SUGGESTIONS TO MEDICAL PRACTITIONERS.

The International List of Causes of Death, as revised in 1948, is shown on pages 5-26 of this booklet. It is desirable, in order to enable causes of deaths to be assigned to one of the titles or sub-titles of this list, that medical practitioners should employ as far as possible only those terms recognized in the Nomenclature of the Royal College of Physicians of London. The use of symptomatic and indefinite terms should always be avoided.

The accompanying list of symptomatic and indefinite terms (see pages 26-31) has been compiled to indicate in what respect the terms are unsatisfactory and what further information as to the cause of death is required in each case. A few unobjectionable terms are included in the list for special reasons.

In cases where an indefinite term must be employed because more definite information is lacking, it would be well to indicate this fact in the certificate. This may be done by the use of such words as "idiopathic" or "cryptogenic" which will be understood as indicating that the probable cause of the condition stated is unknown.

When possible it should be stated on the certificate whether the condition was acute or chronic.

MEDICAL PRACTITIONERS' STATEMENT OF CAUSE OF DEATH.

The primary need for medical records of causes of death is to have a clear indication of the disease or injury which initiated the train of events leading to death. Attention can then be directed to the point at which preventive measures may best be applied. Thus, while it is of value to know how many persons died of peritonitis, it is much more valuable to know what clinical conditions produced the peritonitis, for example, appendicitis. Similarly, in the case of a child who died of broncho-pneumonia complicating measles, it is the specific infectious disease, namely measles, which is of fundamental interest. Thus, the questions relating to cause of death on the medical certificate are designed to secure the proper sequence of diseases causing death.

The morbid conditions relating to death are divided into two parts on the certificate.

Part I. provides for the entries describing the sequence of events leading to death. If a single statement of the underlying cause will adequately describe the case, e.g., lobar pneumonia, this should be entered on line (a). Where more than one statement is deemed necessary, it is important that the medical practitioner describe the sequence of events leading to death in the following order:—

- (i) The "Immediate Cause" of death, i.e., the disease, injury, or complication which caused death is to be entered on line (a).
- (ii) Other causes antecedent to the "Immediate Cause" are to be entered on lines (b) and (c) in order of causal relationship, the underlying cause (i.e., the first to occur) being the last entry in Part I.

Part II. provides for the entering of other important morbid conditions contributing to death but not related to the immediate cause.

ATTENTION IS ALSO DRAWN TO THE FOLLOWING POINTS OF PARTICULAR IMPORTANCE IN RELATION TO SPECIAL CAUSES OF DEATH.

(a) *Malignant Neoplasms*.—The seat of the primary growth should be indicated in all cases where known. Malignant neoplasms of liver, bronchus, or lung should be specifically designated "primary", "secondary" or "metastatic", or "unknown whether primary or secondary". In all other cases where the seat of primary growth is not known this fact should be indicated on the certificate.

It is particularly requested that terms such as neoplasm should not be used without qualification when intended to indicate malignant neoplasm.

(b) *Maternal Deaths*.—When a death occurs in a female of child-bearing age (approximately from fifteen to fifty years) from any of the causes set out in this section, a note should be made as to whether the disease process was related in any way to pregnancy. The mode of termination of the pregnancy should also be noted. It is essential for purposes of classification to know whether the onset of the disease process preceded the termination of the pregnancy, that is, whether the disease arose in pregnancy, in labour or abortion, or after delivery.

In order therefore, that the mortality attributable to childbirth may be ascertained with precision and also to obviate subsequent correspondence, whenever a female of child-bearing age dies from one of the subjoined causes, the words "of pregnancy", "puerperal", "post partum", &c., or "non-puerperal" should be added.

Abscess of breast.	Pelvic Abscess.
" " ovary.	Pelvipерitonitis.
Albuminuria.	Peritonitis.
Cellulitis.	Phelebitis.
Coma.	Phlegmasia alba dolens.
Convulsions.	Pyæmia.

Lymphangitis.	Septicæmia.
Metritis.	Sudden death.
Metروperitonitis.	Tetanus.
Metrorrhagia.	Thrombosis.
Nephritis.	Uræmia.

(c) *Accidental Deaths*.—In all cases in which a practitioner certifies an injury as a cause of death the cause of the injury should be stated (e.g., Fractured femur, fall down stairs; Burns, clothing alight). A statement of traumatic rupture or perforation should always be accompanied by the cause (e.g., Rupture of liver, kicked by horse).

(d) *Operations and Deaths under Anaesthetics*.—When death occurs during anaesthesia which is known to have been administered in the course of medical or surgical treatment of pre-existent disease or injury, it is classified to such causes. The disease or condition for which the operation

was performed (e.g., Cholecystectomy, Cholelithiasis) or the purpose for which the anaesthetic was administered (e.g., normal childbirth, or manual examination) should always be stated. Any condition which is post-operative should always be specified as such.

(c) *Immaturity*.—Under the sixth revision of the International Statistical Classification of Causes of Death provision is made for the classification of immaturity with diseases of early infancy. It is desirable, therefore, that in every case of the death of an infant an indication shall be given as to whether the child was born prematurely, stating the birth weight wherever possible.

(f) *Post-mortem Examinations*.—Should a practitioner have occasion to conduct a post-mortem examination for a coroner and be required to complete a "Report of Post-mortem Examination" the cause of death should, if practicable, be set out thereon in the same manner as that provided for in the "Medical Certificate of Cause of Death".
