four spontaneous and benevolent tendencies common to all human beings, namely the heart of compassion, shame, modesty, and moral discernment, which represent the 'beginnings' or sources of the virtues. On the other hand the seven emotions, enumerated in the Book of Rites, refer to the whole gamut of human sensibilities, positive and negative, such as joy, anger, sadness, delight, etc.

Following the example of Zhu Xi, T'oegye drew a clear ontological distinction between these two sets of attributes by maintaining that 'the Four Beginnings manifest \( I_i \) and the Seven Emotions manifest \( qi \), where \( I_i \) referred to the rational, unifying principle of the universe and \( qi \) was the cosmic 'stuff' with which the myriad things are made. Endowed in man, \( I_i \) is both a natural and a normative standard, and constitutes his original nature (\( ben\ chan\ zhi\ xing \)). This nature is implanted in \( qi \), to which he owes his corporality and individuality, and so his physical nature (\( qizhi\ zhi\ xing \)), which is the source of his bodily desires, consists of \( I_i \) and \( qi \) combined. Evil was regarded as originating from turbid or impure \( qi \) in the physical endowment. Consequently T'oegye maintained that the Four Beginnings were entirely good because they manifested pure principle and the Seven Feelings consisted of both good and evil because they manifested material force.

Kobong and later Yulgok implied that T'oegye's position was too dualistic. Yulgok, a scholar of practical bent who emphasised the importance of adapting abstract principles to circumstances, and who excelled in statecraft as well as metaphysics, emphasised the inseparability of \( I_i \) and \( qi \). By describing the 'Four Beginnings' as a subset of the 'Seven Emotions', both of which were manifestations of \( qi \), Yulgok in particular placed a new emphasis on the positive nature of \( qi \) as well as the emotions themselves.

Alternative Currents
From the seventeenth c. signs of dissatisfaction with the narrow perimeters of Neo-Confucian debate began to show. Two outspoken scholars sharing a markedly independent turn of mind, Yun Hyu (Paekho, 1617-80) and Pak Sedang (Sogye, 1629-1703), both challenged Zhu Xi's interpretations of key concepts in the so-called Four Books, which together with the Book of Changes, formed the philosophical core of the Confucian canon. They were both labelled 'traitors of the Confucian Way', a stigma not without irony, for they had implied that the prevailing Confucian orthodoxy, i.e., Zhu Xi's interpretation, was not entirely orthodox, as its speculative approach had distorted the message of Confucius and Mencius.

Yun Hyu's concept of Heaven (ch' on ), the Confucian term for the ruling power of the universe, was particularly remarkable. Instead of equating Heaven with a universal principle in rational terms, which is how Zhu Xi had envisaged it, he reverted to the early Zhou dynasty concept of Heaven as a ruling deity who empathised with human affairs.

Like Yun Hyu, Pak Sedang tried to show that Chu Hsi had altered the original message of the Four Books, and particularly the Great Learning, by changing the order of the text and adding his own speculative interpretations. He criticized core aspects of Zhu Xi's philosophy of principle such as his equation of the nature of man with the nature of other beings, as well as his concept of self-cultivation. According to Pak, Zhu Xi's interpretation of "gewu zhi zhi," the 'investigation of things and the extension of knowledge', which was regarded as the initial step in a program of self-cultivation, had inflated its significance and detracted from the succeeding, more practical steps. He argued that this kind of ratiocination had caused the scholars of his age to neglect practical ethics and reverse the inductive approach of the Confucian teachings by 'skipping what was close at hand and plunging into the deep and distant'.

In view of the bitter controversy aroused by the work of Pak and Yun, it is not surprising that the voices of more inventively inclined scholars were muted in the succeeding century. In spite of this the philosophy of Wang Yang-ming, which had flourished in China and Japan, managed to surface in a more restrained, somewhat encoded fashion in the writings of its main proponent, Chông Chedu (Hagok, 1649-1736). Hagok, who cultivated a sizeable group of followers, applied the principle/material force cosmology to enlarge on central aspects of Wang's thought such as the equation of mind with principle and the 'extension of one's innate knowledge' (zhi liangzhi).

Stimulated by developments in Qing dynasty scholarship, including ksozheng xfiue or 'evidential learning', which frowned on subjective speculation and emphasised a more rigorous philology including the importance of textual corroboration, the School of Yi Ik (Sôngho 1681-1763) became a focus of philosophical activity. Yi Ik and a number of his followers, including Kwŏn Ch'olsin (1736-1801) and Chông Yagyong (Tasan 1764-1836), also took a great interest in Western Learning, including scientific developments as well as Catholicism. Although Yi Ik, who was known more for his encyclopedic scholarship and bold proposals on administrative reform, rejected overdependence on commentaries and called for a return to the text of the Classics themselves, his philosophy broadly adhered to the conceptual framework provided by Zhu Xi.

Nonetheless it was a follower of Yi Ik, Chông Yagyong (Tasan, 1764-1836), who used the growing sophistication of evidential learning to challenge the textual basis, and the philosophical integrity, of the Neo-Confucian cosmology. Like his Qing counterpart Dai Zhen, Tasan pulled the carpet from under the conventional debate by claiming that Zhu Xi had reified li , originally an abstract concept signifying 'pattern' or 'law', to the status of a universal being, and thus thrown the Confucian camp into confusion with Neo-Buddhist concepts of the 'one (principle) reflected in the many.' But Tasan went one step further than other 'evidential philosophers' by redefining human nature as affective tendencies (kiho ),
both moral and sensual, rather than ontological principle, thus providing the practical ethics of Confucius and Mencius with a novel psychological basis.

Summary

Confucian ideas gradually filtered into the Korean peninsula through the medium of Chinese script several centuries prior to the official introduction of Buddhism in 372. From the late Koryô dynasty, when the Neo-Confucian ideas of Zhu Xi were introduced, Korean Confucian philosophy began to take root. During the early Chosôn Dynasty Neo-Confucian philosophy flowered in the writings of its two greatest exponents, Yi T'oe gy and Yi Yulgok, and in the sophisticated debates that ensued as they and their followers sought to defend their respective views of human nature and its ontological foundations. The 'Four-Seven' debate, the most celebrated of these controversies, revolved around the relationship between the Four Beginnings, the spontaneous and benevolent tendencies common to all human beings, and the 'Seven Emotions', representing the whole range of human sensibilities.

During the following century dissatisfaction with the narrow perimeters of orthodox Neo-Confucian scholarship surfaced in the work of two outspoken scholars, Yun Hyu and Pak Sedang. Both challenged Zhu Xi's interpretations of key concepts in the Confucian canon such as Heaven (T'ian) and the 'investigation of things and the extension of knowledge', which was regarded as the initial step in self-cultivation.

Following this Chông Chedu surreptitiously introduced the ideas of Wang Yang-ming, which had flourished in China and Japan as an alternative branch of Neo-Confucianism. He applied Zhu Xi's li-qi or principle/material force cosmology to enlarge on central aspects of Yangming's thought such as the 'extension of one's innate knowledge'.

Activated by the thorough philology of Qing kaozheng xue or 'evidential learning', the School of Yi Ik became a focus of philosophical development. Chông Yagyong in particular challenged the foundations of orthodox Neo-Confucianism by criticizing Zhu Xi's concept of li or principle. By redefining human nature as psychological tendencies (kiho) he provided the practical ethics of Confucius and Mencius with a novel psychological basis.

Part B. Philosophical impact, Schools and Examination System

Bonds and cardinal relationships

In Korea, the influence of Confucianism is subtle and yet overwhelming. While that statement may appear contradictory, it is never-the-less true because religions in Korea are expressed in many radically different ways.

Compared to Buddhism with its colourful temples, and even to Christianity with its variety of churches, Confucianism is nearly invisible. Whereas beautiful Buddhist temples set in scenic mountain landscapes, and golden images of the Buddha attract tourists as well as believers, and books and brochures about Korea are covered with photographs of those marvellous sites, Confucian buildings are plain and unpretentious. And Christian churches, large and small, dot the city and the countryside. Unique to Korea, are the red neon crosses atop the buildings that standout against the night sky in great numbers. They are a visual testament to the strength of the Christian movement in Korea. And thus it appears that Confucianism is eclipsed by its two more-visible rivals.

Even Shamanism, which is also a powerful force in Korea, appears to overshadow
Confucianism. Although the Shamans do not have grand architecture, the raucous ceremony, the garish costumes and the excitement of Shamanism rituals seem to outshine the Confucian rituals.

To those who first encounter Korean culture, Confucianism does not seem to have a strong influence on Koreans, but the more one observes Korean culture and the behaviour of Koreans in various contexts, the more one finds the subtle influence of Confucianism. More than anything else, Confucianism is a standard of behaviour - a set of rules to be applied to various relationships one finds in society. When one looks beyond architecture, and sees human interaction in Korea, then one sees the overwhelming presence of Confucianism.

Almost every social relationship is influenced by Confucianism. Confucius was not concerned about the next life (although the rituals of Confucianism focus on the ancestors), and he taught his disciples to stay away from spirits. Confucius was a political philosopher who travelled from kingdom to kingdom advising kings on methods of good government. He taught that morality and character were more powerful than might and force. He believed that obedience to one's parents at home translated into loyalty for one's ruler outside the home. He taught the ideal of the junzi (Kor. kunja), the nobleman, one who had cultivated good virtues in himself.

The major ritual of Confucianism is ancestor worship, or as some prefer to call it, ancestor veneration ceremonies. Beginning at the funeral, throughout the three years of mourning, and finally the annual services at the graveside, the various ceremonies for the dead are the essence of Confucian ritual. The heart of the ceremony is the food and drink, and the bows offered to the dead. After the ceremonial offering of the food, all the participants have a feast on the food, and the relationship that brings them together is renewed.

More important than the ritual, however, is the subtle philosophical impact of Confucianism on the society whether one says he believes in Confucianism or not.

In Confucianism there are three 'bonds', and five 'cardinal' relationships. The three 'bonds' (unchangeable relationships) are:
- Sovereign to subject
- Parent to child
- Husband to wife.

The five relationships are expressed as a formula that repeats the three bonds in terms of the quality of the relationships and then adds two others. The five cardinal relationships are:
- Between sovereign and subject there is uprightness
- Father and son there is closeness
- Husband and wife there is separation of duties
- Senior and junior there is order
- Friend and friend there is trust

Confucianism emphasises the values held in official relationships. One of the most basic is filial piety, a term used in English only when describing Confucianism. Filial piety is the quality of children acting respectfully to their parents. There is also a corresponding obligation for the parent to act responsibly to the children. Confucian classics state, 'Never has there been one who has learned filial piety at home, who has been disloyal to his ruler (government).'

Filial piety is first, and loyalty follows close behind. Citizens in countries with Confucian traditions often tolerate autocratic governments for long periods because change is equivalent to disloyalty, and thus, is worse than patiently suffering through with bad leaders. Confucianism, however, also calls for goodness and virtue on the part of the
leader. The rivals of Confucious in his day were those who believe might made right. By comparison, the teachings of Confucious were ethereal and abstract. Yet he taught there was greater power in morality and virtue. In fact, most of the rulers of his day rejected his teachings, and only in later centuries did Confucious become recognized as a sage.

Faithfulness on the part of women, wives and widows, who sacrificed for their husbands and parents-in-law was highly prized. Many stories of heroic women who go to extreme measures to find medicine for an ailing husband or father-in-law are found in Korea. These episodes are recorded in books, primarily collected essays (munjip) of prominent men, and on monuments. There were three kinds of monuments erected in traditional Korea - those for filial sons (hyoja), for loyal subjects (ch'ungshin), and faithful wives (Yollyo).

In rural areas today one can still see these monuments. They are inscribed stele that are usually around three to five feet tall, and at times there is a small wooden structure built over the monument. Such monuments were not built by individuals or even by committees, but rather they were only erected by authority of the king himself. Local officials would initiate the petition to the government, which would approve it at various levels and finally submit it to the king for authorization. It was a serious matter, and an important manifestation of Confucian government, a government concerned with morality first, in action.

Other important concepts in Confucianism include a concept that is expressed simply in a Chinese character pronounced in. The Chinese character is made of two elements, the symbol for man, and the symbol for the number two. It means the relationship two men should have. It is hard to translate, but the terms benevolence, goodness, and human heartedness are used. If you were to ask a scholar of Confucianism which is the most important concept, some would say in, and some would say hyo (filial piety).

Propriety, etiquette, ceremony, knowledge, and trust are also important and have impact on the daily lives of Koreans. Of these values, the importance of education is striking. Today parents make tremendous sacrifices for the sake of educating their children, and children make their own sacrifices to study hard. The value of education has more than abstract underpinnings. Historically, education was the key to social success.

In traditional times, officials were recruited to serve in the government on the basis of passing an examination. The assumption was that good men made good government. And that a good education (in the Confucian classics) made men good. Therefore, there was an extensive education system and examination system in traditional Korea. It is important to note that the only source of prestige as well as wealth in traditional times was to be a government official. Businessmen were controlled and looked down upon, lawyers, accountants, doctors, scientists, and engineers all served the government officials and were considered inferior.

Education was the key to passing an exam and achieving success in traditional times, and it is so today. In today's society rapid economic development has been the hallmark of the day, and again, education is the key to success. It has been said that the education miracle has preceded the economic miracle. The Confucian classics ask, "What is more enjoyable than studying?"

Koreans are wonderful hosts. Foreigners are given royal treatment in homes and in restaurants. The first line of the Analects, one of the classics, says, 'What is more pleasurable that greeting guests who have come from afar!'

All of the above values are expressed in many different ways in the lives of Koreans today and in the past.
The ritual of Confucianism is centred on the concern for the dead. Although Confucius and later writers never described the next life in any detail, they believed in the existence of the soul and the need to offer respect to the departed. The ancestor ceremonies are basically food offerings set on a table, or altar, at the graveside, but they also take place in homes and in special memorial halls.

The ceremony is simple and usually brief, but the preparation of the food for the ceremony can take considerable time and expense. The table is set and the participants, usually descendants of the dead, bow before the altar. The ceremony is basically the same whether it is performed by a few members of a household for their ancestors, or whether it is performed by numerous officials at a national ceremony. At the large-scale ceremonies, there is often a prayer read, and then burned, and at some of the largest ceremonies there is music and sedate dancing.

The largest of all the ceremonies is the Sokchönje, the ceremony offered to Confucius himself twice a year, once in the spring and once in the autumn. The Sokchönje is offered at the site of the former national academy, currently on the grounds of Sŏnggyun'gwan University. There are similar large-scale ceremonies for the royal family, the kings, of the Chosŏn kingdom. Those are offered at the royal shrine (Chongmyo) in Seoul.

There are special buildings, memorial halls, dedicated to the memory of one or more famous scholars from that area, at which ceremonies are offered once or twice a year, and sometimes twice a month. The memorial halls are often attached to traditional Confucian academies (hyanggyo or sŏwŏn), that once were the heart of the educational system, but now are unused except for an occasional group organized over the summer or winter vacation to study Confucian classics.

Families will offer ceremonies to their ancestors in their homes and at the graveside. In the first three years after the death and funeral of an ancestor there are special ceremonies on the anniversary of the death. After the three-year period of mourning is concluded, the ancestor is considered one of a large number of ancestor who continue to receive offerings, usually at the graveside. On the anniversary date, in most cases the death date, but in some other cases the birth date or a national holiday, the descendants of that ancestor meet and commemorate the life of the deceased.

Sokchönje

The oldest unbroken series of ceremonies to Confucius is found in Korea. At the Sŏnggyun'gwan, the former National Academy and now a modern university, twice a year, once in the spring and once in the autumn (like Easter and Hannaka, the date is set on the lunar calendar, and thus it falls on a different day on each year's western calendar). In recent years, with reforms in China, the Chinese have a renewed interest in the ceremony that was forbidden during the Communist years, and many Chinese have come to Korea to re-learn the old tradition.

The ceremony is the most elaborate and colourful in the variety of ceremonies devoted to ancestors. There are two orchestras, one in the front and the 'porch' of the main hall, and the other in the back of the courtyard. There are also dancers who move slowly and sedately through the motions of two dances, one a military dance and one a civilian dance, denoting the two major divisions of government.

In the days of the last dynasty, the king himself, and his high court officials, would participate, but in modern times men, and a few women, dressed in old court robes carry out the ceremony. The offerings, unlike those at all other Confucian ceremonies, include
raw meat; it is believed that Confucius lived so long ago that raw was preferred to cooked meat. Large tables with heads of cows and pigs, and a variety of fruits, vegetables and cakes sit in front of each stand that holds the 'spirit tablet' of the deceased sages.

In addition to the spirit tablet of Confucius, there are those for his four disciples, the sixteen Chinese sages, and the eighteen Korean sages. The Korean sages have been canonized over the years beginning with two men from the Shilla period, two from the Koryŏ period, and fourteen from the most Confucian of all kingdoms, Chosŏn.

Several groups of officiators make several rounds of offerings to the illustrious sages. Wine is offered at each alter in turn. At one point a 'prayer' or congratulatory message is read; after which the paper on which it is written is burned at a point off to the side of the main hall. The burning symbolically takes the message from the physical world to the spirit world, from paper to smoke, so that it can be appreciated better in the other world.

The ceremony used to take several hours, but in recent years it has been streamlined so that the formal part of the ceremony takes about an hour. Foreign diplomats are invited and several attend every year lending an international importance to the time-honoured tradition.

Sŏnggyun'gwan

The Sŏnggyun'gwan (National Academy) was first founded in Kaesŏng in the Koryŏ period, but was relocated to Seoul when the capital was moved at the beginning of the Chosŏn period. Today the old buildings sit next to a modern university that carries on the name and the tradition. The old buildings serve as a reminder of the historic tradition and the importance of education in previous periods, and twice a year they are the site of the Sokch'ŏnjŏ the high ceremony to Confucius and his disciples.

The Sŏnggyun'gwan served two functions in traditional times: it was the place for ceremonies to the great sages, and it was a place of sophisticated scholarship. The ceremonies were held on a large scale twice a year, but lesser ceremonies were held twice a month, once on the new moon and once on the full moon. Entering through the main gate the large building across the courtyard, the munmyo, is the site of the ceremonies. The building behind it is the grand lecture hall, the Myŏngnyun-dang, where students once listened to explanations of the Chinese classics in preparation for the all-important state examinations.

The Sŏnggyun'gwan represented the apex of the educational system in traditional times. Students who did well in preparatory exams could be awarded the privilege of studying at the National Academy. The state examinations were not limited to those enrolled in the National Academy, but they did get the best training available to prepare them.

The examinations were forerunners of modern civil service examinations found in many countries of the world today. In traditional times the examinations, offered almost yearly, were the major avenue of recruitment for the civil service, the most prestigious livelihood possible in traditional times. Many of the most powerful and important leaders of the state of Chosŏn passed through the gates of the Sŏnggyun'gwan academy.

The Examination System

In traditional Korea, over ninety per cent of high office holders were selected for government positions on the basis of passing the high state examination, called the mun'gwa. In the five hundred years of the Yi-Chosŏn, an elite number of 14 654 men passed the examination; less than thirty per year.

The examination was offered on a regular basis every three years, but special ones were
offered nearly every year. Special examinations were held to mark auspicious occasions, such as the birth or marriage of a prince. Thirty-three passed in a typical examination, three in the highest level, ten in the second level, and twenty in the third level; the highest receiving special honours.

Lower on the scale of prestige was another civil service examination called the sama, which had two parts, the saengwón and the chinsa. This examination was given without exception every three years, and only every three years; and at each offering exactly two hundred candidates were selected, one hundred from each section. In the early dynasty the sama examination served as a preliminary, with over half of the candidates going on to pass the mun'gwa. In the latter half of the dynasty the sama came to function as a terminal stage, with less than half going on to the higher examination.

In addition to the civil examination, there was a military examination used to recruit military officers. There were two parts to it - a written part, and a practical part that included shooting a bow and arrows and horseback riding. At times of national emergency the examination was offered more often than at times of peace; over 150,000 passed the examination over the Choson dynasty.

There was also an examination for special skills needed to run the government. There were five test areas: medicine, accounting, geomancy/astronomy, laws, and a test for interpreters that was divided into tests for spoken Chinese, Japanese, Jurchen, and Mongolian. Those who took and passed the special skills tests were members of a few family groups who inherited the privilege from their fathers, and whose sons and grandsons could sit also. These specialists lived in the centre of Seoul and were called 'chungin', or 'central people'.

The examination system was inspired by Confucian ideology and the belief that goodness comes from education. The purpose of the examination system was to recruit good men so that there would be good government.

Hyanggyo, Provincial Schools

Each county, in the Choson period had a government-supported school called a hyanggyo, provincial school. There the local elite would teach qualified students and prepare them for the all-important state civil service examination.

The buildings at each hyanggyo were laid out in similar fashion to those of the National Academy, the Sŏnggyun'gw'an, in Seoul. Surrounded by a fence of stonework, one entered the courtyard, through a three-doored gate. Inside the gate to the left and right was a ginko tree and straight ahead was a stone pathway leading to a large central building. The central building was used for lectures on Confucian classics. To the sides of the courtyard between the gate and the lecture hall, stood smaller buildings, and behind the main hall, usually on an uphill slope, stood the shrine. The shrine held the spirit tablet dedicated to Confucius and there were eighteen other tablets of the Korean sages, nine on each side of the hall.

The hyanggyo was different from the Sŏnggyun'wan in that the hyanggyo was smaller in scale, the lecture hall was in the centre of the courtyard and the shrine was to the rear. The hyanggyo did not have spirit tablets for the four disciples of Confucius or the sixteen Chinese sages.

Many hyanggyo still exist today. They are located in the county capital in a neighbourhood named either Kyo-dong or Myŏngnyun-dong, meaning the 'school neighbourhood', or the 'neighbourhood of teaching morality'.

Sŏwôn, Private Academy
In 1542, Chu Sebong founded the first of the sowon or private academies in North Kyongsang province. He named it Paegundong Sowon after the hall where Zhu Xi studied in China, but eight years later, when Yi Hwang was the magistrate of the county, he changed the name to the Sosu Sowon by which it is known today. The king personally wrote the characters for the sign board and thus the private academy had official recognition.

After the founding of the first sowon, several more were founded and throughout the next three hundred years over 650 sowon were chartered. But only forty-seven of several hundred were given sign boards written by a king. In 1847, the powerful king's regent known as the Taew'on'gun closed and destroyed all but the forty-seven that had royal charters. The tactic was a divide and conquer approach to reduce the power of the bureaucrats who were rivals to the king in the exercise of power. In the view of the throne, the sowon had gone beyond their role as schools and had become power bases of various factions. Factionalism, struggles for power on the basis of group affiliation, had become a problem in the latter part of the dynasty, whereby one faction would gain the king's confidence and sweep the other faction's members out of office. In some cases the disputes would result in accusations of treason and the losing side would lose lives.

Sowon served the same purposes as the hyanggyo, except the former was privately funded and the latter was funded by the government. The purpose was two-fold, educational and ceremonial. The educational purpose was to train for the examination system by learning, memorizing, the Confucian classics. The ceremonial purpose was to honor the departed spirits of prominent scholars from the area. Each sowon was dedicated to one or more Confucian luminaries. For example, the first sowon was dedicated to An Hyang, the late Koryo figure who was credited with bringing Zhu Xi's neo-Confucian commentaries into Korea. Later, Yi Hwang, who had served in that area as a magistrate and later became one of the most important scholars in the Korean Confucian tradition, was also added to the altar and received offerings on the ceremonial days at the sowon.

In recent years, descendants of those men who had been honoured in sowon that were destroyed in 1864, have begun to reconstruct many of the sowon on the site of the original buildings. Therefore, today there exists not only the sanctioned forty-seven sowon, but also many of the unofficial sowon that have been restored.

Part C. Some eminent Confucian Scholars

Yi I (1536-1584)

One of the greatest Confucian scholars in Korean history, Yi I is better known by his pen name, Yulgok. Born in Kangnuing at his mother's lineage home, he was taught the basics of Confucian ideology by his mother, Shin Saimdang. His mother is honoured as the classic example of motherhood in Korea. Yi based the sama examination when he was only thirteen years old. Before he could take the mun'gwa examination, his mother died when he was sixteen, whereupon he retired to a Buddhist temple to mourn and to study Buddhism. He returned to his home a year later and resumed his study of neo-Confucianism.

In 1558, he paid a visit to Yi Hwang, who with Yi I in later years would be regarded as the two greatest interpreters of Confucianism in Korean history. Yi I was a young man, Yi Hwang, at age fifty-seven, was already established as a major figure of his time. The senior scholar was impressed with the junior, and the junior was inspired by the senior. Later that same year Yi I took first place in the mun'gwa examination. In fact, he had taken first place at all nine exams at the preparatory, regional, and national levels.
Yi served in several government offices including posts in various ministries, in provincial magistracies, and in central government as a censor and as an assistant in the office of the Chief State Council. When he served in the Board of War, he called for raising a hundred thousand additional soldiers. In a few years after Yi’s death, many wished they had listened to his prophetic advice when the devastation of the Japanese was unleashed on the Korean peninsula.

As an exemplary scholar/official of the Chosŏn period, Yi made greater contributions in the field of scholarship than he did in officialdom. His interpretations of neo-Confucian philosophy differed from Yi Hwang’s on which was primary, i (principle) or ki (material force). Their disciples carried on the debate for hundreds of years thereafter.

As a member of the Tŏksu Yi lineage, he was a distant cousin to Yi Sun-shin, the admiral who fought the Japanese during the invasion of 1592. Yi I wrote numerous essays and other writings that appear in his collected writings (munjip) and other books. In 1682, he was canonized as one of the eighteen Korean sages enshrined in the Mumnyo of the National Academy.

Yi Hwang (1501-1570)

Known by his pen name T’oegye, Yi Hwang was the most influential scholar in the Korean neo-Confucian tradition. A member of the Chinbo Yi lineage, he was born near Andong in North Kyŏngsang province. Since his father died when he was only seven months old, he was raised by his mother and an uncle.

Yi passed the sama in 1528, and was admitted to the National Academy in 1533. In 1534, he passed the munkwa and began his career in public service. However, he preferred the times when he was out of office, when he could return to his home in Andong and pursue his studies.

When he served as the magistrate of P’unggi, near Andong, he was instrumental in obtaining a royal signboard for the first sowon in Korea, the Sosu Sŏwŏn. A few years later he obtained a royal signboard for his own academy, the Tosan Sŏwŏn, on the north side of Andong. Today, as a symbol of the importance of both Yi and his Sŏwŏn, they are featured on the front and back of the 1 000 won note.

Yi developed a large class of disciples and became known throughout the country for his interpretations of neo-Confucian doctrine. In 1558, a much younger scholar, Yi I, visited him and their letters, as well as letters exchanged with other scholars of the time became an important forum in the development of neo-Confucian ideology of the time. Yi I became the founder of one school, and Yi Hwang became the founder of the other school, both of which retained disciples throughout the dynasty. Neither master intended for the schools to develop into the rival factions that came to disrupt the tranquility of the recruitment process for the all-powerful government service positions.

In 1610, Yi Hwang was inducted into the Hall of Worthies (Munmyo), the shrine of the National Academy. He left numerous written works on Confucian thought and ritual. Unquestionably the most important scholar of traditional times, his influence spread to Japan, and today, there are institutes for the study of ‘T’oegye’s philosophy’ across Korea and in foreign countries.

Sŏl Ch’ong (late Shilla)

Born to the famous Buddhist monk, Wŏnhyo, and princess Yosŏk, Sŏl Ch’ong was a member of the Shilla aristocracy. He became interested in Confucianism early in his life
and devoted his efforts to bring Confucian doctrine to Korea.

He helped to codify a system of writing whereby Chinese characters were used in a creative way to express Korean sounds and grammatical particles. That method of writing came to be known as *idu*, literally meaning clerical writing. In many texts Sŏl Ch’ong is credited with inventing *idu*, but clearly that style of writing was extant before Sŏl Ch’ong’s time, but nonetheless Sŏl Ch’ong role as the one who standardized the system cannot be over emphasized.

Using *idu* Sŏl Ch’ong helped bring Confucianism into Korea and spread its doctrine to all who would study. For his efforts, he is known as the father of Korean Confucianism. Indeed, he was the first sage inducted into the Confucian Hall of Worthies at the National Academy.

Ch’oe Ch’iwŏn (857-?)

A late Silla scholar, Ch’oe Ch’i-wŏn went to T’ang China at an early age and passed the Chinese civil service exam at age 17. After serving in the Tang court for a time, he returned to Korea in 884. He was only asked to serve in minor positions in the Shilla court, apparently because he was either over qualified or too Chinese. He thus left government service and retired to Haein Temple northwest of the Shilla capital of Kyŏngju.

In retirement he actively taught a growing crew of disciples who became the well-trained backbone of government service in the new Koryŏ court. It is believed that Wang Kŏn, the founder of the Koryo dynasty, corresponed with Ch’oe; but by that time he was aged and refused to serve the court himself, but many of those he trained brought Confucian oriented ideas into the new administration.

Ch’oe was the second man enshrined in the Confucian Hall of Worthies at the National Academy. He is also considered the founder of the Kyŏngju Ch’oe lineage with nearly innumerable descendants, almost everyone named Ch’oe, in Korea today. His pen name was Haeun, the famous beach on the edge of Pusan was said to be his favourite place and was named after him, Haeundae.

An Hyang (1243-1306)

Credited with bringing Neo-Confucianism into Korea, An Hyang travelled to the Yuan dynasty and brought back texts of the Song dynasty scholar Zhu Xi and a portrait of the master as well. Twelve years after his death, in 1318, the king ordered a portrait of An to be painted by Yuan dynasty artist, in commemoration of the great scholars accomplishments. That portrait is still preserved in the academy dedicated to him, the Sosu Sŏwŏn near Andong in northern Kyŏngsang province. And is one of the oldest paintings in Korea.

The oldest *sŏwŏn* in Korea, the Sosu Sŏwŏn, is dedicated to hosting ceremonies to An Hyang. It was founded in 1542 by Chu Sebung.

An Hyang is also known as An Yu. His name was changed during the reign of King Munjong (1451-1452) because Hyang was the personal given name of the king, and thus, out of respect, had to be avoided by others. An is considered the founder of the Sunhŭng An lineage, which includes most of those in Korea today who have the surname An. He was the third man inducted into the Confucian Hall of Worthies at the National Academy.

Neo-Confucianism and Chosŏn Society

When Neo-Confucianism was introduced to Korea during the last century of the Koryŏ period, it was initially embraced by Korean scholars less for its scholarly and philosophical contents than for its practical propensities. Neo-Confucianism, it was believed, could be state and society which had fallen into disorder and decay because of the Buddhists' inability to rule the country. In contrast to Buddhism, Neo-Confucianism was perceived as "concrete learning" (shirhak) relevant to the problems of the time. Confucian learning, then, was adopted by the founders of the Chosŏn dynasty as an effective ideology of change.

Above all, Neo-Confucianism opened to the Koreans a whole new world of social organization by providing access to the Chinese Classics—a vast body of literature that described the ideal world as created by the sage-rulers of Chinese antiquity. In particular, books like the Liji (Book of Rites), the Yili (Book of Etiquette and Ceremonies), and the Zhou-ti (Rites of Zhou) were regarded as handbooks containing blueprints for a program of social change and rejuvenation. This literature had, of course, been known in Korea before, but it was Zhu Xi's (1130-1200) commentaries that unlocked its true meaning and made it useful for socio-political reform.

Besides the literature of Chinese antiquity, Zhu Xi's Chu Tzu chia-li (The House Rules of Master Chu) provided the Korean scholar-officials with the ritual details they needed for their reform program. This slim booklet outlined the four major rituals (sarye); capping, wedding, funeral, and ancestral service. These rites formed the foundation of ritual behavior. In the Confucian view, rites were not merely guides to correct behavior; rather, they had a crucial impact on the inner disposition of the one who performed them. They, moreover, were effective beyond the individual performer and created a harmonious relationship among all the participants. In short, rituals were regarded as fundamental instruments for introducing change and reform into the decayed society of Koryŏ.

At the beginning of the Chosŏn dynasty, the eminent scholar-official, Kwŏn Kŭn (1352-1409), was ordered to establish the details of the four rites. He relied heavily on Zhu Xi's Jiálì. The perhaps most important ritual of change was ancestor worship. Like no other ritual action, Confucian-style ancestor worship accentuated the agnatic structure of a descent group and focused it on a common ancestor. A place in this ritual hierarchy determined an individual's rights and duties within the descent group. By building agnatically related worship- ping groups, ancestor worship, thus, became a most effective instrument for...
introducing into Korean society a patrilineal paradigm. Koryŏsociety had rested on a bilateral organization, and a person's descent was consequently traced through paternal as well as maternal links. The new Confucian scheme narrowed such descent reckoning and constructed clearly defined patrilineal lineages. Ancestor worship, practiced in front of the ancestral shrine (sadang), was the most useful mechanism for creating an agnatic consciousness and translating it into socially meaningful action.

Subsidiary to ancestor worship were the changes on the mourning chart (obok). The assignment of mourning grades to the members of a kin group indicated their respective importance vis-à-vis the mourner. By shortening the mourning periods for matrilateral kin, so revered during Koryŏ, emphasis shifted to the mourner's agnatic relatives. The longest mourning period of three years was observed by a son for his parents. The length of mourning for other kin depended on their genealogical distance from the mourner and varied in time between one year and three months.

Ritual status determined a person's share of inheritance. In Koryŏ, sons and daughters had received equal portions of the patrimony. With the Confucian emphasis on the patriline, the sons became the principal heirs, and the daughters, who married out, were gradually disinherited. Eventually, however, the introduction of primo-geniture meant that even the sons' shares were graded, with the largest share given to the eldest son. This shift was rationalized with the argument that his genealogical standing made the eldest son alone acceptable as his line's main heir. As the representative of his generation he took charge of the ancestral services and therefore needed more economic support. His younger brothers, thus, had to be satisfied with smaller portions, and toward the end of the dynasty it was not uncommon that they were bypassed altogether.

The patrilineal restructuring of Korean society had especially grave consequences for women. In Koryŏ, women maintained a certain degree of independence and freedom through the fact that they received the same share of the patrimonial inheritance as their brothers. The sibling bond was, therefore, often stronger than the marital bond, as women did not depend on their husbands for economic sustenance. For men, marriage to an endowed woman was frequently advantageous to their careers, and husbands thus often took up residence in their wives' house. Such uxorilocal arrangements resulted in children growing up surrounded by maternal relatives to whom they felt special affection.

In the eyes of the Confucian reformers such a family situation was "unnatural" and needed their particular scrutiny. Assigning women their proper place in the patrilineal structure, they realized, was instrumental to their reform program. It was for them a particularly disturbing fact that Koryŏmen could have several wives who were not ranked. One of the first measures to disentangle such complex family relationships, legalized in 1413, therefore was the ranking of wives into primary wife (ch'ŏ) and secondary or minor wives (ch'ŏp). Naturally, this piece of legislation was not popular and caused tension and even strife among wives and their respective sons. In a patrilineal structure, however, only one wife--the primary wife--could become the mother of her husband's rightful heirs. The additional wives and their respective offspring her husband may have had had to be clearly subordinated to her and her sons. The law of 1413, thus, was one of the most momentous pieces of reform legislation as it introduced inequality and conflict into the domestic sphere.

The differentiation of wives was instrumental not only for creating clear lineage features, but also for clarifying social status. The offspring of the primary wife alone were recognized as full members of their father's descent group and thus could claim upper class title. Status reproduction continued to be determined by bilateral considerations. Consequently, only women who themselves were born into elite families could henceforth become primary wives. Secondary-wife status, therefore, carried with it the odium of lower class pedigree, and commoner and slave women entered an elite household as secondary wives. Their sons, called secondary sons (ch'ŏpcha), did not become full members of their
father's descent group. They were excluded from ritual heirship (except at the beginning of the dynasty), were disadvantaged as heirs, and were equally barred from sitting for the civil service examinations (munkkwa). They consequently led an unsatisfactory half-way existence throughout the dynasty.

In the course of time, primary wives became gradually more integrated into their husbands' descent group. Confucian ritual excluded a daughter from functions in her natal ancestral shrine as she was married out into a different descent group and thus was no longer useful to her natal family. Although until roughly the middle of the dynasty daughters continued to receive some parts of their families' patrimony, it is clear that their natal families were increasingly reluctant to endow out-marrying daughters. Female shares of the patrimony consequently grew smaller, and eventually disappeared entirely.

While the Confucian-style ancestral cult became the mainstay of the patrilineal descent group, the wedding rite defied Confucianization. Although absorbing some ritual elements of the Chia-li, the sequence and, even more importantly, the locus of the wedding ceremony preserved native tradition. Contrary to Confucian etiquette, the bridegroom met his bride in the bride's natal home, and the nuptial rite was performed there. The tenacity of this Koryo custom was upheld by the importance which continued to be placed on the wife's status in determining her children's social status. The wedding rite was a clear manifestation of status towards the outside world, and only a bride endowed with a demonstrated elite ancestral background could enter her groom's house as a primary wife.

Confucianism emphasized social virtues, and during the Choson dynasty virtuous behaviour was highly praised. Books like the Samgang haengsilto (Illustrated Guide to the Three Relationships) extolled in text and pictures the virtues of loyalty towards the ruler, filial piety, and womanly chastity. Only a son who exhibited filial devotion towards his parents could be trusted as a loyal subject, and a widowed woman who did not choose to remarry and continued to serve her parents-in-law was publicly acclaimed for her wifely virtue. It was the women's task as mothers to inculcate such virtues into their sons and to educate them to serve their ruler well.

The Confucian transformation affected the elite layer of society most profoundly. By narrowing the criteria of descent, group membership became more exclusive, and only proper genealogical credentials opened the way to political office. Such calculations excluded secondary sons from political participation. The extraordinarily close link between domestic sphere and public realm determined much of the political tenor of the period. Political power was wielded by a relatively small group of elite lineages throughout the dynasty. Descent and high social standing were carefully recorded in detailed genealogical records (chokpo) which proliferated from the seventeenth century. Skillfully tied marital relations were an additional method for maintaining and strengthening socio-political eminence.

The impact of Neo-Confucianism on Korean society, thus, was deep and lasting. The agnatic paradigm as outlined in the Chinese classical literature and reactivated by Zhu Xi transformed Korean society from a bilateral into a patrilineal society—a unique feat of social engineering that has no parallel elsewhere in East Asia. This transformation was not accomplished overnight. Rather, it took roughly two centuries of indoctrination and legislation before the patrilineal structure reached with the emergence of ritual and economic primogeniture its fullest elaboration.

Constitution of the Republic of Korea

The Constitution of the Republic of Korea was promulgated on 12 July 1948 and today is a document of about 9 000 words, containing a Preamble, 10 Chapters with a total of 130 Articles, and 6 Articles of Supplementary Provisions. The Constitution has been amended 8 times, with the latest version being put into force as of 25 February 1988. The President or a majority of the National Assembly members may initiate an amendment to the Constitution, but in turn this has to be submitted to a national referendum (Articles 128-130). The Constitution is wide-ranging on all aspects of the basic rights, dignities and freedoms of the Korean people and in setting limits on the exercise of government powers, such as freedom from arbitrary arrest, and equality before the law regardless of sex, religion and social status. However, while it gives every Korean an equal right to personal liberty and the pursuit of happiness, it also imposes responsibilities, such as the duty to defend the nation; fulfillment of the obligation of military service; to pay taxes; and to be denied some of the basic rights in times of national emergencies.

The provisions of the Constitution of the Republic of Korea are as follows:

Preamble

We, the people of Korea, proud of a resplendent history and traditions dating from time immemorial, upholding the cause of the Provisional Republic of Korea Government born of the March First Independence Movement of 1919 and the democratic ideals of the April Nineteenth Uprising of 1960 against injustice, having assumed the mission of democratic reform and unification of our homeland and having determined to consolidate national unity with justice, humanitarianism and brotherly love, and

To destroy all social vices and injustice, and

To afford equal opportunities to every person and provide for the fullest development of individual capabilities in all fields, including political, economic, civic and cultural life by further strengthening the basic free and democratic order conducive to private initiative and public harmony, and

To help each person discharge those duties and responsibilities concomitant to freedoms and rights, and

To elevate the quality of life for all citizens and contribute to lasting world peace and the common prosperity of mankind and thereby to ensure security, liberty and happiness of ourselves and our posterity forever,

Do hereby amend, through national referendum following a resolution by the National Assembly, the Constitution, ordained and established on the Twelfth Day of July Anno Domini Nineteen hundred and forty-eight, and amended eight times subsequently.

29 October 1987

Chapter 1 - General Provisions

Article 1 (1) The Republic of Korea shall be a democratic republic.

(2) The sovereignty of the Republic of Korea shall reside in the people, and all state authority shall emanate from the people.
Article 2 (1) Nationality in the Republic of Korea shall be prescribed by law.

(2) It shall be the duty of the State to protect citizens residing abroad as prescribed by law.

Article 3 The territory of the Republic of Korea shall consist of the Korean peninsula and its adjacent islands.

Article 4 The Republic of Korea shall seek unification and shall formulate and carry out a policy of peaceful unification based on the principle of freedom and democracy.

Article 5 (1) The Republic of Korea shall endeavour to maintain international peace and shall renounce all aggressive wars.

(2) The Armed Forces shall be charged with the sacred mission of national security and the defence of the land and their political neutrality shall be maintained.

Article 6 (1) Treaties duly concluded and promulgated in accordance with the Constitution and the generally recognized rules of international law shall have the same effect as the domestic laws of the Republic of Korea.

(2) The status of aliens shall be guaranteed as prescribed by international law and treaties.

Article 7 (1) All public officials shall be servants of the entire people and shall be responsible to the people.

(2) The status and political impartiality of public officials shall be guaranteed as prescribed by law.

Article 8 (1) The establishment of political parties shall be free and the plural party system shall be guaranteed.

(2) Political parties shall be democratic in their objectives, organization and activities, and shall have the necessary organizational arrangements for the people to participate in the formation of the political will.

(3) Political parties shall enjoy the protection of the State and may be provided with operational funds by the State as prescribed by law.

(4) If the purposes or activities of a political party are contrary to the fundamental democratic order, the Government may bring action against it in the Constitution Court for its dissolution, and the political party shall be dissolved in accordance with the decision of the Constitution Court.

Article 9 The State shall strive to sustain and develop the cultural heritage and to enhance national culture.

Chapter II - Rights and duties of citizens

Article 10 All citizens shall be assured of human worth and dignity and have the right to pursue happiness. It shall be the duty of the State to confirm and guarantee the fundamental and inviolable human rights of individuals.

Article 11 (1) All citizens shall be equal before the law, and there shall be no discrimination in political, economic, social or cultural life on account of sex, religion or social status.
(2) No privileged caste shall be recognized or ever established in any form.

(3) The awarding of decorations or distinctions of honour in any form shall be effective only for recipients, and no privileges shall ensue therefrom.

**Article 12**

(1) All citizens shall enjoy personal liberty. No person shall be arrested, detained, searched, seized or interrogated except as provided by law. No person shall be punished, placed under preventive restrictions or subject to involuntary labour except as provided by law and through lawful procedures.

(2) No citizen shall be tortured or be compelled to testify against himself in criminal cases.

(3) Warrants issued by a judge through due procedures upon the request of a prosecutor shall be presented in case of arrest, detention, seizure or search: provided that in a case where a criminal suspect is apprehended flagrante delicto, or where there is danger that a person suspected of committing a crime punishable by imprisonment of three years or more may escape or destroy evidence, investigative authorities may request an *ex post facto* warrant.

(4) Any person who is arrested or detained shall have the right to prompt assistance of counsel. When a criminal defendant is unable to secure counsel by his own efforts, the State shall assign counsel for the defendant as prescribed by law.

(5) No person shall be arrested or detained without being informed of the reason therefor and of his right to assistance of counsel. The family, etc., as designated by law, of a person arrested or detained shall be notified without delay of the reason for and the time and place of the arrest or detention.

(6) Any person who is arrested or detained shall have the right to request the court to review the legality of the arrest or detention.

(7) In a case where a confession is deemed to have been made against a defendant's will due to torture, violence, intimidation, unduly prolonged arrest, deceit, etc., or in a case where a confession is the only evidence against a defendant in a formal trial, such a confession shall not be admitted as evidence of guilt nor shall a defendant be punished by reason of such a confession.

**Article 13**

(1) No citizen shall be prosecuted for an act which does not constitute a crime under the law in force at the time it was committed, nor shall he be placed in double jeopardy.

(2) No restrictions shall be imposed upon the political rights of any citizen, nor shall any person be deprived of property rights by means of retroactive legislation.

(3) No citizen shall suffer unfavourable treatment on account of an act not of his own doing but committed by a relative.

**Article 14** All citizens shall enjoy freedom of residence and the right to move at will.

**Article 15** All citizens shall enjoy freedom of occupation.

**Article 16** All citizens shall be free from intrusion into their place of residence. In case of search or seizure in a residence, a warrant issued by a judge upon request of a prosecutor shall be presented.

**Article 17** The privacy of no citizen shall be infringed.
Article 18 The privacy of correspondence of no citizen shall be infringed.

Article 19 All citizens shall enjoy freedom of conscience.

Article 20 (1) All citizens shall enjoy freedom of religion.

(2) No state religion shall be recognized, and religion and politics shall be separated.

Article 21 (1) All citizens shall enjoy freedom of speech and the press, and freedom of assembly and association.

(2) Licensing or censorship of speech and the press, and licensing of assembly and association shall not be recognized.

(3) The standards of news-service and broadcast facilities and matters necessary to ensure the functions of newspapers shall be determined by law.

(4) Neither speech nor the press shall violate the honour or rights of other persons nor undermine public morals or social ethics. Should speech or the press violate the honour or rights of other persons, claims may be made for the damage resulting therefrom.

Article 22 (1) All citizens shall enjoy freedom of learning and the arts.

(2) The rights of authors, inventors, scientists, engineers and artists shall be protected by law.

Article 23 (1) The right of property of all citizens shall be guaranteed. The contents and limitations thereof shall be determined by law.

(2) The exercise of property rights shall conform to the public welfare.

(3) Expropriation, use or restriction of private property from public necessity and compensation therefor shall be governed by law. However, in such a case, just compensation shall be paid.

Article 24 All citizens shall have the right to vote as prescribed by law.

Article 25 All citizens shall have the right to hold public office as prescribed by law.

Article 26 (1) All citizens shall have the right to petition in writing to any governmental agency as prescribed by law.

(2) The State shall be obligated to examine all such petitions.

Article 27 (1) All citizens shall have the right to be tried in conformity with the law by judges qualified under the Constitution and the law.

(2) Citizens who are not on active military service or employees of the military forces shall not be tried by a court martial within the territory of the Republic of Korea except in case of crimes prescribed by law involving important classified military information, sentinels, sentry posts, the supply of harmful food and beverages, prisoners of war and military articles and facilities and in the case of the proclamation of extraordinary martial law.

(3) All citizens shall have the right to a speedy trial. The accused shall have the right to a public trial without delay in the absence of justifiable reasons to the contrary.
(4) The accused shall be presumed innocent until a judgment of guilt has been pronounced.

(5) A victim of a crime shall be entitled to make a statement during the proceedings of the trial of the case involved as prescribed by law.

**Article 28** In a case where a criminal suspect or an accused person who has been placed under detention is not indicted as provided by law or is acquitted by a court, he shall be entitled to claim just compensation from the State as prescribed by law.

**Article 29** (1) In case a person has sustained damages by an unlawful act committed by a public official in the course of official duties, he may claim just compensation from the State or public organization as prescribed by law. In this case, the public official concerned shall not be immune from liabilities.

(2) In case a person on active military service or an employee of the military forces, a police official or others as prescribed by law sustains damages in connection with the performance of official duties such as combat action, drill and so forth, he shall not be entitled to a claim against the State or public organization on the grounds of unlawful acts committed by public officials in the course of official duties, but shall be entitled only to compensation as prescribed by law.

**Article 30** Citizens who have suffered bodily injury or death due to criminal acts of others may receive aid from the State as prescribed by law.

**Article 31** (1) All citizens shall have an equal right to receive an education corresponding to their abilities.

(2) All citizens who have children to support shall be responsible at least for their elementary education and other education as provided by law.

(3) Compulsory education shall be free.

(4) Independence, professionalism and political impartiality of education and the autonomy of institutions of higher learning shall be guaranteed as prescribed by law.

(5) The State shall promote lifelong education.

(6) Fundamental matters pertaining to the educational system, including in-school and lifelong education, administration, finance, and the status of teachers shall be determined by law.

**Article 32** (1) All citizens shall have the right to work. The State shall endeavour to promote the employment of workers and to guarantee optimum wages through social and economic means and shall enforce a minimum wage system as prescribed by law.

(2) All citizens shall have the duty to work. The State shall prescribe by law the extent and conditions of the duty to work in conformity with democratic principles.

(3) Standards of working conditions shall be determined by law in such a way as to guarantee human dignity.

(4) Special protection shall be accorded to working women and they shall not be subjected to unjust discrimination in terms of employment, wages and working conditions.

(5) Special protection shall be accorded to working children.
(6) The opportunity to work shall be accorded preferentially, as prescribed by law, to those who have given distinguished service to the State, wounded veterans and policemen, and members of the bereaved families of military servicemen and policemen killed in action.

**Article 33** (1) To enhance working conditions, workers shall have the right to independent association, collective bargaining and collective action.

(2) Only those public officials who are designated by law shall have the right to association, collective bargaining and collective action.

(3) The right to collective action of workers employed by important defence industries may be either restricted or denied as prescribed by law.

**Article 34** (1) All citizens shall be entitled to a life worthy of human beings.

(2) The State shall have the duty to endeavour to promote social security and welfare.

(3) The State shall endeavour to promote the welfare and rights of women.

(4) The State shall have the duty to implement policies for enhancing the welfare of senior citizens and the young.

(5) Citizens who are incapable of earning a livelihood due to a physical disability, disease, old age or other reasons shall be protected by the State as prescribed by law.

(6) The State shall endeavour to prevent disasters and to protect citizens from harm therefrom.

**Article 35** (1) All citizens shall have the right to a healthy and pleasant environment. The State and all citizens shall endeavour to protect the environment.

(2) The substance of the environmental right shall be determined by law.

(3) The State shall endeavour to ensure comfortable housing for all citizens through housing development policies and the like.

**Article 36** (1) Marriage and family life shall be entered into and sustained on the basis of individual dignity and equality of the sexes, and the State shall do everything in its power to achieve that goal.

(2) The State shall endeavour to protect mothers.

(3) The health of all citizens shall be protected by the State.

**Article 37** (1) Freedoms and rights of citizens shall not be neglected on the grounds that they are not enumerated in the Constitution.

(2) The freedoms and rights of citizens may be restricted by law only when necessary for national security, the maintenance of law and order or for public welfare. Even when such restriction is imposed no essential aspect of the freedom or right shall be violated.

**Article 38** All citizens shall have the duty to pay taxes as prescribed by law.

**Article 39** (1) All citizens shall have the duty of national defence as prescribed by law.
(2) No citizen shall be treated unfavourably on account of the fulfillment of his obligation of military service.

Chapter III - The National Assembly

Article 40 The legislative power shall be vested in the National Assembly.

Article 41 (1) The National Assembly shall be composed of members elected by universal, equal, direct and secret ballot by the citizens.

(2) The number of members of the National Assembly shall be determined by law, but the number shall not be less than 200.

(3) The constituencies of members of the National Assembly, proportional representation and other matters pertaining to National Assembly elections shall be determined by law.

Article 42 The term of office of member of the National Assembly shall be four years.

Article 43 Members of the National Assembly shall not concurrently hold any other office prescribed by law.

Article 44 (1) During the sessions of the National Assembly, no member of the National Assembly shall be arrested or detained without the consent of the National Assembly except in case of flagrante delicto.

(2) In case of apprehension or detention of a member of the National Assembly prior to the opening of a session, such member shall be released during the session upon the request of the National Assembly, except in case of flagrante delicto.

Article 45 No member of the National Assembly shall be held responsible outside the National Assembly for opinions officially expressed or votes cast in the Assembly.

Article 46 (1) Members of the National Assembly shall have the duty to maintain high standards of integrity.

(2) Members of the National Assembly shall give preference to national interests and shall perform their duties in accordance with conscience.

(3) Members of the National Assembly shall not acquire, through abuse of their positions, rights and interests in property or positions, or assist other persons to acquire the same by means of contracts with or dispositions by the State, public organizations or industries.

Article 47 (1) A regular session of the National Assembly shall be convened once every year as prescribed by law, and extraordinary sessions of the National Assembly shall be convened upon the request of the President or one fourth or more of the total members.

(2) The period of regular sessions shall not exceed a hundred days and of extraordinary sessions thirty days.

(3) If the President requests the convening of an extraordinary session, the period of the session and the reasons for the request shall be clearly specified.

Article 48 The National Assembly shall elect one Speaker and two Vice Speakers.

Article 49 Except as otherwise provided for in the Constitution or in law, the attendance of a majority of the total members, and the concurrent vote of a majority of the members
present, shall be necessary for decisions of the National Assembly. In case of a tie vote, the matter shall be regarded as rejected.

**Article 50** (1) Sessions of the National Assembly shall be open to the public: except that, when it is decided so by a majority of the members present, or when the Speaker deems it necessary to do so for the sake of national security, they may be closed to the public.

(2) The public disclosure of the proceedings of sessions which were not open to the public shall be determined by law.

**Article 51** Bills and other matters submitted to the National Assembly for deliberation shall not be abandoned on the ground that they were not acted upon during the session in which they were introduced, except in a case where the term of the members of the National Assembly has expired.

**Article 52** Bills may be introduced by members of the National Assembly or by the Executive.

**Article 53** (1) Each bill passed by the National Assembly shall be sent to the Executive, and the President shall promulgate it within fifteen days.

(2) In case of objection to the bill, the President may, within the period referred to in Paragraph (1), return it to the National Assembly with written explanation of his objection, and request it be reconsidered. The President may do the same during adjournment of the National Assembly.

(3) The President shall not request the National Assembly to reconsider the bill in part, or with proposed amendments.

(4) In case there is a request for reconsideration of a bill, the National Assembly shall reconsider it, and if the National Assembly re-passes the bill in the original form with the attendance of more than one half of the total members, and with a concurrent vote of two-thirds or more of the members present, it shall become law.

(5) If the President does not promulgate the bill, or does not request the National Assembly to reconsider it within the period referred to in Paragraph (1), it shall become law.

(6) The President shall promulgate without delay the law as finalized under Paragraphs (4) and (5). If the President does not promulgate a law within five days after it has become law under Paragraph (5), or after it has been returned to the Executive under Paragraph (4), the Speaker shall promulgate it.

(7) Except as provided otherwise, a law shall take effect twenty days after the date of promulgation.

**Article 54** (1) The National Assembly shall deliberate and decide upon the national budget bill.

(2) The Executive shall formulate the budget bill for each fiscal year and submit it to the National Assembly within ninety days before the beginning of a fiscal year. The National Assembly shall decide upon it within thirty days before the beginning of the fiscal year.

(3) If the budget bill is not passed by the beginning of the fiscal year, the Executive may, in conformity with the budget of the previous fiscal year, disburse funds for the following purposes until the budget bill is passed by the National Assembly,
(i) The maintenance and operation of agencies and facilities established by the Constitution or law.

(ii) Execution of the obligatory expenditures as prescribed by law; and

(iii) Continuation of projects previously approved in the budget.

**Article 55** (1) In a case where it is necessary to make continuing disbursements for a period longer than one fiscal year, the Executive shall obtain the approval of the National Assembly for a specified period of time.

(2) A reserve fund shall be approved by the National Assembly in total. The disbursement of the reserve fund shall be approved during the next session of the National Assembly.

**Article 56** When it is necessary to amend the budget, the Executive may formulate a supplementary revised budget bill and submit it to the National Assembly.

**Article 57** The National Assembly shall, without the consent of the Executive, neither increase the sum of any item of expenditure nor create any new items of expenditure in the budget submitted by the Executive.

**Article 58** When the Executive plans to issue national bonds or to conclude contracts which may incur financial obligations on the State outside the budget, it shall have the prior concurrence of the National Assembly.

**Article 59** Types and rates of taxes shall be determined by law.

**Article 60** (1) The National Assembly shall have the right to consent to the conclusion and ratification of treaties pertaining to mutual assistance or mutual security; treaties concerning important international organizations; treaties of friendship, trade and navigation; treaties pertaining to any restriction in sovereignty; peace treaties, treaties which will burden the State or people with an important financial obligation; or treaties related to legislative matters.

(2) The National Assembly shall also have the right to consent to the declaration of war, the dispatch of armed forces to foreign States, or the stationing of alien forces in the territory of the Republic of Korea.

**Article 61** (1) The National Assembly may inspect affairs of state or investigate specific matters of State affairs, and may demand the production of documents directly related thereto, the appearance of a witness in person and the furnishing of testimony or Statements of opinions.

(2) The procedures and other necessary matters concerning the inspection and investigation of State administration shall be determined by law.

**Article 62** (1) The Prime Minister, members of the State Council or government delegates may attend meetings of the National Assembly or its committees and report on the State administration or deliver opinions and answer questions.

(2) When requested by the National Assembly or its committees, the Prime Minister, members of the State Council or government delegates shall attend any meeting of the National Assembly and answer questions. If the Prime Minister or State Council members are requested to attend, the Prime Minister or State Council members may have State Council members or government delegates attend any meeting of the National Assembly and answer questions.
Article 63 (1) The National Assembly may pass a recommendation for the removal of the Prime Minister or a State Council member from office.

(2) A recommendation for removal as referred to in Paragraph (1) may be introduced by one third or more of the total members of the National Assembly, and shall be passed with the concurrent vote of a majority of the total members of the National Assembly.

Article 64 (1) The National Assembly may establish the rules of its proceedings and internal regulations, provided that they are not in conflict with the law.

(2) The National Assembly may review the qualifications of its members and may take disciplinary actions against its members.

(3) The concurrent vote of two thirds or more of the total members of the National Assembly shall be required for the expulsion of any member.

ff) No action shall be brought to court with regard to decisions taken under Paragraphs (2) and (3).

Article 65 (1) In case the President, the Prime Minister, members of the State Council-heads of Executive ministries, judges of the Constitution Court, judges, members of the Central Election Management Committee, members of the Board of Audit and Inspection, and other public officials designated by law have violated the Constitution or other laws in the performance of official duties, the National Assembly may pass motions for their impeachment.

(2) A motion for impeachment prescribed in Paragraph (1) may be proposed by one third or more of the total members of the National Assembly, and shall require a concurrent vote of a majority of the total members of the National Assembly for passage: except that, a motion for the impeachment of the President shall be proposed by a majority of the total members of the National Assembly and approved by two-thirds or more of the total members of the National Assembly.

(3) Any person against whom a motion for impeachment has been passed shall be suspended from exercising his power until the impeachment has been adjudicated.

(4) A decision on impeachment shall not extend further than removal from public office. However, it shall not exempt the person impeached from civil or criminal liability.

Chapter IV - The Executive

Part 1. The President

Article 66 (1) The President shall be the Head of State and represent the State vis-à-vis foreign states.

(2) The President shall have the responsibility and duty to safeguard the independence, territorial integrity and continuity of the State and the Constitution.

(3) The President shall have the duty to pursue sincerely the peaceful unification of the homeland.

(4) Executive power shall be vested in the Executive Branch headed by the President.

Article 67 (1) The President shall be elected by universal, equal, direct and secret ballot
by the people.

(2) In case two or more persons receive the same largest number of votes in the election as referred to in Paragraph (1), the person who receives the largest number of votes in an open session of the National Assembly attended by a majority of the total members of the National Assembly shall be elected.

(3) If and when there is only one presidential candidate, he shall not be elected President unless he receives at least one third of the total eligible votes.

(4) Citizens who are eligible for election to the National Assembly, and who have reached the age of forty years or more on the date of the presidential election, shall be eligible to be elected to the presidency.

(5) Matters pertaining to presidential elections shall be determined by law.

**Article 68** (1) The successor to the incumbent President shall be elected seventy to thirty days before his term expires.

(2) In case a vacancy occurs in the office of the President or the President elect dies, or is disqualified by a court ruling or for any other reason, a successor shall be elected within sixty days.

**Article 69** The President, at the time of his inauguration, shall take the following oath: "I do solemnly swear before the people that I will faithfully execute the duties of the President by observing the Constitution, defending the State, pursuing the peaceful unification of the home-land, promoting the freedom and welfare of the people and endeavouring to develop national culture."

**Article 70** The term of office of the President shall be five years, and the President shall not be re-elected.

**Article 71** If the office of the Presidency is vacant or the President is unable to perform his duties for any reason, the Prime Minister or the members of the State Council in the order of priority as determined by law shall act for him.

**Article 72** The President may submit important policies relating to diplomacy, national defence, unification and other matters relating to the national destiny to a national referendum if he deems it necessary.

**Article 73** The President shall conclude and ratify treaties; accredit, receive or dispatch diplomatic envoys; and declare war and conclude peace.

**Article 74** (1) The President shall be Commander-in-Chief of the Armed Forces as prescribed by the Constitution and law.

(2) The organization and formation of the Armed Forces shall be determined by law.

**Article 75** The President may issue presidential decrees concerning matters delegated to him by law with the scope specifically defined and also matters necessary to enforce laws.

**Article 76** (1) In time of internal turmoil, external menace, natural calamity or a grave financial or economic crisis, the President may take in respect to them the minimum necessary financial and economic actions or issue orders having the effect of law, only when it is required to take urgent measures for the maintenance of national security or
public peace and order, and there is no time to await the convocation of the National Assembly.

(2) In case of major hostilities affecting national security, the President may issue orders having the effect of law, only when it is required to preserve the integrity of the nation, and it is impossible to convene the National Assembly.

(3) In case actions are taken or orders are issued under Paragraphs (1) and (2), the President shall promptly notify the National Assembly and obtain its approval.

(4) In case no approval is obtained, the actions or orders shall lose effect forthwith. In such case, the laws which were amended or abolished by the orders in question shall automatically regain their original effect at the moment the orders fail to obtain approval.

(5) The President shall, without delay, put on public notice developments under Paragraphs (3) and (4).

**Article 77** (1) When it is required to cope with a military necessity or to maintain the public safety and order by mobilization of the military forces in time of war, armed conflict or similar national emergency, the President may proclaim martial law as prescribed by law.

(2) Martial law shall be of two types, extraordinary martial law and precautionary martial law.

(3) Under extraordinary martial law, special measures may be taken with respect to the necessity for warrants, freedom of speech, the press, assembly and association, or the powers of the Executive and the Judiciary as prescribed by law.

(4) When the President has proclaimed martial law, he shall notify the National Assembly without delay.

(5) When the National Assembly requests the lifting of martial law with the concurrent vote of a majority of the total members of the National Assembly, the President shall comply.

**Article 78** The President shall appoint public officials as prescribed by the Constitution and law.

**Article 79** (1) The President may grant amnesty, commutation and restoration of rights as prescribed by law.

(2) The President shall receive the consent of the National Assembly in granting a general amnesty.

(3) Matters pertaining to amnesty, commutation and restoration of rights shall be determined by law.

**Article 80** The President shall award decorations and other honours as prescribed by law.

**Article 81** The President may attend and address the National Assembly or express his views by written message.

**Article 82** The acts of the President under law shall be executed in writing and such documents shall be countersigned by the Prime Minister and the members of the State Council concerned. The same shall apply to military affairs.
Article 83 The President shall not concurrently hold the office of Prime Minister, a member of the State Council, the head of any Executive Ministry, nor other public or private posts as prescribed by law.

Article 84 The President shall not be charged with a criminal offence during his tenure of office except for insurrection or treason.

Article 85 Matters pertaining to the status and courteous treatment of former Presidents shall be determined by law.

Part 2. The Executive Branch

Section 1. The Prime Minister and Members of the State Council

Article 86 (1) The Prime Minister shall be appointed by the President with the consent of the National Assembly.

(2) The Prime Minister shall assist the President and shall direct the Executive Ministries under order of the President.

(3) No member of the military shall be appointed Prime Minister unless he is retired from active duty.

Article 87 (1) The members of the State Council shall be appointed by the President on the recommendation of the Prime Minister.

(2) The members of the State Council shall assist the President in the conduct of State affairs and, as constituents of the State Council, shall deliberate on State affairs.

(3) The Prime Minister may recommend to the President the removal of a member of the State Council from office.

(4) No member of the military shall be appointed a member of the State Council unless he is retired from active duty.

Section 2. The State Council

Article 88 (1) The State Council shall deliberate on important policies that fall within the power of the Executive.

(2) The State Council shall be composed of the President, the Prime Minister, and other members whose number shall be no more than thirty and no less than fifteen.

(3) The President shall be the chairman of the State Council, and the Prime Minister shall be the Vice-Chairman.

Article 89 The following matters shall be referred to the State Council for deliberation:

1. Basic plans for state affairs, and general policies of the Executive;

2. Declaration of war, conclusion of peace and other important matters pertaining to foreign policy;

3. Draft amendments to the Constitution, proposals for national referendums, proposed treaties, legislative bills, and proposed presidential decrees;
4. Budgets, closing of accounts, basic plans for disposal of state properties, contracts incurring financial obligation on the State, and other important financial matters

5. Emergency orders and emergency financial and economic actions or orders by the President, and declaration and termination of martial law;

6. Important military affairs;

7. Requests for convening an extraordinary session of the National Assembly;

8. Awarding of honours;

9. Granting of amnesty, commutation and restoration of rights;

10. Demarcation of jurisdiction between Executive Ministries;

11. Basic plans concerning delegation or allocation of powers within the Executive;

12. Evaluation and analysis of the administration of state affairs;

13. Formulation and coordination of important policies of each Executive Ministry;

14. Action for the dissolution of a political party;

15. Examination of petitions pertaining to executive policies submitted or referred to the Executive;

16. Appointment of the Prosecutor-General, the Chairman of the Joint Chiefs of Staff, the Chief of Staff of each armed service, the presidents of national universities, ambassadors, and such other public officials and managers of important state-run enterprises as designated by law; and

17. Other matters presented by the President, the Prime Minister or a member of the State Council.

Article 90 (1) An Advisory Council of Elder Statesmen, composed of elder statesmen, may be established to advise the President on important affairs of state.

(2) The immediate former President shall become the Chairman of the Advisory Council of Elder Statesmen: except that, if there is no immediate former President, the President shall appoint the Chairman.

(3) The organization, function and other necessary matters pertaining to the Advisory Council of Elder Statesmen shall be determined by law.

Article 91 (1) A National Security Council shall be established to advise the President on the formulation of foreign, military and domestic policies related to national security prior to their deliberation by the State Council.

(2) The meetings of the National Security Council shall be presided over by the President.

(3) The organization, function and other necessary matters pertaining to the National Security Council shall be determined by law.

Article 92 (1) An Advisory Council on Democratic and Peaceful Unification may be established to advise the President on the formulation of peaceful unification policy.
(2) The organization, function and other necessary matters pertaining to the Advisory Council on Democratic and Peaceful Unification shall be determined by law.

**Article 93** (1) A National Economic Advisory Council may be established to advise the President on the formulation of important policies for developing the national economy.

(2) The organization, function and other necessary matters pertaining to the National Economic Advisory Council shall be determined by law.

**Section 3. The Executive Ministries**

**Article 94** Heads of Executive Ministries shall be appointed by the President from among members of the State Council on the recommendation of the Prime Minister.

**Article 95** The Prime Minister or the head of each Executive Ministry may, under the powers delegated by law or Presidential Decree, or ex officio, issue ordinances of the Prime Minister or the Executive Ministry concerning matters that are within their jurisdiction.

**Article 96** The establishment, organization and function of each Executive Ministry shall be determined by law.

**Section 4. The Board of Audit and Inspection**

**Article 97** A Board of Audit and Inspection shall be established under the direct jurisdiction of the President to inspect and examine the settlement of the revenues and expenditures of the State, the accounts of the State and other organizations specified by law and the job performances of the executive agencies and public officials.

**Article 98** (1) The Board of Audit and Inspection shall be composed of no less than five and no more than eleven members, including the Chairman.

(2) The Chairman of the Board shall be appointed by the President with the consent of the National Assembly. The term of office of the Chairman shall be four years, and he may be reappointed only once.

(3) The members of the Board shall be appointed by the President on the recommendation of the Chairman. The term of office of the members shall be four years, and they may be reappointed only once.

**Article 99** The Board of Audit and Inspection shall inspect the closing of accounts of revenues and expenditures each year, and reopen the results to the President and the National Assembly in the following year.

**Article 100** The organization and function of the Board, the qualifications of its members, the range of the public officials subject to inspection and other necessary matters shall be determined by law.

**Chapter V - The Courts**

**Article 101** (1) Judicial power shall be vested in courts composed of judges.

(2) The courts shall be composed of the Supreme Court, which is the highest court of the State, and other courts at specified levels.

(3) Qualifications for judges shall be determined by law.
Article 102 (1) Departments may be established in the Supreme Court.

(2) There shall be Supreme Court Justices at the Supreme Court: except that judges other than Supreme Court Justices may be assigned to the Supreme Court as prescribed by law.

(3) The organization of the Supreme Court and lower courts shall be determined by law.

Article 103 Judges shall rule independently according to their conscience and in conformity with the Constitution and law.

Article 104 (1) The Chief Justice of the Supreme Court shall be appointed by the President with the consent of the National Assembly.

(2) The Supreme Court Justices shall be appointed by the President on the recommendation of the Chief Justice and with the consent of the National Assembly.

(3) Judges other than the Chief Justice and the Supreme Court Justices shall be appointed by the Chief Justice with the consent of the Conference of Supreme Court Justices.

Article 105 (1) The term of office of the Chief Justice shall be six years and he shall not be reappointed.

(2) The term of office of the Justices of the Supreme Court shall be six years and they may be reappointed as prescribed by law.

(3) The term of office of judges other than the Chief Justice and Justices of the Supreme Court shall be ten years, and they may be reappointed as prescribed by law.

(4) The retirement age of judges shall be determined by law.

Article 106 (1) No judge shall be removed from office except by impeachment or a sentence of imprisonment or heavier punishment, nor shall he be suspended from office, have his salary reduced or suffer any other unfavourable treatment except by disciplinary action.

(2) In the event a judge is unable to discharge his official duties because of serious mental or physical impairment he may be retired from office as prescribed by law.

Article 107 (1) When the constitutionality of a law is at issue in a trial, the court shall request a decision of the Constitution Court, and shall judge according to the decision thereof.

(2) The Supreme Court shall have the power to make a final review of the constitutionality or legality of administrative decrees, regulations or actions, when their constitutionality or legality is at issue in a trial.

(3) Administrative appeals may be conducted as a procedure prior to a judicial trial. The procedure of administrative appeals shall be determined by law and shall be in conformity with the principles of judicial procedures.

Article 108 The Supreme Court may establish, within the scope of law, regulations pertaining to judicial proceedings and internal discipline and regulations on administrative matters of the court.

Article 109 Trials and decisions of the courts shall be open to the public: provided that
when there is a danger that such trials may undermine the national security or disturb public safety and order, or be harmful to public morals, trials may be closed to the public by court decision.

**Article 110**

(1) Courts-martial may be established as special courts to exercise jurisdiction over military trials.

(2) The Supreme Court shall have the final appellate jurisdiction over courts-martial.

(3) The organization and authority of courts-martial, and the qualifications of their judges shall be determined by law.

(4) Military trials under an extraordinary martial law may not be appealed in case of crimes of soldiers and employees of the military; military espionage; and crimes as defined by law in regard to sentinels, sentry posts, supply of harmful foods and beverages, and prisoners of war, except in the case of a death sentence.

**Chapter VI - The Constitution Court**

**Article 111**

(1) The Constitution Court shall adjudicate the following matters:

1. The constitutionality of a law upon the request of the courts;

2. Impeachment;

3. Dissolution of a political party;

4. Disputes about the jurisdictions between State agencies, between State agencies and local governments and between local governments; and

5. Petitions relating to the Constitution as prescribed by law.

(2) The Constitution Court shall be composed of nine adjudicators qualified to be court judges, and they shall be appointed by the President.

(3) Among the adjudicators referred to in Paragraph (2), three shall be appointed from persons selected by the National Assembly, and three appointed from persons nominated by the Chief Justice.

(4) The head of the Constitution Court shall be appointed by the President from among the adjudicators with the consent of the National Assembly.

**Article 112**

(1) The term of office of the adjudicators of the Constitution Court shall be six years and they may be reappointed as prescribed by law.

(2) The adjudicators of the Constitution Court shall not join any political party, nor shall they participate in political activities.

(3) No adjudicator of the Constitution Court shall be expelled from office except by impeachment or a sentence of imprisonment or heavier punishment.

**Article 113**

(1) When the Constitution Court makes a decision on the unconstitutionality of a law, impeachment, dissolution of a political party or a petition relating to the Constitution, the concurrence of six adjudicators or more shall be required.

(2) The Constitution Court may establish regulations relating to its proceedings and internal
discipline and regulations on administrative matters within the limits of law.

(3) The organization, function and other necessary matters of the Constitution Court shall be determined by law.

Chapter VII - Election Management

Article 114 (1) Election Management Committees shall be established for the purpose of fair management of elections and national referendums, and dealing with administrative affairs concerning political parties.

(2) The Central Election Management Committee shall be composed of three members appointed by the President, three members selected by the National Assembly, and three members nominated by the Chief Justice of the Supreme Court. The Chairman of the Committee shall be elected from among the members.

(3) The term of office of the members of the Committee shall be six years.

(4) The members of the Committee shall not join political parties, nor shall they participate in political activities.

(5) No member of the Committee shall be expelled from office except by impeachment or a sentence of imprisonment or heavier punishment.

(6) The Central Election Management Committee may establish, within the limit of laws and decrees, regulations relating to the management of elections, national referendums, and administrative matters concerning political parties and may also establish regulations relating to internal discipline that are compatible with law.

(7) The organization, function and other necessary matters of the Election Management Committees at each level shall be determined by law.

Article 115 (1) Election Management Committees at each level may issue necessary instructions to administrative agencies concerned with respect to administrative matters pertaining to elections and national referendums such as the preparation of the rosters of voters.

(2) Administrative agencies concerned, upon receipt of such instructions, shall comply.

Article 116 (1) Election campaigns shall be conducted under the management of the Election Management Committees at each level within the limit set by law. Equal opportunity shall be guaranteed.

(2) Except as otherwise prescribed by law, expenditures for elections shall not be imposed on political parties or candidates.

Chapter VIII - Local Autonomy

Article 117 (1) Local governments shall deal with administrative matters pertaining to the welfare of local residents, manage properties and may enact provisions relating to local autonomy, within the limit of laws and regulations.

(2) The types of local governments shall be determined by law.

Article 118 (1) A local government shall have a council.
(2) The organization and powers of local councils, and the election of members; election procedures for heads of local government bodies; and other matters pertaining to the organization and operation of local governments shall be determined by law.

Chapter IX The Economy

Article 119 (1) The economic order of the Republic of Korea shall be based on a respect for the freedom and creative initiative of enterprises and individuals in economic affairs.

(2) The State may regulate and coordinate economic affairs in order to maintain the balanced growth and stability of the national economy, to ensure proper distribution of income to prevent the domination of the market and the abuse of economic power and to democratize the economy through harmony among the economic agents.

Article 120 (1) Licenses to exploit, develop or utilize minerals and all other important underground resources, marine resources, water power, and natural powers available for economic use may be granted for a period of time as prescribed by law.

(2) The land and natural resources shall be protected by the State, and the State shall establish a plan necessary for their balanced development and utilization.

Article 121 (1) The State shall endeavour to realize the land-to-the-tillers principle with respect to agricultural land. Tenant farming shall be prohibited.

(2) The leasing of agricultural land and the consignment management of agricultural land to increase agricultural productivity and to ensure the rational utilization of agricultural land or due to unavoidable circumstances shall be recognized as prescribed by law.

Article 122 The State may impose, as prescribed by law, restrictions or obligations necessary for the efficient and balanced utilization, development and preservation of the land of the nation that is the basis for the productive activities and daily lives of all citizens.

Article 123 (1) The State shall establish and implement a plan to comprehensively develop and support the farm and fishing communities in order to protect and foster agriculture and fisheries.

(2) The State shall have the duty to foster regional economies to ensure the balanced development of all regions.

(3) The State shall protect and foster small and medium enterprises.

