COMMONWEALTH BUREAU OF CENSUS AND STATISTICS

CANBERRA, AUSTRALIA

MONTHLY BULLETIN OF PRODUCTION STATISTICS

NO. 264 SEPTEMBER 1970

EXPLANATORY NOTES

This bulletin contains statistics of production in Australia of mines and factory products. Production statistics for the Australian Capital Territory and the Northern Territory have been included from July 1968. An alphabetical index of these products is given on pages 2, 3, 4 and 5.

2. The following details are shown for each product :

- (a) Annual totals for the latest three complete financial years;
- (b) Monthly details for each of the latest fourteen months;
- (c) Cumulative totals from July 1970 to date;
- (d) Cumulative totals for the corresponding period twelve months earlier.

3. The figures for the year 1967-68 are mostly derived from Annual Factory Census returns collected by the Deputy Commonwealth Statistician in each State. In a small number of cases returns are accepted from factories for a year other than the normal financial year ending on 30 June.

4. The monthly figures are also based for the most part on returns collected by the Deputy Commonwealth Statisticians. Where another authority is the source, this is shown in a footnote. Monthly figures from July 1968 onwards may be revised when the results of the Annual Factory Census for 1968-69 and 1969-70 become available.

5. For the purpose of factory statistic collections, a factory is taken to be a manufacturing establishment in which four or more persons are employed or in which power other than manual is used. Any production in small establishments not classified as factories is not included in the figures shown.

6. Further details in respect of many of the items will be found on an annual basis in Principal Factory Products and in the series of Manufacturing Industries Bulletins published by this Bureau, and on a monthly basis, in the Monthly Production Summaries, also issued by this Bureau.

7. The bulletin contains seasonally adjusted statistics of several items. In the seasonal adjustment, account has been taken not only of normal seasonal factors but also of "trading-day" effects (arising from the varying numbers of Sundays, Mondays, Tuesdays, etc. in the month) and the influence of Easter and Australia Day which may, in successive years, affect figures for different months. Details of the methods used in seasonally adjusting these and other series are given in "Seasonally Adjusted Indicators 1970" (Reference No. 1.10) issued on 29 June 1970.

8. Most items are identified by Commodity Codes which are derived from the Commodity Classification used in Australian Factory Statistics. In some cases where data is derived from sources other than Factory Collections, no Commodity Code is shown.

9. Any discrepancies between totals and sums of components in tables are due to rounding.

The following symbols are used in this bulletin:

n.a.	Not available
r	Figures or series revised since previous issue.
..	Nil or less than half of the final digit shown.
_____	Break in continuity of series (where drawn across a column).
	A blank space in a column of figures means that the figure concerned is not yet available.
