Early Maladaptive Schemas and Cognitive Distortions
in
Psychopathy and Narcissism

Cristian Torres
April 2002

A thesis submitted for the degree of Doctor of Psychology (Clinical) of
the Australian National University
I hereby certify that the work embodied in this thesis is the result of original research and contains acknowledgment of all non-original work
ACKNOWLEDGMENTS

I would like to extend my gratitude to a number of people without whom this work would not have been possible:

To Dr Jeff Ward, thank you for your ongoing support and guidance throughout the three-year ordeal that was the realisation of this research. Thank you for your steadfast patience and wisdom.

To all my friends (particularly ‘Los Muchachos’) who persevered with my tantrums and moods for the past three years, thank you, it was all for this.

To Judy and Russ, thank you both for feeding and housing me when I needed it, and for your incessant encouragement and support.

To my parents and family, for all your support and encouragement throughout my entire academic lifespan, I sincerely thank you. Yes, it’s over now! Mami Y Papi, este esfuerzo esta dedicado a ustedes. Ustedes que siempre me ampararon y empujaron hacia el estudio.

To Emily, your unyielding support has been precious to me. We entered each other’s lives at a most tumultuous period, for both of us, and yet you always sought to understand what I was going through, and help in any way that you could. I am truly fortunate to have had you by my side…Thanks Hun…all done…
Personality disorders have traditionally been considered refractory to psychological interventions. Two of the most common, and potentially harmful personality disorders are antisocial personality disorder / psychopathy, and narcissism. Although a great deal of conceptual overlap exists between psychopathy and narcissism, the empirical study of these constructs has proceeded largely independently of one another. Further complicating the discrimination of these constructs is the identification of the bifactorial nature of psychopathy - conceptualised as primary and secondary psychopathy - as well as the identification of two distinct forms of narcissism, overt and covert. The recent resurgence of interest in the sub-clinical manifestations of these two constructs has led to the development of a number of easily administered instruments to measure each of the psychopathy and narcissism constructs, as dimensional traits, within normal populations. This has provided empirically validated and reliable instruments to further explicate these two overlapping constructs. The first of the two studies reported sought to discriminate between psychopathy and narcissism through the recharacterisation of these constructs in terms of the early maladaptive schemas outlined in Young’s early maladaptive schema theory (Young, 1999). Two hundred and ninety one participants completed questionnaires measuring primary and secondary psychopathy, overt and covert narcissism, and early maladaptive schemas. Findings are consistent with the hypothesis that psychopathy and narcissism are discriminable in cognitive-interpersonal terms, as operationalised by early maladaptive schemas. Findings also call into question the earlier observed hierarchical structure of the Young Schema Questionnaire. The current analysis identified a two-factor structure to the schema questionnaire, rather than the previously stated 5-factors. Having demonstrated the usefulness of understanding
psychopathy and narcissism in cognitive-interpersonal terms, the second study sought to 
further clarify the association between psychopathy and narcissism through the 
reconceptualisation of these constructs in cognitive terms, through the identification of 
the cognitive distortions operative in each disorder. One hundred and thirty two 
participants completed a cognitive distortions questionnaire developed by the author, 
along with the same measures of primary and secondary psychopathy, and overt and 
covert narcissism, as those administered in study 1. Findings were interpreted as 
providing support for the notion of psychopathy representing a sub-category of 
narcissism. Findings also provide further supportive evidence for the validity of the 
primary / secondary psychopathy, and overt / covert narcissism distinctions. The further 
clarification of the factor structure of the Young Schema Questionnaire, and the 
replication of the reliability and construct validity of the measure of cognitive 
distortions developed for this research are highlighted as areas for future research.
# TABLE OF CONTENTS

Acknowledgements iii

Abstract iv

CHAPTER 1: Psychopathy and Narcissism 1

1.1 Personality Disorders 1

1.2 Psychopathy 9

1.2.1 Psychopathy and Antisocial Personality Disorder (APD): Historical Background 9

1.2.2 Modern Conceptualisations: Primary and Secondary Psychopathy 14

1.2.3 Hare’s Two-Factor Conceptualisation of Psychopathy and the Psychopathy Checklist – Revised (PCL-R) 15

1.2.4 Levenson’s Self-Report Psychopathy Scale (LSRP) 19

1.3 Narcissism 22

1.3.1 The Origins of Narcissism 22

1.3.2 Narcissistic Personality Disorder (NPD) 23

1.3.3 Measurement of Overt and Covert Narcissism 27

1.3.4 The Narcissistic Personality Inventory (NPI) 28

1.3.5 The Hypersensitive Narcissism Scale (HSNS) 28

1.3.6 Conclusions 30
CHAPTER 2: Cognitive Theories of Personality Disorders

2.1 Beck’s Cognitive Theory of Personality Disorders

2.1.1 Early Development of Beck’s Theory of Personality Disorders
2.1.2 A Statement of Beck’s Cognitive Theory
2.1.3 Beck’s Theory of Personality Disorders
2.1.4 Conclusions

2.2 Young’s Early Maladaptive Schema Theory

2.2.1 The Early Maladaptive Schema Model
2.2.2 Early Maladaptive Schemas as a Cognitive-Interpersonal Conceptualisation of Personality Pathology
2.2.3 Measurement of Early Maladaptive Schemas: The Young Schema Questionnaires (YSQ)
2.2.4 Schema Theory and Narcissism
2.2.5 Conclusions

CHAPTER 3: Psychopathy and Narcissism: A Characterisation in Terms of Early Maladaptive Schemas

3.1 Method

3.1.1 Participants and Procedure
3.1.2 Measures
3.1.3 Measure of Early Maladaptive Schemas
3.1.4 Measure of Primary and Secondary Psychopathy
3.1.5 Measures of Overt and Covert Narcissism
### 3.2 Results

3.2.1 Psychometric Analysis

3.2.2 Correlational Analysis

3.2.3 Factor Analysis of the Young Schema Questionnaire – Short Form (YSQ-SF)

### 3.3 Discussion

3.3.1 Psychometric Issues

3.3.2 Relationships Between Psychopathy, Narcissism, and the YSQ-SF

3.3.3 Factor Analysis of the YSQ-SF

3.3.4 Summary

### CHAPTER 4: Psychopathy and Narcissism: A Characterisation in Terms of Cognitive Distortions

### 4.1 Method

4.1.1 Participants and Procedure

4.1.2 Measures

4.1.3 Measure of Cognitive Distortions

4.1.4 Remaining Measures

4.1.5 Data Analysis
4.2 Results

4.2.1 Psychometric Analysis 94
4.2.2 Correlational Analysis 96
4.2.3 Factor Analysis 100

4.3 Discussion

4.3.1 Psychometric Issues 104
4.3.1.1 Internal Consistency 104
4.3.2 The Relationship Between Psychopathy and Narcissism 105
4.3.3 Factor Analysis of the Psychopathy and Narcissism Cognitive Distortions Questionnaire (PNCDQ) Cognitive Distortion Sub-scales 109

CHAPTER 5: General Discussion 112
