The concept for this project came about in 2009, during the 150th anniversary of the publication of *On the Origin of Species* by Charles Darwin with its evolutionary focus on relationships between animal species. Charles Darwin demonstrated that all species of life have evolved from common ancestors. His evolutionary theory of natural selection forms the foundation of modern biology and an explanation for Western understandings of the diversity of life.

The Yithuwa Madarrpa people have a different perception. Y olŋu belief and knowledge is contained within songs, stories, ritual and art. Paintings are conceptual maps depicting living things and earthly elements. All have meaning and are based on complex structures of knowledge and relationships. This is expressed through the Djalkiri, literally meaning foot or footprints, but when applied to Y olŋu law it takes on a more profound meaning referring to the underlying 'foundation of the world'.

The objective of this project was to bring a group of artists, scientists and print makers together in a cross-cultural, cross-disciplinary, creative exchange. To juxtapose Western scientific view points and knowledge with the holistic perspective of Y olŋu people.

At times, as the project developed, the notion seemed assuming and even presumptuous, and yet in the end it was an experience the participants will never forget.

The title, *Djalkiri: We are standing on their names, Blue Mud Bay* are words spoken by Djambawa Marawili. It is an acknowledgement of cultural inheritance based on understanding and mutual respect. It is about walking together in the footsteps of the ancestors.

Angus Cameron
Nomad Art Productions
I want to talk about that day when the artists got together. Manymak, it was good. It was really good for us the Yolŋu people. We learned very much from them. The techniques they were using to show us, and the Balanda (white persons) way of doing art. For us we were learning from them. And the others, those people who were working with us, the tjapiki (foreigners) have learned from us, how we make the patterns, careful and tight. We told them and we showed them that this country has the stories. And those stories were there from beyond, from our ancestors to us, our grandfathers to our fathers and to us.

When those tjapiki artists were walking around in that country, they were walking about the land, but the patterns and the designs are beneath, they come from our ancestors. The way we were working together was really important because we were looking from both worlds, the Balanda world, the Balanda way of significance in how to describe and how to paint it and how to make those pictures real, those paintings of country, with substance, with story, with meaning.

We did the same thing too. We gather the information we made it really happen in a partnership. We were both working together to show ourselves that we are both artists in the Balanda world and also in the Yolŋu world. And it was really important.

So that is what I felt on that day. And the other artists were feeling the same thing too. It was a good team. We were learning together and having a good partnership. Working together to lift the art from the country to make it really strong. It was really important for us to be working at the foundation. It was Djalkiripuyŋu (people from the foundation, footprint people), made it really strong, the relationship with those artists and that is really important to me. Thank you.

Djambawa Marawili AM
The Journey • The idea was for collaboration between leading Yolŋu artists from eastern Arnhem Land and four distinguished non-Yolŋu artists from elsewhere in Australia. Angu and Rose Cameron initiated the project. In the year of Charles Darwin the theme of the project was artistic engagement with natural world and the species dwelling within it. The visiting artists were four prominent printmakers: John Wolseley and Judy Jorg Schmeisser. They were joined by the botanist Glenn Wightman, the photographer Peter Eve, and myself as the engaged observer. Perhaps most importantly we took Ian Hall, for this was an adventure in etching at Yilpara in Madarrpa clan country on the north coast of Blue Mud Bay.

We set off from Buku Larrnggay Mulka art centre in Yirrkala in two vehicles heavily laden with artists’ materials and food on the four-hour journey on dirt roads. There was a touch of tension in the air. The etching plates were to have arrived a week before we set off, but had been delayed. We received advice that they had been dropped off the previous evening by the lorry driver in the bush just off the Central Arnhem Highway on the Yilpara road, three hundred on the outback road. Half an hour is our journey into one of the vehicles broke down at the Gaddy River Crossing. The remaining vehicle set off for Yilpara laden with supplies and Judy, Jorg and Fiona. The rest of us remained behind for six hours waiting for a replacement vehicle. Djambyaw Marawili and the Yilpara community waited patiently and welcomed us at dusk with song and ceremony. We were then led to the clearing in the bush that was to be our home for the next week. The clearing had been made in the shape of Lulumu, the ancestral stingray who made his markings on the plants that grow in it, and the people whose land it was. And, in a very long history of coexistence that must be acknowledged and respected.

The Yolŋu artista Judy Wadlong has also closely explored the relationship between people and the environment, and the impact of the human footprint that manifests itself in different ways in the landscape — sometimes positive sometimes negative — and connects directly to the bodies of the living who inhabit it. An outstanding printmaker, she had worked for a while as a lecturer and resident artist at Charles Darwin University, passing on her knowledge to students and collaborating with Basil Hall at North Australia.

