COMMONWEALTH BUREAU OF CENSUS AND STATISTICS
CANBERRA, AUSTRALIA

PREFACE

This bulletin is one of a series presenting a classification of rural holdings by type of activity and size of selected activities (referred to as principal characteristics), together with details of land utilisation of rural holdings for each State and Australia for the year 1968-69. Explanatory notes and definitions used in this classification appear in the introductory notes immediately following the table of contents.

Classifications of rural holdings according to both size of principal characteristics and type of activity have previously been undertaken for all States and Australia for 1959-60 and 1965-66. Prior to 1959-60, classifications of rural holdings by size characteristics only had been prepared in all States.

Compared with the 1965-66 classification, three additional tables have been included in this series, while Table 35 'Rural Holdings Classified According to State and Size of Sheep Flock: Number of Sheep' in Bulletin No. 7 (Australia) of the 1965-66 classification has been discontinued. The additional tables included in the 1968-69 classification are as follows:

Table 16. Number of Sheep Classified According to Area of Holding and Size of Sheep Flock.

Table 20. Number of Meat Cattle Classified According to Area of Holding and Size of Meat Cattle Herd.

Table 22. Number of Milk Cattle Classified According to Area of Holding and Size of Milk Cattle Herd.

In previous issues of this bulletin, the Statistical Divisions used for South Australia were combinations of a number of Counties. In this issue, the classification is for new Statistical Divisions based on combinations of Local Government Areas. (See *Divisional Statistics, South Australia*, 1970, Deputy Commonwealth Statistician, Adelaide, December 1970.)

Information relating to the Northern Territory and the Australian Capital Territory is included in Bulletin No. 7 (Australia) of this series.

J. P. O'NEILL
Acting Commonwealth Statistician

INTRODUCTORY NOTES

The tabulations contained in this bulletin have been prepared principally from data collected from rural holdings in the annual Agricultural Census conducted at 31 March. Information referring to crop areas and land use relate to the 1968-69 season, while numbers of livestock are as at 31 March 1969.

Rural holdings covered by the annual census are defined as areas of land of one or more acres used for the production of agricultural products or the raising of livestock and the production of livestock products. In some cases, holdings of less than one acre which are used for intensive production are also included. Land owners or occupiers possessing or working more than one holding are required to supply separate census returns for each holding unless the holdings are in close proximity to each other and worked as one.

Classification of Rural Holdings by Type of Activity

Rural holdings have been classified to type in accordance with the predominant activity on each holding. Since many holdings have more than one type of activity an objective measurement to assess the predominant activity was used.

As in earlier classifications, the most appropriate measure of the importance of each type of activity on a rural holding was considered to be gross receipts at the holding, that is, gross receipts less marketing costs. Gross receipts were estimated by applying estimated values per acre and per livestock unit to areas of crops and numbers of livestock reported on the 1968-69 census returns. To remove the effects of seasonal irregularities in 1968-69 these estimated values were based on averages of both yields and prices for each State as a whole for the five years ended 1968-69, although in some States important regional variations were taken into account.

Holdings with estimated gross receipts for all products amounting to \$2,000 or more were treated as 'Commercial' holdings and were classified to one of the following types of activity:

Sheep and cereal grain	Poultry
Sheep	Pigs
Cereal grain	Sugar
Meat cattle	Tobacco
Milk cattle	Other (one main purpose)
Vineyards	Multi-purpose
Fruit (other than vine)	
Vegetables—Potatoes	
—Other	

Holdings were classified as 'Sub-commercial' if gross receipts were greater than zero but less than \$2,000, and 'Unused' if no gross receipts could be estimated in respect of their activities.

'Commercial' holdings were classified to type of activity in accordance with the following criteria:

- (a) Holdings running sheep and growing cereals for grain were classified as 'Sheep and cereal grain' if the combined receipts from these activities accounted for at least 75 per cent of the total receipts of the holding and if neither activity contributed more than four times the other.
- (b) Holdings running cattle for milk production and pigs were classified as 'Milk cattle' if the combined receipts from these activities amounted to 50 per cent or more of the total receipts of the holding.
- (c) Other commercial holdings were classified to the activity which accounted for 50 per cent or more of the total receipts of the holding. However,
 - (i) holdings were classified to 'Vegetables-Other' where 50 per cent or more of the total receipts were derived from the production of vegetables of any kind (including potatoes) but where potatoes alone did not account for more than half the total receipts.
 - (ii) holdings were classified to 'Other (one main purpose)' where a single product, other than those shown in the above type classification, contributed 50 per cent or more to the total gross receipts, e.g. cotton, oilseeds.
- (d) If none of the criteria (a), (b), or (c) was satisfied the holding was classified as 'Multi-purpose'.

