EXPLANATORY NOTES

Introduction

This publication contains quarterly statistics of Australia's trade with selected major trading partners and groups of countries that are of significance to Australia's international trading pattern. The statistics are classified by Sections (1 digit) and Divisions (2 digits) of the Australian Export and Import Commodity Classifications (1203.0 and 1204.0). Statistics for 1982-83 may be amended as a result of continuing quality checks on foreign trade data. Although these amendments generally have little effect on broad aggregate statistics, they may have a significant effect on individual commodity statistics. For this reason, statistics for 1982-83 should be regarded preliminary and subject to revision.

2. More detailed figures (i.e. at the 5 and 7 digit levels) are available on request.

Source of data

3. These statistics are compiled by the Australian Bureau of Statistics from documentation submitted by exporters and importers, or their agents, to the Australian Customs Service as required by the Customs Act.

Statistical concepts

4. The statistics of exports and imports presented in this publication are recorded on a general trade basis: i.e. total exports include both Australian produce and re-exports, and total imports comprise goods entered directly for home consumption and goods imported into bonded warehouses.

5. Australian produce is defined as goods, materials or articles which have been produced, manufactured or partly manufactured in Australia, except goods which were originally imported and have undergone only repair or minor operations which leave them essentially unchanged.

6. Re-exports are defined as goods, materials or articles originally imported which are exported in the same condition in which they were imported, or after undergoing only repair or minor operations which leave them essentially unchanged. Minor operations include blending, packaging, bottling, cleaning, sorting, husking and shelling.

7. The following are excluded from foreign trade statistics:

- (a) direct transit trade, i.e. goods being trans-shipped or moved through Australia for purposes of transport only;
- (b) migrants' and passengers' effects exported or imported and parcels post exports and imports of small value, for which Customs entries are not required;
- (c) certain materials under inter-governmental agreements for defence and similar projects for which Customs entries are not required;
- (d) vessels and aircraft engaged in the transport of passengers or goods between Australia and other countries;
- (e) the sale and/or purchase of any vessel or aircraft intended for use on overseas routes;
- (f) fish and other sea products landed abroad or in Australia directly from the high seas by Australian vessels;
- (g) export consignments where the value of the goods in each transaction is less than \$250;
- (h) entries lodged on informal clearance documents (ICD) for values not exceeding \$250;

and for imports only:

- (i) bunkers and stores supplied to vessels and aircraft prior to arrival in Australia.

8. Exports ships' and aircraft stores. Prior to July 1982 bunkers and stores supplied to foreign owned vessels and aircraft prior to departure overseas were excluded from export statistics but were published separately as ships' and aircraft stores statistics. The United Nations Statistical Commission has recommended (International Trade Statistics, Concepts and Definitions, United Nations Statistical Papers, Series M, No 52, Revision 1, 1982) that such bunkers and stores be included in total export statistics. Accordingly, commencing with July 1982 statistics, these

commodities have been classified according to the appropriate AECG items. As a result, from July 1982 total export statistics and commodity statistics which include stores for foreign ships and aircraft are not strictly comparable with data for earlier periods.

Statistical period

9. Exports are recorded statistically in the month when the entries are both finalised by the Australian Customs Service and passed to the ABS for further processing. Regular exporters or their agents, may provide details of their export shipments on a periodic rather than an individual shipment basis by submitting weekly or monthly returns. These "periodic returns" must be submitted to the Australian Customs Service within seven days of the end of the period in question covering all shipments during that period. All other exporters are required to report each individual shipment prior to the ship's departure. Approximately 90 per cent of monthly export values are recorded on periodic returns. The statistical month for Customs outports (generally ports other than those at which the main Customs office in each State is located) closes on the 21st of each month, whereas for mainports the statistical month is the calendar month.

10. Because of these factors, export statistics for a particular month do not necessarily represent entries lodged or commodities actually exported during that month. Analysis of past data has shown that in aggregate approximately 40 per cent of export trade by value for a particular month reflects actual shipments during that month, 55 per cent by value was actually exported during the previous month with the remaining 5 per cent by value exported in earlier months. For individual commodities the percentage by value representing actual exports in a month may vary considerably.

