Learning and change in rural regions:
understanding influences on sense of place.

Thomas George Measham

August 2003

A thesis submitted for the degree of Doctor of Philosophy of The Australian National University.
I declare this thesis is entirely my own original work.

Acknowledgements

I would like to acknowledge the support of my wife, Marcela Costanzo and the
guidance of my supervisory committee made up of Richard Baker, David Dumaresq,
Marlene Buchy and Daniel Walker. I would also like to thank CSIRO Sustainable
Ecosystems for supporting the study and the Eacham Historical Society for access to
images and other records.
Abstract

This thesis is about how people develop attachments to places, and what this means for natural resource management. The concept of ‘sense of place’ is generating strong interest in the domain of natural resource management. In particular, the concept offers considerable potential as a way of integrating social, ecological and economic dimensions of environment. This makes the concept highly relevant to an emerging agenda from a range of disciplines and management approaches concerned with the links between social systems and natural systems at local and regional scales (Berkes and Folke 1998; Cheng Kruger and Daniels 2003; Plumwood 2002).

Recent interest in place has led to a research agenda for exploring how this concept can play a greater role in resource management (Cantrill and Senecah 2001). Central to this research agenda are questions of how attachments to places are influenced and how sense of place changes over time. In response to the emerging role of sense of place in natural resource management and the research agenda for exploring this concept, this thesis is concerned with three questions: what are the key influences on sense of place?; what is the relationship between sense of place and activities in practice?; and how do people learn about places and respond to change? To explore these questions, the thesis presents findings from interviews with 40 participants in case studies of the Atherton Tablelands and Woodstock, north Queensland. The research employed a purposeful sampling design with the aim of capturing as many different senses of place as possible within the limits of this study. Participants represented a broad range of land uses,
ethnic backgrounds, ages and durations of time in the place of the interview. The data from these interviews were analysed using qualitative methods drawing on grounded theory (Charmanz 2000) and influenced by adaptive theory (Layder 1998). The research included a focus on honouring human experience (Braud and Anderson 1998), and also recognising the importance of prior research on how people develop a sense of place (Piaget 1971; Relph 1976).

The analysis showed how sense of place was influenced strongly by childhood experiences, both for people who grew up in the case study locations and for people who grew up elsewhere. Other strong influences on place involved living in a similar environment overseas, seeking profit and having a sense of self focussed on agricultural production. Of particular interest is that for many participants who moved to the case study locations, their sense of the Atherton Tablelands or Woodstock was well developed prior to arriving there. This implies that influencing people’s sense of place once they have arrived in a new place will be difficult. Attempts to influence people’s sense of place before they arrive, or soon after arrival, are more likely to be successful.

The ways that sense of place related to practice are presented as a series of overlapping themes. These include the practice of admiring one’s place from the comfort of home, making the land produce, and engaging with a place through activities such as hunting, camping and fishing. Participants also described the practice of caring for place, such as looking after traditional country and restoring the family farm.

The ways participants learned about their places focussed on their childhood experiences, learning from elders, the role of comparisons between places, and the
importance of continuity of experience. Participants described very few ways of learning about their place during adulthood. One of these was seeing places under different conditions, such as during a rat plague or after a bushfire. Another was through involvement in community events such as festivals.

In discussing the implications of these findings for natural resource management and policy, the thesis highlights how for several participants the key influences on sense of place were tied to non-economic values. Furthermore, this thesis shows that for many people identity and place were strongly linked and this adds to research that explains why farmers may not behave in economically ‘rational’ ways (Botterill 2001a). The thesis also discusses the links between sense of place and post-productivist values in considering transitions in regional Australia identified by Holmes (2002). The findings of this thesis emphasise the potential role for environmental education during childhood to encourage learning about places. The thesis also discusses the implications of how people learn about their places during adulthood, arguing that further support for festivals and community events can play a significant role in exploring the links between social and ecological systems.