(4) In order to protect the interests of farmers and fishermen, the State shall endeavour to stabilize the prices of agricultural and fishery products by maintaining an equilibrium between the demand and supply of such products and improving their marketing and distribution systems.

(5) The State shall foster organizations founded on the spirit of self-help among farmers, fishermen and businessmen engaged in small and medium industry and shall guarantee their independent activities and development.

Article 124 The State shall, as prescribed by law, guarantee the consumer protection movement intended to encourage sound consumption activities and improvement in the quality of products.

Article 125 The State shall foster foreign trade, and may regulate and coordinate it.
Article 126 Private enterprises shall not be nationalized nor transferred to ownership by a local government, nor shall their management be controlled or administered by the State, except in cases as prescribed by law to meet urgent necessities of national defence or the national economy.

Article 127 (1) The State shall strive to develop the national economy by developing science and technology, information and human resources and encouraging innovation.

(2) The State shall establish a system of national standards.

(3) The President may establish advisory organizations necessary to achieve the purpose referred to in Paragraph (1).

Chapter X - Amendments to the Constitution

Article 128 (1) A proposal to amend the Constitution shall be introduced either by a majority of the total members of the National Assembly or by the President.

(2) Amendments to the Constitution for the extension of the term of office of the President or for a change allowing for the re-election of the President shall not be effective for the President in office at the time of the proposal for such amendments to the Constitution.

Article 129 Proposed amendments to the Constitution shall be put before the public by the President for twenty days or more.

Article 130 (1) The National Assembly shall decide upon the proposed amendments within sixty days of the public announcement, and passage by the National Assembly shall require the concurrent vote of two thirds of the total members of the National Assembly.

(2) The proposed amendments to the Constitution shall be submitted to a national referendum not later than thirty days after passage by the National Assembly, and shall be determined by more than one half of all votes cast by more than one half of voters eligible to vote in elections for members of the National Assembly.

(3) When the proposed amendments to the Constitution receive the concurrence prescribed in Paragraph (2), the amendments to the Constitution shall be finalized, and the President shall promulgate it without delay.

Supplementary Provisions

Article 1 This Constitution shall enter into force as of the Twenty-fifth Day of February, Anno Domini Nineteen hundred and eighty-eight: except that, the enactment or amendment of laws necessary to implement this Constitution, the elections of the President and the National Assembly under this Constitution and other preparations to implement this Constitution may be carried out prior to the entry into force of this Constitution.

Article 2 (1) The first presidential election under this Constitution shall be held not later than forty days before this Constitution enters into force.

(2) The term of office of the first President under this Constitution shall commence on the date of its enforcement.

Article 3 (1) The first elections of the National Assembly under this Constitution shall be held within six months from the promulgation of this Constitution. The term of office of the members of the first National Assembly elected under this Constitution shall commence on the date of the first convening of the National Assembly under this Constitution.
(2) The term of office of the members of the National Assembly incumbent at the time this
Constitution is promulgated shall terminate the day prior to the first convening of the
National Assembly under Paragraph (1).

Article 4  (1) Public officials and officers of enterprises appointed by the Government,
who are in office at the time of the enforcement of this Constitution, shall be considered as
having been appointed under this Constitution, except that, public officials whose election
procedures or appointing authorities are changed under this Constitution, the Chief Justice
of the Supreme Court and the Chairman of the Board of Audit and Inspection shall remain
in office until such time as their successors are chosen under this Constitution, and their
terms of office shall terminate the day before the installation of their successors.

(2) Judges attached to the Supreme Court who are not the Chief Justice or Justices of the
Supreme Court and who are in office at the time of the enforcement of this Constitution
shall be considered as having been appointed under this Constitution notwithstanding the
proviso of Paragraph (1).

(3) Those provisions of this Constitution which prescribe the terms of office of public
officials or which restrict the number of terms that public officials may serve shall take
effect upon the dates of the first elections or the first appointments of such public officials
under this Constitution.

Article 5 Laws, decrees, ordinances and treaties in force at the time this Constitution
enters into force shall remain valid unless they are contrary to this Constitution.

Article 6 Those organizations existing at the time of the enforcement of this Constitution
which have been performing the functions falling within the authority of new organizations
to be created under this Constitution shall continue to exist and perform such functions until
such time as the new organizations are created under this Constitution.

Construction and Transportation, Ministry of [Government]

Corea: The Hermit Nation

Corea: The Hermit Nation is an introductory history and commentary on the political and
social systems of Korea written by William Elliot Griffis in 1882, and published by Harper
and Brothers. The writer compiled his book over three years or thereabouts, between 1877
and 1880, while domiciled largely in Japan. The work was enlarged and reissued several
times with the last edition published in 1905, with five-hundred and two pages in fifty-two
chapters.

In the preface to the first edition, the author gives recognition to the people who assisted
him in the compilation of his book. Many of those named are prominent missionary and
military figures from the West who played major roles in the politics of Korea in the last
days of Chosŏn. The Korean language edition is, however, credited to Japanese students of
the author. Moreover, the author gives credit to the sections on folklore, social life and
Christianity to the previously published Histoire de l'Église de Corée, written by Ch. Dallet
in 1874.

The work itself is revealing of the conditions, as the author interprets them, pertaining in
Korea towards the end of the nineteenth century. The author holds firm to his Christian
beliefs and is quick to qualify many aspects of Korean culture as pagan. Nevertheless,
Corea: The Hermit Nation provides a source of comparative data for scholars, and
therefore, it remains useful in some aspects.
The Cultural Assets System

The preservation movement in South Korea is focused around Important Tangible Cultural Assets (Chungyo yuhyøng munhwajae), Important Intangible Cultural Assets (Chungyo muhyøng munhwajae), Important Folk-Cultural Properties (Chungyo minsok charyo) and Monuments. It was initiated in 1962 with the passing of the Cultural Asset Preservation Act (Munhwajae pohobøp) by the incoming government of Park Chung Hee. Fifteen amendments were made to the basic law by the end of 1990. The Act reflected debates in the National Assembly during the 1950s. These, in turn, had echoed the nationalist movement which grew in the wake of the 1919 Declaration of Independence, calling for the conservation of indigenous folk arts, crafts, and skills. Back in 1916, the Japanese Governor-general had begun listing old Korean buildings and properties for preservation; 44 wooden and 104 stone structures were still listed in South Korea in 1959. North Korea continues with these designations and also appoints master craftsmen as "people's artists (inmin yesulja).

Conservation, the new system argued, would strengthen a Korean identity undermined during the Japanese colonial period, weakened by the ravages of war, and now threatened by encroaching westernization. The Koreans nonetheless learnt much from a parallel Japanese system already in operation, duplicating many of the same categories. But, because it was designed to conserve folk arts and crafts, the Korean Intangible Cultural Asset system was distinct: in Japan but not Korea, folk arts and skills are nominated only as unpaid appointments, there is a fixed number of appointees, and people are nominated more for a lifetime's achievement than for the art or craft they have mastered.

The Korean law instructed scholars to undertake research, both to discover what remained of the old and to suggest strategies for local and national preservation. Scholars produced reports (one series, the Chungyo muhyøng munhwajae chosa pogosø [Cumulative Investigation Reports on Important Intangible Cultural Assets], reached volume 165 in 1985). Reports were submitted to a committee of experts (the Munhwajae Wiwonhoe), who recommended to the appropriate government minister what should be appointed. An Office for Cultural Asset Management (Munhwajae Kwalliguk), now a branch of the Ministry of Culture, was set up with Law 743 in October 1961 to co-ordinate publications, performances, exhibitions, and the system's day-to-day running.

By the end of 1991, there were 2,342 national and 2,642 provincial Tangible Assets, comprising buildings, classical books, calligraphy, documents, pictures, sculpture, and craftwork of high historic or artistic value. 224 Folk Assets encompassed public morals and customs relating to food, clothing, housing, occupation, religion, or annual customs and objects "indispensable to the understanding of changes and progress of national life". In practice, this category included 134 houses and three complete folk villages. The Monument category conserved shell-mounds, ancient tombs, castle and palace sites, pottery remains, strata containing remains, scenic places, animals, plants, minerals and caves of "high scientific value".

By 1991, 93 Intangible Cultural Assets were appointed (numbered from 1 to 98, allowing for deletions). These comprised 17 music genres, 7 dances, 14 dramas, 22 plays and rituals, 30 manufactures, and 3 additional Assets concerned with food preparation and martial arts. Within these, some 1,943 people were listed at the Office for Cultural Asset Management. 186 were "holders" (poyaja), known commonly as Human Cultural Assets (In'gan munhwajae) since the journalist Ye Yonghae coined the term in a Han'guk ilbo.
newspaper series on old arts and crafts in the early 1960s. Today, nobody under the age of 50 is appointed a "holder". "Future holders" (pouya hubo) numbered 84, either too young to be appointed to the senior post or waiting to succeed a "holder". There were 131 honour students (chogyo), 910 master students (isusaeng), 161 students (chōnsusaeng), and 471 "ordinary" students (ilban chōnsusaeng). The system is meant to ensure continuity, hence "holders" are required to train named students who, in turn and subject to examination, graduate as master students.

Conservation does not come free. By 1993, "holders" each received monthly stipends of 600 000 won, a little over half the urban wage. Back at the end of 1991, "future holders" received 200 000 won monthly, honour students 60 000 won and students 50 000 won. Stipends gave a 1991 bill of 1.5bn won, while the government's total expenditure on culture amounted to 0.35 per cent of GNP.

The system has been a considerable success. In the 1980s it was common for student and labour rallies to sing folksongs, to be led by a folkband, and to hold a traditional shamanic ritual to "cleanse" their path. These were all part of the indigenous heritage promoted by the very government they were demonstrating against. Clearly Koreans, with the time for nostalgia that economic prosperity brings, now equate nationalism with their Cultural Assets.

Customs and Traditions

Folk customs can broadly be divided according to the time that they are observed and their function. Those that take place in the first and second lunar months are generally designed to bring about a good farming season, whereas the spring and summer events are directed at the successful maturation of crops, and those in the autumn are aimed at offering new grains to the gods that govern agriculture, and offering thanksgiving for the abundant harvest. The relationship between folk customs and farming cycles is a natural one, since the events are closely related to the lifestyle of the farmers. Other functions of folk customs are the cultivation of communal harmony and co-operation, the consolidation of familial and community bonds, and providing an outlet for the release of tension among participants. Thus, folk customs fulfilled an essential function in traditional Korean culture, and in some respects still do so.

First Lunar Month

The first lunar month is marked by more customs than any other month of the year, and this can be attributed to various factors, such as the desire to begin the new year in an auspicious manner, the fact that this is a slack period in farming and the necessity to conduct ancestral rite activities at this time. On the morning of the first day of the lunar new year (sŏllal), food and wine are offered at the ancestral shrine (chŏnch'ŏ ch'arye), families dress in special clothing known as sŏlbim, and children and younger relatives give new year's greetings and bows to their elders (sebae). The practice of sebae continues and has been extended to include one's teachers and seniors at work. Parents and grandparents often give money or special treats to children in exchange for the sebae greeting. Sŏllal is also marked with the preparation of special foods that are shared with neighbours and during Chosŏn special leave was given to all officeholders, and gifts of paintings or calligraphy were exchanged among officials. Moreover, to bring about a prosperous year, there was the custom of pok chori (buying a new ladle) on this day. Peddlers would begin making their rounds shortly after midnight, selling these bamboo ladles that were thought to bring good fortune.
There are other customs performed around the beginning of the lunar year that function to forecast the fortune of the unfolding year. Some of these are very simple and rely on the direction of sounds, or casting yut sticks, while others involve the application of Chinese scientific theory based upon the five basic elements, i.e., wood, fire, metal, earth, and water. Other rituals are carried out that enlist various supernatural forces to bring about good fortune for the year, and thus should be viewed as incantatory in nature. These include the so-called 'marrying of a tree' (namu shijip ponaegi), in which a stone is placed in the forked branch of a fruit tree, in the hope of securing a plentiful harvest, and the burning of all loose hair, which had been accumulated for the past year, outside the main gate of a house in a bid to be free of disease in the months to come. Further folk customs include the stealing of 'fortunate earth' (pok hêk humch'igi), which requires the poorer members of a community to steal a handful of earth from a wealthy landowner so as to bring some of the same good luck to their own homes; making ritual offerings to the seven stars (ch'ilson; Ursa Major), and erecting a rice-straw pole with several varieties of grain tied to it, are all directed at bringing about fortune or prosperity in the new year.

After the lunar new year, the time around the first full moon, known as taeborum, is next in importance as far as folk customs are concerned. Taeborum is one of the major holidays in traditional times and is marked with various divinatory practices, folk games and the preparation of special foods and medicines. The divinatory practices of taeborum include the making of predictions concerning the future harvest or the year in noting the shadow cast by a pole, on the fifteenth of the first lunar month (kûrimja chôm); by observing the growth of selected bean sprouts; or by the number of times the cock crows on the morning of the fifteenth, and by other means. Special foods include honeyed glutinous rice mixed with dates, chestnuts etc. (yakpap); a mixture of nuts thought to prevent boils (purûm); mixed grain dishes for good luck, and dried vegetables believed to provide the vigour to withstand the summer’s heat. In order to bring about the hearing of good news and prevent ear disease, a special liquor known as kwibalgi sul is consumed on the morning of taeborum. There are many regional variations for predicting the fate of the coming year and in the preparation of foods for special purposes.

Taeborum is also marked by a number of communal rituals to various deities. A particularly important village ritual of this time is the tongshin che, which is the descendant of an ancient agrarian ritual to local tutelary deities petitioning for an abundant harvest. Traditionally, all villagers would take part in this shamanistic ceremony and it was funded by donations from all members of the village, in proportion to their relative wealth. Another large communal, shamanistic ritual is the Pyôlshin kut of the Kyôngsang region, held either once every ten years or when the will of the tutelary goddess requires it. The actual preparations for this ritual begin on the second of the first lunar month and conclude on the fifteenth, and since this event is quite expensive, it is funded by a special village fund. This ritual is held to petition the village tutelary goddess for good fortune and is accompanied by masked dance dramas (talch’um), farmer’s music (nongak) bands and other festivities. A further communal ritual that is performed at this time is the so-called ‘trampling of the earth spirits’ (chishin papki) ritual that is performed in the southern areas of the Korean peninsula. The performance of chishin papki is thought to drive away malevolent spirits with the accompanying dancing, music and shouting, and at the same time, bring forth the blessings of propitious spirits. Other rites and communal folk games performed on this day include tari papki (bridge treading), which is believed to prevent foot ailments, and tol ssaum (stone fighting) in which teams from different villages engage in a rock-throwing fight. This is now practised at a longer-distance between the participants than was formerly the case, thereby reducing the risk of injury or worse, but at one time it was both a defensive and offensive act, and dates from the early part of Koguryô. Then there is hwaeppul ssaum (torch fighting game), that is also played by two teams from neighbouring villages.
Second Lunar Month

The second lunar month is a relatively quiet time insofar as folk customs are concerned, but there are several important events that mark the month. One such event is chomsaengi pogi (Observation of the Pleiades), which is a method of divination practised in the second month. On the evening of the sixth day, people would compare the location of the moon to the Pleiades and if the moon appeared close to the constellation it would foretell an abundant harvest, but if it and the Pleiades were far apart, then a poor harvest would result. There were also rites performed at the Confucian shrines in the second month, and various rituals to bring about a fortuitous year.

Third Lunar Month

The third month is the beginning of spring, and therefore several major rituals are observed. The third day of the month is known as samjinnal and this day is notable for the observation of several folk customs. People gather azalea blossom and place one of the flowers on a rice cake which is then pan-fried, resulting in a pretty cake known as hwajön (flower cake). Hwajön were eaten by everyone to bring about good fortune. Other special foods eaten on samjinnal include rice cake (tökö) combined with various ingredients; a soup made with mugwort (yet'ang); and freshly-caught raw carp eaten with red pepper bean paste (koch'ujang). These special foods were all taken as panaceas. Moreover, there were distinctive liquors prepared for this day, using special ingredients such as azalea and peach blossoms. These drinks were also taken as tonics for providing the good health that would enable the imbiber to survive the hottest months of summer. Other folk customs observed on samjinnal include womenfolk washing their hair in order to render it particularly lustrous, and observing the newly-arrived butterflies as a way of telling their fortunes for the coming months. If a yellow or tiger-striped butterfly was seen first, the year ahead was to be filled with good fortune. If, however, a white butterfly was sighted first, then an unlucky event was predicted.

The second major event of the third lunar month was hanshik (cold-food day), which was observed one hundred and five days after the winter solstice (tongji). On this day people would prepare fruit, liquor, noodles, rice cakes and other foods and visit their ancestral graves, first cutting the grass and tidying the gravesite, and then making sacrificial offerings to their ancestors. This custom is thought to date from the time of the Chinese Qi dynasty (479-501 CE), and was considered as one of the four great holidays (sadae myöngjöl). The reason that it was called hanshik was because no fires were lit, as a way of consoling the spirit of the loyal Jin-China minister, Jie Jitui, who died in a fire.

Fourth Lunar Month

Buddha’s birthday is the major folk event in the fourth month, and is celebrated on the eighth day of the month. This event was known by several different designations such as ch'op'ail, yokpuril and yöndüng che depending upon the people and era. The nights before the actual holiday were marked by the making of lanterns that were lit the night before Buddha’s birthday. Every house would strive to prepare a decorated lantern and erect it on a pole or hang it on a tree, with the shapes and designs of the lanterns greatly varied, some being modelled after animals, others after fruits, yet others lotus blossoms, fish and turtles, and so forth. It was believed that the brighter the lantern, the greater the luck the family would be blessed with. This custom is thought to have its origins in the p'algwan hoe that dates at least back to Koryö. On the eighth of the month people would dress in their finest clothes and visit temples where a large festival in honour of Buddha would be held.

Fifth Lunar Month

The major folk event of the fifth lunar month is the Tano Festival held on the fifth day of the
month. This festival is known by various appellations such as suüi, chungojöll, tanyang, ch’önnungjöll and surinnal, and is considered one of the four major holidays of the year. Tano is characterised by the performance of shamanistic rituals, ancestor rites, folk games, special foods and merriment. The holiday is thought to have originated in China during the Chuo dynasty (740–330 BCE) and subsequently transmitted to Korea, where it became integrated with indigenous festivals such as surinnal. It is noteworthy that Tano is predominately a northern custom since the fifth month is a busy farming season in the southern rice growing areas. Thus, during the Koryo period this was a more important holiday than Ch’usökk (Harvest Festival) held in the eighth lunar month.

On the morning of Tano, boys and girls boil iris plants, use the liquid for bathing and hair washing, after which they don their best clothes. The tubers of the iris are carved to make a hairpin for the girls, and the Chinese characters for luck (pok) and longevity (su) are painted in red thereon, which is believed to drive away baleful spirits. The most notable folk games played on Tano day are swing play (küne) for young women and girls, and ssirüm (akin to wrestling) for males. The sight of the young women and girls dressed in their colourful garments swinging high into the air has long been the subject of Korean folk painters and poets. The opportunity to enjoy the outdoors and the company of their peers in swinging contests provided the females of Chosön, who otherwise led strictly regulated lives, a rare chance for enjoyment outside their homes. Ssirüm was one of the major events of Tano and the wrestler who eventually won the contest would be awarded a worthwhile prize such as an ox or sacks of grain.

Other events surrounding Tano festivals include bullfights (so ssaum) and mask dances (t’alch um) held in some regions. Additionally, shamanistic rites such as the p’ut kut or the nongshinje, designed to ensure successful harvests, were often held in conjunction with the Tano festival. Another means to prevent misfortune was to post a talisman above the main gate of the house. These talismen contained short phrases written in red ink and in addition to houses, they were posted at government offices and even the royal palace and were designed to prevent calamity. The same belief in the preventive powers of the colour red is seen in the practice of young women dying their fingernails red with a concoction made from the petals of the touch-me-not flower, a practice which also sought to expel injurious spirits. Tano remains a major folk custom in Korea today, and the festival held in Kangnüng of Kangwön Province is particularly well known.

Sixth Lunar Month

The fifteenth day of the sixth lunar month is known as yudu, and on this day people would often travel to a clear mountain stream where they would bathe and wash their hair, and then while away the rest of day in a cool spot. There are records of yudu being observed from the time of Shilla, and this practice was thought to not only prevent heat-related illnesses such as sunstroke, but also general misfortune. The people would also make sacrificial offerings to their ancestors and household gods in a ritual known as yudu ch’önnshin, with such seasonal foods as watermelon, fruit, rice cakes, and cold noodles, among others. Of course, after making the ritual offerings the people would then consume all of this food, along with liquor and meat dishes.

Since the sixth lunar month is the hottest part of summer, other foods reputed to have medicinal or restorative qualities were often taken. Among these, pat’chuk (red bean porridge) kaeso (dog soup) and samgye t’ang (chicken-ginseng soup) were all believed to be particularly efficacious in overcoming ailments that could be brought on by the oppressive summer heat. Moreover, since the sixth month is an extremely busy season for farmers with the weeding of crops, these foods were also purported to provide the essential nutrients needed to maintain a person’s strength. At the time of crop-weeding, communal labour groups known as ture were often recruited to work the fields in rapid succession. This operation was frequently accompanied by a farmers’ music (nong’ak) troupe that
provided rhythmic accompaniment and a pleasant distraction from the harsh and repetitive work of weeding.

Seventh Lunar Month

The seventh day of the seventh lunar month is known as ch’ilsŏk and this is the day that magpies and crows are said to fly to the heavens, where they make the Ojakkkyo Bridge that allows the separated lovers Kyŏnu (Herdsmen) and Chingnyŏ (Weaving Damsel) to be united for a single night. This legend dates from the time of the Chinese Zhou dynasty (1027-771 BCE), and it is said that there are no crows or magpies to be seen on ch’ilsŏk day since they have all flown to the heavens. Moreover, it is claimed that it always rains on this day as a result of the tears of joy shed by the reunited lovers. Also, young women and girls offer prayers to Chingnyŏ so that they can become talented in sewing, and young men petition Kyŏnu to give them the skills to make them good scholars. It is also around the seventh day of the month that people expose their clothing, bedding and books to the sunlight, since the rainy season has by then generally ended. This is a way to forestalling damage of these items by mould that often results from the dampness prevalent during rainy weather..

The fifteenth day of the seventh lunar month is known as paekchong (hundred kinds) or paekchung and is largely a Buddhist festival in which the ‘hundred kinds’ of fruits and vegetables are offered in a ceremony to Buddha. This is accompanied by celebrations with food, dance and music. The origins of this ceremony are thought to be found in the Koryŏ festival known as the uranbun hoe that was one of the two major Buddhist festivals of this period. Moreover, the shamanistic ritual manghonil (day of the dead spirits), which consists of food and vegetable offerings to the ancestral spirits and also performed on the fifteenth day of the seventh lunar month, is thought to be related to paekchong.

Other notable folk customs of the seventh month include homi ssitki (hoe-washing day), which is held on the fifteenth of the month and is a day both of rest and festivity among the farmers. This day is so named since it marks the end of the weeding season and thus the farmers can clean their hoes early and then have a day of leisure. The farming families all prepare food and drink, gather at a cool meeting-place by a river or lake, and hold a party, accompanied by farmers’ music, dancing and various folk games. The seventh month also marks the beginning of the planting season. Autumn crops are planted, such as cabbage and turnips which are ingredients of the kimch’i that is prepared at the beginning of winter. Also, to protect the ripening grains, farmers erect scarecrows in the fields at this time.

Eighth Lunar Month

The major folk event of the eighth lunar month is Ch’usŏk, or Harvest Festival. This event has been observed in Korea since at least the beginning of Shilla as recorded in the Sangoek sagi (History of the Three Kingdoms), at which time it was known as kawi. This holiday is also known by the designation of Han’gawi. The festive atmosphere of this holiday is further aided by the ideal weather of this season in Korea, with moderate temperatures and clear skies. Thus, with the newly-harvested crops and the tedious work of the farming season behind them, the people can relax, visits ancestral graves (songmyo) and offer thanks for their harvest.

The events of Ch’usŏk begin with early rising, bathing and dressing in one’s best clothes, before preparing the foods that will be offered at the ancestral shrine on this day. Many foods are prepared for Ch’usŏk including those with the freshly harvested grains, fruits and liquor that will serve both in offering sacrificial rites to the ancestors and for the subsequent feast that will be enjoyed by all. Along with the foods prepared for this day, there are many folk games enjoyed by the people, including chuldarigi (tug-of-war), kanggang sulwollae (a circle dance), swing play, see-sawing, tol ssaum, and ssirŭm, together with music and
dance. Ch’usŏk continues to be observed and with Sŏllal (New Year) is one of the two major holidays.

Ninth Lunar Month

The ninth month is somewhat quiet for the observation of major folk customs, but there are still those events that the people take notice of. The ninth day of the month is notable in that it is said to be the day that the swallows return to the south, marking the end of the temperate weather of autumn. Moreover, the ninth day is auspicious in that it is a double yang (positive, male energy) number day, and thus is often marked by certain folk games or rites. With the beauty of the autumn foliage to be seen, many people journey to nearby mountains to view the autumn landscape, and this has traditionally served as a muse for many poets and painters. Of the seasonal food and drink prepared for this month, those that include the chrysanthemum are notable, such as the kukhwa-jŏn (chrysanthemum rice-cake) and kukhwa-chu (chrysanthemum liquor). Pomegranates and pine nuts are also enjoyed during the ninth lunar month.

Tenth Lunar Month

The third day of the tenth lunar month is commemorated as the day that the legendary founder of Korea, Hwanung, descended from the heavens on to Mount T’aebaek with 3 000 followers and established an earthly kingdom, which later was ruled by his son Tan’gun for some 1 500 years and known as Ko Chosŏn. This day is called kaech’ŏnjŏl (Foundation Day), and is considered as the day that Korean history began in the year 2 333 BCE. Kaech’ŏnjŏl is still marked by ritual offerings to Tan’gun and the heavenly deities, and is a very important day to the adherents of Tan’gun’gyo, the religious cult that centres around the veneration of Tan’gun.

Other events of the tenth lunar month include shamanistic rites offered to the tutelary god of the household (sŏngju), various winter foods such as mugwort soup (ssuk t’ang), rice cakes (ssuk ttŏk) and dumpling soup (mandu kuk) made with vegetables, beef and other meats. The preparation of winter kimch’i, known as kimjang, is also undertaken in this month as the cabbage and turnips planted in the seventh lunar month are harvested and processed into the vegetable side dishes that will be enjoyed throughout the long winter. There are many types of kimch’i prepared by the womenfolk at this time including, paech’u (cabbage kimch’i) and kkaktugi (cubed turnip kimch’i). After preparation, the kimch’i is placed in earthenware vessels of varying size and buried in the ground, which keeps the pickled vegetables fresh throughout the winter.

Eleventh Lunar Month

The eleventh month is marked by tongji, or the winter solstice, which is accompanied by many folk customs. In traditional times, tongji was the day in which everyone added a year to their age, since this was the beginning of the year according to the former calendrical system. One exceptional seasonal food prepared for tongji is tongji p’atchuk (winter solstice red-bean porridge) a dish eaten by all family members. The red colour of the p’atchuk was thought to be an effective means of driving out any baleful spirits present in the household. During Chosŏn, the eleventh month was the time that calendars for the year ahead were distributed to government offices and also when the tribute of mandarin oranges was sent from Cheju Island to the royal palace. Other customs in this month include special foods such as naengmyŏn (cold buckwheat noodles) and drinks like sujŏnggwa, a tea made with persimmon, ginger, cinnamon, sugar, and pine nuts and served cold..

Twelfth Lunar Month
In the last month of the year, the major event is sŏddal kŭmŭmnal, or New Year’s Eve, which marks the passing of the old year. Many of the events of this season are in preparation for the new year, but there are also those that concentrate on the last night of the old year. At the forefront of these is the so-called ‘watching out of the year’ (hae chik’im), which included lighting lanterns in every part of the house and keeping the whole family awake to greet the cock’s crow of the new year. Folktales provide accounts that those who fell asleep on this night awoke the next morning with white eyebrows, and thus children were urged not to sleep lest this happen to them.

Other events of the last month of the year include the narye ceremony, which was held to drive away all of the demons of the past year in both the homes of commoners and the royal palace. In this month, each family would repair worn spots on the kitchen hearth, put the house in good order, and tidy or repair the animal pens. Then at midnight on the last day of the year, they would build a bonfire in the front courtyard of their house and set off firecrackers. This ceremony was thought to drive off demons and malevolent spirits from the house and its environs and thus begin the new year in a propitious manner. A similar procedure was followed in the royal palace, although the ceremony that accompanied the ritual was much more elaborate, and included shamans, ritual dancers and musicians. This ceremony has been observed in Korea since early Koryŏ, and continued to be performed at the royal palace, albeit on a smaller scale, throughout Chosŏn.

**Intercalary Month**

The leap month, which occurs every fourth year, is treated as an extra or free month and carries no religious or folklore significance. Thus, since this month is not plagued by problems from ghosts or spirits, it is generally considered as both a good and safe time for the people. Moreover, the intercalary month is said to be the best time to prepare coffins for the elders or garments for the dead.

**Bibliography**

_____. *Han’guk minsok nori ūi yŏn’gu*. (Research in Korean Folk Games.) Seoul: Sŏngmun’gak, 1985.

**Daegu University**

Daegu University (Taegu Taehakkkyo) is a private university situated in Naeri Village in Kyŏngsan. Founded as Han’guk Sahoe Saŏp Hakkyo (Korea Social Work College), the school was the first in Korea to offer specialised training in the fields of social work and education for the handicapped. In February 1961, the school was elevated to the status of a college and in January 1973, a graduate school was added. In order to accommodate the school’s expansion, a new campus was created in Kyŏngsan County (now Kyŏngsan City) just east of Taegu in 1979 and in December of the same year, the school’s name was changed to Hansa Taehak. When the college became a university in March 1982, the school acquired its present name. At this time, the university was made up of six colleges and one graduate school.

The university now consists of twelve colleges and five graduate schools. The Kyŏngsan campus has become the university’s main campus, with the Colleges of Economics & Business Administration, Engineering, Fine Art, Human Ecology, Humanities, Law, Natural Resources, Natural Science, Public Administration and Social Science as well as an Evening Class Program. The campus also contains the Graduate School as well as the
Graduate Schools of Education and Industry & Information. At the Taegu Campus, are the Colleges of Education and Rehabilitation Science, and the Graduate Schools of Rehabilitation Science and Social Development.

**Dance**

**History**

The history of Korean dance begins some 3,000 years ago. As in many other cultures, Korean dance evolved largely from the religious ceremonials of primitive tribes. In the Three Han tribal states of Mahan, Chinhan, and Pyŏnhan, dance was also closely linked to the agricultural cycle, as it still is in farmers festival music and dance - called *Nongak* - of present-day Korea.

In the 13th c. B.C.E., many tribal peoples were roaming the northern and central parts of the Korean peninsula. One of these tribes, the Puyo, who occupied the area that is now Manchuria, held a festival during the 10th month of the lunar calendar (November) called *Yanggo*, which they celebrated with songs and dances. The Ye people in the northeast held a festival called *Much'on* in or around October, and this also included songs and dances. The ancient Chinese chronicle, the *Hou Han shu* (History of Later Han dynasty) and *Wei shu* (History of the Wei dynasty), compiled between the 6th and 7th c. C.E., tells us that invocatory group dancing and singing were characteristic of the sacrificial ceremonies to the gods of heaven and earth which were carried out as part of these festivities.

In the Three Han Kingdoms (Sam-Ham) in the south thanksgiving festivals were held twice annually, after rice transplantation and after harvest. The *Wenxian tong kao* (Korean *Munhon tonggo*), describes the dances performed at these festivals: they were,... performed by a dozen or so dancers, who, lined up in a single file, followed the leader, raising their hands up and down, stamping on the ground to the accompaniment of music... the ceremonies were presided over by a leader who might well have been a Shaman who was, at the same time, lyricist, composer-musician, and dancer...". This, again, is similar to farmers festival music and dance, which, thereby, may be the oldest form of dance extant in Korea today. It is still closely related to folk religion, or Shamanism being often utilized to exorcise evil spirits or to supplicate the beneficence of the gods. The same may also be said for the mask dance-dramas.

However, the earliest known Chinese reference to these various types of ritual festivities is found in the *San Guo zhi* (The History of the Three Kingdoms) compiled by Zhen Shou in 297 C.E., in the section dealing with the 'Eastern People' (the inhabitants of Korea), telling of the ritual practices held by various tribes up until the 3rd c. C.E.: "In the fifth month, they sacrifice to spirits; all day and night, without rest, they sing, dance, and drink wine." This same chronicle also describes the Korean people as being endowed with, "...a talent for the arts that excels both in originality and creativity."

The *Zhou li* (Rites of The Duke of Zhou), describes Korea as being, "...a land of dance and music that is forever bursting forth anew with an art filled with vigour and vitality", pointing up the fact once again that from ancient times the Koreans were a people endowed with a gift for the arts who delighted in music and dance.

In these ancient rituals to heavenly deities, held before the outset of farm work and after the agricultural cycle was completed, labour and the arts enjoyed a common origin and existed
together in harmony and accord. The rituals were continuously handed down and further propagated among succeeding generations so that they came to form the very basic character of Korean culture: and so it is that Korean music and dance found in folk rites, folk games, farmers festival, music and dance, and in the mask dance-dramas are not separate entities in themselves, but are considered part of an integral whole along with ritual and drama.

The Shaman who presided over the festivals of the Three Han Kingdoms may well have been the immediate predecessor of the hwarang (flower of youth) of the subsequent Silla period, a unique society of young men whose name in present-day Korea is associated with that of knight, fearless warrior, man of arts and letters, and other highly notable qualities. But, according to the most reliable historical sources, they were only partly such, being also quasi-Shamanistic and kwangdae (dancers, singers, actors) as well.

The earliest source we have on the hwarang is the Samguk sagi (History of the Three Kingdoms), compiled in 1145 C.E. This chronicle tells us that the hwarang were organized into their final form in 576 C.E., during the last year of the reign of King Chinhu (r. 534-576) for ethical, artistic, and military training.

The same King Chinhu who founded the hwarang organized an annual court entertainment known as the P'algwwanhoe, a mixture of Buddhist and earlier indigenous religious elements at which the hwarang are believed to have performed. This festival, held in the palace gardens, was a formalization of the annual and semi-annual custom of heaven-worship which had been observed by primitive tribes and has survived today in remote villages in the form of such periodic festivals as the mask dance-drama of Hahoe. According to Hong Pong-han's Tongguk munhön pigo (Encyclopaedia of Korea, 1770), participants "...amused themselves with singing, dancing, and variety acts, and also prayed for blessings."

While the foundation for some of Korea's music and dance tradition was being laid by the Silla hwarang in the south, a people characterized by bravery and strong will-power were creating music and dance of a different nature in the Koguryo kingdom to the north in what is now Manchuria. A fresco on the walls of the Muyong chong (Tomb of the Dancers) discovered in 1940 in Tonggu, once the capital of Koguryo, provides significant evidence. Dating from approximately 500-650 C.E., the fresco reveals convincingly the impetuous, almost Mongol-like ferocity of the people. A portion of the mural contains a scene with five dancers and seven musicians showing the figure of the Koguryo dance: "shuffled shoulders, protruded hip, side-stepping with arms raised horizontally and hands dropped."

The P'algwwanhoe which was performed until the end of the succeeding Koryo dynasty, is considered to be important in the history of Korean music and dance because it not only included Korean and Tang dynasty, China music, but also dance and acrobatics, which were collectively referred to as paeghui (one hundred games). At the P'algwwanhoe, as held at the Koryo court, masked plays and the Ch'ŏyong mask dance-drama were performed. The latter was created from a hwarang lyric poem, 'The Song of Ch'ŏyong', taken from a collection of fourteen pieces of vernacular poetry of Silla referred to as hyangga and preserved in the Samguk yusa (Legends and the History of the Three Kingdoms). The song is said to date from the late 9th c. It is thought to be a Shaman ritual song that passed into the repertory of the Koryo dynasty in an extended form and was believed to be potent against disease.

The first historical records of the mask dance-dramas appear in lyric poetry - as is the case with the Ch'ŏyong - written by the famous Shilla period scholar-poet Ch'oe Ch'iwŏn (857 C.E. - ) in the 9th c., entitled 'Five Poems on Korean Music' (Hyangak chabyong osu), and recorded in the Samguk ssgi (History of the Three Kingdoms), compiled by Kim Pushik (1075-1151 C.E.). Though the title bears the words '...Korean Music', the dances
correlated with these poems are believed to be either Turkestani, Indian, or Central Asian in origin and were introduced into Korea from Wu dynasty South China as Buddhist ceremonial mime dance - some sources say mask dance-drama - known as Kiak (Jap.Gigaku) by a Paekche dynasty musician named Mimaji (Jap. Mimashi), who later, in 612 C.E., taught these dances at the royal court of Japan. This fact suggests that Central Asian music and dance had already been in use before Tang music and dance ever reached Korea. Moreover, the facial features - particularly the prominent noses - of the masks employed in the dance-drama point to a Central Asian origin.

Only when performed at Buddhist temples did the Kiak retain its original message of the consequences of worldly pleasure for the unfaithful. Towards the latter part of the Chosön dynasty (1392-1910), this Buddhist didactic dance-drama was to become, under folk influence, a satire on apostate Buddhist monks, and the lion - whose original purpose in the drama was to devour those who transgressed the precepts of Buddha - began devouring the decadent monks themselves.

Although the Chosön dynasty was the age of Confucianism, Confucian ritual music and dance had actually been imported into Koryó from Song dynasty in 1116, a year that stands out in the musical annals of Koryó as being perhaps the most important of all, for it was in this year that Sung Emperor Huizong (r. 1100-25), a noted patron of the arts, sent a complete set of musical instruments, dance and music scores, costumes, and props for the performance of Confucian ceremonial music and dance.

Another important event was the introduction into Korea of a large amount of Chinese court and religious music and dance of the Song dynasty, which eventually replaced the music of Tang. As early as the 10th c., Chinese musicians and musical instruments had already found their way into Koryó and this simple, but noble, Chinese music and dance (referred to as Tangak) was always offered jointly with so-called Korean native music and dance (referred to as Hyangak), which was livelier by comparison whenever performances were given at royal court banquets and other occasions.

In 1073, court dances of the Song dynasty such as pao qiu yue (p'ogurak) a dance game in which balls are thrown through a hole in a gate-like frame were incorporated into the P'algwanhoe held at the Koryó court. This Ball-Throwing Dance is still performed to this day, albeit infrequently.

Of all periods in Korean history, none were perhaps more favourable for dance and music than the Chosön dynasty; for, in 1418, young King Sejong (r. 1418-50) ascended the throne and brought Korean culture in general to its apex. This period initiated the great era of codification and transcription. For the first time, special attention was given to detail and authenticity. The great king gave himself over to music and dance as much as he did to language, mathematics, astronomy, literature, and fine arts. Together with his chief court musician, Pak Yón, he classified all court music and dance into three primary divisions: Aak (Confucian ritual), Tangak (Chinese Tang and Song dynasty), and Hyangak (native Korean). In addition, he readjusted the system of musical performance at the royal court and the costumes of the court musicians and dancers.

King Sejong's work of classification was continued by King Sejo (r. 1455-68), who classified instrumental and vocal music as well as dances and developed the theory of musical notation. His grandson, King Sónjong (r. 1469-94), had the musical theorist Sóng Hyón compile the Akhak kwebōm (Standard Work of Musical Studies) in 1493. It is said to be the first and the greatest, most comprehensive treatise ever written on music and dance in Korea. This epochal text contains not only the Chosön period music and dance extant at the time, but also covers the theory of music, the arrangement of the orchestra, musical instruments, costumes, chorography, properties, procedures for court dances, and even dance programs. Eight of the dances described are of Chinese origin; seven of traditional
Korean. The scores of five new dances, which were created during this early Chosŏn period to commemorate the founding of the dynasty, are also included. Its detailed descriptions and illustrations made it possible to restore old music and dances after the court musicians and dancers had fled to the countryside and the musical instruments had been destroyed during the Japanese Hideyoshi Invasions at the end of the 16th c. So precise are the contents of this book that it may be used to this day as a reference in re-creating music and dances that have long fallen into disuse.

In 1759, during the reign of King Yongjo, the first book of dance scores, the Siyong mubo (Scripts of Current Dances) was compiled. The scores in this book are those of the Confucian ritual dance, the Il-nu (Line Formation Dance), which was imported into Koryŏ from Song Dynasty China in 1116 and which was performed at ceremonies held at the Confucian and Royal Ancestral Shrines.

In the early part of the 19th c. Crown Prince Hyomyŏng, 1809-1830 is reputed to have composed many court dances, among which is Kain chŏn moktan (Beautiful Persons Picking Peonies), created during the reign of King Sunjo (r.1800 - 34) in tribute to the literary and martial achievements of his royal ancestors. According to Song Kyŏngin, former director of the National Classical Music Institute of Korea (NCMI), Hyomyŏng was probably the only great court dance composer, and of almost all known Korean court dances, about 50 are either his own creations or revisions. That he also created the dance known as Ch'unaeng chŏn (A Nightingale Singing in Spring-time), however, is open to question. Dr. Ho Kuang-chung of Singapore University maintains that the dance was known in Tan and Song dynasty, and that it is the T'ang version which is now preserved in Japan and the Song version which is preserved in Korea.

With Japan's annexation of Korea in 1910, the Chosŏn court, along with its music and dances entered into a state of decline, leaving behind only a few remnants to be preserved in what was once the Royal Music Conservatory that later became the NCMI and is presently called the Korean Traditional Performing Arts Centre. Folk music and dance, which had been flowering among the common people since the latter part of the Chosŏn period, also entered into a state of gradual decline after the 1919 Independence Movement, when modern Western music and dance began to be introduced into Korea by the Japanese.

The period of the Japanese annexation of Korea (1910-45) is marked by a decided turn in the tide of what remained of the eastward cultural migration from China. Japan had by this time become quite Westernized and sent this wave of Westernization, as well as her own traditional cultural influences, westward, submerging her new possession in a completely new era. Every aspect of life was affected, including traditional music and dance. Fortunately, for Korean folk dance, this period also witnessed the last of the great dance masters, Han Sŏng-jun, who, until his death in 1938, stood alone and unexcelled in upholding the great folk dance tradition. So notable were his achievements that even the Japanese could not overlook his merits, and they presented him with an art award. Ironically, it was one of Han's most talented pupils, however, who sub-sequently dealt Korean traditional dance one of its most devastating blows. Choi Seung-hee (Ch'oe Sung-hŭi) studied with Han and then went to Japan where she became the student of Ishii Baku, who brought the Neue Tanz (New Dance) to Japan from Europe. Korean audiences received her performances unfavorably, but when she took her dances to Japan, they were enthusiastically received and she became established by the Japanese as the 'Queen of Korean Dance'. As time passed, Korean dance became even further Westernized at the hands of Choi and her students. Fortunately, another one of Han's students was his own grand-daughter, Han Young-sook (Han Yŏngsuk), who faithfully carried on the folk dance tradition handed down to her by her illustrious grandfather. Her interpretation of Sŏngmu (the Buddhist Monk Dance), created by her grandfather from Buddhist ceremonial dances, called Chakpŏp (nabich'um), was superb and flawless in every sense of the word, and set a standard that was followed by a host of dance students to come. For her extraordinary
talent and her devotion to maintaining the folk dance tradition, she was designated a 'Human Cultural Treasure' by the Korean government, as was court dancer Kim Ch'uhnŭng, who in the early 1990's was the only living male court dancer left in Korea, and who (then well into his 80's), still danced and strived to revive and preserve the dances of the royal court that have long since passed into oblivion. Most dancers active on the dance scene in Korea today, however, seem to derive their greatest satisfaction from their own creations rather than from the glorious dances of the past. It is, perhaps, a manifestation of the new freedom that came with the liberation from Japan in 1945, the birth of the republic in 1948, and the trend toward democratization that has followed ever since.

A C Heyman

Dankook University

Dankook University (Tan'guk Taehakkyo) is a private university situated in Hannam-dong is Seoul. Established as Dankook college in November 1947 with Chang Tobin as its first president, the college was moved to its present location in Yongsan Ward in July 1957. A graduate school was established in the following year. In 1967, the college became a university, with Chang Ch'ungshik as its president. At that time, master's and doctoral programs were established. The university's undergraduate curriculum was further developed and this led to the building of a new campus in Ch'ŏnan in South Ch'ungch'ŏng Province.

Today, the university consists of twenty colleges and eight graduate schools. At the Seoul campus, are the Colleges of Commerce and Economics; Education; Engineering; Evening School; Law; Liberal Arts; Music; Politics and Economics; and Science. There is a separate Graduate School, side-by-side with the Graduate Schools of Education; Industrial Design; Industrial Technology; Labour-Management Relations; Management; and Public Administration. At the Ch'ŏnan campus are the Colleges of Agriculture; Arts; Dentistry; Economics and Commerce; Engineering; Humanities; Law; Medicine; Natural Science; Policy and Business Management; Social Science; and Sports Science. In May 1981, a museum was opened and its three-storey building contains a large number of artefacts, especially of ancient items of apparel and decoration, such as crowns, ceremonial attire, belts and shoes. University Publications include the Tandae shinmun in Korean and The Dankook Herald in English.

Daoism

Daoism refers to both a religious system that arose in the early centuries (CE) and to a group of texts usually understood to be philosophical; the most important of which come from the third century BCE and earlier. These texts, notable the Laozi (also commonly known as the Daode jing or The Way and its Power) and the Zhuangzi, are often seen to oppose the Confucian ideal, emphasising spontaneity and dismissing ritual. The religion of Daoism is traditionally understood to have begun with revelations delivered to Zhang Ling from the deified form of Laozi. Its goal was longevity and the ultimate achievement of immortality through alchemy, sexual regimens, meditations, special diets and by other means. Daoist practitioners often chose to live alone, deep in the mountains, striving for harmony with the forces of nature. The religion incorporated into its practice particular readings of the Laozi -- the I Ching (Book of Change), Yinyang and Five Elements theory, medical practices, prognostication and divination.

Introduction to Korea

When Daoism was introduced to Korea, there were certain factors which prevented it from developing to the extent it had in China. First, unlike Chinese Daoism, which had a chance to develop for several centuries before an increase in Buddhism's popularity, in Korea...
Daoism had to compete with Buddhism from the outset. Secondly, in China, Daoism could criticise Buddhism as a foreign import, while in Korea, both ideologies were on an equal footing.

Conversely, there were many common elements in Daoism and early Korean beliefs. For example, the Chinese ideal of the Daoist immortal was easily combined with early Korean worship of mountain spirits (sanshin) as seen in the Tan'gun myth. In addition, the ideal of the Daoist sage who is able to control the elements of nature had its parallel in Korean shamanism.

**Koguryo**

According to the *Samguk yusa*, in 624 the Emperor Gaozu (r. 618-626) of Tang China sent a Daoist priest to Koguryo along with a statue and the *Daode jing* as a gesture of friendship. This marks the formal introduction of Daoism to Koguryo. However, the religion does not seem to have increased its following at this time. Twenty years later, in 643, Yôn Kaesomun (?-666), the true power behind King Pojang (r. 642-688), presented a memorial to his king requesting that Emperor Taizong of Tang agree to despatch a priest to teach Daoist principles in Koguryo. Later in the same year, the Chinese monk Shuda arrived with seven other Daoist priests and another copy of the *Daode jing*. King Pojang also converted several Buddhist Temples into Daoist Temples and these served as bases for conducting activities to propagate Daoism. The Daoism introduced at this time was of the Celestial Masters sect, and main Daoist practices were centred around ritual offerings to Heaven and the stars. Koguryo's attempt to introduce Daoism as a state religion came too late, as the Koguryo kingdom soon succumbed to the combined Shilla and Tang forces in 668.

**Paekche**

Although little is known about religious Daoism's introduction to Paekche, Japanese records such as *Kojiki* and *Nihon shoki* claim that Daoist texts and rituals were imported from Paekche by Ajikki and Wang In. These records suggest that Daoism entered Paekche at an early date in the country's development. According to the *Samguk sagi*, when King Kungusu (375-384) was a prince, he fought against invading Koguryo forces. When the defeated Koguryo forces fled, the prince pursued them to Sugok Fortress where he prepared to make a further attack. However, his general, quoting a passage from Chapter 44 of the *Laozi*, dissuaded him from making the rash attack. It follows that if Daoist passages were common knowledge even to the military by the fourth century, it can be assumed that philosophical Daoism entered Paekche even earlier.

**Shilla**

Many of the early hagiographical accounts of Shilla heroes tell of magical feats reminiscent of the (magical) powers commonly attributed to Daoist adepts. Hogong, who helped Pak Hyökkôse found Shilla, is described as being able to control the natural elements, as well as the birds and the beasts, but these legends may be derived from Shilla shamanism. Many early Shilla legends concerning the mountains surrounding the capital, Sôrabôl (present-day Kyôongju), are also connected with Daoism.

**Greater Shilla**

During Greater Shilla, an increasing number of scholars travelled to Tang China to study. Many of them returned with knowledge of Daoist techniques of cultivation. For example, during the mid-ninth century, the Shilla scholars Ch'oe Sângu, Kim Kagi, and the Buddhist monk Chihye studied at Guangfa Temple on Mt. Zhongnan. While there, they happened to meet a Daoist adept who introduced them to another Daoist master by the name of Zhongli Quan, (Han Zhongli), one of the Eight Immortals. From Zhong, they received a
number of Daoist works and esoteric teachings. After three years, they obtained the cinnabar elixir -- a metaphor for Daoist enlightenment. The three scholars later returned to Shilla where they were influential in spreading Daoist practices. Kim Kagi and Ch'oe Sūngu passed on their knowledge to Ch'oe Ch'iwŏn, the renowned Greater Shilla scholar.

Koryŏ

During Koryŏ, Daoist practices were incorporated into Buddhism. An example is the continuation of the P'algwanhoe (Festival of the Eight Vows), which was first held in Shilla. But the ceremony was expanded to include many Daoist elements. In a similar manner, the Yŏndŭnghoe, or Lantern Lighting Festival, came to be celebrated with Tang song and dance forms which were Daoist in character.

Daoism also benefited from intermittent royal support. Yejong (r. 1105-1122), the successor to Injong, so favoured Daoism that he even wanted to change the national religion from Buddhism to Daoism. The Chinese emperor, responding to Yejong's wish to know more about Daoism, sent two Daoist monks to Koryŏ. Yejong built Pogwŏn Palace as a Daoist temple for them. In the temple, the monks trained the Koryŏ people in Daoist rites. It must be remembered, however, that these Koryŏ Daoists did not observe any monastic precepts or wear any special monastic garb. On the contrary, they returned to their houses daily after training. This indicates that the monastic traditions of Chinese Daoism were unable to take root in Koryŏ at this time.

On of the most concrete examples of the Koryŏ amalgamation of Buddhist and Daoist beliefs is King Injong's (r. 1122-1146) establishment of the P'alsŏng-dang (Eight Sages Shrine). In 1131, Injong sent Yi Chungbu to the Western Capital (modern-day P'yŏngyang) and had him erect the P'alsŏng-dang in Imwŏn Palace. Within the shrine, eight hermit-sages (son) were enshrined. The first hermit-sage was Munsusari, who was conceived as the sage associated with the sacred Mt. Paektu. The other figures are a mixture of Daoist and Buddhist figures.

Chosŏn

During Chosŏn, Daoism continued to enjoy intermittent support from members of the royal household. However, opposition from the Confucian literati led to a gradual decline in formal Daoist rites and practices. Even so, Daoist beliefs and practices continued to have a social impact. The great advances in medical knowledge during Chosŏn were to some extent a result of Daoist learning. In particular, the Tongŭi pogam (Examplar of Korean Medicine), a large medical compendium finished in 1613, was influenced by Daoist medical knowledge. More explicitly, the work can be seen as a response to the Daoist quest for immortality. In particular, Daoist influence is evident in the work's Naegyŏng Chapter.

The scholar Ch'ujŏk put together the Myŏngshim pogam, a short compendium of verses to be used as a guide to self-cultivation. Although this work, which has continued its popularity to the present day, consists primarily of quotations from Confucian texts, there are many passages from Daoist thinkers.

In Korea, Daoism had a significant influence on Chosŏn thought. Neo-Confucianism, the state ideology of Chosŏn, was already imbued with many Daoism ideas from its inception in Song dynasty China.

By the end of Chosŏn, the influence of Daoism could again be witnessed in beliefs of the millenarian movements that began to appear throughout Korea. Chief among these was the Tonghak Movement, founded by Ch'oe Cheu (1824-1864). Ch'oe preached a combination of Daoist, Buddhist and shamanist ideals with the Neo-Confucianism of Sŏ Kyŏngdŏ (1489-1546). He proclaimed far-reaching goals -- ideals such as equality for all men, in
addition to the chanting of magical verse as a form of protection. In particular, his writings in *Yongdam yusa* (Hymns from Dragon Pool) are noted for their many Daoist elements.

**Daoism in Korean Literature**

During the turmoil existing in Chosŏn after the 1592 Japanese invasion, many popular writings appeared that reflected the people's desires to escape the turbulence that now dominated their lives. Novels written by members of the intelligentsia, such as *Hong Kiltong chŏn* (The Tale of Hong Kiltong) by Hŏ Kyun (1568-1618), began to suggest alternatives to the Neo-Confucian belief system that gripped Korea. These works revealed protagonists well-versed in the Daoist arts which they used to achieve dominance over the ruling apparatus. Other anonymous works mirrored the collective longing of the common people to escape the hardships and burdens of everyday life, through the assistance of supernatural forces that had harnessed the power of mystical Daoism. *Sukhyang chŏn* (The Tale of Sukhyang) is one such work. In addition to these literary works, there were those composed by self-proclaimed Daoists who, having withdrawn from Confucian society, sought to form their own communities, governed according to Daoist principles. A representative work of this genre is the *Ch'onghak chip* (Collected Works of Ch'onghak) written by Cho Yŏjŏk in mid-Chosŏn. This is in the form of a literary miscellany and is a record of the deeds of various individuals who were skilled in the Daoist arts of alchemy, the elimination of emotions, and invoking trances, among others. The work is also exclusive in that it sought to establish a Daoist lineage in Korea showing the existence of this religion since the time of the legendary founder of Korea, Tan'gun.

The inclusion of Daoist beliefs and practices can also be witnessed in the oral literature of the common people. In the genre of *p'ansori* many of the themes of these dramatic performances reveal roots in Daoist beliefs *Shimch'ŏng ka* (The Song of Shimch'ŏng) reveals a strong belief by its composer group in the necessity of being assisted by supernatural forces in order to achieve a happy life. Another *p'ansori* work, *Hóngbu ka* (The song of Hóngbu) reveals a motif of supernatural assistance by animals that leads to an abundant life. The popularity of these works indicates that the commoners believed one way in which to escape their many hardships was through the intervention of supernatural forces. Significantly, too, the appeal of Daoism lay in the hope that it would provide the commoners with an elixir to expunge the troubles which plagued their everyday lives. Other genres of oral literature, most notably *muga* (shaman songs), also show the extensive incorporation of Daoist themes into their repertoire.

**Other Daoist Influences**

Where religion is concerned, Daoism has had rather a pervasive influence in many aspects of Korean religions. Perhaps this is most notable in shaman beliefs in Korea. In examining the pantheon of deities in Korean shamanism, the number of these entities having a connection to Daoism is quite striking. Moreover, the adoption of Daoist concepts such as the Jade Emperor (Okhwang sangje) into shaman beliefs is clearly a manifestation of the syncretic nature of these two belief systems. Daoist influence can also be seen in Buddhism, and the early Nirvana sect of Buddhism clearly exhibits this. This sect, which holds that an immortal Buddha- nature exists within all creatures, was propagated most notably by the late-Koguryŏ monk, Po'd, in an attempt to counter the prevalent appeal of the Daoist belief in immortality.

**Modern Daoism**

The influence of Daoism is still felt in Korea, and can be attested to in the manifestation of Daoist symbolism in many different areas. However, it must be noted that the syncretic nature of Daoist, Buddhist and shamanistic beliefs provides many ambiguities when trying to state exactly where the origin of a particular practice lies. One manifestation of Daoist
beliefs is seen in the fact that the Chinese characters for longevity (su) and happiness (pok) are used to decorate many everyday objects, such as eating utensils, blankets and cushions. This reveals that Koreans today are continuing their quest for the realisation of these mainstays of Daoism. Another area in which Daoist beliefs can be seen is the use of amulets (pujok) to ward off evil influences. These are often placed above doorways or carried by a person in order to prevent misfortune. However, it is the manifold ways in which Daoism has influenced both Korean religious and philosophical thought that remains its greatest legacy.

Daoism has also influenced a number of recent religious movements. Daoist practices, such as breathing exercises, meditation in fixed postures and physical exercise programs, have recently enjoyed considerable popularity. Many of these new movements, including Tanhak, Sŏndo, Kuksŏndo, and others of like ilk, which are almost exclusively interested in Daoist practices as opposed to ideology, are not genuine religious movements in the strict sense of the term.

Judging from the large number of Korean translations and commentaries of the Laozi and Zhuangzi, there has also been a continuous interest in philosophical Daoism in the modern era.

Design

In Korea, designs have been used to decorate clothing, pottery, handicrafts, sculptures, buildings, religious art and other objects. The origins of Korean design are complex. Numerous waves of migrants came into the Korean peninsula from the north. Each successive migration brought in different design techniques and art motifs. In addition, these people were, from earliest times, influenced by the related Mongolian and Manchurian tribes to the north and the Yangtze River culture to the west.
Decorative designs were in use as early as Korea’s Palaeolithic Age. During the early Neolithic Age, simple pottery was decorated by affixing strips of clay to a vessel. Around this time, simple line drawings also became common on both pottery and tools. The Middle Neolithic Age, on the other hand, is characterised by comb-pattern (ch’al’mun) pottery. Produced from about 5000 B.C.E., this pottery was made by adding stacks of circular strips or by repeatedly wrapping a single coil around a piece of pottery. The body of the pot was decorated with thin lines (like those from a comb), each row at opposite angles. This pattern has been found in Inner Mongolia, Manchuria, Japan and throughout north Asia from Scandinavia to Siberia. During the Late Neolithic Period, the use of painted designs spread to Korea from China. During this period, wave and thunderbolt designs also appeared.

With the advent of the Bronze Age, geometrical designs such as the comb-pattern became much more refined. A mirror from this period (National Treasure no. 141) shows exquisitely detailed triangles, concentric circles and radiating lines. In addition, decorated bronze daggers, mirrors, buckles, etc., from the confederated kingdoms period have been excavated. These artifacts are usually decorated with geometric patterns or by realistic images of animals. Rock drawings from this period often show hunting scenes on land and sea or geometrical designs.

Design styles and techniques became much more diverse during the Three Kingdoms Period. The early design motifs from this period were based on indigenous beliefs related to ancient Altaic myths and Shamanism. For example, early gilded crowns have metal strips in the shape of trees and antlers, an indication of the early veneration of trees and deer. The crowns are also decorated with small, curled pieces of jade.

With the introduction of Chinese culture during the Three Kingdoms Period, Korea came into contact with Buddhist religious designs and images from as far away as central Asia and India. The vast Buddhist cosmology provided artists with an abundant stock of religious and mythological motifs to draw from. As each of the Three Kingdoms adopted Buddhism, the symbolism of Buddhist cosmology blended with that of autochthonous beliefs, giving birth to distinctively Korean motifs and designs. Along with Buddhism, Daoism was introduced to Korea from China. The Daoist ideal was the immortal hermit who passed his time in leisure among remote mountain retreats. Daoist influence accounts for the recurring theme of mountainous landscapes in Korean art, as well as the frequent use of longevity symbols.

During the Greater Shilla Period, Buddhist influence and central Asian influence via China led to use of much more elegant and refined designs. Elaborate floral designs and arabesque became popular at this time, some design motifs coming from as far away as Persia. A distinctive characteristic of Greater Shilla art is its use of symmetrically placed objects such as a pair of dragons, phoenixes, fairies or celestial horses. In addition, tiles, pottery and gilded works from this period are often decorated with lions, zodiacal figures or with the imaginary Buddhist song-bird called the kalavinka.

In the Koryo Period, Buddhism continued to enjoy government support. At the same time, Confucian ideals exerted a much greater influence. The Daoist love of nature combined with the Confucian fondness for simplicity and frugality. As a result, the intricate designs of the previous period gradually gave way to idyllic landscapes. Such pictures consisted of descriptive pastoral scenes, such as a scholarly gentleman sitting under a pine tree, watching cranes frolic in the distance. In addition, there were many depictions of plum flowers, orchids, chrysanthemum and bamboo, since these four plants were said to represent the spirit of the cultivated gentleman.

During Choson, Korean artists were initially influenced by China’s northern school of painting. However, during the late Ming Dynasty, Choson artists came under the influence
of the popular painting style of the Southern Sung Dynasty. As a result, Korean artists started to do paintings using ink on white paper. During mid-Chosŏn, the subject matter of such paintings became more diverse. In addition to showing mountain landscapes and leisurely scholars, artists used black ink to depict simple objects like plums, bamboo or grapes. During late Chosŏn, longevity motifs also became popular. The ten longevity symbols (the turtle, deer, crane, pine, bamboo, sun, clouds, rocks, water and the magic fungus of everlasting youth) were often incorporated into both religious and secular design motifs. In addition, various auspicious symbols, such as the unicorn (a mixture of a dragon and other animals), turtle, phoenix and dragon became increasingly common.

Some old motifs continued to be used. From earliest times, Koreans had been concerned with fertility. As a result the fish, carp and 'hundred boy' motif were used on folded screens and in pictures in order to encourage fertility. Pomegranates were also used as a fertility motif, their numerous seeds suggesting abundant offspring. In addition, Koreans continued to use Chinese characters as a basis for designs. The complex characters for long life (su) or good fortune (pok) were often repeated or alternated. Other designs were used to drive away evil spirits. Depictions of the dragon, phoenix, tiger and turtle were believed to prevent evil from the east, south, west and north respectively. For similar reasons, complex talisman designs (originally from China) resembling Chinese characters were also employed. These designs, usually red on white paper, were pasted on walls and above doors to ward off evil influences. Numerous designs, such as the Buddhist swastika, chain links or arabesques, continued to be used on lattice work on doors and buildings. Many of these design motifs were used to represent long life or to guard against evil spirits.

Chinese homophones also influenced symbolism in China and Korea. For example, the Chinese character for 'deer' (rok) has the same pronunciation as the character for 'emolument' (rok), thus deer are sometimes used in Korean art to represent financial success. Likewise, the character for 'bat' (pok) and 'good fortune' (pok) have the same sound; hence, bats have traditionally been a favourite motif in East Asia.

The vast mixture of designs and motifs, derived from multiple layers of history and culture, has made Korean design a particularly enigmatic puzzle. Korean Buddhist temples, in particular, demonstrate the complex origins of Korean design. These large wooden structures are elaborately decorated, on both the inside and outside, with a number of motifs from Buddhist, Daoist and indigenous sources. Each building is covered with detailed patterns, called tanch'ŏng, consisting of intricate patterns of bright red, blue, green and other colours. Tanch'ŏng is normally applied to the beams and girders, the brackets on the column heads, the corners of the roof where the bracket arms are joined to the roof frame, the eaves and ceiling, and the latticework of the windows and doors. The panels on the outside of the various temple buildings usually depict scenes from the Buddha's life, stories of the temple's founder or the famous Ten Ox-herding Pictures. However, many of the designs painted directly onto the interior or exterior of the buildings show dragons, goddesses and other motifs that are indigenous or come from China. The statues within temples and shrine halls are usually plated with gold. Much of the iconology, including the standardised motifs and complex hand positions (mudra) of the figures, are ultimately derived from Indian or central Asian sources.

Korean design is a synthesis of many influences, both foreign and indigenous. Although Korean, Chinese and Japanese designs and motifs share many features, Korean design has some subtle features that make it unique. Korean artists tend to break up a large design into many smaller elements like those of a mosaic. In addition, Korean artists especially value spontaneity, and are not greatly concerned about technical perfection. This lack of self-consciousness gives Korean designs a unique softness and naturalness.

Bibliography
The *Dong-A ilbo* (Tonga Ilbo, East Asia Daily) is the second oldest newspaper currently published in the ROK, with its inaugural issue on 1 April 1920 being less than one month after the first issue of the *Chosŏn ilbo*. The *Dong-A ilbo* had an initial staff of seventy-eight, including Kim Songsu. Its first president was Pak Yonghyo; its managing editors Yu Kun and Yang Kit'ak; its editor-in-chief Chang Tŏksu; and its general editor Yi Sanghyŏp.

From its inception, the *Dong-A ilbo* was a staunchly nationalistic newspaper, which sought to establish itself as a means for the Korean people to express themselves; as a bastion of democratic rights; and as a strong supporter of cultural development. Not surprisingly, the *Dong-A ilbo* was more often than not the subject of Japanese oppression during the colonial period, as witnessed by its temporary closure only two weeks after its inception for the alleged anti-Japanese sentiments it published. Perhaps the best-known incident for which the newspaper was closed occurred after the publication of a photograph of the Korean athlete, Son Kijong, who had won gold in the marathon in the 1936 Berlin Olympics, with the Japanese flag on his running-strip obliterated. This published photograph resulted in the newspaper being shut down for over ten months, from August 1936 to June 1937, and it represents the longest enforced closure of the *Dong-A ilbo*.

As time passed, the publication had developed from its original four pages to twelve pages by early 1936. In the late 1920s, it fluctuated between a morning and evening edition, but by November 1932, it was regularly on the streets twice daily. Its circulation was by far the highest of any newspaper in Korea by the late 1920s, being put at 40,968 by the Japanese Government General in 1928. This was ahead of its nearest competitor, the *Maeil shinbo*, which boasted a circulation of 23,946. The staff of the *Dong-A ilbo* continued to put the interests of the Korean people before those of the Japanese authorities and as a result, the newspaper was subjected to even greater censorship following the outbreak of the China-Japan war in 1937. As a result of unceasing harassment by the colonial government, the *Dong-A ilbo* ceased publication in 1940.

After Korea's liberation in 1945, the *Dong-A ilbo* resumed publication and ever since it has served as one of the standard-bearers of the Korean press. Even during the tumultuous days of the Korean War, the *Dong-A ilbo* continued publication from its temporary abode in Pusan. The sharply critical style of its columns, however, brought down the wrath of the Syngman Rhee (Yi Sungman) government. Consequently, the newspaper was closed indefinitely in March 1955. This closure, the fifth in its history, lasted only one month before publication recommenced. Over the past forty or more years, the *Dong-A ilbo* has been in the vanguard of Korean journalism and has received many accolades for its fair and explicit reporting.

**Dong-A University**

Dong-A University (Tonga Taehakkyo) is a private university situated in Saha Ward in Pusan. Founded as Tonga Haksuk in Pusan's Sujŏng-dong in August 1947, it was
officially accredited as Dong-A College in December of the following year. With Dr. Chung Gi-won (Chŏng Kiwŏn) as its first dean, the college consisted of two divisions, Liberal Arts and Natural Sciences, and Law. In 1949, the college was relocated to Pŏmil-dong in Pusan.

The college expanded throughout the 1950s under the leadership of Dr. Chung Jae-hwan (Chŏng Chaehwan), who had been chairman of the foundation body. The divisions of Agriculture; Engineering; and the Evening College were established in 1954, 1955 and 1956 respectively. In 1958, a master's program was inaugurated, and in the following year, the college attained university status. In 1962, its doctoral program was established. Around this time, the university library, museum and science hall were completed, and a number of research institutes were established.

The Graduate School of Business Administration came into being in 1970 and this was followed by the Graduate School of Education. In 1979, the College of Engineering was moved to a newly-constructed second campus in Hadan-dong, in the western part of the city.

In the 1980s, the university continued to expand with a number of new departments and attached research centres. In particular, it was during this period that the Research Institute for Basic Sciences (Kich’ŏ Kwaḥak Yŏn’guso) was established, along with the Institute for German Study (Togirhak Yŏn’guso) and the Ocean Resources Research Institute (Haeyang Chawŏn Yŏn’guso).

Today, the university consists of eleven colleges -- the Colleges of Administration; Arts; Business Administration; Engineering; Human Ecology; Humanities; Medicine; Natural Resource and Life Sciences; Natural Sciences; Physical Education; and Social Sciences. Six graduate schools are in place, -- the Graduate School, and the Graduate Schools of Business Administration; Education; Industry; Mass Communication; and Policy Sciences. Other facilities include the university Museum and medical centre. The museum was opened in 1959 with Chŏng Chaehwang’s collection of almost nine-thousand pieces. The collection includes classical works of literature; paintings; calligraphy; pottery; tiles; old utensils; and some thousands of archaeological items. The university hospital opened in 1990, and was expanded into a medical centre in 1995.

University publications include The Dong-A Herald in English and the Tongadae Hakpo in Korean.

**Dong-eui University**

Dong-eui University (Tongŭi Taehakkyo) is a private university situated in Kaya-dong in Pusan. Founded by Kim Imshik as Tongŭi Hagwŏn in October 1966, it changed to Kyŏngdong Kongŏp Chŏnmun Hakkyo in December 1976, and then became Dong-eui College in January 1979. With Kim Chubong as its first president, the college quickly expanded its original six departments to twenty-five in the space of one year.

In September 1983, the college attained university status, and it then consisted of the Colleges of Commerce & Economics; Engineering; Humanities; Law; and Natural Science. A month later, a master’s program commenced, followed by a doctoral program in November 1987. In 1990, the Dong-eui Medical Centre (consisting of an oriental-medicine clinic and a general hospital) was established. In 1996, the university concluded an academic exchange agreement with seven colleges and universities in the Pusan area, and an exchange agreement was reached with Kyungsan University in the following year.

Today, the university consists of eight colleges (Arts; Commerce and Economics; Engineering; Human Ecology; Humanities; Law; Natural Science; and Oriental Medicine).
and four graduate schools (the Graduate School, and the Graduate Schools of Industrial Technology; Public Administration; and Small Business). Including the evening-school curriculum, the university has sixty-one departments. As of 1998, 3,420 undergraduate and postgraduate students were enrolled.

**Dongguk University**

Dongguk University (Tongguk Taehakkyo) is a private university situated in P’ildong in Seoul. Its history can be traced to Myöngjin Hakkyo, a school established in 1906 at Wŏnhŭng Temple outside Tongdaemun (Seoul’s East Gate) at the present site of Ch’angshin Primary School. With Yi Podam as its first president, Myöngjin Hakkyo’s aim was to introduce modern educational methods into Korean Buddhism. In April 1910, the school was reorganised as Pulgyo Sabŏm Hakkyo, and in July 1914, its name was changed to Pulgyo Kodŏng Kangsuk. In the following year, it was renamed Changang Hangnim.

Many of the school’s students and faculty participated in the March First Movement (1919). In the following years, large numbers of students and staff members fled to remote temples in the countryside or to Shanghai or Manchuria, making it extremely difficult to conduct regular classes. As a result, the school was shut down by the Japanese Government General in September 1922. In December, Buddhist monasteries donated funds for the revival of the school as Chosŏn Pulgyo Chungsang Kyomuwŏn. The school was renamed Pulgyo Chŏnsu Hakkyo in 1928, Chungang Pulgyo Chŏnmun Hakkyo in 1930, Chogye Hagwŏn in 1940, and then Hyehwa Chŏnmun Hakkyo later in 1940. In 1944, the school was again closed by the colonial government.

In September 1945, the school was re-established, becoming Dongguk College in the following year, with Hŏ Yun at its helm. In 1949, it was renamed Tongguk Haguwon, and as the Korean War entered its final stage, its status was raised and it became Dongguk University, with four colleges and ten departments. Kwŏn Sangno was its first president. Steady expansion of the university led, some twenty-five years after its birth, to the establishment of a second campus in Kyŏngju in October 1978.

At present, the university consists of eighteen colleges and nine graduate schools. At the Seoul campus, are the Colleges of Arts; Buddhism; Business & Economics; Education; Engineering; Law; Liberal Arts; Life Resources Sciences; Science; Social Sciences; and the Evening College; as well as the Graduate School, and the Graduate Schools of Buddhism; Business Administration; Cultural Arts; Education; Industrial Technology; Information Industries; and Public Administration. At the Kyŏngju campus are the Colleges of Buddhist Culture; Commerce & Economics; Humanities; Law & Political Science; Medicine; Natural Sciences; and Oriental Medicine; as well as the Graduate School of Regional Development. At the Seoul campus, there is also the Dongguk University Museum.

**Economy**

1. **Economic History**

Economy, premodern.

Archaeological evidence shows that the Korean peninsula was inhabited by Lower Palaeolithic Age people by at least 500,000 B.C.E. Archeological discoveries suggest that the primary economic activities of these inhabitants were hunting and fishing. However, it is the Neolithic inhabitants who are most often regarded as the direct ancestors of today's Koreans. They arrived around the third millennium B.C.E. Pottery discovered during this period shows that their primary activities were food-gathering, hunting, and fishing. But it was not until the 15th c. B.C.E. (the Bronze Age) that agriculture was introduced into the economy. Rice was cultivated in the south. Increased food production and population growth led to social differentiations based on an unequal access to economic resources and clan or kin groups. Early labour specializations were peasant, artisan, and bondsman.

668-935.

Korea's history as an independent nation is often traced back to 668 C.E. when the Shilla Kingdom (57 B.C.E. - 935 C.E.) conquered two earlier Korean kingdoms - Koguryo (37 B.C.E. - 668 C.E.) and Paekche (18 B.C.E. - 660 C.E.). Buddhism, first adopted by Koguryo, then by Paekche and Shilla, reigned. The early economy of this kingdom was dominated by the activities of a few merchants, like Chang Pogo, who developed a maritime-based trade network linking Korea, China, and Japan. His headquarters were in southwestern Korea (Wando Island). This was the beginning of Korea's long-history in the shipbuilding and export-import industries. Celadon pottery was a key item involved in the trading exchanges. Today, Koryo bluish-green celadon pottery is still a popular export item.

During the Unified Shilla Kingdom (618-935), scholars specializing in diplomatic correspondence, medicine, mathematics, and astronomy were brought into public service. Peasants became eligible to cultivate lands set aside by the equity land system (ch'ŏngjŏn) and paid for this right by returning in kind rice, millet, barley, and wheat - the nation's first tax system. Reservoirs were constructed to irrigate the rice fields. Overall, the Shilla people were relatively affluent.

918-1392.

As the Shilla Kingdom waned, the Koryo Kingdom (918-1392) emerged, led by Wang Kon, a Shilla dissident, who built the kingdom through a network of landlords and merchants. Key economic developments attributed to this time period, with lasting economic ramifications for Korea's economy, were accelerated printing technologies (wood block and metal), continued refinement of the celadon technology, the suspension bridge, the spinning wheel, and a water clock. The foundation was laid for a centralized government. A civil service examination system to recruit government officials was established as was the principle of allotting land to public officials for public activities. But land policies became the centre of controversy as only government officials, military, and a few merchants owned all the agricultural land. Confucianism also appeared in reaction to the public's criticism of the wealth and power of the Buddhist monasteries.

1392-1864.

This period, known as the Chosŏn period, or the Chosŏn Dynasty, saw many important developments that have had a lasting impact on Korea's economy. The adoption of Confucianism by the state instilled an ethic that has permeated Korean society ever since. This ethic stresses cooperation and harmony and one's duty to society-at-large rather than to
oneself. (This appears in direct contrast to the Western philosophies stressing competition and government's responsibility to protect individual rights which some say explains the difficulty Korea has had in moving to a strictly free market-based economy.) During the early days of General Yi's power, he imposed a major land reform - rank land law (Kwajŏnpŏp). The aristocrats (Yangban), were given land by their rank and were free to trade it. They were permitted to collect rent from peasants who were given the right to cultivate the land. The rent was limited to half the crop instead of much higher proportions collected in the past. The effect was to enhance the peasants' economic condition somewhat - but only temporarily. Throughout Chosŏn, land policies and taxing policies were periodically used by the yangban to build wealth and power at the expense of the commoners (sangmin) and the lowborn or slaves (ch'ŏnmin). Yangban were those who directed the economy, government, and culture of Korea. Even today, there is animosity between the average citizen and government leaders over land policy.

