PRELIMINARY BULLETIN

OVERSEAS TRADE

1966-67

PREFACE

The statistics in this Bulletin are preliminary and are published to meet the urgent demand for up-to-date details of Australia's overseas trade. The annual printed bulletin "Overseas Trade" to be issued later this year will contain final and more detailed statistics.

To reduce the size of the volume to manageable proportions, separate details are given only for those countries for which the exports or imports were valued at \$40,000 or more for any particular statistical item. The remaining countries are grouped under "Other".

The Bulletin consists of the following sections:-

- Part 1: Exports* - (i) Statistical Items by Countries of Consignment, pp. 1-61
(ii) Exports by Divisions of the Australian Export Commodity Classification pp. 62 and 63
(iii) Exports by Principal Countries of Consignment, and Divisions of the Australian Export Commodity Classification pp. 64 and 65
(iv) Exports by Countries of Consignment, p. 66
(v) Index to Articles of Trade
- Part 2: Imports* - (i) Statistical Items by Countries of Origin, pp. 1-145
(ii) Imports by Divisions of the Australian Import Commodity Classification, pp. 146 and 147
(iii) Imports by Principal Countries of Origin and Divisions of the Australian Import Commodity Classification pp. 148 and 149
(iv) Imports by Countries of Origin, p. 150
(v) Index to Articles of Trade

Basic documents

Overseas trade statistics are derived from documents obtained under the Customs Act by the Department of Customs and Excise, and compiled by the Commonwealth Bureau of Census and Statistics. These documents are duplicate copies of export and import entries submitted by exporters and importers or their agents to the Department of Customs and Excise. Certain items for which customs entries are not required are excluded from the statistics.

Export entries show date and port of shipment, country of consignment and the description, quantity (where required) and value of the goods. Prior to July 1966 the statistical item number was inserted and verified by officers of the Department of Customs and Excise in Canberra. As from July 1966 the statistical item number has been inserted by the exporter or his agent and verified by officers of the Department of Customs and Excise in the local offices of the Collectors of Customs.

Import entries show date and port of entry, country of origin, description of goods, quantity (where required), value of the goods, and amount of duty paid thereon. The tariff item number under which the goods are admitted and the statistical key code are inserted by the importer or his agent, and these are verified by statistical officers of the Department of Customs and Excise in the local offices of the Collectors of Customs.

Scope of the statistics

General.

All goods moving into or out of Australia are recorded in overseas trade statistics (except those exclusions listed below) and the statistics are not confined to goods which are the subject of a commercial transaction. The area to which all overseas trade statistics issued by this Bureau apply is the whole of the Commonwealth of Australia, comprising the States of New South Wales, Victoria, Queensland, South Australia, Western Australia and Tasmania, the Northern Territory, and the Australian Capital Territory. Non-contiguous territories under Australian administration are treated as outside countries, and trade transactions between Australia and those non-contiguous territories are part of the overseas trade of Australia. Such transactions are shown separately, i.e. the trade of Australia with each particular area is separately recorded and tabulated.

Inclusions and exclusions.

- (a) Imports and exports on government account including defence equipment are treated as normal transactions and are an integral part of overseas trade statistics.
- (b) Direct transit trade, i.e. goods being transhipped or moved through Australia for purposes of transport only, is not recorded.
- (c) Outside packages (containers, crates, etc.) are included as a separate item in the tabulation of imports but they have only been fully classified by country or origin since 1950-51. For exports, however, the value recorded for each item includes the value of the outside package.
- (d) Bunkers and stores supplied to vessels and aircraft have been excluded from statistics of exports since 1906.
- (e) Those migrants' and passengers' effects for which a customs entry is not received are excluded in imports and exports.
- (f) Those parcel post imports and exports of small value for which customs entries are not received are excluded from overseas trade statistics.
- (g) Certain materials for intergovernmental defence projects for which customs entries are not required are excluded from imports.
- (h) The value of ores and concentrates imported and exported includes the value of the gold content and the latter is not included in imports and exports of gold.
- (i) Vessels and aircraft engaged in the transport of passengers or goods between Australia and other countries are excluded from imports and exports.
- (j) Vessels and aircraft purchased for use on overseas routes are excluded from imports and any subsequent overseas sales of such vessels and aircraft from exports.
- (k) Fish and other sea products landed abroad directly from the high seas by Australian vessels are excluded from exports.

Period covered by statistics

Exports

These are recorded statistically in the month in which the export entries are passed by the Department of Customs and Excise. Normally this is within a few days of shipment although delays sometimes occur in the lodging of entries. Shipments are at times delayed by abnormal factors affecting sales, deliveries for export and the loading of ships. When such delays occur, exports during the affected period are diminished and when the delays are overtaken shipments include substantial quantities of accumulated stocks as well as current disposals. Wool shipments in any trade year may be materially affected by the time spread of wool auctions which normally end in July. The carry-over for shipments varies from year to year. New season's wheat normally becomes available for shipment from December onwards, and the quantity shipped in any trade year (ending June) depends on the size of the crop, the time spread on sales for export, and physical factors affecting the scheduling of deliveries.

Imports.