11. Imports are recorded statistically in the calendar month in which the import entries are both finalised by the Australian Customs Service and passed to the ABS for further processing. Import entries may be lodged early using the Customs check-to-arrive system or the documents may be delayed because of various validation checks carried out by Customs prior to the entries being passed to the ABS.

12. Imports statistics for a particular month do not necessarily represent entries lodged or commodities actually imported during that month. Analysis of past data has shown that in aggregate approximately 70 per cent of import trade by value for a particular month was actually imported during that month, 25 per cent by value was actually imported during the previous month with the remaining 5 per cent by value imported in earlier months. For individual commodities the percentage by value representing actual imports in a month may vary considerably. Quarterly tables comprise the addition of three separate months' data.

Valuation

13. Exports. Goods actually sold to overseas buyers prior to shipment are valued at the free-on-board (f.o.b.) Australian port of shipment equivalent of the actual price at which the goods were sold. Goods shipped on consignment are valued at the f.o.b. Australian port of shipment equivalent of the current price offering for similar goods of Australian origin in the principal markets of the country to which the goods are dispatched for sale.

14. Imports. The recorded value of imports is the customs value (formerly referred to as the value for duty). On 30 November 1981, Australia changed its system of valuation from the Brussels Definition of Value (BDV) to the GATT Agreement on Customs Valuation. The Agreement reflects one of a number of trade related codes of conduct established during the round of Multi-lateral Trade Negotiations (MTN) concluded in 1979.

15. The GATT Agreement differs from the Brussels Definition of Value in that it offers a set of practical rules on the revaluation of imports rather than a list of conceptual guidelines. Under the Agreement the primary basis for establishing the customs value is the price actually paid or payable, provided a number of conditions are met. The most important condition is that the buyer and seller must be independent of each other. If the conditions are not met the practical rules are used to determine the customs value.

16. The recording of the value of

imports remains on a free-on-board (f.o.b.) basis (i.e. the charges and expenses involved in delivering the goods from the place of exportation to Australia are excluded). The recorded value also continues to include the value of the outside package, other than international containers used for containerised cargo.

17. The change in the basis of valuation is expected to have a negligible effect on value and duty import statistics.

Merchandise exports and imports

18. In accordance with standards recommended by the United Nations Statistical Commission:

Merchandise exports are defined as all goods which subtract from the stock of material resources in Australia as a result of their movement out of the country. Merchandise exports, therefore, exclude goods exported with the reasonable expectation of their re-import within a limited time. A complete list of commodities not included in merchandise trade is shown under Section 9(b) of the AICC. These include, for example, coin being legal tender and goods for temporary exhibition outside Australia;

Merchandise imports are defined as all goods which add to the stock of material resources in Australia as a result of their movement into the country. Merchandise imports, therefore, exclude goods imported with the reasonable expectation of their re-export within a limited time. A complete list of commodities not included in merchandise trade is shown under Section 9(b) of the AICC. These include, for example, coin being legal tender and goods for temporary exhibition in Australia.

Goods excluded from merchandise trade are for convenience termed non-merchandise and non-merchandise trade is shown separately in Table 2. Total trade is the sum of merchandise and non-merchandise trade.

Commodity classification

19. Exports and imports are classified according to the items of the AICC

and AICC respectively, which, from 1 July 1978, have been based on the Standard International Trade Classification, Revision 2 (United Nations, Statistical Papers, Series M, No. 34, Revision 2, 1975). A detailed description of the commodity items included in this publication is contained in the relevant classification. Copies of, or extracts from, these classifications may be obtained from offices of the ABS in Canberra and in each capital city.

Country and country group

20. For the purposes of foreign trade statistics, a country is defined as a geographical entity which trades, or has the potential to trade, with Australia in accordance with Australian Customs provisions. External territories under Australian administration are treated separately whilst self-governing territories and dependent territories under the administration of other countries may be treated as individual countries in Australian foreign trade statistics.

21. For exports, country refers to the country to which the goods were consigned at the time of export. Where the country of consignment is not determined at the time of export, goods are recorded as exported "For Orders" and in those cases where it was found to be impossible to determine the destination, as "Destination Unknown".