During Chosŏn, development of knowledge was given a high priority, especially in the areas of administration, phonetics, economics, science, music, medicine, and humanities. The Korean alphabet, Hangul, was created to make it easier for the common person to communicate. (The Korean literacy rate today is one of the highest in the world.) Other long-lasting accomplishments were detailed works on Korean agriculture, medicine, astronomy, and musical notation. The world's first ironclad ship, known as the turtle ship (kŏbuksŏn), was built. It is regarded by some as the predecessor of Korea's modern shipbuilding industry - the world's largest by 1987.

Agriculture was the dominant economic activity during Chosŏn and was given priority over manufacturing and commerce through a strictly enforced class system. Under this system, the rank ordering from highest to lowest was: scholar, farmer, manufacturer or artisan, and merchant. However, farmland actually disappeared during this time period as the population grew. Land ownership in general became more concentrated in the hands of a few. One of the reasons was that the central government gave land to local government officials to cover the costs of their salaries and local government services and activities. There were a series of agrarian tax revolts in 1812 and 1862.

The major commercial activity during the Chosŏn occurred through a five-day market day system (changnal) linking communities within walking distance. The primary items for exchange were food and handicrafts. The lack of a well-developed money system and transport difficulties constrained the development of commerce beyond this system. Foreign trade during this period was low volume and pretty much restricted to exchanges between government leaders in Korea, Japan, and China.

Early modern economy, 1864-1910.

This period can best be described as one during which other nations (Great Britain, China, Russia, Germany, United States, and Japan, among others) sought entry into Korea's economy, often forcefully. American troops were repulsed in 1871 when they tried to invade Kanghwado Island. More difficult to repel were the aggressive actions of the Japanese and Chinese. As early as 1868, the Japanese began pushing for trade relations with Korea with an eye toward its natural resources and abundant rice crop. Faced with the possibility of a Japanese invasion, Korea signed a twelve-article treaty establishing diplomatic relations with Japan in January 1876 (Treaty of Kangwha). It was followed in July 1876 by a trade agreement which effectively gave Japan a monopoly over Korean markets. Japanese merchants were mostly interested in buying rice, soy beans, cattle hides, and alluvial gold for sale back home at handsome profits.

These foreign intrusions created conflicts among Koreans. A number of Confucianists urged that European capitalist encroachment (which the Japanese had adopted) be repelled. Others urged Koreans to accept capitalism in order to strengthen the economy and to join
with China, Japan, and the United States in defense alignments aimed at deterring Russian intrusion which appeared to be eminent. Ultimately, Korea signed treaties of commerce with them all but the foreign powers were the primary winners. Korean farmers and peasants became impoverished and took their anger out on Korean's ruling elite by holding huge demonstrations, then violent revolts in 1894 (Tonghak uprising). But it was the Japanese who gained outright control over Korea in 1905 through another treaty (Protectorate Treaty, 1905). By that time, Japan was already imposing its own finance, banking, agriculture, forestry, mining, transportation, education, and cultural policies on Korea. The Japanese even had control of Korea's currency. Some 30,000 hectares (75,000 acres) of unclaimed government-owned land and military farms were confiscated by Japan through its Oriental Development Company founded in 1808. The ODC then coerced poor, uneducated Korean land-owners to sell their land to it, greatly reducing the number of Koreans holding property. During this period, economic development took place, but solely on the terms of the Japanese - for their benefit. Koreans generally suffered economically.

Economy under Japanese Colonial Rule, 1910-1945

Japan ruled Korea for 35 years and therefore controlled the Korean economy throughout this period. The economy grew at a rate of almost 4.0 per cent per annum, but the Japanese government and citizenry were the major beneficiaries. The Koreans actually suffered a decline in their standard of living. Although exports increased (mostly rice and other agricultural products and natural resources in short supply in Japan), most of the profits went to Japanese firms. Korea became the 'import' capital for Japanese citizens exported from Japan to alleviate overcrowding there. It also served as the training ground for the Japanese military in its preparation for the invasions of Manchuria and China. Many young Koreans were drafted to serve in the Japanese military arm.

The long-lasting positive economic benefits to Koreans from this period of Japanese occupation were large-scale infrastructure improvements (railroads, electric utility plants, communication facilities), a first-hand familiarity with the Japanese way of doing business, and, for many of the young who served in the Japanese army, an understanding of large-scale organizational management and behaviour.

The current strong Korean desire to catch up to and surpass the Japanese economy stems from animosities formed during this period and a feeling on the part of many Koreans that their economy's growth was unfairly obstructed by the Japanese occupation.

Partition to the Korean War, 1945-1953.

Japan's defeat in World War II led to Korea being split at the 38th parallel, a real set-back to Koreans who had hoped for the opportunity to be an independent state governed by Koreans. As part of the World War II settlement, North Korea was to be occupied by Russian and South Korea by the United States until an acceptable government under which the two would be united could be agreed to. The subsequent Cold War between Russia and the U.S. prohibited this unification. Instead, governments mirroring their respective ideologies were implanted on each side of the 38th parallel and remained even after the departures of the Russians and the Americans.

During the period of U.S. occupation (1945-1948), there was so much political conflict over how to structure the new government that it was difficult to focus on how to revive the economy. From an economic recovery perspective, it is often said that the South had the more difficult challenge because it was left with most of the population and only the agricultural sector to support it, whereas the North got the bulk of the industry and infrastructure. In spite of this disadvantage, the per capita income of Koreans increased rapidly during this period, primarily because the Japanese were no longer draining the economy.
The recovery was short-lived. The Korean war, 1950-53, destroyed what little infrastructure South Korea had left after post-World War II split and wrecked the economy. It further shook Koreans' confidence in the ability of their governmental leaders to solve the nation's problems.

This was one of the most difficult times in the economic, political, and social history of Korea. The period began with the problems left behind by the Korean war: thousands of war widows and orphans; large numbers of unemployed farmers whose lands had been devastated and who migrated to the cities looking for work; unemployed university graduates; discharged soldiers; and other unemployed workers whose jobs were destroyed by the War. Governance during this time period was autocratic and corrupt, inefficient and inequitable, sparking major protests, demonstrations, and ultimately violence and the overthrow of the Syngman Rhee government. The major approach to economic development was import substitution of non-durable consumer and intermediate goods behind a protective wall of high tariffs and stringent quotas. This did little to turn the economy around and was quickly abandoned once systematic economic planning guided by professional economists began in 1961. In the nine-year period following the Korean War, the annual average growth rate of GNP was only 3.7 per cent and that of per capita GNP was 0.7 per cent. Commodity exports were negligible, usually amounting to less than 1.0 per cent of GNP. The domestic currency was highly overvalued. Industrial incomes remained at subsistence levels and domestic savings were practically non-existent. As described by Suh (1986:4-5), 'The Korean economy in the post-Korean war period was characterized by political instability, a rapidly expanding money supply, rampant inflation, an extremely complex market system, and an inability to meet most of the basic needs of consumers. Additionally, due to the lack of planning experience, the Korean government endured a long period of trial and error in its development projects.'

The most positive long-lasting economic benefit from this time period emanated from a large infusion of government spending for education and the elimination of the class system for employment opportunities. During this period, the illiteracy rate dropped from 78 per cent to 28 per cent and school enrolments at all levels burgeoned. This educational foundation became a critical base from which to launch Korea's economy recovery shortly thereafter.

Another key development during this period was land reform. The Land Reform Act of 1949 established a limit on farmland possession. The percentage of full owners increased from 16.5 in 1947 to 71.6 by 1964. Over time the earnings of small farmers increased and the rural economy improved.

But as late as 1961, Korea was still suffering from many difficulties commonly faced by less developed nations. The unemployment rate remained high, savings were negligible, and the population was growing by 3 per cent annually adding more stress to an already poor economy. The nation had few lucrative exports and was highly dependent upon imports for both raw materials and important manufactured goods. Most of the economic planning efforts during this time period were largely formulated and carried out with the assistance of the U.S. They concentrated on establishing priorities for spending U.S. foreign aid (the Five-Year Korea Economic Reconstruction Plan, 1953/54-1957/59; the Three Year Task Assistance Program of 1963). The nation was still primarily a traditional, closed agrarian economy; approximately two-thirds of the working population was engaged in agriculture. Its industrial base (not large to begin with) was destroyed in the course of the Korean War.

Economy, Contemporary, 1961-Present.
Most economic histories of Korea begin with the early 1960s. Under the new president, Park Chung-hee, formal economic planning and use of the five-year plan to guide the economy's growth and development began. The Economic Planning Board (EPB) was created in 1961 and given a strategic role in this process. While the first Korean-developed plan was drawn up by the Economic Development Council of the Ministry for Reconstruction (Three Year Economic Development Plan for 1960-62 - the first half of a Seven-year Economic Development Plan 1960-1966), it was never implemented due to the Student Uprising of April 1960 and the military coup d'état led by Park Chung-hee. Consequently, the first plan to be formulated and implemented by Koreans under the guidance of the Economic Planning Board was for 1962-1966.

The first major economic recovery decision was whether to take an import substitution route or to adopt an outward-oriented strategy emphasizing exports and participation in the world economy. The government chose the latter which represented quite a drastic departure from the nation's long-standing preference for isolationism. But it was a necessary route in light of Korea's poor natural resource endowment (especially the lack of oil), its shortage of arable land - at that time only 11 per cent of the nation's total land, and its small, rather undeveloped domestic market. 'The essence of the outward-looking strategy in the 1960s was to promote labour-intensive manufacturing exports in which Korea had a comparative advantage.' (Suh, 1986.)

The government's role in guiding economic development has been strong since the beginning of the reconstruction period. (See Economic planning.) Government policies, especially in the initial stages of economic growth following the Korean War, often provided monopolistic conditions that were conducive to the success of large, family-held corporations called chaebol and that of the Korean economy as well. A strong partnership between government and big business aimed at building firms able to compete internationally was regarded by Korean political and economic leaders as the fastest, most efficient way to achieve fast economic growth.

The emphasis of the five-year plans changed as the economy developed but clearly rapid expansion was the focus of the first three plans. (See Table 1.)

The basic objective of this initial plan was to reverse the decelerating trend in the economy and to attain a substantial rise in economic growth rates by investing an increasingly larger portion of the expanding gross national product in the expansion of the means of production. The plan emphasized the development of three basic industrial sectors (energy, agriculture, public infrastructure) to 'build a strong industrial base for the development of a future self-sustaining economy.' Its targeted growth rate for the period was 8.3 per cent. The plan was overly-ambitious and reflected the inexperience of its drafters in dealing with an export-driven economic recovery plan. It had to be adjusted downward in 1964.

Adjusted First Five-Year Plan (1964-1966).

This plan was drafted to correct the first plan's failures to consider such restraining factors as:

- the repayment of loan principal and interest;
- effect of raw material imports on economic growth;
- lack of attention to the role of public finance in economic growth;
- insufficient attention to long-term growth potential;
- neglect of inter-sectoral and inter-project relationships and to individual project feasibility studies;
- insufficient support measures for actual execution of the Plan; and
- an inadequate commodity supply and demand schedule.
The basic change, however, was in the projected growth rate, rather than in the policy direction, with the exception of exports being singled out as an area to be emphasized. The growth rate was revised downward from 8.3 per cent to 7.1 per cent, but the actual growth rate was 7.8 per cent.

During this early period, the government depended heavily on market mechanisms to drive the economy. To mobilize domestic savings, in 1965 the government allowed commercial banks to raise their interest rates on deposits from 12 per cent to as high as 26.4 per cent. (Savings deposits in commercial banks nearly doubled annually for three consecutive years thereafter and the ratio of time and savings deposits to GNP rose from 3.8 per cent in 1965 to 21.7 per cent in 1969.) To encourage the inflow of foreign investment, the government enacted a comprehensive Foreign Capital Promotion Act under which the Korean government underwrote in certain instances the risk borne by foreign investors. To promote exports, the government devalued the Korean won by almost 100 per cent, thereby creating a unified exchange rate. It also provided short-term export financing for Korean businesses, allowed tariff rebates on materials imported for re-export use, and simplified customs procedures. The government moved to liberalize imports by shifting from a 'positive list' of import controls to a 'negative list' system which required proof that an item required import protection rather than proof that it did not. The result was a growth in imports well in excess of the growth in exports ($501.9 million v. $137.8 or 38.6 per cent v. 18.7 per cent). However, prices rose too and inflation became a serious problem, exceeding 30 per cent by 1964.

The First Plan's goal to use export policy to improve the nation's international balance of payments naturally yielded trade policies with this emphasis. Eight specific paths were proposed:

- balance demand and supply of agricultural products, and growth of domestic infant industries by means of import controls on consumer goods;
- product increases of import substitution industry;
- enlargement and consolidation of export compensation system;
- reinforcement of foreign trade financing including exports storage financing;
- enlargement and enrichment of export subsidy, tax reduction, export-import link system;
- overseas market research and increased export promotion;
- quality improvement and standardization through export inspection system; and
- active participation in bonded processing trade.

(From The Federation of Korean Industries, Korea's Economic Policies 1945-1985.)

During this period, Korea's reliance on trade related to exports was 8.0 per cent; for imports 16.7 per cent. The Export Promotion Council was founded and actually chaired by the President of the Republic of Korea, signifying the high priority given to the export strategy.

The government also overhauled its domestic tax administration during this period. In 1966, the National Tax Administration was created under the Ministry of Finance. The immediate purposes were to minimize price distortions stemming from inflation, to increase government savings, and to eliminate chronic budgetary deficits. It was given expanded powers over tax scheduling, auditing, direct taxation collection, and imposition of substantial penalties and fines on delinquent firms. This reform later turned out to play a key role in helping finance the ambitious development programs as revenues increased substantially and deficits disappeared.

The basic objectives of this Five-Year Plan were similar to those of the first - to promote the modernization of the industrial structure and to build the foundations for a self-sustaining
The key elements were export expansion, capital mobilization, and efficient manpower utilization. Emphasis was placed on:

- achieving self-sufficiency in food production;
- investment in chemical, machinery, iron and steel industries to accelerate and diversify industrialization;
- expansion of exports;
- control of population growth rate through family planning; and
- raising the level of technology and productivity to accelerate economic modernization of all sectors.

The plan was also significant for initiating the New Community Movement - *Saemaul Undong* - to assist farmers in improving their economic and living conditions. The projected growth rate for this plan was 7.0 per cent; the actual rate was 9.6 per cent.

During this period, both exports and imports grew. Exports totalled $698.6 million (25.8 per cent) and imports $1,572.7 (17.9 per cent). Once again, the growth rate for imports exceeded that of exports, resulting in a trade deficit of $800 million for the period. (Many of the exports depended upon the import of key parts and components.) While the GNP rose, prices stabilized, and domestic savings increased. However, domestic savings did not keep pace with the need of both the public and private sectors to expand. The reliance on foreign debt increased even more.

Under the first two plans, the economy experienced an average annual growth rate of 9.5 per cent. On a *per capita* basis, real growth for the whole period was 6.9 per cent, in sharp contrast with the 0.7 per cent of the 1953-1961 period. Much of this growth stemmed from foreign trade which itself changed in character over this period. The share of primary products exported declined from 73 per cent of the total in 1962 to 14 per cent in 1971, while that of industrial products increased from 27 per cent to 86 per cent. In the import sector, the share of capital goods increased from 17 per cent in 1962 to 29 per cent by 1971. Internally, there were structural changes. Employment in agriculture, forestry, and fisheries declined from 63 per cent to 48 per cent of the total, while employment in manufacturing and mining increased from 9 per cent to 14 per cent between 1962 and 1971.

Third Five-Year Plan (1972-1976).

The major emphasis of this plan was on the dynamic development of the rural economy, a dramatic and sustained increase in exports, and the development of heavy and chemical industries to avoid dependence on imported raw materials and intermediate goods. Balanced regional development of basic social facilities (electricity, transportation, storage, cargo handling, and communications) and promotion of social welfare programs, along with increased emphasis on food production were also targets of this plan. The projected growth rate for this plan period was 8.6 per cent; the actual growth rate was 9.7 per cent. (See Table 1.)

The focus on developing heavy and chemical industries (HCI) was designed to combat what had turned out to be a significant imbalance in the industrial structure under the Second Plan due to disproportionately high amounts of foreign capital being infused into certain industries. Development of the HCIs was expected to supply Korea's developing industries with domestically produced raw materials and capital goods and thereby reduce their dependency on foreign capital. They would, in turn, become more internationally competitive and thereby increase their earnings from expanding their sales in both foreign and domestic markets. This represented somewhat of a shift toward import substitution as a development policy rather than away as had been the case in earlier periods.

Government fiscal and financial policies aided the development of HCIs. These policies ranged from financial loans, special depreciation allowances, and tax rate incentives to administrative and technical assistance. Major new industries aided in their development
were the integrated iron and steel plan in Pohang, petrochemicals, shipbuilding on the southern coast, transport machinery, and household electric appliances (TVs and transistor radios). The HCI share of the manufacturing sector increased to 45.6 per cent (from 37.3 per cent in the Second year plan period), the ratio of the mining and manufacturing sector to total industries increased from 20.9 per cent to 29.5 per cent, and the per annum rate of growth in the mining and manufacturing sector jumped from 9.8 per cent to 18.1 per cent.

During this period, exports increased at a faster pace than imports, although imports still slightly exceeded exports ($5,523.6 million v. $4,456.2 million). The nation's reliance on trade increased from 40.4 per cent to 63.3 per cent. However, the rate of increase in wholesale prices was twice that of the economic growth rate (20.3 per cent v. 10.1 per cent), indicative of a real problem with inflation.

The government continued its rural community development program, primarily to increase agricultural production and income. These had fallen as the gap between urban and rural household incomes had widened in favour of urban households. Between 1972 and 1975, government investments and loans to agriculture increased 96 per cent over those made in the 1967-1971 period. A price support program for government-purchased rice and barley was instituted. As a result of both government subsidies and rising farmer productivity, agricultural income increased significantly and the urban-rural household income gap was closed and reached parity by 1976, although this was short-lived.

In addition to inflation, other problems began to emerge during this period. Among these were rising unit wage costs (which were beginning to erode Korea's comparative international advantage in many labour-intensive industries), unbalanced regional and sectoral growth, and an over-extension of government investment and low interest loans in the heavy industries, which made the nation more vulnerable to external shocks.

These problems led economic planners and government leaders to emphasize efficiency more than simple rapid expansion in their next two five-year plans.

The Fourth and Fifth plans were designed to 'remedy the structural imbalances in the economy and build up the foundation for economic stability. Social development, technological innovation, and rationalization were the new additions to these plans.'

The major goals of this plan were efficiency-oriented:

- achievement of self-reliance in investment financing;
- equilibrium in the balance of payments; diversification of the industrial structure (promotion of skilled labour-intensive industries);
- promotion of social development (job creation, strengthening of education, health care, and vocational education programs);
- tax reform; rural development; pollution control; more housing; and technological innovation and improvement in efficiency.

The projected growth rate for this five-year period was 9.2 per cent. However, the actual growth rate was far below (5.8 per cent), representing the first time actuals fell below projections. Two oil price shocks, a world recession, continued high inflation at home, along with a disastrous crop failure in 1980, were the major causes of this under-achievement.

The key mechanisms used by government to achieve its goals of stabilizing the money supply, prices, and the economy-at-large during this period were - the adoption of the monetary rule of fixing money-supply growth at a prescribed constant rate of 20% per cent per
annum; the creation of a value-added tax system; and the maintenance of realistic effective exchange rates. But it still continued its direct support for export-oriented firms (offering them export subsidies, tax benefits and foreign loans), along with indirect support for training and research and development. During this period, the government also imposed some other improvements aimed at increasing efficiency. It expanded the number of industrial estates for export firms, including industrial export estates and free export zones. It also created the general trading company (GTC) system to expand trade in world markets.

Nonetheless, the government's efforts at stabilizing the economy through conservative fiscal and monetary policies were generally nullified by negative conditions which surfaced both inter-nationally and domestically. In 1980, the Korean economy faced a negative growth rate of 5.2 per cent for the first time in more than two decades. The wholesale price index jumped almost 39 per cent. The ratio of growth in the mining and manufacturing sector to economic growth declined to 30.8 per cent over the five year period from 38.7 per cent in the previous five-year time frame, although imports and exports generally maintained an average annual growth rate of 10 per cent. The balance of payments, rather than reaching equilibrium per the plan's goal, reached a level of $3 billion in the red.

To combat the slow growth, rising foreign debt, and high inflation of the late 1970s and early 1980s, the basic objectives of this plan were 'stability, efficiency, and balance.' Price stabilization (to control inflation), stimulation of domestic savings, promotion of efficiency through competition (the market model), export growth, development of industries with a comparative advantage in both the domestic and world market, balanced regional development, and greater social development were all specific objectives. The plan was the first to emphasize 'the principles of a market economy encouraging private initiative and creativity.' It was the first to mention greater citizen involvement in the priority-setting process, paralleling the political democratization movement. It also represented a shift in emphasis from heavy and chemical industries to technology-intensive industries. The projected growth rate for this period was 7.5 per cent; the actual was 8.6 per cent.

The government imposed a series of tight monetary and fiscal measures to induce price stability following its 1981 relaxation of fiscal and monetary policies to counter the severe economic recession. A restrictive monetary policy limited the overall rate of expansion of the money supply. A tight fiscal policy reduced the overall government budget deficit as a ratio of GNP from 5.6 per cent in 1981 to 1.5 per cent in 1985. Other stabilization efforts included the issuance of suggested guidelines for wage increases and a steady reduction in rice subsidies to farmers.

The government's efforts at liberalization of the market included the implementation of the Anti-Monopoly and Fair Trade Act of 1981. The Fair Trade Administration within the Economic Planning Board ministry was created. Its early efforts were directed at eliminating cartel arrangements, price-fixing, and other monopolistic practices. Other liberalization efforts were directed at the financial sector. Five commercial banks were denationalized. Entry barriers for foreign banks were lowered. Foreign firms were given greater access to the Korean securities market.

Import liberalization efforts also began. The proportion of freely importable items among all commodities rose from 74.7 per cent in 1982 to 87.7 per cent in 1985. Tariff rates were reduced from 38.7 per cent in 1978 to 21.3 per cent in 1985. More foreign companies invested in Korean industries following liberalization of foreign ownership restrictions.

What was most significant about these liberalization activities is that the government began shifting its style of economic management away from the direct intervention of the 1970s towards a style of less bureaucratic intervention and more reliance on indirect guidance and
market forces. Often the shifts did not occur fast enough in the opinion of many Korean and foreign businesses - with certain exceptions (e.g. Korean rice growers).

The overall health of the economy improved between 1982 and 1988. Real GNP growth during this time period averaged 10.5 per cent per annum. Inflation in both the wholesale and consumer sectors was below 5.0 per cent annually. For the first time, the trade account turned to a surplus (1986). The amount of current account surplus reached $14.2 billion in 1988. This economic growth created about 2.8 million new jobs and the unemployment rate dropped to 2.5 per cent. Most of the job creation came from the mining and manufacturing sector's expansion. In 1986, the nation recorded more savings than investment by 8.0 per cent of GNP. Korea's credit rating increased, permitting it to turn more to bank loans, bond issues, and other sources of capital. In 1985, long-term funding exceeded short-term loans for the first time.

Textiles continued to be the largest single export category, the same position it had held for years, followed by electronic products, machinery, automobiles, footwear, and iron and steel (in that order). The nation's major imports were crude oil and raw materials, transportation equipment, machinery, and electric and electronic products. Small and medium-sized businesses still were disadvantaged vis-à-vis the large conglomerates (the chaebol) in benefiting from government policies and subsidies. So too were the rural parts of the country in spite of the attention promised to be given to each in almost every five-year plan.

Recognizing this shortcoming, the Sixth and Seventh five-year plans gave a greater weight to the achievement of economic equity than previous plans, while still keeping the goals of efficiency and stability.

This plan, more democratically conceived, represented a basic shift in purpose. Whereas the first five plans had as their broad-stated objective 'developing an economic structure for self-sustained growth', the Sixth plan stated the desire to become 'an industrialized advanced state' (a major world industrial power) in the 21st c. by creating a more free-market, competition-based economy. It also called for an improvement in economic equity in the short-term. The three major objectives stated in the plan were:

- competition between government and major sectors of society to establish an economic and social system that will encourage all people to develop their potential fully;
- cooperation between Korean business leaders and workers to restructure industry and improve technological levels; and
- government promotion of balanced regional development (to redistribute national income on a fair and equitable basis, especially for the benefit of lower income groups) to establish a fair market order.

The projected growth rate for this plan was 7.3 per cent. However, in the first year of this plan, the actual growth rate so far exceeded projections that it was necessary to formulate a revised plan.

The revised Sixth plan called for greater emphasis on the qualitative improvement of the economy, private initiative in future economic development, and provision of equal economic opportunities. The plan stressed 'institutional reforms designed to enhance autonomy and equal opportunity' and gave priority 'to support for the underprivileged and lagging sectors of the economy' which had been largely ignored during the past period of rapid economic growth. The plan also stressed international cooperation, especially with socialist nations (the 'Nordpolitik' or the Northern policy). Ironically, while the plan called for greater equity, balance, and competition in the world market place, the techniques used to achieve them were contingent upon the public sector's involvement (tax reform, land
reform, rural development, liberalization of the financial market, liberalization of trade). The growth rate projected for the revised Sixth Plan was 8.2 per cent. The actual growth rate was 10.0 per cent.

While sustaining a heavy emphasis on equity (in both domestic and international markets), this plan departed from the Sixth by reducing expectations regarding growth rate; placing greater emphasis on economic stability and the development of human capital; stepping up the pace of liberalization of import policies and the financial and capital markets; giving greater priority to the development of new, innovative technologies; and expanding governmental spending for infrastructure and social welfare expenditures. It also sought to 'strengthen the role of the private sector by placing special emphasis on the principles of entrepreneurship, workmanship, and citizenship.' The projected growth rate for this period was 7.5 per cent, well below the 10 per cent actual GNP growth rate under the Sixth Plan. Preliminary 1992 figures showed the economy grew at only a 5-6 per cent rate for that year, down from 8.4 per cent in 1991.

The Seventh Plan's lowering of growth rate expectations was based upon the fear that higher growth rates might cause such problems as: a shortage of skilled workers in manufacturing; wage increases in excess of productivity improvements; inflation; a rise in consumption and imports; lower exports and savings growth rates; the re-emergence of the trade deficit; and a diversion of labour from manufacturing and services.

The lower projected growth rate also reflected the political realities of the day, namely growing citizen hostility toward inflation and income distribution patterns, as well as friction from foreign trading partners with regard to perceived inequities in access to Korean markets and capital. Opponents of the Seventh Plan generally faulted the EPB drafters for moving too fast toward a free market economy. Proponents defended the pace, saying that without it, Korea would not be able to sustain its growth of the past, let alone expand on it.

The election of Young-Sam Kim as President in 1992 produced a revised Seventh Year Plan (1993-1998), called the New Economic Five Year Plan. It calls for the government to concentrate on 'enhancing growth potential, enlarging international markets and improving living conditions of the people.' Its targets are: price stabilization at 3.0 per cent, a balance of payments surplus, and a GNP per capita of $15,000 by 1998.

To meet these targets, the government assumes a more aggressive stance in its financial reform and liberalization by implementing policies designed to free interest rates, open wider the foreign exchange and capital markets, revamp the banking industry, and institute a real-name financial transaction system. Korea's track record with regard to actual implementation of such liberalizations (which have been called for since the Fourth Plan) is a slow one as are its records of putting in place major land reforms, stimulating the growth and development of medium and small-sized firms, and reducing regional and sectoral imbalance. Administrative reform, too, has lagged and affected each of the above. By most accounts, it still takes too long and requires too much paperwork for both domestic and foreign firms to expand their role in the Korean economy. But there are some very positive notes to Korea's recent economic history as well.

Since 1962, Korea's economy has grown at one of the fastest paces in the world. Long one of the world's poorest agrarian societies, by the early 1990s, it had emerged as a NIC (newly industrial-ized country) and was a key member of several important economic blocs. By 1991, the agricultural sector made up only 8.1 per cent of the GNP production, down from 39.9 per cent in 1960. The industrial sector increased its share of the GNP from 18.6 per cent to 45.4 per cent. The services sector also increased slightly from 41.5 per cent (1960) to 46.5 per cent in 1991. Of the industrial sector components, manufacturing made
the biggest gains. Its share of GNP production increased from 12.1 per cent in 1960 to 27.5 per cent in 1991. Changes in the sectoral employment patterns paralleled the production sector changes. By the 1990s, the commodity trade volume (exports and imports) had exceeded $150 billion in contrast to $500 million in 1962. The domestic savings rate rose from 3.3 per cent in 1962 to 36.1 per cent in 1991. To put it all in perspective, when Korea joined the International Monetary Fund in 1955, the \textit{per capita} GNP (in current dollars) was $65. By 1992, it was $6,685. It is targeted for $10,908 by 1996 and for $15,000 by 1998. Government initiatives (monetary and fiscal) have played a major role in these development efforts.

Foreign Trade

Foreign trade has always been a key element of the contemporary Korean economy. The pattern began when the government chose an export-oriented industrialization strategy as the fastest way to stimulate economic expansion in a resource-poor nation, with a small domestic market. Korea's trade strategy has been industry-oriented rather than resource or service-oriented. The contribution of exports to Korea's GNP growth has increased sharply and significantly since the 1950s.

Initially, imports greatly exceeded exports but that pattern reversed itself so that by 1986, the nation experienced its first positive balance of payments (current account surplus). While the pattern subsequently reversed itself again, the deficit is not nearly as large as in the past.

Structural changes

Over the years, the nation's foreign trade-based strategy has shifted the structure of industry from subsistence agriculture to modern manufacturing and export trade. The share of primary industries (agricultural, marine, and mineral products) in the overall industrial structure decreased from 34.8 per cent in 1966 to 23.5 per cent in 1976 to 10.2 per cent in 1989.

This structural change is reflected in the nature of the products exported. The top ten exports in 1962 were (in order) - silk, tungsten, fish and fish products, animal oil and fat, plywood, miscellaneous products, textile fabric, machinery, clothing, chemical products. By 1974 they were - clothing, electronics products, ships, textile fabrics, sweaters, plywood, footwear, steel plates, cotton goods, and synthetic resin products. By 1984 the order was: textiles and garments, ships, electronics products, steel products, footwear, synthetic resin products, metal products, petroleum products, electric products, and tyres. By 1991, the rank ordering was: clothing, thermonic valves, textile fabrics, ships, footwear, office machines, iron and steel plates, automobiles, telecommunications equipment, and television receivers. It is apparent from looking at these orderings that the export structure has shifted over time from the production of highly-labour intensive goods to more capital intensive, high-tech goods. Exports in 1991 totalled $71,870.1 million (US dollars).

Bibliography

2. Economic efficiency

Economic efficiency is defined as the allocation of a nation's resources in a manner that produces the maximum possible benefit (output) at the lowest possible cost. In Korea, the government's role in guiding the economy has been a key determinant of its efficiency. The efficiency curve has generally been in an upward direction, although there was a slight interruption in the early 1990s.

Per capita GNP (in current dollars) increased from $252 in 1970 to $6498 in 1991. The unemployment rate steadily declined (from 7.7% in 1964 to 2.4% in 1991). The nation's balance of payments (BOP) turned positive in 1986, a major achievement for a nation that in 1962 was very much a debtor nation. The nation's production index increased from 3.1 in 1964 (1985=100) to 202.6 in 1991 and featured double digit per cent increases per annum for most of the period.

Some weaknesses in the economy began to appear in the early 1990s. The BOP turned negative again in 1990 and the GNP growth rate slowed. There were also increases in the consumer and wholesale price indexes, a slower growth rate in the production index, and a decline in the stock price index.

For the individual, personal disposable income increased between 1970 and 1991 from $242 to $5866. The proportion of an urban household's spending going to purchase food dropped from 47.6% in 1971 to 31.4% in 1991; for farm households, from 47.4% to 22.8%. This drop was only slightly offset by an increase in the proportion needed for housing (from 5% in 1965 to 100.4% in 1991 for an urban household; from 3.8% to 8.2% for a rural household). The rate of increase in the consumer price index, which was in double digits throughout the 1970s, dropped to single digit figures in the 1980s. Although the rate headed upward again in 1990, it still remained below 10%. The ratio of farm household income to urban household income, positive through most of the 1980s, turned slightly negative for farm households in the early 1990s but was still in the 90th percentile - quite different from 1970 when it was a mere 75.6%. Tax burdens have changed very little over the past two decades. In 1975, the ratio of the tax burden to GNP was 15.3%; in 1991, 18.9%. Private savings rates increased from 15.6% in 1975 to 28.6% in 1991.

Government's Role in Promoting Efficiency.

The government has virtually controlled the development of the private sector, especially during the early days of rapid expansion. It was able to do this for several reasons. As a major stockholder in the nation's domestic banks, the government had the power to appoint bank managers. The Bank of Korea and the Ministry of Finance were able to dictate interest rates in the formal banking sector. The government also controlled the inflow of foreign capital that served as the primary source of corporate loans in the early days. Businesses either went along with the strings and guidelines attached to government loans and credit or they got none. Today, the government's role in promoting economic efficiency
is geared more toward enhancing competition in its marketplaces than restricting
competition to large Korean conglomerates as was the case in the early days. Since
passage of the Comprehensive Measures for Economic Stabilization in 1979, the five-year
economic plans have called for liberalization of financial institutions, the capital market,
and trade.

The Domestic Commercial Bank Industry.

The commercial banking industry in Korea is becoming more competitive as a consequence
of the faster pace of deregulation, beginning in 1989. At that time, three new nationwide
commercial banks, Donghwa Bank, Dongham Bank, and Daedong Bank were established
and the state-run Korea Exchange Bank was privatized. In addition, some 30 new financial
institutions, mostly leasing and life insurance companies, were formed. But the downward
adjustment of loan interest rates to stimulate small and medium-sized business development
and expansion have cut into their profit margins, making the industry considerably more
risky than in the past. Some experts project that it will be ten to fifteen years before
Korea's commercial banks are competitive with foreign banks, especially if the Korean
government continues to overregulate the industry. The major problems lie in the
segmentation of the short-term call money and the long-term capital markets and with the
inter-bank wholesale money market, the corporate bill market, and the repurchase
agreement market. Korea's commercial banks, like its businesses, are expanding into
foreign countries in an attempt to increase profits. As of 1991, Korea commercial banks
had 146 offices abroad.

The Foreign Commercial Bank Industry.

As of 1991, there were 53 foreign banks operating in Korea, excluding 14 Japanese banks.
Foreign banks have generally had a very difficult time acquiring the right to do business in
Korea. Government restrictions on the establishment of foreign-owned banks/branches
deter them as do foreign exchange swap ceilings and the high level of capital requirements.
There has been growing pressure on the Korean government by GATT (General Agreement
on Trade and Tariffs) nations and other international financial organizations to liberalize the
financial services market as soon as possible.

The Securities Market.

On 15 June 1991, the Ministry of Finance announced that foreign investors would be
permitted to invest directly in the Korean stock market starting 3 January 1992. Consistent
with its struggle to rapidly liberate all types of markets, the government limited the amount
of foreign investment in the Korean Stock Exchange (KSE) to 10% of its outstanding
shares. It also set a foreign ownership ceiling of 3% and reserved the right to limit the
amount of foreign investment in companies 'vital to the national economy' to 8%. Initially,
the number of firms restricted under the latter rule was 478, including the Pohang Iron and
Steel Co., the Korea Electric Power Corp., and railroad, airline, and finance companies.
As of 1991, the Korean Stock Exchange was the twelfth largest stock market in the world
but also one of the most tightly controlled.

The Domestic Securities Industry.

In recent years, the Korean government sought to stimulate growth in the domestic
securities industry in anticipation of opening the market to foreign investors. To increase
competition in the industry, the government boosted the brokerage commission rate from
0.4 to 0.6%, converted eight short-term finance companies into securities firms, and
established the Korea Development Securities (a wholly-owned subsidiary of the Korea
Development Bank) to establish a strong position in international business through bonds
and underwriting activities. Liberalization of the market, specifically letting in foreign
investors, has made domestic securities firms more attentive to profits. They have generally shifted their investment patterns from short-term to mid and long-term investments.

The Foreign Securities Industry.

In March 1991, four foreign securities houses were permitted to open branches in Seoul (Merrill Lynch and Citicorp Scrimgeours Vickers la Costa of the United States, Baring Brothers of the United Kingdom, and Jardine Fleming of Hong Kong). The application criteria laid down by the Korean government were so stringent that only 17 firms were eligible to apply; of those, only nine did. The Ministry of Finance limited the breadth of activity of foreign securities firms to three securities activities - underwriting, dealing, and brokerage. The license to undertake all three activities cost a firm $US28 million.

Venture Capital.

One of the newest developments from a capital acquisition perspective has been the emergence of venture capital firms - however, the first venture capital corporation was actually formed in 1974 - (the Korea Technology Advancement Corporation.) Recent growth in the venture capital industry was prompted by passage of the Small and Medium Enterprise Start-up Promotion Act (SESPA) in 1986. The Act exempted venture capitalists from capital gains taxation. By 1990, the total amount of venture capital financing in Korea was $US850 million including a sizeable amount from the U.S. and Japan. By 1991, there were 56 domestic venture capital firms. As a whole, the industry puts 62% of its investments in initial start-up companies, 25% in recently-formed firms, and 8% into the expansion of existing firms.

Venture capital activities have been hampered by the government's restrictive regulations on initial public offerings of venture-capital-based companies and limits on the types of companies in which they may make equity investments (mining, manufacturing, software engineering and information research, machinery rental companies). There is also a dual system at work which pits venture firms under the authority of the Ministry of Finance against those under the authority of the Ministry of Trade and Industry. Those under the control of MOF (four technology business financing corporations) generally assist existing companies through loans, leasing, and factoring. Those under the control of MTI (53 companies) support the start-up of small technology-intensive companies through 3 to 6 month short-term loans to their portfolio companies, often funded by venture partnership funds.

Foreign Capital Markets.

In the 1990s, many credit-starved Korean businesses began to turn to foreign markets for capital, primarily to raise funds for crucial technology development and facilities investment. A major stimulant to this external search for capital was higher interest rates at home than abroad - due to the government's slow pace of interest rate liberalization. However, another government policy permitted this external search, namely its relaxation of constraints on overseas financing. Popular overseas investment instruments used by Korean firms are convertible bonds, bonds with warrants, and depository receipts.

Trade liberalization.

Trade liberalization is a highly politically-charged issue in Korea today. On the one hand, the Korean government is being pressured to open its markets to comply with GATT Uruguay free trade requirements as a consequence of its status as one of the world's newly-industrialized economies. On the other, it is experiencing intense pressures from the Korean agricultural and service sectors to protect them against foreign goods and services until they have expanded and improved their efficiencies and technologies.
Some analysts see the Korean government's slow pace of liberalizing its markets as a major ex-planator of the economic inefficiencies that reappeared in the early 1990s.

3. Economic Planning

A rigorous, highly-centralized process of formulating and implementing five-year economic development plans has been the driving force behind Korea's economic growth since the early 1960s when the first plan was passed. Responsibility for the process lies with Economic Planning Board (EPB) created in 1961 immediately after the military coup led by then President Park Chung-hee. Its creation represented Park's strong commitment to making economic development the highest priority for the new government and for those to follow.

The importance of the Board is evidenced by the fact that the EPB Minister concurrently serves as Deputy Prime Minister and is responsible for coordinating business among all the ministries related to the economy and finance. The Board is responsible for the development of the national economy, the formulation and execution of the government's budget, the overall coordination of plans for mobilization of resources, investment, technical development, and economic cooperation with foreign countries and international organizations. Advice is regularly sought from other countries and from international organizations like the World Bank and the International Monetary Fund.

The EPB has a secure political mandate and superior capacities to collect and analyze economic data (macro and micro). However, EPB's role in promoting a free market economy in accordance with the goals of the most recent five-year plans has increasingly resulted in inter-jurisdictional conflicts and tensions between it and the Ministries of Finance, Commerce and Industry, and Agriculture and Fisheries, to name a few.

Citizen Participation

While the EPB maintains the preeminent role in the development of Korea's five-year economic plans, the public's participation in the process has gradually increased, beginning with the Fifth plan. Representatives of academia, research institutes, industry, and other private organizations now serve on ministry-level sectoral planning committees. Opinions are also solicited from the populace through public hearings and regional policy consultation meetings. Plans are more widely-disseminated through the media. The opening of the planning process has paralleled the opening of the political system generally. The result has been a greater emphasis on economic equity and stability (and even protectionism) than economic expansion or efficiency - a result that can be easily observed by comparing the first four five-year plans with the last three (Fifth, Sixth, Seventh).
The initial decision of the economic planners and government officials to implement policies creating rapid growth in the short term have caused problems in the long-term that are extremely difficult to remedy both politically and economically. The initial decision to develop a predominantly export-based economy, and the heavy reliance upon large conglomerates (the chaebols) to do it, created a pattern of inequities from the beginning which have only hardened over time. Government economic development policies are generally perceived to have disproportionately advantaged large firms (especially the chaebols), the manufacturing sector, the Seoul metropolitan area, domestic firms, farmers, large landowners, and management (vis-a-vis labour).

Goals of the Seven Five-Year Plans.

In broad terms, the plans of the 1960s to mid-1970s emphasized rapid economic growth. The plans of the mid-1970s to mid-1980s stressed efficiency through technological improvements and productivity gains. The plans for the latter half of the 1980s and the early 1990s heavily stressed economic equity (both domestically and internationally). Each of the plans established fairly specific quantitative economic goals. With the exception of the Fourth, the Korean economy exceeded the projected growth rates in each of these five-year time periods. (See Table 1.)

Government Tools for Meeting Plan Goals

Historically, the Korean government has played a major role in directing business expansion and development, primarily by controlling corporate access to credit, capital, and markets. It has used a variety of tools including direct subsidies (tax reductions and exemptions; loans), policies affecting crucial industries and sectors (most notably banking and manufacturing), and regulation. It has also used indirect subsidies, information, and exhortation (‘jawboning’). These are all examples of somewhat positive incentive mechanisms.

The government has also used disincentive mechanisms to control the activities of uncooperative firms and ensure compliance with government goals and policies. The three most commonly used have been tax audits, suspension of bank credit or recall of loans, and disconnection of infrastructure services (electricity, water, roads, telephones). (See Song, 1990).

4. Econometric models

Econometric models are highly quantitative multivariate techniques used to explain, predict, or forecast various dimensions of the economy, such as GNP (macroeconomics) or the impacts of fiscal and monetary policy at the individual sector, household, geographical, or
firm level (microeconomics).

Economic planning. (see Economic planning).

Macro-economic models.

Macroeconomics is the study of large economic systems comprised of different sectors, such as that of an entire nation, rather than of specific elements of the larger economy (microeconomics). Macroeconomic models are used to forecast or predict South Korea's economic growth. Major indicators of Korean economic growth often included in such models are: GNP (Gross National Product); GNP per capita; GNP growth rate (%); inflation rate (%); interest rate (%); rate of private savings (%); trade balance; exports; foreign debt; rate of unemployment (%); and the foreign exchange rate (won/US$). GNP and GNP per capita are expressed in terms of current prices. The rate of inflation is based on GNP deflator. The rate of interest is the bank interest rate on time deposits for the period of one or more years. These variables are collected and/or disseminated quarterly and annually by the Economic Planning Board (Major Statistics of the Korean Economy) and The Bank of Korea (Economic Statistics Yearbook).

Macro-economic models focusing on the demand-side factors contributing to Korea's economic growth typically include variables such as inter-industry demand, final consumption, investment, export, and import. Those focusing on the supply side often include variables such as labor, capital, productivity, advances in knowledge, improvement in resource allocation, and economies of scale. (See Byung-Nak Song, The Rise of the Korean Economy, 1990).

In addition to forecasting, or explaining, the overall economic growth rate, macroeconomic models are often the basis for government decisions regarding the regulation of the money supply, interest rates, and so forth.

Micro-economic models.

Microeconomics is the study of particular aspects of an economy rather than the economy as a whole (macroeconomics). Microeconomic models have been used to assess the viability and effectiveness of various economic policies on creditors, savers, fixed-income earners, and pensioners. They have also been used to predict, or explain, the impact of various monetary and fiscal policies on urban vs. rural areas, on the size of the gap between highest income earners and lowest income earners, and on the growth of one sector vis-a-vis another. Korea's economic planners have relied heavily on micro-economic models to guide the nation's economic development. Government incentives and disincentives to individual sectors and businesses (and to a lesser extent individuals), guided by microeconomic modeling by the Economic Planning Board, have been the basis for Korea's dynamic (as opposed to static) national industrial policy. Some analysts argue that microeconomic approaches emphasizing government loans directly to individual firms rather than macroeconomic approaches altering the money supply for all firms may be much more effective for guiding the economic growth of countries with developing economies. (See Song, 1990:135).

Recent developments and future prospects.

The use of econometric models by both the public and private sectors has intensified as the statistical techniques available to analysts have become more sophisticated. It is likely that their use will increase even more in the future with the globalization of the economy. The demands for models inclusive of the actions of other nations will continue to escalate for three reasons. First, Korea is being forced to move fast in liberalizing its markets (including its financial markets) in order to be recognized as a major developed economy.
Second, the projected emergence of strong regional economic blocs will necessitate the development of different economic models as this occurs. Third, the economic experiences of West Germany following reunification with East Germany have demonstrated to Korean politicos and economists on both sides of the 38th parallel the need to conduct thorough economic impact analyses before any reunification of North and South Korea takes place.

Education

In a general sense, 'education' refers to the processes and methods needed for teaching and learning all of the many activities necessary for humans to conduct their lives. Education is manifested in many forms and can be seen in the processes of learning how to interact with others in a community, and in particular is generally exhibited in the transmission of knowledge from experienced persons to the inexperienced. Thus, the relationships between parents and children, teachers and students, seniors and juniors, and the mature and immature are all materialisations of the educational process. In examining the processes of education it becomes readily apparent that there are two fundamental functions involved: first is the innate ability that humans are born with to explore and manipulate their environment, and the second is the acquired abilities that come through the interaction of humans in a structured and designed manner with the additional aim of transmitting knowledge.

History of Education in Korea

Prehistoric Age

Even with the first humans in Korea educational activities were carried out, albeit in an unintentional manner. In the prehistoric age where primitive co-operative societies formed the basis for man's existence, educational activities were carried out as a natural extension of the process of life itself. People in primitive societies acquired the needed skills for living through interaction with those in their communities who possessed these skills. Thus, the older generation taught their juniors how to acquire food, make clothing and shelter, and how to protect the community from the dangers present in the area that they lived in. Much of the educational process at this stage of man's existence can be seen in the development of seasonal customs and the transmission of tales and myths. Moreover, the educational activities of this period are characterised by imitation of one's elders, in hopes of securing the same skills that permitted the elders to survive in the world.

Education developed during this primitive period as a way of surviving in a hostile environment and explaining the occurrences in a community. Hence the primitive people preserved this informal, life-experienced based education and it further developed as the primary religious practices of these people. Then, religion focused on practical goals, i.e., the securing of an abundant catch or harvest, and was not based in a profound ideology but...
rather on survival. Religious life was directed at controlling the forces of the supernatural, and this information was codified and transmitted to subsequent generations in the forms of myths, ritual practices and beliefs. Those that were deemed best able to control the forces of nature led the ceremonial rituals that were a manifestation of the religious beliefs of these communities. The educational activities were conducted in order to transmit these rituals. However, these were not executed in a practical manner and many customs are believed to have died out within a generation or two.

Ko Chosŏn

With the beginning of an agrarian based state, changes were necessitated in this period. With more settled living conditions came the establishment of social ethics that were derived from common experiences transmitted to the following generations as customs, and these customs established the basic educational ideology. The Samguk yusa (Memorabilia of the Three Kingdoms) relates that in the foundation myth of Ko Chosŏn, the Tan’gun shinhwa, Hwanung descended from heaven with 3,000 followers and founded this kingdom. Hwanung had the ability to control the wind, rain and clouds, which were essential for agriculture, and further held dominion over disease, punishment, and managed the lives of the people. This reveals that Hwanung had the ability to distinguish good and evil, to teach the people, to govern the human world and to cure disease. These traits in the king divulge that the aim of education in this period was to teach the people in order to ensure their welfare.

In addition to the information concerning Ko Chosŏn contained in the Samguk yusa, there is also information on this period in Chinese documents. In particular, the legal code of Ko Chosŏn was recorded in Hanshu (History of the Former Han Dynasty). This code, known as the Eight-Article Law (P’alcho pŏp), reveals the items that were stressed by the social code of Ko Chosŏn and thus were among the educational goals of this period. There are presently three of these laws preserved: ‘A person who kills another will be executed;’ ‘One who injures another will compensate him with grain;’ and ‘One who steals from others will become the servant of that house, or will pay them 50,000 nyang to be pardoned.’ These three articles reveal that Ko Chosŏn society respected human rights and property, and that the state guaranteed the well being of its people. The education of this period was not institutionalised, nor executed through an educational system, but instead was conducted by familial and clan systems. The chief emphasis of education was on transmitting social mores and customs, agricultural skills, family living methods and military training, all of which were aimed at success in the struggle to survive.

3.) The Three Kingdoms

The Three Kingdoms is characterised by a shift from the unintentional, familial based education of the previous periods to an organised, state sponsored educational system. Moreover, the introduction of Confucian and Buddhist belief systems also had a major impact on educational activities. To build the basis for the educational systems, students were sent to China for study as the rulers of these early states realised the necessity for education. Education now was a monopoly of the ruling class, and the content of education was directed towards their preservation and their culture. Thus, the goals of education were directed at the consolidation of the bureaucracy that was headed by a powerful sovereign, and to further protect the culture of the ruling class. Supplementary goals were to train military leaders and soldiers necessary for the maintenance and protection of the state.

Koguryŏ

Because of its proximity to China, Koguryŏ accepted many facets of Chinese civilisation from an early point in its history. From records concerning documents of Koguryŏ it is
clear that a writing system was used from the beginnings of this Kingdom. One such
document is the 100-volume Yugi (Extant Records), a national history of Koguryo,
compiled in the early years of the Kingdom. This work was later adapted into the five­
volume Shinjip (New Compilation) by Yi Munjin during the reign of King Yong'yang (r.
590-618). Although neither of these two works are extant, the fact that they recorded
the history of the Kingdom reveal that the writing system of this time was standardised to such
an extent that it could be used for a major undertaking. From this we can ascertain that
writing was taught in a systematised way from early Koguryo .

Various documents show that Koguryo established the T’aehak (National Confucian
Academy) in 372 as a top-level school for the children of ruling class families. King
Sosurim (r. 371-384) embraced Buddhism and this educational institution was a means to
consolidate the national structures of Koguryo; Buddhism was to provide the nation with
spiritual unity and the T’aehak would supply educated bureaucrats to staff the administrative
apparatus of the Kingdom. This institution is thought to have been modelled on a similar
Chinese institution, and it served as a conduit to the higher Chinese civilisation. The actual
organisational structure of the T’aehak is little known, but it is thought to have offered
instruction in subjects such as the Confucian classics, literature and military arts.

Aside from the national-level T’aehak, there were also private schools known as
kyöngdang in Koguryo. There are records of these schools in the Tang history books
Chiu Tangsou (Old History of Tang) and Xin Tangsou (New History of Tang), which
provide a glimpse of the educational practices (in these institutions) and of the Koguryo
people. One such record notes, ‘it is their custom to love books; they erect a large structure
and regardless of class all unmarried youths attend classes at this kyöngdang where they
read the classics and practice military arts.’ It is not known when the kyöngdang were first
established, but these institutions provided education in a manner quite similar to the
hwargang (youth corps) of Shilla. Thus, aside from just reading, the unmarried youths in
Koguryo were trained in the military skills, bravery and in the arts. These institutions of
Koguryo can be viewed as the antecedent to the sōdang (private school) of Koryo.

Paekche

Similar to Koguryo, Paekche also accepted the higher Chinese culture from an early date
and incorporated this culture in its society. There are no extant records of the designations
of any educational institutions in Paekche, but through Japanese historical sources it is
possible to ascertain that the educational levels in Paekche were as high as those in
Koguryo. The Nihon shoki and Kojiki contain records of Paekche scholars travelling to
Japan where they introduced Chinese classics such as Lunyu (Analects of Confucius) in
258. In addition, other scholars and specialists were invited to Japan periodically. A further
indication of the educational activities in Paekche is the compilation of Søgi (Documentary
Records) by Ko Hùng in 375, which recorded the history of the Kingdom.

Shilla

Because of its geographical location, Shilla lagged behind Koguryo and Paekche in
development of its culture. Shilla was further troubled by her more powerful neighbour to
the north and Paekche’s encroachments from the west. However, Shilla strove to solidify
its central administration, military capabilities and other social systems through the
establishment of the hwarang order. The fundamental characteristic of the hwarang was in
the formation of the character of the aristocratic youths that composed its ranks. These
young men were taught concepts such as self-sacrifice and bravery that permitted them to
develop into warriors, thereby fulfilling the needs of the Kingdom. While the hwarang was
initially constituted of the sons of aristocratic families and a private institution, from the time
of King Chinhùng (r. 540-576) it was organised and formalised according to the needs of
the State. The objective of hwarang education was to use hwarangdo (the way of the
hwarang) to develop the skills that would allow the difficulties confronting the kingdom to be surmounted. The Samguk sagi (History of the Three Kingdoms) relates that the hwarangdo allowed youths to develop their interpersonal skills through emotional education, to cultivate their aesthetic qualities through songs and artistic pursuits, and through excursions to mountains and rivers develop a sense of love and knowledge for their country. The daily lifestyle of the hwarang is revealed in the so-called, ‘five secular injunctions’ (sesok ogye) established by the monk Wŏn’gwang in the early seventh c. These injunctions were: 1) to serve the king with loyalty; 2) to serve one’s parents with filial piety; 3) To practice fidelity in friendship; 4) to never retreat in battle; and 5) to refrain from wanton killing. The qualities inherent in the hwarang cultivated the skills necessary for Shilla’s eventual victories over Koguryŏ and Paekche.

Other educational institutions in Shilla include Confucian-orientated institutions that began around the time of the Greater Shilla period. The Kukhak (National Academy) was established in 682 and was the highest educational institution in Shilla, falling under the jurisdiction of the Board of Rites (Yebu). This institution underwent a name-change during the reign of King Kyŏngdok (r. 742-765) to T’aehakkam, but the name subsequently reverted to Kukhak in the reign of King Hyegong (r. 765-780). There are extant records concerning the administrative organisation of the Kukhak, and the features of its curriculum and student composition. The school was headed by a vice-minister (kyŏng), several instructors and middle and low-ranking officials. Entrance into the Kukhak was limited to those members of the aristocracy who held the twelfth official rank (teasa) or below, including those without official rank. It is thought that most of the students at the Kukhak were, in practice, from the sixth head-rank (yuktup’um) since the official position awarded upon completion of studies was either nama (11th of the 17 official ranks) or taenama (10th of the 17 official ranks), and these positions were too low for members of the aristocracy to consider.

The curriculum of the Kukhak was mainly focused on the study of the Chinese classics and was divided into three courses of study. Each curriculum required the study of Lunyu (Analects of Confucius) and Xiaojing (Book of Filial Piety) since these works were considered as essential in conveying Confucian ethics and establishing proper moral training. The first course of study additionally required mastery of Lizhi (The Book of Rites) and Zhuyi (Book of Changes), the second course Zuozhuan (A Commentary on the Spring and Autumn Annals) and Shijing (Book of Songs), and the third course added Wenzuan (Anthology of Literature) and Shangshu (Book of Documents). The period of study was for nine years, although some students were given extensions beyond this. In addition to the study of the Chinese classics, there were also special courses in which mathematics, astronomy, medicine and law were also taught in order to provide a broad educational background for the students of the Kukhak.

Another educational innovation in Shilla was the development of toksŏ samp’umgwa (examination in the reading of texts in three gradations). This examination was based primarily on the texts that the curriculum at the Kukhak revolved around. However, there was special consideration for those demonstrating even broader knowledge of such texts as the Five Confucian Cannons (Shijing, Shangshu, Zhuzhi, Lizhi, and Chunqiu [Spring and Autumn Annals]) and the Three Histories (Hanshu [History of the Former Han], Hou Hanshu [History of the Latter Han] and Shizhi [Records of the Historian]). Those students that demonstrated thorough knowledge of these additional works were appointed to higher positions.

The educational institutions in Shilla revolved around the hwarang in the pre-unification period and the Kukhak after Shilla had subdued its rivals. The Kukhak system was adopted from the Tang Chinese system and closely followed its model. The Kukhak, however, failed to successfully amalgamate with Shilla society due in part to the resistance of the aristocracy. The highest-ranked shunned the institution and instead clung to their
hereditary rights, and as a result the importance of the Kukhak was greatly diminished by late Shilla. Another important feature in the development of education in late Shilla was the large number of students who travelled to Tang China for study. The number of students continued to increase and by the end of Shilla it was those students who had trained abroad who became the motive force in intellectual matters.

Koryŏ

For the most part, the educational system in Koryŏ can be divided into government and private schools. The central government schools consisted of the central Kukchagam (National University), capital academies (haktang) and county public schools (hyanggyo). The private schools of Koryŏ include the Twelve Assemblies (Shibi to) and the sodang (private village schools).

The highest national educational institution was the Kukchagam, established in 992. This central institution was structured somewhat akin to the structure of a modern university in that it had six colleges, namely University College (Kukchahak), High College (T'aehek), Four Portals College (Samunhak), Law College (Yurhak), Calligraphy College (Sŏhak), and Accounting College (Sanhak), all of which were created during the reign of King Injong (r. 1122-1146). Although there were six separate colleges, the curriculum offered was not necessarily distinct, as the University College, High College and Four Portals College all offered a predominantly Confucian-orientated education. Among the Chinese works that were covered here, the Five Confucian Canons and Four Books were central. Special texts that provided instruction in mathematics or accounting were also used at the colleges. The mode of study was to master one subject before moving on to the next, and students were evaluated on a yearly basis by their instructors.

The number of regular students was three hundred in University College, High College and Four Portals College, but at times this number increased to as many as six hundred students. The qualifications for entry into the various colleges of the Kukchagam were different. The University College admitted the sons of military or civilian officials of the third rank or higher, the High College the sons of fourth and fifth rank officials, and the Four Portals College the sons of sixth or seventh grade officials. The remaining three colleges admitted the sons of eighth and ninth grade officials in addition to the sons of all commoners, thus providing an opportunity for all free-born men in these technical fields.

The county public schools (hyanggyo) were governmental secondary educational institutions established in outlying areas and modelled after the Kukchagam. It is not known when the first of these schools was established, but with a royal edict by Injong in 1127 to further propagate the schools, it is clear that they were already abundant at that time. The county public schools served not only as educational institutions, but also as Confucian shrines to observe rituals to various Confucian sages. The top students at the hyanggyo were often sent to the Kukchagam for additional studies, and moreover, these local institutions contributed to the development of the provincial culture. After the reign of King Úijong (r. 1146-1170), however, the influence of these institutions waned.

The third type of government educational institution was the five academies (obu haktang) located in the five major wards of the Koryŏ capital. These institutions served much the same purpose as the hyanggyo did in the provinces, and provided a secondary education for their students. The chief difference between the hyanggyo and the haktang was that the former incorporated a Confucian shrine and sacrificial rituals into the institution while the latter was solely for educational purposes.

In the private educational sphere the Twelve Assemblies (Shibi to) were representative of the higher, non-government institutions. The Twelve Assemblies originated in 1053 when Ch’oe Ch’ung (984-1068) began providing an education to students in his house, deploring
the stagnation of the government schools. This school was known as the Nine-Hall Institute (Kujae) since when Ch’oe opened his school he had such a large number of students that he had to divide them into nine classes. After the death of Ch’oe, however, the school was named the Disciples of Master Munhon (Munhŏn’gong To) after his posthumous title. Due to the success of this first of the Twelve Assemblies, other scholars retired from their offices and opened their own schools, and eventually the Twelve Assemblies were formed.

The curriculum of the Twelve Assemblies was very similar to the Kukchagam, and centred on the Five Confucian Cannons, Four Books and the Three Histories. These schools became very popular among those students who wished to take the civil service examination, since the masters of the schools had all successfully sat for the higher examinations and held high government office, or even supervised the examinations in the past, thus ensuring the success of their pupils. Hence the educational influence of the Twelve Assemblies was major during the mid-Koryŏ, and these schools came to be supported in part by land grants from the central government. However, as the kings, Yejong and Injong, who were concerned with the decline of the state schools, were successful in their attempts to strengthen the Kukchagam, the influence of the Twelve Assemblies declined, and in 1391 they were closed.

The other private educational institution in Koryŏ was the sŏdang (private village schools), which are thought to be the vestiges of similar Koguryŏ institutions. There are few records concerning these schools and authentic records of their curriculum are not extant. However, there is a record in the Chinese source Gaoli tujing (Illustrated Account of Koryŏ) written by Xu Jing in the early part of the twelfth c.to the effect that there were many sŏdang scattered throughout Koryŏ and that the unmarried children of the common people gathered to learn the Chinese classics at these schools. It is clear, therefore, that the sŏdang fulfilled the role of local primary educational institutions during this period.

A noteworthy innovation of the Koryŏ period is the establishment of a government service examination system in 958. King Kwangjong (r. 949-979) at the urging of the Chinese scholar Shuang Ji adopted a civil service examination modelled after the Tang Chinese system. The aim of this system was to employ men of talent in the Koryŏ bureaucracy instead of merely those who had rendered service towards the founding of the kingdom. Hence, education in Koryŏ came to focus on successfully sitting for this examination.

Chosŏn

For the most part, Chosŏn adopted the school system in place at the end of Koryŏ. Accordingly, the educational institutions of Chosŏn can largely be divided along lines of government and private educational institutions. The government schools consisted of the central Sŏnggyun’gwan (National Confucian Academy) and the Sahak (Four Schools) also in the capital, and in the provinces the hyanggyo (county public schools) provided secondary education in the outlying areas. The private schools consisted of the sŏhwŏn (private academies) and sŏdang (private elementary schools) in areas outside the capital.

The educational ideology of Chosŏn was strongly influenced and dominated by the neo-Confucian philosophy. This ideology would eventually come to dominate every aspect of the Chosŏn government and the lives of those who staffed it. Although neo-Confucianism first entered Korea during Koryŏ, it was not until Chosŏn that government policy and ensuing legislation made its place in society paramount and unquestionable. The educational institutions of Chosŏn were crucial to the implementation of this ideology, and chief among these institutions was the Sŏnggyun’gwan.

The Sŏnggyun’gwan actually began in the Koryŏ institution, the Kukchagam. The Kukchagam was actually renamed as ‘Sŏnggyun’gwan’ during the reign of King Ch’ungsŏn (r. 1308-1313), but subsequently reverted to Kukchagam during the reign of
King Kongmin (r. 1351-1374). After King T’aejo (r. 1392-1398) transferred the capital of his new dynasty to Hanyang (modern Seoul), the Sŏnggyun’gwan was established in 1398 in the northeast part of the city (present day Chongno-gu, and the site of the present day Sŏnggyun’gwan University). Initially the organisation of this institution remained as it had been in the Koryŏ period, but with the promulgation of the Kyŏngguk taejŏn (National Code) in 1471 it underwent major alterations. The Sŏnggyun’gwan was headed by a Director (chisa), an Assistant Director (tongjisa) and a Headmaster (taesasŏng). In addition, there were two assistant masters (sasŏng), three second assistant masters (saye), fourteen lecturers (chikkang), thirteen librarians (chonjok), and three each of reference consultants (paksa), first proctors (hakchong), second proctors (hangnok) and third proctors (hagyu). Thus, this highest educational institution of Chosŏn boasted a large staff headed by a senior second-grade official.

At the inception of Chosŏn the Sŏnggyun’gwan admitted one-hundred and fifty students, but after 1429 this number increased to two-hundred where it remained for the remainder of the dynasty. Qualifications for admission to this school were 1) being either a Literary Licentiate (chinsa) or Classics Licentiate (saengwŏn); 2) being well-versed in either the Five Cannons or Four Books as a student of one of the Sahak (Four Schools) and being at least fifteen years of age; 3) one who was familiar with the Xiaoxue (kor. Sohak; Small Learning) and the son of either a meritorious retainer or an official of at least the third rank; 4) one who had passed the Hansŏng Examination (a preliminary examination for the Classics Licentiate Examination), the Literary Licentiate Examination and the regional examinations; 5) a government official who desired to enter the school for additional study. Students who entered the Sŏnggyun’gwan were required to stay in the dormitories and they signed a register before each and every morning and evening meal. By doing so they earned one ‘point’. When they had accumulated 300 points they became eligible to sit for the Kwanshi Examination, which was similar to the civil service examination (munkwa), but only for Sŏnggyun’gwan students.

The students were subject to many regulations that prohibited morally-questionable activities such as violation of the five Confucian virtues, slander of the government, enjoying wine and the company of women, or even reading Daoist or Buddhist scriptures. The content of education at the Sŏnggyun’gwan naturally centred on the Confucian classics such as the Five Cannons, Four Books and Three Histories. In addition, Korean works such as the Kyŏngguk taejŏn and the Tongguk chongun (Correct Rhymes of the Eastern Nation) were also incorporated in the curriculum. The content of the education at the Sŏnggyun’gwan changed on occasion to reflect the content of the civil service examinations, and students were also taught various forms of calligraphy and poetry. The students’ progress was measured by daily, ten-day and monthly examinations, and students who were successful in their studies were allowed to sit for the civil service examination, as well as receiving special consideration for appointments. There was no fixed term of study at the Sŏnggyun’gwan; the day a student successfully passed the civil service examination would be his graduation day.

The Sŏnggyun’gwan, being a government institution, was granted special agricultural land and slaves to meet its operating expenses. The students at the school were completely provided for by the institution during their studies, thus necessitating large land and slave holdings for the school. Accordingly, by the end of the fifteenth c. the Sŏnggyun’gwan held more than 2,400 kyŏl (approximately 550 acres) of fields and some 400 slaves to provide for expenses. However, after the devastation resultant from the 1592 Japanese Invasion the amount of land and slaves allocated to the Sŏnggyun’gwan was drastically reduced, and by the mid-seventeenth c. its holdings were down to 358 kyŏl (approximately 82 acres). However, the number of slaves that the school had rose dramatically during the fifteenth and sixteenth centuries and by the early eighteenth century there were some 7,000 slaves on the rolls of the Sŏnggyun’gwan. This number was also reduced in 1750 when the ownership of all slaves reverted to the Board of Taxation (Hojo), which then distributed
the taxes collected from the slaves to the Sŏnggyun’gwan. As a result of the diminished financial resources of the school, the educational function of the Sŏnggyun’gwan progressed poorly at the end of the Chosŏn period. Moreover, the development of the sŏwŏn as task-orientated institutions also took students away from the Sŏnggyun’gwan as did the factional politics that plagued the late Chosŏn period.

The Sahak (Sabu haktang; Four Schools) were so named because there were four schools in the capital, in the southern, eastern, western and central areas, that provided a secondary level of education. The origins of these institutions is in the Obu Haktang (The Five Academies of the Five Wards) of the Koryŏ period. Initially there was also a school in the northern area of the Chosŏn capital but it did not have an independent building and was abolished in 1445. The Sahak offered a curriculum similar to the Sŏnggyun’gwan but on a smaller scale and lower level. The students who demonstrated excellence in scholarship at the Sahak were then permitted to enter the Sŏnggyun’gwan as special students. Thus, these institutions can be viewed as preparatory schools for the Sŏnggyun’gwan.

The qualifications for entering the Sahak were to be the son of either a yangban or commoner family and at least eight years of age. All expenses for the students was borne by the central government and the teachers for these institutions were provided by the Sŏnggyun’gwan. Each school had about 100 students and the curriculum was based upon the Five Cannons, Four Books and Xiaoxue (Small Learning). At the age of fifteen the students could sit for the Sungbo Examination (a special examination for students of the Sahak) and if they were successful they could enter the Sŏnggyun’gwan for further studies. The importance of the Sahak, however, declined markedly after the 1592 Japanese Invasion during which time they were destroyed. They were rebuilt, but never had significant impact after this time.

The regional government schools were the hyanggyo, or county public schools. These schools were established with a primary aim at both providing a Confucian indoctrination in the outlying areas and at solidifying the control of the central government in these same areas. The hyanggyo thus played a major role in the Chosŏn ideology of suppressing Buddhism while promoting Confucianism. The hyanggyo further served as the intellectual centres of small communities as Confucian rites were offered here throughout the year and these schools also served as gathering places for local intellectuals. Thus newly promulgated laws were introduced at the hyanggyo and important political matters were debated here also. Resultant from this was the loss of the pure educational function of the hyanggyo and the adaptation of these institutions to political centres for the local communities.

The educational process of the hyanggyo allowed youths of common families at least sixteen years of age to be admitted for training. The curriculum of the hyanggyo featured the study of basic Confucian texts such as the Xiaoxue, and the instructors for these institutions were dispatched by the central government. The number of students was closely regulated by the central government since while at the hyanggyo, they were exempted from military and corvee labour service. This exemption led to abuse, as many youths maintained their status as students at a hyanggyo to avoid compulsory service, even to the extent of recording it on the census register. According to the Kyŏngguk taejŏn the number of students allowed enrolled at the hyanggyo at any one time was a maximum of 15 330 nationwide. This figure allowed ninety students at provincial level schools, seventy in urban prefectures, fifty at the county level, and thirty at the prefecture level. These numbers were designed to prevent too large a number of students becoming unavailable for government service.

The hyanggyo were mostly supported by the central government with grants of lands and slaves. The size of the land granted to an institution varied according to its location, with those hyanggyo serving larger areas being granted tracts of land of seven kyŏl (about 16
acres) and those serving smaller areas receiving five kyŏl (11 acres). The number of slaves provided to an institution also fluctuated with hyanggyo serving the larger urban areas having between twenty and thirty slaves, while their smaller counterparts generally had ten or so slaves. The hyanggyo also received support from local government officials and Confucian scholars. There were also levies placed upon communities to help fund these institutions. The hyanggyo came to wield tremendous political and economic influence in the outlying areas as they represented the political centres of their communities. However, in 1894, with the abolition of the civil service examination these institutions had outlived their usefulness from an educational aspect, and thus only the Confucian ritual side remained.

The sŏwŏn, or private academies, best represent the private institutions of Chosŏn. The sŏwŏn began with the establishment of the Paegundong Sŏwŏn in the Kyŏngsang Province by the P'unggi County Magistrate, (kunsu) Chu Sebong, in 1543. Subsequent to this, sŏwŏn were established throughout the country at a rapid pace. Initially, the sŏwŏn in Korea were influenced by the private academies of China that operated without ties to the government and provided an education in a liberal atmosphere. However, the sŏwŏn of Chosŏn did not remain such simplistic institutions for long and gradually transformed to political and social organisations that had a major influence throughout Chosŏn society. Moreover, the sŏwŏn filled a role as a place for the performance of sacrificial rites to particular individuals and as a result, by the nineteenth century, the educational function became blurred with the Confucian ritual import of the sŏwŏn.

Since the sŏwŏn were private institutions, the regulations concerning them were not fixed. The number of regular students was generally around ten, but this increased towards the end of Chosŏn to thirty. Additionally, the requirements for entering the sŏwŏn for study were also subject to variation. We can, however, note the instance of the Paegundong Sŏwŏn that required students to be: 1) a literary licentiate (sŏngwŏn), or a classics licentiate (chinsa) or 2) to have passed the preliminary examination or either the classics licentiate or literary licentiate examination; 3) to have been recommended by a Confucianist and have demonstrated both excellence in scholarship and upright moral conduct. The curriculum of these private institutions differed little from that of the Sŏnggyun'gwan or the hyanggyo. However, since the sŏwŏn were private and not encumbered by government regulations, or a one-track curriculum solely aimed at helping its students pass the civil service examinations, there were also courses of study directed at the cultivation of a proper Confucian character.

The sŏwŏn initially served as organisations where the neo-Confucian literati of the late sixteenth c. could establish a foothold in the rural communities under the guise of providing education to those in rural communities. Thus the number of sŏwŏn began to rapidly increase and, particularly during the reign of King Sukchong (r. 1674-1726), a large number of these private institutions were opened. Part of the reason for the rapid expansion of sŏwŏn during this period was the desire of the neo-Confucian literati to propagate the Confucian ideology. However, the factional strife that was rampant then was another rationale for the establishment of a sŏwŏn, since the foundation of a faction was based upon a given school and its particular interpretation of the Confucian ideology. Thus, sŏwŏn represented the outlet for the embodiment of the formation and study of the ideology of a faction, and this fact resulted in an explosion in their numbers. For example during the reign of Sukchong alone, some 166 sŏwŏn were established.

The preponderance of sŏwŏn by the late seventeenth c. cannot only be attributed to factional strife as the function of these institutions as ancestral shrines also became magnified at this time. Within the yangban families there existed an increased awareness of 'family'. This was manifested in the desire to elevate consanguineous status by the establishment of a sŏwŏn, where a family could honour its ancestors. Thus, families wishing to enhance their status dedicated a sŏwŏn to an ancestor, be he worthy or not, and this function of the
sŏwŏn came to overshadow its instructional capacity.

The social abuses of the sŏwŏn peaked in the late eighteenth c. as the pursuit of scholarship in these institutions stagnated. The money for the establishment of sŏwŏn was illegally procured from local government officials, and the sŏwŏn provided a haven for the sons of yangban who wished to avoid compulsory service to the government. During the mid-nineteenth c., when Chosŏn was under the guidance of the Hŭngsŏn Taewŏn'gun (1820-1898; the father of King Kojong), all but forty-seven of the over 650 sŏwŏn were abolished by royal decree, thus ending the influence of these institutions in Korean education.

The other private educational institution of Chosŏn was the sŏdang, or village school. Sŏdang were designed as primary educational institutions with an instructional objective of preparing students to enter either a hyanggyo or one of the Sahak in the capital. Although these institutions were private, the Chosŏn government actively participated in the administration, regulation and encouragement of the sŏdang. There are four basic types of sŏdang that can be categorised by their management: 1) those schools that were self-managed by a single teacher as his livelihood; 2) schools that were opened by a clan for the primary benefit of their children; 3) a local concord that pooled its resources and then extended an invitation to a teacher; and 4) a town that combined its resources before inviting a teacher. While the basic curriculum of sŏdang focused on the instruction of Chinese characters and the basic Chinese Confucian texts, many sŏdang taught morality and a variety of other subjects.

The role of the sŏdang continued to be of importance even after the advent of the enlightenment period in the late nineteenth c., as many of these schools adopted a modern, Western-style curriculum. However, during the colonial period sŏdang became a target of the Japanese and as a result of increased regulation and interference, the function and number of these schools diminished.

Period of Modernisation

The period of modernisation runs from the 1876 Treaty of Kanghwa Island (Kanghwa-do choyak) to the advent of the colonial period in 1910. It is characterised by the realisation of many in Chosŏn of the need to bring modernisation to this heretofore isolated and China-focused nation, in order to be able to withstand the onslaught of foreign cultures. The first manifestation of the new educational objectives of Chosŏn was the establishment of the Interpreter Training School (Tongmunhak, or T'ongbyŏn hakkyo) under the auspices of the Ministry of Foreign Affairs in 1883. The first private school was the Wŏnsan Academy founded by Chŏng Hyŏnsŏk in Wŏnsan of Hamgyŏng Province. The government also opened the English Academy (Yugyŏng Kongwŏn) in 1886, not only to provide instruction in English, but also in the natural sciences, mathematics, geography and economics. The schools of this period can broadly be categorised as either government operated schools or privately-administered schools. Of these two categories, it was the private institutions that would have the greater impact on education in this turbulent period.

The single group with the most substantial influence on the development of education in this period was the Christian missionaries, who were in Korea in large numbers. Some of the notable schools founded by missionaries include the Paejae Academy in 1885, and the Ehwa Girls School and Kyŏngshin School in the following year. These institutions provided a Western-style education, in addition to providing instruction in Christian precepts. Paejae Academy was sponsored by the United States North Methodist Church and was founded by Henry G. Appenzeler. This school featured a curriculum that provided instruction in English, astronomy, geography, mathematics, and Bible study, in addition to extra-curricular activities such as debating, baseball and tennis. Ehwa Girls School is noteworthy in the fact that it was the first educational institution for women in Korean history, and thus performed a vital role in freeing Korean women from the fetters of the
Confucian ideology that had long dominated their lives. Ehwa was founded by M. F. Scranton of the United States North Presbyterian Church and served as a secondary educational institution. The Kyŏngshin School, founded by Horace H. Underwood, also of the United States North Presbyterian Church, began as a kindergarten and then developed into a secondary school.

