## EXPLANATORY NOTES

### Introduction

This publication contains detailed results for the September quarter 1983 from the quarterly Building Activity Survey. Summary results for September quarter 1983 were published in *Building Activity, Australia (Summary)* (8751.0).

2. The statistics were compiled on the basis of returns collected from builders and other individuals and organisations engaged in building activity. The quarterly survey consists of two components:

- (a) A sample survey of private sector house building activity involving new house construction or alterations and additions valued at \$10,000 or more to houses;
- (b) A complete enumeration of other building activity involving construction of new dwellings other than private sector houses, construction of new other buildings with an approval value of \$10,000 or more and all alterations and additions with an approval value of \$10,000 or more to buildings other than private sector houses.

3. Also shown in this publication are summary statistics of building work approved. These statistics were compiled from the ABS monthly Building Approvals collection covering permits issued by local government authorities and contracts let (or day labour work authorised) by Commonwealth, State, semi-government and local government authorities. Major building activity which takes place in areas not subject to the normal administrative approval processes (e.g. buildings on remote mine sites) is also included in the Building Approvals collection. Details of building approvals are published in publication 8731.0.

4. The use of sample survey techniques in the Building Activity Survey means that reliable estimates of private sector house building activity, including alterations and additions to houses, are available only at the State/Territory and Australia levels. Further geographic disaggregations are not available. However, dwelling unit commencement data for regions below State/Territory level are shown in the monthly series of dwelling unit commencements compiled by State Offices of the ABS. Data from this series, unlike those compiled from the Building Activity Survey, are based on information reported by local and other government authorities.

5. The Building Activity Survey was introduced in the September quarter 1980, replacing the quarterly Building Operations Census. A description of the changes introduced from the September quarter 1980 and further changes introduced from the September quarter 1981 are shown in the explanatory notes in the June quarter 1983 and earlier issues of *Building Activity, Australia* (8705.0).

6. Following a review of concepts and definitions relating to building statistics certain minor modifications

have been implemented from the September quarter 1983. Slightly re-worded definitions, reflecting a more rigorous application of concepts, are presented in paragraphs 10 to 19 below. Modifications resulting in slight changes to survey methodology are described in paragraphs 8 and 20. Investigations have shown that the effect of these definitional and operational changes on the published series is negligible.

### Scope and coverage

7. The statistics relate to *building* activity which includes construction of new buildings and alterations and additions to existing buildings. Construction activity not defined as building (e.g. construction of roads, bridges, railways, earthworks, etc.) is excluded.

8. The scope of the Building Activity Survey has been expanded in relation to work carried out on existing buildings. From the September quarter 1983 the statistics include details of non-structural renovation and refurbishment work and the installation of integral building fixtures, for which building approval was obtained. Previously, such work was only included if described on building permits as involving a 'structural' change to the building and/or an addition to floor area.

9. Building jobs included in each quarter in the Building Activity Survey comprise those building jobs selected in previous quarters which have not been completed (or commenced) by the end of the previous quarter and those building jobs newly selected in the current quarter. The population list from which building jobs are selected for inclusion comprises all approved building jobs which were notified to the ABS (refer paragraph 3) up to but not including the last month of the reference quarter (i.e. up to the end of August in respect of the September quarter survey). This introduces a lag to the statistics in respect of those building jobs notified and commenced in the last month of the reference quarter (i.e. for the month of September in respect of the September quarter survey). For example, building jobs which were notified as approved in the month of June and which actually commenced in that month are shown as commencements in the September quarter. Similarly, building jobs which were notified in the month of September and which actually commenced in that month are shown as commencements in the December quarter.

### Definitions

10. A *building* is defined as a rigid, fixed and permanent structure which has a roof. Its intended purpose is primarily to house people, plant, machinery, vehicles, goods or livestock. An integral feature of a building's design, to satisfy its intended use, is the provision for regular access by persons.

11. A *dwelling unit* is defined as a self-contained suite of rooms, including cooking and bathing facilities and intended for *long term* residential use. Units (whether self-contained or not) within buildings offering institutional care, such as hospitals, or temporary accommodation such as motels, hostels and holiday apartments, are not defined as dwelling units. The value of units of this type is included in the appropriate category of 'other building'.

12. A *dwelling* is defined as a building predominantly consisting of one or more dwelling units. Dwellings can be either *houses* or *other dwellings*.

- (a) A *house* is defined as a detached building predominantly used for long term residential purposes and consisting of only one dwelling unit. Thus, detached 'granny flats' and detached dwelling units (such as caretakers' residences) associated with 'other buildings' are defined as houses for the purpose of these statistics.
- (b) An *other dwelling* is defined as a building which is predominantly used for long term residential purposes and which contains (or has attached to it) more than one dwelling unit (e.g. includes townhouses, duplexes, apartment buildings, etc.).

