MAIN FEATURES

Quarter ended December 1980—

The Australian population at 31 December 1980 is estimated at 14,726,700. The increase of 61,300 during the December quarter 1980 is the highest in any one quarter since the December quarter 1973 when it was 61,900. Net migration gain was 34,100 or 55.6 per cent of the growth.

Year ended December 1980—

Growth of the Australian population during the year 1980 is estimated to be 210,200, or 1.45 per cent over the estimated population twelve months earlier. This is the largest increase and the highest rate of growth since 1974 when the figures were 219,000 and 1.62 per cent respectively.

The component which was responsible for the increased growth was net migration (permanent and long-term movement). This was 93,400 in 1980, compared with 69,000 in 1979, and is the highest gain in net migration since 1971.

Births registered during 1980 were 225,500, 2,400 higher than registered in 1979—the crude birth rate (births per thousand of mean population) continued to fall although at a reduced rate. The rate for 1980 was 15.4 compared with 15.5 for 1979.

Marriages registered during 1980 were 109,200, 4,800 higher than registered in 1979, while the crude marriage rate increased to 7.5 from 7.2 in 1979.

The number of deaths rose in absolute numbers, 108,700 registered in 1980, compared with 106,600 in 1979. However, the crude death rate (deaths per thousand of mean population) remained unchanged at 7.4.

Introduction

This publication provides the latest available statistics of births, deaths (including infant deaths), marriages, divorces, interstate migration, overseas movements and population estimates, for Australia, the States and Territories. It contains references to related and other publications of interest and it is intended to provide information for the general reader. Persons requiring further details should consult the publications listed below or contact the ABS directly.

Related publications

2. Until September 1979 quarterly demographic statistics were published in the following:

Population and Vital Statistics, Australia (Preliminary) (3211.0)

Population and Vital Statistics, Australia (3212.0).

This publication replaces both of these. Detailed annual demographic statistics appeared for many years in the annual publication *Demography* which ceased after the issue for 1971. Since then, annual statistics have been contained in the publications listed below.

Births, Australia (3301.0). The 1979 issue was published on 1 April 1981.

Deaths, Australia (3302.0). The 1979 issue was released in May 1981.

Marriages, Australia (3306.0). The 1979 issue was released on 31 October 1980.

Divorces, Australia (3307.0). The 1979 issue was published in May 1981.

Overseas Arrivals and Departures, Australia (3404.0). The 1979 issue was released in May 1981.

Estimated Age Distribution of the Population: States and Territories of Australia (3201.0). The 1979 issue was released on 4 November 1980; the 1980 issue is expected to be published in June 1981.

3. Other publications of interest are as follows:

Overseas Arrivals and Departures, Australia (3402.0). A quarterly publication showing detailed classifications of movement.

Overseas Arrivals and Departures, Australia (3401.0). A short release of the latest monthly statistics.

Birth Expectations of Married Women, Australia (3215.0). Results of a sample survey in June 1979 were released in May 1980.

Internal Migration, Australia (3408.0). Results of a sample survey covering the twelve months ended June 1980, released on 22 January 1981.

Australian Mortality: A Study by Causes of Death, ABS occasional paper 1980/81, issued in August 1980.

4. Current publications produced by the ABS are listed in the *Catalogue of Publications, Australia* (1101.0) which is available free of charge from any ABS office.

5. Statistics of overseas arrivals and departures and related data are also published regularly by the Department of Immigration and Ethnic Affairs regarding immigration and emigration (see that Department's *Australian Immigration, Consolidated Statistics*) and by the Department of Transport and the Australian Tourist Commission regarding international travel and tourism.

Scope of statistics

6. This publication contains detailed statistics for Australia, summary figures for the States and Territories and some basic population estimates for Capital City Statistical Divisions and selected Statistical Districts. More detailed State statistics are available in publications issued by the ABS State Offices.

Definitions and explanatory notes

7. These are provided at the head of each section of tables.

Rounding

8. In this publication population estimates have been rounded to the nearest hundred. Neither rounded figures, nor unrounded figures identified as part estimated, should be assumed to be accurate to the last digit shown.

9. Where figures have been rounded, discrepancies may occur between sums of component items and totals.

Symbols and other usages

- r figures or series revised since previous issue
- p preliminary—figure or series subject to revision
- n.a. not available
- n.y.a. not yet available
- .. not applicable
- nil or rounded to zero
- break in continuity of series (where drawn across a column between consecutive figures).