Non-Christian interests also undertook the establishment of private schools. The aforementioned Wŏnsan Academy represents the first private school of this period and in 1895 Min Yŏnghw'a (1861-1905) opened the Hŭnghwa Academy, which was closely followed by the Ulmi and Chunggyo schools that were founded in 1899. The curriculum of these private schools varied widely, but they did focus on providing a Western-style, modern education to their students.

The Reforms of 1894 (Kabo Kyŏngjang) brought about many changes to the official policies concerning Chosŏn education. One major change was the abolition of the Board of Rites (Yebu) that had formerly regulated educational policy. In its stead the Ministry of Education (Kyoyuk-pu) was established and charged with the administration of educational policies. The Reforms also brought about the discontinuance of the primary educational focus of the previous five-hundred years. The civil service examination system was eliminated and with this stroke the entire scope of education shifted from Chinese classics-centred education to that of practical, modern and Western-centred instruction. Education also slipped from the grasp of the ruling class during this period, as the primary impetus of educational reform was that of the commoner class. Educational institutions became sources of both new ideologies and the nationalist movement. The conservative elements in Chosŏn society resisted these changes since they not only threatened their power base, but also since they viewed these new educational modes as being improper. Nonetheless, private schools flourished during the period of modernisation and those of the lower class became the dynamic force in both the enlightenment and nationalistic movements.

The Chosŏn government was not entirely passive during this period as some leading forces in the government realised the need for education in the modernisation and preservation of Korea. Thus, in 1895, the government an edict for founding the Hansŏng Teachers’ College, with the goal of training primary school teachers that would permit the implementation of a new school system. The establishment of this institution resulted in an upheaval in the various types of schools throughout Korea. All told, in the fifteen years before Korea fell under the complete colonial domination of Japan, some five thousand schools were established in Korea, with a particularly high percentage of these being located in the northern provinces of Korea and in Seoul.

The government did provide an abundance of legislation concerning education in the mid to late 1890s. In 1895, regulations for the operation and the programs of primary schools were promulgated, and these were followed by legislation in 1899 concerning the operation and management of junior high schools. These legislative measures established the age for students in primary and middle school, and the required periods of study before graduation. Specifically, primary-school students were to be between the ages of eight and fifteen and were required to undergo three years of general study, followed by two to three years of study at an upper level. For the junior high schools, students were obligated to complete a seven-year course of study that would enable them to graduate and enter into business. Other legislation enacted by the government concerned foreign language schools (1895), medical schools (1899), and commercial and industrial schools (1899). Such laws provided basic standards that all licensed schools were expected to follow, and thus contributed to fostering educational activities that would help the nation in its quest for modernisation.

As the Japanese encroachments upon Chosŏn’s sovereignty increased, however, legislation sponsored by Japanese interests began to impinge upon the new educational institutions. Japan viewed the educational institutions of Chosŏn as a threat to her designs, and thus
during the Residency-General period, enacted a law that required private schools to operate only with government sanction and that only approved textbooks were to be used. As a result, of these restrictions many private schools were forced to close. Education in Korea, after the enactment of the Protectorate Treaty of 1905 (ulji poho choyak), can be characterised as stringent regulation by Japanese interests seeking to inhibit and destroy any possible nationalistic uprising fostered by the desire for any new education system.

Colonial Period

Korean education during the Japanese colonial period can be understood in terms of the educational policies implemented in Korea that reflected the colonial aims of the Japanese Empire. The desires of the Korean people were shelved and the focus of the schools turned to producing obedient and productive cogs in the Japanese colonial machine. After the annexation of Korea in 1910, education was redirected to training in manual skills and thus vocational education became the primary educational goal. The rationale for this direction was that the Japanese feared that the Koreans, if provided with a higher level of education, would become critical of the colonial regime and strive for independence. In addition to this reasoning, the Japanese had no desire or need to have Koreans at the higher educational levels with the underlying threat of becoming future leaders. The goal of the Japanese was quite simply to provide only the basic amount of education that would permit Koreans to perform the menial tasks required of them, and to provide this education at the lowest possible expense for Japan. A further and perhaps more sinister objective of Japanese colonial educational policy was the obliteration of the national spirit and culture of Korea. Japan sought to thoroughly assimilate Korea into the Japanese Empire by not only seizing her sovereignty, but also by destroying the essence of Korean culture.

At the time of the Japanese occupation of Korea the number of primary educational institutions established by the government stood at one-hundred and one. This had increased to two-thousand eight hundred and eighty-four by liberation in 1945. The number of government secondary schools increased from three to ninety-seven, and the number of vocational institutions rose from fifteen to fifty-eight. These sharp increases can be attributed to the Japanese desire to educate the people in a manner that would make them better colonial subjects. Thus the focus was on basic educational skills so designed for handling practical affairs and not for preparing students to pursue any higher education ideals. This is seen in the fact that only Keijo (Seoul) Imperial University and eleven colleges were established during the colonial period.

The curriculum and educational policies of the colonial schools also reflected Japanese aims for Korea. Curriculum and policy changes can largely be divided into three periods: 1) the initial occupation years of 1910-1919 which were characterised by the harsh implementation of Japanese will; 2) 1920-1938, the 'enlightened' administration era, and 3) 1938-1945 when the Japanese sought to destroy Korean culture and thoroughly assimilate Koreans into the Greater Japanese Empire.

The activities of the first period are seen in the changes in both curriculum and administrative regulations. Noteworthy is the change in status of the Korean language, which was now designated as the Chosón language, while the Japanese language was deemed the 'national' language. The classroom time spent in the study of these two languages was similarly impacted by this change, with the Japanese language taking precedent over Korean. Textbooks also underwent considerable change and naturally reflected the Japanese colonial outlook.

The Resident-General in Korea, Terauchi Masatake, issued sweeping reforms of the Korean educational system that included provisions for all textbooks used in Korean schools to be written in Japanese and which focused mainly on Japanese culture. Moreover, the Japanese language was to be the language of instruction. These policies
resulted in the closure of many private Korean schools since all teachers were required to be fluent in Japanese. In 1910, the first year of the colonial period, some 1,973 private schools closed, and by 1919 an additional 1,230 also closed their doors. At this point in 1919 only some 742 private Korean schools remained open and this, of course, resulted in diminished educational opportunity for Korean children. This can be seen in the fact that 91.5 per cent of Japanese children in Korea attended school, while the percentage for Korean children was a paltry 3.7 percent.

After the March First 1919 Independence Movement the Japanese colonial policy in Korea softened somewhat. The reasonably ‘enlightened’ educational policy of this period featured more opportunities for Korean students, especially in higher education. The 1922 promulgation of the Second Choson Educational Regulations increased the length of study in primary and secondary schools, established the Korean language as a required subject, and provided the foundation for the establishment of a national university. The concession of the Japanese to permit a national university in Korea was in response to the demands of the Choson Educational Association, which had lobbied strongly for this cause since mid-1920. The Japanese agreed to establish Keijo Imperial University, a measure that allowed them to continue to control higher education in Korea.

The educational policies of this second period are, on the surface, more enlightened and less confrontational than the policies of the first period. In truth, however, the Japanese guise of an ‘enlightened’ policy was little more than a cover for their continued encroachment into every facet of Korean society. Insofar as educational policy was concerned, the Japanese sought to strengthen Japanese-style education by harmonising it with the Korean system, and in a final analysis their goal of obliterating Korean culture did not waver.

The third period of Japanese educational policy for Korea is highlighted by the cultural assimilation policies of the period. In March 1938, the Japanese issued the Third Choson Educational Regulations, measures designed to forcibly assimilate Koreans. Under the banners of ‘Naisen Ittai’ (Japan and Korea are One Entity) and ‘Ninku Tanren’ (Perseverance and Discipline), the Japanese changed the names of Korean schools to the same as their Japanese counterparts and also changed the content of the educational curriculum to match the Japanese model. These changes included the complete prohibition of the use of the Korean language at schools; the memorisation of the Oath of Allegiance to the Japanese Emperor was made mandatory for all students, as was its recitation at various functions; Shinto Shrines were erected at all schools and worship at these was compulsory. The adoption of a Japanese name was required for all, with those who refused being barred from either attending or teaching at a school. But with the escalation of the Pacific War in the 1940s, educational activities in Korea went into abeyance in the light of Japan’s declining fortunes in this massive conflict.

In 1943, in a last-ditch effort to exploit the resources of Korea, Japan implemented the Fourth Choson Educational Regulations that fully changed the educational system of Korea to a wartime-footing. Thus, school education became an instrument of the war effort and the remaining private schools, which until then had been carefully treated by the Japanese, bore the brunt of these policies. Educational goals now stressed labour and military training, and many students were conscripted and sent to the various theatres of war. As a result of these policies, the education system in Korea collapsed and would not recover until after liberation in 1945.

**Education in the Modern Period**

United States Military Government in Korea, 1945-1948

The post-1945 liberation of Korea is characterised by the USA’s occupation of the
southern part of the peninsula and the USSR’s occupation of the north. From this, the educational policies in the south and north reflected the respective political ideologies. Thus, the United States Military Government in Korea (USAMGIK) instituted educational policies that reflected a democratic education, and these would shape post-liberation education in South Korea. A single-track 6-3-3-4 (six years elementary, three years junior high, three years senior high, four years college) system was implemented along with teacher training, adult education and the use of the Korean language in the classroom. In addition, facility expansion was planned and the six years of elementary education was made compulsory. Moreover, elementary education was to be free of charge and the age for elementary students set to begin at six and end at eleven. Secondary educational institutions of this brief period included the junior and senior high schools, teacher’s colleges and vocational schools. Higher education was represented by the colleges with a fixed study period of four years for students between the ages of eighteen and twenty-one. A marked accomplishment of this period was the establishment of a teachers’ college and of Seoul National University, the first truly Korean national university.

The post-liberation growth in the number of schools and students can be seen in Table 1.

The educational system of South Korea made tremendous improvements during this three-year span not only in quantity, but also in instructional quality. The system was, however, still burdened with a lack of qualified instructors, overcrowding and outdated teaching methods. Thus, while this short period represents a drastic improvement over the colonial era, it still fell well short of educational ideals.

### Republic of Korea, 1948-1960

The establishment of the Republic of Korea (ROK) in 1948 brought about further refinement of the educational system with the enactment of various legislative measures. These new laws were designed to create a system that contributed to completing the character of the individual who would then have the intellectual means to assist in the growth and development of an independent and democratic nation, and importantly be imbued with the desirable qualities of a citizen in a modern democratic society. Moreover, the educational philosophy reflected the realities of the Korean peninsula and thus education in the ROK promoted an anti-Communist ideology. The single-track educational system of the previous period was retained and was further supplemented with the addition of a two-year kindergarten period. Perhaps most importantly, the foundations for a national educational policy were enshrined in the Constitution of the ROK with the guarantee of equal opportunity in education for all citizens and a guiding ideology of devotion to the welfare of mankind.

Education in the new Republic advanced rapidly, but not without problems. Due to the constitutional right for a compulsory elementary education, enrolment in primary institutions skyrocketed, resulting in a lack of classroom space. However to meet this
increased demand, schools began conducting classes in shifts with those with the largest enrolments operating three to four shifts a day. The greatest setback to education in this period was the outbreak of the Korean War in June 1950. The war resulted in a massive displacement of people and resources and a tremendous disruption of educational activities. Nonetheless, the Ministry of Education (MOE) created a textbook, *Chönshii tokpon* (Wartime Reader), that was designed to provide guidance to students during this tumultuous period. Here, the aim of education was to defeat communism and rebuild the nation after the cessation of hostilities. Educational policy was designed to provide the skills needed for living during the war, and to further train each student in one skill that would be of use in the rebuilding of the nation after the war.

Other significant developments in this period include the establishment of an autonomous educational system by mid-1953. Although this system had many early problems, it still represented an early stage of self-government and is thereby quite meaningful. Civil education also came to the fore in this period as a means to educate those individuals who were too old for regular classes. Vocational schools were also founded at both upper and lower levels, and in 1950 sixteen junior colleges were authorised throughout the nation and one national university for each province was approved as a means to combat the heavy concentration of colleges in the national capital. Despite the many hardships caused by the war and the extreme poverty then current in the ROK, education was viewed as the answer to many of the nation's woes, and thus it grew exponentially during this period.

**Education after 1960**

After the 1960s there were several stages of major change in the composition of the Korean educational system and its goals before it reached its present state. The rapid expansion of the 1950s had resulted in a deterioration of educational quality to some extent and this shortcoming was further exacerbated by the superficial imitation of foreign educational systems. Thus, in the latter half of the 1960s, several projects were launched to revise the curricula of Korean schools to meet the needs of Korean students. One major change was the abolition of the entrance examination for junior high students, which permitted the proportion of elementary school students advancing to the next level to increase from 55 to 75 per cent. The impact of this was to permit a greater number of students to obtain a higher education level and in turn to provide more highly educated workers for the industrialisation process that Korea was then experiencing. Also, a standardised national entrance examination system for colleges and universities was established to provide equal opportunity so that all students might secure a higher education. The effect of this regulation was to guarantee that the best-qualified students were admitted to higher education institutions, thereby raising the overall quality of higher education. Finally, in 1968 the National Education Charter (Kungmin Kyoyuk Honjang) was promulgated, and this substantiated the goals of national education as being to assist the people in the realisation of a concrete national identity in addition to developing respect for history and tradition. Moreover, the Charter emphasised the importance of balancing the needs of an individual with those of the State, and to foster a spirit that would provide for both the individual and the nation. Thus, the Korean educational system was prepared for the period of rapid economic growth and to help usher in a period of prosperity.

The 1970s were distinguished by a great push for economic advancement and a national philosophy of anti-Communism and nationalism. Hence, the educational focus was on the development of scientific and technical skills, while at the same time programs such as the New Village Movement (Saemaul Undong) advocated the progression of self-reliant communities. The educational policies of this period created a strong national identity among the Korean people and programs such as the New Village Movement were largely responsible for this increased awareness. At the same time, efforts to realise an improvement in higher education were undertaken. In particular, engineering and technical colleges were developed as these institutions held the key to better preparing Korea for
advancement in high-technology undertakings.

In the 1980s, Korea’s educational policies were reorganised with the outlawing of private tutoring and revised college entrance regulations. Other changes executed by the MOE included strengthening of moral education, implementing pre-school education, qualitative improvement in college education, the extension of social education and the strengthening of international education, among other reforms. All of these changes and others besides helped prepare Korea for the 1990s and her place in an increasingly technology-driven society. International exchange programs ensured that Korean students were among the world’s best educated and that Korea was able to compete in the global community. In addition, compulsory education was extended through junior high school in the early 1980s and this guarantees all Koreans a basic educational level. The tremendous growth of education in Korea can be seen in Table (2):

Education in the Republic of Korea has made tremendous gains since liberation in 1945. Illiteracy, which was rampant at the time of liberation, has been virtually eliminated among Koreans, and this can be attributed to the immense desire of Koreans for education. Education has traditionally and continues to be of great importance to the Korean people and this is seen in the efforts that the Korean people have made in this aspect of their modern society. Primary education has become something all young Koreans have a right to, and access to secondary and higher education is also guaranteed to all Koreans. However, there are problems in the educational system of Korea such as the over-crowding of classrooms, excessive focus of junior and high school students on the college entrance examination and expenses incurred by parents in trying to provide their children with an education. These issues must be addressed in the future in order to prepare educational policies that will best suit Korea and her people in the upcoming years.

Educational Broadcasting System (EBS) [Broadcasting companies]

Electronics Telecommunications Institute (ETRI)

Located in Taedŏk Science Town in Taejŏn, the ETRI (Han’guk Chŏnja T’ongshin Yŏn’guso) is one of Korea’s leading research institutions. Its origins date from December 1976, when the Korea Institute of Electronics Technology (KIET) was established under the jurisdiction of the Ministry of Commerce and Industry. A year later, the Korea Telecommunication Research Institute (KTRI) was established with responsibility to the Ministry of Communications. In March 1985, KIET and KTRI were combined to form the ETRI, under the control of the Ministry of Science and Technology. In March 1992, the Ministry of Communications assumed control of the ETRI.

The Institute engages in basic and advanced research in the electronics and telecommunication fields. As of 1994, it had a total operating budget of almost $US180 million with three-quarters of this sum, or thereabouts, utilised for R and D. The Institute’s budget supports a direct payroll of around eighteen hundred staff of which three hundred
hold doctorate degrees and fifteen hundred or so have technical qualifications. If consultants
and other contracted personnel are included, the total labour force of ETRI exceeds two
thousand, three hundred.

ETRI's research interests are multifarious, and include basic and advanced technologies in
the fields of telecommunications; semi-conductors; computers; and information technology.
These functions are primarily devoted to providing sophisticated telecommunications
services to Korea in the twenty-first century, and in expanding the international market share
of the country's electronics and communications technologies.

**Emille Museum**

Located in North Ch'ungch'ong Province's Po'n County, the Emille Museum (Emille
Misulgwan) is a private museum founded and operated by Zo Za-yong (Cho Chayong), a
renowned architect and art collector. Zo studied architecture at Tennessee's Wesleyan
College and then at Harvard University. When he returned to Korea in 1953, he began to
gather ancient roof tiles and other artefacts related to Korea's traditional architecture. In the
years that followed, his collection widened to include folk art, especially shrine paintings of
the mountain spirit (*sanshin*) and works in which tigers are the subject. In 1968, he
founded a museum in Seoul's Kangsŏ Ward and the exhibits there slowly grew to about
eight-thousand. To house his collection, a museum branch was set up in Po'n County in
May 1982 and in the following year the entire collection was transferred there.

*Empire News* (see *Cheguk shinmun*)

**Employment**

Employment encompasses those activities in which humans undertake in order to secure
the goods or products that they need to ensure their daily survival. It also generally entails a
certain set of skills and requires the completion of some task or tasks in order to receive the
means that permit one to gain his or her livelihood. Resultant from employment is work which
serves to satisfy many diverse needs. For the individual employment satisfies his need to
exercise his faculties and to participate in the collective work of society. It also provides
him a claim on the social product, thereby enabling him to support himself and his family.
From the standpoint of the community, work is necessary for both survival and civilisation.

Throughout most of history, man has had to gain his living from the land. In traditional
societies, in which the productivity of agricultural labour is very low, virtually the entire
population was required to be engaged in agricultural activities. As a civilisation advances
and develops, it becomes able to feed its people more easily, thereby requiring a smaller
proportion of its population to be engaged in agricultural activities. When agricultural
production achieves a certain threshold, the demand for primary products, that being those
of agrarian nature, drops and the demand for other goods such as clothing, shelter and
manufactured products increases. The production of secondary products ultimately
becomes organised in factories and expands dramatically. As demand grows the
employment in the secondary sector increases. Another sector of employment, the tertiary
sector, emerges as society continues to advance. This sector encompasses the service
trades, teaching, administrative functions, scientific research, medicine, arts and other such
areas. This sector features slight technical progress when compared to the first and second
sectors, hence requiring large numbers of people. In countries with high standards of
living, demand for the products of the tertiary sector is great and keeps increasing. Consequently, employment in this sector increases more rapidly than the other two sectors.

**History of Employment**
In traditional Korean society it is difficult to identify many practices as being employment in a modern sense of the word. However, working in agricultural activities in order to gain one's livelihood is very much like the modern concept of employment. The same can be said for livestock raising activities. However, as ancient societies advanced towards centrally-governed states, there appeared a class of those who supervised and of those who were supervised. A manifestation of this phenomenon is the existence of social and class relations in the ancient kingdoms of Korea. In Shilla the kolp 'um (bone rank) system reveals this relationship as does the aristocracy of Koryó and the upper and lower classes of Chosón. In traditional society there was a very close relationship between the occupation that one was engaged in and his social class. Only members of certain classes performed certain occupations. In traditional society one's physical ability or technical knowledge did not determine his occupation inasmuch as his ancestry did. Accordingly, it was of no consequence of what talents or desires an individual had, but to which class he was born determined what he would do for his livelihood. As a result there were tremendous restrictions on one advancing in traditional society. Therefore, traditional Korean societies can be characterised by generations of the same family specialising in a particular occupation.

The economy of the Koryó period was founded in agriculture, and the vast majority of the people were involved in direct tillage of the land. However, there were those who received stipends for services performed for the government in other realms. The Stipend Land Law (chŏnshi kwa) provided land stipends for various reasons, one of which was the so-called 'soldier's land' (kunin chŏn) that was granted to those peasants who entered the Koryó military service. Moreover, local government officials also received compensation for their service to the government in the form of stipend lands known as oeyŏk chŏn. Both of these occupations were hereditary, and therefore so were the lands that provided support for the recipient families. If there was not a male heir to continue in the family tradition, the land would revert to the state and the family would then receive a small pension.

In Chosón the social structure is dominated by the relationship between the ruling yangban class and the commoners. The preservation of power by the ruling class was achieved through restrictions on land ownership, outsiders gaining access to official posts, social mobility, and other such measures designed to prevent commoners from entering into the ranks of the governing class. However, the numbers of those in the yangban class were not sufficient to staff all positions within the government, so commoners accessed the lower administrative positions. Such positions as sŏri (petty clerks), kun'gyo (military cadre members) and t'ogwan (local civilian officials) were filled by commoners. The individuals in these positions received stipends in various forms and therefore can be considered as employees in the modern sense of the word.

Being tied to a single, hereditary occupation marked the lives of most commoners during Chosón. Employment was not a matter of choice, but was instead dictated by one's birth. Even worse than the plight of the commoners of this period was that of the slaves and other low-born peoples. Slavery was hereditary and in accord with the status of one's mother. The lowborn people were those engaged in the hereditary occupations such as butchers, travelling entertainers, tanners, female entertainers (kisaeng) and shamans. These individuals were ostracised from society and generally lived in separate hamlets.

The opening of ports in Korea in the aftermath of the 1876 Kanghwa Treaty saw the birth of a class of day-labourers. There had already been, of course, labourers in Chosón who were required to work as service for the government such as those in the silver and copper mines, but in the modern sense of the word, it was not until this period when they came into existence in Korea. It was the areas around the newly opened ports of Inch'ŏn and Pusan that day-labourers first appeared. It is thought that by 1911 there were over 22 000 of these wharf workers in Korea. Other evidence of a large employed class forming can be seen in the 1910 mobilisation of 100 000 workers for the construction of railroads. Prior to the Japanese seizure of Korea, a modern army was founded and the bureaucratic structure
was modernised with a system for hiring public officials. In addition to the employment opportunities created in these areas, there were jobs created in the tertiary sector, such as in hospitals and schools. The structure for the creation of employment as such was accelerated throughout the colonial period.

The colonial industrial policies of the Japanese were greatly accelerated in the 1930s and this caused a marked increase in the number of wage-workers in Korea. By 1943 it is thought that there were around 1,750,000 wage-workers in Korea. Of these, 390,000 were employed in factories, 280,000 worked in mines, 170,000 were employed in various transportation-related occupations, 380,000 were employed in construction jobs, and another 530,000 were employed in various other occupations. The vast number of jobs under the Japanese were those requiring labour and in 1942 nearly 67 per cent of all jobs were for various types of labour, 7.4 per cent mine work, 8.6 industrial in nature and 2.0 per cent for marine related occupations. Contrasted to this, only 4.3 per cent of the Korean employed at this time were in jobs that can be classified as either bureaucratic or liberal. An examination of the employment structure created for Koreans and Japanese in Korea at this time, shows that the Japanese were mostly involved in management or technically-advanced employment, while Koreans were largely employed in manual work. Therefore, by the time of liberation in 1945, Korea was presented with a largely unskilled labour force.

Modern Employment

After 1945 the government of South Korea implemented a capitalist economic system. From the 1960s, Korea entered the world market with an export-orientated economy that became one of the fastest growing in the world. The rapid expansion of employment in the second and third sectors of the economy resulted from industrialisation. The shift of employment from primary sectors such as farming, stockbreeding and fishing to other areas reveals the depth of this change. In 1955 the agrarian and marine sectors of the economy were the largest, but by 1975 numbers employed in these sectors had decreased to 48.8 per cent, and in 1983 to 28.5 per cent of the population.

Korean workers are now guaranteed the right to choose the occupation they wish to follow. The fifteenth Article of the Constitution of the Republic of Korea states: 'All citizens have the freedom to choose their occupation'. This is a right that did not exist in Korea until the establishment of the Republic of Korea. However, potential choices in employment are greatly influenced by factors such as age, sex and education. Manufacturing jobs with their relatively low wages remain the domain of those with lower educational levels, and among the manufacturing jobs those that are mostly staffed by women such as in the textile industry generally pay the lowest wages. However, in recent years the gap between the earning power of men and women in the manufacturing sector has somewhat narrowed.

As Korea recovered from the turmoil surrounding the liberation of the country, its subsequent partition and the disastrous Korean War, it entered a stage in the early 1960s that would witness rapid economic expansion and modernisation. The manufacturing sector grew at an annual average of 13.2 per cent from 1962 to 1979, and here employment also grew by leaps and bounds. In 1963 the sector accounted only for about 8.0 per cent of the workforce, but by 1980 this had grown to almost 22.0 per cent. Virtually every segment of the manufactured-goods industry expand during this period. Due to rapid economic growth and an improved industrial structure, the problem of unemployment in Korea has been virtually eliminated. However, with the decline in birth rate since the mid-1980s, the elevation of income levels and the trend among Koreans of avoiding the so-called '3D' (dirty, dangerous, difficult) jobs, the Korean economy has been experiencing a serious labour shortage, particularly in the manufacturing sector since the early 1990s.

The government has undertaken a series of measures to combat this growing problem,
recognizing that a stable supply of manpower is necessary to ensure planned economic activity. With the aim of matching supply and demand for manpower, various employment policies have been implemented and vocational training services established. Those who wish to find new jobs or change their careers have access to guidance services, such as vocational aptitude tests and counselling. Placement services are being promoted to improve job finding and security through country-wide employment security agencies. These agencies are linked with nation-wide computer data bases.

To train technically skilled workers and expand employment in preparation for the advent of an advanced industrial society, development programs focus on better utilisation of educated or trained manpower. Also emphasised are the improvement of working conditions and the environment, including the fostering of a constructive dialogue between labour and management, and the revitalisation of labour unions at the industrial level. To foster the heavy and chemical industries and to promote export industries which are the life-blood of the nation, efforts have been made to ensure the qualitative improvement and increased sophistication of skilled workers and their technical orientation.

The vocational training system in Korea can be divided into public and private sectors. Public training is mainly conducted by the Korea Manpower Agency (KOMA) under the guidance of the Ministry of Labor (nodongbu). Other governmental institutions also manage vocational training programs to meet various needs. KOMA training focuses on basic and new technology trades, and skilled labour. Private vocational training consists of in-plant training offered by companies and authorised training conducted by individual or non-profit organisations. The former is conducted to meet the specific needs of the enterprises and the latter is conducted with approval from the Ministry of Labor. However, many companies are reluctant to invest a large amount of money in worker re-training programs, since the focus of many small to medium sized corporations is on immediate profits. This has created something of a dilemma in Korean industry where the need for having workers that are both highly skilled and flexible is evident, but where there remains an unwillingness to invest the money needed to achieve this.

Korea’s need for a highly-educated and highly-skilled workforce is becoming increasingly evident as the economy looks to a greater share of the international market. Labour-intensive jobs that are dependent upon a low wage workforce and an export market, such as textiles, have already started to move from Korea to China, Thailand and elsewhere. Therefore, the education of Korea’s workforce is more important than ever before.

Eul-yoo Publishing Company

Eul-yoo Publishing Company (Uryu Munhwasa) is a publishing company located in Susong-dong in Seoul’s Chongno Ward. It was established in Seoul in December 1945 with Min Pyŏngdo as president, Yun Sŏkchung as editor-in-chief, Chŏng Chinsuk as general manager and Cho P’ungyŏn as managing editor. Its stated role was that of elevating popular awareness of traditional Korean culture while introducing the more advanced aspects of foreign cultures.
In 1946, the company established Chosŏn Adong Munhwa Hyŏphoe as an organisation committed to creating edifying works for children. In February of the same year, Yi Kakkyŏng’s children’s book Kajong Kŭrsi Ch’ech’øp (A Book of Model Penmanship for Home Learning) was published, followed in November by the weekly periodical So Haksæng (primary school student magazine), which became a monthly in May of the following year. As one of the first publications of its kind in liberated Korea, So Haksæng helped to kindle a new interest in the genre of children’s literature.

As a further milestone in Korean publishing, the company published the first volume of Chosŏnmal K’un Sajŏn in 1947. The sixth and final volume of this comprehensive dictionary of the Korean language was completed in 1957. In 1948, the company created the academic monthly Hapk’ung, but its publication, as well as that of So Haksæng, was soon halted by the Korean War. In October 1952, Chŏng Chinsuk became president, and the company’s operations were transferred to Pusan.

In the years following the war, the company moved back to Seoul where it remains today. Its publications include important histories such as Han’guk t’ongsa by Han Woo-keun (in Korean) and The History of Korea. (in English) by the same author. The company still publishes books for children.

Ewha Womans University

Ewha University (Ihwa Yŏja Taehakkyo) is a private university situated in Taehyon-dong in Seoul. Its beginnings can be traced to May 1886, when the Methodist missionary, Mary F. Scranton taught a female student. In 1887, after receiving the name Ihwa (Plum Blossom) from Empress Myongsŏng (1851-1895), Scranton named her establishment Ihwa Haktang. Being the first educational institution for women in Korea, the school was accredited in 1908 as a school with departments for primary, junior high and high school students.

In 1910, Ihwa Haktang offered a four-year college curriculum and four years later, three students were the first to receive their diplomas from the school. In 1925, Ihwa Haktang was reorganised as Ihwa Yŏja Chŏnmun Hakkyo and a humanities and music department were established. In order to accommodate increased student enrolment, the school was relocated to its present site in 1935, when new buildings were constructed. In 1939, Kim Hwallyeun became its principal. Because of pressure exerted by the Japanese colonial government, in 1943 the school changed its name and role to Yŏja Ch’ŏngnyŏn Yŏnsŏngso, a one-year training institute for young women. In 1945, it became the technical school, Kyŏngsŏng Yŏja Chŏnmun Hakkyo.

After liberation, the school was reorganised as Ewha Womans College, but with the outbreak of the Korean War, the campus was abandoned and the faculty moved south to Pusan. While in Pusan, a graduate school was established and Ewha was reorganised into five colleges and nineteen departments. The college was returned to Seoul in August 1953. In the decades that followed, much expansion took place, and Ewha has developed into one of South Korea’s foremost universities, with a good measure of international standing.

Today, Ewha Women’s University consists of fourteen colleges: Art and Design; Business and Economics; Education; Engineering; Home Science and Management; Law; Liberal Arts; Medicine; Music; Natural Sciences; Nursing Science; Pharmacology; Physical Education; and Social Sciences. For postgraduate studies, there is the Graduate School as well as the Graduate Schools of Design; Education; Information Science; International Studies; Social Welfare; and Translation & Interpretation.

The university also supports the Ewha Women’s University Museum. The museum’s
collection dates from 1935, and initially consisted of objects donated by faculty members and students. The displays include pottery; roof-tiles; paintings; calligraphic works; bamboo articles; metalwork, set gemstones; personal ornaments; and household utensils used by women during Choson.

**Film and film makers**

Korean film is a broad subject to define, and its practitioners are a varied group to describe; but it is possible to outline the most prominent aspects of their interrelated history up to the present time.

**Early History**: the Japanese occupation, censorship, and two wars serve as backdrop, strongly influencing early Korean film development.

The first showing of a motion picture in Korea was in 1904; it was a news documentary of the feats of the Japanese Navy in the Russo-Japanese War. It was shown to Korean government leaders for obvious reasons and preceded by six years the outright takeover of Korea by Japan in 1910.

The first Korean-made film was shown to the public in 1919. 'Righteous Revenge', a 'kinedrama' designed to be combined with a stage performance, was directed by Kim Tosan. There is some discrepancy over the honour of first feature-length film in Korea. One source, *A Handbook of Korea* 1990 ed., says, 'Oath Under the Moon' (1923) was the first such film made there. Directed by Yun Paek-nam, the film was a prelude to the era of silent movies in Korea. However, in 'The Koreans', by the Korean Overseas Information Service, it states that 'Ch'unhyang ch'on' (1922) - the story of enduring romance between an upper-class young man and a common girl, already made famous in novel, *p'ansori* (Korean operatic) and *ch'angguk* (folk song) forms - was the first film of that type. Regardless, in 1926 the classic 'Arirang', a protest against Japanese colonial oppression, was produced by the writer-actor-director giant Na Un-gyu (who also made a version of 'Ch'unhyang ch'on' that was Korea's first 'talkie', and who died in 1937 at age 35). Early silent films like 'Arirang', whether domestically produced or imported, used a *pyonsa*, who narrated all the spoken parts live during each showing of the film. Through this vehicle, anti-Japanese sentiments could be inserted for Korean audiences during the Japanese occupation.

'Arirang' was followed by a few more films of its type, and then the Japanese began a crackdown against Korean films in 1930. Only two or three films were made each year in the 1930s and cinema activities in Korea were in the hands of the Japanese until Korea's liberation at the end of World War II: more than 140 films were produced from 1919 to
1945, mostly of a propagandistic nature.

During World War II, virtually no Korean films were made in Korea. The Japanese masters saw to it, though, that propaganda films were made. War documentaries came more into play in Japan than in Korea, but they still were important to the Japanese war effort throughout that nation's empire, inclusive of Korea.

With liberation, the film industry was reborn in Korea. The first 'liberated' commercial success was the 1946 film 'Chayu manse!' ('Hurrah for Freedom!'). Then came the first Korean-made colour film, 'The Diary of a Woman', directed by Hong Sunggi, in 1949. The Korean War (1950-1953), however, dealt a severe blow to the fledgling film industry, and only a handful of war documentaries were made in North and South Korea at that time. In the South, American newsreels also provided coverage of what democracy consisted of, with Japanese voice-overs. Even North Korean prisoners of war developed a liking for these films, once the Japanese soundtracks were disconnected!

In 1955, the South Korean government exempted all domestic films from taxation, which led to a rapid increase in the number of film-makers and a golden age of cinema in Korea. A nicely-done 'Ch'unhyang' broke all box-office records in 1956 by attracting 90,000 viewers in a twenty-one day first run in Seoul. The number of films produced in the late 1950s reached about 100 annually, and about 200 a year in the 1960s. In 1969, The 'History of Korean Motion Pictures' was published to celebrate the 50th anniversary of the introduction of cinema to the country.

Film Making: Early signs were positive; things progressed, albeit gradually; finally, it was time to develop indigenous Korean film possibilities.

The film-making art in Korea has been a gradually progressive form in terms of quantity and quality. Early technology did not allow for colour or sound; black-and-white cues were paramount then. And the struggle to make first-rate films in the face of Japanese censorship was an ongoing one for the first 26 years of the industry's growth. Eventually, the artistic genius of Korean film-makers began to flourish. Early signs had been positive. The vision inherent in an 'Arirang' or the first 'Ch'unhyang chon' is apparent; and when 'A Diary of a Woman' emerged in 1949, Korean film-making began forming an indigenous wellspring of possibilities.

The main force for good in Korean film-making has been the way the technical limitations imposed upon Korean film-makers have been blended with the talent of all personnel involved, producing useful Korean films. A kind of nationalistic and cultural imperative has been obtained in the way those forces have come together, especially since the 1950s, when both Korean governments became active in the promotion of their nations' films. More recently, it is hoped the opening of the film-making market in South Korea since the late 1980s will have effect on the production of even more powerful films near the start of a new millennium.

Directors: there have been outstanding Korean film directors from the early days on. And in Korea today there continue to be many excellent directors.

There have been many leading directors in the Korean film industry over the years. These include Kim Tosa, the director of the very first Korean-made film, Righteous Revenge, 1919; Lee Myongu, dir., Ch'unhyang chon, ca. 1922; Yun Paengnam Oath Under the Moon, 1923; Na Un'gyu, Arirang, 1926; Hong Sunggi, The Diary of a Woman, 1949; Shin Sangok (Mr. Shin was the producer-director of more than 200 films, in both South and North Korea - mainly in the 1960s and 1970s in South Korea); U Wŏnjun and Yun Yonggyu, The Tale of Ch'unhyang, 1978; Yi Tuyong, P'imak (Death cottage), 1981 and Mulleya Mulleya (Spinning wheel), 1984; Pae Ch'angho, Kipko p'urun pam (Deep Blue
Night), 1985; Im Changbom and Ko Hagim, Pomnal üi nunsogi, 1987; Pae Yonggyun (Why Did Bodhi-Dharma Go East ?), 1989; Chung Ji-Young (Chŏng Chiyŏng, (The White Badge), 1992; Pak Jong-Won (Pak Chongwŏn), Our Twisted Hero), 1992; Kim Ulsuk ('A Marriage Story', 1992); and Im Kwŏnt'aek, Sŏpyŏnje, 1993 and Ssibaji (The Surrogate Mother). Film directing in Korea has been a man's profession until recently. Korean women have been making strides there, too, but more slowly than in the West. All-told, Korean directors have made real contributions to the film-making art.

**Actors**: Korea has produced many fine actors and actresses, especially since the 1970s.

Korean actors have been playing leading roles in the films of their nation since 1919, when the first film made by Koreans, 'Righteous Revenge', was released. Although little information is readily available about the casts of Korea's earliest films, it is safe to say that the Japanese masters of Korea during their most recent occupation of that peninsula kept a close watch so that the 'Koreanness' of these pictures was not overly emphasized. After liberation, government sponsorship was not, at first, profound enough for Koreans to produce many films; and the Korean War slowed what was a fledgling development of film acting styles (which depended on acting styles from the drama) early on.

By the late 1970s and 1980s, things had improved significantly. At the 24th Asian Film Festival, held in Sydney, Australia, in 1978, the South Korean Kim Ja-Ok won the best actress award for her role as a hostess in the feature-length 'Apartment of Miss O'. Then, in 1987, Kang Su-Yon won her first international best actress award at the Venice International Film Festival for her role in 'Ssibaji' ('The Surrogate Mother'). And in 1989, Ms. Kang captured her second award of that magnitude at the Moscow International Film Festival for her role in 'Aje, Aje, Para Aje' ('Come, Come to a Higher Place'). Meanwhile, in 1988, Shin He-Su, a newcomer, won the best actress award at the Montreal Film Festival in an Im Kwon-Taek film, 'Adada'. And by 1992, at the 37th Asia and Pacific Film Festival, held in Seoul, the South Korean Chang Mee-Hee had won the best actress award.

In 1993, a new film was released that proved to be an instant artistic and popular success. 'Sŏpyŏnje' ('A Journey into the Korean Soul', which is an epic dramatization of the life of a family of p'ansori performers, p'ansori being a traditional Korean song-in-drama, operatic form) starred three actors whose reputations are assured as a result of their contact with this greatest of Im Kwon-Taek films. Those actors were: Kim Myung-Gon, as the step-father, Yubong; Oh Jung-Hae, as the faithful daughter, Songhwa; and Kim Kyu-Chul, as the rebellious son, Tongho. Writing for Korean Culture in its Spring 1994 issue, Y.K. Kim-Renaud notes: "These actors... do not just perform music well; they also act superbly, most probably because of their deep understanding and empathy for the life of the people they portray."

**Producers**: although the film producers of Korea have done yeoman's work, they have not been recognized as widely as Korea's directors and actors.

In North Korea, film producers do the work of the Communist Party. They have been strongly influenced by the Soviet and Chinese models. Meanwhile, in South Korea film producers have been influenced by the Western and Japanese models. South Korea's Kang Dae-Bong was named best producer in 1978 at the 24th Asian Film Festival for his work on 'Butterfly Girl', partly because he recognized the validity of the latter examples. Others have won regional wards since then, but aside from South Korea's Shin Sang Ok, whose talents were so pronounced that he apparently was kidnapped by the North Koreans in 1978, Korean film producers have not yet come into their own in the international marketplace. That is not because they have failed to work hard and well at their jobs, but rather it is because they have not received the publicity of other producers. That may change soon, as the two Koreas continue to move more into the international spotlight.
Companies: Korean film companies do not carry as much clout as Western film companies. Nevertheless, they are making head-way.

North Korea does not have film companies in the Western sense. Films are produced by and for the state, and some good films emerge from that formula; but the best Korean films are being made in South Korea today.

In 1971, the South Korean government, in an effort to help the ailing movie industry of that nation, launched a program of financial assistance for film production and script writing, and established the Motion Picture Promotion Corporation to support cinema circles both in financing and in dealing with technological problems. Film companies per se have not been dominant in the industry there; rather, the South Korean government, more recently big business, and individual producers, directors, and their associates have been.

However, in the controversial 1994 Im Kwon-Taek film 'Tae-Baek-San-Maek' ('The Taebaek Mountain Range'), the role of all film production companies came into greater focus, as Tae Hung Production Company defended Im, its employee, from attacks relating to the socialist themes associated with the novel that inspired that company's film. The novel by the same name was attacked by political rightists for its portrayal of South Korea's early leaders as Japanese sympathizers. The rightists branded the novel a 'socialist revolutionary textbook' and were none too happy that a film was being made from it. Lee Taewon, the film's producer and president of Tae Hung, noted in the Korea Newsreview of 14 May 1994: 'It is my personal opinion that the novel is a source of controversy. However, making the film has nothing to do with that. It is entirely up to director Im how to make the film. If somebody wants to say something about it, then he should say it after seeing the film.'

Also in 1971, the South Korean government provided outstanding producers with permits to import foreign films, subject to an annual quota. And following-on from the opening of the South Korean film market to foreign film-makers in the late 1980s, in 1995 a new Motion Picture Act was passed, with the thrust of strengthening the domestic film industry. South Korean film-makers are today encouraged to compete directly with the best foreign film-makers, inclusive of those in Hollywood. And yet, Western films continue to attract - like 'Jurassic Park' (1.4 million people in 1993); 'Cliffhanger' (1.3 million), and 'The Bodyguard (1.1 million). Even the Russian-made 'Moscow Doesn't Believe in Tears', continued to draw big audiences in South Korea fairly recently.

Locations: P'yŏngyang and Seoul are keys to Korean film-making, although that is changing.

P'yŏngyang is the heart of the North Korean film industry, as is Seoul in the South. The North Koreans produced a film in 1987 that gained international recognition because it dealt with social themes and not political ones per se. That film, 'Pomnal ŭi Nunsogi' ('The Snow Falling Away in Spring', or simply, 'Thaw'), is rare because it attacks the Japanese rather than the Americans. Needless to say, it was not made in Japan.

Seoul is the centre of the South Korean film industry, but that capital is now being tested by other locales. For many years in South Korea, localism was paramount in the nation's film production. Then in the 1980s, overseas location sequences were included more often in South Korean films. However, due to depressed box office receipts in early 1992 by colossal South Korean films containing sequences shot overseas, that nation's film-makers began rethinking their interest in working outside their country. Still, it seems likely that more South Korean films will be shot overseas by the start of the 21st century.

Genres: six categories, broadly defined, cover Korean film-making types.
Comedies: Korean comic dramas have long depended on earthy humour and horseplay; and so have the nation's satires. Korean comic films use these devices plus more subtle humour (in more serious films) to lighten up difficult situations. This was most readily apparent in several recent films. 'Out into the World' (1994), to take one example, is a black comedy written by the former drama critic Yo Kyun-dong. It is the story of two convicts who accidentally become fugitives while being moved to another prison. Joined in their escapades by a worn-out bar girl, the pair poke fun at the 'outside' world. In the end, the star power generated by Moon Sung-gun, Lee Kyung-Young, and Shim Hye-Jin (as the bar girl), asks the question: Who really should be in prison - the convicts or the law enforcers?

Documentary: Korean documentary films were originally made under Japanese control, and with pointed imperialistic aims in mind. Most of these films were made between 1938 and 1945, but their history is older than that. Then with liberation and the separation of the two Koreas, new situations called for new methods. In the North, documentaries became a means of teaching Communist techniques. The Soviet model was used there at first. In the South, documentaries have been more influenced by free market mechanisms. During the Korean War, U.S. film-makers influenced South Korean film-makers for the first time at close range. After the war, both North and South Korean film-makers took practical, indigenous roads to new art as well.

Hyondaeguk: This word derives from drama circles, and it means, roughly translated, 'the modern stage'. In terms of Korean films, it describes very generally those films that express their emotions and ideas through modern characters and scenes.

Literary Sources: Korean films have been directly influenced on many occasions by Korean novels, folktales, dramas, and even by songs, paintings and poems. The most important instance has been in the 'original' and remade versions of 'Ch'unhyang chon'. That folktale is perhaps Korea's favourite story. (As with all the major distinctions made in this section, there is some overlap between categories, but that only means that Korean films are as complex in most respects as American, European, or Japanese films.)

Melodrama: Korean films have often been called too melodramatic. That may be the case with some films; but it is also true that the melodramatic form per se is a thing of beauty when expressed right in Korea. Again, the story of 'Ch'unhyang chon' is melodramatic, but it also is lyrically poetic and central to the Korean way of life.

Saguk: This word also derives from drama circles, and it means, roughly translated, 'the historical stage'. With regard to Korean films, it refers in some cases to those films created from historical sources. The Japanese occupation (as in the film made from a novel by the same name, 'T'aebaek sanmaek', translated as 'The Taebaek Mountain Range') or the Korean War come into play here; but more likely saguk are those films created from royal or more distant-in-time historical sources. These fall into four categories: court drama, melodrama (again, an overlap), action drama, and historical biography.

Film Studies: The specialty is growing in Korea and elsewhere.

Researchers, critics and historians of Korean films have developed decent specialities for themselves not only in the two Koreas, but in other East Asian countries, the United States, the United Kingdom, and the Commonwealth nations, for example. Schools like the University of Southern California's film department and the Institute of Contemporary Arts in London, which recently sponsored a Korean film festival (whose catalogue title was Seoul Stirring: 5 Korean Directors) are leading in this area, while film courses are being added in Korean universities, especially since the late 1980s. In conjunction with new studies of Korean art forms in those schools and in more private instructional areas, Korean
film-makers should learn more about what it takes to make good films as time passes.

Film festivals at which Korean films have been featured have included the 'Cinema and Society' series of the American Museum of Natural History, held from 11-14 January 1990. In that series, two films from each of four countries (Hong Kong, Vietnam, India and South Korea) were shown. The films from South Korea focused on the issue of sexism in Korean society. They were: 'The Tale of Ch'unhyang' ('Ch'unhyang ch'on', 1978), and 'Come, Come to a Higher Place' (Aje, Aje Para Aje' 1988).

Libraries and Archives: A selective endeavour, and yet essential.

The largest, single, independent collection of motion pictures in the two Koreas belongs to Kim Jong-Il, the president of North Korea. He is reputed to own more than 20 000 feature films in his library. Among his favourites are the American-made 'Friday the 13th' series, and 'Godzilla', a North Korean remake of the classic American film. Apparently, President Kim loves Hollywood pictures, especially violent ones. He also has a great fondness for North Korean documentaries. Large South Korean collections are owned by leading film producers and the Korean Motion Picture Promotion Corporation. With the growing interest among all types of people in both Koreas relative to film, it is essential that film libraries in those countries be continually expanded, albeit judiciously.

The Television Age: new challenges from other media, and the future.

Like radio and television, film has become an important element of the mass media in Korea. However, before television, film was becoming as influential as radio had been early on there. More recently, television has made vast inroads into film's potential audiences. Today, North Koreans either watch government-controlled programming on the occasional very expensive television set or venture out to see movies in government-controlled distribution centres.

For their part, South Koreans more often stay at home to watch their favourite commercial-network-produced comedies and melodramas than to view similar ones at theatres. Theatre buildings - like the Seoul Cinema Studio Complex (for film and drama) - are themselves useful to both Koreas, but they are not the be-all and end-all of cultural existence.

What does the future hold for film in the two Koreas? It is anyone's guess whether Korean film-making will bring the two Koreas closer together. But most likely it can be said that the two Koreas will find common ground in film at least as quickly as they will in the political arena - if not sooner.

Finance and Economy, Ministry of [Government]

Financial Institutions

Introduction

The Korean financial system has evolved rapidly since the Korean War (1950-53), in the process, becoming diverse and complex. At its apex stands the central bank, the Bank of Korea, but the real power is held by the Minister of Finance and through him, the government.

The core of the financial system consists of the five old-line commercial banks. They have the power to open branches nationwide. Four of them predate Korea's liberation from Japanese rule in 1945. In the last decade, they have been joined by two joint-venture and three new purely Korean commercial banks. In addition, the Korea Exchange Bank, which formerly specialized in international financial transactions, has become a nationwide commercial bank. All have been given the same powers as the old-line commercial banks.

Other less important deposit-money banks include the 67 branches of foreign banks and ten provincial commercial banks, whose branching is currently limited to adjacent provinces.

Finally, among the deposit-money banks are the following several specialized institutions.

The second level of the system includes development banks, investment companies, savings institutions, and insurance companies. Table 1 shows the relative importance of each major category of institution as measured by its assets and by how rapidly they have grown between 1975 and 1990.

</table>
At a third level is the informal curb market in which savings are consolidated and re-lent on short maturities, with little or no security, usually at very high rates. High rates and high risk have gone together and while the government has tried to restrict the curb market, it has in fact flourished, particularly at those times when government regulation of the formal banking sector left desperate borrowers with no place else to go. There is little hard information on this sector, but one estimate was that it amounted at a minimum to more than $2 billion in 1990. This is equivalent to about one per cent of deposit money bank assets, so that it is no longer a significant source of funds in the economy as a whole, if it ever was.

In the past, some large firms took out low-rate policy loans and re-lent the funds in the curb market, thus defeating the purpose of government attempts to direct the flow of capital. Officialdom seems to have turned a blind eye to this practice when an important company was having financial difficulties in order to avoid seeing it go under. Of course, since little is known about the curb market as a whole, the importance of policy funds re-lent in it is even more difficult to determine.

The curb market was diminished by government efforts in the early 1970s during a financial crisis to regularize its loans and bring them within the formal sector where they are subject to government regulation. Several of the non-deposit banking institutions were created at that time to pay somewhat higher deposit rates in order to make the curb market less attractive. The curb market has come under increasing pressure in recent years during which time the government-imposed interest rate structure has been kept very high. The planned move to deregulation of all rates by 1997 will likely see the demise of the curb market.

Evaluation

The Korean banking system has been the subject of much criticism and is currently in the middle of a major reform. It has been described as repressed because of government intervention in what elsewhere would be considered private sector decisions, made in the context of market forces. In the past, many Koreans also considered it to be corrupt in the sense that they believed government allocated credit to businesses that made substantial political contributions. The new Kim Young-sam administration has implemented the real-name law (it has been on the books since 1981 but never enforced), which requires holders of financial assets to record their holdings in their actual names, in order to end one form of corruption in the system. It has also required politicians and civil servants to declare their assets.

Criticism begins with the absence of independence at the central bank. Although the governor is appointed to a four-year term, he really serves at the pleasure of the President: as recently as 1992, a particularly independent governor was forced to resign less than two years into his term because he wanted to maintain tight monetary policy. Moreover, the Monetary Board, which is charged with making monetary policy, is appointed by the President or by his ministers and is chaired by the Minister of Finance. The Finance Minister can override Board decisions, initially by insisting that they be reconsidered and then if they are still rejected, referring the final decision to Korea's president.

The banking system has been the main instrument for financing Korea's investment and growth. It both consolidates savings and, following government guidance, directs them toward designated activities. Both the savings rate and the investment rate have been highly conducive to rapid growth. In addition, government choices of priorities for investment have been generally sound, so that the return on investment has been high.

However, several consequences of government intervention have been adverse. One has
been the weakness of the five core commercial banks. The government used them to direct credit to its priority industries. Some of these industries (for example, shipping, shipbuilding, and overseas construction) were initially successful, but ultimately experienced financial difficulty. By 1989, despite attempts to improve their position, these banks found 13 per cent of their loan portfolios to be non-performing (see Table 2) and 16.5 per cent to be troubled. Rather than write off the losses, the government chose to subsidize the losing banks and to continue to control their managements.

Table 2 Credit Soundness of the Big Five Old-Line Nationwide Commercial Banks (at the end of 1989, in 100 million won, %)

Also contributing to the financial weakness of the banks has been government ceilings on interest rates. The banks' margins between lending and deposit rates have usually been adequate but at times were squeezed as the government attempted to keep lending rates low in the face of rising market pressures on deposit rates.

Even so, a 1993 World Bank study of the Korean financial market concluded that the repression of interest rates placed them only moderately below free market rates and that they were kept positive in real terms in most years. It gave the performance of the financial system high marks.

A second consequence of government intervention is the failure of the core banks to develop the capacity to determine the creditworthiness of borrowers independently. Instead, bankers simply checked on whether the central bank and the Ministry of Finance would approve rediscounting a loan to a particular borrower. Although the government sold off its controlling holdings of bank stock and gave up its formal power to name bank officers, it continues to nominate senior bank managers who are consistently elected by the stockholders. If these banks are ever to have an independent capacity to judge credit risk, they will have to be turned loose from the remaining elements of government control.

A third consequence is that the banks cannot be thought of separate from the government's industrial policy. They are the instrument by which it is carried out. Freeing the banks from government intervention means finding other instruments to implement industrial policy or giving up having an industrial policy altogether. The new presidency of Kim Young-sam declared it would cease making industrial policy, but pressure to raise the growth rate may induce it to abandon its vow. In any case, the financial system remains mired in rolling over past policy loans, making it difficult for the government to eliminate its direct controls. It recently announced its intention to reduce directed credit and phase out policy loans made through the commercial banks by transferring them to the specialized banks or the government budget. However, it is not clear how rapidly this will happen.

The government's industrial policy selected the winning industries, and companies willing to embrace the government selections were the ones that got capital and grew. (It also required the banks to direct a certain amount of their new lending to small and mid-sized business.) The government's influence on business decisions was amplified by requiring government approval to enter certain activities and to obtain foreign exchange, foreign capital, foreign technology, and approvals to import. Korea might still identify its best idea of the likely industrial winners but not use finance or other controls to promote its choices. Such an 'indicative industrial policy' may yet evolve and would avoid weakening the banking system.

A fourth consequence of government intervention has been the emergence of the large company groups that dominate Korean business. Because so much of their financing came and still comes from the banks rather than from the sale of equity or debt to the public, founding families have been able to maintain a high degree control. This is widely considered to be responsible for inequities in income distribution, although comparative
measures show that Korea's income distribution is among the best in developing countries.

A fifth consequence has been the development of a widespread belief that the government and business are in a corrupt embrace in which the government approves loans to those who will make campaign contributions and pay bribes. Paradoxically, the enforcement of the real-name law and the compulsory revelation of officials' assets seem to confirm this belief even as these two measures make it more difficult for such practices to continue.

A sixth result of financial repression has been difficulty in controlling the money supply at times when inflation began to accelerate. Prices have risen fairly fast in Korea over the years (about 8 per cent) which seems not to have damaged growth. However, at times, they have risen far faster and monetary policy failed to achieve its targets because it could not restrict bank lending for policy loans.

A seventh and last consequence has been that companies with no access to policy credits were often short of capital and generally had to resort to the curb market for funds. They paid higher rates and were often unable to get as much credit as they wanted or for as long as they wanted. This is widely considered to have been particularly damaging to the economy in the 1970s when such labour-intensive industries as textiles had to find capital outside the banking system. Nevertheless, the World Bank considers that Korea has been remarkably successful at allocating credit to highly productive activities and that its industrial policy has not altered the composition of industrial output from what would be expected without industrial policy measures.

In recent years, foreign-invested firms seem to have been the most adversely affected under this regime to allocate credit as they were reluctant (or in some cases, not allowed because of the government's tight monetary policy) to bring in additional funds from abroad or to resort to the curb market. Some foreign companies have reportedly disinvested because of their difficulty in raising sufficient loan funds at attractive rates, when all available bank funds had been allocated to priority activities. Limits on foreign-invested firms access to credit has become a trade issue with such governments as the United States, which is pressing the Korean government to liberalize its financial system. The government has announced several liberalization plans, the latest of which is to run to 1997, the end of Kim Young Sam term as president. It calls for the substantial deregulation of foreign exchange and capital flows. One measure, effective 1 January 1994, allows foreign firms to borrow abroad an amount up to half their capital investment in Korea.

In some measure, liberalization of capital flows into and out of Korea is inevitable. As other capital markets around the world have removed controls, it has become easier to move funds in defiance of Korean government regulations. That this has happened is attested to by the rise in the errors and omissions entry in the balance of payments.

For many years, the stock market played a relatively small role in Korea's economic development. In recent years, however, it has been encouraged to grow and equity now constitutes about a third of companies' capital. The stock market will undoubtedly be a more important source of finance in the future.

The market rose slowly for many years and then took off between 1986 and 1989 when company earnings grew very rapidly. Between 1989 and mid-1990, however, the market fluctuated but was generally flat. The government has wanted to see it appreciate, and particularly to raise price/earnings ratios, in order to make raising equity funds more attractive to companies. As a result, it has limited the number of new issues that it has approved. Despite the limit on the issuance of new shares, however, company earnings have not grown as fast as in the past, so that price/earnings ratios have remained restrained. After 1989, the government also pushed the banks into lending large amounts to securities firms to buy stock and thus boost the market. It failed to do so but left the banks holding
additional non-performing loans.

Foreign investment coming in response to the greater opening of the market at the beginning of 1992 resulted in a marked rise in the Seoul Exchange index, but this was also attributed to a more positive assessment of the profitability of Korean companies as well as less attractive returns in other nations' markets. Net foreign investment in the Seoul market totalled $1.25 billion in 1992 and $6.41 billion in 1993. The two-year total is the equivalent of about 7 per cent of the values of stock transactions in 1992.

The 'repressed' character of Korea's financial system which kept returns to savers below market clearing rates has led many to channel their savings into activities which were disapproved by the government, including speculation in real estate and other assets. The system allowed this through the ability of investor-speculators to own property under false names. Since 1982, the government has made these false names illegal, but only taxed them in such a way that they remained attractive. In August 1993, however, the newly-elected president, Kim Young-sam, gave owners of such assets a few months to declare their holdings in their real names or be prosecuted. Some expected this to create turmoil in financial markets and produce capital flight, but these fears seem to have proved wrong. The only reported effect has been a shortage of money in the curb market.

**Banking Institutions**

**Commercial Banks**

The core nationwide commercial banks are:

- Bank of Seoul
- Chohung Bank
- Commercial Bank of Korea
- Hanil Bank
- Korea First Bank

The two foreign-invested nationwide commercial banks are the

- Koram Bank
- Shinhan Bank

Recent additions to the nation-wide category are:

- Korea Exchange Bank
- Dongham Bank
- Donghwa Bank
- Daedong Bank

The provincial commercial banks were originally established to provide banking services in each province. From the beginning they were privately owned and escaped most government interference. They were allowed to open as many branches as they wished in their home province and one in Seoul. Since 1990, they have been permitted to expand to adjacent provinces. They remain, however, relatively less important outside their home provinces.

Table 3 shows the relative importance of loans by each type of Korean deposit-money bank.

**Table 3 Loans by Type of Deposit Money Bank (end of 1990)**

| % of Total |
Nationwide Banks 47  
Provincial Banks 10  
Foreign Banks 7  
Commercial Banks Total 64  
Specialized Banks 36  

**Specialized Banks**

The specialized banks were set up to provide lending services to low income clients, mostly for specific groups as indicated by their names. They also provide deposit and general banking services. They include:

- The Korea Housing Bank
- The National Agricultural Cooperative Federation
- The National Federation of Fisheries Cooperatives
- The National Livestock Cooperatives Federation

In addition, the Industrial Bank of Korea is designed to help small and mid-sized business and The Citizens National Bank, households and small business.

**The Bank of Korea**

Korea's central bank has the powers one would expect, including currency issue, bank supervision, rediscounting, open market operations, and reserve requirements. In addition, it still sets some lending and all deposit rates. It also runs the foreign exchange system, including holding Korea's foreign exchange reserves.

**Non-banking Financial Institutions**

**Development Institutions**

Their names indicate the type of activity they carry on. They include:

- The Korea Development Bank
- The Export-Import Bank of Korea
- The Korea Long Term Credit Bank

**Savings Institutions**

Savings institutions address the needs of small savers and include:

- Trust business now carried out by most banks
- Mutual savings and finance companies
- Credit unions and their close relatives, mutual credit facilities, and
- New Community Finance Associations (part of the New Community or Saemaul Movement)
- The Postal Savings System

**Investment Companies**

These include:

- Investment and Finance Companies which were originally set up to draw funds from the curb market. They deal in commercial paper, underwrite and sell securities, and act as brokers.

- Merchant Banks which were set up mainly to attract foreign capital but also sell debentures in Korea, all six of which are currently joint ventures with foreign financial institutions.
Insurance Companies

Insurance companies must issue either life or casualty/property insurance. Their rates are set by the Minister of Finance, but such regulation is now scheduled to be phased out by 1998. In the past, most were owned by the large company groups (chaebol) which were able to use their large policy reserves to invest in other group companies. The government has attempted to eliminate this practice in recent years, but the restriction can be circumvented if two groups privately agree to lend to each other.

Property and casualty reinsurance is entirely handled by a government established company, the Korean Reinsurance Company. Supervision and 'guidance' is the responsibility of the government established Insurance Supervisory Board. The post office also writes life insurance.

Foreign insurance companies were kept out of Korea until the mid-80s, when unfair trade practice complaints from American companies led to a few being approved. They have had considerable difficulty competing in Korea and one has withdrawn from the market.

The National Investment Fund

The National Investment Fund was started to mobilize investment funds for the heavy and chemical industry program of the government. It gets funds from required deposits by the banks and insurance companies and by public entities as well as the government itself. The fund is administered by the Bank of Korea and makes loans through the regular banking institutions. It has decreased in size in recent years, as the government has tried to extricate itself from making policy loans.

Securities market

The Seoul Stock Exchange has operated since 1956. It started small but has grown to be of increasing importance. To get listed and sell shares on the exchange, companies have to meet requirements as to years since incorporation, amount of paid-in capital, number of issued shares, and proportion of issued shares on public offer. In addition, a company's shares are initially listed in a second tier category and can advance to the first tier if a higher per cent of total shares is publicly held, dividends have been paid in two of the last three years, and the firm has been listed for 6 months. There is also an over-the-counter market where the requirements are still less stringent.

Foreign participation in the market was prohibited for many years, but has been gradually expanded since 1984. Initially, foreign mutual funds were allowed access to the market in a fixed amount. Subsequently, a few Korean companies were allowed to sell convertible bonds or bonds with warrants, and this became a second avenue for foreigners to invest in the Seoul market. In 1992, foreigners were allowed to trade directly in the market if the foreign held proportion of a particular company was kept below 10 per cent.

The issued value of Korean stocks had reached 23 trillion won in June of 1990.

The Money Market

This market has grown rapidly in recent years and trades in:
- Call money
- Commercial paper
- Repurchase agreements
Negotiable certificates of deposit
Short-term government bonds
Monetary stabilization bonds
Trade bills

**Flow of Funds in the Financial Market**

Financial surpluses and deficits by sectors - individuals, the government, financial institutions, and the foreign sector - indicate who is financing whom. Individuals are increasingly important as a source of savings, followed by government and financial institutions. The business sector has run net deficits as one would expect in a rapidly growing economy. The foreign sector has been a supplier of savings except from 1986-89.

Data on individuals' holding of financial assets shows that money has declined and constitutes less than 3 per cent of the total in the period 1985-89. Time and savings deposits have grown to become their most important holding, at 36 per cent, followed only by insurance and trusts at 26 per cent. Stocks have declined relatively to 13 per cent, and bonds to 3 per cent, while beneficiary certificates have grown to 12 per cent. Other assets have declined to 7 per cent.

Food and eating

Eating Customs

The Korean meal, laid out on a table or tray, has been influenced by the strong Confucian tradition that has pervaded all of Korean society. During the Chosón Period the layout of the food was normalised according to the following characteristics:
There was to be a mixture of different tastes, so salty would be off-set by bland, hot off-set by cold and different colours laid out to enhance the aesthetic appeal. The more dishes the more diverse the colours, tastes and flavours available.

The basic meal offered cereals, uncooked fresh vegetables, cooked vegetables, fermented side dishes including kimch'i, a pickle made of a radish, cabbage, garlic, shallot, ginger, etc., and meat or fish. The table setting usually contained a rice bowl, soup bowl, kimch'i bowl, bowl for stew and small bowls for side dishes. A spoon and chop sticks complemented the setting. In summer, ceramic or porcelain bowls would be used but during the winter months brass tableware was preferred. People had their own individual rice and soup bowls and utensils.

The layout of the table was also standardised. On the table, immediately in front of the person, the rice would be placed slightly to the left side with the soup to the right. Utensils were usually placed to the right of the soup bowl. Forming a second row across the table were side dishes in small bowls set in the middle and dishes of dried food or other fermented foods set on the outside of these. In a third row across the back of the table would be stews or steamed dishes and kimch'i placed in the centre. For a larger table or setting more side dishes would be included.

Staple Food and Side Dishes

The staple foods of Korea are rice, barley and millet cooked without any flavouring or seasoning but sometimes with beans added. These staples provide the main source of calories in the normal diet and rice in particular, because of the balance of starch and thiamine, is regarded as central to any meal.

Basic side dishes include soups, stews and kimch'i. Also provided are a selection of fresh uncooked vegetables, green vegetables, salads, grilled meat or fish, fermented dishes, dried fish, dried vegetables, raw fish, raw meat and varieties of pancakes. The basic principle of the side dish is to supplement salt, vitamins, minerals and proteins that may be lacking.

Seasoning and Cooking

Soy sauce is still the main seasoning agent used in Korean cooking. Before mass manufacture, soy beans were boiled, removed from the pot and kneaded into small bricks then left to ferment before being dried in the sun. This dried bean malt was called meju. The sauce was then made by mixing one part bean malt with two parts water and approximately half a part salt in large earthenware pots with lids on. After fifty to sixty days the liquid was boiled, cooled and left in the pot. Another important seasoning agent was bean paste. There were various types of bean pastes, but most were manufactured from soy beans.

History

Early States

Incipient farming methods (dibbling and planting) and cattle breeding led to agricultural cultivation becoming the main food source as the inhabitants of the Korean peninsula formed communities and then tribal leagues. These comm-unities benefited initially from
the bronze ware culture imported from Manchuria and later from the iron age culture imported from Han China. In this evolution, the cereals grains produced were ground in earthenware bowls and then cooked in urns (shiru) over hut fires. It is presumed that meat and shellfish were added to the simmering cereals and archaeological excavations have revealed that food was also steamed in urns. Meat and shellfish were also dried and pickled - a type of broiled meat (maekchok) became very well known throughout the peninsula.

The Iron Age culture provided the advantages of more durable iron vessels for cooking but earthenware pots were still used for preserving foods. Spoons were the common eating utensil used.

The development of agriculture saw the emergence of beverages, with millet and rice used to produce a wine (t'akju). The present-day soy sauces and bean curd had their origins in beans produced and processed in the Puyŏ region from this time.

The Three Kingdoms

Koguryŏ

More efficient methods of rice and millet cultivation became possible at this time due to new implements forged of iron. It was during this era that pork became a food used in ritual ceremonies.

Paekche

Flood control methods were put in place along the rivers, with irrigation systems for crops and cattle used as beasts of burden for land cultivation, point-out a notable development in agricultural production.

Shilla

Barley cultivation was the main crop for this area of the peninsula.

After the transition to the Greater Shilla, central granaries were established by the government to store crops - such was the quality and quantity of production. Cereals had by now become the staple food source. From the sixth century, pots with lids were being used and these transformed cooking practices. Simpler ways of cooking were developed and it is from this time that the Korean tradition of morning and evening cooking took hold. The tradition of rice as the staple dish with side dishes for variety has been handed down through the ages to form the basis of the Korean meal.

Other basic foods developed during this period were dried and pickled meats and shellfish used as side dishes, soy sauces, alcoholic beverages and rice cakes.

Koryŏ

Throughout the Koryŏ period agricultural development was strongly encouraged by the royal court. In addition, the rise of Buddhism saw a marked decrease in the consumption of meat which lasted to the end of the period, when a combination of the demise of Buddhist influence and an in-bound migration from Manchuria led to a resurgence in meat consumption. As a direct result of the decrease in meat consumption many new vegetable dishes were developed - including the forerunner of the present-day favourite, kimch'i.
A new development during this time was the use of milk. Milk was processed and used by the aristocracy for medicinal purposes. Another drink enjoyed by the aristocracy was tea and it was at this time that the rituals for the tea ceremony were established. Alcoholic beverages made from rice and other plants and flowers were refined and supplemented with liquor (soju) imported from China.

Foreign foods

During the Koryŏ period there was an increase in trade with Sung dynasty China, Japan and other foreign countries. This facilitated the development of drinking establishments and inns providing a variety of different foods, including imported dishes, and accommodation for the foreign traders. An example of the imported dishes is the sanghwah, which was made from flour, mixed with alcohol then left to ferment. A bun or dumpling-sized piece of the mixture was then moulded, stuffed with a vegetable mix, steamed and served.

Banquets

The nobility were able to enjoy such favours. The participants would be seated around large tables with each guest receiving a separate small table loaded with individual servings. This was in contrast to the common meal where people sat around a table with dishes laid out for all to access, much like they are today.

Ritual Food

Although meat consumption declined during Koryŏ, following the custom of the earlier period, foods selected for sacrificial offerings were beef, pork and mutton, vegetables and fruits.

Chosŏn

The Chosŏn era was a time of scientific developments and the time when Confucianism emerged to supplant Buddhism as the dominant force within the kingdom. Texts concerning agriculture and agricultural production were published and disseminated. Supplies for medicines were developed following publication of Tonguipogam (Exemplar of Korean Medicine) and Hyangyangchipsongpang (Compendium on Indigenous Medicine) and the previously used chinaware was replaced by Koryŏ celadon. Brass tableware was cast and its usage was common throughout the region.

A great variety of fruits, cereals, oils and spices became available during this period; consequently there were changes in the main dishes - in addition to soups, stews (tchigae) and casseroles (chŏngol) became common. Different types of fritters, pancakes and other foods were fried in wide pans and the boiling of food became much more widespread also. By the end of the Chosŏn period many specialised skills had emerged, along with recipes for special or ceremonial dishes, medicinal additives, gruels and beverages.

Some of the ceremonial foods that existed were white rice cakes, sticky millet with red beans, coloured rice cakes (songpyŏn), seaweed soup containing meat and various vegetable dishes. These were all prepared for the one-hundred-day birthday celebration, weddings and sixtieth birthday banquets.

Sacrificial or ritual foods were usually laid out with the red foods to one side of the table and white foods to the other. The table would include various fruits (except peaches) vegetables, dried meat, fish (but not carp and scaleless fish), shellfish, pickled fish, rice, soup (meat or meat and vegetable), dumplings, noodles, pork, beef, mutton, chicken, rice cakes and various pancakes. All these would be prepared, set out and then, after the
ceremony, consumed.

Modern Period

Korean society was in transition from an agricultural to an industrial base and this change was reflected in the change in dietary habits. The daily staple diet was still rice supplemented with meat, fish, vegetables and fruit. However, the development of the processed foods industry provided ready access to foods such as pickles and sauces that had previously been laboriously produced at home. More of the population had access to a wider variety of these foods, a greater variety of condiments appeared, as did recipes for western dishes. The country's electricity grid brought power for cooking and the use of electrically-operated appliances in the home made food preparation a lot less burdensome than in the past.

Chinese Influence

The importation of beans from Manchuria led to the development of a 'bean culture' (k'ong munwha), which was the origin of many Korean dishes such as bean curd, bean paste, soy and other sauces. Also from Manchuria, with a migration into the Korean peninsula at the end of the Koryo period, came many new recipes for meat dishes - this also coincided with the demise of the Buddhist influence. Tea was first cultivated in 828 during the Shilla period and tea drinking became popular during Korò when tea and the tea ceremony were imported and adapted from China. The distilled liquor soju was introduced from Yuan dynasty China. In mid-Choson pumpkin and sweet potatoes were introduced from China. Initially, these vegetables were cultivated to supplement dietary intake in times of famine.

Japanese Influence

The chilli pepper was introduced to the Korean peninsula from Japan and was widely cultivated and used from the reign of the Choson ruler Prince Kwanghae (r. 1608-23). The condiment brought about a tremendous change in the cuisine of the time and within one hundred years of its introduction it had been universally adapted to develop the chilli paste which became so integral to Korean cooking. Sweet potatoes were also introduced from Japan, being mainly cultivated as a supplementary food source in the years when harvests were lean.

Preservation

In the Early States period some meat and fish products were dried naturally while others were pickled in brine solutions. Later during the Three Kingdoms period ice was utilised to help in the preservation of food. During Choson vegetables and fruits were preserved both by drying and by burying them in the ground. Chestnuts were placed in dry sand inside pots, covered with bamboo leaves and sealed with clay. Fish products were steamed, frozen or soaked in salty water and dried. It was during Choson that the pickling of foods became popular, the techniques for fermenting foods became specialised and information concerning the most appropriate place to store kimch'i, in order to maintain the correct temperature and acquire optimum flavour, was spread around the kingdom.

Overview

Korea ran current account deficits for many years. (See Chart 1) From the end of the Korean War in 1953 until the mid-1970s when American aid ended, most of the deficits were financed by concessional aid - primarily from the US but also from the World Bank and the Asian Development Bank. As American aid declined, Korea sought additional foreign financing from the private sector. Initially, this took the form of syndicated bank loans, but more recently, Korean companies and financial institutions have been able to sell bond issues, some convertible and some with warrants to purchase stock.

Insert Chart 1 Current Account Balance ($ Billions) ????
Insert Chart 1 Export Growth (%) ?

By the mid-80s, Korea had become the fourth largest debtor among the developing countries. This created problems for Korea's economic policy makers on two occasions. During the oil shocks of 1973 and 1979, Korea tried to maintain investment levels and borrowed heavily abroad; on both occasions, foreign banks became nervous enough about Korea's ability to service its debt that they informally put a stop to additional lending. The government had then to cut back on its ambitious investment plans.

The Korean government guaranteed the foreign borrowings of its banks or companies, either directly or implicitly through its support of the banking system. Thus, it was able to obtain foreign credits at only a small margin above the best rates available to the most creditworthy international borrowers.

Korea crossed a divide in 1986 when for the first time it ran a current account surplus (it had run a one-time insignificant one in 1977). The change occurred in part because of the maturing of the Korean economy but also because of three fortuitous circumstances - low interest rates, a rise in the yen which made its exports to the US much more competitive, and low oil prices. Korea continued to run current account surpluses until 1990 when rising labour costs had made it less competitive and when it was going through a major restructuring of its manufacturing sector to higher technology products. Korea's current account had swung from a surplus of $14 billion in 1988 to a deficit of almost $9 billion by 1991. However, the deficit was eliminated by 1993.

Korea's economic growth has always been constrained by the speed with which its exports grew. Its imports have been limited by its exports, after taking account of the availability of foreign financing for modest deficits. To see the connection, it must be remembered that Korea produced value-added to imports which were then re-exported. Thus, export growth first allowed employment to grow until full employment was achieved and then produced rising wages in manufacturing, which competition for labour then conveyed to the rest of the economy. The speed at which this process progressed was determined by the rise in demand for Korean exports around the world, most importantly, by the level of economic activity in the US, Korea's long-time largest market.

While most of Korea's foreign earnings have come from the export of goods, service exports were significant in the 1970s when the first oil shock led to high prices and a construction boom in the middle east. That boom evaporated after a few years but Korea has remained a significant competitor in overseas construction, both among the oil-rich and more recently in southeast Asia.

For the balance of the services accounts, Korea is a net exporter of shipping services, which are now its largest earner in services. It is in deficit on other transportation services.
Travel has been heavily in deficit in recent years. It went into net deficit when the Korean government began to allow its citizens unrestricted foreign travel; previously, business travel alone was allowed and family members were not permitted to accompany the business person. Investment income has long also been in deficit, reflecting Korea's heavy overseas borrowing (See Table 4).

