1 INTRODUCTION AND EXPLANATORY NOTES

1.1 PURPOSE AND BASIS OF THE AHECC

- The Australian Harmonized Export Commodity Classification (AHECC) is designed:
- for use by exporters and agents to classify goods when providing export declarations to Australian Customs Service (ACS); and
 - to assist users in the interpretation of export statistics published by the Australian Bureau of Statistics (ABS).

The AHECC, which replaced the Australian Export Commodity Classification in 1988, is based on the 5019 6 digit items of the Harmonized Commodity Description and Coding System (HS) and, with a few exceptions, is directly comparable with the 6 digit base of the Customs Tariff for statistical purposes. Further subdivisions have been included in the AHECC where necessary by the addition of two extra digits to the HS 6 digit base.

1.2 CLASSIFYING GOODS TO THE ITEMS OF THE AHECC

Goods are classified according to the general rules for the interpretation of the Harmonized System. They are presented in Section 1.3 below to provide a ready reference for users of the AHECC.

The following notes are provided to further assist in determining the correct AHECC items to be used in making Customs' export declarations. They are not exhaustive but try to cover the most important aspects of the classification of goods.

Structure of the AHECC

The AHECC is arranged according to the Sections (2 digits), Chapters (2 digits), Headings (4 digits) and Subheadings (6 digits) of the Harmonized System and its items can be divided into two broad categories as follows:

- Raw materials (including Manufactures Classified by Material) - Sections 01-15.
- Manufactures not classified by material - Sections 16-21.

Goods obtained from the same material are generally grouped together and are arranged progressively from the raw material or less manufactured product through to the finished or more highly manufactured product. For example,

- Chapter 1 : Live animals
- Chapter 2 : Meat and edible meat offal
- Chapter 15 : Animal fats and oils
- Chapter 16 : Preparations of meat, etc
- Chapter 41 : Raw hides and skins, etc
- Chapter 42 : Articles of leather, etc
- Chapter 64 : Leather footwear, etc

Certain categories of exports e.g., goods re-exported after being imported for industrial processing and some ships' and aircraft stores, are not classified in the normal manner and are included in either Chapter 98 or 99. See Section 1.4 for more details on these chapters.

Classification techniques

The following general principles should be followed when classifying goods:

- (a) Determine the broad category to which the goods fall e.g., raw materials or semi-manufactures and finished goods.
- (b) Select the appropriate Section and Chapter from the category determined under (a) above and from the Section and Chapter headings given in the Summary of Classification (see Section 2.6).
- (c) Examine the 4 digit Headings in the chosen Chapter to determine the most appropriate 6 digit Subheadings. To assist in classifying goods to the six digit Subheadings an alphabetic index is included in Section 4 of this document.
- (d) Examine the detailed 8 digit classifications under the selected 6 digit item to select the one most appropriate.

The following points should also be borne in mind when classifying goods:

- i Where possible, an article should be classified according to its specific use. For example, typewriter ribbons of silk should be classified to AHECC item 9612.10.00 "Typewriter and similar ribbons" and not to item 5007.20.00 which covers fabrics of silk.
- ii If it is not possible to classify an article by its specific use, it must be classified by material content. Where an article is made of a number of materials it should be classified according to the predominant material, or, in the case of textile yarns, fabrics, etc, it should be classified by the material of chief weight (see Rule 3 in Section 1.3).

Classification of parts

- (a) Parts for general use do not take the classification of the whole goods unless indicated to the contrary by a heading at the 4, 6, or 8 digit level e.g., 7315 "Chain and parts thereof, of iron or steel".
- (b) Where parts can be identified as being mainly for use with particular machines or apparatus they are classified under the same 4 digit heading as that particular machine or apparatus but not necessarily under the same 8 digit AHECC item, unless indicated to the contrary.
- (c) When a part is given a specific item number in the AHECC that item should be used even when the part is for a specific machine or apparatus. However, the preceding point (b) applies if the part is in a single consignment of mixed parts of what is essentially a complete machine. For example, timing gears for railway locomotives should be entered specifically as timing gears (AHECC item 8483.40.10) not as parts of locomotives (AHECC item 8607.91.00) unless they come in a single consignment with other parts for assembly of an essentially complete locomotive.