13. The number of dwelling units created by alterations and additions to existing buildings, and through the construction of new 'other buildings' i.e. buildings other than dwellings, is not included in the tables but is shown as a footnote to Table I.

14. *Commenced*. A building job is regarded as commenced when the first physical building activity has been performed on site in the form of materials fixed in place and/or labour expended (this includes site preparation but excludes delivery of building materials, the drawing of plans and specifications and the construction of non-building infrastructures, such as roads).

However, for practical purposes, a building job is not treated as having commenced in a particular quarter unless the value of work done to the end of the quarter, reported on the Building Activity Survey form, is equal to or greater than the following threshold values:

- (i) for houses (including alterations and additions to houses), \$2,000.
- (ii) for other dwellings and other buildings (including alterations and additions to other dwellings and other buildings), \$5,000.

15. *Under construction*. A building job is regarded as being under construction at the end of a period if it has been commenced but has not been completed, and work on it has not been abandoned.

16. *Completed*. A building job is regarded as completed when building activity has progressed to the stage where the building can fulfil its intended function. In practice, building jobs are treated as completed when notified as such by respondents to the survey.

### Valuation of building jobs

17. The value series in this publication are derived from estimates reported on survey returns as follows:

- (a) *Value of building approved, commenced, or under construction* represents the anticipated completion value based, where practicable, on estimated market or contract price of building jobs excluding the value of land and landscaping. Site preparation costs are included. Where building jobs proceed over several quarters the anticipated completion value reported on the return for the first (commencement) quarter may be amended on returns for subsequent (under construction) quarters as the job nears completion.
- (b) *Value of building completed* represents the actual completion value based, where practicable, on the market or contract price of building jobs including site preparation costs but excluding the value of land and landscaping.
- (c) *Value of building work done during the period* represents the estimated value of building work actually carried out during the quarter on building jobs which have commenced.
- (d) *Value of building work yet to be done* represents the difference between the anticipated completion value and the estimated value of work done on building jobs up to the end of the period.

### Building classification

18. *Ownership*. The ownership of a building is classified at the time of approval as either *private sector* or *public sector* according to the expected ownership of the completed building.

19. *Builder type*. Houses are classified according to the type of builder as follows:

- (a) *Contractor-built houses*. Those constructed by a private recognised building contractor, either under contract, or in anticipation of sale or rental.
- (b) *Houses built by other than contract builders*. Those constructed by an owner (other than a recognised building contractor) or under his direction, without the services of a single contractor responsible for the whole job. Houses built by businesses (other than recognised building contractors) and public sector organisations are also included in this category.

20. *Functional classification of buildings.* A building is classified according to its intended major function. From the September quarter 1983, a building which is ancillary to other buildings or forms a part of a group of related buildings is classified to the function of the building and not to the function of the group as a whole. An example of this can be seen in the treatment of building work approved for a factory complex. In this case a detached administration building would be classified to Offices, a detached cafeteria building to Shops, while factory buildings would be classified to Factories. An exception to this rule is the treatment of group accommodation buildings where, for example, a student accommodation building on a university campus would be classified to Educational.

21. Examples of the types of buildings included under each main functional heading are shown in the following list:

- (a) *Houses.* Includes 'cottages', 'bungalows', detached caretakers' managers' cottages, rectories.
- (b) *Other dwellings.* Includes blocks of flats, home units, attached townhouses, villa units, terrace houses, semi-detached houses, maisonettes.
- (c) *Hotels, etc.* Includes motels, hostels, boarding houses, guest houses, holiday apartment buildings.
- (d) *Shops.* Includes retail shops, restaurants, cafes, taverns, dry cleaners, laundromats, hair salons, shopping arcades.
- (e) *Factories.* Includes paper mills, oil refinery buildings, brickworks, foundries, power houses, manufacturing laboratories, workshops as part of a manufacturing process.
- (f) *Offices.* Includes banks, post offices, council chambers, head and regional offices.
- (g) *Other business premises.* Includes warehouses, storage depots, service stations, transport depots and terminals, electricity sub-station buildings, pumping station buildings, telephone exchanges, mail sorting centres, broadcasting stations, film studios.
- (h) *Educational.* Includes schools, colleges, kindergartens, libraries, museums, art galleries, research and teaching laboratories, theological colleges.
- (i) *Religious.* Includes churches, chapels, temples.
- (j) *Health.* Includes hospitals, nursing homes, surgeries, clinics, medical centres.
- (k) *Entertainment and recreational.* Includes clubs, theatres, cinemas, public halls, gymnasiums, grandstands, squash courts, sports and recreation centres.