**Balance of Payments**

Table 1 shows Korea's capital account from 1992. Both its long-term borrowing (maturing in more than 3 years) and its short-term borrowing have grown in most years. Part of this went to increase its foreign exchange reserves, and the balance has been used to finance its net import of goods and services.

</tr>
</tbody>
</table>

Such deficits are logical in a country with a very high rate of return on invested capital—foreigners find investing attractive and Korea finds that it can grow even faster than would have been possible from its own high rate of domestic saving.

The exception was the period, 1986-89, when its current account surplus allowed it to pay off many of its long-term loans and reduce its net foreign debt (debt less foreign exchange assets) almost to zero. Since 1989, of course, its gross and net debt have increased moderately.

**Exports by Commodity Group**

Table 2 shows exports by major commodity group. Over the years, virtually all of Korean exports have become manufactured goods.

</table>
A major element in Korea's development strategy has been to substitute heavy industry and chemical products for its light manufactures, because greater value was added and higher wages could be paid. The percentage of light industrial products (principally textiles, clothing, and footwear) fell to 40 per cent of total exports in 1993.

The distinction between light and heavy industrial products is slightly misleading - electronics and electrical equipment are included.

Foreign exchange control

Foreign exchange controls remain pervasive in a formal sense, although in practice they are much less stringent than formerly. Thus, the import licensing system remains in existence, although licenses are automatically granted for almost all goods. Similarly, stringent controls remain on reporting exports, and foreign exchange earnings must be turned in to the Bank of Korea. The justification for continuing formal controls remains that Korea is in danger of attack from the North and that its economy is vulnerable. In addition, Korea maintains control on inward capital movements in order to prevent loss of control of Korean companies and to maintain its ability to conduct an independent monetary policy.

Controls on outward investment remain as well. Companies must seek approval to acquire property abroad, though where it has a business-related purpose, it is usually granted. At times, controls have been relaxed, and while Korea was running current account surpluses, repayment of foreign debt and foreign investment were encouraged.

While Korea was running a current account deficit and borrowing abroad, the government restricted Korean companies investments abroad. They were allowed where they assured access to a market, for example, by getting around protectionist measures; to acquire market knowledge and technology; and to assure itself of raw materials and energy.

Following the rise of wages beginning in 1987, many of Korea's labour intensive industries became much less competitive. The government then encouraged companies to invest overseas by moving their factories and capital equipment to low-wage markets. At the end of 1992, Korean companies had actual investments abroad which cumulated $4.4 billion. Most were in the United States, where market access and technology were key, and in Southeast Asia, where its textile and light manufactures found an abundant source of low cost, diligent labour and where its marketing skills and used machinery earned a good
return.

Foreign investment in Korea

Korea's direct foreign investment legislation has been quite liberal for many years. However, in practice, the Korean authorities have wanted direct foreign investment only when it brought foreign technology that was not otherwise available.

Officials argued that everything direct foreign investment brought could be acquired in other ways more cheaply. Marketing was available through its general trading companies, modelled on the Japanese sogogaisha or from contract buyers, mainly large American retailers like Sears Roebuck and K Mart. Capital could be obtained more cheaply by borrowing with government guarantees than by issuing equity to foreigners. Technology generally could be purchased at attractive prices, embodied in machines or through licenses, the terms of which the government had to approve. Korean supervisors were generally better able to manage Korean workers than foreigners.

The attitude toward foreign investment has changed in the last ten years. Much of the more sophisticated technology Korea now seeks is only available with equity investment. Marketing of higher technology goods is not done by American retailers or very well by Korean general trading companies. Profits on equity investments are only remitted when they are made, whereas service payments on loans must be made year-in and year-out. Even so, foreigners find Korea a demanding place in which to invest, partly because some of the old doubts about such investment persist.

Formally speaking, Korea has begun to change its foreign investment legislation to take some of the tax incentives away. The argument has been that foreign investors should be treated on a par with Korean investors. Nevertheless, some special advantages continue to be granted where it is necessary to attract an investor with a particularly desirable technology.

The numbers show that the more favourable policy has produced results. By the end of 1991, foreign direct investment (on an approval basis) totalled $93 billion. Five years earlier, it had amounted to $3.6 billion, while in 1981, it had amounted to only $1.8 billion.

Nevertheless, direct foreign investment is overshadowed by other forms of foreign funding. At the end of 1991, Korea's total foreign debt amounted to $39 billion. It is now seeking portfolio investment in its stock market as well; after opening its market to direct trading by foreign investors in 1992, they had invested a total of $7.7 billion in it.

Government Policy on Foreign Trade

Since the 1960s, the Korean government has recognised the necessity of exporting, primarily because it has to import in order even to feed itself. Self-sufficiency and import substitution were never long-term alternatives.

Its pro-export policies have varied greatly over the years but must generally be considered a success. Export growth has been spectacular (see Chart 2). Early on, exports were subsidised through the exchange rate. This was later supplemented by government attempts to reduce the risk in exporting. Credit, foreign exchange, and approval to undertake new manufacturing lines were only available to companies which successfully exported. The most successful exporters were honoured in annual export day ceremonies presided over by Korea's president and the president long presided over monthly meetings with exporters and the economic ministers, at which performance was monitored and problems were addressed.
Korea has long been criticised for what appeared to be import substitution policies. This misread the facts. Korea freely imported raw materials, semi-processed goods that could not be made competitively at home, and capital goods.

Imports of finished consumption goods on the other hand, were mostly considered luxuries that Korea was not yet rich enough to afford. But most of what Korea consumed, as well as exported, had to be made from imported materials on imported machinery.

Explicit import substitution policies were implemented on a narrow range of producer goods as part of Korea's heavy and chemical industry program in the 1970s. The objective was to be less dependent on imports, particularly from Japan. But it was also made clear to Korean companies enjoying this protection that it would be for a limited time and that they were expected to become competitive abroad. Some protection of this sort, involving new products, has continued in the 1980s but has become the target of growing criticism from Korea's trading partners, backed up by threats of retaliation.

Korea began to reduce its import barriers in the late 1970s, when it looked as if its trade would achieve balance. It moved in this direction, based on the notion that it would enjoy the highest standard of living if it exported a small range of internationally competitive goods and imported the balance of its requirements. The second oil shock put its trade back into deficit, and further import liberalisation had to be deferred.

In the early 1980s, however, Korea again began to liberalise, first reducing import licensing requirements, then reducing tariffs, and finally, reducing the restrictions on foreign investment (thereby giving foreign companies the choice of manufacturing in Korea or exporting there). It also installed a system for determining the exchange rate that allowed market forces to influence it.

Nevertheless, Korea's trading partners, especially the United States, continue to criticise its trading regime and to press it to liberalise. Four areas remain of major concern, agriculture, intellectual property protection, the financial system, and direct foreign investment.

**Imports by commodity group**

Table 3 presents a breakdown of imports by commodity group. As one might expect with a small country specialising in manufactures, they are more diverse than its exports. The three manufactured-goods categories are the most important, but comprise 55 per cent of total imports, compared to 87 per cent of its exports. Fuels are the next most important, followed by crude materials, chemicals, miscellaneous manufactures, and food.

**Joint Ventures**

For many years, Korea has declined to approve wholly-owned foreign investments except when they brought technology that could be obtained in no other way. Generally, instead, foreigners were encouraged to enter joint ventures and to accept minority positions; most did so.

Joint ventures generally made good sense to the foreign investor because of the difficult Korean business climate. First, foreigners had to deal with the government, and a Korean partner who understood the culture was much more likely to succeed in getting what the company wanted from the government than a foreigner. Second, feverish competition in Korean business and the importance of personal connection made it important for foreigners to have a Korean ally.

A number of important foreign companies have pulled out of Korea after many years there. Several, such as Dow Chemical, Gulf, and Union Oil, did so because of changes in the
conditions of their industries (e.g., energy costs and control of crude oil sources). Nevertheless, had the business in Korea remained attractive, they might well have stayed.

One major factor in the loss of profitability of foreign investments has been the rapid rise in Korean wages. This has forced foreign investors to consider alternative manufacturing bases in Asia. The alternative would have been to upgrade their Korean operations, primarily through the use of new technology. Many foreign investors have been unwilling to do so, partly because of concerns about the adequacy of Korean protection of their intellectual property (i.e., patents, copyrights, and trade marks) and partly because that wasn't part of their business strategy (e.g., the more sophisticated products were already being manufactured elsewhere).

Although most companies date the rise in wages from the election campaign of 1987, when trade unions first escaped enforcement of the repressive labour laws, companies had long been moving abroad because of rising wages. As early as 1975, some of the low-end textile manufacturing had moved to cheaper labour markets, and the duty-free zones that depended on low wages for assembly work had been losing tenants since the early 1980s.

Another element in the decision to divest has been the Korean partner's desire to run the joint venture. Most large foreign firms have been unwilling to take that step, which they thought incurred greater risk.

Similarly, joint venture partners have disagreed on basic strategy and goals. For example, Korean companies are often less interested in large profits than in larger market share. Other times they are interested in reinvesting earnings, whereas the foreign partner wishes to remit its share (but is unwilling to see its equity share reduced, effectively making it impossible to expand), often for business reasons related to conditions outside of Korea.

Many foreign firms have concluded that the goals of investment in a joint venture can be obtained through long-term contractual relationships with much less risk and much greater flexibility. Many Korean firms find this arrangement more attractive as well. Thus, in the absence of the ability to upgrade its technology, the foreign firm can contract for manufacture in Korea, providing a single injection of technology and considerable management control. When manufacture there is no longer competitive, it can move on relatively easily. The Korean partner may also find that its goals and strategy make it attractive to give up its joint venture.

Protectionism

Although exceptions remain, Korea has substantially liberalised its trading regime. Licensing has been virtually eliminated as a restriction on imports, tariffs on average have been cut by more than half, and special laws which affected particular imports have been modified or eliminated.

The principal remaining areas of protection lie in agriculture, but even here Korea starting in 1995 will import some rice, phasing in tariffication of this most sensitive product (Koreans, like many other Asians, have an almost religious attachment to rice growing). It earlier agreed to allow the import of substantial amounts of beef, though this trade is not, even now, completely market determined.

Financial services remain a major source of concern to foreigners. Restrictions on entry and on the freedom to do business affect not only potential foreign investors in the financial sector, but also foreign company subsidiaries that wish to borrow. Korea has committed itself to phase out remaining financial restrictions by the end of 1998. Although it has made similar promises in the past and then put off carrying them out, this time circumstances look more favourable. In any case, foreign banks have been given more freedom to branch, to
borrow locally, and to offer a growing variety of services, bringing them closer and closer to full national treatment. The real issue remains whether Korean banks will be allowed the full freedom to do business as in other countries - a prerequisite to full freedom for foreign bank branches.

Another area of contention is the protection of patents, copyrights, and trade marks. Korea has changed its law to meet most foreign objections. However, despite improvement, enforcement continues to generate complaints. Since enforcement is a problem in many home countries, the complaints may be exaggerated.

Direct foreign investment also remains a source of foreign complaints, primarily because the taking and implementation of decisions to allow such ventures has been slow and seemingly inconsistent with stated policy.

Removing controls on the import of agricultural products has been very difficult for Korea. Agriculture still employs more than 15 per cent of the labour force and is politically potent. While the country cannot feed itself and is a major importer of food and feedstuffs, a majority of Koreans wants to protect and subsidise its farmers. Because the farm population is rapidly falling (the old are retiring and the young are migrating to the cities), the problem will disappear over the next decade or two, but in the meantime, is a very hot potato.

Other areas for foreign investment continue to face restrictions, but are less the subject of complaint.

Trading companies

In 1975, faced with weakness in its export markets, Korea followed the Japanese model and created its General Trading Companies (GTCs). Favoured with preferential loans and other measures, they were intended to become much more aggressive in overseas marketing, particularly of products from small businesses, which lacked the resources to do their own overseas selling.

Originally ten in number, the GTCs currently total eight. Seven are affiliated with the large company groups (Hyundai, Samsung, Lucky-Goldstar, Daewoo, Ssangyong, Sunkyong, and Hyosung) while one, Korea Trading, was government-initiated, with the intention of keeping the others competitive and serving small business.

Today, they account for about half of Korea's exports. Although they were used to promote purchases from the US during the 1980s, they are much less important as importers and still less so as traders between two foreign markets. In contrast, their Japanese counterparts get a substantial portion of their business from imports and trade between two foreign countries. In 1994, the GTCs have announced their intention to begin to invest overseas in production facilities, which will effectively transform their role.

The GTCs have been criticised for making small firms dependent on them and thus facilitating their take-over. It is true that the chaebol have acquired many such companies. However, it is not clear whether this was their original intention or the consequence of the competitive failure of the small company on which they depended.

It is also not clear whether the GTCs have played a critical role in Korean exporting. In their early days, they often 'bought' exports (paid another company to route its export through the GTC) in order to meet government requirements for retailing their GTC status and to gain other government benefits. Such practices are said to have disappeared.

More recently, the type of product has changed as heavy and chemical industry products have become a larger share of the total. These are not marketed through the same channels as consumer goods and require quite a different kind of marketing expertise.
Nevertheless, the GTCs have brought substantial benefits to Korean industry. The training and experience working in other cultures has prepared Korean companies for the time when they can no longer depend on contract manufacturing relationships with foreign retailers to meet their marketing needs. They have created a cadre of businessmen who are used to living and working abroad and to addressing the language and idiosyncrasies that distinguish one country from another. They have become a window on the rest of the world, keeping Korean companies aware of what is happening and of the competitive challenges and opportunities that changing conditions bring.

Trading partners

Korea's trading pattern has gone through substantial changes in the last 20 years. Initially heavily dependent on the American and Japanese market for its exports, it subsequently made great efforts to diversify. It found growth in the middle east in the 1970s, and in Europe and Asia in the 1980s and 1990s. Although many Koreans worry about their ability to continue to increase their exports, Asia looks to be the source of future export growth. The dynamism of its economies and the emergence of the Peoples' Republic of China along with Thailand, Indonesia, and Malaysia among the fastest growing, bodes well for future growth.

Korea's largest source of imports remains Japan (capital equipment and components for manufactures). The rest are diversified and involve principally crude oil and other raw materials.

Korea has sought to increase its imports from the United States because of the US complaints about its restrictive trade practices. It has also been concerned to try to reduce its trade surplus with the US (and has virtually eliminated it) while reducing its deficit with Japan by switching sources where this has been feasible. The rise of the yen relative to the dollar has facilitated the transfer. Even so, the US has remained relatively the same as a source of imports (23 per cent of the total in 1977 and 1992). In the same years, Japan declined as a source of imports much more sharply (from 36 per cent to 23 per cent of the total).

Finally, it has tried to find its new growth outside of the US market and has succeeded to a considerable extent. While the US declined relatively as a market (from 31 per cent of total exports in 1977 to 23 per cent in 1992), and Japan declined (from 21 to 15 per cent), non-Japan Asia has been the principal source of growth, followed by Latin America. Europe and the middle east were also down somewhat as a proportion of the total in the same period. The regional distribution of Korean trade is shown in Table 5 and 6.

| Table 5 Regional Distribution of Korean Exports, 1977 & 1992 (%) |
|-------------------------|---------|---------|
| Asia                    | 30      | 44      |
| Middle East             | 13      | 5       |
| Europe                  | 18      | 1.5     |

Forestry

Forestry is the management of forested land, together with associated waters and wasteland, primarily for harvesting timber but also for conservation and recreation purposes. Forestry includes not only the management of lands in rural areas, but also lands that are surrounding urban areas. The forestry in Korea combines both the management of rural and urban forests, and moreover, both public and private lands. Urban forests in Korea include many different environments such as city greenbelts, parks and mountainous areas located around the major urban centres. Rural forests are located throughout Korea and are generally in the mountainous areas.

Since the Korean peninsula stretches from the north to the south for over 1,000 kilometres, the types of trees that grow in Korea are quite diverse. In addition to great differentials in the mean temperature of the various regions, there are also variations in the amount of precipitation, differences in elevation and dissimilarity in soil composition. Therefore, it is to be expected that the diversification in flora in Korea would be greater than in a country that was relatively similar in composition regardless of size.

Angiosperms, the biological class to which most trees belong, constitute the dominant plant life of the present geologic era. They are the products of a long line of evolutionary development that has culminated in the highly specialised organ of reproduction known as the flower, in which seed development occurs within an ovary. This group includes a large variety of broad-leaved trees; most of which are deciduous but some that are evergreen. The angiosperms are further divided into monocots and dicots. Trees are represented in both groups. There are also those trees that are classified as gymnosperms, such as pine trees, and those that are monocotyledonous like bamboo.

In South Korea forests occupied 6,455,550 hectares of land, or about 65 per cent of the nation’s total area at the end of 1995 and trees grow on about 97 per cent of this area. The composition of the forests in Korea can be divided into about 45 per cent coniferous trees, 26 per cent deciduous trees and 26 per cent mixed between the two. In general, coniferous species are found at higher elevations, while deciduous species are found at lower and more temperate elevations.

Species

The chief indigenous tree species in Korea are the Red Pine (Pinus densiflora), Korean White Pine (Pinus koraiensis), Black Pine (Pinus thunbergii), Korean Larch (Larix gmelina), Needle Fir (Abies holophylla), Hornbeam (Carpinus laxiflora), and several varieties of Oaks and Alders. Introduced species include the Pitch Pine (Pinus rigida), Jack Pine (Pinus taeda), Rigitaeda Pine (Pinus rigitaeda), Japanese Larch (Larix leptolepis), Japanese Cedar (Cryptomeria japonica), Hinoki Cypress (Chamaecypers obtusa), Black Locust (Robinia pseudoacacia) and various Poplars. The natural forest zones of Korea include the sub-tropical forest that is predominant in the southern coastal regions and the lower elevations of Cheju Island, the southern temperate forest which encompasses most of the southern half of the Korean peninsula except for the higher elevations of the Taebaek Mountain Range, and the northern temperate forest which consists of the higher elevations in South Korea and much of the northern part of the peninsula.
The Red Pine grows over much of South Korea but since its form is often stunted and of poor shape, it is unsuitable for many commercial applications. The Korean White Pine grows at a faster rate than the Red Pine and is a favoured tree for reforestation due to its commercial value and the pine nuts that can be harvested from the trees after they reach maturity in their tenth year. The Black Pine is commonly found in the sandy soils of the southern coastal areas where it thrives and produces a stabilising crown cover. Various types of oak are spread throughout South Korea but usually are not suitable for commercial use. The Pitch Pine was introduced from North America in 1906 and has been widely planted in the past for fuel and erosion control. The Japanese Larch was introduced from Japan in the 1920s and has great commercial value as a tree that can be utilised for construction, pulp and shipbuilding. The Japanese Cedar and Cypress were also introduced from Japan in this same period and both are now widespread due to the value of their timber.

Forest Utilisation

Ownership of most forestland in South Korea is private, with about 96 per cent of the total forest area being owned by individuals with holdings of less than ten hectares. There are also national forests and public forests, which account for the remainder of the nation’s forestland. Wood in forests has traditionally been used for fuel. The use of wood as fuel has only recently declined as other forms of heating has spread throughout the rural areas of Korea. In the past fifty years the industrial use of timber has had the greatest impact on Korean forests, with the highest demand being for sawn logs. The export of forest products in Korea reached 530 million dollars in 1995 which was an increase of 19 million dollars from 1994. The main export of the forest product industry is plywood. Other products that are exported from the forest include food items such as chestnuts, pine nuts and mushrooms. However, despite Korea’s sizeable amount of exported forest products, she remains heavily dependent upon imported lumber in many areas having imported 87 per cent or her lumber needs in 1995.

Other traditional and modern day uses of the forest include as a source of compost, which is readily available for agricultural needs. However, this is declining with the widespread use of chemical fertilisers. The placement of grave sites, recreation, minor forest by-products and erosion prevention are all other uses of forestland. Most of the nation’s forests are dotted with grave sites, which are located on private family lands, and is generally the sole purpose of forestland ownership for individuals. Sites were traditionally chosen for their geomantic qualities, and are noticeable by the small burial mounds in cleared spots on the slopes of mountains. Erosion control is the object of great efforts by the Korean government in many mountainous areas. Since forests are generally located on mountainous lands in Korea, they provide a favoured spot for recreation among Koreans who enjoy outdoor activities such as mountain climbing, camping and other outdoor activities in a natural setting. The increase in the amount of leisure time in Korea in recent years has seen an explosion of recreational activities in forested areas.

History of Forestry

The beginnings of forestry in Korea are found in the colonial period of the nineteenth c. During the Japanese occupation the whole of Korea was exploited for food production and the harvesting of natural resources. Timber did not escape the attention of the Japanese and was used initially to support the development of Japanese industry and then from the late 1930s forward it was used to sustain to Japanese war efforts. Although the Japanese introduced many controls concerning the cutting of timber and afforestation, these guidelines were largely ignored by the Japanese themselves as their timber needs escalated in the waning days of the Second World War. Entire mountain slopes and forests were clear cut in the futile attempts by the Japanese to fuel their war efforts.
After liberation tremendous economic hardships and political turmoil beset the Korean peninsula. As a result the Korean people were forced to seek sources of fuel and building materials from the forests, and as a consequence the devastation of Korean forests continued unabated. To compound the crisis in the forests of Korea, the outbreak of the Korean War in 1950 led to wide-scale clearance of forestlands by the military in carrying out the war efforts.

There was no true forestry policy in Korea until legislation was passed in the early 1960s. At this time the government of the Republic of Korea established guidelines for the preservation, maintenance, restoration and usage of Korean forest resources. Large-scale afforestation projects were undertaken and from a beginning of 125,080 hectares reforested in 1962, government led programs saw this number soar to over 450,000 hectares reforested in 1967. Efforts by the Korean government have continued until the present time and have seen the amount of forested land stabilised with an ongoing program for the afforestation of lands used for commercial purposes. In addition, efforts are underway to preserve the so-called ‘green-belts’ that surround many of the major Korean cities. This type of environmental afforestation covered over 2,000 hectares in 1995 in urban areas, and is forecasted to cover an additional 25,000 hectares by 2004. These environmental projects are being conducted under the auspices of the Korean government and are designed to provide the citizens of Korea with a better living environment by reducing pollution and providing natural areas to relax in.

In establishing government policy, agencies such as the Forestry Policy Bureau (Imjöngguk) and the Forestry Research Institute (Imop yon’guwon) are crucial in maintaining the balance between commercial needs for forest products and preserving this great natural asset of Korea.

Fortune-telling

Fortune-telling or divination practices are various methods that man uses to discover either what the future will bring him, or to modify his actions so as to bring about the most favourable consequences. In ancient times, divinations were used to predict the outcome of battles, matters of state and also to explain natural phenomena. It is tempting to connect practices of divination with the earliest human civilisations as ancient man tried to understand and explain his environment.

Fortune-telling practices are performed in a variety of ways with some using implements and others interpreting signs in natural objects like the moon and clouds. There are in essence four types of fortune-telling practised in Korea today: shinjōm (divine inspired divinations), chakkweajōm which unravel the fortune of men by interpreting the hexagrams in the Chinese Yiijing or I Ching (Kor. Yŏkkkyŏng, Book of Changes), mongjōm in which the future is seen through a dream, and ch’ŏn’gijōm which observe natural phenomena such as the shadow of the moon on the fifteenth day of the first lunar month, or the Pleiades (chomsaengi pogi) on the sixth day of the second lunar month in order to predict good fortune in farming.

History

The first records of fortune-telling practices in Asia are found in the so-called ‘oracle bones’ of the Chinese Shang Dynasty (1700-1027 BCE). Oracle bones are turtle plastrons and ox
scapulae on which the Shang kings divined by applying a hot instrument to prepared hollows in the bones and then using the resulting cracks in the bones to divine all matters of state and ritual acts. On the bones themselves, the actual questions that were tested were often recorded and many of these records are extant. It is not known whether this practice was transmitted to Korea or not, but records concerning the Puyô Kingdom in the Sanguo zhi (History of the Three Kingdoms) reveal similar practices. In Puyô during ritual ceremonies to heaven, an ox would be slaughtered and if the cleft in its hoof was found to have widened it was thought to portend disaster. If it had not, it was interpreted as a propitious omen. In Puyô the duty of performing divinations was originally that of the king, but as his political authority expanded, the duty of divinations fell under the realm of the shaman.

Through historical records such as the Samguk yusa (Memorabilia of the Three Kingdoms) we know that there were many instances of fortune-tellers being consulted by the royal courts to either explain natural phenomena or to predict the outcome of battles and other matters of state. Those who were charged with predicting the future were the ilgwan of Shilla, the ilja and muja of Paekche, and the mu and samu of Koguryô. Legends passed down that concern divinations and those who performed this art include Ch'ôyong ka (The Song of Ch'ôyong), Yônorang seonyô chônsôl (The Legend of Yônorang and Seonyoô), Manp'asikchôk chônsôl (The Legend of the Flute that could Calm Ten Thousand Waves) and the legend concerning the demise of the Paekche Kingdom. In Ch'ôyong ka, King Hôn'gang (r. 875-886) is told by his ilgwan that he must build a temple to appease the Dragon of the East Sea. After he does this, the Dragon presents to the King one of his sons who becomes a royal adviser to the King. In Yônorang seonyô chônsôl the Shilla King summons his ilgwan and asks him to explain why the sun and the moon had stopped shining in Shilla. The fortune teller explains that the spirits of the sun and moon had left Shilla for Japan. The King sends a messenger to Japan who meets with Yôn-ro-rang and Seo-nyô and is told that the god of heaven wished them to come to Japan. They then presented him with some golden cloth with which to offer a sacrifice to the heavens, and after this the sun and moon again shone in Shilla.

Manp'ashikchôk chônsôl tells of a magical flute that was given to King Shinmun (r. 681-692) by the spirit of his father, King Munmu (r. 661-681) and the spirit of Kim Yushin (595-673) that could control the waves in the East Sea, whereby the Japanese marauders could be repelled. King Shinmun was presented with this flute after consulting his ilgwan to discover why there was a small mountain floating off the Korean coast. These examples of divinations are all recorded in the Samguk yusa.

One tale concerning the downfall of the Paekche Kingdom is recorded in the Samguk sagi (History of the Three Kingdoms). In mid-reign of Paekche's King Üija (r. 641-660) on a turtle shell that was unearthed, it was recorded that: 'Paekche is as a full moon, Shilla is as a crescent moon'. This was interpreted by the King's muja as foreboding the downfall of Paekche, which shortly was realised. In Buddhist beliefs the Chômch'äl kyông (Divination Sutra) was used by some to foretell the future and the results of their karma in their next lives. To discover their future using this work, wooden sticks would be cast and then interpreted in light of the Sutra. The Chômch'äl kyông was also used at Chômch'äl Dharma Assemblies. According to the Samguk yusa this work is said to date to the Chinese Sui Dynasty (581-617) and was given to the monk Ch’inpyo by Maitreya along with 189 divination sticks.

The use of divination was also widespread throughout Koryô and Chosôn, but as shamanism was replaced as the state religion firstly by Buddhism and then by Neo-Confucianism, the status of fortune tellers and their trade became degraded. However, among the common people of these ages, fortune-telling was accepted as one way in which to understand both current and future events. Although many mudang (shamans) of these periods continued to practice fortune-telling through the use of various implements, there
also gradually appeared a class who performed only fortune-telling functions. In addition to those who specialised in telling fortunes, many of the common people relied upon the observation of heavenly bodies, the outcome of various folk games such as tug-of-war, or the behaviour of animals as means to predict future events. In particular, the amount of divinatory practices surrounding the farming culture of Choson reveals strong beliefs on the part of the farming communities in the validity of these practices. Many of these practices are still observed to some degree.

One mode of fortune-telling that was well received during Choson and continues to enjoy popularity to the present-day is the use of the Yiijing (Book of Changes). This method of divination uses an interpretation of a reading of certain hexagrams in the Yiijing. The hexagrams are selected from a total of sixty-four by casting lots for each of the six lines that will compose one's fortune. Then the Yiijing practitioner interprets these six hexagrams. There are different ways to determine which hexagrams are selected such as casting wands, drawing yarrow twiglets from a bunch or tossing coins. Of these methods, the tossing of coins (usually three in number) is probably the most common in present-day Korea. Once a hexagram has been created by casting the coins six times, the reader then interprets this in the light of the appropriate passage in the Yiijing. Adherents to this mode of divination commonly use this method to determine answers to questions of marriage, family and business.

Modern Practices

Today, divinations are still received by Korean people in many of the same modes as they had been in traditional times. Consultations with Yiijing practitioners are very common and on any given week-end afternoon many of these fortune-tellers can be seen in areas around parks, temples and palaces in the major urban areas of South Korea. Consultations with mudang are also very common for adherents to shamanism. The divinations of the mudang are used in a wide range of applications from matters concerning poor health to where to locate a house. Divination by observing items of nature is also very common, particularly in rural areas. These arts of predicting the future continue to thrive in many forms since they are used to provide answers to people's problems and often to comfort them. Fortune-telling, along with closely related practices and arts such as incantations and taboos, help humans cope with the external world. Generally, taboos and incantations are used to prevent an undesirable event from occurring while fortune-telling is used to discover what the future holds.

France and Korea

Choson Period Relations

Korea-France relations began with French missionaries attempting to introduce the Catholic faith to Koreans. Catholicism was known to Koreans in Beijing, where the work of French and other Western missionaries was prevalent, but the Church was not established in Korea because of the threat of persecution by the Choson government. The first French missionary in Korea was Fr. Maubant who came in early 1836. He was followed by Fr. Chastan who arrived at the end of the same year and Fr. Imbert, a year later. The
missionaries work was proving successful, with 6,000 converts in 1836, to over 9,000 two years later. Apart from the endeavours of the priests, a major reason for the spread of Catholicism at this time was a relaxation of the anti-Catholic stance of the Chosón government, which was a direct reflection of the royal father-in-law Kim Chosun (1765-1831), the real power behind the throne. This attitude, however, underwent a drastic change with the arrival of a new royal in-law power, the P'ungyang Cho family, which commenced with the reign of King Hönjong (r. 1834-1849). As a direct result of Cho policies, the Catholic Persecution of 1839 took place and the three French priests along with many Korean Catholics were massacred.

Once the deaths of the three friars became known to the French authorities, a French warship was despatched to the Ch'ungch'ŏng coast, and a letter was delivered to the Korean authorities demanding an explanation. A year later another French vessel appeared in Korean waters, requesting Chosón authorities to reply to the first letter, and expressing France’s wish to conclude a friendship treaty with Chosón. The Chosón government, however, was aware of the hardships that befell China in her constant clashes with Western nations in the Opium War and the Arrow Incident, and it preferred a policy of isolation as a means of avoiding similar trouble. Also, the Chosón government feared the Catholic doctrines, which they saw as patently confrontational to the teachings of neo-Confucianism. However, despite the Chosón government’s intentions and actions to prevent the spread of Catholicism, an increasing number of French missionaries journeyed to Korea, and by the early years of King Kojong’s reign (r. 1863-1907), there were about 20,000 followers.

The policy of Kojong’s father, the Hŭngsŏn Taewŏn’gun (1820-1898), while at first moderately tolerant of Catholicism in his country, was soon swayed by his advisers and in 1866 he launched a major persecution of Catholics. Initially, the Catholic missionaries had persuaded some members of the Chosón government that if Chosón entered diplomatic relations with France and England, it would prevent the Russians from gaining a foothold in Korea. The aim of the church was certainly that of securing an unfettered hand for their missionary activities, in exchange for the promise of France’s assistance against the Russia gaining a foothold on the peninsula. The Taewŏn’gun sent for the leader of the missionaries, Bishop Berneux, but later declined to go ahead with the meeting, on the Bishop’s delayed arrival at the palace. The Taewŏn’gun saw the Catholics as a threat to his political power and demonstrated his disdain for them by ordering the full-scale persecution that occurred in 1866. Nine of the twelve French missionaries in Korea were executed, together with a large number of Korean converts. The three missionaries remaining fled to safety across the Chinese border where they reported the massacre to the French Legation.

On hearing of the death of their missionaries in Korea, the French decided to take punitive action against Chosón, in what became known as the Foreign Disturbance of 1866. Under the command of Admiral Roze, three naval vessels crossed the Yellow Sea, sailed up the Han River, anchored within sight of Seoul, and prepared for action. A flotilla of seven French warships had also left China for Korea, from which the admiral sent a detachment to capture the fortifications on Kanghwa Island and despatched another to Seoul. While the French on Kanghwa met with limited success, the ships that attempted to make their way to the capital were repulsed by a Korean contingent led by Han Sŏnggŭn. A second attack on Kanghwa Island was also repelled by troops led by Yang Hŏnsu, and this forced Roze to withdraw to China, with his punitive mission against Chosón closing without achieving its objectives. This ended French attempts to force Korea to enter into relations it did not want.

Early Diplomatic Relations

After the Chosón government concluded the 1876 Treaty of Kanghwa Island (Kanghwa-do Choyak) with Japan that opened Korean ports to foreign trade, China urged Chosón to also sign similar treaties with Western powers, such as Great Britain and the United States. Insofar as France was concerned, however, China hindered attempts to negotiate a treaty
with Chosŏn, cautioning the Koreans about the problems associated with the propagation of Catholicism in Korea. The French persisted in their efforts, and eventually the thirteen-article 'Treaty of Friendship' was concluded in 1886, with Kim Manshik and Georges Cogordan as signatories for their countries.

The treaty between Korea and France was somewhat different than those that the United States and Great Britain had concluded with Chosŏn, since it reflected to a greater extent the independent will of Korea. Even so, the treaty provided protection for French nationals on the peninsula, and stated that they should be subject only to French law and to trial by the French authorities. Moreover, the treaty allowed the French to trade openly at the ports of Pusan, Wŏnsan and Chemulp'o, and to lease or purchase land or buildings at these locations. Moreover, French nationals with visas were allowed to travel freely in Korea, and those who wished to learn the Korean language were to be provided with help by the Korean government. Other clauses in the treaty secured France's right to freely propagate French language and culture, and to employ Koreans in various capacities.

Although France now had a treaty with Chosŏn, its interests in the peninsula were only peripheral compared to its other areas of interest in Asia. The French government did, however, consider its diplomatic representation in Korea to be on an equal footing with its diplomatic missions in Japan and China, thereby revealing that it held Korea in equal esteem with her neighbours. Its envoys were further instructed to concern themselves with commercial and cultural activities only and not interfere in Chosŏn's domestic affairs. France did not recognise Korea as being a Chinese suzerain, but treated it as an independent nation. France also sought to pursue mining and construction projects in Korea, and in particular was awarded the concession to build the Seoul-Uiju railway, but eventually had to surrender this right to the Japanese authorities.

In contrast to the subdued French view of Korea, the Chosŏn government had many high expectations concerning the relationship. Korea saw the treaty as a way to improve her international standing, to modernise her military and training techniques, so as to keep China at bay, but also as a possible source of financial support. While France did supply Korea with some texts on military organisation and tactics, it was not interested in taking an active role in reforming the Chosŏn army, and actually declined a request to do so. The French also declined to guarantee French military support against Chinese intervention in Korea. Lastly, Chosŏn's requests for loans from France were also rejected on the grounds that the Chosŏn government was a poor credit risk and that the people of France knew very little about the country and its situation. Thus, the relationship between the two countries excluded military intervention amongst foreign powers and it proved unsatisfactory to Chosŏn in its sought-after economic aid. This was not what Chosŏn had contemplated in concluding its treaty with France.

The economic relations between France and Korea proved of little consequence. Despite some initial interest on the part of French companies for importing Korean paper and ramie, this was not realised. According to 1889 statistics, imports from France accounted for less than one per cent of Korea's total imports, and these imports were confined to a small amount of wine, canned food and cotton products. The lack of French interest in Korea is seen in the minuscule French population there, of about twenty persons. Of this, the number of merchants was at most one, and often none.

The only area in which the French proved to have a serious interest in Korea was in the propagation of Catholicism, and this was pursued by French missionaries with vigour. Although the clause in the treaty between Korea and France was understood by the Chosŏn government as allowing the teaching of the French language and culture, the French interpreted it as permitting the teaching of Catholic doctrines, and this was a point of contention between the two nations. The Korean government was eventually compelled to allow the missionary activities and so Catholicism spread rapidly. By 1910 it had secured a
strong foothold throughout the peninsula.

Relations during the Colonial Period

The cause of Korean independence was not an issue with the government of France, which was then far more concerned with the preservation of its Indochina interests. There were individuals in France, however, who aided the Korean independence movement indirectly. Félicien Challayé, a professor at a French university, joined with the Chinese journalist Xie Dongfa and formed the Paris branch of the Aid Korea Association (l'Association des Amis de Corée), which had a membership of some forty persons at its inauguration in 1919. Other activities during this period included the publishing of a journal, La Corée Libre, which presented arguments for Korean independence. However because of a shortage of funds, the journal was only published for one year, from May 1920.

Aside from some indirect cultural influence from France in the realm of literature, the contacts between France and Korea all but ceased during the colonial period. The reasons for this are twofold. First, the Japanese were very restrictive in allowing Westerners to enter Korea. Secondly, the French were beset by their own internal problems; reconstruction after the conclusion of World War I; the political conflicts of the 1930s, and the outbreak of World War II, in September 1939. The independence movement activities of Koreans abroad centred on courting the Western world powers, mainly the United States and Great Britain, and France was largely ignored in the process.

Furniture

Domestic furniture and interiors

Korean furniture consists of three distinct yet over-lapping traditions: a court tradition of elegant and luxurious pieces; a temple tradition of intricate pieces with colourful Buddhist, Daoist, and shamanistic motifs; and a domestic tradition of wood furniture used primarily in upper and middle class homes. Little from the court and temple traditions survive, but its existence can be verified in scanty records, depictions of furniture in old paintings and in what remains of old furnishings from Korean palaces, temples, and shrines. Its rich beauty can also be experienced in a few surviving small boxes, trays, and tables that are lacquered and date from as early as Ancient Chosŏn (1 000-500 BCE). The Shōsōin in Nara, Japan preserves a few seventh c. cabinets which might have links to Korea. From the Koryŏ period (918-1392) onwards, cabinetry for upper class use in temples and palaces was often lavishly inlaid with mother-of-pearl.(see Lacquerware).

Korea's household furniture, with most extant pieces dating from the last two hundred years of Chosŏn (1392-1910), has commanded wide interest for its originality of style, simplicity of design, beautiful proportions, and flexible utility. Based mostly on a simple box design with few interior compartments or drawers, Korean chests are surprisingly versatile and fit easily into modern or traditional decor. They were made from native woods, of which over twenty varieties have been identified. In the northern provinces mixed coniferous forests predominate and soft woods with fine grain like pine and linden were the usual timbers for furniture. Perhaps to compensate for the plainness of the grain, chests from North Korea, such as those from P'yŏngyang tended to be more profusely decorated with metalwork. In the milder climate of South Korea, many varieties of
deciduous trees thrive and a wide selection of hardwoods with decorative grain such as persimmon, maple, Korean ash, and zelkova (a type of elm) was available. So as to not detract from the beauty of the wood grain, chests from the Southern provinces tended to be simply or delicately adorned with metalwork. Regional differences were also evident in the overall style of chests and this largely depended on the taste and the wealth of the patrons. Furniture from Kyŏnggi Province, where the capital was located, was often of generous proportions, made of solid wood, and magnificently ornamented. Cheju Island, which was home to exiles and prisoners produced basic furniture of rough and rustic character.

Glue and bamboo or metal nails were in use in the construction of furniture, but pieces were usually held together by means of jointing techniques, the most common being mitre joints (yŏngwi), finger joints (ssagae), lap joints (tŏk), mortise and tenon joints (chok), and butt joints (mat). Wood surfaces were either left unfinished or polished with an oil made from the perilla plant (tul kirüm). Smaller pieces were sometimes subjected to a smoking process which caused the resin in the wood to come to the surface where it was then rubbed to form a protective coating.

The furniture of Chosŏn was generally modest in size, low in height, and frontally oriented. Chests usually opened at the front where the decoration was also concentrated. These features evolved not only to fit the spaces of the Korean house but to accommodate traditional living habits. An agrarian and nature-oriented people, Koreans ventilated their houses and kept them tuned to seasonal changes through the use of detachable open lattice-work doors and windows called ch'angho. The outdoors was also brought under the roof of the house through the use of open verandahs, corridors, and side-rooms with wood plank floors called maru. The cool, raised maru floor was the preferred place to work, socialise, and rest during the warmer months. Household items requiring cold storage were also kept year-round on maru floors. In the winter months, Koreans retreated to small, low-ceilinged rooms that were designed to facilitate a unique type of underfloor heating called onدل. Ondol floors were sealed and plastered over with thick oiled paper. (see Architecture) Living in tune with the environment and staying close to the source of heating contributed to the adoption of a floor-living culture by Koreans. The floors of a traditional house, particularly those of onدل rooms, doubled as activity rooms during the day and sleeping quarters at night. They were kept spotlessly clean through the removal of outside shoes and daily wiping. People sat, slept, ate, worked, and studied on straw mats or padded cushions directly on the floor. Rooms did not have built-in closets. The furniture in a room had to accommodate both items in daily use as well those in long-term storage.

Placed against the wall, only the fronts of chests were in full view. Thus the fronts were typically fashioned out of the best wood (sometimes in veneer panels) and embellished with the fanciest fittings. The two sides were made of less-desirable wood and hinged with simpler fittings. The backs of chests were made of the least-desirable wood and hardware without compromising function. Chests were raised off the floor on attached or detachable stands to protect their bases from exposure to the intense heat of the onدل floor in winter, humidity in summer, and pests year-round.

Domestic furniture of the Chosŏn period also reflects the hierarchal Neo-Confucian ordering of society under which people lived. To the extent that wealth and social status permitted, the houses of this period were segregated into men's and women's quarters and furniture was designed accordingly. In upper-class Yangban families, the men lived and studied in outer rooms collectively called sarang ch'ae. They entertained and took their meals in a main onدل-floored room called a sarang-bang or, in warm weather, on an adjoining balcony or the maru wooden-floored rooms. Their women lived in inner rooms collectively called anch'ae and the principal onدل-floored room of their domain was called
the anbang. Sometimes connected to the anbang by sliding showing doors was a raised alcove called an utbang which housed larger storage units and cabinets. The anbang was entered from a wooden-floored porch called a taech’ông maru, where women worked and close-family members socialised in warm weather. Sometimes opposite the anbang was a smaller sitting and sleeping room called the könnöbang.

Confucian ideology emphasised that the man of virtue should lead a life of moderation and decorum, and this encouraged an ethos of austerity in the design of the men’s quarters and its furnishings. The result was furniture that was restrained in style, sober in colour, and made of subdued woods like pine and pillion. Fittings were plain, kept to a minimum, and fashioned from dull metals like cast iron. Standard pieces of furniture found against the walls of the sarangbang were a pair of low chests for stationery and incidentals called mun’gap, a four-tier book and display stand called a sabang t’akcha, a two-tier book chest called a ch’aekchang, a wardrobe chest called an ügöri chang, and a storage chest (chang) for items in daily use. In the centre of the room would be such low and portable pieces as a scholar’s desk (ch’aeksang or kyonsang) and an inkstone box (yonsang). At meals times, individual serving tables (soban) laden with food were brought in from the kitchen. The adjoining wooden-floored maru might contain such additions as a low bamboo or wood slatted platform bed and one or two book storage cabinets.

In contrast to the restraint ambiance of the sarangch ’ae and its furnishings, the women’s quarters or anch ’ae was a much brighter and cheerful place. The furniture of the anbang was more exuberant in style, brighter in colour, and made of more ornate woods like persimmon and zelkova. Chests of red or black lacquer embellished with ox-horn panels, mother-of-pearl inlay, and carved motifs were not uncommon. Fittings were also more ornate, often incised with decoration, and made of shinier metals like brass or nickel. Hinges were fashioned into whimsical and auspicious shapes such as flowers, butterflies, bats, swallow tails, or the Sino-Korean characters for happiness (pok) and longevity (su). An anbang typically contained a three-level chest for everyday clothing called a samch’ūng chang, a two-unit stacked chest for out-of-season clothing called a ich’ung nong, a pair of mun’gap, an all-purpose chest called a bandaji upon which the daily bedding was stowed, and several low chests such as mõrit chang (headside chest), aegijang (a baby-sized chest), or posönjang (chest for socks). These pieces were placed against the wall; on top of them were stacked such small, portable boxes as ham (a pair of wedding boxes), kori ham (a document box), and kyöngdae (mirror box).

The kitchen of a Chosŏn house was connected to the far end of the women’s quarters and built at a lower level to the anbang. It had an earthen floor in the stove area and in the area opposite where crockery, utensils, and food were stored, a raised wooden platform or maru floor. Typical pieces of furniture found on the maru include stands of two or three tiers (ch’ant’ak) for the storage of ceramic bowls, jars, and bottles; chests for the storage of rice (ssal twiju) and beans (p’at twiju); and a three-level chest with a row of small drawers (samch’ung cha’anjang) for the storage of eating utensils and crockery. Kitchen furniture was built to be sturdy and functional, usually made of solid pine and fitted with plain cast iron or tin hardware.

As late as the 1970s, fine specimens of domestic furniture were still being found in villages as Koreans moved to the cities and abandoned traditional ways of living. Today, however, unadulterated pieces of high quality are extremely difficult to acquire, with fine specimens having found their way into museums and private collections. The National Folklore Museum of Korea, the Onyang Folk Museum, the Korea University Museum, Ehwa Woman's University Museum, as well as most university museums in Korea will have excellent pieces of traditional Korean furniture on public display. The Japan Folk Crafts Museum in Tokyo and the Koryo Museum of Art in Kyoto both display notable old Korean furniture. In the West, almost any large museum with a collection of Asian art is likely to have isolated specimens of Korean furniture.

Rose E Lee
James Scarth Gale was a missionary and scholar of Korean history and culture. He was born in Canada as his parents had shortly before emigrated from England in search of a better life in North America. Gale was the fifth of six children born to John and Miami Gale and he was raised on their Ontario farm. He received his elementary education in the local school, and when he was eighteen travelled to St. Catherines to study at St. Catherines Institute. There he met Robert Harkness who would become a life-long acquaintance, and who would later serve with Gale in Korea. By 1884 Gale had graduated, and enrolled at University College in Toronto. In 1888 he had completed his studies, following which he accepted a position as a missionary in Korea. He arrived in Pusan in December 1888 and then journeyed north to Seoul. Initially, he concentrated on studying the Korean language and soon departed Seoul for the city of Haeju in Hwanghae Province. In Haeju he learned Chinese characters and was fully exposed to the Korean way of life in the provinces. Within a year he had relocated to Pusan and was intent on establishing a mission there, but within a short time thereafter he returned to Seoul.

Gale became acquainted with many of the other foreign missionaries in Seoul and was afforded the opportunity to travel to parts of Korea not yet explored by foreign missionaries. By 1891 he had severed his links with the Toronto YMCA, his supporting organisation, and joined the Presbyterian Church, New York, which gave him increased financial support for his mission in Korea. In the early 1890s, he devoted time to educational activities and in writing a book on the Korean language entitled, *Korean Grammatical Forms* (1894). In 1891, he married Harriet Gibson, the widow of Dr. John W. Heron, who had been one of the first Presbyterian missionaries and physicians in Korea, and soon thereafter moved his new family to Wonsan, to take up an appointment. During his time in Wonsan, in addition to his duties as a missionary, he wrote his *Korean-English Dictionary* (1897) which was the first comprehensive work of its kind. It served as the standard dictionary for more than half a century. Gale also published his translations of Korean shijo poems, undoubtedly the first ever in English, in *The Korean Repository* in 1895, in addition to various translations of Christian materials into Korean.

Gale’s activities in the period after the inception of the declaration of the Great Han Empire (1897-1907) are marked by continued educational, missionary and literary achievements. He participated in the founding of the Seoul YMCA, served as a correspondent for the *North China Daily News* of Shanghai and produced a series of textbooks. *Yumong ch’ŏnja* (Korean Readers) designed to instruct in modern science, world history, English and American literature, among other subjects. He also served as Secretary of the Korea Branch of the Royal Asiatic Society shortly after its foundation in 1900. At about this time Gale developed a friendly rivalry with other scholars in Korea, most notably Homer Hulbert. Gale’s scholarship was, however, distinctly superior to Hulbert’s in the understanding of Korean language and history, especially as Hulbert had no knowledge of Chinese characters.

In 1908 Gale’s wife died, and two years later he remarried Ada Louisa Sale who had lived most of her life in in Japan. Notwithstanding the colonisation of Korea by Japan, Gale furthered his Korean studies and in 1913 his *Korean Folk Tales* was published. Moreover, he continued to publish amended versions of his dictionary and revised his *Korean Grammatical Forms* in 1916. Between 1911 and 1916 he served as president of the Korea Branch of the Royal Asiatic Society and published, *The Cloud Dream of Nine*, a translation of the 1687 novel *Kuun mong* (A Dream of Nine Clouds). One of his most acclaimed works, *The History of the Korean People*, was completed between 1924 and 1926 and was initially published in instalments in the *Korea Mission Field*. Shortly thereafter, Gale and his family left Korea for England, where he died in 1937. Gale is remembered not only for for his missionary zeal, but also for his prolific writings that held pride of place as the best English-language works on Korea until the late 1950s.
Geomancy

In Korea the practice of geomancy is known as p’ungsujiri sol or the theory of wind, water and land, and these practices adhere to the belief that the natural features of an area can influence the fortune of those who live there and their descendants. *P’ungsujiri sol* is derived from the Chinese practice of *feng-shui* (wind-water) which is thought to have developed from the chronic natural catastrophes wrought in China by winds and floods. These beliefs are thought to date back to at least the time of the Warring States period (475-221 BCE) and also incorporate the Daoist sciences of *yin-yang* along with the five elements that compose all matter.

Theory

Geomantic theory centres on the building of structures such as graves, temples, palaces, dwellings, villages and capitals and is thought to repulse calamity and baleful influences, and at the same time bring about good fortune by harnessing the power inherent in certain natural features. The directions are represented by animals with the east symbolized by a blue dragon, the south by a red sparrow, the west a white tiger and the north a black turtle. The interrelation between these entities and the natural topographical features such as mountains, rivers and valleys is examined before deciding on where to build. The aspects of how wind and water interact are also examined in determining the propitiousness of a location.

In the case of a major structure, a strong character of the blue dragon is sought-after in the terrain surrounding the planned structure. The building itself would generally face the south (red sparrow) with the white tiger to the right and blue dragon to the left, leaving the black turtle to the rear. This was thought to be the most propitious way in which to design most buildings. In the case of deciding the location for a grave, or *myôngdang* (a propitious site for a grave), geomantic features are also very important since they permit descendants to benefit from their ancestors. The best grave-sites would have a high peak behind them and from this peak there should be two ridges that sweep down from it to the east (blue dragon ridge) and to the west (white tiger ridge). This would enable the grave-site to be protected by these guardian spirits which would ensure the living benefit from their ancestors through these auspicious resting spots.

The selection of auspicious sites for the graves of one’s ancestors also had a down side. There was, naturally, the belief that if one’s ancestors were buried in an ideal location on an auspicious mountain, the descendant’s future would be very prosperous. However, from ancient times, there has also been the concept that if people settle on the foot of an auspicious mountain and receive the benefits of the mountain evenly, this would prevent one family from receiving the exclusive benefits (of the mountain). Moreover, it was thought that for a cadaver to be buried on an ideal mountain, the impurities resulting from death and decay would not be washed away and thus there would be no rain. Therefore, during a prolonged drought people would assume that someone had secretly buried a corpse in the mountains, and they would then seek to find and remove it. Here it is clear that the balance between geomantic benefits had to be shared among the living and the dead.

History

The knowledge of geomantic principles is thought to have entered Korea along with Taoism.
in the late sixth or early seventh centuries in the Koguryo Kingdom. However, widespread adoption of these principles is not thought to have become common until the latter part of Greater Shilla. In particular, it is thought that through the teachings of the monk Tosôn (827-898) geomantic beliefs were spread. His teachings combined the Buddhist ideal of achieving merit through good works with the Daoist principles of yin-yang and the five elements, together with geomancy. Tosôn likened the Korean peninsula to a great tree with its roots at Mt. Paektu. There are many tales from the end of Greater Shilla concerning the diminished auspiciousness of the Shilla capital and its demise.

In the Koryo period there are also many stories concerning auspicious places, such as that surrounding the ancestral home of the Kingdom’s founder. The family home of Wang Kôn (King T’aejo), which was in Kaesông, was claimed to be in a greatly auspicious locale and by virtue of the topography of Kaesông, Wang Kôn was able to unify the later Three Kingdoms and found the Koryo Kingdom. Wang Kôn had such a strong belief in the attributes of geomancy that in his Ship hunyo (Ten İnjunctions) that he left for future rulers he asserted in the fifth injunction that he was able to carry out the unification of Koryo by the latent virtue of mountains and streams of Korea. The palace of the Koryo Kingdom was constructed in a place that was renowned for its geomantic qualities. The tremendous geomantic qualities of Manwoldae are noted in many historical records such as the Samguk sagi (History of the Three Kingdoms), Koryo sa (History of Koryo), P’aryôk chi (The Eight Provinces) of Korean writers, and Gaoli tujing (Kor. Koryô togyông, Illustrated Account of Koryô) and Chaoxian fu (Kor. Chosôn pu) both of Chinese writers.

Geomancy also played a major role in the Revolt of Myoch’ông in 1135. Myoch’ông was a Buddhist monk who sought to take advantage of the turbulent times in the mid-Koryo period and seize the throne for himself. By using geomantic theory the monk tried to convince King Injong (r. 1122-1146) to relocate his capital to P’yongyang where Myoch’ông and his conspirators planned to take power for themselves. He reasoned with the King that the geomantic attributes of Kaesông were depleted and that if the capital was relocated to P’yongyang the kingdom would be recharged by virtue of the abundant geomantic energy located there. King Injong was nearly swayed by the monk’s argument, but in the end the ruling powers in Kaesông convinced him to leave the capital in Kaesông. Myoch’ông rose up in revolt but was soon defeated.

In the subsequent Chosôn Kingdom geomancy also played a major role in the selection of Hanyang (present day Seoul) as the site for the capital of the new kingdom. Yi Sônggye, the founder of the new Kingdom, selected Seoul for not only its easily defensible location, but also because the site was well situated to take full advantage of the geomantic attributes of the area. Seoul is surrounded by mountains and has the Han River flowing through its centre. To the north is Mt. Pugak which holds the power of the black turtle, Mt. Nak to the east is the blue dragon, Mt. Mallidong to the west is the white tiger and Mt. Nam (Namsan) to the south channels the power of the red sparrow. Seoul served as the seat of power for Chosôn for almost 600 years, which bespeaks its geomantic merit.

Geomancy is not at all a dead art in this c. During the Japanese colonial period it is said that the Japanese placed their Government-General building in the front of Kyöngbuk Palace in order to sever the flow of geomantic energy of Korea. One reason cited for the recent demolition of this building is to restore to Seoul the natural auspiciousness of the area. Other aspects of present-day adherence to geomancy are seen in the location of graves and in choosing sites to build a home.

Germany and Korea

Early contacts

In a first casual encounter between a Korean and a German, crown prince Sohyŏn in the middle of the 17th c. met Father Adam Schall von Bell in Peking and received some Jesuit writings. Then, in 1832, the British East India Company sent Captain Lindsay of the 'Lord Amherst' in order to try to establish trading contacts. Whilst his ship was at anchor off the west coast of Korea, waiting for the Court’s permission to land, Karl Friedrich August Gutzlaff went ashore and distributed religious pamphlets.

The third encounter was less harmless. Ernst Oppert, a German merchant from Shanghai, in 1866 made two futile attempts at establishing trading contacts. He went to Korea a third time in 1867 or 1868, planning to rob the mortal remains of the Korean king’s father and thus acquire a means of exerting pressure on the Court. The plan failed, but became known, resulting in a consolidation of the Korean policy of isolation.

As for official contacts, Germany had no interest in acquiring colonies in Korea, but only trading interests. However, since Korea attracted foreign interest until it was eventually colonised by Japan, German-Korean relations also have to be viewed in the light of this rivalry for the peninsula.

When the Western powers became politically active towards East Asia in the second half of the 19th c., China did not succeed in clearly defining its relations with Korea in terms of international law. Korea continued to remain politically dependent on China, but was traditionally left to make its own decisions on questions of trade and missionary activities, the sole points of interest to Germany. Against the background of this badly defined legal status, Japan developed an active diplomacy towards an opening of Korea to international trade and an internal reform. The situation was so unclear that the German diplomat M.A.S. Von Brandt set out to Pusan from Yokohama on a Japanese ship in 1870 in order to examine the status of Japan on-site. The result was conclusive: the Koreans protested to the Japanese and achieved his immediate departure.

In 1874, M.A.S. Von Brandt tried to encourage Berlin to take diplomatic steps towards a German-Korean treaty, but Berlin was not interested, although the German consul in Niuzhuang also welcomed the idea. In 1875, the Japanese provoked a military incident at Kapkoji on Kanghwa Island in landing a combat-ready force there, which followed desultory naval bombardment along the Korean coastline, keeping the two countries just short of actual war. Japan then sent a negotiator to Beijing who announced that direct negotiations would be taken up with Korea in this matter. In consequence of the indecisive attitude of China, the treaty of Kanghwa was eventually signed in 1876, which was heavily weighted in Japan’s favour. Although it recognized Korean sovereignty, it gave the Japanese privileges of extra-territorality, exemptions from customs duties and the right to use their own currency in the three ports opened to Japanese trade.

The Western powers reacted positively to this treaty. When an aggressive Russian policy towards Manchuria and Korea became apparent Japan suggested that other powers, especially Germany, make treaties with Korea, so that in case of a Russian aggression Japan would not be the only power concerned. Germany was hesitant, fearing a rebuff, but changed its attitude in 1880. Shufeldt was trying to open Korean ports to the United States, and a concentration of Russian ships off Nagasaki worried foreign diplomats in Japan. At this point, the German diplomat Eisendecher recommended to follow the American example if an agreement could be reached peacefully. Von Brandt, by that time posted to Beijing, had been given authority for negotiations if the opportunity arose.
After the American-Korean treaty of 1882, followed by one with the same wording with England, Von Brandt also reacted quickly and achieved an agreement which was signed on 30 June 1882. It contained the concession that Germany and the German people might benefit from all rights conferred by the treaty even before ratification by the governments; quite important, since it was never to be ratified because Germany reopened negotiations following the same British policy.

A new treaty, negotiated by the German consul-general at Yokohama, Zappe, was signed on 26 November 1883 in Seoul. It entailed lower customs duties and contained a most-favoured-nation clause. The ratification documents were exchanged on 18 November 1884. The debate of the treaty in the German parliament brought out the question of principle concerning colonial politics, which was defined in very reticent terms. The German policy was to look after the interests of German merchants, not to acquire colonies, which reticence was to be the essence of German colonial politics for years ahead. This primacy of trade continued even after German politics changed in the 1890s, when Germany began to show colonial interests in China. In Korea, Germany limited itself to assisting German merchants and experts, because of the Japanese and Russian interests there, and Germany entertained friendly relations with both countries. Also, trade with Korea did not fulfill German expectations and was not promising to improve. Altogether, Germany was not very interested in Korean problems, remaining neutral in the various conflicts in and around Korea, even when Japan colonised Korea.

Towards the end of 1905 Japan took over Korean foreign relations, which were thenceforth represented in Tokyo, and the closure of the German Minister's residence in Seoul ended the first phase of diplomatic relations between Germany and Korea after twenty-three years. German trade with Korea had never been substantial. German exports to Korea stayed below 0.003 per cent of the total German exports and the import figures were lower still. For instance, Germany was able to secure only one goldmine concession and small first-day projects like a model farm were short-lived. In reality, Germany had not had a bad start. The former German adviser in China, Von Mollendorff, had organised the Korean customs and had much influence at court. There is also a long list of Germans who occupied prestigious and influential positions, but German diplomacy, being limited to representing civil interests as against the more 'aggressive' diplomacy of other powers, could achieve no lasting influence.

Not much of importance can be said for the time until the end of World War II. Korea was dominated and colonised by Japan, but Germans still continued to come to Korea. One of the German missionaries who visited Korea was Andre Echardt, who later returned to Germany and embarked on a university career. As the first German scholar of Korean he tried to present Korea as the third great culture of East Asia in its own right, in his many lectures and publications. For completeness sake it should be mentioned that the Korean provisional government in Shanghai declared war on Germany (being an ally of Japan) in February 1945.

Post-war relations

The second phase of German-Korean relations after World War II is the history of at least two sets of relations, given the division of both countries. Both were basically friendly, with regard to trade as well as mutual understanding for the other's complicated political situation.

The relations between the former East German (GDR) and North Korea (DPRK) were the first to start. The two countries entered into diplomatic relations on 7 November 1949 and exchanged ambassadors. East Germany was naturally on the side of the North Koreans during the Korean War, and gave assistance in the recovery afterwards. The common interest in the reunification of both countries led to mutual visits of the two political leaders.
in 1955/56. A number of scientific and economic agreements enhanced the good relations. Owing to various loyalties and ideological difficulties on the background of Soviet-Chinese relations, there were no visits on the highest level from 1960 to 1968. However, relations recovered after Honecker's visit to the DPRK in 1977.

The Korean War actually brought about a normalisation in West Germany's relations with the western powers, and German rearmament began. It can be said that in this sense what happened in Korea was of the utmost importance to Germany. Soon after the war, in 1953, the Republic of Korea wanted to establish a consulate general in the Federal Republic of Germany. After initial hesitation on the German side, the first Korean consul general, Dr Yi Han-ho, was established in West Germany and opened a trade mission. The FRG opened a consulate-general in Seoul in 1956, which became a legation in 1957. Both missions were raised to the status of embassies in 1958. From 1957 there were mutual visits on a ministerial level; the heads of state exchanged first visits in 1964 and 1967 respectively.

The good general relations, based on good trading relations, were at times subject to crises. The most precarious situation resulted when in 1967, during a time when anti-communism was very strong in South Korea, a group of Koreans, suspected to be North Korean spies, was kidnapped in Germany and taken to Korea. Germany protested against this violation of German sovereignty and demanded the return of the kidnapped persons and an official apology, and promised credits were frozen. The affair was not settled until 1969 and, given much prominence by the media, it had a long-term negative effect on the Korean image in Germany.

Relations between Germany and Korea are now on an excellent footing, cementing a longstanding relationship. Korean miners came to Germany in 1963, followed by nurses from 1966. Today there are more than 10,000 Koreans with permanent residence status living in Germany. Commercial exchange is also outstanding. Korea, which started off as a receiver of substantial developmental aid, has become an economically viable partner.

Germany has been one of the protagonists in the economic recovery and modernisation of South Korea. It gave humanitarian aid towards the construction of a hospital in Pusan (opened in 1954), sent experts in vocational education, and financially supported Korea's economic development. In the mid-1960s Germany was the second biggest, later the third-biggest investor, after the United States and Japan. At present, Germany is Korea's most important trading partner among the European Union countries and third on the list of partners worldwide.

Ginseng

Ginseng is a perennial plant in the family of Araliaceae that is used for medicinal purposes and is native to Korea. The species found on the peninsula is Panax ginseng C.A. Meyer and is known in Korean as 'insam.' The scientific name of ginseng alludes to its medicinal powers as the prefix 'pan' means 'all' and 'ax' is derived from axos meaning 'to cure'; thus 'panax' means to cure all -- literally, a panacea. In East Asia there are several varieties of ginseng including, Panax japonicum C.A. Meyer, which grows in Japan and parts of China, and Panax notoginseng (Burk) F.H. Chen, that is found in China. Ginseng is grown also in North America and Europe. The plant is known to have been used by man for at least two millennia, with its mention in the Chinese medical books, Mingyi bielu (Record of Medicine Names) of the Liang dynasty, and Shennong bencao jing (Shennong's Book of Medicine). Records of ginseng cultivation in Korea date to the early Three Kingdoms, during the reign of King Onjo (r. 18 BCE-28 CE) of Paekche.

Ginseng grows naturally in the mountainous regions of Northeast Asia, from latitude 30 to 48 deg. N., in which the Korean peninsula is located (from latitude 33.7 to 43.21). It is also found in Manchuria between 43-47 N., and in Siberia from 40 to 48 N. Ginseng is a
low-growing shrub that prefers a shady location. It produces berries which are generally red in colour, and its leaves are long and plural.

Korean ginseng grows best in mountain range locations with a north or northeast-aspect and between 100 and 800 metres above sea level. In South Korea, the best regions for ginseng cultivation are from latitude 36 to 38 N., but if the soil and location are reasonable it can endure less favourable climatic conditions. However, ginseng can be a difficult plant to grow for marketing, since if the environment is not to its liking, the shape of the root, its quality and efficacy will be adversely affected. Ideally, the climatic conditions for ginseng cultivation are those areas with an annual average temperature between 0.9C. and 13.9 C. and an annual average rainfall of 1 300 to 1 350 mm., with an occasional snowfall. The plant will not tolerate direct sunshine and needs a humus-abundant soil and good drainage on gently sloping land, with a north or northeastern exposure. While almost all ginseng sold in Korea is cultivated on dedicated farms, the most efficacious plants are said to be those found in the wild (sansam), in the mountainous regions of the peninsula.

There are two basic types of ginseng: red and white. Red ginseng is harvested when the plant has been in the ground for over six years, while white ginseng is grown for 4-5 years before it is culled. Red ginseng is processed under controlled conditions by careful steaming, drying and shaping of the raw ginseng root. White ginseng retains the original form of the ginseng root and is washed and sun-dried until the water content is less than twelve per cent, a process generally taking about four years of storage under special conditions. Ginseng is processed in many different forms including natural root for stewing or chewing, as capsules, as a tea or tonic drink, as a powder, and is used in candy and wine, even as an ingredient in cake.

Ginseng has been treated historically as a commodity monopolised by government in Korea, with records showing the plant being placed under government control during the reign of King Myongjong (r. 1545-1567) in 1556. Other regulations during Choson reveal that the cultivation and trade of ginseng were strictly regulated as a means to control the value of this commodity. The monopoly on ginseng was maintained throughout Choson, and after Korea’s liberation in 1945, it transferred to the government of South Korea. The monopoly laws for red ginseng were reassessed in 1972, with the new regulations focused on controlling the production, processing and sale of red ginseng. White ginseng is not subject to government inspection and is not included in the government’s monopoly of the product.

Medicinal Attributes

There are numerous records of the cultivation of Korean ginseng going back as far as the early Three Kingdoms era, and to differentiate the Korean plant from others it was referred to as Korean ginseng (Koryo insam). From early on ginseng was prized as a panacea among the people, and its qualities are now beginning to be understood by modern science. While ginseng was in former times imbibed as a tonic for the protection of the so-called ‘five vital organs’ (ojang) and as a general health restorative, modern science now has verified its therapeutic value for supplementing adaptogenic activity; improving the circulation of blood by reducing peripheral resistance; positively increasing metabolism in regards to the promotion of regenerating fatty matter, protein and nucleic acid; and improving the function of the digestive system by promoting blood circulation in the gastric membrane. Moreover, some researchers claim that ginseng serves to fortify the immune system and thus delay the development of AIDS from the HIV infection. Others have asserted that ginseng suppresses the multiplication of cancerous cells. Other curative claims for ginseng include the promotion of mental functions such as learning ability and memory capabilities; as a male reproductive tonic; and as a painkiller for menstrual pain in women. While many of these claims have yet to be confirmed by exhaustive scientific study, clearly
the potential for the medicinal use of ginseng is quite high.

Due to the many purported medical attributes of ginseng, as well as its not unpleasant taste, it is well used by Koreans. In the culinary field, it is an ingredient in a variety of traditional dishes, perhaps most notably in samgye t'ang, which is a ginseng and chicken soup often eaten as a general health tonic. Ginseng has also become a commodity on the international market in recent years, as some of the medicinal claims made for it are progressively verified, to the degree that it can be considered as one of South Korea's major exports to Western countries.

Chemical Composition

Korean ginseng is a unique species and possesses a chemical composition that has long been praised as being superior due to the varied formation of its ginsenosides, which are the major active components in ginseng. Moreover, only Korean ginseng contains insulin-like compounds such as acidic peptides; ginsenoside Rb1 and Re; adenosine and Mn-containing compounds; all of which are effective in the treatment of diabetes. Thus far, a total of seventeen ginsenosides have been identified in Korean ginseng: Ro, Ra1, Ra2, Ra3, Rb1, Rb2, Rb3, Rc, Rd, Re, Rf, Rg1, Rg2, Rg3, Rh1, Rh2, and 20-gluco-Rf. Other varieties of ginseng have only seven or eight kinds of ginsenosides present. Korean ginseng also contains numerous antioxidants such as vanillic acid, syringic acid and ferulic acid, among others. Other components found in Korean ginseng include natural sugars, lipids, nitrogen-containing compounds, vitamins and inorganic matter.

Government and Legislature

Government

The Civil Service

In 1998, the government embarked on sweeping austerity programs in a bid to induce consumers into restrained spending as one of its counter-measures to the country's economic downturn. Concurrent with these programs, the Kim Dae Jung government undertook, in legislation passed by the 188th National Assembly on 17 February 1988, a massive government restructuring program, to effectively downsize the civil service, through a reduction of the number of ministries, ministers, vice-ministers and minister-level officials, together with an overall cut to civil service positions of 17 612 (10.9 per cent), by the end of the century.

The civil service system still borders, however, on a personnel total in excess of half a million, approximately one-quarter of whom work in local government. The other three-quarters include, firstly, a special category of high-ranking officials who are members of the State Council; vice-ministers of executive ministries; directors of other ministerial-level offices; ambassadors and ministers; judges and lawyers; secretaries to political figures; military personnel; civilian employees of defence establishments; provincial governors; and mayors of the seven metropolitan cities which now have status akin to that held by provinces. Secondly, there is a general civil service category composed of nine grades, of which the first five have presidential appointments, on the recommendation of the relevant ministers. Grades six to nine are nominated by ministers. Thirdly, there is a category for administration and faculty of the public schools at all levels. These people are referred to as
'educational civil servants' and are subject to the Education Civil Servant Act. Their posts include presidents, deans and faculty members of the national universities, and teachers in all secondary and primary schools. Fourthly, there are the officers of the Ministry of Foreign Affairs and Trade, who are subject to the provisions of the Ministry of Foreign Affairs Personnel Act, 1981, which improved the career structure in that organisation. Also included in the list are the national police (not paramilitary) and employees of the Presidential Office's, Agency for National Security Planning.

Civil servants employed in local government fall into 'career' and 'non-career' categories. The Local Civil Service Act, 1963, (as amended) sets out the conditions, procedures of recruitment selection, appointment, job classification, promotion and associated matters. Career stream local government officers in general hold less standing than their counterparts in central government.

The civil service is still one of the most prestigious professions in the ROK, and its entry examination is highly competitive. Civil servants are employed within the province of the National Civil Service Act 1963 and its amending legislation. This law cushions civil servants from political activity and pressure, and prevents their unfair dismissal. They have the right of appeal, but are not permitted to engage in collective bargaining. Overall, the civil service is a strong political force, not least because of its pivotal role in executing the functions of government. Also, its powerful position in Korean society owes much to the degree of eminence that surrounds the profession in the public's estimation.

The Presidency

The President of the Republic is the head of state. Under the rules of the Constitution of the Sixth Republic, the presidential system of government was adopted, and the President is now elected directly by popular vote. The incumbent serves a single term of five years, and this term may not be extended. If a future constitutional amendment were to be made to alter this rule, either to extend the term or to allow the President to serve an additional term, this would not apply to the present incumbent. This legislation provides a double safeguard against the prevailing holder of the office from seizing power for an extra term.

The President is the most powerful member of the executive, even though his powers have been reduced while those of the National Assembly have been increased commensurately. He no longer has the right to dissolve the National Assembly, but the Assembly can call the President to account to the Constitution through the impeachment rule. It can also recommend that the president dismiss the Prime Minister and other cabinet members, either individually or collectively, but this is not binding. Under the Constitution of the Sixth Republic, the President has lost the power to issue emergency measures across the whole spectrum of state affairs. His power is now limited to the issuing of emergency decrees in respect of financial matters.

The President has eight essential roles to perform, as follows:

As the head of state, and head of the executive arm of government, the President has responsibility for ensuring the safety and independence of the country, and the continuity of the state and the Constitution.

As the principal administrator, the President ensures that laws passed by the National Assembly are implemented, and can issue decrees for the enforcement of laws. The President has control over the State Council (through an instructive process to the Prime Minister who controls the ministries) and over a number of advisory bodies and executive agencies. He is empowered to appoint public officials, including the Prime Minister and the heads of executive agencies.

In his capacity as the foremost policy maker and lawmaker, the President can propose legislative bills to the National Assembly, and can veto bills passed by the National Assembly, but he can be overruled in
The President is Commander-in-Chief of the armed forces.

As the chief executive in the foreign policy-making process, the President makes decisions relating to the conclusion of treaties or agreements, on receiving and dispatching diplomats, and on making and keeping peace with foreign states.

The President represents the country domestically, within government, and externally, in foreign relations. This includes the welcoming of foreign dignitaries, awarding honours, performing ceremonial duties, and the granting of pardons.

The President is leader of a political party, with the power of decision-making on the appointment of top-ranking personnel to the executive wing, on the basis of advice from the party.

The President has the task of pursuing the reunification of the Korean peninsula, and of referring policy on matters of momentous importance, in regard to diplomacy, national defence, or reunification, to the nation through a referendum.

The Presidential Office

In the late 1990s, under the presidency of Kim Dae Jung, the Presidential Office, with its location in Ch’ong Wa Dae (Ch’ongwadae, the Blue House) underwent sweeping change. The following organisations are placed within the Presidential Office:

- Advisory Council on Democratic and Peaceful Unification
- Agency for National Security Planning
- National Security Council
- Planning and Budget Commission
- Presidential Advisory Council for Science and Technology
- Presidential Commission on Small and Medium Business
- Presidential Secretariat
- Presidential Security Service
- Presidential Commission on Women’s Affairs
- State Council

Under a Secretary-General, senior secretaries are in control of protocol, political and economic matters, civil issues, public information, general questions and administration.

The State Council

The State Council is the body through which the President undertakes his executive functions. Members of the State Council are appointed by the President on the recommendation of the Prime Minister (Constitution, Article 87). The State Council considers significant matters of state and policies which come under the President's direct responsibility, and stands ready to give him advice also on sensitive and acute issues. However, the terms of reference of the state Council are set out in Article 89 of the Constitution, of which the following are perhaps the most important:

- Action for the dissolution of a political party.
- Appointments of the Prosecutor General, the Presidents of the national universities, Ambassadors, the Chief of Staff for each armed service, and public officials and managers of major state-run enterprises as are required by law.
- Award of honours.
- Basic plans concerning delegation or allocation of powers within the executive arm.
- Basic plans on state affairs and general policies of the executive.
Draft amendments to the Constitution, proposals for national referenda, legislative bills, and proposed ordinances of the President.

Evaluation and analysis of the administration of state matters.
Examination of petitions pertaining to executive policies submitted or referred to the executive branch.

Granting of amnesty, pardon and rehabilitation. Important military matters.

Matters pertaining to requests for convening extraordinary sessions of the National Assembly.

Proposed budgets, closing of accounts, basic plans for disposal of state properties, conclusion of contracts which involve major financial obligations for the state, and other significant financial questions.

Proposed treaties and other important foreign policy issues.

Questions regarding the determination of jurisdiction between executive ministries.

Other matters presented by the President, the Prime Minister, or member of the State Council.

The Cabinet

The Constitution empowers the Prime Minister to control the ministries under instructions from the President. The Cabinet examines all major policy matters coming before the government. The President chairs the Cabinet and the Prime-Minister is vice-chair.

Cabinet membership includes the Prime Minister and all Ministers with portfolios.

Office of the Prime Minister

The Prime Minister is appointed by the President with the National Assembly’s approval. He is the chief executive assistant to the President, and in this capacity (under the President’s control) he oversees the executive ministries. The extensive restructuring which commenced in February 1998 saw the establishment of the Office of State Affairs Coordination, led by a minister-level official, to assist the Prime Minister’s Office in the coordination and evaluation of inter-ministerial affairs. As vice-chairman of the State Council, the Prime Minister has the authority to recommend to the President the appointment or dismissal of members of this body.