POPULATION ESTIMATES

Notes and definitions

Method of estimation. The estimates of the population of Australia, the States and Territories at 30 June 1976 are the Census results adjusted for underenumeration. Estimates for later dates are derived from these by the addition of natural increase and net migration gain (which excludes overseas movement of less than one year). For the States and Territories account is also taken of estimated interstate movements involving a change of usual residence. For dates between June 1971 and June 1976 the estimates were derived retrospectively from the June 1976 estimates.

Mean populations. These are calculated for calendar and financial years to the formula:

$$\text{mean population} = \frac{a + 4b + 2c + 4d + e}{12}$$

where *a* is the population at the end of the quarter immediately preceding the twelve month period, and *b, c, d* and *e* are the populations at the end of each of the four succeeding quarters. Mean populations are used in the calculation of crude rates. The weights used in the

formulation of the mean annual populations have been derived using a mathematical technique which involves the fitting of a third degree polynomial function to a series of points. Further explanation of this procedure is available to interested users on request to the ABS.

Crude rates. These are the numbers of births, deaths, etc. per 1,000 mean population. The infant death rate is the number of deaths under one year registered per 1,000 live births registered.

Rates of population growth. These express a change during a period as a proportion (per cent) of the population at the beginning of the period. These rates should be distinguished from crude rates (of natural increase, net migration, etc.) which are expressed per 1,000 of mean population.

Population by age. The 1976 base figures are the results of the Census of 30 June 1976 adjusted for underenumeration, mis-statement of ages and other factors including certain age-specific adjustments in respect of short-term travellers. A detailed explanation appears in *Estimated Age Distribution of the Population: States and Territories of Australia, June 1971 to June 1976* (3201.0).

BIRTHS AND DEATHS

Notes and definitions

Natural increase. Excess of registered births over registered deaths.

Occurrence and registration. Births and deaths are registered in the State or Territory of occurrence which is not necessarily the State or Territory of usual or last residence of the mother or the deceased. Births and deaths are shown in the quarter or year of registration.

Live births. A live birth is the complete expulsion or extraction from its mother of a product of conception, irrespective of the period of gestation, which after such separation breathes or shows any other evidence of life such as beating of the heart, pulsation of the umbilical cord or definite movement of voluntary muscles.

Crude birth and death rates. The number of live births or deaths per 1,000 mean population.

Infant death rate. The number of deaths under one year registered per 1,000 live births registered in the same year.

Total fertility rate. The sum of age-specific fertility rates (live births at each age of mother per 1,000 female

population of that age). It represents the number of children a woman would bear during her lifetime if she experienced the rates of the period shown.

Female gross reproduction rate. The sum of female age specific fertility rates. It represents the average number of daughters born to women all of whom survive to the end of the reproductive period and bear daughters at each age in accordance with the rates prevailing in a year.

Female net reproduction rate. This allows for mortality during the child-bearing period. It represents the average number of daughters born to women who are subject to the fertility rates of a year and the mortality as determined from a life table.

Nuptial births. Live births are identified as nuptial where the father registered was married to the mother at the time of the birth or where the husband died during the pregnancy.

Life expectancy refers to the average number of additional years a person of a given age and sex might expect to live if the age-specific death rates of the given period continued throughout his/her lifetime.

(a) For crude rates, see previous tables. (b) For years 1947 to 1971 based on Official Life Tables calculated by the Australian Government Actuary. The figures for the years 1947 to 1971 are based on the mortality of three years, including the year before and the year after that shown. For all other years based on life tables calculated by the Australian Statistician. Because of the method of calculation these figures are subject to annual fluctuations which may not be indicative of a longer term trend. (c) Proportion of total live births.

MARRIAGES AND DIVORCES

Notes and definitions

Marriage. Under the Australian *Marriage Act* 1961, marriages may be celebrated by a minister of religion registered as an authorised celebrant, by a district registrar or by other persons authorised by the Attorney-General. Notice of the intended marriage must be given to the celebrant at least one calendar month but within 3 calendar months before the marriage. A celebrant must transmit an official certificate of the marriage for registration to a district registrar in the State in which the marriage took place.