22. For imports, country refers to the country of origin of the goods, which is defined as the country of production for Customs purposes.

Country group

23. The country groups shown in Tables 1 and 2 are selected economic groups with which Australia trades. Country groups may not be mutually exclusive e.g. Indonesia is included in OPEC, ASEAN and as a Developing Country.

24. Component countries of some of the groups included in this publication will change from time to time. Because of this, it has been necessary to adopt rules for including countries in a particular country group. For the historical data included in Table 1 of this publication, the countries included in each group are those that were members on the last day of the latest quarter. For example, should a country cease to be

specified as a Developing Country during the first week of the latest quarter, then its trade with Australia will not be included in the Developing Country group for either that quarter or for any previous period. Trade figures for the Developing Country group (see footnote (a), page 8) represent the total trade with those countries although some commodities imported from those countries into Australia will not have been given Developing Country status. For example, certain types of mittens from Hong Kong are not granted Developing Country status and, therefore, do not attract a preferential rate of duty on importation. However, imports of mittens from Hong Kong, together with all other imports from that country are included in the Developing Country group statistics in this publication.

25. The country groups included in this publication are;

Association of South-East Asian Nations (ASEAN)
Centrally Planned Economies
Developing Countries
European Economic Community (EEC)
European Free Trade Association (EFTA)
Organisation of the Petroleum Exporting Countries (OPEC)

A list of the countries included in each of the above groups is shown on pages 7 and 8. The selected countries included in this publication are China-excluding Taiwan Province, Japan, New Zealand, United Kingdom and the United States of America.

Excess of exports over imports

26. The statistics shown refer to the total value of exports and imports recorded during the period specified. The excess of the value of exports over imports in Table 1 represents the balance of trade on a recorded trade basis. This is not the same as the balance of trade on a balance of payments basis. Statistics on a balance of payments basis are a more comprehensive measure of Australia's international transactions, and therefore, more appropriate for use in economic analysis. Details of the adjustments made to recorded trade data to derive estimates of foreign trade on a balance of payments basis are set out in the annual ABS publication Balance of Payments, Australia (5303.0).

Total exports and imports

27. It should be noted that the export and import figures designated

total are the total trade for Australia and not the sum of the trade with the particular countries and country groups specified in the publication.

Treatment of confidential data

28. To ensure that information about the activities of particular businesses is not disclosed it is necessary to restrict the release of statistics of certain commodities. These restrictions do not affect total export and import figures but they can affect statistics at all levels of the AEC and AICC.

29. The implementation of a new foreign trade processing system has resulted in a revised treatment of confidential data. Consequently certain statistics in publications first containing March 1982 data are not directly comparable with statistics in previous publications.

30. Reference to table footnotes should assist in the interpretation of these differences.

Revision of statistics

31. Statistics shown in this publication were the latest available at the time of compilation. However, revisions may have since been made to the statistics, which could result in differences between figures in this publication and those in other related publications e.g. Exports by Commodity Divisions, Australia (Preliminary) (5402.0), and Imports by Commodity Divisions, Australia (Preliminary) (5403.0)

OTHER INFORMATION AVAILABLE

32. Special returns service: Subscribers to this service can receive computer produced printout of foreign trade statistics at a particular commodity level in one or more of a limited number of formats, for a charge consistent with the level of detail required. This service is recommended where up to fifty specific commodity items are required on a regular basis.

33. Microfiche service: Foreign trade statistics are available on microfiche in a variety of tabular formats. Each tabular format covers all commodities exported or imported at various levels of aggregation. This service is recommended where the subscriber wishes to obtain foreign trade details for a

large number of commodities.

34. Magnetic tape: Statistics for imports, exports and import clearances are available on 9-track magnetic tape approximately 4 weeks after the end of the reference period. Documentation regarding the content and structure of these tapes is available from the ABS Trade and Shipping Section in Canberra.

35. To meet subscribers' needs special returns and microfiche are available on a monthly, quarterly or less frequent basis. Relevant application forms and information papers for these services are available from the ABS Trade and Shipping Section in Canberra or any ABS State office. Payment in advance is required for each of these services.