The Office of the Prime Minister includes the following organisations:

Administrative Appeals Commission
Commission on Youth Protection
Emergency Planning Committee
Fair Trade Commission
Financial Supervisory Commission
Office for Government Policy Coordination
Office for Public Information
Ombudsman of Korea
Prime Minister’s Secretariat

The Prime Minister’s Secretariat consists of seventy members, with the Chief Secretary controlling divisional secretaries in charge of political affairs, petitions, protocol and more general matters. With the dismantling of the Ministry of Information in the February 1998 cut-backs, the work of that organisation is now the responsibility of the Office for Public Information, within the Prime Minister’s Office.

Board of Audit and Inspection (BAI)

The BAI is an organisation established by Article 97 of the Constitution and is the supreme audit and inspection body of the ROK, reporting to the National Assembly. It was established as the BAI in 1962, but its origins are in the first ROK government in 1948.

By virtue of Article 97, the BAI is under the President’s direct control, but in practice
retains its independence in the performance of its duties. It has a seven-member Audit Committee and a Secretariat. It operates under a secretary-general, with two vice secretaries-general who supervise its bureaus and offices. Its principal roles are to keep a close watch on the way public money is used, to examine and audit government operations and the job performances of the executive agencies and civil servants in carrying out their official duties.

The BAI was actively involved in a bid to assist the improvement of current-account deficits in January 1997, through a special audit of, *inter alia*, foreign currency spending by ministries. In this audit, the BAI cast a wide net, from macro-type operations such as the detailed examination of inter-bank money exchange and illegal outflow of foreign currencies, to the more subaltern issues of excess use of credit cards and injudicious overseas travel. From this audit, 6,449 cases of irregularities were uncovered, and the BAI asked for disciplinary and judicial action against 1,617 officials, of whom 356 were sued. Fines imposed amounted to 165.7 billion won.

State Structure

As already noted above, the President now has reduced powers while those of the National Assembly have been increased commensurately. He is now allowed to make emergency decrees only in respect of financial matters. The State Council is the primary policy-making body in the land, and it is through this institution that the President performs his executive duties.

The state structure comprises, at the summit of the executive system, the President, as the head of state; the legislature, where power resides in the National Assembly, which is a unicameral body; and the judiciary, which is constitutionally an independent arm of government, where power is vested in the courts. The court system operates at three levels. First, there is the Supreme Court which hears and adjudicates appeals of the verdicts of appellate courts in both civil and criminal cases. The decisions of the Supreme Court are final. Secondly, there are the three appellate courts which hear appeals of decisions by district courts; and thirdly, there are the district courts which are located in all major cities, whose task is to act upon all civil and criminal cases heard in the first place. Also, at this level are the Family Courts which deals with matrimonial matters and those affecting minors.

The Ministries

Directly beneath the summit level is the office of the Prime Minister whose duty it is to assist the President. Below the Prime Minister are the Ministries, brief details of which follow:

The Ministry of Finance and Economy

The Ministry has ten divisions:

- Economic Cooperation Bureau
- Economic Policy Bureau
- Financial Policy Bureau
- International Finance Bureau
- National Tax College
- National Tax Tribunal
- Planning and Management Office
- Tax and Customs Office
- Treasury Bureau
- Welfare and Customer Policy Bureau
The Ministry holds multiple responsibilities, which include the overall planning for and the development of the national economy; emergency planning; economic policy; mobilisation of resources; investment; technical development and cooperation with foreign states and international organisations. Further, the Ministry has responsibility for matters relating to the state treasury, currency, finance, national bonds, accounts, taxation, customs; foreign exchange; and the control of state-owned and vested properties.

The Ministry of National Unification

This Ministry has nine divisions:

- Humanitarian Assistance Bureau
- Information Analysis Office
- Institute of Political Education for Unification
- Intra-Korean Exchanges and Cooperation Bureau
- Office of the Advisory Council on Democratic and Peaceful Unification
- Office of Planning for LWR-Project
- Office of South-North Dialogue
- Planning and Management Office
- Policy Planning Office

The Ministry is engaged in research on many matters regarding the unification of South and North Korea, and decides measures and plans for public information and education in preparation for the eventuality.

Special mention is made here of the Advisory Council on Democratic and Peaceful Unification, which illustrates the enormity of the task faced by this body and the other organisations planning for unification. The Advisory Council has its origins in 1981 when it was established as the Advisory Council for Peaceful Reunification. It was given its present name on 25 February 1988 following its embodiment in federal law.

The Council's primary role is to advise the President on matters of policy designed to bring about the non-violent unification of the two Koreas. In 1997, the Advisory Council consisted of over 13 000 members, with many drawn from local government (over 5 000), a greater number (about 6 000) of leading figures in many walks of life in the ROK, and an unspecified number from political and social organisations.

The President chairs the Advisory Council, which holds plenary sessions, domestic and overseas meetings, steering and standing committees. The Council's activities are coordinated and decided by more than two-hundred and sixty domestic committees, overseas regional committees and sub-committees.

The Ministry of Foreign Affairs and Trade

The former Ministry of Foreign Affairs was expanded in 1998 to become the Ministry of Foreign Affairs and Trade. It has absorbed some of the functions of international trade negotiations and overseas trade promotions. Issues relating to diplomacy; trade; treaties with foreign states; other international agreements; and the protection and guidance of Korean nationals abroad are the responsibility of the Ministry, as are Korean missions to other states, and the maintenance of good relations with the diplomatic representatives of foreign states in Korea. In addition, the Ministry has the duty of care for economic relations with foreign countries.

The Ministry includes the following offices, bureaus and institutions:
The Ministry deals with matters associated with provincial and local administration; managing national referenda; naturalisation; elections; civil emergency planning; budgetary and financial matters; internal security; fire prevention; national police; maritime police; and local government.

The Ministry consists of twenty-one academies, bureaus, offices, commissions and centres, across the spectrum of internal affairs and local government, as follows:

Administrative Management Bureau
Appeals Commission
Central Officials Training Bureau
Civil Defence and Disaster Management Bureau
Disaster Prevention and Preparedness Bureau
Fire Administration Bureau
Five Provinces of North Korea
Government Archives and Records Centre
Government Buildings Management Centre
Government Computer Centre
Local Administration Training Institute
Local Autonomy Support Bureau
Local Finance and Economy Bureau
Local Tax Bureau
National Fire Service Academy
National Police Commission
National Scientific Investigation Laboratory
Personnel Bureau
Planning and Management Office
Protocol and State Council Bureau
Recruitment and Training Bureau

The National Police Agency, under the control of the Ministry, has the following divisions:

Central Police Academy
Crime Prevention Bureau
Criminal Affairs Bureau
Intelligence Bureau
Metropolitan Police Agency (13)
The Ministry of Justice

This Ministry has control over prosecutions; supervision of prosecutors; penal institutions; exit from and entry into the country; immigration; protection of human rights; administration of civil and criminal justice, and other juridical matters.

The Ministry has the following bureaus, institutions, offices and other bodies under its control (numbers in parenthesis, at February 1999):

- Correction Bureau
- Correctional Institutions (30)
- Detention House (7)
- Immigration Bureau
- Immigration Office (12)
- Immigration Processing Centre
- Institute of Forensic Psychiatry
- Juvenile Classification Home (5)
- Juvenile Training School (11)
- Legal Affairs Office
- Legal Research and Training Institute
- Parole Examination Committee (5)
- Planning and Management Office
- Probation Office (12)
- Prosecution Bureau
- Regional Correction Headquarters (4)
- Social Protection and Rehabilitation Bureau
- Social Protection House (2)

The Ministry of National Defence

The Ministry of National Defence has responsibility for all aspects of the country's defence and military affairs. The armed forces, including the army, air force, navy and homeland reserve forces, come under the control of this Ministry, with Military Manpower Administration as a subordinate office. It consists of seventeen bureaus, headquarters and offices, as follows:

- Air Force Headquarters
- Army Headquarters
- Budget and Finance Bureau
- Defence Project Office
- Information Systems Bureau
- Installations Bureau
- Joint Chiefs of Staff Headquarters
- Logistics Bureau
- Mobilisation Bureau
- Naval Operations Headquarters
- Office of Defence EDPS
- Office of Daejon National Cemetary
- Office of Information and Management
- Office of National Cemetary
Personnel and Welfare Bureau
Planning and Management Office
Policy Planning Bureau

The Military Manpower Administration has the following offices:

Conscription Bureau
Mobilisation and Call Bureau
Regional Military Manpower Office (10)

The Ministry of Education

This Ministry has overall responsibility for formulating and implementing the nation's educational policies and programs for all levels of education -- from kindergarten to university; for life-long education; and for the provision and staffing of special schools for the physically and intellectually handicapped. It carries responsibilities also for educational establishments and facilities. It provides administrative and financial support for departments, subsidiary organisations, local education offices and all levels of schools. The Education Reform Committee, a presidential advisory body, mapped out a fifteen-year master plan on education, which came into operation in January 1998. The organisation of the Ministry includes the following divisions:

Academic Research Policy Bureau
Appeal Commission for Educators
Education Environment Improvement Bureau
Education Information and Technology Bureau
Korea Institute of Curriculum and Evaluation
Korea Institute for Special Education
Life-long Education Bureau
National History Compilation Committee
National Institute for International Education Development
National Institute for Training of Educational Administrators
Planning and Administration Office
School Policy Office
Secretariat of National Academy of Sciences

The Ministry of Culture and Tourism

Formerly the Ministry of Culture and Sports, this Ministry was renamed the Ministry of Culture and Tourism during the government restructuring process of 1998. The sports interest is still retained in the form of a Sports Bureau, which holds responsibility for the general oversight of sports and sporting venues and fixtures, both in Korea and overseas.

The Ministry has a wide responsibility for matters pertaining to culture, including policy on the Korean language; the arts; traditional as well as modern sports; the National museums, institutes, library and theatre; the preservation of cultural property; promotion of the Korean film industry; and looking after the interests of specialised groups in the culture and art fields, and also in all areas of sport.

The 1998 reorganisation of the Ministry resulted in the formation or preservation of the following organisations:

Arts Bureau
Culture Industry Bureau
Cultural Policy Bureau
The Ministry of Agriculture and Forestry

The major functions of this Ministry include the determination of policies in regard to medium and long-term development and farmland management; land registration; agricultural technology; water resources; food-grain production; sustainable agriculture; livestock, food grains, vegetables, fruits; and horticulture; forestry planning and management; improvement of the marketing structure; control of agricultural products; and many other matters which fall within the purview of agriculture. There is a training institute for agricultural officers, a plant and animal quarantine service, and an inspection and quality control service. The institutions which command these functions include the following:

Agricultural Officer Training Institute
Agricultural Policy Bureau
Agricultural Production and Horticulture Bureau
Food Policy Bureau
International Agricultural Bureau
Livestock Bureau
Marketing Policy Bureau
National Agricultural Products Grading and Inspection Office
National Animal Quarantine Service
National Plant Quarantine Service
National Veterinary Research Institute
Planning and Management office
Provincial Agriculture Statistics Office (9 offices)
Rural Development Bureau

Subordinate divisions of the Ministry exist for forestry administration (comprised of eight specialised areas) and rural development administration (which has a total of fourteen experimental stations, bureaus and institutes)

Ministry of Maritime Affairs and Fisheries
This Ministry was created from the division of the former Ministry of Agriculture, Forestry and Fisheries, and holds responsibilities for all matters related to the establishment and maintenance of fisheries; aquaculture; management of marine resources; and negotiation of maritime treaties. The Ministry has further responsibility for the National Maritime Police Agency (which includes twelve maritime police stations). The main divisions of the Ministry are:

Fisheries Patrol Vessel Management Office
Fisheries Policy Bureau
Fishery Promotion Bureau
Floating Navigational Aids Office
Maritime Accidents Inquiry Agency (5 offices)
Maritime and Fisheries Officials’ Training Institute
Maritime Policy Bureau
Maritime Transport and Seafarers’ Bureau
National Fisheries Products Inspection Station
National Fisheries Research and Development Institute
National Oceanographic Research Institute
Planning and Management Office
Port Construction Bureau
Port Policy Bureau
Regional Maritime Affairs and Fisheries Office (11 offices)

The Ministry of Commerce, Industry and Energy

On 6 March 1993, the Ministry of Trade and Industry was merged with the Ministry of Energy and Resources to form the Ministry of Trade, Industry and Energy. With the government’s reshuffle of the ministries in early 1998, it was renamed Commerce, Industry and Energy.

This Ministry is responsible for the country’s overall trade policy related to exports and imports, bilateral and multilateral trade cooperation and international trade policy. Its energy and resources policy covers petroleum and gas, coal, electric and nuclear power. It carries responsibility, *inter alia*, for the promotion of industrial competition, for new and established industries, industry and the environment, and industrial technology policy. It keeps a watchful eye on imports by conducting investigations and making determinations, where imports are having, or are likely to have, an injurious effect on Korean industry.

The main establishments are:

Capital Goods Industries Bureau
Electronics, Textile and Chemical Industries Bureau
Industrial Policy Bureau
Korea Trade Commission
Planning and Management Office
Power and Resources Policy Office
Technology Policy Bureau
Trade Policy Office

Other organisations include:

Free Export Zone Administration Office
Korean Industrial Property Office
Mine Registration Office
Mine Safety Office (4)
Small and Medium Business Administration
The Ministry of Construction and Transportation (MOCT)

This Ministry was created by merging the previously separate Ministries of Construction and Transportation under the government's initiative for 'small government' (December 1994).

The MOCT's organisations are tasked with the coordination in construction and operation of the national infrastructure system. The establishment and co-ordination of plans for national land development and control; conservation; utilisation; preservation; development; and renovation of land and water resources development are its responsibility. It deals too, with matters such as building materials production, the preparation of construction budgets, and building research and construction legislation. The Ministry formulates policy and oversees all matters related to land transport, marine transport, harbour and port construction; railways, aviation and tourism.

The organisations of the MOCT include the following:

- Civil Aviation Bureau
- Construction Economy Bureau
- Construction Safety Bureau
- Construction Technology Bureau
- High Speed Railway Construction Planning Team
- Housing and Urban Affairs Bureau
- Land Bureau
- Logistics Bureau
- Major Urban Areas Transport Planning Team
- National Planning Development Bureau
- National Railroad Administration (with 14 sub-divisions)
- New Airport Construction Planning Team
- Planning Management Office
- Road Bureau
- Surface Transportation Bureau
- Transport Planning Bureau
- Urban Architecture Bureau
- Water Resources Bureau

The Ministry of Health and Welfare

This Ministry is responsible for the maintenance and promotion of national health and social welfare. Its functions include public health; epidemic prevention and control; public hygiene and sanitation (the latter including a quarantine service and the testing, acceptance or rejection of imported foodstuffs); medical and pharmaceutical administration; public assistance; social welfare; health insurance and family planning programs. The main divisions of the Ministry are:

- Health Policy Bureau
- Health Promotion Bureau
- Health Resources Management Bureau
- Hospitals - National Mental Health (5)
- National Rehabilitation Centre
- National Sorokdo (leprosy) Hospital
- National Tuberculosis Hospital (2)
- National Health Institute
- National Institute of Social Welfare Training
- National Medical Centre
The Ministry of Labour

The Ministry of Labour is concerned with industrial matters relating to a workforce of over twenty-one million (21.6 mill. in 1997). This includes, for example, the control of foreign workers (267,000 in 1997), most of whom are employed in labouring or similar work; the foreign-worker industrial training scheme; and the enforcement of legislation which compels the medium and larger-sized firms (over 300 employees) to employ disabled persons. Its concerns include worker-employer relations; safety in the workplace and working conditions; employment and unemployment policies; maintenance of the job bank; occupational stability; protection of workers’ rights and welfare; wage levels and standards; and the resolution of labour disputes. The Ministry’s bureaus and offices include:

Central Employment Information Office
Employment Policy Office
Industrial Accident Compensation Insurance Deliberation Committee
Industrial Safety Bureau
Labour Policy Bureau
Labour Standards Bureau
Labour Training Institute
Local Labour Relations Commission (12)
Minimum Wage Council
National Labour Relations Commission
Planning and Management Office
Regional Labour Administration Office (6)
Working Women Bureau

The Ministry of Information and Communication (MIC)

The MIC was established in 1994 and in 1995 the Korea Information Infrastructure Initiative (under the provisions of the Basic Act on Informatisation Promotion, 1995) set the scene for bringing information technology directly into the lives of the Korean people, as well as facilitating government services and actively assisting the business sphere. Many ‘informatisation’ programs are being implemented to enhance the quality of life of the Korean people.

The MIC holds responsibility for Korea’s postal services; telecommunications; broadcasting; postal exchanges; postal savings; postal pensions; and national life insurance. On the development of information technology policies and programs, the MIC works closely with the Ministry of Science and Technology. The main areas of the MIC include:

Central Radio Monitoring Office
Electronic Data Management Centre
Information and Communication Officials Training Institute
Information and Communication Policy Office
Informatisation Planning Office
Korea Communications Commission
Planning and Management Office
Postal Savings, Insurance and Finance Bureau
Posts Bureau
Radio and Broadcasting Bureau
Radio Research Laboratory
Ministry of Science and Technology (MOST)

The main functions of the MOST are to provide technology forecasting and to set basic policy for science and technology (S&T); the development of core technology and future-oriented technology; what the Ministry refers to as 'big science technology'; the pursuit of technological self-reliance in regard to the safe use of nuclear technology; the promotion and support of research and development (R&D) programs carried out by Government Research Institutes (GRI's) such as the Korea Institute of Science and Technology (KIST), tertiary institutions and private bodies; policy-making for R&D investment; human resources information; international S&T cooperation; and the promotion of public understanding of S&T.

The Ministry has a continuing and fully responsible role in the coordination of S&T policy among the other Ministries and for overseeing compliance with the policy.

The basic legal framework for the government’s S&T policy is contained in Article 127 of the Constitution and S&T related laws. The Ministry was extensively reorganised and elevated in status by the government’s restructuring process in February 1998. It has the following offices and bureaus:

- Atomic Energy Office
- Basic Science Manpower Bureau
- Planning and Management Office
- R&D Policy Office
- Science and Technology Cooperation Bureau
- Science and Technology Policy Bureau

The Meteorological Administration is a distinct organisation with direct responsibility to the Minister of Science and Technology, and has six divisions, as follows:

- Applied Meteorology Bureau
- Forecast Bureau
- Meteorological Research Institute
- Meteorological Training Institute
- Planning Bureau
- Regional Meteorological Office (5)

Ministry of Environment

The Ministry is committed to preventative policies which encourage industry to engage in production processes aimed at lessening the amount of waste and pollutants and the damage to natural areas. These extend to the establishment of transparency and consistency in environmental and conservation policies, not least to ensure that the ROK can claim that its standards are in tune with those of advanced nations. Sweeping programs are in place to improve air quality; the better control of waste; the improvement of water standards; and the upkeep of the natural environment. The Ministry is directly concerned with the government’s global treaties on environmental issues, of which thirty-two were in existence in 1998.

The Ministry of Environment has twelve departments for policymaking and control of environmental and associated issues, as follows:

- Air Quality Management Bureau
The Ministry of Legislation has general control over and coordination of government legislation. This includes the presentation of bills and regulations before the State Council; the authoritative interpretation of laws and regulations; submission of the Executive's legislative bills to the National Assembly and the preparation and promulgation of laws and regulations. The Ministry compiles data and information for legislation, and is the informed source on domestic and foreign laws. Under the Prime Minister it holds responsibility for the Administrative Appeals Commission; it has an officer in charge of public relations on legislation who, *inter alia*, is responsible for informing the public of important laws and regulations which affect the citizen's daily life. The Ministry has four bureaus, as follows:

- Legislation Bureau of Administrative Affairs
- Legislation Bureau of Economic Affairs
- Legislation Bureau of Social and Cultural Affairs
- Bureau of Administrative Appeals Management

The Ministry of Patriots' and Veterans' Affairs

Now directly controlled by a Minister, the former Patriots' and Veterans' Administration Agency is tasked with overseeing issues relating to veterans; such as financial relief; loans; compensation; employment and insurance for disabled war veterans and policemen; defectors from the DPRK; bereaved families of soldiers, policemen, and students killed in the 1960 uprising; and a National Cemetery. The Ministry is comprised of the following establishments:

- Enhancing and Memorial Affairs Bureau
- Merit Reward Administration Bureau
- Merit Reward Judging Committee
- Office of National Cemetery for the April 19th Revolution
- Regional Office of Patriots' and Veterans' Affairs (5)
- Research and Training Centre for Patriots' and Veterans' Affairs
- Welfare Services Bureau

**Legislature**

**Confucian socio-political Doctrine**

The Chinese Confucian tradition of behavioural and institutional modes, focusing upon hierarchical structures, deference to superiors, virtuous behaviour, and observance of correct form, is deeply ingrained in Korean socio-political culture. Other influences, such as those associated with the western liberal democratic, and western socialist traditions, combined with Korea's own native mores and practices, are now more in evidence. They have helped to produce an integrated socio-political culture in Korea, but elements of the
Confucian doctrine continues to persist in regard to attitudes and thinking. This is not surprising since Korean society was subjected to Confucianism over a period of more than five hundred years, until the Chosŏn dynasty came to a close in 1910, during which it was the official philosophy.

Some of the characteristics of the Confucian doctrine include the following:

- A dislike of government interference in private and family matters and life.
- A preference for decision-making through consensus, rather than by a majority vote, and a reluctance to compromise on matters of principle.
- A striving for power and position over rivals.
- An acceptance of a hierarchical pattern of relations among people within society and elsewhere, so that everyone was either superior or inferior to everyone else, apart from peers of the same age.
- An unchanging and resigned view of the human condition whereby states and dynasties emerged and disappeared in a cyclical way, while life in its essentials stayed fundamentally the same.
- Belief in order, consensus and accord as the most important political principles.
- Devout loyalty of subjects to their ruler who was regarded in awe and with reverence.
- Disapproval of commercialism, industrialisation, and a cash economy.
- The importance of placing duty towards family over and above individual desires and interests.

Some features of the Confucian doctrine persist in regard to the citizens' relative lack of interest in civic matters as opposed to family and group concerns; their residual unwillingness to be involved in voting and other political procedures; and their contempt for political parties. An example of this characteristic is the voter turnout in the 4 June 1998 local elections, which hit a record low with only 16.72 million (52.6 per cent) of the 32.53 million voters going to the polls.

Other features include a disinclination to accept the idea of a loyal political opposition and open debate within the legislature; and a tendency for political leaders to believe that their superior knowledge gives them the right to decide what is best for the people, without question.

The Yushin Hŏnpŏp Constitution (1972-1987)

The Fourth Republic came into being on 28 December 1972, with Park Chung-hee (Pak Chŏnghŭi) as President. A new Constitution was implemented at the same time, after a national referendum, and this ushered in the Yushin (meaning revitalisation reforms) system, in order to accelerate domestic economic growth and to deepen the industrial modernisation process, and in response to dramatic changes in the international environment which were perceived as a grave threat to the ROK's security. Under this system, democracy was virtually extinguished, as the President assumed his role for life. His election was through a presidential electoral college, composed of at least 5,000 presidential electors elected directly by ROK citizens. To be elected, the President required a majority of the votes of the total members of the college through a secret ballot. Also, under the new Constitution, one third of the National Assembly members were appointed by the President; the principle of the separation of powers and checks and balances was discarded and replaced by the absolute supremacy of the President. Opposition parties, dissidents and the press, were hounded and silenced, and some of their fraternity imprisoned and tortured. Freedom of association scarcely existed, and enfranchisement lost its meaning other than nominally. The new regime took on the attributes of bureaucratic authoritarianism. The President believed that a liberal democracy was incapable of achieving his economic and industrial goals because it had 'created a social environment blurred with inefficiency and conspicuous consumption'. With the introduction of the Yushin system, the ROK experienced huge economic growth, increased industrial expansion, and a surge in GNP and per capita income, in a situation where big business could thrive in the absence of labour problems.
Following President Park's assassination on 26 October 1979, there was a two-year interim period of chronic unrest and instability, as the country's economic fortunes plummeted, with falling production and exports. During this period, on 18 May 1980, the bloody Kwangju massacre took place, in which many people died. As a consequence of this, political control was tightened, the Special Committee for National Security Measures was formed, and General Chun Doo Hwan (Chôn Tuhwan) was elected President on 27 August 1980, with a pledge to build a 'democratic welfare state', and to allow the resumption of normal political activities.

Despite the promises of President Chun, the new Constitution under the Fifth Republic, approved by referendum, displayed many of the features of its immediate predecessor, but with certain improvements. It did not guarantee the presidency for life, but for one term of seven years, thus anticipating a peaceful transfer of power. It guaranteed stronger political and civil rights, habeas corpus was restored, and the guilt-by-association policy was abolished. Also, greater freedom of the press and association materialised during the latter part of the Republic's life, but most characteristics of the Yushin system were retained until 1987. That year, although economic performance and growth were excellent, opposition movements clamouring for democratic reform grew larger and more vociferous until even the army and the police could not contain them. The situation veered out of control following President Chun's 13 April 1987 refusal to consider Constitutional revision, his approval for police action in arresting hundreds of political dissidents, and for their indiscriminate use of tear gas and methods of torture against students. It was in response to these circumstances that retired General Roh Tae Woo (No T'aeu), leader of the ruling Democratic Justice Party, put forward his eight-point proclamation, pledging a thorough democratisation of ROK politics, on 29 June 1987. These included:

Amendment of laws to allow union organisation, collective bargaining and collective action;
Constitutional reforms to guarantee basic human rights;
Direct presidential elections;
Freeing of all political prisoners except those charged with serious crimes;
Lifting of restrictions placed upon the press and political parties;
Independence of the judiciary;
Local autonomy;
Revision of the Constitution.

In July 1987, President Chun, now under tremendous public pressure, gave his word to implement the eight-point program.

The most significant change in this Constitution occurred in the executive arm where the President's powers were reduced while those of the legislature were enhanced. The President is now elected by popular vote, for a single five-year term. He no longer has the power to take emergency measures, except in relation to financial matters, and he cannot dissolve the National Assembly.

The new Constitution authorised the extension of the National Assembly sessions from ninety to one hundred days. It granted the National Assembly the power to inspect all aspects of state affairs on a regular basis, instead of only certain matters, and it was also given the power to pass a non-binding motion calling for the removal of the Prime Minister or any member of the State Council, as well as the stipulation that the Assembly's consent be given for the appointment of the Prime Minister.

Other provisions of this Constitution called for the appointment of the Chief Justice by the President with the consent of the National Assembly. Judges of the Supreme Court have to
be appointed by the President with the approval of the Chief Justice, with the consent of the National Assembly. All other judges are appointed by the Chief Justice with the consent of the Conference of Supreme Court Justices. Impeachment or imprisonment constitute the only grounds for a judge being dismissed.

A Constitution Court was established by this Constitution under Article 111. It has responsibility for passing judgement on the constitutionality of a law upon request of the courts, and rules on impeachment and jurisdictional disputes between the branches of government, and other constitutional matters prescribed by law. Article 111 also calls on the Constitutional Court to decide on the disbanding of political parties and to judge the legal rights of organisations.

The rights and responsibilities of citizens were given new protection. It was made obligatory for an arrested person to be told of the charges brought against him; and *habeas corpus* was maintained. Other freedoms implemented included the restoration of the freedom of speech, the press, assembly, and association; with prior censorship forbidden. Victims in criminal cases were permitted to attend court hearings in person to present their cases if they so wished. Those suffering from injuries committed by those engaged in criminal acts were given the right to receive financial compensation from the state if the offender could not pay.

In the work place, the Constitution made it compulsory to implement a minimum wage; and to prohibit discrimination against women in terms of their employment, including wages and working conditions. It also granted workers freedom to associate, to engage in collective bargaining, and to take collective action. The welfare of senior citizens and the very young also became prioritised in the Constitution.

The year 1997 marked the final year of the Seventh Republic under the presidency of Kim Young Sam (Kim Yŏngsam). President Kim, who presided over the first genuinely civilian government, pledged to further the democratic process as a means of restoring the fortunes of the economy, by furthering the reforms promised by his predecessor; through strong government, clean politics, and the creation of a just and healthy society. Steps were taken to drive out corruption at the top of society, by forcing high-ranking political, military and judicial figures to disclose their assets. Towards the end of his term of office, however, Kim Young Sam’s administration began to lose popular support, in tactical moves not unlike those of some earlier presidents, as well as the corruption revealed by the collapse of the Hanbo Steel Group; irregularities attached to his own son, Kim Hyun-chul (Hyŏnch’ol); and the revelation that the President intended to personally choose the presidential candidate for the New Korea Party. On the other hand, Kim honoured his promise to administer the presidential elections in a fair manner, and thus he is credited with the nation’s first-ever clean and fair election.

Politics witnessed unprecedented change in 1997, highlighted by the break-up of the New Korea Party and the nomination of a single candidate representing both the National Congress for New Politics and the United Liberal Democrats, and the merger between the New Korea Party and the Democratic party to create the Grand National Party. The inauguration of Lee In-je’s (Yi Inje) New Party for the People, and the agreement to field a single candidate for the National Congress for New Politics and the United Liberal Democrats gave way to a new political equation, pitting a united opposition camp against a divided government one. The 18 December 1997 election was won by Kim Dae Jung by a margin of 390 000 votes over his Grand National Party opponent, Lee Hoe-chang Yi Hoech’ang).

The National Assembly

Legislative power is located in the National Assembly which is a one-chamber body, which
must have more than two hundred members; the exact number is determined by law. Two-thirds of the lawmakers are elected by popular vote for a term of four years, and the remaining one-third of the seats are distributed proportionately among parties winning five seats or more in the direct election. This system of proportional representation is intended to encourage legislative participation by leading technocrats through the political party structure, and to advance democracy. Lawmakers now have the right to examine government activities, and to give the Prime Minister or other cabinet ministers a no-confidence vote. However, the right to dismiss the Prime Minister, which entails the removal of the whole cabinet, cannot be exercised during the first year following his appointment to office.

The significant responsibilities of the National Assembly include the power to propose, deliberate and approve or reject legislative bills, to finalise and inspect closing accounts of the national budget, to ratify or reject foreign treaties, and to give, or withhold, support on the declaration of war or the conclusion of peace. The Assembly has the prerogative of impeaching the President, and to endorse his emergency orders, thus giving it more opportunity to check possible abuses of presidential powers.

The National Assembly elects one Speaker and two Vice-Speakers. A law-maker enjoys the usual privileges of a legislator, and he is not held responsible outside the Assembly for any opinions expressed, or votes cast, within the legislative chamber. A lawmaker is not allowed to hold any other office, and he is not permitted to abuse his position and privileges.

Guide to Korean Characters, A

A Guide to Korean Characters is an introductory book that features the 1800 basic Chinese characters used in Korea. It was written by Bruce K. Grant and published by Hollym International in 1979. Grant's work is designed as a guide in writing Chinese characters and the characters are presented in order based upon stroke count. Each character has a definition; han'gül equivalent; three to four examples of usage; and a simplified chart demonstrating how to write the character. The work also functions as a rudimentary dictionary in which characters can be found by stroke count, radical or phonetic index. The author includes several appendices listing Korean surnames; easily confused characters; simplified characters; and characters with multiple readings; in addition to others. While A Guide to Korean Characters is useful for the elementary student of Korean, it lacks depth and full definition for intermediate and advanced students. Further, since the work is limited to 1800 characters, it is less valuable for specialised reading requirements.

Gyeong Sang University

Gyeong Sang University (Kyōngsang Taehakkyo) is a national university situated in Chinju in South Kyōngsang Province. It began as a junior college (Torip Ch'ōgǔp Chinju Nonggwa Tachak) in 1948, with Hwang Unsōng as its first president. In 1953, it became
the four-year Chinju Nonggwa Taehak.

In 1973, the college attained national college status. In the 1950s and 1960s, its main role was as an agricultural college, but the rapid increase in junior high and high school students in Korea had led to a surge in the demand for teachers. In response, the college established the Departments of Science Education, Mathematics Education and Home Economics Education in December 1969. In 1972, the name was changed to Gyeong Sang College. In March 1975, a master's degree program commenced, followed by a doctoral program in December 1978. In the following year, the college became a university and was re-established to its present location in Kajwa-dong.

The university consists of the Colleges of Agriculture; Business Administration; Education; Engineering; Humanities; Law; Marine Sciences; Medicine; Natural Sciences; Social Sciences and Veterinary Medicine. Post-graduate studies are undertaken in the Graduate School as well as in the Graduate Schools of Business and Public Administration; and Education and Industry. University publications include the Kyŏngsangdae hakpo in Korean and The Gyeongsang Herald in English.

HMS Samarang [United Kingdom and Korea]

Hadong County

Situated in the southwest corner of South Kyŏngsang Province, Hadong County is comprised of the town of Hadong and the townships of Kojŏn, Kŭmnam, Kŭmsŏng, Pukch’ŏn, Agyang, Yangbo, Okchong, Chŏgyang, Chin’gyo, Ch’ŏngam, Hwagae and Hwangch’ŏn. The county covers 675.03 square kilometres and as of 1989, had a population of 69,104. Mt. Chiri National Park, comprised of a chain of rugged mountains over 1,500 metres high, lies in the northwest area of the county. As the name Hadong (East of the River) suggests, the county is situated to the east of the Sŏmjin River. With some of Korea’s cleanest waters, the Sŏmjin River is a major habitat of the sweetfish, a local delicacy. Traditionally, the river also served as an important trade route.

The Seoul-Chŏnju Line, which connects Chinju and Sunch’ŏn, passes through the center of the county, while the Namhae Expressway connecting Pusan and Sunch’ŏn runs through Chin’gyo Township and Kŭmsŏng Township in the south. National roads from Mokp’o to Pusan and from Namhae to Wŏnju also pass through the area. With the construction of Namhae Grand Bridge, the national road linking Namhae and Wŏnju now leads directly to Namhae Island.

Because of the rugged terrain in the northern portion of the county, only about seventeen per cent of the land is arable. Most of the agriculture is centred around rice cultivation along the river and streams, especially along the Hoengch’ŏn Stream and Sŏmjin River. Songwŏn Reservoir, the county’s largest, serves as an important source of irrigation water for the region. Besides rice, dry field crops such as barley, beans, sesame, garlic and Chinese cabbage are grown here. In Hwagae Township, Hwagae tea is produced. Since records state that the shirhak philosopher Chŏng Yagyon (styled Tasan, 1762-1836) discovered Gaolin tea plants growing here, it can be surmised that the area has a long tradition of tea cultivation. In recent times, a large number of stock breeding operations have also been set up in the area. Coastal fishing provides catches of flatfish and anchovy, but the local fishing industry has lately been in decline due to depletion of fish stocks and the negative effect of industrial pollution.

Clay is extracted from about ten quarries located in the Pukch’ŏn and Okchong townships. The clay is used to produce ceramics and traditional pottery. The ceramics industry is centred around Chin’gyo township, and in Saemigol. Other speciality products of the area include bamboo shoots, pears, small shells called corbicula and rice-straw shoes known as chipshin. Although the shoes are no longer worn, they are still used in shaman rituals and
funeral ceremonies.

In addition to Mt. Chiri (See Chiri Mountain), the county has a large number of tourist destinations and historical relics. Ssanggye Temple in Hwagae Township is the most famous temple in the county. This ancient monastery houses numerous old buildings as well as a relief carving of a Buddha. Within the temple complex one also finds a marble stele, dating from the Greater Shilla period, that commemorates Chin'gam, the temple’s founder. Outside of the temple, there is a unique pair of changsůng (spirit post) made by planting tree trunks upside down with the roots exposed. Up the slope from Ssanggye Temple stands Ch'ilbul (Seven Buddha) Temple. Legend has it that seven princes who came here attained Buddhahood.

There are a number of Confucian schools in the area, including Oksan Sŏwŏn in Okchong Township, Yŏnggye Sŏwŏn in Yangbo Township and Hadong Hyanggyo next to Highway 19 in Hadong. Built during the Chosŏn period, the school was moved three times during the 18th century before reaching its present location in Ómnae Village. The school has been designated South Kyŏngsang Province Tangible Cultural Asset No. 233.

The Chosŏn Confucian tradition is being kept alive in Ch’ŏnghak-dong, a small village in Ch’ongam Township. Here, residents follow a traditional lifestyle. Boys have long braided hair while men wear their hair in top-knots, and everyone wears the white clothing common during the Chosŏn period. In the village’s Ch’ŏnghak Sŏdang, students receive an education in the Confucian classics.

In order to promote the Hadong County’s unique cultural heritage, a series of festivals and celebrations are held throughout the year. Since 1981, the Hadong Cultural Festival has been celebrated annually on the first of November. Held under the auspices of the Hadong Cultural Centre, this event includes folk games, exhibitions and sporting competitions. Another event, called Meguch’igi, is held for up to fifteen days around the lunar New Year. During this time, a farmers’ band visits every household of the village to wish for a good harvest and conduct exorcisms of evil spirits.

_Haedong cheguk ki_ (International Records of Korea)

_Haedong cheguk ki_ was compiled in 1471 by Shin Sukchu by order of King Sŏngjong (r. 1469-1494) and consists of one volume. This work contains a historical survey of the geographical features of Japan, national affairs in Japan and the procedures for the exchange of diplomatic envoys with Japan. It contains six maps that show the countries around Korea: Japan proper, Kyŏshšı, Tsushima and the Ryūkyū Islands among others. It also contains the ‘Ilbon ’guk ki’ which records the major historical events in Japan from the time of the first emperor until 1471, the ‘Yuguguk ki’ which contains a history of the Ryūkyū Islands and the ‘Chobing ŭnjŏp ki’ which is a record of the diplomatic procedures between Japan and Korea.

After the original work was published there were supplements added to the work. First there was a report of an uprising in 1473 and in the next year upon receiving a royal order the Junior Secretary of the Board of Rites, Nam Che, made maps of the Three Ports (sampa’o). In addition in 1501 there were descriptions of the diplomatic affairs with Ryūkyū, as related by envoys from Ryūkyū, added to the work. All of these supplements were added to the original work as appendixes.

This work contains valuable data for the study of diplomatic relations between Korea and Japan and the various protocol guidelines that were adhered to by the two countries. It is notable that while Chosŏn pursued a policy of subservience (sadae) towards China, they held an attitude of superiority in their dealings with Japan and Ryūkyū. This disposition can be seen in the various protocols that were observed in dealing with these countries. In
addition this work not only served as the basis for Korean diplomatic intercourse with Japan from the time of the Muromachi Shogunate, but also was studied by Japanese scholars during the time of the Tokugawa Shogunate. It has been reissued at least twice in this century with the most recent being in 1974 when it was included in Haechang ch’ongjaje published by the Minjok Munhwa Ch’ujinhoe.

**Haedong kayo** (Songs East of the Sea)

*Haedong kayo* is a *shijo* collection that was compiled by Kim Sujang in 1755. There are three versions of this work: the Ilsŏk-edition, the Chu family-edition and the Pak family-edition. The Ilsŏk-edition bears the title *Haedong p’unga* (Music of Korea).

The structure and organisation of various editions of *Haedong kayo* are quite similar insofar as the placement of songs and the classification by writer are concerned. The earliest version, the Pak family-edition, has a total of five-hundred and thirteen works by ninety-three writers; the Chu family-edition has five-hundred and sixty-eight works by one-hundred writers; and the Ilsŏk-edition, the most recent version, has six-hundred and thirty-six works by eighty-five writers. However, the Ilsŏk-edition is incomplete, as the end part of the book is missing. In examining the contents of these editions, all of the writers present in the Pak family-edition are found in the Chu family-edition, but the Chu family-edition has seven writers that are not present in the Pak family-edition. The Ilsŏk-edition has the largest number of unknown writers at three-hundred and fifteen, while the Pak family-edition has two-hundred and two. Works of the compiler Kim Sujang number twenty-one in the Pak family-edition while there are one-hundred and seventeen of his poems in the Chu family-edition. Also, the poems of Kim Ch’ŏnt’aek in the Chu family-edition number fifty-seven while there are only twenty-one in the Pak family-edition.

*Haedong kayo* is valued as one of the most important songbooks of Korea, along with Ch’ŏnggu yŏngŏn (Enduring Poetry of Korea) and Kagok wŏllyu (Sourcebook of Songs). *Haedong kayo* has not only preserved songs from traditional ages, but has served also as a model for later compilations.

**Haedong kosŭng chŏn** (Lives of Eminent Korean Monks)

The *Haedong kosŭng chŏn* is a collection of biographies of eminent Buddhist priests of Koguryŏ, Paekche, Shilla as well as Koryŏ (up to mid-Koryŏ), compiled by the priest Kakhun. It was ordered by King Kojong in the second year of his reign (1215), and is the oldest extant work of its kind. Only Volumes 1 and 2 of the *Yut’onp’yon* have survived to date, but these are nevertheless considered as important classical works relating to the religious and cultural history of Korea. The exact number of volumes in the complete work is not known, but it is assumed to have been about ten volumes, based on the Chinese model of similar works at that time.

The surviving volumes of the *Haedong kosŭng chŏn* include biographies of such Chinese priests as Shun Dao (Machurian?), Tan Shi and A Dao, who were considered important in relation to the introduction of Buddhism to Korea, as well as a number of notable Korean priests. Volume 1 is regarded as being more valuable than Volume 2, which consists mainly of items reproduced from other sources such as the *Biographies of Priests*, compiled by the priest Yi Jing of the Tang dynasty.

The extant volumes were discovered by a priest named Yi Hoegwang in a Buddhist temple in Sŏngju, North Kyŏngsang province, and were reproduced in the journal *Pulkyo* (Buddhism), no. 37. An edited version appeared in the *Dai Nippon bukkyō zensho: Yuhōden sōsho*, Series 2, in 1917. They were again reproduced in Histories and Biographies, No.2, of the *Taishō shinshif daizōkyō*, volume 50, and in 1956 Tongguk University published them as *Changoe channok*, No. 1.
Haedong munhôn ch’ongnok

*Haedong munhôn ch’ongnok* is a bibliography of historical documents that was compiled by Kim Hyu (1597-1639) and is composed of one fascicle. In 1616 Kim saw for the first time the Chinese book *Wenxian tongkao* (Kor. *Munhôn t’onggo*) and desired to make a like work in Korean. He therefore devoted over twenty years of his life recording documents from the Shilla period to the Koryó period up until the time of his own birth. This work holds about 670 entries that cover a broad spectrum of topics such as the Confucian Classics, historical documents, documents of rituals and music, military and law records, medical documents and those concerning agricultural matters among others. The entries are arranged under the title of the document followed by the author’s name, his father and grandfather’s names, his scholarship, official post, posthumous title and his acquaintances. The bibliographical annotation provided by Kim includes any reprintings of the document or its inclusion in subsequent works and also explains the features of the work.

Presently there are copies of this work at Korea University, Seoul National University and Seoul City University. It contains very valuable data for the study of historical documents in the times prior to the early Choson period.

Haedong yaôn

*Haedong yaôn* is a Choson period compilation of unofficial historical documents from the early Choson period that was compiled by Hô Pong (1551-1588). It consists of two fascicles and is a calligraphed work. The first section of this work contains the ‘T’aejo ki’, ‘T’aejong ki’ and the ‘Sejong ki’. The second section includes additional records from ‘Sejong ki’, and records from ‘Munjong ki’, ‘Nosangun ki’, ‘Sejo ki’, and ‘Yejong ki’ among others. The third and final section is composed of ‘Yŏnsan’gun ki’, ‘Chungjong-ki’, ‘Injong ki’ and ‘Myŏngjong ki’ among other documents. The form of this work is closely related to other literary miscellanies that preceded it such as Sŏ Kojŏng’s *P’ilwŏn chapki* (Writing Brush Garden Miscellany) and Sŏng Hyŏn’s *Yongjae ch’onghwa* (Assorted Writings by Yongjae) and others. This work contains documents from many historical works that are not presently extant and therefore is quite valuable in the study of the early Choson period. Moreover, since it is in the form of an unofficial history, it contains many of the behind-the-scenes political intrigues and machinations that were common in the Choson period. Notable is the record surrounding the time of Prince Yŏnsan (r. 1494-1506) that records events surrounding a political massacre and many events from the life of this Prince who led a decadent lifestyle before being deposed.

Haedong yŏksa (History of Korea)

*Haedong yŏksa* is a historical chronology that details the history of Korea from ancient times to the end of the Koryó period which was compiled by Han Ch’i’yun (1765-1814). This seventy-volume work took over ten years to complete and also has a fifteen-volume supplement. It was modelled after the Qing dynasty work *Yishi* (Kor. *Yŏksa*) and therefore Han named it *Haedong yŏksa*. The general historical divisions and outline of the work closely follow the examples presented in An Chŏngbok’s *Tongsa kangmok* (Annotated Account of Korean History) and *Zichi tongjian gangmu* (Kor. *Chich’i t’onggam kangmok*) of the Chinese Neo-Confucian philosopher Zhu Xi.

In compiling this work, Han Ch’i’yun tried to provide an objective point of view by using many foreign documents. In all 550 documents were cited for this work, and of this number 523 were Chinese sources. This bias towards Chinese sources results in *Haedong*
yŏksa accepting the Chinese view of Korean history, which according to Chinese sources began with the Chinese colonies set up on the Korean peninsula. Therefore, early states such as Ko Chosŏn are disregarded in this work. This, of course, leads to the largest criticism of this work, which is the over reliance on Chinese sources instead of also incorporating Korean documents. Nonetheless, this work still is a worthy source of data in the study of the ancient states in Korea. A seventy-one volume, twenty-six fascicle calligraphed copy of this work is presently stored at the National Central Library in Seoul.

_Hae egesŏ sonyŏn ege_ (From the Sea to Children) [Literature]

**Haehaeng ch’ongjae**

_Haehaeng ch’ongjae_ is a collection of travel accounts and poems written by Korean envoys and the officials who accompanied their embassies to Japan from the time of both the Koryŏ and Chosŏn Periods. Also included in this work are the accounts of prisoners returning from Japan and those who had run adrift in Japan due to shipwrecks and storms. This hand written work of an unknown compiler is comprised of twenty-eight volumes. The name of the work is derived from the rather broad term ‘haehaeng ch’ongjae’ which accounts for all types of travel to Japan.

This collection has no preface or epilogue and the works are classified by the author’s name into the twenty-eight volumes. Some of the writers featured in this collection include Chŏng Mongju whose trip to Japan in 1377 is recorded in the section entitled ‘Ponggasijak’, Shin Sukchu’s 1471 journey, Kim Sŏngil’s 1590 travel chronicled in ‘Haesa rok’, the 1597 journey of Kang Hang in ‘Kanyang rok’, Kyŏng Sŏn’s 1607 journey in ‘Haesa rok’, and Kim Chinam’s ‘Tongsail rok’ that details his 1682 trip to Japan. There are many other accounts included in this collection in addition to those listed above.

_Haehaeng ch’ongjae_ was included in the efforts by the Chosŏn Kosŏ Kanhaeng Hoe to collect and publish all of the important documents of the past kingdoms that were undertaken from 1909 to 1916. _Haehaeng ch’ongjae_ is included in its entirety in the third to sixth volumes of this collection. Although there are some differences with the original, they are minor and the result is a nearly identical work. _Haehaeng ch’ongjae_ is a highly valued document for research into the relationships between Korea and Japan in both the Koryŏ and Chosŏn periods, and moreover, provides a Korean perspective on conditions in Japan.

**Haehak yusŏ** (Posthumous Collection of Haehak)

_Haehak yusŏ_ is the collected works of Yi Ki (1848-1909) a patriot in the waning years of Chosŏn. This calligraphed collection consists of twelve volumes and three fascicles. The materials in this work were posthumously collected by Yi’s son, Nakcho, and then revised by Kang Tonghŭi and Chŏng Inbo. It was published in 1955 in the third volume of _Han’guk saryoch’ongsŏ_.

The first volume contains information on the land systems in traditional Korea, the second discusses various political and governmental systems and the third contains literary documents. The fourth volume holds memorials presented to the king and the fifth contains prefaces and epilogues to various other works and the eighth is a diary. The ninth volume contains biographical accounts and miscellaneous notes, while the tenth is composed of rhymed verse. In the eleventh and twelfth volumes other poems of Yi’s are collected.

This work provides a window through which to view the tumultuous events that swept the
Chosŏn dynasty into the twentieth century and ultimately to its demise. Yi was a patriot who sought reforms in Korea but was thwarted by those in the government who were concerned with protecting their own interests rather than those of the nation. This well-written work provides many enlightening chapters on the political, economic, social and educational situation in Korea at the end of the Chosŏn period, and for this the work is highly praised.

Haein Temple

Haeju

Haeju is situated on the Yellow Sea in Hwanghae Province. Mt. Suyang (899m) and Yongsu Peak (513m) rise in the northern part of the city. In close proximity with the ocean and with mountains blocking winds from the northwest, the city enjoys a relatively mild climate. The area has an average rainfall of 1,025mm and an average annual temperature of 10.7°C.

The city’s most important source of employment is manufacturing. Local factories produce building materials, chemical goods, machinery, metal products, foodstuffs, clothing, glass, pottery and everyday household items. Building materials made here include cement produced at Haeju’s cement plant, and chemical products include potassium fertilisers and caustic soda. Machinery produced here includes agricultural implements, electric motors and transformers. In addition, local factories manufacture furniture, musical instruments, pottery, shoes, cloth, blankets, under garments, sheet glass, bicycles, plywood, tiles and fishing tackle.

The city’s agriculture is centred around vegetables such as Chinese cabbage, turnips, spinach, cucumbers, tomatoes, red peppers and leeks, and fruits such as persimmons, pears, peaches apples, strawberries and jujubes. In addition, there are dairy farms, duck farms and piggeries. Marine products also make a significant contribution to the local economy. Boats operating out of the city’s harbour bring in catches of gizzard shad, croaker, grey mullet, and shrimp. Oysters and clam are also harvested in the area.

Historical sites in the city include Suyang Fortress and pavilions such as Nagwŏlchŏng and Haeunjong. In Haech’ŏn-dong, one finds a Koryŏ-era nine-storey pagoda and a 4.64-metre high pillar erected during Koryŏ. Known as the Tarani Pillar, each of its six sides contains an inscription of the Buddhist text Dafoding Tuoluonjing. In Okkye-dong, there is a stone-built ice-storage chamber. The inner chamber is 28.3 metres long, 4.5 metres wide and 6.0 metres high. It is said to have been built during Koryŏ, and to have been repaired in Chosŏn, in 1735. Near the chamber is a five-storey pagoda, with a height of 4.63-metres, also built during Koryŏ. In Okkye-dong there is Haeju Hyanggyo, an old county public school, founded in 1423.

Haenam County

Situated at the southwestern tip of South Cholla Province, Haenam County consists of Haenam Town and the Kyegok, Masan, Munnae, Pugil, Pukp’yon, Sani, Samsan, Songji, Okch’ŏn, Hwasan, Hwawŏn, Hwangsan and Hyŏnsan Townships. Although there are several mountains on the eastern side of the county, the area is mostly made up of relatively flat terrain. As a southern coastal area, the region’s weather is characterised by mild winters and cool summers. These conditions make it an ideal place for the cultivation of warm-weather crops such as fruits and red peppers. Along the coast, there are a number of artificial oyster and cockle beds, and there are also several mines in the area.

Haenam County has a number of tourist attractions. Mt. Turyun Provincial Park is
particularly popular. At the base of Mt. Turyun, one finds Taehing Temple which is famous for its links with Hyujong (Grand Master Sosan, 1520-1604), one of the greatest monks of the Choson period. Some of the personal effects of Hyujong can be seen in a small museum at the temple, and a stupa in his honour stands with other stupas near the entrance to the temple. On the slope of Mt. Turyun, stands Ilchi Hermitage. This small hermitage was built by Úisun, (1786-1866) styled Ch’oůiǔ. Famous as both a meditation master and a tea expert, Ch’oůiǔ was on intimate terms with many of the Confucian literati of his time, including Kim Chǒnghũi and Chǒng Tusán. Tea is still grown outside of this small but picturesque hermitage.

In Songji Township, one finds the southernmost point of the Korean mainland, known as Land’s End. This rocky strip of land jutting into the sea has been eulogised in the poetry of Kim Chiha. The exposed granite pinnacles of Mt. Tarma rise up above the site, and on the slopes of Mt. Tarma, one can see Mihwang Temple.

In addition to Buddhist temples, the county has several old historical buildings associated with Choson period Confucianism. The Haenam Hyanggyo (County public school), in Haenam Town, was originally founded in 1398 and was moved to its present location in 1482. After being destroyed in the Hideyoshi Invasions (1592-1598), the school underwent restoration in 1673 and 1844. The main lecture hall has been designated South Cholla Province Tangible Cultural Asset No. 77.

Hagwŏn

Hahoe village

Haksul ch’ongnam (A Comprehensive Bibliography of Academic Works)

*Haksul ch’ongnam* is a bibliography of Korean studies research works, which has been published annually since 1966 by the National Academy of Sciences. The contents cover research publications from 1901 to the present-day, thereby making it a comprehensive research tool.

Haktang

Halla Mountain

Located in the middle of Cheju Island, Mt. Halla (1,950 metres) is South Korea’s highest mountain. It has been known by a number of names, including Puak, Mt. Wŏn, Mt. Čhin, Mt. Sŏn, Tumuak, Mt. Yŏngju, Mt. Pura, Hyŏlma Peak and Yŏngjanggun. In the present name, ‘han’ (which becomes ‘hal’) refers to the Milky Way, while ‘na’ (misconstrued as ‘la’) means ‘grab.’ In other words, from the mountain’s lofty peak, it seems as if one could reach up and grab the Milky Way.

Mt. Halla is actually a volcano. At the top of the mountain, there is Paengnoktam (White Deer Lake), a three-kilometre caldera which has filled with water. Beautiful in any season with its reflections of the sky, the lake is especially lovely when covered with snow. In addition, there are approximately 360 parasitic cones on the mountain. Living next to a volcano, Cheju Island residents are no strangers to natural disaster. In addition to heavy winds and occasional cyclones that threaten the island, the residents experienced two eruptions at the beginning of the eleventh century. The island’s inhabitants survived the ordeal by hiding in caves or by temporarily fleeing in boats.

The valleys of Mt. Halla are primarily found on the north and south sides of the mountain.
The streams running down the northern side tend to be straight, in contrast with the winding streams and waterfalls characteristic of the southern side. A collection of oddly-shaped rocks called the ‘Five-hundred Generals’ lie on the mountain’s southern slopes. Tourists come from far away to see scenic areas such as T’amni, Kolmōri, Hyodonch’ŏn, Suak and Tosolch’ŏn Valley and the Ch’ŏnjijŏn or Ch’ŏnjeyŏn Waterfall. The mountain also has several lava tubes such as Kuri Cave, Honggwae and Sanggwae. The latter two caves are around thirty metres long. Kuri Cave begins at the entrance to the Kwanrım Temple hiking trail. Its height and width vary from two to five metres and it is 380 metres in length.

Many writers and poets have praised Mt. Halla’s unique beauty. One of the earliest accounts was Kim Sanghon’s work Namhang ilji (Daily Accounts of a Southern Voyage). In 1601, Kim, while performing a mourning rite on the mountain, praised the mountain’s spiritual powers and picturesque scenery. In 1875, Ch’oe Ikhyŏn described a hike up the mountain in his work Hallasan gi (Record of Mt. Halla). Approximately fifteen people accompanied Ch’oe on the hike; yet, all but four turned back short of the summit. The record suggests how rugged the ascent must have been before modern hiking trails were built. Yi Kŏn, in his work Cheju p’ungt’o gi (Record on Cheju’s Environment), discusses the area’s wildlife. He states that although there were no bears, tigers and wolves on the mountain, there were cattle, horses and a surprising number of deer. With its high elevation, Mt. Halla has a great number of temperature zones. As a result, the mountain also provides a habitat for a wide variety of plants. The area is home to around 300 species of trees. Of these, 31 per cent are evergreens and 62 per cent are subtropical varieties.

With its spectacular scenery, lush valleys and lovely waterfalls, Mt. Halla is a favourite destination for Korean tourists. To meet the demand, there are five well-marked hiking routes leading up the mountain. Unfortunately, the increasing number of visitors has put a great deal of stress on the area’s delicate environment. In order to preserve the mountain’s natural surroundings, the area was designated Halla-san National Park in 1970.

**Hallym University**

Hallym University (Hallim Taehakkyo) is a private university situated in Ch’unch’ŏn in Kangwŏn Province. Founded in January 1982 as Hallym College (Hallim Taehak), it initially had the Departments of Biology; English; Social Welfare; Pre-medicine and Medicine. Kim T’agil served as the school’s first president. In the 1980s, the college expanded with the addition of numerous departments and institutes and in December 1984, the affiliated Sŏngshim Hospital was built adjacent to the campus.

In November 1987, the college received accreditation for Master’s degree courses and in November 1989, was accredited for Ph.D. courses. In 1988, Hallym became a university, composed of four colleges, with Hyŏn Sŏngjong as president. In the 1990s, the university continued to expand with the construction of new facilities, a gymnasium and a language centre with state-of-the-art computer and audio-visual facilities.

Hallym University now consists of the Colleges of Information & Electronics Engineering; Humanities; Medicine; Natural Sciences; and Social Sciences, along with the Graduate School, and the Graduate Schools of Business Administration, North-East Studies and Social Welfare. The university’s history department is known for its internationally-recognised scholars, such as Yi Kibaek and Yu Yŏngik, who have both taught there. In support of historical research, there is also a small museum on campus, with a collection of artefacts from Kangwŏn Province. Hallym also offers a foreign language program, with an international exchange student content.

*Hallim pyŏlgok* (Song of the scholars)
Haman County

Situated in the centre of South Kyŏngsang Province, Haman County is comprised of the town of Kaya and the townships of Kunbuk, Taesan, Pŏpsu, Sanin, Yŏhang, Ch’i’l’buk, Ch’i’lsŏ, Ch’i’rwŏn and Haman. The county covers an area of 416.57 square kilometres and as of 1989, had a population of 64,212. Mt. Mudung (556m) and Mt. Chaktae (648m) rise along the county’s eastern border while Mt. Sŏbok (739m), Mt. Yŏhang (744m) and Mt. Pangŏ (530m) stand in the southwest. As the site of heated battles during the Korean War, Mt. Pangŏ switched hands on about nineteen occasions.

The Nam and Naktong rivers mark the county’s northern border. In the flat areas near these rivers, farmers grow rice, the county’s major crop. Approximately 33 per cent of the county’s land is arable. Besides rice, watermelons, red peppers, garlic, spinach, cotton and sesame are grown here, while local orchards produce peaches and persimmons. In addition, there are numerous mines in the area which excavate gold, silver and copper.

The county has a number of scenic areas. Kyŏngyangdae, a giant rock overlooking the Naktong River, offers a panoramic view of the surrounding area. Situated on the east side of the Kuma Expressway, the rock is easily accessible to visitors coming from Taegu. In earlier days, one of the main routes into southeastern Korea went by here. As a result, Kyŏngyangdae is frequently mentioned in older travelogues and poetry.

During the early Three Kingdoms period, the area belonged to the Ara Kaya, one of the tribes of the Kaya federation. A number of Kaya-era tombs and fortresses have been discovered in the area. Some claim that the Mt. Sŏng Fortress in the town of Kaya marks the site of Ara Kaya’s palace, but this has yet to be confirmed.

Buddhist artefacts in the area include Koryŏ-era stone statues depicting a seated Buddha with attendants at Haman’s Taesan Village, an old Ch’ilsŏng-gak (Seven Star Pavilion) at Wŏnhyo Hermitage in Kunbuk Township and a pagoda with a lion motif at Haman’s Churi Temple. On Mt. Pangŏ, there is a relief carving of a Buddha. As the date it was carved (801) was inscribed on the rock, the work is of particular significance to the art historian. At Changch’un Temple in Ch’i’l’buk Township, there is a seated Buddha figure, a five-storey pagoda and an old Main Buddha Hall (South Kyŏngsang Province Tangible Cultural Assets No. 7, 68 and 16).

In addition to Buddhist sites, there are a number of old Confucian schools in the area, such as Ch’i’rwŏn Hyanggyo just east of the Kuma Expressway in Ch’i’rwŏn Township, Tŏgyŏn Sŏwŏn in Ch’i’rwŏn Township’s Yongjŏng Village, Kŭmch’ŏn Sŏwŏn built in 1569, Tŏgam Sŏwŏn built in Pongsŏng Village in 1634, Torim Sŏwŏn built in Taesan Township’s Taesa Village in 1672, Sŏsan Sŏwŏn built in Kunbuk Township’s Sach’ŏn Village in 1706, Songjŏng Sŏwŏn built in Sanin Township’s Songjŏng Village in 1721 and Haman Hyanggyo in Haman Township just east of Kwangjŏng Stream. Haman Hyanggyo was founded in 1392 in P’asu Village, but was moved to its present site in Pongsŏng Village in 1595. Famous pavilions in the area include Tongsanjŏng in Kaya’s Kŏmam Village, Pan’gujŏng in Taesan Township’s Changam Village, Sajjŏng in Kaya’s Sŏlgok Village, Ch’aemijŏng in Kunbuk Township’s Wŏnbuk Village and Hapkangjŏng in Taesan Township’s Changam Village. Hapkangjŏng (Uniting Rivers Pavilion) gets its present name from its location at the spot where the Naktong and Nam rivers come together. The pavilion site was used as a retreat by Cho Imdo (1585-1664), a neo-Confucian scholar and writer.

Aimed at preserving the area’s cultural heritage, a number of festivals and celebrations are held throughout the year. The Ara Cultural Festival is held in early November in the town of Kaya. The festival includes an opening ceremony, various celebrations, a sporting
competition for local residents, folk performances and games. Writing, drawing, music, and calligraphy contests are also held at this time.

**Hamel, Hendrik** (1630-1692)

Hendrik Hamel was a Dutch seaman who was shipwrecked off the coast of Cheju Island in 1653. A journal, considered to have been written by Hamel, concerning the adventures of his crewmates and himself in Korea, represents one of the first Western accounts of the country.

Hamel was born in 1630 in Gorkum and in 1650 left his native Holland for the East Indies as a seaman. He served in various capacities for the VOC (The United East Indian Company), such as gunman, before being promoted to writer and then bookkeeper. His duties as bookkeeper required him to not only keep a record of the ship’s finances, but to be responsible also for the ship’s journal. It was in this capacity that Hamel left Batavia (present Jakarta) in the sixth month of 1653, on board the merchant ship *De Sperwer* (Sparrow Hawk) of the VOC, as it set sail for Taiwan. After a stay in Taiwan, the ship then navigated to Nagasaki in Japan, but met with foul weather and ran aground off the southern coast of Cheju Island. Of the sixty-four-man crew, thirty-six survived the shipwreck. Under normal circumstances the ship would have been expected to arrive in Nagasaki by the end of the eleventh month, and as time passed, the VOC’s governors gave up all hope of recovering the vessel. In the following year the ship, crew and cargo were all officially declared lost.

The shipwrecked seamen were soon discovered by the Koreans on Cheju, and were then detained by royal command. King Hyojong (r. 1649-1659) ordered that the seamen should not be allowed to leave Cheju, and when several members of the party attempted to escape, they were punished by the authorities. In 1654, Hyojong ordered that they be brought to the mainland and then to Seoul, the capital. There, Hamel and his crewmates were ordered to serve as the king’s guard. The Dutch sailors were closely watched by the Chosŏn authorities and were denied any freedom of movement in Korea. Notwithstanding, there were various escape attempts, which resulted in some of the men losing their lives on recapture. Those remaining were exiled to Cholla Province in 1656, and eventually split up into small groups in various areas of the province. In autumn 1666 Hamel, along with seven of his comrades secretly purchased a boat and set sail for Japan, thus eventually escaping from their Korean captors after some thirteen years. In Japan, Hamel and his crewmates were interrogated by the Japanese authorities before being allowed to leave on a Dutch trading vessel. Hamel remained in Batavia for a short period before finally departing for Holland, where he arrived in late 1667. He and the other seven sailors were awarded small payments by the VOC. Hamel lived out his life in Gorkum and died, still unmarried, in the second month of 1692.

The journal attributed to Hamel was the first information on Korea to reach the West. The work was, however, recorded in Japan while Hamel and the other sailors were awaiting a Dutch ship, and was largely composed from the recollections of its writer. Hamel’s journal provides an account of the shipwrecked crew’s stay in Korea and a general description of various Chosŏn institutions, the governing structure, and of housing, etc. Hence, it is of value for its perception of seventeenth c. Korea, as seen through European eyes.

Hamel and his crewmates were not the first Europeans to arrive in Korea, as they had been preceded by nearly thirty years by another Dutchman, Jan Janse Weltevree. Weltevree had also been shipwrecked, but did not leave Korea and worked towards the improvement of armaments by imparting his knowledge of cannon-casting to Chosŏn artisans. According to the journal, Hamel and his fellow captives met Weltevree during their time in Korea, and gained much knowledge about the peninsula from him.
Hamhŭng

Hamhŭng is situated in South Hamgŭng Province. Except for Mt. Panyong (319m) in the northwest and Unju Peak (618m) and Ch'ŏnju Peak (562m) on the eastern border, the city's terrain is flat. Sŏngch'ŏn River flows through the western sector before joining Horyŏn Stream on its way to the East Sea. Most of the area's agriculture is centred around rice cultivation on the fertile Hamhŭng Plain. Although the cultivated area is limited, crop yields here are exceptionally high. Fruits such as apple, pear, grape and peach are also grown commercially in Hamhŭng.

During the Japanese occupation of Korea, an efficient transportation network was set up in Hamhŭng. In 1922, the Hamnam Railway Line was built, followed by the Hamgŭng Line in 1928 and an industrial railway linking Hamhŭng and Hŭngnam in 1933. The area's electricity supply comes from hydro-electric plants on the Pujŏn and Changjin rivers. Taking advantage of the city's transport hub, many factories have been established in the area, including the Hamhŭng Industrial Park. These plants manufacture a wide range of goods, including chemical products, workshop and farm machinery, electrical equipment, tyres, building materials, textiles, foodstuffs and articles for everyday use.

The city contains a number of important historical sites. On Mt. Panyong is Hamhŭng Fortress and at the foot of Mt. Sŏlbong lies Kwju Temple. In Kwiru-dong, there is Kyŏnggijŏn, a large wooden structure which is said to mark the birthplace of Yi Sŏnggye. Hamhŭng Pon'gung, a hall located in Sonamu-dong, was built by Yi Sŏnggye after he became King T'aegu (r. 1392-1398). Erected at the site of the king’s forbears, the hall was used for rites dedicated to the last four generations of his ancestors. Burnt down during the Hideyoshi Invasions (1592-1598), the building was restored in 1610 and then reconstructed in the late 17th c. It was extensively damaged during the Korean War, but has been gradually repaired. It is now a museum. Northwest of city hall in Panyong-dong is Hamhŭng Hyanggyo, a Confucian school built c. 1469. Modern educational institutions in the city include Chongsŏng College (originally known as Hamhŭng Medical College), Hamhŭng College of Chemical Industries and Hamhŭng Waterworks College.

Hamp’yŏng County

Situated to the west of Kwangju in South Chŏlla Province, Hamp’yŏng County is comprised of the town of Hamp’yŏng, and the townships of Nasan, Taedong, Sonbul, Shin’gwang, Ōmda, Wŏrya, Hakkyo and Haebo. The county covers an area of 387.70 square kilometres and as of 1989, had a population of 69 728. The area’s topography is characterised by plains and hills. Mt. Pulgap (516m) and Mt. Moak (348m) rise in the north; Mt. Kamak (258m) stands on the southwestern border and Kosan Peak (359m) is in the centre. With its location on the coast, Hamp’yŏng County has relatively mild weather with an average yearly temperature of 12.8°C and an annual rainfall of 1 337mm.

Approximately 77 per cent of the county’s households are engaged in agriculture, and 39 per cent of the total area is arable. Of this, 15 270 hectares is used for rice cultivation and 9 350 hectares for dry-field crops. Tobacco, sedge, peach and persimmon are also cultivated commercially. Hamp’yŏng County is a leading producer of onions. Mint (nowadays a key ingredient in motion sickness medicine); edible lotus roots and herbs for oriental medicine are among the speciality crops grown for market. More as a supplementary income, local farmers raise cattle, chickens and ducks. For the last 300 years, sedge mats have been woven in the Sasan, Wŏrya and Haebo townships.
Most of the area’s historical sites are found in the vicinity of Kisan Peak in the south and near Mt. Wŏrak (165m) in the northwest. Hamp’yŏng Park, situated at the base of Kisan Peak, contains several pavilions including Sheshimjŏng, at the southeast end of the park, and Kwandŏkjŏng. To the left of the path leading through the park, is a row of twenty-two steles commemorating war veterans and Chosŏn governors.

Buddhist sites in the area include a stone lantern at Yongch’ŏn Temple, relief carvings of Buddhas at Kosan Temple and Sagi Peak, a stupa in Hamp’yŏng Village, a standing Buddha figure in T’ap-dong and a large bronze bell at Pogwang Temple. Important temples in the area include Sŏsang Temple on Mt. Kunyu, Taegul Temple on Mt. Taegul and Kŭngnak Temple on Mt. Kambang.

A number of tongje (village rituals) are still performed in the area. Of these, one of the most important is the Yŏngsuj'e which is performed in the town of Hamp’yŏng. Held to appease the spirits of those who died by drowning, the ritual begins around sunset and continues until early next morning. At an altar in Yŏngsu Stream, prayers are offered beseeching the local water deity to prevent any future drownings. During the procedure, ritual offerings are made to the deity from a boat on Yŏngsu Stream. As the food for offering is placed on the boat, those in attendance float candles on the water as they pray for personal good fortune. Farmer’s music (nongak) is then played by a local band. Buddhist monks originally officiated at the ritual, but it is now performed by shamans.

Hamyang County

Situated in the western part of South Kyŏongsang Province, Hamyang County is comprised of the town of Hamyang and the townships of Mach’ŏn, Pyŏnggok, Paekchŏn, Sŏsang, Sŏha, Sudong, An’guk, Yurim, Chigok and Hyuch’ŏn. The Sŏback Mountain Range runs through the county and one of Korea’s best-known mountains, Mt. Chiri, rises (1 915m) is in the south. In spite of the area’s high elevations, the weather is relatively mild with a yearly average temperature of 12.6°C and an average annual rainfall of 1 178mm.

Approximately eighty per cent of the county’s residents work in the agricultural sector. Rice is the principal crop, but barley, potatoes, beans, radishes, Chinese cabbage, garlic and hot peppers are also cultivated. Poultry and pig farming operations are also found here. As a supplementary means of income, over half of the area’s households practice sericulture. In the town of Hamyang, there are silk processing mills as well as factories producing hanji (Korean paper), wooden implements and cut stone.

With Mt. Tŏgyu National Park to the north and Mt. Chiri National Park in the south, the county invites tourists to a large number of attractions. The trail through the Hanshin Valley up to Mt. Chiri’s Ch’ŏnwang Peak is particularly popular with hikers. Other scenic areas in the county include Yongch’u Waterfall and the Yongch’u Temple site in An’guk Township’s Songwŏn Village, and Sŏgye, a picturesque valley in Hamyang’s Kuryong Village. Sŏgye is famous for the oddly shaped granite pillars that overlook the valley’s clear streams. Taeun Temple stands at the valley entrance.

Since most of the county’s historical sites are clustered around the 88 Olympic Expressway, they are easily accessible to visitors. As for Buddhist relics, at the old site of Sŭngan Temple in Sudong Township, there is a three-storey pagoda (Treasure No. 294) and a seated Buddha figure made of stone (South Kyŏongsang Province Tangible Cultural Asset No. 33), and in Hamyang’s Kyosan Village, there is another seated Buddha figure (Treasure No. 376). Other artefacts include a seated Buddha figure at the Kŭngnak Temple site in Sŏsang Township’s Oksan Village, a three-storey pagoda at Kŭmdae Temple in Mach’ŏn Township, a stupa at An’guk Hermitage, a rock carving in relief (Treasure No. 375) of a standing Buddha in Tŏkchŏn Village and a three-storey pagoda at Pyŏksong Temple.
Confucian schools in the area include Hamyang Hyanggyo in Kyosan Village; Anüi Hyanggyo in Anüi Township’s Kyobok Village; Hamyang Namgye Sŏwŏn in Sudong Township’s Wŏnp’yŏng Village, and Ch’ŏnggye Sŏwŏn northwest of Mt. Yŏnhwa. Hamyang Namgye Sŏwŏn was built for Chŏng Yŏch’ang in 1552 — its structure was recently reconstructed and now serves as the county library. In Paekchŏn Township’s P’yŏngch’ŏng Village, one finds Pyŏksongjŏng. This small pavilion was originally built in honour of Kang Munp’il who resided in this area. Other pavilions in the area include Haksaru and Hamhwaru (South Kyongsang Province Tangible Cultural Assets No. 90 and 258) in Hamyang’s Unnim Village and Nongwŏlchŏng in Anüi Township’s Wŏllim Village.

Overlooking Imch’ŏn Stream in Yurim Township’s Son’gok Village, stands Hamhŏjŏng, a pavilion built in honour of Ch’oe Hanhu. When Ch’oe served as governor of the county in early Chosŏn, he was popular as a leader who urged the general populace to engage in both agriculture and scholarly studies. In Hamyang’s Sangnim Park, there is a stele in commemoration of his achievements and in 1970 another stele was erected outside of Hamhŏjŏng.

Han Ho

[Calligraphy]

Han River

From its origin in the T’aebaek Mountain Range, the Han River flows east-west through the provinces of Kangwŏn, North Ch’ungch’ŏng and Kyŏnggi, and the city of Seoul before entering the Yellow Sea near Kanghwa Island. In ancient times, there were several names for the river. In the Han-shu (History of the Former Han Dynasty), it is called Taesu; on the stele next to the tomb of Koguryŏ’s King Kwanggaet’o (r. 391-413), it is referred to as Ari-su, and in the Samguk sagi (History of the Three Kingdoms), it is called Han-su. The words ari (originally al) and han are originally Korean words referring to the great size of the river. The Han is about 514 kms. in length and is the fourth longest in Korea after the Yalu, Tuman and Naktong rivers. It has two main branches. The northern branch, known as the Puk (North) Han River, begins around Mt. Kŭmgang in Kangwŏn Province while the southern branch, known as the Nam (South) Han River, has its source at Mt. Taedŏk in Samch’ŏk. The river’s northern and southern forks meet at P’aldang Lake to the east of Seoul.

Located at the centre of the Korean peninsula, the Han River basin was home to some of the region’s early cultures. Excavations of the Han River and Nam Han River areas have revealed a large number of Palaeolithic remains. In addition, there are over one hundred and forty Neolithic sites, many of which contain geometric-design pottery. A number of earthen fortifications and tombs provide proof of the Paekche kingdom’s early occupation of the area. During greater Shilla, the Han River basin’s political importance waned due to its distance from the capital in Kyŏngju. However, the area increased its importance during Koryŏ, when the capital was moved to nearby Kaesŏng. Towards the end of Koryŏ, as a response to many foreign invasions, some claimed that the geomancy of the Han River basin made it more suitable as a place for the nation’s capital. Even so, the permanent transfer of the capital to modern-day Seoul was not effected until early Chosŏn. Yi Sŏnggye (King T’aego) who founded Chosŏn in 1392, moved his capital from Kaesŏng to Hanyang (present Seoul) in 1394.

About three-quarters of the Han River basin is mountainous terrain. The area is sparse in forest and vegetation generally and not least because of this the catchment area of the surrounding mountains drains the outflow into the river at a rapid rate. As a result, the Han sometimes overflows and the resultant flooding can be severe, especially around Ch’unch’ŏn and P’aldang Lake. During the twentieth c., the worst floods occurred in
1925, 1936, 1940, 1960, 1965, 1972 and 1984. In 1990, the Ilsan Dyke burst, causing tremendous damage to the surrounding area. In order to better harness the river's resources, Hwach'on Dam was built in Hwach'on County in 1944. This was followed by the construction of Ch'unch'on Dam, Soyang Dam and Uiam Dam on the Puk Han River, P'aldang Dam just east of Seoul and Ch'ungju Dam on the Nam Han River.

