COMMONWEALTH BUREAU OF CENSUS AND STATISTICS

CANBERRA, AUSTRALIA

MONTHLY BULLETIN OF PRODUCTION STATISTICS

NO. 211 - DECEMBER 1967

EXPLANATORY NOTES

This bulletin contains statistics of production in Australia of mine and factory products. An alphabetical index of these products is given on pages 2,3 and 4.

2. The following details are shown for each product:

- (a) Annual totals for the last three complete financial years;
- (b) Totals for the most recent six-monthly and three-monthly periods;
- (c) Totals for the corresponding periods, twelve months earlier; and
- (d) Monthly details for each of the latest thirteen months, where available.

3. The figures for the years 1964-65 and 1965-66 are mostly derived from Annual Factory Census returns collected by the Deputy Commonwealth Statistician in each State. In a small number of cases returns are accepted from factories for a year other than the normal financial year ending on 30 June.

4. The monthly figures are also based for the most part on returns collected by the Deputy Commonwealth Statisticians. Where another authority is the source, this is shown in a footnote. Monthly figures from July 1966 onwards may be revised when the results of the Annual Factory Census for 1966-67 become available.

5. For the purpose of factory statistics collections, a factory is taken to be a manufacturing establishment in which four or more persons are employed or in which power other than manual is used. Any production in small establishments not classified as factories is not included in the figures shown.

6. Further detail in respect of many of the items will be found on an annual basis in Principal Factory Products and in the series of Manufacturing Industries Bulletins published by this Bureau, and on a monthly basis, in the Monthly Production Summaries, also issued by this Bureau.

7. This bulletin contains data of monthly output of over 350 products. The items for which quantity of output is published are not, however, selected as representative of all factory output, and the tables should be read only as showing monthly trends in output of the individual items or groups of items listed.

8. The bulletin contains seasonally adjusted statistics of several items. In the seasonal adjustment, account has been taken not only of normal seasonal factors but also of "trading-day" effects (arising from the varying numbers of Sundays, Mondays, Tuesdays, etc. in the month) and the influence of Easter and Australia Day which may, in successive years, affect figures for different months. Details of the methods used in seasonally adjusting these and other series are given in "Seasonally Adjusted Indicators 1967" issued on 18 July 1967.

9. Work is continuing, as resources permit in connection with the development of current indexes (monthly and quarterly) of factory production.

EXPLANATORY NOTES - continued

10. Most items are identified by Commodity Codes which are derived from the Commodity Classification used in Australian Factory Statistics. In some cases where data is derived from sources other than Factory Collections, no Commodity Code is shown.

11. Any discrepancies between totals and sums of components in tables are due to rounding.

The following symbols are used in this bulletin:

n.a.	Not available
r	Figures or series revised since previous issue.
..	Nil or less than half of the final digit shown.
_____	Break in continuity of series (where drawn across a column).
	A blank space in a column of figures means that the figure concerned is not yet available.
