

# The reSEARCHer Showcase

A presentation for the APSR Adaptable Repositories Forum.  
May, 2007

Andrew Bennett  
University of Queensland Library

# Overview

- Around UQ reSEARCHers in 12 minutes (well less actually)
- Quick look at integration with our institutional repository (UQ espace)
- Next steps, including integration of data from Research Master, Thompson GO8 NCR and other sources

# UQ reSEARCHers circa 2007

- Developed in 2006
- Draws together data from various sources to create a “view” of research at UQ
- Recreates data daily and then presents it via a dynamic web interface
- Used both as a tool for promoting and marketing our research and for discovery of colleagues, experts potential collaborations

# The UQ reSEARCHERS site

The screenshot shows a Microsoft Internet Explorer browser window displaying the UQ reSEARCHERS website. The browser's address bar shows the URL <http://www.uq.edu.au/uqresearchers/index.html>. The website header features the University of Queensland logo and the text "UQ reSEARCHERS". Below the header, there is a search bar and a navigation menu with links for "UQ HOME", "SEARCH", "CONTACTS", "STUDY", "NEWS", "EVENTS", "MAPS", and "LIBRARY". The main content area is divided into several sections:

- ON THIS SITE:** A list of links including Search, Browse, Subscription, About, Contact Us, and How to include your research. Below this is a "Select a quick link:" dropdown menu.
- Other Resources:** A link to "UQ Experts".
- Getting Started:** A section with a search box and a "Search" button, followed by links for "Locate a person", "Look for a School, Centre or Group", and "Advanced Publication, Project or Keyword Search".
- Latest News:** A section titled "Live from UQ News Online" with three news items: "Smart software makes classification easy May 01 2007", "Scientists target manta ray mysteries May 01 2007", and "Navigating a legal sea May 01 2007". A link for "More Research News" is also present.

The browser's taskbar at the bottom shows the Start button and several open applications, including Internet Explorer, and the system clock displays "4:58 AM".

ARC Federation Fellow

[→ Biography](#)

**John Quiggin is an Australian Research Council Federation Fellow in Economics and Political Science at the University of Queensland.**

Professor Quiggin is prominent both as a research economist and as a commentator on Australian economic policy. He has published over 700 research articles, books and reports in fields including risk analysis, production economics, and environmental economics. He has also written on policy topics including unemployment policy, micro-economic reform, privatisation, competitive tendering, and sustainable management of the Murray-Darling system. He was awarded the Thomson ISI Australian Citation Laureate for Economics in 2004. He is a Fellow of the Australian Social Science Academy, the American Agricultural Economics Association, and the Australian Institute of Company Directors, and a Distinguished Fellow of the Australian Agricultural and Resource Economics Society.

The screenshot shows a Microsoft Internet Explorer browser window displaying the UQ reSEARCHers website. The browser's address bar shows the URL: [http://www.uq.edu.au/uqresearchers/researcher/frazerih.html?uv\\_category=prj&prj=354704](http://www.uq.edu.au/uqresearchers/researcher/frazerih.html?uv_category=prj&prj=354704). The website header includes the University of Queensland logo and navigation links for Home, Search, Contacts, Study, News, Events, Maps, and Library. The main content area features a profile for Professor Ian Frazer, with a sub-section for a research project titled "Non-viral vectors for targeted delivery of RNAi nucleotides to cervical cancers" from 2007-2009. The abstract describes RNA interference as a technique for gene silencing in cancer treatment. Researchers listed include Mcmillan, N. A. J., Davies, N. M., Parekh, H., Mcgeray, R. P., Lambert, P., Barik, S. S., and Frazer, I. H. The funding body is the National Health and Medical Research Council, with a total funding of \$400,125. A sidebar on the left provides navigation options for the professor's profile and the website's search and news sections.

2007 - 2009 **Non-viral vectors for targeted delivery of RNAi nucleotides to cervical cancers**

Abstract: RNA interference (or gene silencing) is a new technique whereby we are able to turn off the expression of a particular gene either temporarily or permanently. Cancer is basically a genetic disease where certain protective genes are lost or cancer-causing genes expressed. Gene silencing holds great promise in the treatment of genetic disorders, infectious diseases and cancer. Cervical cancer is caused by infection with the human papillomavirus and the expression of two cancer-causing genes. Using RNA interference we can turn off the expression of these two genes which results in the death of the cancer cell. We are also able to cure mice of tumours derived from human cervical cancer. The major issue with gene silencing is how to deliver it effectively to patients. Here we are investigating novel nanoparticulate systems to deliver this new gene-inhibiting drugs preferentially to the tumour site.