In conclusion, the thesis argues that the concept of place continues to offer considerable potential for understanding change in regional Australia, and in particular a grass roots shift towards post-productivist values. This role can be developed by further supporting environmental education in childhood and community events such as festivals which help us to learn about the links between ourselves and our environments.
# CONTENTS

## Abstract

**Chapter 1** *Introduction*

1.1 What is ‘place’?  
1.2 The relevance of place  
1.2.1 Sense of place is linked to environmental stewardship  
1.2.2 Places are a context for social learning  
1.2.3 Places link theory with experience  
1.2.4 Place is an integrating concept  
1.2.5 Behaviour and change  
1.2.6 Scale  
1.2.7 Place, local knowledge and belonging: linking social and ecological systems  
1.3 How place is part of natural resource management  
1.4 Key issues in place based research  
1.4.1 Influences on sense of place  
1.4.2 The link between sense of place and behaviour  
1.4.3 Learning, place and change  
1.5 Prior interest in how sense of place formed  
1.6 Defining the research  
1.7 Thesis overview

## Chapter 2 *Review of literature on the concept of place*

2.1 Chapter introduction  
2.2 Background  
2.3 Contemporary context for place: human dimensions research  
2.4 Defining and understanding place and space  
2.4.1 Humanist definitions  
2.4.2 Gender, space and place  
2.4.3 Ethnicity and the politics of place  
2.4.4 Time and place  
2.4.5 Place and identity  
2.4.6 Belonging to places  
2.4.7 Integrating society and nature: western philosophy and place as agenda  
2.5 Problems associated with place  
2.5.1 Globalisation, locality and place  
2.5.2 Unsustainable places  
2.6 Chapter conclusion

## Chapter 3 *Methodology and methods*

3.1 Methodology  
3.1.1 Introduction  
3.1.2 Construction and reality  
3.1.3 Purpose of the research and rationale for approach  
3.1.4 Qualitative approach  
3.1.5 Adaptive theory  
3.1.6 Background concepts  
3.2 Case studies  
3.2.1 First case study: Woodstock, north Queensland
viii

3.2.2 Second case study: the Atherton Tablelands 51
3.3 Methods 62
3.3.1 Confidentiality 62
3.3.2 Sampling 63
3.3.3 Interviews 65
3.3.4 Semi structured guiding themes 67
3.3.5 Data 67
3.3.6 Context and triangulation 69
3.3.7 Analysis 70

Chapter 4 Influences on sense of place 75
4.1 Chapter introduction 75
4.2 Principal themes 75
4.2.1 Growing up in the place of the interview 75
4.2.2 Influence of a rural childhood elsewhere 85
4.2.3 Rejection of urban life 91
4.2.4 Profit 94
4.2.5 Overcoming adversity 96
4.2.6 Living in a similar environment overseas 98
4.2.7 Production focus 101
4.2.8 Circumstance and specific events 105
4.2.9 Other influences 114
4.3 Discussion 115
4.3.1 The role of childhood influences 115
4.3.2 Sense of place developed prior to arriving 118
4.3.3 Seeking belonging 120
4.3.4 A significant minority: post arrival influences on place 121
4.3.5 Local food, place and embeddedness 122
4.4 Chapter conclusion 123

Chapter 5 Identity, place and practice 125
5.1 Chapter introduction 125
5.2 Principal themes 125
5.2.1 Veranda gazing 125
5.2.2 Making the land produce 131
5.2.3 Crafting a particular landscape 142
5.2.4 Recreating 145
5.2.5 Community events and festivals 147
5.2.6 Care for place 148
5.3 Discussion 157
5.3.1 Exclusive focus on production 157
5.3.2 A question of balance 158
5.3.3 A caring minority 158
5.4 Chapter conclusion 161

Chapter 6 Learning and place 164
6.1 Chapter introduction 164
6.2 General themes 164
6.2.1 Learning about places in childhood
