EXPLANATORY NOTES

Introduction

This publication contains statistics of Australia's exports classified by Sections (1 digit), Divisions (2 digits) and significant Groups (3 digits) and Items (5 digits) of the *Australian Export Commodity Classification* (A.E.C.C.) (1203.0). Statistics for 1978-79 and 1979-80 are preliminary and subject to revision.

Source of data

2. These statistics are compiled by the Australian Bureau of Statistics from information contained in export entries submitted by exporters or their agents to the Bureau of Customs as required by the Customs Act.

Statistical period

3. Exports are recorded statistically in the month in which the entries are passed by the Bureau of Customs. Normally this is within a few days of shipment of cargo, but delays sometimes occur in the lodging of entries. The statistical month for Customs outports (generally ports other than those at which the main Customs office in each State is located) closes on the 21st of each month whereas for mainports the statistical month is the calendar month.

Valuation

4. Goods sold to overseas buyers before export are valued at the f.o.b. Australian port of shipment equivalent of the actual price paid to the exporter. Goods shipped on consignment are valued at the f.o.b. Australian port of shipment equivalent of the current price offering for similar goods of Australian origin in the principal markets of the country to which they are dispatched for sale. The value of outside packages is included.

Scope of the statistics

5. The statistics of exports presented in this publication are recorded on a *general trade* basis, i.e. export figures include both Australian produce and re-exports.

Australian produce is defined as goods, materials or articles which have been produced, manufactured or partly manufactured in Australia, except goods which were originally imported and have undergone only repair or

minor operations which leave them essentially unchanged.

Re-exports are defined as goods, materials or articles originally imported which are exported in the same condition in which they were imported and goods, materials or articles originally imported which are exported after undergoing repair or minor operations which leave them essentially unchanged. The values of re-exports are shown in Tables 4 and 6.

Minor operations include blending, packaging, bottling, cleaning, sorting, husking and shelling.

The statistics are not confined to goods which are the subject of a commercial transaction. Among the items included are exports on Government account including defence equipment.

Exports exclude *ships' and aircraft stores*; separate statistics for these are shown in Table 7.

Merchandise and non-merchandise exports

6. Total exports are divided into merchandise and non-merchandise in accordance with international standards recommended by the United Nations. Merchandise exports are the equivalent of total exports less certain items specified as non-merchandise. A description of non-merchandise items is contained in the A.E.C.C..

Country

7. This means the country to which goods were consigned at the time of export. Where the country of consignment is not determined at the time of export goods are recorded as exported *For orders* or as *Destination unknown*.

Commodity classification

8. From 1 July 1978, exports have been classified according to the new A.E.C.C. which is based on the Standard International Trade Classification, Revision 2. A detailed description of the commodity items included in this publication is contained in the A.E.C.C.. Copies of, or extracts from, this classification may be obtained from offices of the ABS in Canberra and in each capital city. In Table 3 statistics are shown for Commodity Groups and selected Items of the A.E.C.C.. For this reason the sum of the Groups and Items within any one Division may not add to the total for that Division.

Industrial groups

9. Exports of Australian produce are classified into eighteen industrial groups according to whether they are processed or unprocessed primary products, manufactured products or certain other categories. The value of processed primary products includes some element of value added by the simple processes of manufacture while the value shown for manufactures necessarily includes the value of raw material (primary produce) used in those manufactures.

Broad economic categories

10. Exports of merchandise in Table 5 are classified according to the nineteen categories of the United Nations' Classification, Broad Economic Categories (B.E.C.). The B.E.C. attempts to classify external trade statistics for the purposes of general economic analysis according to the main end use of the commodities traded. Figures for previous years have been compiled and are available on request.

State

11. From 1 July 1978 "state" statistics in this publication comprise state of origin of Australian produce and state of final shipment of re-exported goods. State of origin is defined as the state in which the final stage of production or manufacture occurs. Previously "state" was the state in which the export document was lodged with the Bureau of Customs. Because of this change, figures from 1 July 1978 are not directly comparable with those for previous periods.

Revision to previous figures

12. Where revisions have been made to the previously published figures for earlier months of the current financial year, appropriate adjustments are made to the year-to-date figures shown in this publication. For this reason, monthly figures published in previous issues for the current financial year will not necessarily add to the year-to-date figures shown in the latest issue.

13. Statistics shown in this publication were the latest available at the time of compilation. However, revisions may have since been made to the statistics, which could result in differences between figures in this publication and those in other related publications e.g. *Exports and Imports, Australia (Preliminary)* (5401.0), *Exports by Commodity Divisions, Australia (Preliminary)* (5402.0).

Seasonal adjustment

14. In carrying out seasonal adjustment of export

statistics, account is taken not only of seasonal factors but also of "trading-day" effects (arising from the varying numbers of Sundays, Mondays, etc. in the month) and the influence of Easter, which may affect figures for different months in different years. Details of the methods used in seasonally adjusting this series are given in *Seasonally Adjusted Indicators* (1308.0). The statistics may also be subject to large irregular influences which are not removed by seasonal adjustment and may be affected by changes in the composition of exports. For these reasons care should be exercised in interpreting month-to-month movements.

Special returns system

15. Users requiring more detailed statistics for individual commodity items can obtain these from the special returns service under which statistics for items selected by the user are extracted and forwarded regularly for an appropriate charge.
