EXPLANATORY NOTES

Introduction

This publication contains monthly and year-to-date statistics of Australia's imports classified by Divisions (2 digits) and Items (5 digits) of the Australian Import Commodity Classification (AICC) (1204.0). Statistics at the Section (1 digit) level are available in the ABS publication Imports by Commodity Divisions (Preliminary) (5405.0). Statistics for 1983-84 and 1984-85 may be amended as a result of continuing quality checks on foreign trade data. Although these amendments usually have little effect on broad aggregate statistics, they may have a significant effect on individual commodity statistics. For this reason, statistics for 1983-84 and 1984-85 should be regarded as preliminary and subject to revision.

Source of data

2. These statistics are compiled by the Australian Bureau of Statistics from information contained in import entries submitted by importers or their agents to the Australian Customs Service as required by the Customs Act.

Statistical concepts

3. The statistics of imports presented in this publication are, with one exception, recorded on a general trade basis, i.e. imports comprise goods entered directly for home consumption together with goods imported into bonded warehouses. Table 1 of this publication also shows statistics of imports on a special trade basis, i.e. imports cleared for home consumption. Imports cleared for home consumption differ in scope from imports in that they include withdrawals from bonded warehouses but exclude imports into bonded warehouses.

4. The following are excluded from recorded import statistics:

- (a) direct transit trade, i.e. goods being trans-shipped or moved through Australia for purposes of transport only;
- (b) bunkers and stores supplied to vessels and to aircraft prior to arrival in Australia;
- (c) migrants' and passengers' effects imported and parcels post imports of small value, for which Customs entries are not required;

(d) certain materials under inter-governmental agreement for defence and similar projects for which Customs entries are not required;

(e) vessels and aircraft engaged in the transport of passengers or goods between Australia and other countries;

(f) the purchase of any vessel and/or aircraft intended for use on overseas routes;

(g) fish and other sea products landed in Australia directly from the high seas by Australian vessels;

(h) entries lodged on informal clearance documents (ICD) for values not exceeding \$250.

Statistical period

5. Imports are recorded statistically in the calendar month in which the import entries are both finalised by the Australian Customs Service and passed to the ABS for further processing. Import entries may be lodged early using the check-to-arrive system or the documents may be delayed because of various validation checks carried out by Customs prior to the entries being passed to the ABS.

6. Import statistics for a particular month do not necessarily represent entries lodged or commodities actually imported during the month in question. Analysis of past data has shown that in aggregate approximately 70 per cent of import trade by value recorded for a particular month was actually imported during that month, 25 per cent was actually imported during the previous month with the remaining 5 per cent being imported in earlier months. For individual commodities the percentage by value representing actual imports in a month may vary considerably.

Valuation

7. The recorded value of imports is the customs value (formerly referred to as the value for duty). On 30 November 1981, Australia changed its system of valuation from the Brussels Definition of Value (BDV) to the GATT Agreement on Customs Valuation. The Agreement reflects one of a number of trade related codes of conduct established during the round of Multi-lateral Trade Negotiations (MTN) concluded in 1979.

8. The GATT Agreement differs from the Brussels Definition of Value in that it offers a set of practical rules on the valuation of imports rather than a list of conceptual guidelines. Under the Agreement the primary basis for establishing the customs value is the price actually paid or payable, provided a number of conditions are met. The most important condition is that the buyer and seller must be independent of each other. If the conditions are not met the practical rules are used to determine the customs value.

9. The recording of the value of imports remains on a free-on-board (f.o.b.) basis (i.e. the charges and expenses involved in delivering the goods from the place of exportation to Australia are excluded). The recorded value also continues to include the value of the outside package, other than international containers used for containerised cargo.

10. The change in the basis of valuation is expected to have a negligible effect on value and duty import statistics.

Merchandise imports

11. In accordance with standards recommended by the United Nations Statistical Commission, merchandise imports are defined as all goods which add to the stock of material resources in Australia as a result of their movement into the country. Merchandise imports, therefore, exclude goods imported with the reasonable expectation of re-export within a limited time. A complete list of commodities not included in merchandise trade is shown under Section 9(b) of the AICC. These include, for example, coin being legal tender and goods for temporary exhibition in Australia. Goods excluded from merchandise trade are, for convenience, termed non-merchandise and non-merchandise trade is shown separately in some tables. Total trade is the sum of merchandise and non-merchandise trade.