# And links again to the publications

The screenshot shows a Microsoft Internet Explorer browser window displaying the UQ reSEARCHers website. The address bar shows the URL: [http://www.uq.edu.au/uqresearchers/search.html?search\\_type=advpub&join=ANY&field\\_1=papilloma&section\\_1=Publication+title%7E%7E&field\\_2=8](http://www.uq.edu.au/uqresearchers/search.html?search_type=advpub&join=ANY&field_1=papilloma&section_1=Publication+title%7E%7E&field_2=8). The website header includes the University of Queensland logo and navigation links: UQ HOME, SEARCH, CONTACTS, STUDY, NEWS, EVENTS, MAPS, LIBRARY, and my.UQ. The main navigation bar features tabs for basic search, publication search, project search, and keyword search. The 'Publication Search' section is active, showing a search form with four input fields, each with a dropdown menu set to 'Publication title'. The search criteria are: Match  Any  All terms. Below the search form, it says 'Enter the string here' and 'Select a field here'. A 'SEARCH' button and a 'Help' link are visible. The search results section displays: 'Found following results matching ANY search term(s) , 'papilloma' in "Publication title":'. A blue button labeled 'Publications' is shown, followed by the number '2'. Under the heading 'Publications:', there are two search results listed with checkboxes: 

- Chimeric human papilloma virus-simian/human immunodeficiency virus virus-like particle vaccines: immunogenicity and protective efficacy in macaques
- Dysarthria and dysphagia following treatment for a fourth ventricle choroid plexus papilloma

# However there are a few drawbacks

- Very complex internal data model
- Highly reliant on accurate and complete data entry by admin staff
- Researchers may exist with multiple identities
- Not all academics enter the same or as much data about themselves
- Not really robust enough for RQF purposes

# RQF to the Rescue !!

- Need to determine a complete and accurate picture of EACH researcher and their full body of work
- Need to be able to associate a researcher with one or more groups (not necessarily the same as schools of the organisational structure)
- We are capturing citations for as many works as possible in the institutional repository

# Use the Institutional Repository !!

# Store RQF and non-RQF in the same IR

The screenshot shows a Microsoft Internet Explorer browser window displaying search results for 'papilloma' in the UQ eSpace repository. The browser's address bar shows the URL: [http://espace.library.uq.edu.au/list.php?cat=quick\\_filter&sort\\_by=searchKey0&search\\_keys%5B0%5D=papilloma](http://espace.library.uq.edu.au/list.php?cat=quick_filter&sort_by=searchKey0&search_keys%5B0%5D=papilloma). The page header includes the University of Queensland logo and navigation links like 'UQ HOME', 'SEARCH', 'CONTACTS', 'STUDY', 'NEWS', 'EVENTS', 'MAPS', 'LIBRARY', and 'my.UQ'. The user is identified as 'Andrew Bennett'. The search results are sorted by 'Search Relevance' in descending order. The first result is a journal article by Wenjun Liu et al. (2001) titled 'Polynucleotide viral vaccines: codon optimisation and ubiquitin conjugation enhances prophylactic and therapeutic efficacy'. The second result is by Ian H. Frazer and Kong-Nan Zhao (2002) titled 'Saccharomyces cerevisiae is permissive for replication of bovine papillomavirus type 1'. The third result is by Darren J. Trott et al. (2003) titled 'Characterization of Treponema phagedenis-Like Spirochetes Isolated from Papillomatous Digital Dermatitis Lesions in Dairy Cattle'. The fourth result is by Thomas, Ranjany et al. (2004) titled 'Despite differences between dendritic cells and Langerhans cells in the mechanism of papillomavirus-like particle antigen uptake, both cells cross-prime T cells'. The browser's taskbar at the bottom shows the Start button, several open applications including Microsoft PowerPoint, and the system clock showing 5:49 AM on 11/11/2004.