Imports are recorded statistically in the month in which import entries are passed by the Department of Customs and Excise. Normally this is within a few days of discharge of cargoes.

Since July 1914, detailed trade statistics have been compiled for financial years (July to June). Prior to that details were compiled on a calendar year basis.

Valuation

Imports into Australia prior to 15 November 1947 were recorded in British currency values and full explanatory notes on the methods of recording import values before and since 15 November 1947 were included in Year Book No. 37 page 396.

All values in overseas trade statistics are determined on a 'free on board (f.o.b.) port of shipment' basis. This means that all charges, in particular the cost of freight and insurance, incurred after the goods have been exported from the port of shipment are excluded. Only transport and service charges incurred, or usually incurred, prior to export are included in the determination of trade values.

The procedure adopted to value imports and exports is as follows.

Exports.

The recorded value of goods exported includes the cost of containers and outside packages and has been determined as from July 1937 as follows :

- (a) Goods sold to overseas buyers before export are valued at the Australian f.o.b. port of shipment equivalent of the actual price at which the goods were sold.
- (b) Goods shipped on consignment are valued at the Australian f.o.b. port of shipment equivalent of the price paid for similar goods of Australian origin in the principal markets of the country to which they are dispatched for sale.

An account of the bases of valuation in operation prior to July 1937 is given on page 469 of Year Book No. 39.

Imports.

The recorded value of goods imported is the amount on which duty is payable or would be payable if the duty were *ad valorem*. Value for duty is the f.o.b. port of shipment equivalent of either:

- (a) the actual price paid or to be paid by the Australian importer plus any special deduction (transactions value) ; or
- (b) 'the current domestic value' of the goods; whichever is the higher.
'Current domestic value' is defined as, 'the amount for which the seller of the goods to the purchaser in Australia is selling or would be prepared to sell for cash, at the date of exportation of those goods, the same quantity of identically similar goods to any and every purchaser in the country of export for consumption in that country.'

The cost of containers and outside packages is excluded from the value of individual import items but is included as a separate item in the tabulation of imports.

Quantity data

Where quantities are shown they are generally, but not invariably expressed in terms of the normal trade unit. Where 'cental' is used, the unit is equivalent to 100 lb avoirdupois. Quantities are not tabulated in respect of statistical items for which there is no appropriate unit of quantity (for example, a statistical item which covers a number of commodities that cannot be recorded under a uniform unit of quantity).

Statistical concepts of trade

Trade systems.

There are two generally accepted systems of recording overseas trade statistics, namely (a) special trade and (b) general trade. The Statistical Office of the United Nations defines the two systems as follows:

'System of Trade.

Two systems of recording trade are in common use, differing mainly in the way warehoused and re-exported goods are recorded.

(a) Special Trade.

Special imports are the combined total of imports directly for domestic consumption (including transformation and repair) and withdrawals from bonded warehouses or free zones for domestic consumption. Special exports comprise exports of national merchandise, namely, goods wholly or partly produced or manufactured in the country, together with exports of nationalised goods. (Nationalised goods are goods which, having been included in special imports, are then exported without transformation).

- (b) *General Trade.* General imports are the combined total of imports directly for domestic consumption and imports into bonded warehouse or free zone. General exports are the combined total of national exports and re-exports. Re-exports, in the general trade system, consist of the outward movement of nationalised goods plus goods which, after importation move outward from bonded warehouse or free zone without having been transformed.

Direct transit trade, i.e. goods merely being transhipped or moving through the country for purposes of transport only, is excluded from the statistics of both special and general trade.'

Statistics in this volume are compiled on the 'General Trade' basis.

Australian produce (national produce) is defined as goods, materials or articles which have been produced, manufactured or partly manufactured in Australia, except goods which were originally imported and have undergone only repair or minor operations which leave them essentially unchanged.

Re-exports are defined as goods, materials or articles originally imported which are exported in the same condition in which they were imported, and goods, materials or articles originally imported which are exported after undergoing repair or minor operations which leave them essentially unchanged.

Minor operations include blending, packaging, bottling, cleaning, sorting, husking and shelling.

Merchandise and non-merchandise trade

Total trade is divided into merchandise and non-merchandise trade. Merchandise trade is the equivalent of total imports or exports less certain items specified as non-merchandise. Prior to July 1965 non-merchandise trade consisted of imports and exports of specie and gold and silver. In July 1965 merchandise and non-merchandise trade were redefined in accordance with international standards recommended by the United Nations and since that date non-merchandise items include commodities such as gold, legal tender, decorations, trophies, samples, passengers' personal effects, military equipment and stores for Australian Forces abroad, goods for the use of diplomatic and consular representatives, goods imported with the intention of being re-exported, goods exported with the intention of being reimported, etc. A complete description of these commodities is contained in the Australian Export and Import Commodity Classifications published by the Bureau.

Balance of payments basis.