12. Classification changes affecting the levels of merchandise and non-merchandise trade were introduced on 1 July 1983, in accordance with recommendations of the United Nations Statistical Commission (International Trade Statistics, Concepts and Definitions, United Nations Statistical Papers, Series M, No 52, Revision 1, 1982). As a result, statistics of imports, from July 1983, under Sections 9(a) and 9(b) of the AICC

are not comparable with previous years. The changes do not affect Sections 0 to 8 of the classification, nor total trade. Further information about the changes is given in the current edition of the AICC, or may be obtained from the ABS Trade and Shipping Section in Canberra.

Commodity classification

13. Imports are classified according to the items of the AICC which, from 1 July 1978, has been based on the Standard International Trade Classification Revision 2 (United Nations, Statistical Papers, Series M, No. 34, Revision 2, 1975). A detailed description of the commodity items included in this publication is contained in the AICC. Copies of, or extracts from, the classification may be obtained from offices of the ABS in Canberra and in each capital city.

Broad Economic Categories

14. Imports of merchandise in Table 6 are classified according to the nineteen categories of the United Nations' Classification, Broad Economic Categories (BEC). The BEC attempts to classify external trade statistics for the purposes of general economic analysis according to the main end use of the commodities traded. Figures for previous years have been compiled and are available on request.

ASIC industry of origin

15. Import statistics classified by Subdivisions of the Australian Standard Industry Classification (ASIC) are shown in Table 5. These statistics are compiled by allocating statistical items of the AICC to the ASIC industry of origin with whose main economic activities the commodities are primarily associated. A full description of ASIC Classes is contained in the publication Australian Standard Industrial Classification, Vol. 1 - The Classification (1201.0).

Country

16. For the purposes of foreign trade statistics, a country is defined as a geographical entity which trades, or has the potential to trade, with Australia in accordance with Australian Customs provisions. External territories under Australian administration are treated separately whilst self-governing territories and dependent territories under the administration of other countries may be treated as individual

countries in Australian foreign trade statistics. For imports, country refers to the country of origin of the goods which is defined as the country of production for Customs purposes.

State

17. Means the State in which the import entry was lodged with the Australian Customs Service. The port of lodgement of the import entry is not necessarily the port of discharge of the goods. Goods forwarded interstate after import, whether in containers or not, are recorded as being imported at the port of lodgement of the import entry.

Treatment of confidential data

18. To ensure that information about the activities of particular businesses is not disclosed, it is necessary to restrict the release of statistics of certain commodities. These restrictions do not affect total import figures but they can affect statistics at all levels of the Australian Import Commodity Classification.

19. The implementation of a new foreign trade processing system has resulted in a revised treatment of confidential data. Consequently, certain statistics in publications first containing March 1982 data are not directly comparable with statistics in previous publications.

20. Reference to table footnotes should assist in the interpretation of these differences.

Revisions to previous figures

21. Where revisions have been made to the previously published figures for earlier months of the current financial year, appropriate adjustments are made to the year-to-date figures shown in this publication. For this reason, monthly figures published in previous issues for the current financial year will not necessarily add to the year-to-date figures shown in the latest issue.

22. Statistics shown in this publication were the latest available at the time of compilation. However, revisions may have since been made to the statistics, which could result in differences between figures in this publication and those in other related publications e.g. Imports by Commodity Divisions, Australia

(Preliminary) (5405.0).

OTHER INFORMATION AVAILABLE

23. Special returns service: Subscribers to this service can receive computer produced printout of foreign trade statistics at a particular commodity level in one or more of a limited number of formats, for a charge consistent with the level of detail required. This service is recommended where up to fifty specific commodity items are required on a regular basis.

24. Microfiche service: Foreign trade statistics are also available on microfiche in a variety of tabular formats. Each tabular format covers all commodities exported or imported at various levels of aggregation. This service is recommended where the subscriber wishes to obtain foreign trade details for a large number of commodities.

25. Magnetic tape: Statistics for imports, exports and import clearances are available on 9-track magnetic tape approximately 4 weeks after the end of the reference period. Documentation regarding the content and structure of these tapes is available from the ABS Trade and Shipping Section in Canberra.

26. To meet subscribers' needs special returns and microfiche are available on a monthly, quarterly or less frequent basis. Relevant application forms and information papers for these services are available from the ABS Trade and Shipping Section in Canberra or any ABS State office. Payment in advance is required for each of these services.

Related publications

27. Other ABS publications which may be of interest include:
