MOTOR VEHICLES - NEW REGISTRATIONS, 1950Preface

Details of new registrations of Motor Vehicles (excluding Motor Cycles) have been tabulated for the year ended 31st December, 1950 and are summarized herein.

HORSE-POWER, Western Australia: The Traffic Act of Western Australia specifies that the Dendy Marshall formula shall be used in calculating horse-power for the purpose of vehicle registration.

The formula is as follows:-

In Inches -

$$\frac{(\text{Diameter of Cylinder})^2 \times \text{No. of Cylinders} \times \text{Stroke}}{12}$$

In Millimeters -

$$\frac{(\text{Diameter of Cylinder})^2 \times \text{No. of Cylinders} \times \text{Stroke}}{200,000}$$

The application of the Dendy Marshall formula has the effect of reducing the specified horse-power of the vehicle concerned by from 2 or 3 h.p. in the case of light models, to 10 h.p. in the case of heavier models.

In the metropolitan area of Western Australia the horse-power for all motor vehicles has been shown according to the Dendy Marshall formula, but for some country areas the normal vehicle horse-power rating has been shown instead.

Owing to this anomaly the figures relating to horse-power in respect of Western Australia, although in the main according to the Dendy Marshall formula, nevertheless include some horse-powers according to Manufacturers' or R.A.C. ratings.
