

COMMONWEALTH BUREAU OF CENSUS AND STATISTICS, CANBERRA,
AUSTRALIA.

SECONDARY INDUSTRIES.

1957-58.

BULLETIN No. 52.

PREPARED UNDER INSTRUCTIONS FROM THE RIGHT HONORABLE THE TREASURER.

BY

S. R. CARVER,

COMMONWEALTH STATISTICIAN.

SECTION I.—MANUFACTURING.

MANUFACTURING STATISTICS.

(i) SCOPE OF THE STATISTICS.

Scope.—The statistics are compiled annually and show—

Number and size of factories: Number of persons employed, in various categories: Salaries and wages paid: Book value of land, buildings, plant and machinery (not capital invested): Value of materials, containers, repairs and replacements, power, fuel and light (including water and lubricating oil) used in factories: Value of output: Value of production: Quantities and values of fuel used: Quantities and values of principal materials used and articles produced: Value of additions and replacements to, and depreciation allowed on, land and buildings, and plant and machinery: Rated horse-power of engines ordinarily in use and those in reserve or idle.

The returns from which these statistics are compiled are obtained from manufacturers; they are not intended to show a complete record of the income or expenditure of factories or to show the profits or losses of factories collectively or individually.

Definition of "Factory."—For the purposes of the accompanying statistics a "factory" is defined as an establishment in which four or more persons are employed or where power (other than manual) is used in any manufacturing process. It should be noted that details relating to small establishments not classified for statistical purposes are not included in the figures shown herein.

Classification of Factories.—The classification of factories adopted under Resolution No. 4 of the Conference of Statisticians, 1930, was introduced in 1931.

(ii) PERIOD COVERED.

The period covered by the statistics in this Bulletin, is, in the main, the twelve months ended 30th June. In cases where some other accounting period is used it is permissible to complete the census schedule for that accounting period. These cases, however, are comparatively few and their inclusion in no way impairs the comparability of the statistics in the year under review or from year to year.

(iii) DEFINITIONS OF TERMS USED.

Average Number of Persons Employed.—All persons employed in the manufacturing activities of a factory are counted as factory employees. The figures relating to employment, therefore, exclude all those engaged in selling and distribution, such as salesmen, travellers, collectors, carriers engaged solely on outward delivery of manufactured goods, and retailing stores. The figures, however, do include proprietors who work in their own businesses, as well as "own workers".

The average number of persons employed is quoted on two different bases: the average during the period of operation and the average over the whole year. Of these, the former is simply the aggregate of the average number of persons employed in each factory during its period of operation (whether the whole or only part of the year). This average is used only in respect of details relating to classification according to number of persons employed (Tables 5-11). The latter, which is used in all other instances, is calculated by reducing the average number working in the factories (irrespective of period of operation) to the equivalent number working for a full year.

Working Proprietors are included in all employment figures other than those relating to monthly employment and age distributions, but salaries and wages paid in all cases exclude drawings by working proprietors.

Value of Materials Used.—This item includes the value, in the usual sense, of the materials used, stores used, containers, tools replaced, and materials used in repairs to plant. In general, it does not include the value of customers' articles or materials repaired, assembled or treated by the factory.

Value of Fuel, &c., Used.—This item includes also the cost of power, light, lubricants and water used. Additional details of the costs included under this heading are given in Tables Nos. 29 and 40.

Value of Output.—The value of factory output is the value of the goods manufactured or their value after passing through the particular process of manufacture and includes the amount received for repair work done on commission and receipts for other factory work. The basis of valuation of the output is the selling value of the goods at the factory, exclusive of all delivery costs and charges and excise duties, but inclusive of bounty and subsidy payments to the manufacturer of the finished article.

Value of Production.—The value of production is the value added to raw materials by the process of manufacture. It is calculated by deducting from the value of factory output the value (at the factory) of the materials used, containers and packing, power, fuel, and light used, tools replaced, and materials used in repairs to plant (but not depreciation charges).