Jörg Schmeisser, Basil’s teacher, played a crucial early role in the project. At the time Jörg was the head of printmaking at Canberra School of Art, and Narritjin and his son Banapana were Creative Arts Fellows at the Australian National University. Jörg recognised the potential of applying Indigenous artistic practice to the medium of printmaking. The initiative was further developed by Basil Hall who became Director of Studio One in Canberra before moving north to Darwin to develop the print workshop at Charles Darwin University. Jorg was returning to somewhere he had never been in body but which had been part of his imagination ever since working with Narritjin all those years ago. The Yolŋu artists who took part in the project were all closely related to Yilpara. Gumbay Marawili and Djambyaw Marawili of the Madurrara clan are clan and community leaders respectively. Miluken and Luyauwdan Wurpnga belong to the Dhuñ Duñ clan whose country lies close by, and who for generations have intermarried with the Madurrara. Luyawwdan is a grand-daughter of Narritjin. Marrnyula Mununggurr is of the Djapu clan, and Yilpara is her mother’s country. The Yolŋu artists and the community saw their role initially as making people welcome in place and showing them the ancestral footprint (gjikjun) on their land. The day’s events and the landscapes we crossed were recorded by Peter Eve’s analytic and photographic eye to be re-experienced later on. A pattern of Aboriginal thought was developed. During the project the artists joined together or shared the same ‘studio’ space, and in the evening showed photographic examples of their work, screened in the open air around the warmth of the campfire.

Being There • Art is a way of establishing connections between people across cultures — work becomes the memory of an event, an impression of what has been seen, heard and felt. The project began by establishing connections, exploring corners of new places, and in the case of the visitors, making new collections. The visitors were new to the place and the resident artists deeply connected. But both were equally excited by the idea of exploring new ways. The first morning we left the Lulumu-shaped camp, and followed the route that the stingray took in ancestral times. We saw the sites in the ground that Lulumu made as he headed back towards the sea from inland. We stopped at an enormous sand sculpture in the shape of Lulumu and together walked around its contours. We stood by the shade of the single tree where the great Yolŋu leader Wunggurr had sat some eighty years ago with Gumbanyi’s father Mandakul and made this Lulumu sculpture. We looked into the stingray’s eyes where for many years hunters had cast the bones of fish and shell fish hoping for a beneficent catch. We travelled closer to the shore passing at a place in the dunes that too had been carved out by Lulumu’s body. Djampung dug deeply into one of the eyes, the sites in the ground left behind by Lulumu, to find the fresh water hidden beneath the surface. And then in the distance we saw the beginnings of the reef that is Lulumu’s tail. We were uncertain of the boundaries between ancestral connections and the human and the domain and the division between ‘nature’ and ‘civilisation’.

The artists • None of the visiting artists had been to Yilpara but all had intimations of synergy with the people and the place. John Wolseley has been an on extended artistic journey across Australia, always sensitive to the Indigenous presence, ‘to discover how we dwell and move within landscape — a kind of meditation on how land is a dynamic system of which we are all a part’. Fiona Hall equally acknowledges that Lulumu etched the plants in that, and the people whose land it was [and is], have together a very long history of coexistence that must be acknowledged and respected.

The Yolŋu, knowing the country, felt they stood on firm ground we were uncertain of the boundaries between ancestral design and the human and the division between ‘nature’ and ‘civilisation’.

Art is a way of establishing connections and relationships between people across cultures — work becomes the memory of an event, an impression of what has been seen, heard and felt. The project began by establishing connections, exploring corners of new places, and in the case of the visitors, making new collections. We travelled closer to the shore passing at a place in the dunes that too had been carved out by Lulumu’s body. Djampung dug deeply into one of the eyes, the sites in the ground left behind by Lulumu, to find the fresh water hidden beneath the surface. And then in the distance we saw the beginnings of the reef that is Lulumu’s tail extending out into the bay. When we returned to our camping place we were uncertain of the boundaries between ancestral design and the human and the division between ‘nature’ and ‘civilisation’.

The visiting artists shared in common a passion for collecting — the associated skin of a snake, a crab’s carapace, a stingray barb, seeds, shells, feathers, broken toys, mechanical debris. And they collected images with their cameras and sketched in their notebooks. Yolŋu guided, interpreted and made connections; and made the process of collecting into a process of exchange of ideas and knowledge. They were aided by Glenn Wightman whose lingua franca and profound knowledge of the botany of Arnhem Land made him a great cross-cultural interlocutor. Artists shared things with one another, talked about where else they had found such things, where their paths may have crossed in Moscow, Sydney, Darwin. It is the fate of artists — Yolŋu and non-Yolŋu — to be travellers.

