EXPLANATORY NOTES

Introduction

This publication contains statistics relating to principal minerals and mineral products produced in Australia.

2. In order to achieve early release for the majority of the statistics, this publication is produced according to a set timetable. Consequently, although the statistics shown are the latest available at the time of issue they do not in all cases relate to the month to which the publication title refers.

Sources of data

3. Table 1. Mine production statistics are collected by:

Bureau of Mineral Resources (BMR)
Department of National Development and Energy
State Mines Departments.

The annual statistics shown in this table have been obtained by adding together the published monthly or quarterly figures. In some cases, there will be small discrepancies between these figures, and those published in the publication *Mineral Production* (8405.0). The figures in *Mineral Production* are derived from the annual mining census which is conducted by the Australian Bureau of Statistics (ABS) in collaboration with State Mines Departments. The census figures should be considered the more accurate.

4. Table 2. Production of principal manufactured products of mineral origin:

Statistics of non-ferrous metal production, refined gold and refined silver are collected by the BMR.
Other data in this table are collected by the ABS.

Seasonal adjustment

5. This publication includes seasonally adjusted production statistics for black coal. Details of the methods used in seasonally adjusting this and other series are given in *Seasonally Adjusted Indicators* (1308.0).

Related publications

6. The following is a list of publications containing other mining and related statistics for Australia, published by the ABS, the BMR or by the ABS in conjunction with the BMR. Users are also referred to the annual reports of the State Mines Departments, which contain mineral statistics.

(a) Quantities shown are metallic contents of mine products based on chemical assay. (b) Western Australian and Northern Territory gold production figures (in respect of major producers) normally relate to a four-week period ending in the calendar month indicated. However, two such periods ended in the calendar months of May 1979 for the Northern Territory and March 1979 for Western Australia. (c) Includes iron ore for pelletizing. (d) Includes ilmenite for beneficiating.
