

THE DAIRYING INDUSTRY, AUSTRALIA
JANUARY 1972

Reference No 10 6

Table 2 includes seasonally adjusted figures for whole milk produced. In the seasonal adjustment, account has been taken of normal seasonal factors, and of "trading-day" effects because the quantity of milk used for butter and cheese-making is derived from the factory production of butter and cheese. Details of the methods used in seasonally adjusting this and other series are given in "Seasonally Adjusted Indicators, 1971" (Reference No. 1.10) issued on 2 July 1971.

Any discrepancies between totals and sums of components in Tables are due to rounding.