We travelled on to Yathikpa on the coast for Biru, the ancestral crocodile. Djambyaw talked about the importance of the place in the Blue Mud Bay Native Title Claim. The court case had identified Yolŋu ownership of the intertidal zone, clarifying ambiguities in the Aboriginal Land Rights (Northern Territory) Act. It was the dance of Biru, bringer of fire, that greeted Justice Selway when he arrived at Yilpara, and paintings of Biru were submitted in evidence to the court. It was Biru who in Yolŋu thought laid the firm foundations for the court action. When we worked on to Yathikpa on the coast for Biru, the ancestral crocodile. Djambyaw talked about the importance of the place in the Blue Mud Bay Native Title Claim. The court case had identified Yolŋu ownership of the intertidal zone, clarifying ambiguities in the Aboriginal Land Rights (Northern Territory) Act. It was the dance of Biru, bringer of fire, that greeted Justice Selway when he arrived at Yilpara, and paintings of Biru were submitted in evidence to the court. It was Biru who in Yolŋu thought laid the firm foundations for the court action. When we
and she was able to use it for the first time. Mulkun too produced Gumbaniya if she could paint her mother’s design. They agreed of the importance of cultural exchanges and often reference their long history interacting with outsiders. Yolŋu have learnt time as acknowledging their sovereignty over their land. In exchanged dances, designs and songs with Yolŋu at the same time as being artists. The places we visited made sense of the etchings the Yolŋu artists created. After travelling and collecting, the art work began. As an outside observer I became entranced with watching all the artists at work, almost obsessed by the movements of their hands and their exceptional control over their work. The Yolŋu artworks were built up in stages beginning with a structuring of the overall design and then adding increasing detail and effect through the process of cross-hatching with a marrow, the long thin brush of human hair. The cross-hatching styles differ — Gumbaniya lays each line in place with the length of the brush. While Lindsay covers the surface with rapid and elegant strokes — each technique having its own subtle effect. The visiting artists brought their collections back to the camp and worked on them meticulously in their different ways. I saw Judy Watson use the powerful light of the sun to transform the shape of a plant into a sharply defined outline shadow and then paint it exquisitely on the surface of the plate. Fiona Hall engraved in detail the form of a green ant, photographed in the bush and then with apparent impatience hammered a series of dots across the surface that turned out to be equally thoughtfully placed. And Jörg Schmeisser having brought a crab's skeleton, finally creating a composition he was satisfied could be transferred to a more durable medium. But that too was only a stage in a process.

In each case the artists seemed to build up a work in dialogue with an idea. Although in this project Yolŋu artists were working on an established trajectory that connected them to their history in place, their works were no less a dialogue with time and the product of technique, thought and the exercise of the imagination. The patterns associated with ancestral beings in place are part of the ancient law of the country, the blazing diamond of the Bäru and the rectangular pattern of the Djapu clouds. But in executing the design Yolŋu lay an emphasis on thought. The marrow, the brush of human hair becomes the metaphor for the mind that guides the hand. And the dangerous dialogue between composition and technique is as present in Yolŋu art as in any other. The complexity of Djambawa’s painting was such that it was only in the final stages that it was possible to see how the whole would come together.

Etched together • Etching is a magical process in which unique ideas are created in reproducible form, where technique and the imagination come together, where the question that recurs was “is it possible?”. During the entire time we were at Yilpara and in the months that followed Basil had to be dedicated to the tasks of working with the individual artists to help their ideas materialise. Basil had spent many years working with Yolŋu artists collaboratively developing methods that transferred Yolŋu technical processes and aesthetic effects to the medium of print. The transfer of techniques from one medium to another is integral to the creative process and the ideas that have been developed over time have been important to the success of the print workshop at Buku Larrnggui Mulka. Basil’s relationship with the visiting artists was equally one of dialogue, though perhaps in the case of Jörg Schmeisser it entered the more esoteric domain of discourse between master printmakers as artists.

Basil had little time to enjoy the journeys through the country with the rest of us. He remained in the camp working with the artists who had stayed behind and getting things ready. His journey required him to follow the artists to the final stage of production, as the inks were impressed onto the paper. At Yilpara Basil moved constantly between the artists, thinking of the consequences of their every action on a later stage of the etching process and the final form of the print. In Brisbane he worked with Judy Watson on the complex possibilities of combining very different forms. In Darwin he worked with the Yolŋu artists and with John Wolseley and Fiona Hall as they combined the etching process and the final form of the print. In Brisbane he worked with Jörg Schmeisser in his studio. Etching has the advantage, in a collaborative project, of requiring that the dialogue with the artists continues long after the first encounter. It has the second advantage that many can share in its results. The relationship with the printmaker is something the artists all share in common connecting to a history of image making that cuts across time and place. I have been a privileged observer able to experience the magic of engagement and knowledge exchange out of which appeared miraculous and individual works.

Professor Howard Morphy • 2010
In the distant past there was an ancestral figure with mythic powers and wisdom, who moved through the landscape connecting different estates through his extensive travels and bestowing names and dispensing Law that the people still abide by today. The kinship system which asserts that Yolŋu are all one family stems from his actions.

It was his revelation of the Law which outlined the foundational links between the people and the land and between people and all living things. His Law continues to manifest in the people he left behind. And its expression remains etched on the landscape itself.

Although the track of this ancestor does not enter northeast Arnhem Land, the Law he brought is widely honoured, to the extent that the capital of the Northern Territory is named after him.

In this region there are always other laws and songlines that web together over the landscape autonomously. Usually inert to the other, but sometimes intersecting, sometimes even conflicting. It is familiar to pass from one mental landscape to another. Like people crossing from Tweed Heads to Coolangatta strain to feel the difference. In the air, or the vegetation, or in some other invisible dimension. “It’s so much more Queenslandy now”.