**Han Yongun (1879-1944)**

The Korean Buddhist priest Han Yongun (Manhae) lived during a turbulent period in Korean history. It was a period which had profound effects on his life and upon which he left an enduring mark through his efforts as a Buddhist reformer, social activist, and author of both novels and poetry. His celebrated collection of eighty-eight poems, *Nimūi Ch'imnuk (The Silence of the Beloved)*, firmly secured his reputation as a leading figure within modern Korean vernacular poetry. This collection of poetry continues to affect Korean readers with its vivid images and masterful display of the poetry inherent in the Korean spoken language, and it would be nearly impossible to find a schoolchild who could not recite by memory at least two of the poems.

During Han's lifetime Korea's longlasting policy of isolation came to an end as the Chosŏn dynasty (1392-1910) collapsed in the face of internal and external forces. In 1910 Japan's control was formalized through the Treaty of Annexation, and in the fifty-year period under Japan's aegis Korea was transformed from an independent, agrarian kingdom to a colonized, industrial police-state.

This era of colonial rule witnessed the growth of a variety of nationalist responses to the national situation, and in the main, the greatest threat to Japan's rule came from organized religions. The Korean Protestants, the Chŏndogyo (Religion of the Heavenly Way; a syncretic Korean religion), and the Buddhists all played important roles in attempting to regain Korea's sovereignty, as demonstrated in their cooperative effort in the March First Independence Movement of 1919.

Han came from a modest gentry family and as a child was schooled in the Chinese Classics. He early on exhibited a certain precociousness in his enjoyment of classical Chinese novels, an enjoyment which most traditional parents would have prohibited. In 1899 he left home intending to see world but was soon shocked to see that his traditional education left him ill-prepared in the modem world.

It was during this time of dismay that he went to a Buddhist monastery and began a period of reclusion and meditation. While at the monastery he learned of the world beyond Korea set his mind on going to Vladivostok and, ultimately, America. In Vladivostok, however, he was nearly killed and so went home in 1904.

In 1905 he returned to the Paektamsa Monastery, the site of his earlier retreat, and received his ordination as a monk and subsequently commenced his formal studies of Buddhist scripture and began his Sŏn (Zen) training. In 1908 he left for Japan where he was befriended by a Japanese Buddhist scholar and had the chance to see firsthand a modernized society. During these six months he studied Buddhism and Western philosophy at a Buddhist university, and he was deeply impressed by the vitality of Japanese Buddhism. This period proved to be pivotal in his intellectual maturation and the development of his Buddhist outlook.

The progressive attitude in Japanese Buddhism was precisely what he saw lacking in Korean Buddhism, and in 1910 he completed his *Chosŏn pulgyo yushinnon (The Reformation of Korean Buddhism)*, a lengthy treatise which called for widesweeping changes within Korean Buddhism and which was greatly influenced by his observations of how Japanese Buddhism had come to terms with the drastic changes of modernization.
Among his many proposals for reform, *Reformation* called for an end to the insistence that monks be celibate, and this issue, which caused an uproar in the Buddhist community, still proves to be divisive.

He spent the years between 1911-1917 trying to popularize Buddhism and serving on a variety of Buddhist councils which opposed other Korean Buddhists who had allied themselves with Japanese Buddhism. In 1917 he achieved his spiritual awakening and on March 1, 1919 launched himself into the political arena by acting as one of the thirty-three signatories of the Korean Declaration of Independence. He spent close to three years in prison for this, but upon release in 1922, he resumed his efforts towards strengthening Korean Buddhism and giving it a role in the struggle for national sovereignty. He remarried in 1933 and had a daughter one year later, and despite the difficulties on him and his family, he persevered in his activities as a Buddhist intellectual and social critic until his death at the age of sixty-six.

Although it is commonplace to think of Han as a Buddhist reformer and a political activist, it is crucial to bear in mind that these activities were, to a great degree, carried out in print and were made possible by the proliferation of print media in Korea in the early part of this century. He was a prolific essayist who wrote on topics ranging from Buddhist history and philosophy to social events outside of Korea. In essays he put forth his views on the debate over women's hair length and offered advice to students facing financial difficulties, and in tackling the many uncomfortable issues of his day, he showed an unflinching, realistic attitude. His views were certainly tempered by Buddhism, to which he often referred, but there was little dogmatism - religious or otherwise - in his social criticism. Rather, he was much the progressive, staunchly opposed to the superstitious trappings of Korean society in general and Buddhism in particular. Moreover, his views on women demonstrated his admirable tendency to apply the Buddhist doctrine of equality to criticize unjust social practices, even when such practices were accepted aspects of the Korean tradition. In this sense, his *Chosŏn tongnip ūi sŏ* (*Document on Korean Independence*) can be seen to have a political significance beyond the question of Korea's right to freedom. Submitted to the Japanese after his arrest in 1919 and published later that same year, this document began with: "Freedom is the life of all creatures and peace is the happiness of human existence. Accordingly, those without freedom...are as corpses and those who have lost peace...experience the utmost agony." While written explicitly to justify Korea's right to engage in a peaceful struggle for independence, it is suggestive that he chose to base his appeal on the importance of the individual and reason therefrom towards the political relationships between nations: just as no individual should be enslaved to another, so too no nation should be made to suffer under the yoke of another. This egalitarian aspect of his thought in regard to women, at once radical in light of tradition and rational in light of his religious philosophy, was clearly expressed in 1927 in his essay *Yŏsŏng ŭi chagak* (*The Self-awakening of Women*) which concluded: "And so I say that women's self-awakening is the basic element for attaining the goal not only of women's liberation, but moreover the liberation of the human race." In short, he believed that women have the right to self-determination, and in the context of his opening to the *Document on Korean Independence*, it seems likely that he saw the plight of traditional Korean women as symbolic of the plight of the Korean nation under Japanese colonial rule.

The likelihood of this parallel in his thought seems rather credible when we consider his novels which were marked by strong female characters attempting to determine their own destinies. He began work in this genre in 1924 with *Chugŏm* (*Death*), which was published posthumously, and between 1935 and 1939 he completed two serial novels which were published in newspapers: *Hŭkp'ung* (*The Black Wind*) and *Pangmyŏng* (*Misfortune*). During the same period he began publication of the serial novels *Huhoe* (*Remorse*) and *Chŏrhyŏl miin* (*The Iron Lady*), though neither of these were completed. Despite the prevalent critical appraisal that Han was a poor novelist compared to many of his contemporaries, his novels bring into relief many of the issues of his day ranging from
opium addiction to the conflicts between traditional morality and modern necessity. Moreover, his novels brought to the fore two practical consequences of his feminist stance: women must be allowed the opportunity for education and the opportunity to choose their own marriage partners.

In addition to his work as an essayist and novelist, he also engaged in numerous other scholarly and literary activities ranging from collecting historical documents related to important Korean Buddhist sites to recovering centuries-old Korean translations of Buddhist sutras. In 1914 he published his lengthy Pulgyo taejŏn (Buddhist Canon), which was a systematic presentation of the various Buddhist texts and philosophical concepts contained in the Tripitaka Koræana, and in 1917 he published his commentary on the Cai- gen-tan (Kor. Ch’aegiintam), a syncretic text written by the Ming Chinese scholar Hong Ying-ming which Daoist perspectives on spiritual training. In 1926 he published his commentary on the Shi-xuan-tan (Kor. Shiphyŏn tam), a collection of talks by Chang-cha (a Zen master from T’ang China), and between 1939-40 he began publishing his Korean translations of the Yumagyŏng (Vimalakirti Sutra) and the classic Chinese novel The Romance of the Three Kingdoms, though both of these went unfinished apparently due to the Japanese colonial government's increasing interference with Korean publications.

As befitted a man of his generation and background, Han was an able poet in the traditional art of Chinese verse. He also wrote traditional Korean shijo (a short poetic form defined by its rhythm) and modern Korean free-verse poems, of which he is credited as having published the first in 1918. Nevertheless, his literary reputation is based on a collection of free-verse, vernacular poetry written in 1926 when he was forty-eight. Throughout these eighty-eight poems of Nimū ch’immuk (The Silence of the Beloved), Han demonstrated his ability to adapt the rich metaphors of Chinese poetry and Buddhist thought to the Korean spoken language. In the process he created a body of poems which is at once erotic and evocative of his lifelong focus on the Buddhist concepts of all is mind and the immanent enlightenment of all beings.

The structure of the collection subtly suggests that they were written during the passage of a single night, and this suggestion is strengthened by the prevalence of images indistinctly seen by the eye, yet clearly seen by the mind's eye. The first poem of the collection begins with the parting of nim, or the beloved, and Han uses vivid language to convey his overwhelming sense of loss and to foreshadow the power of memory to instill hope even as it heightens sadness. The paradox of intangible memories as forceful presences is clearly voiced in the final stanza: "My love song, an unconquerable melody/ twines around your silence." [throughout all translations mine] This sense of separation from the beloved leading to a strengthening of love in the mind frames the collection as a whole.

The most emblematic poem of the collection is found in the middle, and in this poem, Sŏnsaūi sŏlpŏp (A Zen Master's Talk on the Great Way), Han vividly describes his attachment to the beloved. This poem self-consciously manifests the inherent paradox between the Buddhist doctrine non-attachment and the poet's own mind persistently clinging to the beloved, and as such it is worth quoting in full: "I listened to the Zen Master's lecture/ In loud rolling words/ 'Don't suffer in love's cold cuffs, break its tether and in this your heart will celebrate!'/ What dull folly not to know/ Wrapped in the coils of love is an ache/ But cutting those strands is an agony even greater than death/ In love's shackles, chains tighter wound come loose/ Escape is there/ Troubled that the threads of your love tangling me had grown weak/ I doubled mine about you." This tension between the Buddhist ideal of the transcendence of emotional ties - especially romantic love - and the Buddhist poet's firm resolve not to let go of his beloved underlies the essential difficulty in our attempts to interpret the collection.

The fact that Han was a committed patriot who had been imprisoned for his role in the March First Movement has led some scholars to speculate that the beloved from whom the
463

poet is separated is Korea. In this interpretation, then, the entire corpus of poems can be
read as a veiled description of the poet's resolve to work for independence, to reunite with
his beloved. In other interpretations the beloved is seen as a symbol of religious
enlightenment, and the collection as a whole is interpreted as a depiction of the mystical
process of the individual consciousness transcending dualistic thought. Essentially
Buddhist, this interpretation may be firmly based on the Vimalakirti Sutra in which a
layman, Vimalakirti, manifests his spiritual enlightenment through silence. Another
interpretation is, like the first, biographical, and it ventures that the beloved refers to an
actual woman with whom Han had fallen in love.

Although these three different interpretive strategies might seem mutually exclusive, most
scholars give varying degrees of support to each, and a significant body of scholarship
devoted to The Silence of the Beloved has arisen. This can be attributed to the fact that Han
never discussed these enigmatic poems and thus left to his readers the joyful task of reading
and re-reading, searching for clues in light of his Buddhist thought, his remarkable life, and
indeed, in light of the ever-changing circumstances of our own world.

Han'guk ch'onju kyohoesa (A History of the Korean Catholic Church)

Han'guk ch'onju kyohoesa is a history of the Korean Catholic Church written in 1874 by
the French Catholic Priest, C. C. Dallet. It was originally published in French under the
title of Histoire de l'Eglise de Coree, in two volumes. The complete work comprises one
thousand, one hundred and sixty-eight pages under fifteen main headings. When first
published, it provided valuable material about the heretofore unknown Choson nation.

Han'guk ch'onju kyohoesa traces the development and growth of the Korean Catholic
church and moreover, serves as a record of the men who helped establish the religion in
Korea in the face of ongoing persecution by the Choson government. The book was well-
received and was soon translated into English and Russian. Parts were translated into
Korean over time, but it was not until 1956 that the entire work was translated into modern
Korean, when it appeared in serial form in the magazine Kyonghyang chapji. Eventually,
in 1979, it was published in three-volumes by Pundo Ch'ulp'ansa.

Han'guk ch'onju kyohoesa is highly acclaimed for its role in providing a Western record of
the history of the Korean Catholic Church.

Han'guk chedosa yon'gu (A Study of the History of Social Systems in Korea)

Han'guk chedosa yon'gu is a collection of twelve studies by Kim Yongdok on the history of social systems in Korea. Ilchogak Publishers published this 409-page work in 1983.
Bibliography

**Han’guk chimyŏng yŏnhyŏkk'o** (Historical Change of Korean Place Names)

*Han’guk chimyŏng yŏnhyŏkk'o* is the work of Kwŏn Sangno. It details the historical place names of Korea. The author uses sources such as the Tongguk yŏji sŏngnam (Augmented Survey of the Geography of Korea), Samguk sagi (History of the Three Kingdoms) and Koryŏsa (History of Koryŏ) in his compilation of this encyclopaedic work. It is a valuable aid to researching the names of places in Korea, covering a period of one-thousand five-hundred years. *Han’guk chimyŏng yŏnhyŏkk'o* was published by Pulham Munhwasa in 1960.

**Han’guk Chŏngshin Munhwa Yŏn'gwŏn** (see Academy of Korean Studies)

**Han’guk chungse chŏngch’i pŏpchesa yŏn’gu** (A Study of the History of Political and Legal Systems in the Korean Middle Ages)

*Han’guk chungse chŏngch’i pŏpchesa yŏn’gu* was written by Kim Sŏngjun and published by Ilchogak in 1985. Its four-hundred and twenty-four pages are divided into thirteen studies, and cover such topics as the Ship hunyo (Ten Injunctions) by King T’aeejo (r. 918-943) of Koryŏ, the legal systems of Koryŏ and Chosŏn, and the military systems of Chosŏn.

The *Han’guk chungse chŏngch’i pŏpchesa yŏn’gu* is an exhaustive analysis of the governmental structures of both periods.

**Han’guk chungse sahoesa yŏn’gu** (A Study of the History of Korean Society in the Middle Ages)

*Han’guk chungse sahoesa yŏn’gu* is a 512-page treatise on the evolution of local administrative systems from semi-independent clan communities in the late Three Kingdoms period to more centralised and organised communities in the early Chosŏn period. This work was written by Yi Sugŏn and published by Ilchogak Publishers in 1984.

**Han’guk Haksul Chinhŭng Chaedan** (see Korea Research Foundation)

**Han’guk hyŏndae munhak non** (A Study of Modern Korean Literature)

*Han’guk hyŏndae munhak non* is a work that covers modern Korean literature written by Shin Tonguk and published by Pagyŏngsa Publishing Company in 1981. The contents of this 337 pages work include a discussion of problems in Korean literature, and inquiries into representative work such as Samdae (Three Generations) by Yŏm Sangsŏp, Muyŏngt’ap by Hyŏn Ujin, and Chujŏndo by Sŏ Chŏngju. Other topics covered include a study of literary criticism and an analysis of Western literature and literary topics.

**Han’guk hyŏndae munhaksa** (History of Modern Korean Literature)

*Han’guk hyŏndae munhaksa* is a 620-page work by Cho Yŏnhyŏn that defines Korean literature from the time of the Reforms of 1894 forward. This work contains a methodology of new literary history, describes the birth of modern Korean literature,
contains works of Ch’oe Namsŏn and Yi Kwangsu, and reviews the writers of the 1920s and 1930s. The work also contains appendixes that cover the literature of the Enlightenment period, the new schools of novels in the late Colonial period and a review of Korean literature of the first twenty years after liberation in 1945. Ilchogak Publishers issued this work in 1980.

Han’guk kich’o charyo sŏnjip (A Collection of Basic Materials for Korean Studies)

Han’guk kich’o charyo sŏnjip is a 1316-page work on which compilation began in 1987 by the Academy of Korean Studies. It is a collection of selected source materials for Korean studies with explanatory notes and annotations. This work will be in four volumes; the first two on the ancient period and the middle ages have already been published. The other two volumes are forthcoming.

Han’guk kodae sahoe yŏn’gu (Research on Ancient Society in Korea)

Han’guk kodae sahoe yŏn’gu is a collection of studies that deal with the history of the ancient periods in Korea. There are three main sections in this work: first, the formation of the Three Kingdoms; second, rise and fall of the ruling political structures of Koguryŏ and Shilla; third, ancient society of Korea. This 514-page work was written by Kim Ch’ŏlchun and published by Chishik Sanopsa Publishers in 1977.

Han’guk kodaesa ŭi shin yŏn’gu (A New Study of the Ancient History of Korea)

Han’guk kodaesa ŭi shin yŏn’gu is a re-examination of various cultural, social and philosophical issues reflected in the ruling systems, the military, and other institutions of early Korea up until the Greater Shilla period. This work in 492 pages was written by Shin Hyŏngshik and published by Ilchogak Publishers in 1984.

Han’guk kodaesa yŏn’gu (Study of the Ancient History of Korea)

Han’guk kodaesa yŏn’gu is a comprehensive collection of studies on ancient Korean history. It was written by Yi Pyŏngdo and published by Pagyŏngsa Publishing Company in 1987 in 814 pages.

Han’guk kogohak kaesŏl (An Introduction to the Archaeology of Korea)

Han’guk kogohak kaesŏl is an introduction to archaeological studies in Korea written by Kim Wonyong. This 294-page work was published by Il Ji Sa Publishers in 1986. The larger sections detail the results of archaeological excavations, many of which were directed by the author, on sites of remains from the Palaeolithic, Neolithic, Bronze and early Iron Ages. In addition there are also historical sites from the Lolang Colonies, Three Kingdoms and the Greater Shilla periods covered in this work.

Han’guk kojŏn munhaksasa (The History of Korean Classical Literature)

Han’guk kojŏn munhaksasa is an introductory study into the classical literature of Korea and it also compares this with literature of similar periods in China and Japan. Classical literature, including those works in Chinese characters, from the Three Kingdoms, Greater Shilla, Koryŏ and Chosŏn periods are all covered in this work of 452-pages. It was written by Kim Chunyŏng and published by Hyung-Seul Publishing Company in 1982.

Han’guk kŏnch’uk yangshing non (Styles and Structures of Korean Architecture)
Han’guk kǒnch’uk yangshing non is a 450-page work written by Chǒng In’guk and published by Iljisa Publishers in 1974. This work covers a wide spectrum of architectural styles and structures in traditional Korean society. There are also discussions of the originality and special features inherent in Korean architecture.

Han’guk kubi munhak taegye (A Grand Collection of Korean Oral Literature)

Han’guk kubi munhak taegye is an eighty-five volume collection of oral literature that was published by The Academy of Korean Studies (Han’guk Chǒngshin Munhwasa Yǒn’gwǒn) from 1980 to 1988. This vast collection includes mostly folktale stories although a great number of shaman songs (muga) are also included. Fieldwork for this project took place from 1978 to 1986. The work consists of eighty-two volumes of transcribed text and three volumes of indexes, and the works included are categorised by which region of Korea they were recorded in. All regions in South Korea are included in this collection.

Han’guk Kukche Kyoryu Chaedan (see Korea Foundation)

Han’guk kündae pyŏnyŏk munhaksasa yǒn’gu (A History of Modern Korean Literature in Translation)

Han’guk kündae pŏnyŏk munhaksasa yǒn’gu is a 1,050-page work written by Kim Pyŏngch’ol and published by Eul Yoo Publishing Company in 1975. This work covers the major translation efforts in Korean literature from the time of the Reforms of 1894 until the outbreak of the Korean War in 1950. This period was marked by heavy influence from Western literary sources. The history of translation in Korean literature is covered in two major divisions; the first covers 1895-1917 and is entitled ‘Preparatory Period of Translation’. The second is from 1918-1925 and is entitled ‘Awakening Period of Literature in Translation.’

Han’guk Manju kwan’gyesa ui yǒn’gu (A Study of the Historical Relations of the Korean and Manchu Peoples)

Han’guk Manju kwan’gyesa ui yǒn’gu is a 274-page study of the historical relationship between the Korean and Manchu states. Its author is Yi Inyŏng and the work was published as a part of Han’guk munhwasa ch’ongsa (The Complete History of Korean Civilisation) by Eul Yoo Publishing Company in 1954. The preface is by Son Chint’ae and there are seven chapters which cover the various phases of relations between the Manchu and Korean peoples, from early to late Chosŏn. The impact of the establishment of the Six Garrisons (yukchin) along the Yalu River during the reign of King Sejong (r. 1418-1450) is examined, as is the northern emigration policy of King Sejo (r. 1455-1468). Each brought Chosŏn into conflict with the Manchu people, which eventually resulted in the Manchu invasions of the early seventeenth century. Han’guk Manju kwan’gyesa ui yǒn’gu is a notable work, not only for its excellent scholarship, but also as the first post-liberation work that examined the historic relationship of the Manchu and Korean peoples.

Han’guk minjok munhwasa taebaekkwasa sajŏn (The Encyclopedia of Korean Culture)

Han’guk minjok munhwasa taebaekkwasa sajŏn is a twenty-seventy volume (24 795 pages) work published by The Academy of Korean Studies between 1988 and 1992. The encyclopaedia covers all aspects of Korean society in its sixty-five thousand entries and forty-thousand photographs and illustrations. Its compilation took seven years, beginning in 1980 and concluding in 1987, with contributions representing the scholarship of over four-
thousand specialists. Entries on various aspects of Korean society and culture are arranged alphabetically in the first twenty-five volumes of the work, while volume twenty-six contains a detailed chronological table of Korean history along with other tables and maps. The twenty-seventh volume contains an extensive index. Han'guk minjok munhwa taebaekkwa sajōn is highly valued by scholars and students for its comprehensive coverage of Korean culture and history, and it stands as the most inclusive encyclopaedic work on Korea.

**Han'guk minsok chonghap chosa pogosō (Folklore in Korea: A Series of Reports)**

*Han'guk minsok chonghap chosa pogosō (Folklore in Korea: A Series of Reports)* is an ongoing twenty-two volume series that covers various aspects of folklore across Korea. The first volume in this series was published in 1968, and the latest in 1922. In addition there are plans for future publications. The earlier volumes of this series contained a full survey on the folk customs in each province. The later volumes contain a nationwide survey of one particular aspect of folklore such as food-implements, geomancy and the like. This work is being done under the auspices of the Office of Cultural Properties a branch of Ministry of Culture.

**Han'guk minsok taegwan** (An Overview of Korean Folklore)

*Han'guk minsok taegwan* is a six volume study of Korean folklore that was published in 1980 by the Korean Cultural Research Center at Korea University. This work is divided into twelve categories, which include marriage, funeral and ancestor worship methods, daily life, clothing, food, folk beliefs, religions, seasonal customs, folk games, folk arts and oral literature.

**Han'guk minyo chip** (A Collection of Korean Folk songs)

*Han'guk minyo chip* (A Collection of Korean Folk songs) is a five volume collection of Korean folk songs compiled by Im Tonggwôn. This work contains a total of 7,183 folk songs, 3,685 children's songs and 267 old songs. This work only contains the lyrics to these works. Chipmundang published this collection in 1982.

**Han’guk minyo sa (The History of Korean Folk Songs)**

*Han'guk minyo chip* contains a historical survey of the development of the Korean folk song. This 282 page books was compiled and written by Im Tonggwôn and published by the Chimmundang Publishing Company published in 1981. It includes 1,945 pieces of data. The contents of this work include a review of the history of folk songs, the meaning of folk songs, and a study of the history of folk songs in the context of Korean literature. In addition, this work records songs from the period before and during the Three Kingdoms, from the Chosŏn period and those of the present time. A bibliography of Korean folk songs is attached to this work as an appendix.

**Han’guk muga chip** (Korean Shaman Song Collection)

*Han’guk muga chip* is a four-volume collection of shaman songs (*muga*) compiled by Kim T’aegon. This comprehensive collection includes explanatory comments by the author, his recording methodology and data concerning his subjects. It includes shaman songs from all Korean provinces and is the most extensive work of its kind.

**Han’guk munhaksa** (History of Korean Literature)
Han‘guk munhaksasa is a 503-page work written by Chang Töksun and published by Dongwha Moonwha Sa in 1982. The contents of this work contain a methodology for historical study of Korean literature, legendary literature, ancient songs, hyangga, Koryŏ period literature, Chosŏn period literature and modern literature. In this work the history of Korean literature is divided into the four periods of ancient times to Shilla, Koryŏ, Chosŏn, and the late Chosŏn period until 1945. The author discusses the advent of literature in Chinese characters, hyangga, kasa and shijo literary forms. In addition han‘gul literature is also discussed.

Han‘guk munhak sa (History of Korean Literature)

Han‘guk munhak sa is a work that traces the development of Korean literature to the end of the Colonial period in 1945. This work classifies Korean literature into eleven periods that are characterised by the literary activities that were present at these times instead of the traditional historical divisions based upon the kingdom. According to this work, Korean literature was formed during the Greater Shilla period but not further developed during the subsequent Koryŏ period. However, after the advent of han‘gul (the Korean script), Korean literature was reformed. This 604-page work was written by Cho Yunje and published by Tamgudang in 1985.

Han‘guk munhak sa (A History of Korean Literature)

Han‘guk munhak sa is a 486-page work co-authored by Kim Yunshik and Kim Hyŏn. Minŭmsa published this work in 1973. It is divided into sections concerning criticism of methodology, the growth of modern consciousness, the Enlightenment period, the period of the growth of nationalism, discovery of the individual in literary works and national reconstruction. This work is notable in that it explores many of the causes behind the growth of a modern and nationalistic consciousness such as the collapse of the social system of the Chosŏn period, the extreme Korean poverty under the Japanese colonial government and the influence of Western ideologies in Korea. In addition this treatise covers the works of such literary giants as Ch’oe Namson and Yi Kwangsu whose works and ideals had a lasting impact on the development of modern Korean literature.

Han‘guk munhak t‘ongsas (A Complete History of Korean Literature)

Han‘guk munhak t‘ongsas is a five-volume comprehensive history of Korean literature from the time of the ancient states until liberation in 1945. The data in this collection is based upon accumulated field research and provides an exhaustive examination of the major trends in the history of Korean literature and an explanation for these trends. Written by Cho Tongil and published by Chishik Sanŏp Sa Publication Company it has been updated and was re-issued in a second edition in 1989.

Han‘guk munhwa sa taegyes (Korean Cultural History)

Han‘guk Munhwa Yesul Chinhŭngwŏn (see The Korean Culture and Arts)
Han’guk munhwa sa yŏn’gu non’go (Research in the Cultural History of Korea)

Han’guk munhwa sa yŏn’gu non’go is a 368-page work by Yi Sangbaek that is composed of three papers in which the author discusses the ramifications of the anti-Buddhism movement in the waning years of the Koryŏ Kingdom and the early years of Chosŏn, and the subsequent transition to Confucianism. It was published by the Eul Yoo Publishing Company in 1947.

Han’guk nonjŏ haeje (Annotated Bibliography of Works in Korean Studies)

Han’guk nonjŏ haeje is a six-volume annotated bibliography compiled by The Korean Cultural Research Center (Minjok Munhwa Yŏnguso) at Korea University. It was published by the Asian Cultural Press published in 1972. The first volume is devoted to language and literature, the second to history, and the third to political science, legal studies and economics. The fourth volume covers sociology, folklore studies, arts, religious studies and geography, while the fifth volume is devoted to the natural sciences and the sixth covers medical sciences and pharmaceutical studies.

Han’guk pokshik sa yŏn’gu (A Study of the History of Korean Costume)

Han’guk pokshik sa yŏn’gu is a historical examination of Korean dress written by Kim Tonguk. The Asian Cultural Press (Asea Munhwa Sa) published this 584-page work in 1980. It is divided into sections on the dress of the early Chosŏn period, late Shilla period, of women’s dress in the Chosŏn period and an analysis of the headgear system of the Chosŏn period among other topics.

Han’guk Pulgyo Pŏphwa-jong

Han’guk Pulgyo Pŏphwa-jong is a Korean Buddhist order founded by Kim Unun (styled Hyesŏn). Its origin can be traced to 1939, when Kim established a Buddhist mission in Seoul’s Sungin-dong. This was followed by the construction of Pŏphwa Temple in Seoul’s Samsŏn-dong in 1941 and the official founding of the order in 1946. In March 1960, the order split three-ways into the sects of, Taehan Pulgyo Pŏphwa-jong; Taehan Pulgyo Purip-chong; and Taehan Pulgyo Ilsung-jong. The order regards the Lotus Sutra (Kor. Myŏbŏp yŏnhwa kyŏng) as its basic text and pays homage to Sakyamuni Buddha. At the end of the 1980s, the Han’guk Pulgyo Pŏphwa-jong had 60 temples, 82 monks and over 175,000 followers.

Han’guk Pulgyo T’aego-jong

The T’aego Order (Han’guk Pulgyo T’aego-jong) is, after the Chogye Order, the second largest Buddhist sect in Korea. Although the order traces its roots back through the Korean Sŏn tradition to the historical Buddha, the modern T’aego Order was born out of factional disputes that plagued Korean Buddhism following the country’s liberation in 1945. From 1954 to 1962, confrontation persisted between those monks who believed that the Buddhist monastic order must be strictly celibate and those who advocated a clergy entitled to marry. In March 1962, those advocating celibacy founded the Chogye Order. Eight years later, on 15 January 1970, those who would allow monks to marry established the T’aego Order with Pak Taeryun as its Grand Patriarch (chong-jong).

The T’aego Order reveres Pou (styled T’aego, 1301-1382) as its leading Korean figure and regards the Diamond Sutra (Kor. Kŭmgang kyŏng) and the Avatamsaka Sutra (Kor. Hwaŏm kyŏng) as its most authoritative scriptures. The order’s main administrative centre
is T'aego Temple in Sŏngbuk-dong in Seoul. As a sect with a married clergy, the T'aego Order promotes itself as a form of Buddhism more applicable to modern-day circumstances. At the end of the 1980s, the order had over 4,000,000 members, 2,455 temples and 4,708 monks. Important temples of the order include, Pongwŏn Temple in Pongwŏn-dong in Seoul, and the ancient Sŏn'am Temple in Sunch'ŏn in South Cholla Province.

Han'guk sahoe sa yŏn'gu (Research in the History of Korean Society)

Han'guk sahoe sa yŏn'gu is a work written by Yi T'aejin and published by Chishik Sanŏp Sa in 1983. This book is a collection of studies on agricultural techniques and rural communities in Korea.

Han'guk sosŏl ūi iron (Theoretical Approach to the Korean Novel)

Han'guk sosŏl ūi iron is a work that establishes a systematisation of the history of Korean literary thought. The work contains commentary on the tradition of basic principles and new theoretical directions in Korean literature along with discussions on the theory of the ego and its role in the history of the Korean novel. This work also reviews the birth of the novel, period novels and the structure of heroic novels. This 476-page work was written by Cho Tongil and published by Chishik Sanŏp Sa Publishing Company in 1985.

Han'guk t'ongs'a (A Complete History of Korea)

Han'guk t'ongs'a is a seven volume work that covers Korean history from ancient times until 1910. It was compiled by The Chindan Society and published by Eul Yoo Publishing Company Ltd. The first volume in this set covers ancient Korean history and the second the middle ages of Korea. Yi Pyŏngdo wrote both of these volumes. The third volume covers the early pre-modern age and the fourth the late pre-modern stage, and these were written by Yi Sangbaek. The fifth volume details the early modern period and the sixth the modern period. These last two volumes were both written by Yi Sŏn'gŭn. The seventh volume is a chronological table.

Han'guk tongnip undong chi hyŏlsa

Han'guk tongnip undong chi hyŏlsa is a history of the Korean independence movement written by Pak Unshik in 1920. The 326-page work, penned in Chinese characters, was published in Shanghai by Yushinsa (Weixinsh). It provides extensive coverage of the situation in Korea from the time of the opening of the seaports in 1882 to the loss of national independence. It concludes with an examination of the First of March 1919 Independence Movement. The author explains the events that led to the loss of national sovereignty at the end of Chosŏn and during the Great Han Empire, and further probes into the prevailing situation during the colonial period which saw the rise of the independence movement. The an'guk tongnip undong chi hyŏlsa is an extremely valuable source for understanding the events that surrounded the independence movement.

Han'guk tongnip undong sa (A History of the Korean Independence Movement)

Han'guk tongnip undong sa is a work that presents the history of the independence movement in Korea in a straightforward and systematic manner. It was compiled under the auspices of the National History Compilation Committee (Kuksa P'yŏnch'an Wiwŏnhoe). between 1965 and 1969, with one volume being published annually.

Volume One covers the period 1904 to 1910 - during which Korea lost its national sovereignty. Volume two is concerned with the period to the 1919 Independence Movement, while Volume Three analyses the period to the 1931 Manchurian Incident.
Volume four deals with the period to the outbreak of the Sino-Japanese War in 1937, and Volume Five covers the period until Korea’s liberation in 1945.

Han’guk tongnip undongsa provides a comprehensive examination of the period in which Korea lost her national independence, and the quarter-century that followed, until the end of World War II. This extensive and comprehensive work provides an excellent aid to the researcher in this field.

Han’guk tosŏ haeje (Annotated Bibliography of Korean Books and Manuscripts)

Han’guk tosŏ haeje is an annotated bibliography of important Korean books and manuscripts published before 1910. This work was compiled by about eighty scholars over the course of nine years, and was published under the auspices of The Korean Cultural Research Centre (Minjok Munhwa Yŏnguso) at Korea University. It contains over 29,000 entries concerning materials written before 1910, including undated old and modern period novels. The data in this work are arranged in Korean alphabetical order.

Han’guk ūi min sok (Folklore in Korea)

Han’guk ūi min sok is a series of colour slides that is divided into seven areas of Korean folklore. This collection includes topics such as rites and folk games, clothing, housing, social systems, folk beliefs and folk crafts among other subjects. There is also an accompanying set of explanatory texts. The collection was compiled by the Onyang Museum of Folklore.

Han’guk ūi myŏngjŏ (The Classics of Korea)

Han’guk ūi myŏngjŏ is a three-volume collection of modern Korean translations of classical works that were highly influential at the time in which they were written and still of great relevance today. These works were selected by hundreds of scholars and specialists in various fields. The first volume contains literary works, the second works on philosophy, religion, politics, economics and the military arts, and the third volume features works on history, geography, science and technology and others. At the end of each volume are biographies of the author and the translator of the works, and there is also a bibliography of related works. Pak Chŏngchŏng headed the compilation effort for this work, and it was published by Hyonom Publishing Company in 1978.

Han’guk ūi p’ansori (P’ansori of Korea)

Han’guk ūi p’ansori is a 468-page work that introduces the literary genre of p’ansori (one-man dramatic singing). This work was written by Chŏng Pyŏnguk and published by Chimmundang Publishers in 1981. It is divided into four chapters and twenty main sections that cover topics ranging from an introduction to p’ansori, a discussion on the qualities of this art, how to perform p’ansori, and biographies of the eighteen great singers of this art. Also included are the texts of the five extant p’ansori: Ch’unhyangga (Song of Ch’unhyang), Shimch’ŏngga (Song of Shimch’ŏng), Hŭngbuga (Song of Hŭngbu), Sugungga (Song of the Underwater Palace) and Chŏkpyŏkka (Song of the Red Cliff).

Han’guk ūi susukkekki (Korean Riddles) [Literature]

Han’guk ūihaksa (A History of Korean Medicine)

Han’guk ūihaksa is an examination of the history of the science of medicine in Korea written by Kim Tujong. The first volume, a detailed examination of medicine in medieval
Korea, was published in 1954 by Chōngūmsa. In 1966 the second volume, covering the modern era, was published by T'angudang. The author provides detailed coverage of the history of Korean medicine from early times to the systems in place at the time of the work’s publication. Han'guk ühaksa is a particularly valuable work for the study of the history of medicine in traditional Korean society as it includes comprehensive analysis of historical documents.

Han'guk ümak yŏn'gu (A Study of Korean Music)

Han'guk ümak yŏn'gu is a collection of twenty-two articles written by Yi Hyegu. This 461-page work was published by the Kungmin Umak Yŏn'guhoe in 1957. It was the first of its kind in Korea and includes the author’s Ph.D. dissertation and comparative studies of Korean music with that of neighbouring countries.

Han'guk ümaksa (History of Korean Music)

Han'guk ümaksa is a history of traditional Korean music written by Chang Sahun. This work systematically describes the history of Korean music in eight chapters and also includes a chronology and photographs of traditional Korean instruments. The second half includes a reproduction of the Akhak kwebom (Guide to the Study of Music), which was a music theory book of the Choson period. This 538-page work was published by Chōngūmsa Publishing Company in 1976.

Han'guk yŏn'gŭksa (The History of Korean Drama)

Han'guk yŏn'gŭksa is a 374-page work written by Yi Tuhyŏn and published by Hagyŏn Sa Publishers in 1987. This book covers Korean drama from ancient times to 1945. It is divided into six chapters, which introduce Korea drama, cover the drama of the traditional periods and detail the development of modern drama. This work also examines traditional forms of Korean drama such as t'ālch'um (masked-dance drama) and kkotkugakshī (puppet play).

Han'guksa (History of Korea)

Han'guksa is a twenty-five volume collection compiled by the Korean History Compilation Committee (Kuksa P'yŏn'ch'an Wiwŏnhoe) in 1984. This work was published by T'angudang Publishers. The collection covers Korean history from the prehistoric periods until the 1930s, and features articles written by many different scholars. The first twenty-two volumes contain articles about various historical events, while the twenty-third volume is a general introduction, the twenty-fourth an index and the twenty-fifth carries a list of articles contained in the work.

Han'gŭl (see Language, Korean)

Han'gŭl Hakhoe (see Korean Language Society)

Han'gyŏng chiryak (Summary of Han'gyŏng)

Han'gyŏng chiryak is a description of the capital of Chosŏn, Han’gyŏng (present-day Seoul), which was compiled during the reign of King Sunjo (r. 1801-1834). The compiler is thought to have been Yu Ponye, but this has never been confirmed. The hand-written work consists of two fascicles in two books.

Han’gyŏng chiryak contains descriptions of many of the governmental structures in the
capital. Volume One includes such topics as astronomy; castle walls; gardens; government offices; graves; history; royal palaces; scenic locales; shrines, as well as other entries. Volume Two is an account of the government offices located around the palaces; bridges; historical locations; natural features such as mountains and rivers; post stations and other items.

The work is of value to researchers and others interested in the features of the Chosŏn capital, and it provides a comprehensive analysis. In 1956, the only extant copy of the original work was copied by the Committee for the Compilation of Seoul City History (Sŏulshisa P’yŏnch’an Wiwŏnhoe).

Han-Chung kwan’gyesa yŏn’gu (A Study of the History of Sino-Korean Relations)

Han-Chung kwan’gyesa yŏn’gu is a study of Korean-Chinese relations written by Chŏn Haejong and published by Ilichogak in 1970. This 268-page work was compiled over a ten year period (1959-1968) and includes a series of ten papers which examine the constantly-changing relationship of China and Korea. Chŏn is concerned with the historical relationship between the earliest Korean states and their Chinese counterparts, and continues his research through Chosŏn and the bilateral relationship existing between the two nations. Han-Chung kwan’gyesa yŏn’gu is a valuable source for the study of historical Chinese-Korean relations.

Hanam

Hanam is situated to the east of Seoul in Kyŏnggi Province. Mt. Kŏmdan (620m) rises to the east of the city while Ch’ŏngnyang (480m) stands in the southwest. The Han River flows past the city’s northern border. Until recently, rice was cultivated in the low areas of the city and along the Han River. However, the area’s rapid urbanisation has led to sharp reductions in farmland. Taking advantage of the city’s proximity to Seoul and the Han River, a large number of industries have been set up here, mostly producing textiles or chemical products for export.

The city’s tourist industry is centred around P’aldang Resort on the Han River, Namhan Fortress to the south and the Tongsŏul and Namsŏngdae country clubs. There are a number of important historical relics in the area. In Ch’un’gung-dong, there are five-storey and three-storey pagodas (Treasures No. 12 and 13). In Kyosan-dong, there is a relief carving of Bhaisajya-guru (the Medicine Buddha, Treasure No. 981, and in Kyosan-dong, one finds Kwangju Hyanggyo (Kyŏnggi Province Cultural Site No. 13).

In 1962, the Canaan Farmers’ School was founded here by Kim Yonggi, a leader of the independence movement during the Japanese occupation. During the school’s four-day program, students undergo an intensive course to instill the values of hard work and frugality. In 1973, another branch of the school was opened in Wŏnju. Approximately half a million people from all walks of life have undergone training at the two schools.

A Handbook of Korea

A Handbook of Korea is a general introduction to Korea for non-specialists interested in various aspects of Korea. This 592-page work has been published numerous times, with the most recent edition being issued in 1993, by the Korean Overseas Information Service. It is largely divided into twenty-two chapters, which cover such topics as the land, the people and language, history, religion and philosophy, customs, culture, system of government, foreign relations, unification policy, national defense, finance, economy, industry, agriculture, transportation and communication, science and technology, education, social development and lifestyles, mass communication, sports, and tourism. The writing style employed in this handbook is quite straightforward and designed for the general
reader. Moreover, there are a large number of charts, photos and graphs that enable comparative ease in comprehension.

Given the wide array of topics covered in this book and the self-professed intent of providing a useful guide to Korea for students, businessmen and tourists, the work is presented admirably. Moreover, many of the statistics that the work provides are useful to even those whose interest in Korea is more in-depth than the casual reader. The primary value of the work is, however, as a general handbook on Korea and her institutions for the general, non-academic reader.

Hangnul

Hangnul (1888-1966), styled Hyobong, was born in Yangdŏk in South P’yŏngan Province as Yi Ch’’anhyŏng. In 1913, after graduating from Japan’s Waseda University, he returned to Korea where he worked as a judge in the Seoul and Hamhŭng district courts, and then in a P’yŏngyang review court. In 1923, he felt such remorse after sentencing a defendant to death that he left his job and family and set off wandering the country engaged in menial labour jobs or working as a taffy vendor.

In 1925, he went to Shin’gye Temple on Mt. Kŭmgang where he received the five precepts from Im Sŏktu. Having become a monk at the late age of thirty-eight, he devoted himself to intense meditation in an attempt to gain enlightenment. In the following years, he spent retreat seasons at various temples throughout the country, visiting famous masters such as Suwŏl, but he was still unable to attain awakening. Deciding that he would have to achieve realisation through his own efforts, he returned to Mt. Kŭmgang where he engaged in intense meditation practice during which he would not even lie down to sleep. In 1930, he built a one-room hut behind Pŏpki Hermitage, and after shutting himself inside, swore that he would not come out until he achieved realisation. Eating just one meal a day, he practiced intense meditation until he finally achieved awakening in the summer of 1931.

In 1932, he went to Yujŏm Temple in Seoul where he received full ordination and the Bodhisattva Precepts. In 1936, he received formal recognition (in’ga) of his enlightenment from Hanam and Man’gong, two of the most respected Korean Zen masters of the period. He then went to Songgwang Temple’s Samil Hermitage, where he spent the next decade serving as a meditation instructor. After Haein Temple was expanded into a major training monastery in 1947, he was nominated to the prestigious position of the monastery’s resident meditation master (pangjang). During the confusing years of the Korean War, he resided at various temples in the south of the peninsula. When the war finally ended, he was active in leading the restoration of Korean Buddhism. In 1962, after the married monks (aech’ōsong) succeeded from the Chogye Order, he became the new order’s first Chongjong (Supreme Patriarch). For a number of years, he resided at Songgwang Temple where he instructed a number of famous disciples including Kusan and the popular writer, Pŏpchŏng. He died at P’yŏch’ung Temple in Miryang. Hyobong is best remembered for his strict teaching style and his meticulous observance of the monastic precepts. In 1973, Kusan and Pŏpchŏng published a compilation of Hyobong’s writings known as Hyobong ḍorok.

Hanil Bank [Banks]

Hanin Aeguktan (Korean Patriotic Corps) [History of Korea]

Hanji (see Paper, hand-made)
**Hanjung mannok** (A Record of Sorrow)

_Hanjung mannok_ or _Hanjung nok_ (A Record of Sorrow, 1795-1805) is the memoir of Lady Hong of Hyegyong Palace (1735-1815) who was the wife of Crown Prince Sado (1735-1762), the mother of King Chongjo (r. 1776-1800) and the grandmother of King Sunjo (r. 1800-1834). In this memoir the author, Lady Hong (1735-1815) tells the tragic tale of her life at the Choson court. It is one of the few works written by a woman and in the Korean alphabet, *han'gul*, about court life. The memoir is written in the elegant court language of the Choson dynasty, which is rarely found in the prose of male writers.

Lady Hong describes her experiences with the controlled emotion and Confucian compassion which permeates the whole of her life and work. In her lifetime, Lady Hong was never Queen of Choson, or even Queen Consort. Her husband, Crown Prince Sado, was gruesomely put to death by his father in 1762.

Lady Hong was born into an impoverished *yangban* family in 1735, and at the age of eight entered the royal court as the bride chosen for the crown prince. There is a particularly poignant and entrancing part of the memoir, portraying King Yongjo's affection for the young girl and (at times) his goodwill towards her parents, while throughout neglecting the Crown Prince and often maligning and scolding him in public. Even in these early stages there is an undertone of extreme tension and concealed violence. Lady Hong first noticed there was something odd about her husband at the age of ten, when he seemed to take an extraordinarily long time with his morning ablutions. As the memoir unfolds, it reveals the prince's increasing mental instability, which ultimately took bizarre and even murderous forms. Lady Hong herself was spared when the Crown Prince was put to death, and her son by Sado later succeeded to the throne as King Chongjo (r. 1776-1800). She outlived her son; and it was mainly to instruct her grandson, the young King Sunjo (r. 1800-1834) in what actually happened, that, in the twilight of her life, she wrote this memoir. Particularly, she sought to divert the blame away from her own family, which had been unjustly implicated in the tragedy.

_Hanjung nok_ is an account of the tragic relationship between the king and the crown prince, father and son. After 1776, all mention of the Imo incident was expunged from the Diary of the Royal Secretariat after 1776, when Lady Hong's son Chongjo succeeded to the throne as King Chongjo (r. 1776-1800). She outlived her son; and it was mainly to instruct her grandson, the young King Sunjo (r. 1800-1834) in what actually happened, that, in the twilight of her life, she wrote this memoir. Particularly, she sought to divert the blame away from her own family, which had been unjustly implicated in the tragedy.

Begun in 1798, when Lady Hong was in her sixtieth year, _Hanjung nok_ was completed in six separate sections according to the manuscripts of the Ilsa and Karam Collections. The Ilsa Collection however divides the manuscript into four chapters, one and three being subdivided into two parts. The Karam Collections has six chapters. Chapter one is a description of Lady Hong's early life, which forms a necessary background for her narrative. Chapter two and three describe the Imo Incident.

**Bibliography**

**Hankook ilbo**

The _Hankook ilbo_ (Han'guk ilbo) is a national daily newspaper published in Seoul. It derived from the _T'aeyang shinmu_ newspaper, and under the direction of Chang Kiyong
was renamed the *Hankook ilbo*, with its first issue on 9 June 1954. At the outset, Chang handled publishing, editorial and even printing duties, and was assisted by editors O Chongshik and Chông Hongjin. The first issues were of only a few pages, but these had increased to twelve pages in the third year of publication. In 1957, the *Hankook ilbo* established the Korean Broadcasting Stock Company (Taehan Pangsong Chushik Hoesa), with its broadcasting station HLKZ-TV.

The *Hankook ilbo* strove to report in an apolitical and unbiased manner, and this led to many conflicts with the Park Chung Hee (Pak Chônghŭi) government. In a dramatic change of direction, Chang Kiyŏng founded a political party (Republican Party) in opposition, his newspaper was openly critical of Park’s government in November 1962. Chang, together with the editor-in-chief Hong Yusŏn and the political-bureau chief Kim Chahwan, were imprisoned for three days. In addition to its political activities, the newspaper also sponsored nationwide efforts to reunite separated families in the 1960s and 1970s. Other social issues in which the *Hankook ilbo* was in the vanguard, included the creation of ‘green zones’ in Seoul, which saw the planting of one million saplings along the banks of the Han River in 1979; and the establishment of a cultural centre in 1981 to foster continuing (lifelong) education for the people.

Where technology is concerned, the *Hankook ilbo* has been at the fore of the Korean newspaper industry in several respects. In July 1975, it was the first Korean newspaper to print its editions in four colours, and in late 1979, the first to perfect a computerised han‘gŭl language printing press. In 1983 the newspaper began to use a larger and clearer font that made for easier reading of its columns. More recently, other innovations have been developed through state-of-the-art printing and editing techniques, and these have established the *Hankook ilbo* as an industry leader in Korea.

The *Hankook ilbo* also encourages new literary talent, by offering prizes in the various genres of literature. It also sponsors a wide range of activities, such as national beauty pageants, concerts, marathon running and other sporting events which encourage the Korean people to expand their interests and lead more interesting lives.

**Hankuk University of Foreign Studies**

Hankuk University of Foreign Studies (Han’guk Oegugŏ Taehakkyo) is a private educational institution situated in Imun-dong in Seoul. Founded as Hankuk College of Foreign Studies in January 1954 by Kim Hungbae, the school initially consisted of five departments that taught English, French, Chinese, German and Russian. A Spanish department was added a year later. The college moved to its present location in Tongdaemun ward in 1957. During Korea’s rapid economic development in the 1960s, its role assumed increasing urgency as more foreign language graduates were required, to meet the needs of Korea’s export-oriented economy. In 1979, a night school was established and a branch opened in Yongin in Kyŏnggi Province. By 1980, the college had University affiliation, with Kim Tongsŏn as its first president.

Today, the university consists of twelve colleges and seven graduate schools. At the Seoul campus, are the Colleges of Business & Economics; Education; Law; Occidental Language; Oriental Language; and Social Science; the Graduate School; and the Graduate Schools of Education; Global Business; Interpretation and Translation; International Area Studies; Management and Information; and Policy Science. The Yongin campus contains the Colleges of Asian and African Studies; Economics and Business; European and American Studies; Humanities; Information and Industrial Engineering; and Natural Science.

**Hankyoreh shinmun**

The *Hankyoreh shinmun* (Han’gyŏre shinmun) is a daily general newspaper that is
published in Seoul. The first issue of the paper was on May 15, 1988. The newspaper was formed when a group of reporters who had been dismissed from their posts at the Chosôn ilbo and Dong-A ilbo (Tonga ilbo) newspapers came together to form a paper to carry on the struggle against the establishment. Among those who helped create the paper was the former editor-in-chief of the Dong-A ilbo, Song Kônho. After the necessary funds for the operation of the paper had been secured, publication began with a thirty-two page inaugural edition. While the size of the paper was but eight pages per issue after the first issue, this increased to twelve pages by September 1988.

Perhaps most notable in the origin and operation of the Hankyoreh shinmun is the creation of the newspaper with small capital investors, which ensured that the newspaper would be independent of external influences. In post liberation Korea, it is only the Hankyoreh shinmun, aside from small regional papers, that can boast a capital base financed by small investors, and in this aspect, the paper is quite unique. Moreover, the Hankyoreh shinmun was the first general paper in the post liberation period to use the vernacular han'gul script exclusively, which has resulted in it becoming the paper of choice among those in the working classes. Additionally, the paper features a larger font and wider spacing than most papers, all of which are conducive to easier reading. The independent ownership and working-class orientation of this paper has resulted in it being the most popular paper among college students, and the liberal editorial viewpoints of the paper further attracted the interest of student groups in the various student movements of the late 1980s and early 1990s. In recent years, the Hankyoreh shinmun has established branch offices in Chicago, London, Frankfurt, Berlin and Sydney among other locations, which have enabled it to better report on international events.

Hannam sangho pangwi choyak [USA and Korea]

Hannam University

Hannam University (Hannam Taehakkyo) is a private university situated in Ojōng-dong in Taejŏn. Its forerunner was founded as Taejŏn Kidok Hakkwan by American Presbyterians. When first established, the four-year school had three departments which specialised in the scriptures, English literature and chemistry. In February 1959, the school obtained accreditation as Taejŏn Taehak with W. A. Linton as its first president. The institution was then moved to its present location in the Tong District of Taejŏn. In 1970, it merged with Sungshil Taehak in Seoul to become Sungjŏn Taehak and in the following year, it gained university status.

In 1983, Sungjŏn Taehakkyo's Taejŏn campus was separated from the university, becoming Hannam College and in November 1985, it became a university with Yi Wŏnsŏl as its first president.

Hannam today consists of eight colleges: the Colleges of Economics & Business Administration; Education; Engineering; Law; Liberal Arts; Natural Sciences and Social Sciences, as well as the Night College. In addition, there are five higher degree schools: the Graduate School; and the Graduate Schools of Education; Industry; Regional Sciences; and Small and Medium Business. The university also contains a number of research institutes and a museum. University publications include Hannam Taehak Shinmun in Korean and The Hannam Times in English.

Hansan Island

Hansan Island is situated in Hansan Township in the city of T'onyŏng in South Kyŏngsang Province. The island covers a total area of 15.55 sq. kms. and has a 30-km.-long coastline. Statistics for 1985, show a population of 4,404. Mt. Mang (294m) rises in
the south of the island. This is the source of Tuok Stream which flows into Hansan Bay in the northwest. Because of its southern location, the island’s climate is mild with an average January temperature of 1.0 c., an average August temperature of 26c. and an average yearly rainfall of 1 385mm.

About 19 per cent of the island is farmland. Of this, under 1.0 sq. km. grows rice and some 2.0 sq. kms. grow dry-field crops such as barley, beans, sweet potato, garlic, sesame and hot pepper. Local marine products include anchovy, eel, mussel and seaweed. There are also a number of oyster farms.

To meet the educational needs of the residents, there are four primary schools and one junior high school. A daily ferry service runs between the island and T'ongyong.

The island is famous as the place where Admiral Yi Sunshin (1542-1598) had his naval headquarters during the Hideyoshi Invasions (1592-1598). It was also the site of one of the three major naval engagements of the war. During the battle, which took place in the seventh lunar month in 1592, Yi’s forces achieved an overwhelming victory without losing a single ship. Every year, a festival is held on the island to commemorate the battle.

Hanshik [Customs and Traditions]

Hansŏng sunbo [Newspapers]

Hansŏng Tosŏ Chushik Hoesa

Hansŏng Tosŏ Chushik Hoesa was a publishing company founded during the Japanese occupation, with Yi Pongha as its president. The company published biographies of patriots, books on Korean history, literary works and a magazine. Famous works published by the company include Kim Okkyun by Kim P'albong, Sangnoksu (Evergreen Tree) by Shim Hun and the literary collection Han'guk munhak chŏnjip.

Hanŭm mun'go (Collection of Hanŭm)

Hanŭm mun'go is the anthology of Yi Tŏkyŏng (1561-1613), a mid-Chosŏn scholar official. The work is a woodblock print consisting of twelve fascicles in five volumes. It was first compiled and published by Yi Sangjong, the author’s grandson, in 1673. The contents of the work include poems, memorials to the throne, correspondence with Japanese and Ming Chinese generals during the 1592 Japanese Invasion, and some miscellaneous pieces.

The Hanŭm mun'go is acclaimed both for its literary and historical merits, and in particular for the insight it provides of the situation during and after the 1592 Japanese Invasion. Many of the memorials presented by Yi Tŏkyŏng to the throne concern events during the Invasion, and are thus of importance for an understanding of this period. The author’s poetry reveals his literary skills and adds to the value of the work. Copies of the Hanŭm mun'go are now in the possession of the Kyujanggak Library and Sŏnggyun'gwan University, as well as other locations.

Hapch’ŏn County

Situated in South Kyongsang Province, Hapch’ŏn County is comprised of the town of Hapch’ŏn and the townships of Kaya, Kahoe, Tŏkkok, Taebyŏng, Taeyang, Myosan, Pongsan, Samga, Ssangbaek, Ssangch’ae, Yaro, Yongju, Yulgok, Chŏkchung, Ch’ŏngdŏk and Ch’o’gye. The county covers an area of 983.71 square kilometres and as of 1989, had a population of 78 942. Part of Mt. Kaya National Park is situated to the north,
while Mt. Odo (1,134m), Mt. Suksŏng (899m), Mt. Hwangmae (1,108m) and Mt. Chŏnam (696m) stand along the county's western border. The Hwang River meanders eastward through the central part of the county to join the Nakdong River in the east. As for weather, the area has an average temperature of 13.3°C and receives an average annual rainfall of 1,093mm.

Only 17.6 per cent of the county is arable. Two-thirds of this land is used to cultivate rice, the county's main crop. On the remaining land, barley, beans, potatoes, burdock, tara and lotus roots are produced. Other crops include sedge (used to make mats), cotton, hemp and medicinal herbs. In addition, there are a large number of stock breeding operations in the area.

In addition to Mt. Kaya (See Kya Mountain), the county has a large number of scenic attractions. In the eastern part of the county sixteen kilometres southwest of Hapch’ŏn lies Hapch’ŏn Lake. This mammoth reservoir was created with the completion of Hapch’ŏn Dam in December 1988. Standing ninety-six metres high, Hapch’ŏn Dam holds 7.9 million tons of water and its hydro-electric power station generates 234 million kilowatts of power annually. The lakeside route via the dam is an excellent scenic drive. Anglers also come here to fish for carp and other fish. Southeast of Hapch’ŏn Dam in Yongju Township, one finds Hwanggye Waterfall. This twenty-metre high waterfall is a popular destination in the hot summer months.

There are a number of historical sites in the area. Most of the Buddhist artefacts are located in and around Haein Temple in Kaya Township. At the old site of Yŏngam Temple in Kahoe Township, there is a three-storey pagoda, a stone lamp with a twin-lions motif, and a stone stele holder in the shape of a tortoise. In addition to Buddhist sites, there are a number of old Confucian schools in the area, such as Hapch’ŏn Hyanggyo just south of Mt. Chagyŏng (503m) in Yaro Township, Hwaam Sŏwŏn in Myosan Township, Paeksan Sŏwŏn next to the Hwang River in Ssangch’ae Township, Ch’ogyŏ Hyanggyo just south of Highway 24 in Ch’ogyŏ Township, Sohaktang in Kaya Township’s Maean Village and the picturesque Samba Hyanggyo next to Highway 33 in Samba Township. Famous pavilions in the area include Hwanggang-jŏng in Ssangch’aek Township’s Sŏngsan Village, Hoyŏng-jŏng in Yulgok Township’s Munnim Village and Yongmun-jŏng in Yongju Township’s Naega Village. Yongmun-jŏng was originally founded in memory of Yu Sujŏng. As the governor of Kangwŏn Province, Yu was caught up in the Purge of 1519, and was thus forced to relinquish his position and seek seclusion in this remote area away from the capital.

In order to promote local culture, festivals and celebrations are held here on a regular basis. In particular, the Taeya Cultural Festival is held for three days in October in Hapch’ŏn, with the major event being a march by students along ‘The Road to Loyalty and Filial Piety,’ the road that Admiral Yi Sunshin took when he was released from prison on the King’s amnesty after having been falsely charged and arrested by Wŏn Kyun and his partisans.

This region is reported to have 72 different sacrificial rituals for the local spirits, among which the rituals of Sangch’ŏn Village, Yŏkp’ŭng Village and Hoeyang Village are the best known. The hosts of these rituals, who are chosen one month before, must cover the yards of their houses with yellow soil, and take a bath three times a day to avoid evil. The food offered in this ritual is the same as that offered in traditional memorial services for the dead, the only difference being that the head of a pig is added. In Yŏkp’ŭng Village, people do not offer fruit on the altar, but instead use food made of rice from a mill built exclusively for this ritual.

Haram Mountain
Situated on the border of Hwanghae and P'yŏngan Province, Mt. Haram (1,485 metres) is part of the Kukhwa Mountain Range. The mountain is surrounded by other peaks over 1,000 metres high. On top of Mt. Haram, there is an area called Ch'ima-dae (Running Horse Summit). Yi Sŏnggye is said to have practiced martial arts and trained his horse here before he became King T'aejo (r. 1392-1398), first king of the Chosŏn Dynasty. A stele commemorating King T'aejo was erected on the mountain in 1799 by King Chŏngjo (r. 1776-1800). Although the area is not readily accessible, numerous tourists come from far away to enjoy the mountain's beautiful scenery.

Health and Welfare, Ministry of [Government and Legislature]

Health Care System

The Republic of Korea initiated a compulsory health insurance program in 1977. At the outset this program only covered about ten per cent of the population but was gradually expanded until it covered all but a fraction of the population by 1989. In January 1995, 42.86 million people or 95.6 per cent of the population were eligible for medical insurance, and the remaining 4.4 per cent were eligible to receive medical support from the government. The current medical system dictates different insurance premiums depending upon which medical cooperative one belongs to, with most members of private cooperatives paying from two to eight per cent of their monthly income for health insurance. Members of the cooperatives for public servants pay 3.8 per cent of their monthly wages. The government subsidizes the cooperatives for low-income farmers, fisherman and the urban poor, in order to keep premiums low.

However, flaws such as a low reimbursement schedule, high co-payments and the exclusion of many health care services from coverage have beset the health insurance system of Korea. Also, health care facilities are not distributed equally throughout Korea, but instead concentrated in the urban centres. This inequity can be seen in Table 1.

</tbody>
</table>

(Numbers per 10 000 persons)

The result of this inequity between the rural and urban areas is that patients who live in rural areas are required to pay additional travel expenses for medical services while the available medical care in their regions remains low.

The government is attempting to reform the medical system and has implemented some improvements in medical insurance coverage and other areas. For example the reimbursable treatment period per year is presently at 240 days, and this number will gradually be increased every year until it reaches 365 days coverage by the year 2000.

This extension of services will provide better treatment for the elderly or chronically ill who require ongoing medical care. Another area that is scheduled for reform is the payment of
cash benefits to women who leave their jobs to give birth. Presently they are paid a nominal amount through maternity leave, but this is targeted for supplementation by the payment of cash benefits through a maternity support system.

The implementation of a national health insurance program in Korea has seen the overall health of the Korean people improve substantially. In addition, programs that have seen major improvements in diet, lifestyle habits and the development of health and medical programs have had a major effect on the overall health of Koreans. Table 2 diagrams some of the improvements since 1970.

Source: Ministry of Health and Social Affairs.

Overall the state of health of Koreans has improved markedly since the beginning of the 1970s. The incident rates of communicable diseases, such as tuberculosis or cholera, have declined sharply. However, there have still been recent outbreaks of cholera and cases of tuberculosis although these numbers are quite small. Korean people are using more medicine than ever before and this can be seen in the percentage of income devoted to the purchase of remedial substances. In 1963 medical expenses accounted for just 2.7 per cent of the total income of an urban family, but by 1990 this number had nearly doubled at 5.3 per cent.

Present State of Health Facilities and Management

As of 1995 South Korea had a total of nearly 200,000 hospital beds, and of this number nearly half were in general hospitals. The number of hospitals and clinics was over 15,000 with 266 of these being general hospitals, 398 hospitals and the balance clinics. Dental hospitals and clinics were numbered at over 8,300 and oriental medicine hospitals amounted to nearly 6,000. There were also 42 specialized hospitals, 177 midwifery clinics, 238 health centres and over 3,300 health centres. In trying to give balanced health care facilities to the entire nation, the government established 2,039 primary health care centres that were under the existing health centres and health sub-centres. These facilities are most commonly located in rural areas that do not have regular medical facilities and are staffed by either nurses or midwives who can perform first-aid and para-medical services in these remote areas.

The management of many of the nation’s health care facilities is in the private sector, but all parts of the health care domain are under government regulation. There are many different government organizations that oversee the regulation of this sphere of Korean society including the Ministry of Health and Social Affairs (Pogŏn sahoebu). In addition to the bodies that determine policy and regulate the health care professions, there have also been
numerous legislative measures taken to ensure the health and social welfare needs of Koreans are being met.

The management of public health includes various measures designed to combat diseases and to promote healthy lifestyles. The implementation of programs to combat both infectious and non-infectious diseases has been successful in reducing their occurrence. Also there have been programs directed at improving the diets and lifestyles of Koreans, which has resulted in better overall health. Some of the campaigns sponsored by the government include those that are aimed at preventing non-communicable diseases such as cancer, lung and cardiovascular diseases that are now responsible for a large share of all deaths in Korea. Along with the establishment of research institutes to search for cures of these diseases, the government has also launched major public education programs that are designed to encourage healthy lifestyles that will help prevent these ailments.

The final link in the health care management of Korea is the training of health care professionals. The education of these professionals to staff the facilities in Korea is achieved through a comprehensive system of universities that offer training in the various fields of medicine. There are many universities that now offer programs in medicine, dentistry, oriental medicine and public health. In 1992 there were over 41,000 students enrolled in either medicine or pharmacology programs in Korea. The medical departments at the major universities of Korea offer six-year programs that are designed to equip their graduates with the tools needed to provide competent health care to the citizens of Korea.

Heavenly Way (see *Chŏndogyo*)

*History of Corea*

*History of Corea* was written by John Ross and published by Elliot Stock in 1891. It is a 404-page history of Korean civilisation, supplemented with a self-proclaimed description of Korean manners, customs, language, and geography. The author, who resided in Manchuria for seven years, cites his purpose for writing the book as being the dearth of information available on Korea for the Western reader. He likens the influence of China on East Asia to that of Rome on Europe, and thus examines much of Korean history from a Chinese perspective.
History of Korea

Prehistoric Times

The Paleolithic Age

Remains of human bones and artifacts have been found widely spread through the Korean peninsula, occurring in both cave deposits and along rivers in the open. Earliest discoveries of hominid activity in Korea may be as early as 500,000 years ago. Although these early dates are disputed, well-dated sites in near-by China demonstrate that finds of this age in Korea are not unreasonable. Cave sites so far have produced only sketchy evidence of human activities, but the pollen cores and animal bones have allowed a reconstruction of the paleoclimate, especially from caves such as Turubong, and periods of warm and cold no doubt reflect the Ice Ages known around the world. At the site of Chô'n'gongni the discovery of "hand-axes" (a stone tool made by flaking a core on both sides, with one end narrower and somewhat pointed), previously thought to be missing in Asia, caused a rethinking of the whole question of the context and function of these stone tools. Another site, Sŏkchangni, is important for the depth of the deposits, showing change in stone tool technology through time, and a rare late paleolithic shelter in an upper layer. Suyanggae is a late paleolithic site with an unusual amount of lithic scatter. Rectangular stone knives, microblade cores and tanged points connect this site with others in northeast Asia and the Japanese islands. The gap between paleolithic and neolithic is beginning to be filled with preceramic levels in shell mound sites and evidence of composite tools made with microblades.

The Neolithic (Chûlmun) Period

Neolithic sites contain pottery, chipped and ground stone tools, and consist of semi-subterranean houses grouped into small villages. The sites are found along riverbanks or coastlines, or on islands in the Yellow Sea. The earliest dated site is Osanni, on the east coast just north of the 38th parallel. A group of calibrated dates for the lowest level clusters just after 6000 B.C. Dwelling floors have square hearths outlined with cobbles, and the pottery has flat bases with stamped or pinched designs (Yunggi-mun) in a band around the mouth. Tools include large stone shanks for composite fishhooks, and pointed weights.

On the west coast, slightly later, the Chûlmun (Pitsal-mun) pottery is quite different, with pointed bases and incised all-over decorations, especially featuring nested zigzags and bands of short slanted lines. At Amsadong the main stone tools are chipped hoes, net sinkers, and projectile points made of slate. Houses are similar to those of Osanni. At the site of Chidanni, near Pyŏngyang, grains of two kinds of millets were found in a Chûlmun jar, indicating plant cultivation at this time. At coastal Kungsan, where bone has been well-preserved by a shell mound, antler picks and reaping implements made of pig mandibles have been found.

The Chûl-mun pottery style later spread to the south and east, and is found in a layer at both Osanni and Tongsamdong above Yunggimun and undecorated pottery. In the far northeast, at Sŏp'ohang, the pottery has flat bases and is decorated with incised bands, while in the northwest the bases may be pointed, rounded, or flat.

Whether all neolithic groups were growing grains is not known, but the consensus is that the earlier villages engaged in fishing and hunting and shellfish collecting, later adding cultivated plants to their subsistence base. North Korean archaeologists believe that pigs and dogs were domesticated in the Chûlmun period, as well. Since settled villages with domesticated pigs and millet cultivation are found in northeast China (Manchuria) as early as 6000 B.C.E., this claim is not unreasonable, but the full data have not been made available.
The Megalithic Age

The temporal boundaries of a bronze age are not easy to draw, and in any case it is more appropriate to consider the appearance of new pottery called Mumun as the marker for a new stage than to insist on bronze as the important difference in the new way of life.

Bronze was probably not a factor in the origin of this change, and only gradually became an important feature of the Korean cultures. The Chu'llmun neolithic changed in many important ways with the introduction of rice cultivation and megalithic monuments, perhaps as early as 2000 B.C., but certainly by 1000 B.C. The differences can be seen in far more than mere stylistic differences in pottery or stone tools, although these occurred. Most telling is the changing location strategy of the villages - whereas Chu'llmun sites are on riverbanks and coasts, Mumun sites are found on hillsides, like present-day Korean villages, leaving the flat ground for agricultural use, in addition to terracing the hills for better water distribution to the crops. Not only does the location of the village in relation to the arable land imply rice cultivation, actual grains of rice, as well as other grains such as millets and barley, have been collected from sites such as H§unamni and Songgungni. Stone tools were made in several new shapes, including heavy axes, chisels, semi-lunar reaping knives, star-shaped mace heads, and large perforated discs. Polished stone daggers also appear. Like the neolithic, not all of these tool types were found at every site. The sizes of villages vary considerably; some have only a few dwellings, while others contain more than 100 houses. In conjunction with these villages, rows of dolmens have been found.

The megalithic monuments in Korea are given the names of analogous structures in Europe, although there is probably no connection. Menhirs are simply unmodified standing stones, sometimes placed in lines. Dolmens are constructed in several ways. The "northern style" has four upright stone slabs, making a box, topped with a much larger slab that extends above the box on all sides. These capstones routinely weigh several tons, and one is estimated to weigh 300 tons. "Southern style" dolmens are placed directly on the ground, or covering a group of small propping stones or even a stone pavement. Dolmens are burial markers, although the northern-style examples were easy to loot by removing one of the upright stones, and few have been found with any contents. Southern style dolmens mark subterranean burials, most often in stone cists, but also jar burials and earth pit graves. Associated grave goods include small burnished red jars, polished stone daggers, tubular stone beads, and the curved bead known as kogok.

Bronze first appears in northern Korea in the form of small objects such as buttons and knives. Bronze daggers with points along the edges of their blades are characteristic of both Korea and Liaoning province in northeast China. Those in China are dated to the Spring and Autumn period of the Zhou dynasty (8th to 5th century B.C.). A cache of Chinese swords of the Warring States period (5th to 3rd century B.C.) has been found in the southwestern part of Korea.

Later bronzes include mirrors with geometric designs, narrow daggers, belt buckles in the shape of horses and tigers, and bells. Bronze axes and chisels are occasionally discovered, but in general the use of bronze appears to have been more for weapons and ornaments that for tools. Thus, bronze was for the elite and not the common person.

Early Use of Iron

Iron, in contrast, was widely used for agricultural implements and wood-working tools as well as weapons and armor. Iron ore was available in many areas of Korea, and local smelting on a small scale occurred widely, particularly along the Han and Nakhtong rivers. There are also several coastal sites in both the southeast and the southwest with evidence of local iron production in the form of iron slag. The date for the beginning of iron production
in Korea is not secure, but sites near sources of iron date to the third c. B.C.E. These sites have new types of houses that are square with corner hearths, and built on the ground surface. They may reflect the advent of iron tools with which to make wooden houses above the ground, or more efficient heating so that it was no longer necessary to use the earth for partial walls. In a few cases, the subfloor heating system known as ondol has been found.

New regional pottery types are found as well. They include paddled exteriors, globular jars with 'eggplant' designs on the body, and jars with oval impressions around the base. There are also wide-mouthed vessels with rolled rims and long-necked black jars. Some stone and bone tools were still in use, such as knives and projectile points of stone and bone needles, awls, and handles for iron tools.

Although the use of iron began earlier, most radiocarbon dates for sites with iron in the south fall into the first few centuries A.D. During this period, with the rise of the Lelang commandery in the northern half of the peninsula, the south was free of Chinese domination but not of Chinese influence. Iron became a state monopoly in China, perhaps increasing trade with Korea for iron.

Archaeological sites from this time period include walled hill forts, towns along rivers, and burials. A particularly interesting burial is the site of Tahori, where a continuous high water level preserved a number of ordinarily perishable artifacts. In one burial, the coffin was a dugout log, cut in half lengthwise. Beneath the coffin, a bamboo basket was found containing writing brushes and rope. A lacquered wooden bowl on a stand contained the remains of persimmons, a lacquer sword stand, iron axes with wooden handles, and bows and arrows were also found.

Chinese coins have helped to date a number of sites. In the north, mingdao coins shaped like knives or spades have been found in large numbers, whereas in the south wushu coins are more common. Other interesting discoveries include 'oracle bones' (animal scapulae with burn marks), glass beads, and Han dynasty mirrors from China.

The Earliest Korean States

Ancient Chosŏn

In the thirteenth century *Samguk yusa* occurs the legend of the foundation of the earliest Korean kingdom by the supernatural hero Tan'gun. This story may have originated as an attempt to affirm the unique and indigenous quality of Korean culture in opposition to another legend, found in Chinese texts as early as the second century B.C.E., which described how Jizu (Kor. Kija) a prince of the Shang dynasty in China, established a kingdom in Korea when his royal house was overthrown towards the end of the second millennium B.C.E. As commonly happens, both these legends were elaborated further in later sources; the account of Kija went on to claim that his descendants reigned in P'yŏngyang for over eight hundred years.
So far archaeology is not in a position to confirm or deny these stories. It is known, however, that several kingdoms of the late Warring States Period in China - especially the northeastern state of Yan - were in contact with northern Korea, and that when, between 231 and 221 B.C.E., these kingdoms were swallowed up by the western state of Qin which went on to found the first Chinese empire. Chinese refugees made their way into northern Korea. One such refugee was a certain Wei Man (Kor. Wiman) who in 195 B.C.E. established a powerful state based at Wanggǒm, near modern Pyǒngyang. According to a Chinese text of the third century C.E., the Wei lue Wei Man seized control from a local ruler who had welcomed him and who, when driven out, fled to the Han tribes in southern Korea: once again it is difficult to be sure that we are not dealing with later legends. There is, however, no doubt about the historicity of Wei Man and his successors, whose power seems to have extended over most of northern Korea, and whose influence at least extended into the south.

The rise of Wei Man's state coincided with the rise of the Former Han Dynasty (202 B.C.E.-C.E.9) in China, which within a century had built up the most powerful East Asian empire of its day. Trade contacts between China and Korea continued, but Wei Man's grandson Ugǒ antagonistised the Chinese Emperor Wu (r.141-87 B.C.E.) by blocking Chinese diplomatic contact with the Han tribes of southern Korea. In 109 B.C.E. Emperor Wu despatched armies against Ugǒ's kingdom of Chǒsǒn; the Chinese campaign was badly co-ordinated, but the struggle also revealed internal tensions in Ugǒ's state. Within a year he was murdered by his subordinates and his domains annexed to the Han empire, which subdivided them into four provinces or commanderies. Of these, two quickly passed out of Chinese control, and only Luolang (Kor. Nangnang) based in the area round Wanggǒm, and Xuantu (Kor. Hyǒndo), which lay at least partly beyond the Yalu, outlasted the Former Han dynasty itself.

Koguryǒ and Puyo

Clearly the enormous distance and difficulties of communication limited the extent to which a Chinese government based in Chang'an could control conquests in Korea; moreover land communications were constantly threatened by the great nomad confederacies of the steppe, the Xiongnu and their eastern subordinates the Wuhuan and the Xianbi. Chinese frontier authorities in northern Korea attempted to secure themselves by alliances with other tribal groups, notably a group of five tribes known under the general title of Koguryǒ, apparently connected with the Manchurian tribal kingdom of Puyo. However, when the Chinese usurper Wang Mang (r.C.E.9-23) tried to use Koguryǒ in his war against the Xiongnu, the Koguryǒ tribes rebelled; a Chinese general murdered the chieftain used by the frontier authorities as an intermediary in their dealings with the tribes, but this did nothing to quell the disturbance. Meanwhile Wang Mang was overthrown and his empire was disputed by rival warlords. It was not until thirteen years later that the Eastern or Later Han dynasty (25-220) took over most of China and granted official recognition to the Koguryǒ kingdom.