As mentioned above, those holdings for which no gross receipts could be estimated were treated as 'Unused' holdings. Examples of 'Unused' holdings include holdings used for intermittent grazing or for the growing of fruit trees which were not bearing.

Crops used for fodder are generally regarded as an ancillary to livestock production and were excluded from the estimation of gross receipts. Thus, some holdings which reported fodder crops and no other activity at the 1968-69 census were classified to 'Unused'.

Classification of Rural Holdings by Size of Principal Characteristics

In addition to being classified to a type of activity, rural holdings are also tabulated by size of principal characteristics in Australian agriculture, including area of holding, area of sown grasses and clovers, area of selected crops and numbers of selected livestock. However, the size characteristics to which a holding has been classified may not be the predominant activity of that holding. For example, sheep, meat cattle and pigs reported on a holding are each treated separately for sizing purposes, although the holding may have been typed to a different predominant activity.

Definitions

Land utilisation

The following definitions apply to the land utilisation categories in this bulletin.

- (a) *Area of fruit.* This includes the total bearing and non-bearing area of orchards, plantations, vineyards, small fruits, edible nuts and olives.
- (b) *Area of crops (excluding fruit).* In general this category includes all crops (other than fruit) as shown in Table 5 of the publication *Rural Industries, Bulletin No. 7, 1968-69* issued by the Bureau. The area of grasses and clovers cut for hay or silage or harvested for seed is excluded for all States except South Australia (see (d) below).
- (c) *Area lying fallow.* This relates to land lying fallow during the whole or greater part of the season. It excludes land under short or summer fallow.
- (d) *Area under sown grasses and clovers.* This relates to the area of sown grasses and clovers whether grazed, cut for hay or silage or harvested for seed. For South Australia the area of grasses and clovers cut for hay or silage or harvested for seed is excluded (see (b) above), but grasses for grazing are included.
- (e) *Balance of holding.* This is a balance item and represents the area of land used for grazing (other than sown grasses, clovers and crops fed off), and the area of land not used for agricultural purposes.

In these bulletins the areas shown for the above categories have been based on information which, in some cases, has been subject to minor amendments since these tabulations were undertaken. Consequently, the figures in these bulletins may vary slightly from those published elsewhere.

Cattle

The terms 'Meat cattle' and 'Milk cattle' used in these bulletins are abbreviated statements for the phrases 'cattle used for meat production' and 'cattle used for milk production'.

'Meat cattle' herds comprise beef breed bulls used (or intended) for service, beef breed bull calves intended for service and other cattle mainly for meat production.

'Milk cattle' herds comprise dairy breed bulls used (or intended) for service, dairy breed bull calves intended for service and cows, heifers and heifer calves used (or intended) for the production of milk or cream for sale.

As in the 1965-66 classification, house cows and heifers kept for domestic milk supply have been excluded from this size and type classification. This has resulted in a small number of rural holdings where dairy breed bulls were being run with house cows being classified to the size group 1-4 of the milk cattle herd classifications.

Accordingly, the classification of 'meat cattle' and 'milk cattle' differs from published classifications which include dairy breed bull calves intended for service with 'Calves (under one year) mainly for meat production'. (See *Livestock Numbers, Bulletin No. 29, 31 March 1971, Table 2*).

In addition, where dairy breed bulls were being run with cows for meat production or where beef breed bulls were being run with cows for milk production, the holding was included in both the milk cattle size classifications and the meat cattle size classifications.

Sheep

In States other than Queensland, if there were no sheep on a holding at 31 March, but details were shown on the census return for sheep shorn during the year, gross receipts from sheep were estimated on the basis of this information. This has had the effect of classifying to 'Sheep' or 'Sheep and cereal grain' certain holdings with no sheep at 31 March (see Table 28).

This procedure was not adopted in Queensland because details of sheep shorn are not collected at the annual census.

NOTE

In Tables 1, 16, 20, 22 and 26, any discrepancies between totals and sums of components are due to rounding.
Size intervals and types of activity for which the value is nil have been suppressed in this publication.