Another exotic songline which has zones of power within our district is the Jesus ceremony. This hops along the coast landing in small consecrated sites at Yirrkala, Galiwinku and Milingimbi to name a few.

These two songlines contradict each other and tangle and intertwine and push each other back and forth like the tides and entities in Yolŋu law. They are each oblivious to other laws that they cover or are submerged by. Being autonomous they act as if there is no other source of power or wisdom on the landscape.

This is not uncommon with such elemental forces. Barama who dispatched his disciples from Gängan to elucidate the Law did so by right, without reference to Darwin or Christ. Neither did he depend on the Djan’kawu who were themselves on a distinct voyage as they progressed from their paradise at Buralku Island to their landfall at Yalangbara. Their journey across Arnhem Land giving birth to each separate Dhuwa clan is a law which holds strong amongst Yolŋu, whereas Darwin is unknown.

But it is common to find the shape of a law replicated in more than one place. In several places an ancestor chops a tree, which is full of honey, in an escarpment place, where the crashing tree forms a watercourse, which is filled with the honey, and carries that tree to the sea. In each place the ancestor can have a different name, so can the tree, the river and the sea. The language spoken or bequeathed and the clan identity of the places created can all be different, but the shape of this story is the same. It happens this way at Trial Bay, Melville Bay and Arnhem Bay.

And so it is with On the Origin of Species. Darwin says that we are all related. We are, in literal fact, one family. Not just with all other humans but with all life forms. Yolŋu law is identical. This is the same shape that the law of Barama, Djan’kawu and Wuyal has.

Gurrutu (or kinship) is the root law which governs all Yolŋu life. Yolŋu action and thought is guided by the principle of this family relationship with the entire world.

As a result of this Project, the sacred songline of Darwin that stretches from Shropshire to the Galapagos and Darwin has come ashore at Yilpara and kissed the ground only lightly, as other older tracks course by powerfully.

Autonomous and powerful it does not displace the forces already at work.

Will Stubbs
When Angus and Rose Cameron first began talking about this project, it was catalysed by the 150th anniversary of the publication of On The Origin of Species by Charles Darwin in London in 1859. The initial concept was to involve a group of high-profile artists and a fieldtrip to a biological diverse and culturally strong location in the Top End of the Northern Territory.

A previous art and biocultural knowledge project we had undertaken at Nauiyu on the Daly River, with a couple of the same artists had been highly successful from an artistic, scientific and biocultural perspective. The beautiful prints and associated interpretive materials developed in 2006 are still travelling around Australian art galleries, botanic gardens and scientific institutions telling a powerful story about biodiversity, people and cultural connections.

One of the great joys of working on pristine country, with countrymen and biodiversity in the cultural landscapes of north Australia is that even the best plans generally do not follow script. This of course negates the need for all but the most rudimentary planning, which is good, but it means you have to follow the script as it evolves and ‘stay on the horse’, which may not be good.

In line with basic gist of Charles Darwin’s On The Origin of Species this is exactly what happened during Djalkiri. While the field trip and the artistic process followed the basic bones of the plan, the flesh was added in a seemingly unstructured evolution of artistic discovery and biocultural knowledge exchange.

Watching the artists interact with the incredible biodiversity of Yilpara and the Blue Mud area, with the senior biocultural knowledge custodians who accompanied us on country, with each other and with the other members of the Djalkiri team was both enthralling and highly educational.

While undertaking a welcoming-introductory walk around Yilpara with Djambawa and Marrirra Marawili and Mulkun Wurrpanda on the first morning of our visit, I was overcome by a feeling of desolation and sadness of such intensity that I quietly wept. This has not happened to me before or since. However, the thoughts of the wonderful elders I have worked with over the last few decades, who have now left us, came to me strongly.

The cultural and emotional power of the artwork prepared during Djalkiri comes to me now as I look at the plates, the detail, the range of biodiversity, the stories behind it, the memories of the artists and Djalkiri group working together to ‘stay on the horse’ as the project evolved with us.

Blue Mud Bay is a famous and wonderful place, in a famous and wonderful region. Northeast Arnhem Land is a bastion of Australian Aboriginal cultural and biological knowledge. It is linguistically diverse and biologically rich and is the home of the unanimously respected Yilgaa clans. The region is famous for a number of spectacular episodes that have occurred there since settlement. There have been notorious killings of Japanese fishermen and police, famed bark paintings and large mining operations. However, Blue Mud Bay is most famous for the momentous High Court decision in 2008 to give traditional owners exclusive rights over tidal waterways flanking Aboriginal Land.

Yilpara on Blue Mud Bay is a special place. Djalkiri is a special word. It has several meanings, one of which relates to footprints, but it also refers to deep, hidden knowledge. Visual art is a powerful mechanism for telling stories, it is a primary vector for knowledge transmission. All humans relate to art in some way. Biodiversity, mainly plants and animals, have cultural importance for all Homo sapiens, no matter how far removed we might be from our traditional cultural and survival-based links.

This combination of visual art and biodiversity is a wonderful mechanism for preserving and promoting biocultural diversity, which is north Australia’s most threatened biological and cultural heritage.

