UTS Shopfront Monograph Series contains high impact research which is relevant to communities of interest or practice beyond the university. Known as 'the scholarship of engagement', this is academically relevant work that simultaneously meets campus mission and goals as well as community needs. It is a scholarly agenda that integrates community issues, where community is broadly defined to include audiences external to the university that are part of a collaborative process to contribute to social justice and the public good.

Shopfront Monographs present original research which is of interest and relevance to community workers and organisations, policymakers and government organisations, service providers, advocates and activists. The style combines academic rigour and accessible communication. The series is open to contributions across all disciplines and encourages contributions from Early Career Researchers and those producing interdisciplinary and/or collaborative research.

Title: 'Targeted': Experiences of Racism in NSW after September 11, 2001

Authors: Dreher, Tanja

Keywords: racism
Muslim Australians
September 11 2001
Arab Australians
prejudice
discrimination
Islam
fear

Issue Date: Dec-2006

Publisher: UTS Shopfront

Series/Report no.: UTS Shopfront Research Monograph Series
2

Abstract: 'Targeted', is a report on experiences of racism in NSW after September 11, 2001. The monograph was collected by the anti-racism hotline established by the Community Relations Commission For a Multicultural Society (CRC). The research was conducted by UTS Shopfront and funded by the CRC. The monograph details an increase in racially motivated violence and verbal abuse in NSW in the months following the US 2001 attacks. The CRC hotline recorded 248 acts of violence, abuse, harassment, discrimination and violence against Muslim, Arab and Sikh communities in NSW. The report relates that these incidents produced a climate of insecurity, which continues to impact these communities, and denies them the chance to enjoy a full Australian citizenship.

Title: Cronulla, Conflict and Culture. Can Muslim women find their voice in Australia?

Authors: Ho, Christina

Issue Date: 12-Sep-2006

Abstract: Following the Cronulla riots, Muslim women have again found themselves targets of violence and harassment in public spaces. Meanwhile public figures claiming to defend women's rights have added to conflict by displaying misogynistic and a threat to Australia's egalitarian culture. In this climate, how can Muslim women find their voice about cultural change without fuelling further hatred?

Description: This public lecture confronted issues of feminism, nationalism and Islamophobia in the post-9/11 world.

UTS:Library – activities in relation to DSpace

- Develop and manage the UTS institutional repository
- Host, manage IT infrastructure
- Policy development
- Oversee of policy and standards implementation
- Training, promotion, marketing