Statistics of exports and imports for balance of payments purposes are derived by making certain adjustments, relating both to scope and valuation, to statistics of merchandise exports and imports. Statistics on the adjusted basis are published in statistical bulletins relating to the balance of payments. The adjustments include the following. Imports are adjusted for the overall excess of recorded value for duty over the actual selling price to the importer; exports and imports of goods for repair and return and the value of repairs are deducted from merchandise trade; exports and imports of ships and aircraft for use on overseas routes, certain imports of defence equipment, and other trade items for which customs entries are not required are added. Adjustments are also made for timing differences between the change of ownership and the lodgment of import entries, in the case of certain large items of equipment (e.g. warships).

The balance of trade is derived by comparing statistics of exports on a balance of payments basis with statistics of imports on that basis.

Balance of payments

Estimates of the balance of trade do not measure Australia's total balance of payments which includes other transactions such as freight and insurance charges on imports, shipping expenditure in Australian ports, overseas travel, payments of profits and interest, and private and government borrowing overseas. Estimates of these transactions will be found in statistical bulletins relating to the balance of payments.

Country of consignment or origin

'Country of consignment' referred to in exports tables means the country to which goods were consigned at the time of export. Where the country of consignment is not determined at the time of export the goods are recorded as exported 'For orders'. 'Country of origin', referred to in import tables, means the country of production. Classification of imports according to country of shipment was discontinued after the year 1920-21. A brief account of the dual system of import classification by country, operating prior to the year 1921-22, was given on page 500 of Year Book No. 51.

Commodity classifications

From July 1965 imports have been classified according to the new Australian Import Commodity Classification and from July 1966 exports according to the new Australian Export Commodity Classification. Prior to those years the statistics were based on the Statistical Classification of Imports and Exports. The new classifications are based on the Standard International Trade Classification, Revised (S.I.T.C.) which is closely related to the Brussels Tariff Nomenclature used in the new Australian Customs Tariff introduced in July 1965. In accordance with the principles of the S.I.T.C. imports of defence equipment by the Australian Services are normally classified according to the commodity imported, e.g. warships are classified under 'ships and boats'.

Description of commodities

In this bulletin it has been necessary to abbreviate descriptions for some export and import items. For import items generic headings have been used extensively and description of commodities appearing thereunder have been indented appropriately. The extent of such indentation is shown by the number of asterisks (*) which appear before the first line of a description. A full description of any export or import item can be obtained from the Australian Export or Australian Import Commodity Classification.

Commodity index

An index to articles of trade is included at the end of each section of this bulletin. The articles are arranged in alphabetical order and show commodity classification reference numbers.

Pre-federation records

In the years preceeding federation each State recorded its trade independently, and in so doing did not distinguish other Australian States from external countries. The aggregation of the records of the several States is necessarily the only available means of ascertaining the trade of Australia for comparison with later years, but the results obtained may be subject to error, since past records of values and the direction of imports and exports were not on uniform lines. Imports and exports for years prior to federation may be found in issues of the Year Book prior to No. 41. On the introduction of the *Customs Act 1901* the methods of recording values were made uniform throughout the States.

Rounding

Any discrepancies between totals and sums of components are due to rounding.

Abbreviation

N.E.I. means 'not elsewhere included'.

Special periodical return system

A subscription service is available to provide for the particular detailed requirements of individual users of overseas trade statistics. These special periodical returns show trade according to items of the Australian Export and Import Commodity Classifications or statistical key code dissections of Australian Customs Tariff items. These returns are obtainable monthly or quarterly. A charge is made which varies from 10 cents to 75 cents per item per return depending on the amount of detailed required. Tabulation extracts are also available at a fee of 5 cents per item where these are more suitable.

Publications relating to overseas trade

Details of exports and imports are given in the following publications relating to overseas trade.

- Annual Preliminary Bulletin : Overseas Trade, Part I – Exports Preliminary Bulletin :
 Overseas Trade, Part II – Imports
 Overseas Trade
 Australian Exports
 Imports cleared for Home Consumption.
 Trade of Australia with Eastern Countries
- Quarterly Overseas Trade, Major Groups of Countries
- Monthly Overseas Trade, Exports and Imports (Preliminary)
 Exports of Wool
 Imports of Assembled New Passenger Cars
 Imports by Commodity Divisions
 Exports by Commodity Divisions
 Monthly Bulletin of Overseas Trade Statistics –

INDEX TO ARTICLES OF TRADE, 1966-67

Entries in this index are arranged in alphabetical order and listed against each entry is an Australian Import and/or Export Commodity Classification reference number of 3, 5 or 7 digits. Where a reference number relates to both imports and exports, no distinction has been made, but in those cases where a reference relates to an import item only or an export item only, this has been indicated by an (I) or an (E) respectively after the number. Those entries which cover a homogeneous group of statistical items have a statistical reference of 3 or 5 digits. Entries not readily associated with a homogeneous group of items, or which are sufficiently important, have a statistical reference of 7 digits. Consequently any article not specifically mentioned in the index is included under its generic heading, e.g., 'champagne' is not listed but may be located in the classification through the 5 digit reference for 'wine' or the 3 digit reference for 'alcoholic beverages'.

If an article has more than one reference number and the leading digits of each reference number are identical, the leading digits are shown for the first reference number only, e.g., the entry 512.21, 22, 23, 24, 25 means 512.21, 512.22, 512.23, 512.24 and 512.25.