How does a book about human evolution written by Charles Darwin in southern England 150 years ago lead to the preparation of these magnificent plates from Arnhem Land drenched in artistic detail, cultural knowledge, visual beauty and scientific accuracy? Djalkiri magic from Blue Mud Bay.

Glenn Wightman
Garrangali is the sacred and dangerous area where Bâru, the crocodile nests on Madaarpa clan land. This Garrangali is away inland up a creek to an area marked by an oasis of tall trees and forest surrounded by the expanses of a ‘featureless’ flood plain. Here freshwater bubbles to the surface to mix with the surge of saltwater tidal contamination. During the dry, considerable heat shimmers across the dust, remaining inaccessible without rights of passage when inundated with flood waters during the wet.

Bâru, the ancestral crocodile ventures here from Yathikpa, bringing the power and authority of the Ancestral Fire with him. The sacred clan design of cross hatched, ribbon swirling flame indeed denote this fertile mix of waters and fire in this sacred area. Garrangali is revered as a reservoir of Madaarpa soul.

To venture into these parts is for those with appropriate knowledge and the preparedness for the intense heat of fire and the ire of the crocodile.
Our journey began with a dance: in this ceremonial way the Blue Mud Bay community welcomed us to their country. Over the following days as they showed us around; they unfolded for us the living map of their land and sea, which charts Yolŋu culture and embodies Yolŋu ancestry. We learned that their homeland is a story place; it is the larder and the medicine chest, the almanac and vast encyclopedia. We saw that their sea and land and sky are home to many creatures, and learned they harbour sacred places where past and present manifest perpetually.

The time when we visited was the lead-up to the Wet. The last of the burning was in progress, washing the land with fire in readiness for the rain. Some of the plants were already pushing out fresh new growth and bursting into flower, eager to get a head start. I felt that I could hear them singing out to the rains to hurry up and come.

Not long before traveling to Blue Mud Bay, I listened to Djambawa Marawili sing a song of his country to his bark paintings at an exhibition in Moscow. I didn’t know the words of his song, but I sensed that through his singing his saltwater world flowed into the space around them, easing them into a strange land and culture, for his paintings and their stories were very far from home.

For each of us, home is a place that is not only fixed on a map but floats along the tributaries of our consciousness. The place I come from is, I think, located somewhere on the ebb tide of the world at large, a place in a culture in a continual state of flux, drifting without an anchor. It is a place which is sharing less and less of its space with its kindred plants and animals, and which is inundated time and again by the tidal waves of its own gross superfluities. Too often the world I belong to absolves itself of guilt and responsibility for its actions by washing away the traces of its murky history. I have a sinking feeling that I’m from a society that is now foundering out of its depth, which laid down its foundation on quicksand.

I learnt at Blue Mud Bay, that Yolŋu culture is a fluid one, with a deep knowledge of and respect for the source from which it flows. A tide of goodwill from the community there invited us to walk and sit together, to create Djaliki. In the slipstream of this collaboration our different worlds are flowing together, making ripples on the surface where our cultures meet. I think I see a shimmer on the horizon.

Fiona Hall
YALATA. Liyawaday is the daughter of artists Dhukal Wirrpanda and Galuma Maymuru and third wife of Djambawa Marawili. She has painted her Dhudi-Djapu clan’s design of country that was transformed by the principal creator beings for the Dhudua moiety - the Djan’kawu. They passed through the plains country of Yalata towards where the Dhudi-Djapu live today at Dhurruputji. These the Djan’kawu, two Sisters with names in this country of Ganaypa and Banyali, sang the brolga (Dhaŋgultji) as they went with their walking sticks (Wapitja). With these they dug waterholes as they went, naming, and thus sanctifying them with special qualities. Today they retain those same qualities for the Yolŋu, the water and knowledge that surfaces from these wells by their actions are sung in ceremony for this country. Warakawu the sacred goanna for Djapu clans and associated Dhuea emerged from one of these waterholes by the upper reaches of the plain, a place called Dhabara or Walirwan. Warakawu witnessed the first sunrise over this area to see Dhaŋgultji walking over the plain, waterhole to waterhole, leaving their footprints in the drying mud. This image depicts these plains inundated with flood waters of the Wet. Grasses are suspended by this sacred water, its gentle flow is towards the sea of Blue Mud Bay. Both the Sisters and the brolga are manifest in the footprints.
Since the early days of European settlement there has been a tradition of heavy-footed artists drawing and documenting parts of the continent about which they know little. As for myself, when I arrived at Banyala I was just plainly discombobulated! Here I was with Yolŋu artists of such distinction and with such brilliant ways of expressing in paint their vast knowledge about the place that I thought - goodness me - I'm starting from scratch here!

In these etchings I may have found a way of making ignorance a virtue - or even a valid stratagem for drawing. There I was on the edge of the sea with a blank unmarked etching plate and an empty mind. At least a mind 'trying' to be empty. I watched the ebb and flow of the waves and how sometimes the energy and openness of the sea would deposit some leaf or coral to add to the random scatterings at my feet. As I drew each fragment, carefully mimicking the placement of each one as it rested on the sand, I was fascinated by the idea that there was a hidden order in the pattern of disparate objects as they rested on the sand.

