

Preface

IiX 2008 is the second international symposium on Information Interaction in Context succeeding the symposium held in Copenhagen in 2006. The primary objective of IiX is to investigate how the concept of context can be understood and exploited to make information systems truly interactive. Knowledge about context can be used effectively to constrain retrieval and seeking of information and to understand ensuing information behaviours including relevance and use, thereby reducing the complexity of the interaction processes. As in the case of the first IiX symposium, the aim of IiX 2008 is to bring together researchers from the related areas of information seeking behaviour, laboratory IR, and interactive IR to provide a forum for discussion and collaboration on context issues with respect to information seeking and retrieval. This is successfully achieved in IiX 2008, as a variety of angles to the concept of context, as well as suggestions as to how to consider and treat context in information seeking and retrieval, is presented.

IiX 2008 received paper submissions from 19 countries (four continents) and accepted 23 full and research in progress papers.

The organising committee would like to thank all the authors who submitted their work for consideration and the participants of IiX for making the event a great success. Special thanks are due to the members of the Program Committee who worked very hard to ensure the timely review of all the submitted manuscripts, and to the invited speakers: Professor Stephen Robertson, Microsoft Research Cambridge, and Dr. Ian Ruthven, University of Strathclyde, Glasgow.

We also thank the sponsoring institutions for their generous contribution: British Computer Society Information Retrieval Specialist Group (BCS IRSG); Information Retrieval Facility (IRF); and Yahoo! Research.

Thanks are also due to the editorial staff at ACM for agreeing to publish the conference proceedings as part of their International Conference Proceedings Series and to enter the proceedings in the ACM Digital Library.

Finally, we would like to thank Peter Ingwersen for organising the panel session on “Information Interaction: Problems & Challenges”, the co-chairs of the Doctoral Forum Ross Wilkinson and Erica Cosijn, the tutorial co-chairs Eero Sormunen and Peter Ingwersen, the publicity chair Birger Larsen, and Murat Yakici for acting as webmaster.