Brief: How we might approach RQF - focusing on the research outputs

Partnership between the UTS Research and Innovation Office and the Library

Project Goals

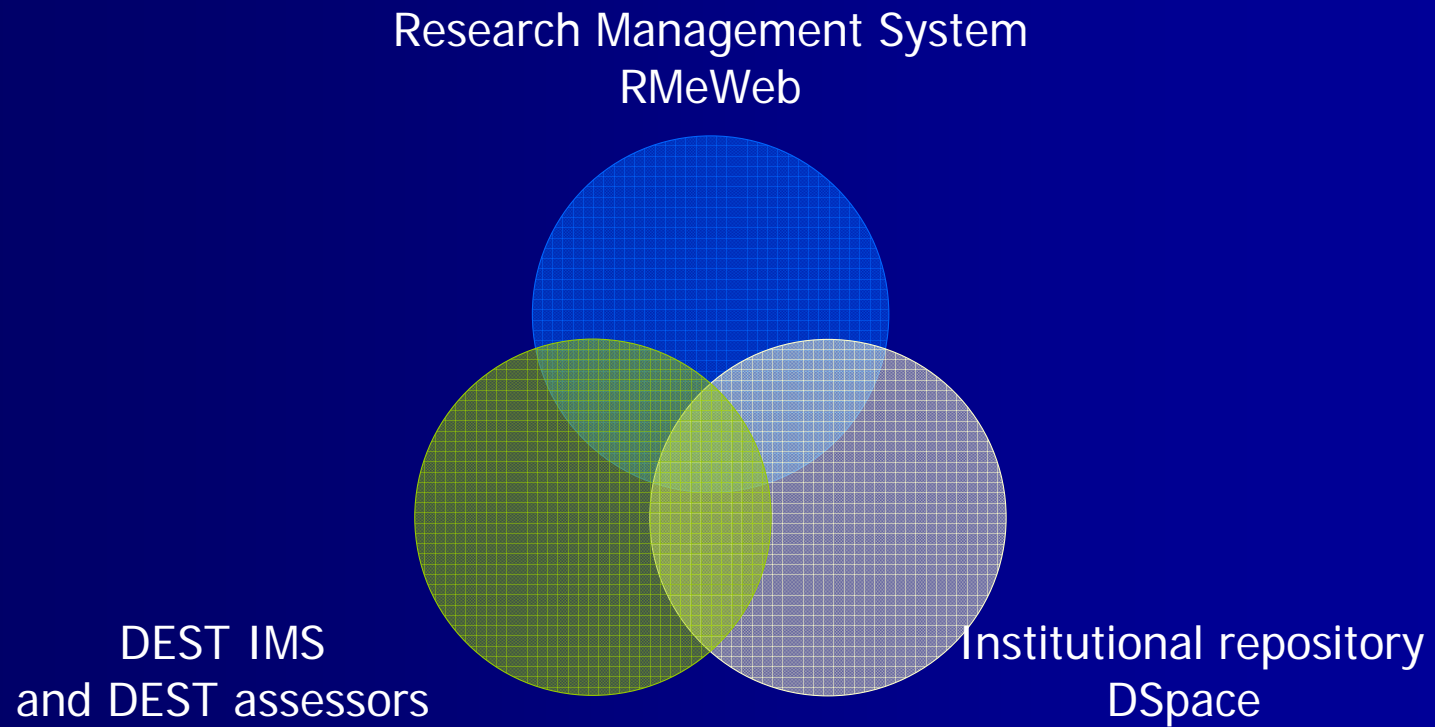

To find the best solution for obtaining, storing and providing access to the information required for the RQF

To ensure that this solution provides a long term benefit to the institution, outside the RQF

Stakeholder groups with Library representation

- Research and Research Training Committee (Chaired by PVCR)
- Research Infrastructure Steering Committee
 - Includes Library, HR, ITD, Finance; researchers, Grad School, etc

Systems linkages

Deliverables include

- RMeWeb and Digital Repository interaction
- RMeWeb and DEST IMS interaction
- Access to institutional repository for assessment panels
- Seamless deposit of materials into the appropriate section(s) of the Digital Repository (RQF or Closed Access, Limited Access, Open Access)
- Clear process maps for academic staff depositing material
- Face to face training and online supporting material (tutorials) for academic staff and support staff involved in depositing research publications

A possible workflow

Academics submit their research output to the Research Office via the Research Master web interface.

If the submission includes digital content, RM will deposit it into DSpace using a (currently undefined) Web Services API

To accommodate this the RM submission process will need to be modified so that:

1. It asks if the content is open access or restricted
2. It asks which collection inside DSpace the content should be deposited into

Both restricted and open access material can be deposited into the same DSpace repository. The DSpace access controls will be used to restrict access.

The RM provides the appropriate reports to DEST for the RQF

DEST would notify panel members. DSpace accounts would be created for the panel members allowing them to retrieve restricted content from inside DSpace. These accounts can be anonymous.

Academics could still deposit additional material, such as pre-prints and raw data, directly into DSpace

Scanning 6000+ objects

IT staff estimate:

est. 2.5 terabytes of storage space for the existing material

Based on:

a journal article	= average of 5A4 pages
a book chapter	= 20A4 pages
a conference paper	= 5A4 pages

All captured as pdf files.

More accurate assessment = a random sample of 100 objects across all sections