- (l) *Miscellaneous.* Includes law courts, homes for the aged (where medical care is not provided as a normal service), orphanages, gaols, barracks, mine buildings, glass houses, livestock sheds, shearing sheds, fruit and skin drying sheds, public toilets, and ambulance, fire and police stations.

#### Reliability of the estimates

22. Since the figures for private sector house building activity (including alterations and additions) are derived from information obtained from a sample of approved building jobs they are subject to sampling error; that is, they may differ from the figures that would have been obtained if information for all approved jobs for the relevant period had been included in the survey. A measure of the likely difference is given by the relative standard error of each estimate. There are about two chances in three that a sample estimate will differ by less than one standard error from the figure that would have been obtained if all approved jobs had been included, and about nineteen chances in twenty that the difference will be less than two standard errors. Relative standard errors of the estimates are shown in Tables 18 and 19.

23. An example of the use of standard errors is as follows. From Table 2 it can be seen that the estimate of the number of new private sector houses commenced during the quarter ended September 1983 is 22,530. The associated relative standard error is 1.4 per cent (see Table 18). Therefore, there are about two chances in three that the value which would have been obtained if information had been obtained about all approved private sector house jobs would have been within the range 22,210 to 22,850 and about nineteen chances in twenty that the value would have been within the range 21,900 to 23,160.

24. The imprecision due to sampling variability, which is measured by the relative standard error, should not be confused with inaccuracies that may occur because of inadequacies in the source of building approval information, imperfections in reporting by respondents, and errors made in the coding and processing of data. Inaccuracies of this kind are referred to as non-sampling error, and may occur in any enumeration whether it be a full count or only a sample. Every effort is made to reduce the non-sampling error to a minimum by the careful design of questionnaires, efforts to obtain responses for all selected building jobs, and efficient operating procedures.

#### Seasonal adjustment

25. Seasonally adjusted building statistics are shown in Table 4. In the seasonally adjusted series, account has been taken of normal seasonal factors and 'trading day' effects (arising from the varying numbers of Sundays, Mondays, Tuesdays etc. in the quarter and the effect of movement in the date of Easter which may, in successive years, affect figures for different quarters. Details of the seasonal adjustment methods used are given in *Seasonally Adjusted Indicators, Australia* (1308.0).

26. Since seasonally adjusted statistics reflect both irregular and trend movements, an upward or downward movement in a seasonally adjusted series does not necessarily indicate a change of trend. Particular care should therefore be taken in interpreting individual quarter to quarter movements. Each of the component series shown has been seasonally adjusted independently. As a consequence, while the unadjusted components in the original series shown add to the totals, the adjusted components may not add to the adjusted totals. Further, the difference between independently seasonally adjusted series does not necessarily produce series which are optimal or even adequate adjustments of the similarly derived original series. Thus the figures which can be derived by subtracting seasonally adjusted private sector dwelling units from the seasonally adjusted total should not be used to represent seasonally adjusted public sector dwelling units.

#### Unpublished data and related publications

27. The ABS can also make available certain building approvals and activity data which are not published. Where it is not practicable to provide the required information by telephone, data can be provided in the following forms: microfiche, photocopy, computer print-out and clerically extracted tabulation. A charge may be made for providing unpublished information in these forms.

28. Users may also wish to refer to the following building and construction publications which are available on request:

*Building Approvals, Australia* (8731.0)—issued monthly

*Building Activity, Australia: Dwelling Unit Commencements (Preliminary Estimates)* (8750.0)—issued quarterly

*Building Activity, Australia (Summary)* (8751.0)—issued quarterly

*Construction (Other Than Building) Activity, Australia* (8761.0)—issued quarterly

*Building and Construction statistics, Index 1978* (1104.0).

29. Current publications produced by the ABS are listed in the *Catalogue of Publications, Australia* (1101.0). The ABS also issues, on Tuesdays and Fridays, a *Publications Advice* (1105.0) which lists publications to be released in the next few days. The Catalogue and Publications Advice are available from any ABS Office.

#### Symbols and other usages

- n.a. Not available
- .. Not applicable
- Nil or rounded to zero
- r Figure or series revised since previous issue
- Break in continuity of series (where drawn between two consecutive figures in the same column)

30. Where figures have been rounded, discrepancies may occur between sums of the component items and totals.

(a) Figures shown for numbers of new houses and total dwelling units commenced, under construction and completed are rounded to the nearest ten units. (b) Excludes value of the main structure of new Parliament House which was not available when site works commenced.

NOTE: The number of self-contained dwelling units commenced as part of the construction of other buildings and alterations and additions to existing buildings (including conversions to dwelling units) are excluded from this table. 174 such dwelling units were commenced in the September quarter 1983.
