CATALOGUE NO. 6411.0

NOON 4 FEBRUARY 1980

PRICE INDEX OF MATERIALS USED IN MANUFACTURING INDUSTRY AUSTRALIA NOVEMBER 1979

INQUIRIES

If you want to know more about these statistics ring Mr Paul Curran on Canberra 526256 or our State office, or write to Information Services, ABS, P.O. Box 10, Belconnen, A.C.T. 2616. For copies of this publication contact Information Services, Canberra 526627 or State offices.

MAIN FEATURES

The **All groups index** rose by 0.3% for November 1979.

The **Home produced materials index** showed no change. Higher prices for cattle and calves, lambs, milk and silver-lead in concentrate were offset by decreased prices for sheep, wool and copper in concentrate.

The **Imported materials index** rose by 1.0% mainly because of increased prices for crude petroleum and chemicals.

In the year ended November 1979, the **All groups index** rose by 32.6%, the **Home produced materials index** by 34.0% and the **Imported materials index** by 29.7%.

EXPLANATORY NOTES

Introduction

The price index contained in this publication relates to an important input (namely materials and fuels), to manufacturing industry. It does not reflect changes in other important costs such as labour and capital inputs to manufacturing, and taxes incurred during manufacturing.

Scope and composition

2. The composition of the index presented in this publication is based on materials used by establishments classified to Division C, Manufacturing, of the Australian Standard Industrial Classification (ASIC). The index is on a *net basis*; that is, it relates only to those materials which are used by establishments within the Manufacturing Division in Australia and which have been produced by establishments outside that Division. Such outside establishments are either Australian establishments classified to other Divisions of Australian industry (e.g. Mining or Agriculture) or are overseas producers (including overseas manufacturing establishments).

3. Materials purchased by establishments classified to the Manufacturing Division of ASIC from other establishments in that Division are outside the scope of the index, but the same materials when purchased from overseas are included. In other words, the pricing and weights for the index reflect usage of materials at the point of entry to the Manufacturing Division.

Items and weights

4. The index is a *fixed weights index*. The items included in the index were selected on the basis of values of materials used, in 1971-72, by establishments classified to the Manufacturing Division of ASIC. The selection was made from data reported in the 1971-72 Census of Manufacturing Establishments, and in 1971-72 import statistics.

5. The selected items were allocated weights in accordance with estimated manufacturing usage in the year 1971-72. Many of the selected items carry not only the weight of directly priced materials but also the weight of unpriced materials whose prices are considered to move similarly to those of directly priced materials.

6. The percentage contributions for each of the index items are based on estimated usage in 1971-72, valued at the relevant prices applying in the *reference base year 1968-69*. Percentage contributions (as at the reference base year) were published in the April 1975 issue of this publication and are also available from the ABS on request.

Classifications

7. The selected items have been combined into broad *index groups* using two different approaches. Table 2 presents index numbers for groups based on the Australian Standard Industrial Classification (ASIC). These groups have been formed by allocating each of the index items to an *industry of origin* (e.g. home produced agriculture; or imported manufacturing). Table 2 also shows index numbers for 'total imported materials' and 'total home produced materials'. Table 3 presents index numbers for groups based on the United Nations Standard International Trade Classification (SITC (R) 1961). This has the effect of combining like commodities within broad *commodity groups* (e.g. food, live animals and tobacco).

8. Table 1 shows percentage changes for index groups based on SITC, and for 'total imported materials' and 'total home produced materials'.

Special grouping

9. Prices of the materials included in this index are affected by many different influences and a significant proportion fluctuates considerably in price. This is particularly the case in the *Food, live animals and tobacco* group where the series is significantly affected

by fluctuating prices for live animals and sugar cane. A special grouping 'Food and tobacco, excluding live animals and sugar cane' is presented in Table 3 in order to indicate the general trend in prices for food and tobacco.

Prices

10. Prices used in the index are mainly monthly average prices. Prices of home-produced items are generally obtained from principal users (manufacturers) but in some cases from major suppliers (producers or wholesalers). Prices of imported items are obtained from suppliers (importers) and users (manufacturers).

11. In concept, pricing for the index is at the point at which the materials physically enter the manufacturing sector. Therefore, as far as possible, prices are on a *delivered into store* basis.

12. Price series relate to *goods of fixed specifications* with the aim of incorporating in the index price changes for representative materials of *constant quality*.

13. In general, prices recorded in the index for a given month refer to materials delivered to manufacturers in that month.

14. The treatment of the following topics is explained in the September 1977 and previous issues of this publication:

- prices of transferred goods
- seasonal items

Index numbers

15. All index numbers for the current month and the previous month are preliminary and subject to revision. Figures for earlier months are generally not revised for changes which have a minor effect at the All groups level. Index numbers for financial years are simple averages of monthly index numbers.

Percentage changes

16. The following example illustrates the method of calculating percentage changes:

All groups index number -

November 1979	308.0 (See Table 2)
less October 1979	307.0 (See Table 2)
Change in index points	+1.0

$$\text{Percentage change} = \frac{+1.0}{307.0} \times 100 = +0.3\%$$

Related publications

17. Users may also wish to refer to the following price index publications which are available on request:

- Price Indexes of Articles Produced by Manufacturing Industry* (6412.0)
- Price Index of Materials Used in Building Other than House Building* (6407.0)
- Price Index of Materials Used in House Building* (6408.0)
- Price Index of Electrical Installation Materials* (6409.0)
- Price Indexes of Metallic Materials* (6410.0)

18. Other ABS publications which may be of interest include:

- Wage Rates Indexes, Preliminary* (6311.0)
- Wage Rates* (6312.0)
- Average Weekly Earnings* (6302.0)

19. All current publications produced by the ABS are listed in *Catalogue of Publications* (1101.0) which is available free of charge from any ABS office.

Symbols and other usages

- p preliminary - series subject to revision
- r figures revised since previous issue
- nil or less than half the final digit shown

November p	224.3	288.4	227.7	282.9	276.1	493.4	308.0	209.3

(a) The index is on a net basis, and relates in concept only to materials that enter Australian manufacturing industry from other sectors of the Australian economy or from overseas. See paragraphs 2 and 3.

(b) Excluding the manufactured imported crude materials listed in footnote (c).

(c) Includes imported fuel oil and the following manufactured imported crude materials : Synthetic rubber, hardwood, softwood, woodpulp, synthetic fibre, vegetable oils.

(d) Composition and weighting pattern as at reference base year: see paragraphs 2 and 6.
