PRODUCTION SUMMARY NO. 28 : FOOTWEAR (a) AUSTRALIA : MAY 1973

The figures for 1969-70 are derived from the Annual Factory Census. All subsequent figures are derived from the recorded monthly production and are subject to revision. This summary contains seasonally adjusted statistics of boots, shoes and sandals, in Table 4 on page 3. In the seasonal adjustment, account has been taken not only of normal seasonal factors but also of "trading-day" effects (arising from the varying numbers of Sundays, Mondays, Tuesdays etc. in the month) and the influence of Easter and Australia Day which may, in successive years, affect figures for different months. The seasonally adjusted figures have been revised following annual reanalysis. Details of the methods used in seasonally adjusting this and other series will be given in "Seasonally Adjusted Indicators 1973" (Reference No. 1.10) to be issued shortly.