In the process of manufacture, many goods are treated in several industries, the output of one becoming the raw materials of another, so that such commodities are counted more than once in the aggregate value of output and of raw materials. Examples are raw sugar passing from the mills to the refinery; metals from the smelters which become raw materials in establishments concerned in the production of metal goods; and timber from the sawmills used in furniture factories and in joinery. On the other hand, the aggregate value of production is assessed without duplication, the value added by each industry being taken into account once only. For this reason the value of production, and not the value of the output, is used as a measure of activity in the manufacturing industries as a whole.

There are many miscellaneous expenses, such as maintenance of buildings, &c., depreciation, workers' compensation insurance, other insurances, pay-roll tax, income tax, advertising, interest on borrowed money, bad debts and many other sundry charges, which are not taken into account. Consequently it must not be inferred that, when wages and salaries are deducted from value of production, the whole of the surplus is available for interest and profits.

Rated Horse-power of Engines Used.—Statistics of power used in factories other than Central Electric Stations relate to the "rated horse-power" of engines ordinarily in use and of engines in reserve or idle, omitting obsolete engines. In the case of Central Electric Stations, the figures refer to the "rated capacity" of engines and generators installed.

No. 1.—Factories: Summary of Operations.

SECONDARY INDUSTRIES

No. 79.—Australia—Machinery Installed(a) in Turtle Hills at 20th June, 1966

<i>description of Machines.</i>	<i>Number.</i>	<i>Description of Machines.</i>	<i>Number.</i>
<i>Wool Textile Mills (including Woolcombers and Fullingmopring Establishments).</i>		<i>Cotton Mills.</i>	
Scouring Machines, i.e. Sets of Bore (incl. sets which are used as part of a card-boning chain)	158	Carding Machines—Flat	1,064
Carbonizing Machines, i.e. Sets of Acid and Neutralizing Bore	31	Condenser Finisher	71
Carding—Worsted	253	Combing Machines	21—Deliveries 82
Woolen	253	Unwring Frames	290—Heads 884
Combing—Noble Combs	294		
French Combs	154		
Dyeing—Louse Wool	62	Spind Frames—Stubbing	46
Type	146	Intermediate	125
Power	200	Rotary	71
Yarn	67	Spinning Frames—Ring and/or Mule	666
Worsted Dyeing Sets—	109	Twisting Frames (excl. Pirm Winding)	248
Opac (Hendford)	18	Pirm Winding Frames	169
Continental Type	32		
Warp Mills	303	Warping Machines	94
Sizing Machines	10	Twisting Machines	31
Finishing—Scouring	248	Dry Beaming Machines	18
Tweeters	49		
Cutters	88		
Blowers—Steam	58		
Pressers—Hand	30		
Power	60		
	<i>Number.</i>		<i>Total Spindles.</i>
Spinning—Mule—Worsted	49		30,000
Ring—Worsted	297		114,511
Woolen	261		61,289
Cap—Worsted	937		174,800
Flyer—Worsted	92		17,760
Other—Worsted	55		9,890
Twisting—Ring	367		60,944
Cap	272		49,572
Others	55		6,070
	<i>Number.</i>		<i>Ends.</i>
Winding—Cone	374		11,362
Chooze	247		6,799
Blank	96		3,369
Wet Winding—Automatic	249		3,294
Non-Automatic	159		2,990
	<i>Broad (d)</i>		<i>Narrow (d)</i>
Looms—Automatic	1,898		143
Non-Automatic (incl. Hand)	3,546		296
	<i>Broad (d)</i>		<i>Narrow (d)</i>
<i>Rayon and Synthetic Fibre Weaving Mills.</i>		<i>History and Knitting Mills.</i>	
Warping Creels	58	Used in the production of Hosiery—	
		Fully Fashioned Knitting Machines	457—Heads 9,112
		Circular Knitting Machines (excl. Ankle)	
		Women's	1,217
		Men's	1,856
		Children's	317
		Ankle Knitting Machines—	
		Women's	265
		Men's	300
		Children's	933
		Linking and/or Looping Machines	933
		Seaming Machines	660
		Used in the production of Underwear and/or Outerwear—	
		Warp Knitting Machines or Looms	542
		Flat Knitting Machines	2,785
		Circular Knitting Machines—Rib	2,440
		Open Top	1,432
		Fully Fashioned Knitting Machines	22—Heads 175
		Other Machines used in Hosiery and Knitting Mills—	
		Cone Winding Machines	535—Spindles 3,470
		Other Winding Machines	316—Spindles 4,817
		Twisting Machines	169—Spindles 22,605
		Warp or Beam Winding Machines	96
		Warping Creels	81
		Overlocking Machines	4,430
		Flat Locking Machines	628
		Plain Sewers	3,575
		2 Needle Picking Machines	333
		Other Sewing Machines	4,897