Further assistance

If you require further assistance in classifying goods for export declaration purposes you should contact the Export Section of your nearest Customs House.

1.3 GENERAL RULES FOR THE INTERPRETATION OF THE HARMONIZED SYSTEM

Rules for classification of goods in the Harmonized System are prescribed in Schedule 2 of the Customs Tariff. These rules are applicable to the AHECC and are reproduced below.

- 1 *The titles of Sections, Chapters and sub-Chapters are provided for ease of reference only; the classification should be determined according to the terms of the headings and any relative Section or Chapter Notes and, provided such headings or Notes do not otherwise require, according to the following provisions:*
- 2
 - (a) *any reference in a heading to an article shall be taken to include a reference to that article incomplete or unfinished, provided that, as presented, the incomplete or unfinished article has the essential character of the complete or finished article. It shall also be taken to include a reference to that article complete or finished (or falling to be classified as complete or finished by virtue of this Rule), presented unassembled or disassembled.*
 - (b) *any reference in a heading to a material or substance shall be taken to include a reference to mixtures or combinations of that material or substance with other materials or substances. Any reference to goods of a given material or substance shall be taken to include a reference to goods consisting wholly or partly of such material or substance. The classification of goods consisting of more than one material or substance shall be according to the principles of Rule 3.*
- 3 *When by application of Rule 2 (b) or for any other reason, goods are, prima facie, classifiable under two or more headings, classification should be effected as follows:*
 - (a) *the Heading which provides the most specific description shall be preferred to Headings providing a more general description. However, when two or more Headings each refer to part only of the materials or substances contained in mixed or composite goods or to part only of the items in a set put up for retail sale, those headings are to be regarded as equally specific in relation to those goods, even if one of them gives a more complete or precise description of the goods.*
 - (b) *mixtures, composite goods consisting of different materials or made up of different components, and goods put up in sets for retail sale, which cannot be classified by reference to 3 (a), shall be classified as if they consisted of the material or component which gives them their essential character, insofar as this criterion is applicable.*

- (c) *when goods cannot be classified by reference to 3 (a) or 3 (b), they shall be classified under the heading which occurs last in numerical order among those which equally merit consideration.*
- 4 *Goods which cannot be classified in accordance with the above Rules should be classified under the heading appropriate to the goods to which they are most akin.*
- 5 *In addition to the foregoing provisions, the following Rules should apply in respect of the goods referred to therein:*
- (a) *camera cases, musical instrument cases, gun cases, drawing instrument cases, necklace cases and similar containers, specially shaped or fitted to contain a specific article or set of articles, suitable for long-term use and presented with the articles for which they are intended, shall be classified with such articles when of a kind normally sold therewith. The Rule does not, however, apply to containers which give the whole its essential character.*
 - (b) *subject to the provisions of Rule 5 (a) above, packing materials and packing containers presented with the goods therein shall be classified with the goods if they are of a kind normally used for packing such goods. However, this provision is not binding when such packing materials or packing containers are clearly suitable for repetitive use.*
- 6 *For legal purposes, the classification of goods in the subheadings of a heading should be determined according to the terms of those subheadings and any related Subheading Notes and, mutatis mutandis, to the above Rules, on the understanding that only subheadings at the same level are comparable. For the purposes of the Rule the relative Section and Chapter Notes also apply, unless the context otherwise requires.*

1.4 CHAPTERS 98 AND 99 OF THE AHECC

The content of chapters 1 to 97 of the AHECC is defined in the Harmonized System, but the ABS has included two additional chapters in which goods are not classified on a commodity basis.

Chapter 98 - "Special transactions and commodities not classified according to kind"

This chapter includes:

- **exports of ships' and aircraft stores** (excluding goods in bond subject either to excise or Customs duty) where the total value of invoice lines for each commodity in the consignment does **not exceed \$5,000** (AHECC item 9807.00.00 should be used). All other exports of ships' and aircraft stores (including those in bond and subject to excise or Customs duty), should be recorded under their substantive 8 digit AHECC items, as is the case for all other exports.
- **goods re-exported after being imported for industrial processing.** These goods should be recorded against two AHECC items. The value, etc of the goods **before** industrial processing should be recorded against AHECC item 9805.00.10; and the **value added** by industrial processing should be recorded against AHECC item 9805.00.20.
- **special categories which minimise the administrative burden on exporters and their agents.** The value of these commodities is monitored to ensure that it does not distort export statistics for individual commodities.