Djambawa told me that a mangrove leaf (Aegialitis annulata), with an odd resemblance to a stingray was used by children at play when they are re-enacting the mythic stories about a giant ray which created some of the landforms of Banyala. Glenn then identified some little water chestnut corms as Brevia (Eleocharis spiculata). Sprouting from these important edible corms are the slender leaves which figure in the marvellous paintings of the Garangalli flood plains by Mulkan Wirrpanda. Howard then told me that a feather I had found was that of a Brolga, and how those magnificent birds play a significant role in the great creation stories about Garangalli. And then Glenn said that Brolgas feast on these Brevia. When I showed him a Koel feather which blew away before I could put it in my etching, he said they say here that when the Koel sings it is ripening the black Plums (Vitex glabrata).

Each day as we all worked in the centre, these gems of information - given so generously - mediated our printmaking. And as these images of small things slowly spread across the dark velvety ground of my etching plate I felt as if some invisible ordering force was at play. Now when I look at the finished etchings I hope that I may have learnt just a little bit about some of the mysterious systems of correspondences and interconnections which are a part of the Yolŋu cosmic understanding of the nature of the world.

On the last days I took a number of sheets of etching paper to an area of recently burnt Sand palm and Stringybark scrub. The papers were firmly clipped to a board and I moved them over the burnt stems and twigs of the charred trees. The black fingers and flanks of the trees drew themselves on the paper. They made grazings and stipplings, skid marks and staccato dots. Each species made different marks – the little palmate hands of the sand palm made filigree versions of themselves; while the crocodile scales of the cycad stems caused more sombre blotches. Then I took the papers to Basil Hall's amazing print workshop and we floated passages of my other etching onto them. The etched images of the sand palm bits and burnt cycad nuts I had picked up on the beach then found themselves next to the carbon marks they had unwittingly made further inland - and these combined to tell their own story without, I hope too much interference from a discombobulated artist.
GURRTIPI: The depicted Gurrtipi is the stingray hunted much on the shallow shores of Blue Mud Bay. It is also a totem for the Madanyu at Baniyala as they talk of Gurrtipi having a path of creation there. A few hundred yards down the beach, a small tidal creek cuts through the dunes to the flat country immediately behind. This creek named Måwangga was used by Gurrtipi to track back into the bush. Here he bit into the ground forming several small billabongs, a source of water for Yolŋu living there. His path continued along the direction that is now the Baniyala air strip to flat sandy country before heading out to the point Lulumu to become a white rock surrounded by the slow tides.

During the days of Wonga, the Djapu warrior, an area in the shape of the stingray was cleared by him and others who came to country to hunt Gurrtipi mid-way through the Dry season. The area is still clear today, his two eyes holes in the ground where the current inhabitants pick sand to throw in the direction of the rock at Lulumu for good luck and plentiful fishing. The stingray, Gurrtipi has been depicted in these waters.
A note on traveling with a plate. The distant mountains and the small objects are right here with me, on the plate. I am touching the cliff of the distant rock-face with the etching needle. I follow the confusing lines of the mangrove-roots with a pencil. The tip of the lead and the needle’s point are my fingertips. I draw and get my bearing. I get closer connected to where I happen to be. Or is my surrounding closing in on me?

Time seems to slow down as I work. The moment is extended, the flow of time measured, departure delayed. While I observe, the other senses are alert: I taste the air and the dust, I feel the rough stones, hear the cicadas, smell the smoke. And somehow this will find its way into the picture. The sketched lines of first thoughts remain on the surface, together with the defined marks of the final image. On the way back to base: baggage, precariously close to the plates, the copper is bruised by the movement of the travelling car, cold weather cracks the ground, the heat will let the block-out stick to my hands. In the end it is both the travel and I, who create the marks, which will make the print of the journey.
Bawu. In October 2009 I had a trip to Yilpara with other artists Fiona Hall, Judy Watson, John Wolseley and Jörg Schmeisser. We worked with Marrirra Marawili, Djambawa Marawili, Liyawaday Wirrpanda and Mulkun Wirrpanda. Basil Hall came along to help with the printing process. He took the images back to his studio for printing in Darwin. Winsome Jobling made the paper for the Bawu to go on to the print.

Ethno-biologist Glenn Wightman and anthropologist Howard Morphy were also part of this group. Rose and Angus from Nomad Art organised the workshop. Peter Eve took photos of the workshop and Yilpara. The next day we were sitting under the tamarind tree and Djambawa was telling us a story about Yilpara and the sea rights ceremony. He told us about the flag.

That night I dreamt about the Bawu (the sails of the Macassan ships) and then asked Marrirra and Djambawa if I could paint my mother’s design. I got the permission from them and this is the story for my print.

Bawu represents the sailing cloth. It is the Madarrpa and Mangalili clan design. The design in the middle is Bawu. On the top the white represents the clouds and the blue represents the water.