Divorces refer to decrees of dissolution of marriage made absolute, nullities, and, under the Matrimonial Causes legislation (superseded by the *Family Law Act* 1975), judicial separations granted. For 1976, the first year of operation of the new legislation, divorces determined under the superseded legislation are shown separately.

Crude marriage and divorce rate. This is the number of marriages or divorces per 1,000 of the mean population. (The usefulness of this rate is limited because a large and varying proportion of the population used in the denominator is below the minimum age of marriage or is unmarried. Age-specific marriage and divorce rates can be found in the more detailed marriage and divorce publications listed under 'Related publications' at the beginning of this publication).

The median age is the age which divides the total numbers in a population into two equal halves.

The median duration of marriage is the duration (in years) which divides the number of marriages dissolved into two halves, one half of these marriages having lasted shorter, the other half longer than the duration shown.

(a) Many divorces registered in the A.C.T. involve applicants normally resident in areas surrounding the A.C.T. In 1979, only 722 (54%) of A.C.T. divorces granted were to applicants normally resident in the A.C.T. The A.C.T. rate is therefore not a statistically accurate reflection of the extent of divorce among A.C.T. residents.

(b) Introduction of Family Law Act.

(a) There is a break in series due to introduction of Family Law Act

MIGRATION

Notes and definitions*Categories of overseas travellers.*

Permanent movement consists of persons who, on arrival, state that they intend to settle in Australia (*settlers*), including *assisted settlers* as identified by the Department of Immigration and Ethnic Affairs; and Australian residents, including *former settlers*, who, on departure, state that they do not intend to return to Australia.

Long-term movement consists of visitors arriving and Australian residents departing temporarily with the intention to stay in Australia or abroad for twelve months or more, and the departure of visitors and the return of Australian residents who had stayed in Australia or abroad for twelve months or more.

Short-term movement consists of travellers whose intended or actual period of stay in Australia or abroad is less than twelve months.

Travellers who state exactly twelve months or one year as their actual or intended stay are randomly allocated to long-term or short-term in proportion to the number of returning travellers who report their actual length of stay as up to one month more or one month less than a year. A similar procedure is used for those travellers who fail to state their period of stay.

Net overseas migration. For the purpose of estimating the population of Australia, the States and Territories, overseas migration is taken as net permanent and long-term movement. The allocation of net overseas migration to States and Territories of residence is part estimated.

Method of estimation and reliability of overseas migration statistics. All arriving and departing overseas travellers are required to complete passenger cards which are the source of the statistics. To reduce processing costs, passenger cards in respect of movement by air with a duration of stay of one year or less are sampled. Estimates for these travellers are subject to sampling variability and measures of the sampling error are available. The reliability of the statistics is also affected by errors of reporting and, in particular, by discrepancies arising from the fact that certain information reflects the passengers' intentions at the time the cards are completed.

Statistics of interstate migration. Information about internal migration is available from population censuses and from a sample survey which has been conducted at more or less annual intervals since 1970. These sources do not provide the up-to-date quarterly estimates of interstate migration required for regular population estimates of the States and Territories. From 1966, and retrospectively to 1961, interstate migration estimates for population estimates have been derived from records of interstate changes of address advised to the Department of Social Security in connection with family allowance payments, and to the Electoral Office in connection with the franchise and electoral rolls. The census and survey results were used to interpolate for the population not covered by the two sources. However, an investigation of the methods and the data (for family allowance and electoral roll transfers) used in estimating interstate migration revealed serious deficiencies which warranted a change to the procedures being used.

For the year 1979-80, therefore, estimates of interstate migration were derived by a different procedure. The family allowance data was used to estimate interstate migration of the 0-14 age group, whereas for the 15 years and over the data from the *Internal Migration Survey*, conducted in July 1980, was used. This survey refers to the year ended 30 June 1980 and results from it were published on 22 January 1981, in *Internal Migration, Australia* (3408.0).

Because of large sampling errors inherent in estimating net interstate migration gains from survey data and the difficulties in obtaining adequate coverage of all movements from both electoral roll and family allowance transfers, estimates of interstate migration are less reliable than those relating to overseas migration and natural increase.

Preliminary quarterly estimates of interstate migration for the September and December quarters of 1980 are based on the expansion of the family allowance data using the ratios of persons aged 15 and over to persons aged 1-14 derived from the 1976 Census. These estimates will be revised once the forthcoming June 1981 *Internal Migration Survey* results become available.
