

PRODUCTION SUMMARY NO. 5 : ELECTRICITY AND GAS
AUSTRALIA : NOVEMBER 1972

26 FEB 1973

Annual figures are derived from the recorded monthly production and are subject to revision. This summary contains seasonally adjusted statistics of Electricity in Table 1 below. In the seasonal adjustment, account has been taken not only of normal seasonal factors but also of "trading-day" effects (arising from the varying numbers of Sundays, Mondays, Tuesdays, etc. in the month) and the influence of Easter and Australia Day which may, in successive years, affect figures for different months. Details of the methods used in seasonally adjusting this and other series are given in "Seasonally Adjusted Indicators 1972" (Reference No. 1.10). Production figures for Northern Territory are included with South Australia.

(a) See footnote (a), page 1. (b) Statistics relate to generation of electricity within each State and take no account of interchanges between States. Furthermore, details for Victoria exclude Victorian entitlements to generation from the Hume Power Station and the Snow Mountains Hydro-electric Scheme.