The lines around Bawu represent the saltwater-Muŋurru connected to Yilpara and Djarrakpi homelands. This is my first painting from my mother’s clan. It tells the story of sea rights. The ceremony for sea rights at Yilpara had this flag situated in the sea connecting clouds and water.
When the red flowers appear on the kurrajong, the mud crabs have good flesh on them.

We ate the crabs and fish, tasted buffalo stew, heard the buffalo snuffling around our camp.

People danced and welcomed us with blue flags and great ceremony.

Our camp is in an open area where the stingray came in and bit the ground in different places.

The eyes of the stingray are waterholes where freshwater bubbles up out of the ground.

"We had those designs," said an old man.

Wangarr – ancestral presence in the country, in the land.

Past, present, future.

Djalkirri – strong spirit places.

Different currents that go under and over each other.

Mungurru – great current.

Waters – shared between the clans.

Biru, crocodile, diamond, fire.

Mina, the shark came inland up the river from the sea.

Casuarina, Wangspins, the cloud of this tree.

That arises in the sea.

We sing about this tree.

11 clans in the map of Blue Mud Bay, different dialects.

Matthew Flinders met a captain of the Macassan fleet who had exchanged names, Pobasso with Y olŋu – Wirrpanda.

Garrangál the name of the band, is the crocodiles’ nest, a jungle area on the floodplain.

Garrangari, the flood plain.

Djambawa: I am still living and surviving with all those stories.

The sand is still alive.

The shape is still alive.

The story is still alive.

Blue – sea.

White – cloud.

Invisibility.
Yalata: This work depicts early events during Ancestral (and present) times at Yalata close to the Dhudi-Djapu clan homeland of Dhuruputjpi (about three hours drive southwest from Yirrkala). The Dhudi-Djapu homeland is a coastal fringe area that has territory leading up a river through plains country behind an area of coast on Blue Mud Bay. The plain is tidal and during the Wet season it is flooded by the rains and tidal surge creating areas of brackish water. During the Dry season the grass and black earth dry out. Then the fires come, turning a swamp into a huge plain of cracked black earth. Fresh water springs dot this sun baked plains forming small islands of vegetation and as Barreduda (the hot time) builds the thirsty birds come to these sacred springs in their thousands. The noise of the guturrku or dha ŋgultji (brolgas) and gurrumatji (magpie geese) are deafening, the mud is scored with their tracks and the sky dark with the flocks of wheeling birds.

In Ancestral times, activity of Måna the shark and the Djaŋ’kawu took place here. The Djaŋ’kawu (the Dhuwa moiety Creator Beings), in naming this country for the Dhudi-Djapu, created these sacred fresh water, springfed waterholes by plunging their sacred digging sticks in the ground. Freshwater spring from these wells as did a sacred goanna, a manifestation in some circles of the Djaŋ’kawu themselves. Story has it that on surfacing, the goanna saw the first sun rise. Also on the wet clays around the wells the goanna observed the footprints of Dha ŋgultji the brolga. The prints of the Dha ŋgultji passing from spring to spring are an echo and a present day manifestation of the Sisters who adopted the form of the brolga in their travels between springs as portrayed by the roundels.

The design repeated throughout represents Dharrang - a freshwater plant associated with this homeland for the Dhudi-Djapu and the Ancestral Shark. This painting by a senior Dhudi-Djapu elder is a close comparison to the designs used in ceremony. It is a classic representation of the sacred miny’tji of the Dhudi-Djapu clan.

Mulkun Wirrpanda
Fiona Hall

Fiona Hall is a prolific and highly regarded artist. She began her career as a photographer in the 1970's but has expanded her practice to include such diverse mediums as knitting, beading, painting, printmaking, sculpture/installation, garden design and construction and costume.

Much of Hall’s work over the past 15 years has had botany and/or print medium, both traditional values and practices and images of contemporary Arnhem Land life find a place in her art. Much of her work over the past 15 years has had botany and print medium, both traditional values and practices and images of contemporary Arnhem Land life find a place in her art.

Marrnunya Mununggurr

Marrnunya Mununggurr

Marrnunya Mununggurr, a senior Djupu Leader and major artist, is the daughter of the great Yolŋu leader Djambawa Marawili.

Mullah Wirrpanda

Mullah Wirrpanda paints Dhudi-djapu miny’tji (sacred clan design) that depicts her land at Dhuruputjpi. Mullah was an early practitioner of works without figurative imagery within the miny’tji. Until recently the painting of this ‘raw’ miny’tji was restricted to ceremonial use. The work is always done using natural earth pigments (ochres).

Wirrpanda's work. It is often her role to complete the fine cross hatching or marwat with a fine brush made of a few human hairs. She has consistently produced work in her own right drawing on her own Djupu clan designs which her father has shared with her.

Liyawady is the granddaughter of the famous artist Narritjin Maymuru. Her first exhibition was at Annandale in 2009 and marked her coming of age as an artist.

