EXPLANATORY NOTES

Introduction

This publication provides quarterly (and annual) estimates of the main components of gross domestic product and national expenditure at current and constant prices from September quarter 1959 to June Quarter 1980. It thus extends to earlier periods, on a consistent basis, some of the current price series presented in *Quarterly Estimates of National Income and Expenditure, Australia, March Quarter 1986* (5206.0).

2. The concepts and definitions applicable to these estimates are described in *Australian National Accounts, Concepts, Sources and Methods* (5216.0) but with the changes outlined in Appendix A, *Australian National Accounts, National Income and Expenditure, 1984-85* (5204.0) together with those given in 'changes in this issue' in 5206.0 for the December quarter 1985.

Constant price estimates

3. The estimates at constant prices presented in this publication are based on average 1966-67 prices and on average 1974-75 prices. In the most recent issue of the regular quarterly publication (5206.0) the constant price series were based on average 1979-80 prices and relate to the period September quarter 1969 to the March quarter 1986. Thus, for the period September quarter 1969 to June quarter 1975 constant price estimates are available on three different bases (1966-67, 1974-75 and 1979-80) and from September quarter 1966 to June quarter 1969 they are available on two different bases (1966-67 and 1974-75). The differences between the growth rates exhibited by these various series are attributable to two sources:

- (i) the changed weighting patterns being used because of differences in relative prices in the various base years, and

- (ii) the use of different data sources and methodologies.

Implicit price deflators (IPDs)

4. This publication also contains series of IPDs of selected major aggregates contained in the domestic production account. The annual IPDs are derived from original (unadjusted) data while the quarterly IPDs are obtained from seasonally adjusted data. In both cases they are calculated by dividing the current price series by the corresponding constant price series. The IPDs are presented on both a 1966-67 base and a 1974-75 base. A discussion of the nature of IPDs and factors to be taken into account in their interpretation is included in *Australian National Accounts, Concepts, Sources and Methods* (5216.0).

Seasonal adjustment

5. The methods used in the ABS for making seasonal adjustments are described in *Seasonally Adjusted Indicators, Australia* (1308.0).

Rounding of figures

6. The procedures used in preparing this publication may occasionally result in rounding differences between figures in this publication and corresponding figures in other publications.

7. Where figures have been rounded, discrepancies may occur between totals and sums of component items.

Related publications

8. Current publications produced by the ABS are listed in the *Catalogue of Publications, Australia* (1101.0). The ABS also issues, on Tuesdays and Fridays, a *Publications Advice* (1105.0) which lists publications to be released in the next few days. The Catalogue and Publications Advice are available from any ABS office.
