THE MAXIMUM EFFECT OF CONVECTION IN STELLAR ATMOSPHERES ON THE OBSERVED PROPERTIES OF STELLAR SPECTRA.

Thesis submitted by

Antoni Przybyski
of Rogozno (Poland)

to the

AUSTRALIAN NATIONAL UNIVERSITY

for the Degree of Doctor of Philosophy.
Contents

1. Introduction ........................................... 2
2. Mean absorption coefficient used ................. 3
   2.1. Mean absorption coefficient for neutral hydrogen 4
   2.2. Mean absorption coefficient for negative hydrogen ion 6
3. Construction of models ............................... 7
   3.1. Radiative models ................................ 7
   3.2. Adiabatic models ................................ 9
4. Monochromatic fluxes ................................ 10
5. Colour gradients ...................................... 11
6. Computation of the equivalent width of calcium lines 12
   6.1. Introductory remarks ............................ 12
   6.2. Ionization ....................................... 14
   6.3. Damping ......................................... 15
7. Results ................................................ 16
   7.1. Model stellar atmospheres ...................... 16
   7.2. Monochromatic fluxes ................................ 16
   7.3. Colour gradients ................................ 17
   7.4. Equivalent widths ................................ 18
8. Comparison of observation with computations ........ 19
   8.1. Theoretical gradient-equivalent width relation 19
   8.2. Observational data ................................ 20
   8.3. Observed gradient-equivalent width relation .... 22
   8.4. Comparison of the observed and computed relations 24
9. Stellar temperature scale ............................ 25
10. Blanketing effect .................................... 27
11. Comparison with the models of B. Stromgren ...... 29
12. Acknowledgements .................................... 29

Summary ................................................ 30
References .............................................. 31
Table of the equivalent widths ........................ 33
Tables of model stellar atmospheres .................. 36