(a) Includes all machines capable of being operated whether active or idle, or in reserve. (b) With capacity to weave cloth 34 inches or more in width. (c) With capacity to weave cloth less than 34 inches in width. (d) With capacity to weave cloth exceeding 34 inches in width. (e) With capacity to weave cloth up to and including 34 inches in width.

No. 88—Furniture: Principal Materials Used, 1887-88.

Particulars shown in this table are arranged alphabetically as in the previous Bulletin. They represent recorded usage in the industries or processes indicated only, and therefore do not necessarily show total factory usage of the articles listed. It should be noted that materials used in small establishments not classified for statistical purposes as factories are not included in the figures shown herein. Where there are less than three users of a particular article in a State, details are confidential and indication of such is given by a footnote—(a) Not available for publication. Figures shown include, wherever applicable, quantities of articles produced and consumed in the same year in the factories producing them.

No. 22.—*Factories: Materials Used and Articles Produced in Various Industries, Australia.*

NOTE.—Figures shown for articles produced in each class of industry mentioned represent the total recorded production of the relevant articles in all industries including quantities produced, as subsidiary production, in other industries. Similarly figures shown for materials used include, wherever possible, quantities used in the production of the relevant articles in factories otherwise classified. It should be noted that materials used and articles produced in small establishments not classified for statistical purposes as factories are not included in the figures shown herein.

STATISTICS OF NEW BUILDINGS.

DEFINITIONS.

Contract-built.—Includes the operations of all Building Contractors and Government instrumentalities which undertake the erection of new buildings.

Owner-built.—For the purpose of this Bulletin, an "owner-built" house is one actually erected or being erected by the owner or under the owner's direction, without the services of a contractor who is responsible for the whole job.

Commenced.—A building is regarded as having been commenced when work on foundations has begun. Owing to the difficulty of defining the exact point at which the building operation, classifications made by informants may not be entirely uniform.

Completed.—A building is regarded as having been completed when the contractor has fulfilled the terms of the contract. As with commencements, the classification made may not be entirely uniform.

Values.—All values shown exclude the value of land and represent the estimated value of buildings on completion.

Employment.—Figures relate to persons actually working on the jobs of contractors who undertake the erection of new buildings and of Government instrumentalities which erect new buildings on their own account. They include persons actually engaged in alterations, additions, repairs and maintenance when these jobs are undertaken by such contractors and instrumentalities. The figures exclude working principals and their employees, men working as or for sub-contractors, and men temporarily laid off on account of weather.

Contractors are asked to give details of the persons employed on a specified day, but because of frequent movement between jobs and because some persons (such as electricians, etc.) may work on several jobs which are under construction simultaneously, some duplication may occur.

The figures exclude persons working on owner-built houses, and employees of builders who undertake only alterations, additions, repairs and maintenance.

SOURCES OF INFORMATION.

Returns are obtained from—

- building contractors engaged in the erection of new buildings;
- owner builders;
- Commonwealth, State, and Local Government instrumentalities.

SCOPE.

Details in this Bulletin relate only to the erection of new buildings, as distinct from the construction of railways, bridges, earthworks, water storage, etc.

Major new additions to existing buildings are included as new buildings.

Minor alterations, additions, renovations and repairs are excluded because of the difficulty of obtaining lists of persons who undertake this work.

Figures in this Bulletin do not include converted military huts and temporary dwellings. (Figures for houses exclude flats and also exclude dwellings attached to other new buildings. The value of dwellings attached to other new buildings is included with the value of the buildings to which they are attached.) Figures for flats include "home units".

Imported prefabricated houses are included in all relevant tables in this Bulletin. Details obtained from Government authorities and building contractors refer to all areas. Details for owner-builders cover only those areas subject to building control by Local Government authorities. Thus some houses on farms are excluded, but this does not affect figures materially. More detailed information is available in the Quarterly Bulletin of Building Statistics.