# Usage statistics available

# Will also be used for HERDC reporting

The screenshot shows a Microsoft Internet Explorer browser window displaying the website for the Bibliographic Data Collection. The browser's address bar shows the URL: <http://www.uq.edu.au/research/orps/index.html?page=364>. The website header includes the University of Queensland logo and navigation links such as 'UQ HOME', 'SEARCH', 'CONTACTS', 'STUDY', 'NEWS', 'EVENTS', 'MAPS', and 'LIBRARY'. The main content area features a breadcrumb trail: 'Home » Research Information » Bibliographic Data Collection'. A large heading reads 'Bibliographic Data Collection' with a right-pointing arrow. Below this, a paragraph states: 'Each year, the University of Queensland's Office of Research and Postgraduate Studies conducts the bibliographic data collection for the previous academic year. This is an official record of each piece of research, conducted by a staff or student of the university, which has culminated into an official publication.' A second paragraph explains: 'This collection not only serves as an official listing for university records, but is also a requirement of the Commonwealth Department of Education, Science and Training (DEST). While the Office of Research and Postgraduate Studies organises and oversees the collection, it is the responsibility of each school or centre to collate the publications produced by their staff and students, enter each record into our Research Master database, and submit the required evidence to us. The school or centre of the first named University of Queensland author of a publication is responsible for the entry and submission of the data.' A section titled 'Why Collect Publications Data?' lists three bullet points: 'Official bibliography for the University of Queensland.', 'Requirement of the Department of Science, Education and Training (DEST).', and 'This data is used to redistribute funds to the internal schools and centres.' Another section, 'How Funding is Allocated', states: 'Only publications that meet DEST requirements are funded. External funding is only allocated to the publications that are published in the year being collected.' A final paragraph provides an example: 'For example, if we are collecting publications that were published in 2006 and we have a book that was published in 2003 then we cannot include it for external funding (from the government). However the publication should still be entered into Research Master for inclusion'. On the right side, a 'More Information' box contains links to 'Specifications', 'Category Definitions', 'Classifications and Weightings', 'Data Entry Information', 'Information for Authors', 'UQ reSEARCHers', and 'Bibliographic Administration Reports'. A 'Print version' link is also present. On the left, an 'ON THIS SITE' menu lists various navigation options like 'Home', 'Research Grants', 'RHD Admissions', etc. The browser's taskbar at the bottom shows several open applications, including Microsoft Word, and the system clock indicates 6:12 AM.

**The Thompson National Citation Report data-set**

The University has purchased a large data set (Thomson National Citation Report) containing detailed records of all academic publications produced at Australian Universities and recorded by Thomson ISI in the last 10 years (note that Thomson focuses on some disciplines more than others). The data set currently contains bibliographic data and citation performance data to October 2006 and will be updated on a regular basis. Although this is not a comprehensive data set for the entire UQ academic community, it does provide a lot of useful information that will add to the information already within the existing UQ information systems. Importantly, it will provide statistics on citation performance for those publications that are captured in the dataset.

To ensure that we extract all useful data, a web interface called UQCited has been designed to enable UQ staff members to identify their papers within the Thomson National Citation Report. This interface allows you to search the database for your publications and assert authorship. After asserting authorship of the publications that you have written you will immediately be able to generate an individualised citation profile and publication history based on this Thomson data. While it is not without fault, this data-set does represent a large and widely accepted source of citation performance data.

The publications that you find within this dataset should mirror those found through a Web of Knowledge search for your work for the period 1997 - October 2006, excluding all publications produced at overseas institutions.

The information that you provide using the interface will be recorded and will augment the University's existing data relating to publications and research performance. This project represents one-step towards a longer-term objective to compile a complete publication dataset. This will necessarily involve working closely with the UQ academic community to ensure that this is comprehensive. All useful data, including the Thompson data set, will help inform decisions regarding the selection of researchers to participate in the Research Quality Framework, the composition of research groups and the selection of works to be submitted. No single piece of information will be used in isolation.

To access the site, go to: <https://www.library.uq.edu.au/uqcited/login.php>  
Login using your UQ username and password.

We would be grateful if you would take the time to use this interface and generate a citation profile and publication history for yourself over the next few weeks. Should you have any queries relating to the interface, then please do not hesitate to email Ambery Thomas or Dianna Gould at [raf@uq.edu.au](mailto:raf@uq.edu.au).

Select a quick link:

# Conclusion

- A very brief look at the current functionality of UQ reSEARCHers
- Roadmap for integration with the institutional repository as the authoritative source for publication information
- Two sources of publication data which will be imported into the repository with scripts and data models available via APSR

# Questions Are Welcome!
