PREFACE

This bulletin contains the detailed annual statistics of causes of death for 1973 and continues publication of statistics which up to 1962 were included as part of the bulletin *Demography*. Further statistics of deaths, showing particulars other than cause, are included in *Deaths, 1973* (Reference No. 4.8).

The statistics relate to the number of deaths registered in, not those which actually occurred in, the years shown.

Information on causes of death additional to that published in this bulletin is available on request. The available tables show causes of death in association with the following characteristics: birthplace, period of residence in Australia of overseas-born persons, age group and sex; statistical division, age group and sex; month of registration and sex. Most of these tables, and those included in this bulletin, are available for individual States as well as for Australia. Additional statistics in respect of individual States are available from the State Offices of the Bureau.

The causes of death are classified according to the Eighth (1965) Revision of the World Health Organization's International Classification of Diseases (ICD). Particulars relate to the underlying cause of death, which WHO has defined as the disease or injury which initiated the train of morbid events leading directly to death. Accidental and violent deaths are classified according to the external cause, that is, to the circumstances of the accident or violence which produced the fatal injury, rather than to the nature of the injury or violence.

The full list of categories which make up the WHO Abbreviated List of 50 Causes (with certain subdivisions) is shown in Table 1 of this bulletin. The omission of a category from either the full or abbreviated list of causes in other tables indicates that no deaths were assigned to that category during the period to which the table relates.

The death rate statistics shown in various tables in this publication are calculated using the population values shown in Tables 10 to 12 which have been included to assist readers to calculate additional rates. Population figures in these tables are subject to revision when the results of the next Population Census become available.

My thanks are expressed to the Deputy Commonwealth Statistician in each State and the State Government Departments responsible for the registration of deaths for the valuable assistance rendered by them in furnishing the data for the compilation of these statistics.