Under the Later Han, Chinese control in Luolang and Xuantu was even less secure than before, indeed in northeastern Korea it was now non existent; Koguryǒ moved in to fill the vacuum. Essentially the Koguryǒ state consisted of a warrior aristocracy supported by a serf-like peasantry who grew the food which the nobles consumed and provided the labour to build their massive stone tombs. The centre of the kingdom was the Hunchiang valley north of the Yalu, where ruins of these tombs have been found, but the rule of Koguryǒ extended over a wide area, including the coast of north-eastern Korea inhabited by the rice-growing Okcho tribes, who now became Koguryǒ vassals. The power of the 'king' of Koguryǒ was restricted by the privileges of the tribal nobility, and at some time in the first century C.E. the kingship was actually transferred from one tribe, the Sonnobu, to another, the Kyerubu. Nevertheless, Koguryǒ remained strong enough to be a threat to the Chinese commanderies, especially in the early second century; indeed the Chinese only managed to
preserve their position thanks to the help which they received from Koguryo’s rival, the ancient kingdom of Puyô in Manchuria. Kung, the ruler who mounted this threat against the Chinese, was to be regarded as the ancestor of all later Koguryo kings.

The Wei Reconquest

Later Han power was increasingly affected by internal problems, notably the increasing shift of population from north to south China; in 189 the dynasty collapsed, but this did not immediately benefit Koguryo as the north-eastern border commandery of Liaodong was then taken over by a powerful warlord family, the Gongsun. The following century was one of crisis for Koguryo: the heartlands of the kingdom were devastated by an invasion of Gongsun Kang, warlord of Liaodong; the Sonnobu tribe seems to have abandoned the kingdom en masse after supporting an unsuccessful claimant for the throne in a civil war, and the state came under increasing pressure from the Wuhan and Xianbi confederacies who had replaced the Xiongnu in the steppe borderlands. In response to these threats the early third century king limo moved the Koguryo capital further south (but still north of the Yalu) to the stronghold of Hwando. However in 244 - 45 Hwando itself was sacked by the armies of the Chinese Wei dynasty (220-265), one of the three states into which the Han empire had divided. The Wei had reconquered Liaodong in 238, and now seemed poised to re-establish Chinese control in northern Korea; they recognised the Koguryo vassal rulers of the eastern coast as independent kings, reasserted the old alliance with Puyô in the north, and in the south again asserted a loose suzerainty over the Korean Han tribes. Hundreds of Koguryo families were deported to central China; it seemed as if Koguryo had been blotted from the map, and for over half a century it disappears from the Chinese records.

Transition to the Three Kingdoms

But the Chinese triumph was more apparent than real; the shift of population within China already mentioned meant that the Chinese settler presence in the northern border areas, including the Korean commanderies, declined sharply, creating a vacuum into which other groups such as the Xianbi tribes of Manchuria moved or were resettled by Chinese administrators. In 285 the Murong clan of the Xianbi overran and almost obliterated the ancient state of Puyô; surviving members of the Puyô royal house fled through what had once been Koguryo territory to establish a kingdom in north-eastern Korea amongst the Okchô, themselves former Koguryo vassals. The Jin dynasty which had succeeded the Wei in China in 265 and nominally reunited the country in 280, proved even less capable of preventing these tribal movements on the borders than its predecessors. For a time it maintained a facade of imperial control, and the Jin records list 'tribute missions' from chieftains in southern Korea upon whom the Jin had bestowed such titles as 'the Jin King' or 'the lord of Mahan'. But at the beginning of the fourth century the Jin dynasty collapsed in a series of bitter civil wars in which several of the contenders attempted to use armies of Xiongnu and Xianbi who had been settled inside the empire. The result was that these resettled northern nomads took north China for themselves, restricting the Jin dynasty to the south and cutting off all contacts with the surviving Chinese settlers in Luolang. There was no longer a Chinese administration capable of bestowing titles and honours upon the minor Korean chieftains, who then looked about for other means to bolster their eroding status. This would seem to have been what happened in Mahan where, if we reinterpret the legends preserved in the twelfth century Sino-Korean chronicle, the S Manguk sagi, 'the lord of Mahan' appears to have invited a group of Puyô warrior aristocrats from their new foothold in north-eastern Korea. In the course of a long struggle the newcomers succeeded in taking over most of Mahan, which became the mediaeval kingdom of Paekche, proud to trace its royal house from the ancient state of Puyô. At the same time Koguryô, which resurfaces in the Chinese records shortly before 313, began to exercise pressure on the old Luolang commandery, being blocked from expansion further north by the strong Murong Xianbi kingdom. The situation amongst the Chinhan tribes of south-eastern Korea is less clear, but certainly changes which led to the emergence of the Shilla kingdom later in the
fourth century were already taking place. With the reappearance of Koguryó and the formation of the states of Paekche and Shilla the mediaeval period of Korean history may be said to have begun.

K H Gardiner

The Changes of the Fourth Century.

During the so-called Three Kingdoms Period Shilla, Koguryó and Paekche were not the only states which existed in the peninsula; there were other petty tribal 'kingdoms' in southern Korea, notably the so-called Kaya league lying west of the Naktong river and consisting of Kúngwan Kaya, also known as Karak (near modern Kimhae), Greater Kaya, Ara Kaya, Koryóng Kaya, Sónsang Kaya and Lesser Kaya. Shilla seems to have been in origin a similar petty state, but it succeeded in uniting the tribes of Chin-Han, east of the Naktong river, whereas the various principalities of the Kaya league failed to come together (though at first Kúngwan Kaya predominated), and eventually the Kaya states which had once formed a barrier between Paekche and Shilla, were swallowed up by these more powerful neighbours.

The beginnings of most of the kingdoms can no longer be traced; it is not necessary to take seriously the claim of the eleventh century Samguk sagi that Shilla was founded in 57 B.C.E. (this is a magical date based on calculations involving the sixty year cycle). Both Shilla and Paekche occur as names amongst the lists of scores of petty tribal communities in southern Korea in the third century Chinese history, San guo zhi - but they can hardly have been fully fledged kingdoms at this time, and Paekche cannot have acquired its distinctive Puyo royal house until after the migration of the Puyo princes to Okchó in 285. Further north we are on surer ground: the rulers of Koguryó which re-emerged at the beginning of the fourth century (Kings Úlbul or Úlbulli and his son and successor Só) claimed descent from the Kyerubu kings of the second and third centuries, and there is no reason to doubt this, though how the state had survived more than fifty years of total eclipse is not clear. In the fourth century as North China fell to the warring Xiongnu and Xianbi, Koguryó and Paekche were both able to recruit refugee literati from China, a process which tended to strengthen centralising trends within these two states.

As in earlier times, the warrior aristocracy of Koguryó were intent on imposing their control over settlers in the surrounding lowlands, notably Liaodong and the coastal plains of north-western Korea -- the old commandery of Luolang. But expansion into Liaodong was now blocked by the kingdom of the Murong Xianbi, who had occupied this area under the outstandingly able chieftain Murong Hui (r.285-333). When a civil war erupted after the latter's death, some of the defeated party, including a certain Dong Shou, fled to Koguryó, which had long attempted to form a coalition of other regional powers against the Murong. To discourage such activity, Murong Huang launched a two-pronged attack against Koguryó in 342/43; once again Hwando was sacked and King Só was forced to flee. However the Xianbi forces did not attempt to hunt the king down as the Chinese had a century earlier; the tributary structure of the Koguryó state was left intact, and this time it soon recovered from the blow.

Checked for the time being in their attempts upon Liaodong, the rulers of Koguryó turned to the south to take over the Chinese settlers of Luolang. Here too they met with difficulties, and it seems likely that Dong Shou who had perhaps been despatched to this area to conciliate his fellow Chinese to Koguryó rule, took advantage of the Koguryó defeat of 342/43 to assume de facto independence. Between 1949 and 1957 a huge tomb was excavated at Anak in Hwanghae Province, containing an inscription giving the precise date of Dong Shou's death (24th November, 357) and listing his titles such as "General Pacifying the East, Commandant-Protector of the Barbarians, Governor of Luolang". Such
detail would be most unusual if the tomb had been actually made for someone else (North
Korean archaeologists tend to regard it as that of a Koguryó king). It also contains frescoes
of day to day scenes -- a procession, horses in a stable, dogs hanging about a butcher's
shop, women at a well -- with nothing specific to connect them with a Koguryó ruler. It is
most unlikely that this last attempt to restore the old Luolang commandery survived Dong
Shou's lifetime. By 358 the Murong kingdom was locked in a bitter struggle with its rivals
for the domination of North China, and the rulers of Koguryó were free to concentrate
upon expanding southwards into the Korean peninsula. Luolang seems to have been taken
over fairly quickly, and only the rise of the kingdom of Paekche prevented Koguryó
extending its control even further.

The Rise of Paekche

It was the arrival of emigré northern warriors from Puyó which transformed the old tribal
community of Paekche into the Paekche kingdom. In the Samguk sagi what appears to be
an older variant of the Paekche foundation legend assigns the leading role in this migration
to a Prince Piryu, whose name is identical to that of the father of the first definitely
historical king of Paekche in the mid fourth century. It seems very likely that they are one
and the same. Indeed a date for the foundation of Paekche's northern ruling house at the
beginning of the fourth century would fit in well with the collapse of the Western Jin dynasty
in China and the consequent need of the 'lord of Ma-han' to find some other source of
support for his position. In this case the story given in the Samguk sagi of the Puyó princes
being invited into Ma-Han and then gradually taking over the whole Ma-han territory will
have been substantially accurate, needing only to be redated from the first century B.C.E.
to the early fourth century C.E.

The Samguk sagi also tells how a king of Paekche married the daughter of the ruler of
Daifang, and subsequently came to the aid of Daifang when it was attacked by Koguryó.
Daifang, originally the southernmost portion of Luolang, had been made into an
independent commandery under the Gongsong warlords, and would have been threatened
by Koguryó once the latter had taken over Luolang, perhaps after the death of Dong Shou.
Any authority amongst the Chinese settlers there may well have seen a princely house
descended from Puyó, traditionally a Chinese ally, as preferable to conquest by Koguryó,
traditionally hostile to the Chinese. Moreover such an alliance would readily explain the
presence of Chinese settler families amongst the Paekchae ruling group and the high degree
of sinicisation which the Paekche court revealed from quite early times. Paekche was
certainly a stumbling block to Koguryó expansion: the Samguk sagi places a Koguryó
attack upon Paekche in 369; in 371, in a retaliatory raid on Koguryó, Paekche forces killed
King Só of Koguryó under the walls of P'yöngyang (not at that time capital of the state).
Chinese sources confirm that King So was killed by Paekche, but without giving a date.
Clearly the long feud between Paekche and Koguryó had begun.

Since by this time the destruction of the Murong state in China by its rival Fu Jian Qin (in
370) had removed any threat from Koguryó's northern borders, King So's successors
concentrated upon conquests in the Korean peninsula. Prudently keeping on good terms
with Fu Jian Qin's court by a series of 'tribute missions' (Fu Jian Qin for his part sent the
first Buddhist priests to Koguryó in 372), Koguryó looked for allies in its struggle with
Paekche; in 377 representatives from the south-eastern state of Shilla accompanied
Koguryó ambassadors to the court of Fu Jian Qin. As will be seen, the Kwanggaet'o Stele
inscription of 414 confirms that the young state of Shilla was a Koguryó ally at this time.
Paekche itself was now threatened with encirclement and began looking for powerful
helpers.

In 372 King Ch'ogo sent a mission to the court of the refugee Eastern Jin dynasty in south
China. He was rewarded with the title of 'General Stabalisising the East and Acting
Governor of Luolang', but clearly no substantial help could be expected from this source. It
would seem that the rulers of Paekche turned elsewhere -- to the Japanese archipelago.

Korean historians have been rightly sceptical of claims in the eighth century Japanese histories, the *Kojiki* and the *Nihon shoki*, of Japanese connections with Korea going back to remote antiquity, pointing out that even in the fourth century Japan was not united, and the Yamato kingdom, from whose point of view the histories were written, was merely one amongst a number of contending tribal states. On the other hand the *Nihon shoki* does cite earlier documents such as the *Kudara ki*, which seems to have originated as a Paekche chronicle (its list of Paekche kings from Ch'ogo onwards is virtually identical with that of the *Samguk sagi*) and from this it appears that contacts were in fact initiated by Paekche, which used Yamato warriors to take over some of the small tribal principalities between Paekche and the Nakdong valley, bribing the Yamato leadership with gifts of iron, the iron of southern central Korea being already famous in the region in the third century. It is in this context that we see the famous seven-branched sword, still preserved in Japan, with an inscription stating that it was conferred on an otherwise unknown King of Wa (i.e. Yamato) by the King of Paekche and his crown prince, presumably King Ch'ogo and his son Kusu, who succeeded his father in 375. The alliance with Paekche became vital to the Yamato court, since from this foothold on the mainland of Asia it could import not only iron, but also horses and horse-riding equipment, and even the Confucian Classics, said to have been introduced to Japan along with Chinese writing by Paekche scholars at the beginning of the fifth century.

**The Climax of Koguryŏ power**

A flood of somewhat contradictory light is thrown on Korean politics at the turn of the fourth/fifth centuries by the inscribed (but badly damaged) stele of the Koguryŏ King Kwanggaet'o (r.391-413). In a period for which source materials are scarce the inscription is invaluable as a contemporary document, although its presentation of events of the reign is by no means undistorted; the purpose of the inscription was to glorify King Kwanggaet'o and it sought to achieve this in part by blackening his enemies and exaggerating their power. No part of the text has caused more controversy than the statement that, whereas Paekche and Shilla were originally subjects of Koguryŏ, in 391 'Wa crossed the sea... defeated Paekche... and Shilla and made them their subjects'. As the Japanese scholar Hirano Kunio has pointed out, even though there is a notice of an expedition to Korea at this point in the *Nihon-shoki* 'Yamato was not in a position to subjugate Paekche' since it was not even in control of western Japan. It is also true that Paekche had never been a subject of Koguryŏ prior to this, and even Shilla was more of an ally of Koguryŏ than a subject. The purpose of the text is to convey the impression that the rulers of Paekche were in treacherous rebellion against their suzerain, and that they brought in troops from across the sea who took over Paekche, Shilla and the tribal states in between. This led to the Koguryŏ expedition against Paekche in 396, when King Ahwa of Paekche is said to have surrendered and given hostages for his future good conduct, and a further successful expedition against the Wa troops in Shilla and the neighbouring areas in 400. After these victories the *maegŭm*, i.e. the supreme chieftain, of Shilla, who had never come to the Koguryŏ court before, did so -- an interesting remark in view of the earlier assertion that Shilla had hitherto been a Koguryŏ subject. In spite of the grandiose claims of the stele, it is clear that Paekche continued to exist as a state with its capital at Hansŏng in the Han valley, and with a continuing close alliance with Yamato. On the other hand, if we are to accept that the Shilla ruler visited the Koguryŏ court, it implies that Koguryŏ suzerainty was extended into southeastern Korea. Certainly hundreds of families from the south and east were carried off back to Koguryŏ, since later on we read of 220 such families being settled as tomb guardians round the king's grave. The acquisition of such new subjects who, coming from outside the Koguryŏ tribal structure, were more completely under royal control than the 'old families' still linked to the Koguryŏ tribal aristocracy, may well have been part of the purpose of these campaigns.
The most spectacular territorial gains of Koguryō at this time do not appear on the stele; they were made at the expense of the new Murong state set up after the collapse of Fu Jian Qin in 383. This Later Yan kingdom was dogged by foreign invasion and internal quarrels, thanks to which by 402 Koguryō seems to have achieved one of its long term objectives, the conquest of Liaodong. When in 407 the last Murong ruler was murdered, he was briefly succeeded by the former captain of the bodyguard Gao Yun, a man of Koguryō origin who continued to enjoy excellent diplomatic relations with his native land. The interesting possibilities of this situation were never developed, since Gao Yun in turn was murdered (in 409) and succeeded by a man of another family. Nevertheless Liaodong remained in Koguryō hands, and a witness of its conquest is the tomb discovered outside P'yongyang in 1976 belonging a governor of Liaodong who died in 409 and who - unlike Dong Shou - bears a Koguryō rank and dates in the regnal year of King Kwanggaet'o. Strikingly enough, before any of his official titles, this man boasts above all his devotion to Sakyamuni Buddha.

It is from the painted tombs of this era that we can picture the life of the Koguryō' nobility at the height of their power. Of these perhaps the most famous is the so-called 'Tomb of the Dancers', which shows Koguryō nobles galloping across the hills and using the famous Parthian shot -- back over the horse's hindquarters -- to shoot at game -- deer and tiger. Frescoes in other tombs show a wrestling match, carts pulled by bullocks, dancing figures from a mortuary cult, and a combat between heavily armoured horsemen like Parthian cataphracti.

According to the Samguk sagi it was in 427 that the Koguryō court moved from Hwando to Pyǒngyang, its last capital. Although uncorroborated elsewhere, the move tallies with the stele's indications of the increased importance of Pyǒngyang in King Kwanggaet'o's day, and took place under his successor, King Changsu (413-491), whose seventy-eight year reign is attested by contemporary Chinese references, and must count as the longest in East Asian history. It is clear that for most of this time Shilla, now threatened by an increasingly aggressive Yamato kingdom, remained very much under the aegis of Koguryō. As for Paekche, it came close to destruction in 476 when the aged King Changsu led a huge army to besiege its capital, Hansǒng; the Paekche King Kaero, captured while leading a desperate sortie, was duly executed; thus the hundred year old grudge was satisfied. At this moment Koguryō must have appeared as one of the strongest states in East Asia.

The Triumph of Shilla

Late in the fifth century the death of the Yamato King Bu, known to later generations as Yuryaku, led to internal instability and dynastic change. This meant that Shilla was no longer under threat from Yamato -- or from Paekche, since that state was still struggling to survive with its capital moved further south to Ungjin. In Koguryō the enormous reign of King Changsu, like most excessively long reigns, seems to have left a certain weakness in the central authority. In these circumstances the ruling group in Shilla, resenting their partial dependance on Koguryō, allied themselves with Paekche against their former suzerain. The moment was well chosen; Koguryō was going through internal troubles -- King Anjang was murdered in 531 -- and after a series of campaigns the two allies attacked and won back the Han valley which had been taken from Paekche in 476. Since Koguryō no longer posed a threat, Shilla now turned on Paekche and kept the Han valley for itself; when King Sǒng of Paekche fell in a night ambush and Shilla for the first time emerged as the strongest state in the peninsula.

It was Shilla's geographic position -- on the east coast without a good harbour -- which had made it into a cultural backwater; until the sixth century it had largely escaped influences from China and beyond which had helped to reshape both Koguryō and Paekche. It is significant that Buddhism, which reached Koguryō from North China in 372 and Paekche from South China in 384, did not make a significant impact in Shilla until the 520's, at the
same time that Shilla began direct diplomatic contact with the imperial court of South China and, perhaps as a result, started to reorganise its internal structure. The Kaya states were amongst the first objectives of a reinvigorated Shilla; between 527 and 532 Shilla annexed Kimgwan Kaya or Karak, and for the first time crossed the Nak tong river; this was followed, as already seen, by the campaigns against Koguryo and the successful war with Paekche, which gave Shilla access to the west coast of Korea and hence a more direct route to southern China.

This early phase of Shilla expansion reached its culmination in the reign of King Chinhiing (540-576), and is associated with the unique Shilla institution of hwarang. The hwarang were specially chosen sons from noble families who were given a rigorous military training and obliged to perform special religious pilgrimages and vigils; each hwarang was accompanied in battle by oath-pledged comrades, sometimes to the number of several hundred. The combination of strict military and religious training -- the Buddhist priest Won'gwang drew up a code of conduct for hwarang in 602 - developed this elite into an extremely efficient fighting force, but by the beginning of the seventh century Koguryo seems to have recovered some of its earlier power and national spirit, and Shilla was again on the defensive.

The situation in Korea was now complicated by the reappearance of a united Chinese Empire under the Sui dynasty (581-618), which saw itself as the heir to the old Han empire and therefore unable to accept non-Chinese rule over such border areas as Liaodong. The Sui emperors dreaded an alliance of Koguryo with the Eastern Turks, who now dominated the steppe borderlands; an early clash between Koguryo and Sui China was narrowly averted in 598, but in 612 Emperor Yang of Sui (r.604-618) launched the first of a series of massive invasions. There followed three years of bitter fighting in which Koguryo, though ravaged almost to the point of exhaustion, managed to beat off the Chinese attack. Indeed, the campaigns ultimately proved more disastrous to the Sui dynasty; under the strain rebellions broke out all over China, and the dynasty collapsed. Nevertheless, within a decade the new Tang dynasty (618-907) had restored the united empire of the Sui, and it was not long before a tense situation again developed along the Chinese border with Koguryo.

Although Shilla embassies had helped to encourage the Sui invasions, neither Shilla nor Paekche had taken any active part in the fighting. Instead Paekche, now showing signs of recovery, began a series of attacks on Shilla to regain its lost lands. Shilla itself was going through an internal crisis, connected with the stratification of the Shilla ruling group into 'bone-ranks'. These 'bone-ranks', which were hereditary, controlled access to all official positions; the kingship was only open to the members of the highest, sŏnggol. However, with the death of King Chin-p'yŏng in 632 the male sŏnggol line became extinct, and a female ruler inherited the throne, to be succeeded by yet another female in 647. It was this perceived weakness in Shilla that triggered the Paekche attacks, which in turn led to further Shilla appeals to the Tang court. Tang Taicong (r.626-649) was more interested in attacking Koguryo, especially after 642, when the Koguryo noble Yŏn Kaesomun in 642 seized power, killing the king. However the Chinese invasions of Koguryo in 644/45 were indecisive, and operations were halted in 649 by the death of Tang Taicong.

Throughout these years Shilla was being harassed by Paekche, to some extent in alliance with Koguryo, and further appeals for help led the Chinese to renew their attacks against Koguryo in 655, the year after the throne of Shilla had finally passed to the second highest 'bone-rank', the chin'gol. The Chinese experienced great difficulty in supplying their forces along the only practicable land route - via Liaoxi and Liaodong - while attempts to launch naval expeditions against the Koguryo coast had generally proved disastrous. In 660 however a new strategy was adopted; finally turning against Paekche, the Tang forces, aided by Shilla, quickly overran that state. But Paekche was an ally of Yamato, and the Japanese and the Japanese intervened to help the Paekche resistance - only to be
disastrously defeated in a naval battle. Now the Tang, with a secure base in Korea, could launch attacks on Koguryó from two directions at once. For a time the northern kingdom continued to hold out, but when Yôn Kaesomun died in 666 disputes broke out amongst his sons, and the end could no longer be averted. P’yô’ngyang fell in 668 to the Tang after a siege which left most of the city in ruins. With Shilla the only independent state in the peninsula the Three Kingdom period comes to an end.

Three Later Kingdoms

The late ninth c. was a period of turbulence and change almost throughout East Asia, as an old order passed away and a new one painfully shaped itself. In China the Tang dynasty collapsed in chaos following the Huang Chao rebellion of 875-84, and when the Later Liang succeeded the Tang in 907 it only controlled a fraction of the country. At almost the same time the Khitan tribes united under the able leadership of Apaochi and threatened both the warlords of the Chinese borderlands and the waning kingdom of Parhae.

The final collapse of Greater Shilla coincided with these events. The Samguk sagi suggests that it was triggered by the accession to the throne of another ruling queen, Queen Chinsong (887-897) who attempted to collect taxes throughout the country at the end of a year’s amnesty following a famine, but here we may be in the presence of a hostile historiographic tradition. Certainly by the end of the century large scale banditry was rampant; interestingly enough, the bandit leaders were not the provincial nobility who had contended for power in earlier struggles, but individuals from various underprivileged groups. Kyôn Hwôn in the south-west was a farmer’s son who had served as an officer in the coastal defence system and had taken the opportunity to form his own private army; his career thus recalls that of Chang Pogo half a century earlier. In central southern Korea his great rival, Kung Ye, allegedly the illegitimate son of a Shilla king, had survived (with the loss of one eye) an attempt to put him out of the way in early infancy. Not surprisingly his whole career (which included a brief period as a Buddhist monk) was a bitter vendetta against the Shilla court. When he occupied the provincial centre of Hung-ju he is said to have slashed with his sword at the portraits of Shilla kings in the great temple, and to have denounced Shilla for bringing in foreign troops to destroy Koguryó. Nevertheless, once he had styled himself king the title he chose for his kingdom (in 904) was not Koguryó or Koryó but Majin, a term with magico-religious associations. In contrast, when Kyôn Hwôn entered Wonsan in 900, he took advantage of local discontent with the Shilla court to proclaim himself King of (Later) Paekche.

In the conflicts of the early ninth c. those with power bases in the provinces had striven to control the succession to the Shilla throne; this was no longer the case. With its influence confined to Kûmsông (Kyongju) and its environs, the court had become a largely irrelevant factor in the civil wars, although the fact that amongst the last Shilla kings there were several from the Pak consort family suggests that succession problems still continued there. But the court was clearly living on borrowed time; the real struggle was between Kyôn Hwôn and Kung Ye.

In this contest Kung Ye was aided by his able lieutenant Wang Kôn, whông) and were perhaps involved in the China trade. Certainly Wang Kôn seems to have had a grasp of naval warfare; he established an island base in the south-west of Kyôn Hwôn’s sphere of control and not merely resisted all attempts to expel him from there but succeeded in threatening Later Paekche’s trade link with China. Eventually Wang Kôn’s achievements may have begun to appear somewhat excessive to his leader, and in 913 he was recalled to Kung Ye’s court at Ch’ôrwôn in central Korea.

Surviving in the nightmarish atmosphere of Kung Ye’s court may have required even more skill than Wang Kôn’s expeditions against Later Paekche. Jealous of his rivals and suspicious of his subordinates, Kung Ye sought to bolster his power by claiming
supernatural authority; he announced that he was Maitreya, the coming Buddha, who could see into the hearts of men and discern their secret motives, and that his two sons were Boddhisattvas. This did not prevent him from putting his sons to death with horrific torments when he became suspicious of them too. Such a reign of terror could not go on indefinitely without producing a reaction, and on 24 July 918 what was clearly a well-prepared coup overthrew Kung Ye and installed Wang Kōn in his place. After hiding in the mountains for a few days, Kung Ye was killed by peasants from whom he was seeking food.

Wang Kōn and his followers reorganised the northern kingdom and shifted its capital from the inland town of Ch’örwŏn to Songak (Kaesŏng), the home of Wang Kōn’s family; it was not long before diplomatic contact was made with the state of Wuyue in southern China, circumventing Later Paekche’s attempted monopoly of the China trade. Wang Kōn also renamed his state Koryŏ, asserting a continuity with the earlier northern kingdom of Koguryŏ; by 919 he had had P’yŏngyang, the old ruined capital of Koguryŏ, refortified. There was more interest than sentiment to prompt such measures, since at this time the expanding Khitan power was pressing hard upon the kingdom of Parhae, eventually overrun by Apaochi’s armies in the winter of 925-26, and crowds of Parhae refugees, including members of the royal house, were going over to Koryŏ.

Another change of direction was the development of diplomatic contacts with the Shilla court, unthinkable in the time of Kung Ye. It was perhaps inevitable that in this protracted struggle between three states the weakest should seek the alliance and protection of one of the other two, and this combination persisted even though governors of isolated towns north of Kyŏngju who were still holding out for Shilla now began to go over to Koryŏ. Naturally it sharpened the rivalry between Koryŏ and Paekche, in spite of an attempt to stabilise relations between the two by an exchange of hostages. But in 926 the Paekche hostage died in Koryŏ and Kyŏn Hwŏn, refusing to believe that this was a natural death, reopened hostilities. In fact time was now running out for Kyŏn Hwŏn; he was already a man of sixty and had been campaigning for over thirty-five years. In October 927 he suddenly launched his main army against Kyŏngju, surprising the Shilla court while it was on a pleasure trip outside the city. The Shilla king was forced to commit suicide in front of the Paekche troops; the court ladies were handed over to them and the whole place ransacked, although a puppet king was also appointed. Wang Kōn, hurrying up with an inadequate force in response to a last minute appeal for help from the Shilla court, was surrounded and very nearly killed, and only escaped thanks to the devotion of a handful of his followers.

For the next few years southernmost Korea was dominated by Kyŏn Hwŏn. However, the latter does not appear to have developed any long range strategies to counter his still powerful rival; his forces plundered southern Koryŏ and the lands of his nominal puppet in Shilla alike, inevitably causing the latter to make common cause with Wang Kōn, and from 930 the tide had again turned in Koryŏ’s favour. In March, 931 Wang Kōn himself visited the Shilla court and was entertained by King Kyŏngsun who was apparently already considering abdicating the throne in his favour. This actually took place in November 935, when this last Shilla king led his court to surrender to Wang Kōn in Kaesŏng.

Meanwhile Kyŏn Hwŏn had been overthrown by his son Kyŏn Shimgon, who resented having been passed over as heir to the throne. Kyŏn Shimgon killed his more favoured brother and shut up his father in a Buddhist temple at Kŭm-san. After three months the old warrior was able to escape, and to make his way to the court of his hated rival Wang Kōn. Wang Kōn now prepared to invade Paekche to punish Kyŏn Shimgon’s unfilial behaviour, and he did so in September 936, accompanied by Kyŏn Hwŏn. In the circumstances, support for Kyŏn Shimgon could scarcely be wholehearted, and in the battle of Ilsŏn-gun on 26 September 936, the Paekche army was routed and Kyŏn Shimgon and his brothers surrendered to Koryŏ. Kyŏn Hwŏn, embittered and humiliated, died a few days later,
495

bringing to an end the era of the warlords, the so-called Three Later Kingdoms.

Greater Shilla and Parhae

After the Tang Invasions

With the destruction of its two traditional rivals, Koguryo and Paekche, Shilla entered upon a new phase in its long history. At first it had to counter the threat represented by those Tang armies still remaining in Korea, occupying areas which the Tang court regarded as rightfully part of its empire. These forces came under increasing pressure as Shilla, claiming the need to secure itself against so-called ‘Paekche drifters’ took over more and more of the south-west. Eventually the Tang launched a series of punitive campaigns against Shilla, but these proved singularly ineffective, largely because T’ang resources were now seriously overstretched and were needed to defend other frontiers (notably against Tibet). By 679 China had effectively acquiesced in Shilla’s rule over the whole of the former Paekche kingdom and over southern Koguryo; in this same year the Shilla court despatched officials to take over the island kingdom of T’amma (Cheju-do) formerly a dependency of Paekche. Now begins the period of Greater Shilla (sometimes misleadingly called Unified Shilla).

With the regularisation of relations with the Tang, cultural contacts between Shilla and China naturally increased. A stream of Buddhist monks travelled from Shilla to China and beyond - such as Hyech’o, who left a record of his travels to India in 726. Even greater numbers of students went to Chang’an and Luoyang to study the Confucian classics - in one year alone 105 such students are said to have returned from China to Shilla. Largely as a result of these contacts the Shilla court attempted a superficial sinocisation of local institutions, including the introduction of the Tang examination system, the registration of land holdings and regular distribution of land to peasants. Some of these changes were probably intended to curb the power of the great provincial families, more threatening now that the Shilla royal house only enjoyed chin’gol status. For the ‘bone-rank’ system continued to stratify Shilla society, and restricted even access to examinations to the upper reaches of the aristocracy, with the result that some of the more talented individuals from outside this group (such as the great scholar Ch’oe Ch’iwôn at the end of the 9th c.) found it easier to go to China and gain an official position there.

In spite of these internal contradictions in Shilla the period saw an efflorescence of the arts in the peninsula. Chinese characters were adopted in an attempt to represent the sounds of the Korean language (hyangch’al), and in this cumbersome system the earliest known Korean poems have been preserved. State patronage of Buddhism was responsible for some of the most spectacular examples of Shilla art - a number of enormous temple bells, one the second largest in the world, and the famous Sokkuram grotto. Moreover, the earliest printed text in the world appears to be a dharani prayer discovered in the base of the 751 Pulguk-sa pagoda in 1967, a wood block print which clearly antedates the earliest known use of wood block printing in China.

The Rise of Parhae

Well before the end of the 7th c. Shilla expansion had come to a standstill, although the inadequate sources do not clearly show why. The change may have been connected with difficulties which the Shilla court was having in controlling the provincial nobility, as already mentioned. It is clear that Shilla rule never extended north of the Taedong river, and the ruined city of P’yöngyang remained in a kind of no-man’s land, controlled neither by Shilla nor China. In 697 the revolt of the Khitan tribes west of the Liao effectively terminated Chinese control in Liaodong, and within a few years the Malgal tribes, formerly a subject group under Koguryo, had come together to form their own kingdom under the leadership of a certain Tae Choyông, whose ancestors had been Koguryo generals. Hoping
to use Tae Choyŏng as a counter to both the Khitan and the Eastern Turks, the Tang court in 713 bestowed upon him the title of ‘King of Parhae’; the state which he founded was to survive for another two centuries.

Unfortunately Kim Pushik, author of the Samguk sagi being a descendant of the Shilla royal house, deliberately excluded Parhae from his account of Korean history and, since no Parhae records have survived, this means that we are dependent on the superficial and sinocentric accounts in Chinese dynastic records for most of our information on this state. However even from these sources it is clear that Parhae soon emerged as an important regional power, taking over the old Koguryŏ territory in Manchuria and the northern third of Korea. Its rulers claimed to be the legitimate successors of the kings of Koguryŏ, and in the Japanese records - Parhae initiated diplomatic contact with Japan in 727 - the rulers of Parhae are invariably termed ‘Kings of Koryŏ’, the shortened form of Koguryŏ.

Almost nothing is known about Parhae’s relations with Shilla, though Kim Pu-sik affirms that Shilla built a defensive wall across its northern frontier early in the 8th c., and in 735, when Tae Muye, the second ruler of Parhae (reigned 719-737) had come into conflict with the Tang, the latter pressured Shilla into launching a northern expedition against Parhae. The result was catastrophic; caught in the early onset of winter over half the Shilla army perished in blizzards, and the dispute between Parhae and China was eventually settled by diplomatic means. Under Tae Muye’s son and successor, King Mun (reigned 737-794), Parhae reached the height of its power, and it is from this period that a rare piece of evidence of Parhae material culture has survived, the tomb of a Parhae princess, excavated between 1953 and 1959; the grave goods included golden earrings, jade ornaments and a carved stone lion.

The Decline of Shilla: Chang Pogo

During the second half of the 8th c. it becomes clear, even from the Samguk sagi’s scrappy account, that the problems of Greater Shilla were beginning to assume a more threatening character. In 780 King Hyegong perished in the course of a palace revolt and the throne, hitherto hereditary, albeit in a chin’gol lineage, now became something which any leading noble could hope to seize. In the ensuing struggles for power and influence at court it was the ordinary people of Shilla who suffered most; while the Samguk sagi mentions repeated droughts, locust plagues and resultant famines, the Chinese histories speak of boatloads of starving refugees from Shilla coming ashore in South China.

The career of Chang Pogo epitomises the problems of this time. A commoner, Chang Pogo had gone off to China to seek his fortune together with a friend. Returning to Shilla after a brief career as an officer in the T’ang armies, he somehow managed to persuade King Hŭngdŏk (reigned 826-36) to put him in charge of an island garrison off south-western Korea so that he could stop pirates from carrying off those living along the coast for sale overseas as slaves. In this endeavour he was successful, and in the process built up a most effective private army; when coup and counter-coup erupted in the capital after King Hŭngdŏk’s death, Chang Pogo’s support was worth having, and in 839 his forces captured Kŭmsŏng (Kyŏngju), killed the usurper who had been maintaining himself there, and installed a rival candidate for the throne. Though this candidate died almost immediately, Chang Pogo continued to support his son and successor King Munsŏng (reigned 839-57), and received an appanage of 2000 families. His ships now controlled the China Sea and, when the Japanese Buddhist monk Ennin travelled to China in 839, we know from his extant travel diary that he went in one of Chang Pogo’s ships and stayed in a monastery in Shandong built by Chang Pogo for Shilla monks. Nevertheless when King Munsŏng proposed to make Chang Pogo’s daughter his queen, an uproar at court over this unseemly promotion of an ‘islander’ compelled him to abandon the idea. This in turn alienated Chang Pogo, who prepared to rebel but was murdered by an agent from the court, probably in the winter of 841-42. But the court’s victory was hollow; when the garrison which Chang
Pogo had commanded was abolished, presumably to prevent others from following his example, the China Sea became so unsafe that diplomatic missions between Shilla and China, and between Japan and China, came to an end. The Shilla ‘dynasty’ continued, but from now on the *Samguk sagi* account concentrates almost entirely on affairs of the capital, suggesting that the kings had already lost control over most of the country.

**Koryo Dynasty (918-1392)**

The Koryo kingdom, from its founding in 918 to its collapse in 1392, occupies a pivotal period in Korean history. As a link between Silla and Choson, it inherited the traditions of the former and laid the foundations for the latter. In this role, it transformed and developed itself to new levels of institutional and cultural sophistication. Because of its refined governing apparatus, spirited defence of its land from foreign conquerors, and priceless artistic and literary masterpieces, Koryo has been labeled a golden age in Korean history.

**Founding: 918-949**

Koryo history commences in the early tenth century with the disintegration of Silla. As the Korean peninsula divided into three warring sections, Wang Kon (d. 943), Koryo’s future dynastic founder, achieved prominence as an able warrior under the northern regional lord Kim Kungye (d. 918). Kungye, a scion of Silla’s royal Kim clan, called his state Later Koguryo. To the southwest the state of Later Paekche under Yi Kyونhwŏn (d. 936), a peasant-soldier, dominated the area. Silla retained only the loyalty of the people of the southeast. Kungye initially attracted a number of local authorities to his banner. During the early tenth century, Wang Kon, one of many leaders, quickly proved his worth as both an able general on land and a superior tactician on sea. Despite Wang Kon’s military successes, Later Koguryo floundered as Kungye became increasingly tyrannical. Believing he was an incarnation of a bodhisattva, he sponsored lavish ceremonies that depleted his state treasury. And in carrying a determined hatred for Silla traditions, he refused to employ Silla intellectuals who offered their expertise and even executed people who spoke favourably of Silla.

By 918 life under Kungye had so deteriorated that Wang Kon, supported by a number of disaffected officers, revolted, executed Kungye, and founded Koryo. Wang Kon, the son of a prominent maritime leader, made his home district in the Imjin River estuary the new capital, calling it Kaegyong or Kaesŏng. He consolidated his position by relying on his skill both as a diplomat and a talented general. In building his new state, he sought to unify the diverse regions of the peninsula. Mindful of the country’s northern heritage, he name the kingdom Koryo which is a shortened form of Koguryo. From the south he welcomed men from the Silla kingdom and sought to infuse his regime with Silla’s educated elite, thereby gaining a modicum of the old kingdom’s legitimacy. He also sought to build his authority through a number of strategic marriage alliances with regional leaders across the peninsula, ultimately marrying 29 women. Coupled with these tempered policies, he vigorously fought his opponents and by 936, with the surrender of Yi Kyŏnhwŏn of Later Paekche, reunified the peninsula, securing his new state.

Aware of the many latent threats to his kingdom and fearful that his successors would be unable to govern effectively, Wang Kon issued a series of commands called the Ten Injunctions (ship hunyo). In these warnings, the dynastic founder urged restraint in foreign affairs and the practice of Buddhism, and discussed principles of governing and issues of succession. Despite his appeals, power struggles marred the next reigns as a number of Wang Kon’s allies sought to dominate the new kings. Wang Kyu (d. 945), a royal son-in-law, tried to kill King Hyejong (943-945) and place his own grandson on the throne. Koryo’s third king, Chŏnjong (945-949), even considered moving the capital to Pyŏngyang to escape the threats posed by the some of the powerful regional leaders.
Consolidation: 949-1009

Although Wang Kôn and his lieutenants established the dynasty within a twenty year period, the process of dynastic consolidation consumed the next sixty years, lasting until the end of the tenth century. Two kings in particular, Kwangjong (949-975) and Sŏngjong (981-997), son and grandson of Wang Kôn, were the key architects of this policy. On becoming king, Kwangjong was determined to assert his authority, having watched the two previous monarchs struggle against the regional strongmen. He launched an investigation into the social status of slaves, many of whom had been captured in the battles for reunification, and manumitted those wrongly seized. In the process, he won the loyalty of the formerly enslaved and also curtailed the economic power of the slave owners, who were frequently regional strongmen. When he continued to face opposition, he launched a purge that by some accounts packed the prisons.

In an attempt to build monarchical power through an invigorated officialdom, Kwangjong also inaugurated a state examination system that was modeled on Chinese precedents. With the help of an advisor from China, he instituted the examination system in 958 and recruited a number of men into the government in part based on their ability to understand the Chinese classics. To give added dignity to his officialdom, he reintroduced a garb system where an official's status was indicated by the colour of his robe. In yet another attempt to enhance his government's authority, he called himself "emperor" rather than king, and his capital became known as the "Imperial Capital."

Sŏngjong, while repudiating some of Kwangjong's more drastic policies, continued to augment royal power and centralize the Koryo state. During his reign Ch'oe Sŭngno (927-989), a young Confucian scholar, emerged as a powerful voice for reform. In a 28 point reform proposal submitted to the king, Ch'oe first reviewed the errors of the former kings citing especially their excessive dependence on Buddhism and then proposed specific policies. Ch'oe put special emphasis on recruiting only able officials, retaining but limiting contacts with China, establishing a regional governmental structure to meet the needs of the people, and guarding against the over consumption of goods and other excesses by the officialdom. Under Ch'oe Sŭngno's influence, Sŏngjong relied heavily on Confucian norms that called for frugality in governing. He sought to educate the youth in the Chinese classics and extend direct central-government control over outlying areas by dispatching officials to head provincial administrations. In this way, structure and system were brought to Koryo.

Aristocratic State: 1009-1170

From this foundation, Koryo matured into a stable, sophisticated state during the next century. Slowly an aristocratic elite of great families emerged, with their power resting in part on a sound education in the Confucian classics and control of key government offices. By monopolizing offices of prestige, they were able to gain control over large tracts of land and thereby win a degree of economic security. To sustain their positions of influence, they intermarried with other elite families and also relied on such governmental mechanisms as the protective appointment which allowed men of high rank to name a family member to a government post. The clan system which became a distinguishing characteristic of Chosŏn yangban society began to emerge at this time. Great families such as the Ansan Kim or the Inju (Kyŏngwŏn) Yi repeatedly held the most prestigious and influential offices and provided queens for the royal family. From their clan seats such as Ansan or Inju, they established themselves at court in Kaesŏng and dominated Koryo aristocratic life.

This society emphasized education. From the start of the kingdom, schools were in Kaesŏng and P'yŏngyang, the Western Capital. Sŏngjong, by establishing the National University (Kukchagam) in 992, actively promoted the study of Confucian learning. The state further expanded its educational efforts in the 12th century with the founding of scholarship foundations and academic institutes to promote the study of especially the
Chinese classics. In Munjong's reign (1046-1083) Ch'oe Ch'ung (984-1068) established his own private academy which became a model for a number of other privately endowed institutions. These schools became popular among the elite where personal ties that lasted throughout their lives developed between masters and students. Sŏngjong labored to extend learning beyond Kaesŏng by dispatching scholars to the countryside to teach Confucian principles. In the 12th century Injong (1122-1146) fostered these endeavours and founded regional schools in a number of localities.

Koryŏ developed a complex governing apparatus. As in other areas, Chinese models provided the initial inspiration for Koryŏ's bureaucratic divisions, but in operation the kingdom relied heavily on consensus building institutions. The Council of State (Chaesang) which comprised the top officials of the Royal Secretariat and Chancellery (Chungsŏmunhasŏng) and the Security Council (Ch'umirwŏn) established policy and directed the Six Ministries (Yukbu) to implement their decisions. Gradually censorial agencies became powerful in reviewing and critiquing both policy and official action. The king presided over this structure providing a sense of unity and symbolizing state authority.

Regional administrative units (to, chu, hyŏn) developed as primary links between the central authority and the people in the countryside. Through centrally appointed magistrates, the dynasty tried to maintain its control over the people. The state military structure called the Two Guards and Six Divisions was the primary peace keeping force. Stationed in the Kaesong area and along Koryŏ's northern border, they protected the dynasty from internal and external emergencies. The soldiers who filled these units were professionals who stayed in the military throughout their lives. When invasions or internal rebellions threatened the country, the dynasty would conscript peasants into specially formed central armies and, placing them under civilian leaders, these armies became the major defense force that was disbanded only after the danger had passed.

Central, civil officials and military officers were paid stipends and granted specific yields from land according to the Stipend Land Law (chŏnshikwa). This law established 18 grades by which officials according to their ranks received yields from land allotments for the duration of their careers. Similar grants were offered to soldiers. Besides these publicly acknowledged land holdings, officials privately gained control over land and passed parcels on to succeeding generations.

Challenges to this structure came from both foreign and domestic sources. Even before Wang Kŏn had consolidated his new authority, the Mongolian Khitan tribe had posed a latent threat. Because of Khitan incursions and their destruction of the Manchurian kingdom of Parhae, Wangŏn in the Ten Injunctions warned his descendants to be wary of this foe. His words were prophetic, for the Khitan invaded Koryŏ three times during the late ninth and early tenth centuries, sacking Kaesŏng on one of these forays. The people of Koryŏ resisted by building walls around their capital as well as across their northern border. Sŏ Hŭi (940-998), a civilian leader who assumed command of a Koryŏ army, when confronted with Khitan demands for Koryŏ territory, advised resistance rather than surrender. He backed his position by personally confronting the Khitan commander and, in pointing to Koryŏ's Koguryŏ heritage and rights to land in the northern part of the peninsula, negotiated a favorable settlement. When several decades later the Khitan launched a final invasion, another Koryŏ official led forces that overwhelmed the invaders and ended the Khitan threat. Not content with these measures alone, Koryŏ sought to invoke divine intervention by carving on woodblocks the entire Buddhist Tripitaka.

In addition to the Khitan, Koryŏ also had to contend with the Jurchen, another northern tribal people, and Song China. No sooner had the Khitan been subdued than the Jurchen in the late 11th century rose to pose a similar threat to Koryŏ's northern frontier. After a series of intense encounters, relations with the Jurchen stabilized, and when the Jurchen conquered northern China and established the Jin state in 1126, Koryŏ exchanged tribute
missions with Jin. With Song China, Koryō established amicable ties relying on both diplomatic and commercial links. Admiring Song material achievements, Koryō actively sought to borrow not only Sung institutions, but Song products. Exporting gold, silver, ginseng, and fans, Koryō imported silk, medicine, musical instruments, and books. However, these cultural ties never jeopardized the national interests of either state. When Koryō called on China to aid in resisting the invading Khitan, China refused, as did Koryō when China asked for help in rescuing a captured emperor in 1126.

Domestic unrest also threatened the security of the state. As Koryō aristocrats increased their monopoly over top offices, several clans, such as the Yi clan of Kyôngwŏn, became especially powerful. They not only held many offices of prestige but also intermarried with the royal family in an effort to affect policy at the highest levels. Although one Yi clansman in the late 11th century made an initial attempt to control the dynasty, the most serious challenge occurred in 1126 when Yi Chagyŏm (d. 1126), who was both father-in-law and grandfather to the young king Injong (1122-1146), threatened the throne. Other aristocrats blocked his attempt, ultimately causing his defeat, but the dynasty survived in a weakened state.

The Yi Chagyŏm revolt of 1126 was one indication of growing internal unrest. Another sign was the Myoch'ŏng revolt less than ten years later. A charismatic monk, Myochŏng (d. 1135) charmed King Injong into believing his dynasty was threatened unless he moved the capital north to Sŏgyŏng (Western Capital). Relying upon geomantic theory and calling for a declaration of independence from Chin China's influences, Myoch'ŏng revolted in 1135. The ensconced Kaesŏng elite, led by the Confucian scholar Kim Pusik (1075-1151), fought back, defeated Myoch'ŏng, and secured the dynasty. Myoch'ŏng's revolt embodied the clash of several interests. On one side was Myoch'ŏng who represented Buddhist impulses, independence from the Chinese world order, and a call for native, non-elite, non-Kaesŏng traditions. In contrast was Kim Pusik who stood for Koryŏ's Confucian heritage, the power of the central Kaesŏng ruling class and a China-centered foreign policy. Kim Pusik's victory reaffirmed the authority of the latter, and afforded the kingdom a superficial, short-lived sense of security.

**Military Domination: 1170-1270**

The costs derived from these two failed rebellions were mounting and ultimately contributed to the military coup of 1170. Peasants burdened by civil unrest and forced to pay for these military expeditions fell further into debt. Military officials, smarting under civilian domination and yet assuming a new confidence through their successful roles in defeating both Yi Chagyŏm and Myoch'ŏng, became disillusioned with state affairs. When the new king Uijong (1146-1170) came to power, he cared less for governing, choosing instead to pursue pleasure. Uijong, building new palaces and gardens, spending his funds on travels and banquets, all but ignored the growing problems in the kingdom. In addition to an oppressed peasant class, there were a number of conscientious civilian leaders and military officers who wanted change. Shortly after General Ch'ŏng Chunghu (d. 1178) had his long white beard set on fire by a drunken civilian elite, he led fellow military officers in a coup that killed a number of the more dissolute civilian officials and forced King Uijong to abdicate.

In the years that followed the coup, Koryŏ society rapidly deteriorated as generals at the top struggled among themselves for control over the dynasty, and peasants, slaves, and monks rebelled to protect their own interests. Initially the Council of Generals (Chungbang) which comprised the key military leaders of the age, tried to govern, but the power of this agency collapsed under the ensuing chaos of rebellion. It was not until 1196, when a young general from a military family named Ch'oe Ch'ung'hŏn (1149-1219) came to power, that a degree of stability returned to Koryŏ. An innovator, Ch'oe Ch'ung'hŏn established a new structure that would last four generations until his great grandson was assassinated in 1258. He
announced his intentions to reform shortly after he assumed control through the publication of his own ‘Ten Injunctions. In this document somewhat reminiscent of Wang Kön’s earlier appeal, Ch’oe Ch’unghón sought to curtail the excesses of Buddhist monks and civilian elites, limit the number of governmental offices, and promote only talented people.

To restore order to the kingdom, General Ch’oe built his own private military power and purged possible sources of military resistance. Gradually he augmented his own armed force and allowed the dynastic troops to atrophy into insignificance. Aware that he needed a strong administration, General Ch’oe turned to established civilian families and recruited the educated elite into his government by means of both handsome stipends and the state examinations. He consciously addressed the problems of social unrest by refreezing the social order and decisively defeating slave, peasant, and monk insurrections. To refine further his governing apparatus, he brought a number of dynastic decision-making agencies into his own house and ruled the kingdom through an ad hoc dynastic directorate (Kyojong togam). He also controlled the royal family, forcing kings who opposed him to abdicate and richly rewarding those who were compliant. The Personnel Authority (Chongbang) developed under Ch’unghón’s son and became a major agency for Ch’oe recruitment. Ch’oe leaders placed talented, learned men into this office, making it an important centre for Ch’oe policy. Institutionally, the Personnel Authority survived even the collapse of the military leaders and was an organ of civil power into the 14th century. For a number of decades, the Ch’oe House governed Koryó through this dual organization of private and dynastic institutions, with Ch’oe private agencies governing the country while dynastic offices afforded the regime a specter of legitimacy.

Initially the Ch’oe House was quite successful as power transferred to Ch’unghón’s son U (d. 1249). However, there were certain institutional contradictions that ultimately undermined this order. Ch’oe Ch’unghón had stabilized the dynasty in part by invoking tradition. But through his manipulation of the royal family and reliance on the civilian elite and their norms, he became dependent on these institutions and their sanctions of legitimacy. When the Ch’oe House heir was assassinated in 1258, civilian leaders quickly maneuvered to restore authority to the court and commence a process that once again would isolate generals from key dynastic offices.

The greatest threat to the stability of the Ch’oe House did not come from civilian opposition or domestic unrest, but from Mongol attacks. The Mongols first confronted Koryó early in the 13th century, and by 1231 they invaded the country with a massive army. Ultimately the Mongols forced their way over the peninsula seven different times, bringing destruction and death wherever they roamed. That the Koreans chose to resist rather than submit affords insight into the determination of the Korean character. With the first Mongol attacks, the Koreans used every means available to defeat the enemy. All social groups withstood the Mongol onslaught and retaliated. When these measures failed, the Ch’oe House opted to evacuate the capital to the offshore island of Kanghwa and urged the peasantry throughout the peninsula to resist the Mongols from the islands and mountain fortresses of Koryó. As they had under the earlier Khitan siege, the Koryó people again appealed to Buddha’s intervention and carved the Triptika in 80 000 woodblocks as a sign of their devotion. None of these measures protected the Koreans from the Mongols. The people suffered huge loss of life and destruction to their farmlands, and the culture witnessed the looting of many literary works, buildings, and cultural treasures. Shortly after civilian and military leaders toppled the Ch’oe House, they sued for peace with the Mongols and by 1270 the Koryó court returned to the mainland, marking their submission to Mongol rule.

Some Koreans chose to resist even this peace. Disgruntled military officials, unwilling to surrender to Mongol authority, rebelled. Using the Three Elite Patrols (Sambyölc’o) and forming an anti-Mongol regime, they enthroned a royal clansman to be their king. First occupying Kanghwa island as their base, under pressure from combined Koryó and Mongol forces, they evacuated to Chin island in the southwest and then to Cheju island.
Their struggle ended in defeat in 1273.

**Late Koryo: 1270-1392**

For the next century the Mongols controlled Koryo. Initially their rule was harsh, but by the middle of the 14th century, as Mongol authority waned across Asia, so did their influence in Korea. No sooner had these new overlords taken Korea than they demanded that the conquered country outfit an invasion force to capture Japan. When a typhoon destroyed the first invasion, the Mongols ordered a second expedition which set out in 1281 and was also swept away by another storm. The Koreans, forced to provide many of the provisions, men, and ships, bore the costs of these two disastrous defeats.

The Mongols sent military governors to Korea and tried to rule the country through them. They also established a special office, the Eastern Field Expedition Headquarters, first to direct the Japanese invasions and then to administer Koryo. Through this agency the Mongols manipulated the royal family, exacted huge tribute requests that included demands for gold, falcons and women, and put some Koryo land directly under Mongol jurisdiction. As the people of Koryo helplessly watched the dismemberment of their country, they slowly grew more bold, beginning to express a sense of national consciousness through literary works, and arguing for their own sovereign interests through diplomacy.

The Mongol domination of Koryo brought the country into closer contact with Chinese culture. On the frequent visits of the Koryo embassies to the Mongol capital, Koryo and Chinese scholars met. For a variety of reasons, both Mongol and Koryo officials proposed reforms for Koryo society. King Kongmin (1351-1374), during whose reign Mongol authority disintegrated in China, became a strong proponent of changes to curtail the influences of the great Koryo clans that had prospered under the Mongols. In trying to eliminate their excessive land and slave holdings, he was assisted by the Buddhist monk Shin Ton who became a key royal adviser. The king recruited Sin Ton because of his humble origins and lack of ties to the Koryo elite. Together, king and subject, charted policies that attacked the entrenched central elites who had prospered by manipulating Koryo's contacts with the Mongols. Especially prominent at this time was the Ki lineage which had married one of its women to the Mongol emperor and then enjoyed and abused its elevated status. The reforms advocated by King Kongmin attacked the vast wealth of these aristocrats and challenged the intrusive authority of the Eastern Expedition Field Headquarters. Because of their aggressive policies and the success of their reforms, dissident forces assassinated King Kongmin and removed from power and then killed Shin Ton.

During King Kongmin's reign there lived a number of other reformers who also assisted him and through their fierce defence of Confucian norms, they placed a renewed emphasis on Confucian ideals causing Confucianism to flourish. Influenced by changes in Chinese thought that they learned of through increased contact with China, Koryo officials sought to restitute moribund Confucian traditions and press for reforms. The foundations of the Neo-Confucian state that would be embodied in the rise of Choson was laid in these last decades of Koryo. These same reforms that caused Koryo officials to challenge their subordination to Mongol authority, infused them with the determination to contest both the domestic and the foreign order by establishing a new dynasty in 1392.

Tensions fractured Koryo history, as the court and central officialdom, central and regional authority, military and civilian power, Confucian and Buddhist impulses, rich and poor, and domestic and foreign interests vied for primacy. These divisions were both negative and positive in potential. They were negative in that they occasionally split the country and brought it to the verge of collapse. They were positive because, when controlled, they propelled Koryo forward toward new levels of achievement and
sophistication. The negative has been seen in the insurrections, rebellions and invasions that marred Koryô's 474 years of history. The positive can be enjoyed materially even today through a cultural legacy that illustrates Koryô's eminence.

**Cultural Heritage**

Koryô produced priceless artistic treasures. Korea's earliest extant wooden buildings date from late Koryô and reveal a refined simplicity and subtle beauty. Of even greater renown is the celadon that has been so closely associated with Koryô's greatness. Capturing a greenish hue that has been unmatched to this day, Koryô potters also innovated with novel designs and perfected an inlaid technique on the surface of their vessels. Although much of Koryô's legacy in painting has been lost, there are a few remaining Buddhist portraits that reveal a similar intricacy and sophistication.

While producing masterpieces in art and architecture, Koryô scholars also wrote peerless verse. Because of the terrible destruction wrought to Koryô by both the Khitan and Mongol invasions, few literary works remain from before the 12th century. In those native songs (hyangga) surviving from early Koryô, readers gain a sense of honesty and frankness in the portrayal of life. These same themes can be found in the literature of the mid-Koryô writer Yi Kyubo (1168-1241). Yi Kyubo, under the patronage of the Ch'oe House, wrote prolifically on nearly every theme imaginable. Especially noteworthy were his appeals to the Mongol court, which are reported to have brought tears to the eyes of the conquering khans. Other period writers include the poet Chông Chisang (d. 1135) and the prose writers Yi Illo (1152-1220) and Ch'oe Cha (1188-1260). Chông Chisang, an ally of Myoch'ông and executed for his participation in that rebellion, eloquently presented the pathos often found in Korean expression, as he lamented the inevitability of parting or separating from people and places held dear. Both Yi Illo's *Jottings to Break Up Idleness* (P'ahan chip) and Ch'oe Cha's *Supplementary Jottings in Idleness* (Pohan chip) are collections of essays on any number of topics that afford insight into the people and the literary sophistication of Koryô.

Two key histories have also survived from mid Koryô. *Samguk sagi* (The History of the Three Kingdoms), compiled under the supervision of the Confucian scholar Kim Pushik, appeared in 1145. Adapting Chinese historiographical traditions to Koryô, Kim Pushik divided this history into four major parts, annals, chronology, treatises, and biographies. The Buddhist monk Iryôn (1206-1289) wrote *Samguk yusa* (The Memorabilia of the Three Kingdoms) in the late 13th century, while Koryô was suffering under the Mongol occupation. Filled with legends and tales of early Korea, the *Samguk yusa* offered a monk's interpretation of Korea's heritage in contrast to the measured, scholarly analysis of Kim Pushik. Both works, in addition to providing a history of early Korea, reveal a clear consciousness of Korean traditions and heritage. Innovations in printing, such as the use of a moveable metallic print, facilitated the dissemination of all sorts of writings and literature.

Religious and philosophic expression was another underpinning of Koryô life. Shamanistic and geomantic beliefs, expressed through art, architecture, and literature, remained at the very root of much of Koryô's life. Buddhism played an equally significant and fundamental role. In early Koryô, both the Doctrinal (Kyo) and Meditation (Sôn) Schools found broad support among the central and regional elite. In the 11th century, the royal prince Uich'on (1055-1101), after traveling to China, founded a new school called Ch'ont'ae which tried to fuse scholarship and meditation. At the end of the 12th century, Chinul (1158-1210), a monk who received Ch'oe House patronage, reinvigorated the Buddhist world by placing new emphasis on the Meditation school. Largely through his and his disciples' efforts, Meditation became the dominant religious force in late Koryô, as both the ruling elite and the farming peasant embraced it. Buddhist holidays captured the imagination of the people. The Lantern festival (Yöndunghoe) in the spring and the Assembly of Eight Prohibitions (P'algwanhoe) in the eleventh month became annual
festivals to honor local spirits and represented the merging of Koryo's various spiritual traditions.

Confucian principles, studied and practiced throughout the dynasty, remained the ideology for good government. In the early 12th century and then in the 14th century, scholars seriously discussed its concepts and applied them to governing. In part stimulated by metaphysical speculation originating in China, late Koryo scholars like An Hyang (1243-1306) and Chŏng Mongju (1337-1392) epitomized this new thinking. Many of late Koryo's intellectuals, in an effort to forward Confucian analysis, criticized the excesses of Buddhism. They also attacked some scholars' excessive attachment to literary studies and poetry. These approaches, coupled with a rigid adherence to principle or righteousness and a call for the moral cultivation of rulers, characterized the new thinking that has been labeled Neo-Confucianism. Moreover, through their writings, late Koryo scholars, becoming strong advocates of reform, drew on the efforts espoused by King Kongmin. Other Neo-Confucian thinkers like Chŏng Tojon (d. 1398) shaped these ideas into a political platform that helped to establish the foundations leading to the rise of the Chosŏn kingdom in 1392.

Retrospect

The legacy that is Koryo remains to this day. Koryo people, concerned about power relations, adopted a system of governing that was Chinese in practice, but tempered by Korean norms. They developed an examination system based on Chinese standards and used it to attract new blood, but also continued to rely on men with lineage. Buddhism, often at the spiritual center of Koryo aristocratic life, became by the end of the dynasty the property of both the elite and peasant class. Contributions in literature and the fine arts have remained an important reminder of Koryo's heritage. It is through the expressions of these traditions that Koryo people demonstrated a love for their land and a sense of belonging to that land that has remained steadfast to the present. Finally, it is in Koryo that the western world first learned of Korea, and the word "Koryo" provided the name by which the country of Korea is now known to the West.

Chosŏn Dynasty (1392-1450)

The establishment of the Chosŏn Dynasty

When the Chosŏn dynasty was founded in 1392, it brought to an end over two hundred years when the power of the kings of the Koryo dynasty (founded 918) had been reduced to a virtual nullity by a military coup in 1170 and Mongol overlordship in 1258. King Kongmin's attempts to rebuild royal power after 1351 were thwarted by aristocratic yangban families. General Yi Sŏnggye seized power in a coup in 1388 and ruled behind three puppet kings, undertaking reforms that preceded his establishment of the new Chosŏn dynasty in 1392.

Yi moved the capital from Kaesŏng to Hansŏng (Seoul) and preserved the Koryo bureaucratic system, but he expanded central control by appointing central bureaucrats to all local districts, making the civil service examinations the primary route to regular office, and barring members of the rural elite hyangni class from promotion to regular official posts.

To redress the severe shortage of central revenues, he conducted a national cadastral
survey, burned the many prebendal (i.e., tax-collection) certificates granted to favoured yangban families, restricted prebends only to men granted official rank, and limited the land over which prebends were granted to only part of the province around the capital. Most land was now owned privately and subject to the land tax.

The overall tax system was designed to fit an agricultural subsistence economy with underdeveloped commercial and industrial sectors. The land tax was payable in grain, the local product, tribute tax was paid in kind by peasants, and labour and military service was made compulsory and non-renumerative, levied on adult males except for slaves and yangban with official rank. Relatives of yangban were allowed to serve in elite military units or sinecures, and military service was divided between rotating duty soldiers and support taxpayers who paid a cloth tax to support duty soldiers.

Early Chosŏn society was heir to the late Koryŏ social system dominated by great hereditary families called yangban who relied on their slaves and commoner tenants for the cultivation of large landed estates. The yangban took pride in their ancestors prominent in government service, Confucian scholarship, and belles-lettres. When the new dynasty required passing the highest civil service examination to qualify for office, the yangban adapted readily by educating their sons, and dominating the restricted quotas, and blocking any real chance for upward mobility for commoner peasants. The clerks and technical specialists who were excluded from the ranks of regular officials soon formed an hereditary class called 'middle people' (chung'in).

The new dynasty was also a slave society at its inception because about one third the population consisted of chattel slaves, the legacy of hereditary slavery introduced some time in the tenth c. When the Chosŏn state confiscated the slaves of the Buddhist monastic estates, it converted about 70,000 of them into official slaves. Private slaves were divided into household servants and outside-resident slaves who lived on the master's parcels of land and paid personal tribute equivalent to a sharecropping rent. Slaves were part of the status category of base persons, which included kisaeng (female entertainers), shamans, and the outcaste paekchōng (hereditary butchers and willow-basket weavers).

Commoner peasants probably constituted about sixty per cent of the population and worked as smallholding subsistence proprietors, but some could be landlords, owner-tenants, pure landless tenants, or day or seasonal labourers. Only a small number engaged in commerce and handicrafts.

The Koryŏ period was a syncretic age when Buddhism provided solace, Confucianism provided ethical norms and practical knowledge for officials, and animism, shamanism, and popular Buddhism provided for the spiritual needs of the peasantry. In the late thirteenth c. the Chinese Song dynasty version of Neo-Confucianism synthesized by Zhu Xi of the twelfth c., was introduced into Korea, and it carried with it a powerful bias against Buddhism. The Neo-Confucians supported the overthrow of the Koryŏ dynasty and persuaded the Chosŏn regime to adopt Zhu Xi's commentaries on the classics as the main curriculum for the examinations that were opened to commoners but not slaves and merchants.

The Neo-Confucians reorganized family structure, ritual, and religious life according to patrilineal, patrilocal, and patriarchal principles of descent, marriage, and inheritance. They lowered the status and financial independence of women and elevated the power of the eldest legitimate son by putting him in charge of ancestral sacrifice, increasing his share of the inherited patrimony, and subordinating his younger brothers and half-brothers by concubines. Replacing Buddhist with Confucian rituals took until the late seventeenth c. to spread among the peasantry, but Confucian practice only had minimal influence over
peasant belief in animism, shamanism, geomancy, spirit worship, and prophecy. Some Neo-Confucians advocated a radical program of institutional reform including the elimination of hereditary status, the abolition of private property, and egalitarian land redistribution to peasants, but those plans were blocked by the yangban landlords.

The early Choson economy was primarily agricultural, and the main crops were rice, barley, beans, hemp, ramie, and cotton. The techniques of rice production were not advanced because rice was seeded by the broadcast method and watered by rainfall rather than irrigation, and keeping some land fallow rather than annual manuring remained dominant.

Clothing was woven of either ramie or cotton cloth at home by peasant households. Silk was not worn by the peasants, and the finest silk brocade was imported from China for the upper class. Precious metals like gold and silver were used only for ornaments or shipped to China as tribute, but they were not minted into coins. Roof tiles and fine ceramics were fired in kilns operated by the state. Iron and bronze were used for buildings, agricultural tools, weapons, and brass for plates and vessels. Precious metals, iron, copper, and tin were mined by the state or part of the peasants' labour service during the agricultural rest season.

Bolts of cloth and bags of grain were the main media of exchange, and the attempt throughout the fifteenth c. to institute the circulation of metallic coins and paper money ended in failure. The country lacked developed markets except for the Seoul, Kaesong, Pusan, Ùiju, Chónju, small towns were devoid of permanent shops, and rural peasants were served only by itinerant peddlers and periodic markets. The government granted monopoly licenses to a few shops in the capital to supply luxury items, and employed official artisans, mostly slaves, to produce ceramics, paper, and utensils. Foreign trade was limited to the tribute missions to China, and trade with Japan was limited to a few open ports and a small quota of Japanese ships.

Even though King T'aejo enrolled as tributary of the Ming Emperor, the latter mistrusted Koreans, demanded heavy tribute and cession of some Korean territory, refused to issue a patent of investiture to King T'aejo, and included derogatory statements about his lineage in the official Ming code. By 1398 Ming tribute demands were eased and later Ming emperors issued patents of investiture routinely, but the Ming code was not amended until 1581.

Since the Chinese did not interfere either with Korea's domestic political affairs or foreign affairs that had no bearing on Chinese security, Korea was regarded as self-governing (chaju). Korea was plagued by raids from the Wako (Waegu) pirates based on Tsushima Island and other places in Japan, but a raid on Tsushima in 1419 ended the pirate threat. Thereafter, Japanese ships were allowed to trade in three ports. Peace was maintained except for brief outbreaks of violence in 1510 and 1544.

Since the Choson dynasty was founded by an act of usurpation, legitimacy was a problem from the outset. The Neo-Confucians supported a more powerful monarchy, but they also insisted that the king be restrained by Confucian moral norms and the royal succession be passed on to the eldest legitimate prince, but both principles were often violated. The successions of the second, third, and fourth kings were irregular, and in 1455 the king's uncle usurped the throne (King Sejo) and cast doubt on the legitimacy of his successors for the next fifty years. Kings were also restricted by their yangban in-laws and by yangban officials who used the censorate to remonstrate.

The fourth king, Sejong (r. 1418-50), was most notable for his contributions to the refinement of institutions and the flowering of culture. He sponsored the invention of an alphabet in 1444 -something never achieved in China or Japan - but the Confucian literati clung fast to Chinese ideographs and denigrated the new script to the end of the dynasty.
He patronized painting, music, medicine, and agriculture, and compiled books on Korean history. He built a new sundial, water clocks, a rain gauge, and an astronomical observatory, cast a new font of movable metal type, established a gunpowder magazine, and cast cannon. He created a more equitable system of land tax assessment in 1437, established grain loans to peasants, and made the death penalty more difficult to enforce.

Changes in early Chosŏn institutions (1450-1592)

King Yŏnsan'gun (r.1494-1506) was so infuriated by critics of King Sejo's usurpation and by censorate opposition to his decisions that he conducted two bloody purges of officials in 1498 and 1504. His attempt to rule as a despot, however, violated accepted norms of conduct and led to his deposition by his officials and the enthronement of King Chungjong in 1506.

Now that the prestige of the censorate was restored, the censor Cho Kwangjo, a leader of the self-professed Confucian moralists, persuaded the king to hold a special recommendation examination to ferret out virtuous men overlooked because of politics. Cho and the new censors then attacked and forced the dismissal of merit subjects who had supported the coup against Yŏnsan'gun, but those men then convinced the king that Cho was a threat to the throne. Chungjong agreed, executed Cho, and exiled his compatriots in 1519, a purge that wounded the censorate, but did not destroy it.

By 1530, the ambitious prime minister, Kim Allo, eliminated his major rivals and married his son to a princess, but when he tried to depose King Chungjong's second queen, the king executed him in 1537. The court then split apart in 1544 over the succession. Yun Im (Big Yun) of the P'ap'yŏng Yun supported the son of King Chungjong's second queen while Yun Wŏnhyŏng (Little Yun) from the same clan supported the son of the third queen. When the king abdicated the throne to King Injong, the Big Yun faction gained power, but Injong died only eight months later in 1545 and was succeeded by King Myŏngjong, the eleven-year-old nephew of Little Yun, who purged almost a hundred supporters of Big Yun. The pursuit of power still overwhelmed Neo-Confucian norms of civility and generational succession.

Internecine politics became worse with the emergence of hereditary factions in 1575. An official in the personnel ministry, Shim Ħ'gyŏm, vetoed the appointment of the scholar Kim Hyowŏn, and when Kim later became bureau chief in that ministry, he blocked the appointment of Shim's brother. Kim's supporters became known as the Easterners (Tongin) and Shim's followers the Westerners (Sŏin) because of the geographical location of their residences in Seoul. King Sŏnjo encouraged the rivalry in 1591 when he dismissed the Westerners for opposing his choice for crown prince. Then the Easterners split into the Northerners (Pugin) and Southerners (Namin) over the demand for harsh or moderate punishment of the Westerners, and their hostility clouded the judgment of the court on the eve of the Japanese invasion of 1592.

By the late fifteenth c. population growth, the division of land among heirs, and bankruptcy among the poorer smallholders led to increases in tenancy and the size of landlord estates. Even though the state gradually took over prebendal tax collection rights, it failed to maintain efficient taxation of landlords because it kept the land tax rate too low and neglected regular cadastral surveys. The local tribute tax also proved unworkable as villages that stopped producing tribute goods were forced to pay tribute contractors to remit the goods they owed the state.

The educational system of official schools suffered erosion because of the decline in the quality of the instructors, and so many prominent families hired resident tutors or established private academies. In 1543, Chu Sebong established a private academy alongside a shrine to An Hyang of Koryŏ, and in 1550, King Myŏngjong granted it a royal
charter, land, books, and slave cultivators. These academies did not function primarily as grammar schools, but they grew in number to over 600 by the eighteenth c.

The Imjin War and the Manchu Invasions 1592-1659

The system of military service also deteriorated. Private and official slaves were exempted from military service from the outset, which eliminated a third of the adult male population. The male relatives of officials and even commoners evaded service by bribing registrars, and unit commanders accepted cloth tax support payments in lieu of service. Not only did King Sonjo ignore Yi I's (pen name, Yulgok) suggestion in 1574 to create a 100 000-man army, but the local garrison forces were empty of troops.

Toyotomi Hideyoshi was the supreme feudal lord in Japan, having defeated all his feudal rivals after over a century of continuous warfare. Possessed of overweening arrogance, illiterate and ignorant of the wonders of Chinese culture, and heedless of diplomatic niceties, he now decided to conquer the huge Ming empire. When King Sonjo refused to grant his forces free passage through Korea, he despatched an initial force of over 100 000 battle-hardened mounted warriors, archers, and infantrymen equipped with Western muskets to Korea in 1592. In a few weeks they cut their way through regular Korean forces to P'yongyang where they camped for the winter. Only Cholla Province in the southwest was spared because of the naval skill of Admiral Yi Sunsin in interdicting Japanese maritime supply lines.

Although Ming dynasty forces arrived belatedly, six months after the invasion, because they suspected Korean complicity, they drove the Japanese back to Seoul but suffered a serious defeat at Pyökgchegwan. Thereafter they played a very cautious game and signed an armistice with Japan in 1594 that lasted until 1597. The war resumed in 1597, and the Japanese now laid waste Cholla Province, but after the Ming army checked the Japanese advance, Hideyoshi died in 1598 and the war came to an end.

The performance of the Korean army was a complete disgrace, but magnificent actions were rendered by leading guerrilla fighters who harassed Japanese camps and columns. Admiral Yi Sunsin, recalled from action by hostile political forces, returned to duty to win crucial engagements at sea, but he lost his life at the end of the war, a tragic end to a great and heroic performance.

The loss of life from war and starvation was enormous, and the area of registered arable land was reduced by two-thirds. The state cancelled or lowered taxes as an inducement to the reclamation of waste land, but attempts at reconstruction were offset by a new foreign challenge, the rise of Manchu tribesmen under a heroic leader, Nurhaci.

His attacks against Ming territory placed King Kwanghaegun in an awkward position because the Ming court demanded Korean reinforcements. He could not avoid Ming demands but was fearful of a Manchu invasion, so he sent his reinforcements but told his commanders to surrender as quickly as possible. The plan worked, but it angered the Westerner faction who believed that Korea owed undying loyalty to the Ming for blocking Hideyoshi.

Since the Westerners also resented the Great Northerner faction that supported Kwanghaegun, they deposed him and placed King Injo on the throne in 1623. They immediately reversed foreign policy by declaring outright support of the Ming dynasty against the uncultured and barbaric Manchus, but the defence of the northern frontier against a Manchu attack was disrupted when Yi Kwal, a dissatisfied coup leader and commander of the north-eastern frontier, rebelled and seized the capital with his troops.

Although the rebellion failed, it decimated border defences. King Injo had to keep too many
troops around the capital for political protection, but the moralistic Westerners continued to defy the Manchus. Manchu forces naturally invaded Korea in 1627 (Chǒngmyo horan) and pressed right down to Seoul, but fortunately they quickly offered peace terms because they were eager to transfer their forces to the Ming frontier. King Injo readily agreed to adopt a younger brother relationship with the Manchu emperor without damaging his tributary relationship to the Ming emperor.

When Injo rejected Manchu demands to hand over royal hostages and the advocates of the anti Manchu policy for punishment, Emperor Taizong of the Qing dynasty personally led an invasion (Pyŏngja horan) in 1637 that forced Injo's capitulation. Later, King Hyojong (r. 1649-59), who had been a hostage in Manchuria, tried to rebuild his army to attack the Manchus, but Manchu surveillance was too pervasive, especially after the Manchus ended the Ming dynasty in 1644.

Tax and economic changes in the seventeenth century.