Mulkun Wirrpanda

Mulkun Wirrpanda is the daughter of the great Yolŋu leader Djambawa Marawili. As the eldest and most knowledgeable for the Dhudi-Djapu clan from Dhuruputji, Mulkun Wirrpanda is acknowledged as a leader. Mulkun is one of the few Yolŋu women to have this status.

Mulkun paints on bark, larrakiti (memorial poles) and yidaki (didjeridu) and is a talented carver, weaver and printmaker. Her work has been exhibited throughout Australia and in Asia.

Mulkun Wirrpanda is widow to Wikandi Marawili, a Madarrpa clan leader. She is also mother (by kinship) to senior artist Djambawa Marawili who chairs the Buku-Larrnggay Mulka Art Centre and Museum.

Djambawa Marawili AM

Djambawa Marawili AM

Djambawa Marawili is the leader of the Madarrpa clan and an activist and administrator on the interface between non-Aboriginal people and the Yolŋu people of northeast Arnhem Land.

Djambawa’s art is closely related to his role as a leader and he draws on the sacred foundation of his people to represent the power of Yolŋu and to educate others in the justice of his people’s struggle for recognition. Living at Banjara, three hours from Yirrkala, he is immersed in the country he paints and carves.

His work is represented in most major Australian collections, and in several overseas collections. In 1996 he won the prestigious National Aboriginal and Torres Strait Islander Artist Award Best Bark Painting Prize.

Research and Information Outreach (CRIO).

A major interest is in developing digital publishing in the social sciences and humanities through ANU’s Consortium for Ecology over time among the Y ongu people of Blue Mud Bay.

He is currently leading a multidisciplinary team of researchers and religion. He is writing a biography of the Aboriginal artist performance, museum anthropology, visual anthropology has published widely in the anthropology of art, aesthetics, and full copyright.

Glenn Wightman is one of the few non-indigenous Australians to have developed a deep understanding of the country’s traditional plant and animal knowledge. Since graduating from Melbourne’s Monash University in 1981, Wightman has been working closely with the many Aboriginal communities in the Top End of the Northern Territory, an area rich in biodiversity, to help them record this precious knowledge of northeast Queensland who has gained wide national and international recognition. She was one of three Australian Aboriginal women artists chosen to represent Australia in the 1997 Venice Biennale.

Glenn Wightman’s work often explores her connection with Waanyi country, the land of her grandmother and great grandmother but she is also interested in women’s issues, political issues and the environment. She has been involved in many projects in the NT and resided in Darwin working as an artist and lecturer at Charles Darwin University before relocating to Brisbane in 2002.

Jürg Schmeisser

Jürg Schmeisser was born in Germany in 1942 and has lived in Australia since 1978 when he was appointed Head of Printmaking and Drawing at Canberra School of Art, Australian National University. Schmeisser’s distinguished printmaking career is informed by a restless curiosity about the perception and essence of the visual world. From the beginning, Schmeisser has been inspired by travel, his imagination fired by regular experiences of the unfamiliar and unknown.

His love of travel has taken him to Israel, Thailand, Japan, China, USA, Europe and India. He has participated in numerous solo and group exhibitions nationally and internationally. In 1968, he was awarded a German Academic Exchange Scholarship to Japan and in 1974, he received the Ahldenover Gesellschaft Scholarship. Jörg Schmeisser’s work is part of many high profile, public and private collections throughout Australia and overseas including, the National Gallery of Australia; Australian National University; National Gallery of Victoria; Museum of Modern Art, New York.

Professor Howard Morphy

Professor Howard Morphy is Director of the Research School of Humanities at the ANU. He was previously Professor of Social Anthropology at University College London. Morphy has published widely in the anthropology of art, aesthetics, performance, museum anthropology, visual anthropology and religion. He is writing a biography of the Aboriginal artist Nurrinja Maymuru in text and multi-media form.

He is currently leading a multidisciplinary team of researchers looking at the interrelationship between culture, society and ecology over time among the Yungu people of Blue Mud Bay. A major interest is in developing digital publishing in the social sciences and humanities through ANU’s Consortium for Research and Information Outreach (CRIO).

Acknowledgements
On behalf of the participants we acknowledge the Yithuwa Madarrpa Traditional Owners of the Baniyala region.
Congratulations to the artists for their enthusiastic participation in this project. Thank you to Djambawa Marawili and the people of Baniyala for hosting the group, Glenn Wrightman for his bush knowledge and guidance, Professor Howard Morphy for his enthusiasm, knowledge and support, Will Stubbs, Dianne and Andrew Blake for opening the door to an extraordinary experience and their invaluable advice and facilitation, Basil Hall and Mats Uden for never ending patience, facilitating the workshops, proofing and editing the prints and to Peter Eve for producing beautiful photographs and designing the catalogue.

Project Funding
This project has been assisted by the Australian Government through National Science Week, the Australia Council, its arts funding and advisory body and the Northern Territory Government through the Department of Natural Resources, Environment and the Arts and the Research and Innovation Board & Fund.
We thank the following organisations for their generous support, The Gordon Darling Foundation, The Research School of Humanities and the Arts, ANU College of Arts and Social Sciences and The Myer Foundation.