Chapter 99 - "Commodities and transactions not included in merchandise trade"

Non-merchandise trade which falls to this chapter, is defined by the United Nations as all goods which cross a customs frontier but which do not add to or subtract from the stock of material resources of a country. Non-merchandise trade includes:

- **goods exported after being imported on a temporary basis** - ships, boats, floating structures, goods for public exhibition and goods originally imported under Section 162 or 162A of the Customs Act, e.g., racing cars and associated equipment for the Australian Grand Prix, NZ race horses for the Melbourne Cup, Chinese Terracotta Warriors;
- **goods exported for repair, alteration or renovation and subsequent re-importation; and**
- **goods re-exported from Australia after being imported for repair, alteration or renovation.**

1.5 AVAILABILITY OF EXPORT STATISTICS

Information lodged by exporters and their agents with the ACS is used in compiling and publishing export statistics for use by the Australian Government in forming trade and budgetary policies. In addition, statistical information is sought by governments, exporters and industry associations to monitor trends and identify markets.

The statistics produced by the ABS are available in regular publications, computer printout, microfiche, computer tapes, floppy disk and via electronic media (ie. AUSSTATS and TELESTATS). The statistics cover a wide range of information including:

- total exports by value and quantity
- details of exports classified by:
 - AHECC statistical item
 - country of destination
 - State of origin and loading
 - port of loading
 - mode of transport
 - overseas port of discharge
 - country of destination
 - type of shipping vessel, country of registration and type of service
 - gross weight

If you require further information on the availability of these statistics please contact the ABJ (see Section 1.9).

1.6 SPECIAL CODES USED IN EXPORT STATISTICS

The following codes are used in published export statistics. **THESE CODES ARE NOT TO BE USED WHEN COMPLETING CUSTOMS DOCUMENTATION.**

AHECC Statistical Items

- 2699.99.99 Aggregate of 'No Details' confidential items of trade for Chapter 26
- 9888.88.88 Miscellaneous items of trade, nes
- 9999.99.99 Combined confidential items of trade (excluding 'No Details' confidential items of trade for Chapter 26)

State Code

- NSD - No State Details

Country Codes

- CONF - Country Confidential
- NCD - No Country Details
- OILB - Oil Blended in Bond
- UNID - Unidentified

Any queries regarding these codes should be directed to Information Subsection, ABS (see Section 1.11).

1.7 CONFIDENTIALITY OF EXPORT STATISTICS

Exports information supplied to the ABS by the ACS is only disclosed as statistical aggregates. However, the aggregates for trade in some commodities may relate to a single person or organisation. The ABS operates under legislation that allows it to disclose foreign trade statistics that could relate to a single person or organisation except where a person or organisation has shown that such disclosure would be likely to enable their identification, although, of course, the organisation would not be named.

If you are concerned about the possible disclosure of confidential information please contact the ABS (see Section 1.9 for address details) and your concerns will be investigated. If appropriate, restrictions will then be placed upon the release of the statistics.

1.8 REQUESTS FOR CHANGES TO THE AHECC STATISTICAL ITEMS

While the ABS will consider requests for changes to the statistical codes of the AHECC, it must also ensure that the classification does not become too large or complex. Therefore, in order to limit the number of changes to the AHECC, the following criteria have been developed to assess such requests:

- all requests should have the support of a relevant government department or industry association to ensure that the widest possible range of user requests is satisfied;
- there should be a sufficient number of exporters and sufficient level of trade to allow for further dissection; and
- any new items must have descriptions that are meaningful to exporters and agents and can be applied easily when classifying goods for Customs documentation.

It should be noted that Australia's adoption of the Harmonized System means that the ABS cannot amend the 4 digit Headings or 6 digit Subheadings which are specified as part of the system.
