MAIN FEATURES

March 1982—

An overall surplus of \$426 million as measured by net official monetary movements, an increase of \$386 million on the surplus for February.

A trade deficit of \$438 million compared with a deficit of \$280 million the previous month.

Exports of \$1,675 million, up \$75 million on the previous month. Seasonally adjusted, exports were virtually unchanged.

Record monthly imports of \$2,113 million, up \$233 million on February. Seasonally adjusted, imports increased by 3 percent.

A current account deficit of \$976 million, \$296 million larger than the deficit in February.

A government capital outflow of \$69 million, which includes the repayment of a \$US 350 million (\$A 335 million) borrowing partly offset by Swiss Franc 600 million (\$A 299 million) borrowings.

A record monthly net apparent capital inflow of \$1,401 million, substantially higher than the estimated inflow of \$721 million in February.

Nine months ended March 1982—

An overall deficit of \$1,248 million in contrast with the surplus of \$290 million for the same period the previous financial year.

A trade deficit of \$2,629 million, compared with a deficit of \$293 million for the nine months ended March 1981.

Exports of \$13,883 million, virtually unchanged from the same period the previous financial year. Falls in the exports of wheat (down 15 per cent) and sugar (down 30 per cent) were partially offset by a rise in coal exports (up 30 per cent).

Imports of \$16,513 million, up 16 percent on the nine months ended March 1981.

A current account deficit of \$6,666 million, \$2,931 million larger than for the corresponding period last financial year.

A net apparent capital inflow of \$5,418 million, up \$1,393 million on the corresponding nine months of 1980-81. Of this increase, government capital accounted for \$247 million and the borrowings of public non-monetary enterprises \$199 million.

EXPLANATORY NOTES

Introduction

This issue contains, in Table 1, preliminary estimates of Australia's international balance of payments for the month of March 1982 together with revised estimates for previous months and financial years. Supplementary information is contained in Table 2. The estimates should be examined in conjunction with the series contained in the quarterly and annual balance of payments publications (5302.0 and 5303.0, respectively). Reference should be made to the publication *Balance of Payments, Australia: Concepts, Sources and Methods* (5331.0) released on 19 March 1981 for information about balance of payments concepts and definitions. Changes to concepts, sources and methods since that publication are described in the 1979-80 issue of 5303.0 and in the December quarter 1981 issue of 5302.0.

2. Care should be exercised in interpreting monthly movements in the balance of payments, especially those of the most recent months. The sources available for the production of timely and reliable monthly estimates are limited. Consequently, estimates in this publication, to a greater degree than estimates in the quarterly and annual balance of payments publications, are subject to revision as more complete and more accurate information becomes available.

Exports f.o.b. and imports f.o.b.

3. The figures for exports free-on-board (f.o.b.) and imports f.o.b. in Table 1 represent recorded trade figures adjusted in respect of coverage, timing and valuation for balance of payments purposes. Seasonally adjusted estimates for exports f.o.b. and imports f.o.b. are shown in Table 2.

Balance of trade

4. This is exports f.o.b. less imports f.o.b.

Net invisibles

5. Net invisibles comprises the net sum of credit and debit entries for transactions in services, income and unrequited transfers. Items included are transportation services, travel, government services, miscellaneous services, property income and unrequited transfers such as foreign aid, gifts and donations.

Private capital and balancing item

6. This aggregate covers private capital movements (i.e. foreign investment in Australian enterprises, Australian investment abroad, trade credit n.e.i.), non-official monetary sector transactions and the balancing item (i.e. net errors and omissions). Within this aggregate, separate details are shown for public non-monetary enterprise borrowings, the trade credit of marketing authorities and other (which includes the balancing item).

Net official monetary movements

7. The aggregate net official monetary movements, the main component of which is changes in official reserve assets, is usually taken as a measure of the overall surplus or deficit in the balance of payments. This aggregate excludes changes that do not arise from international economic transactions.

Official reserve assets and exchange rates

8. Table 2 shows changes in official reserve assets which are included in the balance of payments, together with the adjustments made to the original Reserve Bank statistics to exclude changes in the Australian dollar value of reserve assets that are the result of revaluations. The table also shows changes in the value of the Australian dollar against specified foreign currencies.

Residual items

9. Due to lack of monthly data certain aggregates in Table 1 are derived as residuals after having first calculated those aggregates for which monthly information can be obtained or estimated. The aggregates which are derived as residuals are net apparent capital inflow, which is calculated by subtracting the balance on current account from net official monetary movements, and private capital and balancing item, which is derived by subtracting government capital from net apparent capital inflow.

Seasonal adjustment

10. In carrying out seasonal adjustment of exports f.o.b. and imports f.o.b. account is taken not only of seasonal factors, but also of 'trading-day' effects (arising from the varying numbers of Sundays, Mondays, etc. in the month) which may affect figures for different months in different years. Details of the methods used in the seasonal adjustment of these series are given in *Seasonally Adjusted Indicators, Australia* (1308.0). The statistics are also subject to large irregular influences which are not removed by seasonal adjustment and may be affected by changes in the composition of exports and imports. For these reasons, particular care should be exercised in interpreting individual month-to-month movements.

Presentation

11. In Table 1, minus sign (-) denotes: a debit for aggregates in the current account; an outflow for components of capital inflow (net); and for monetary movements, a decrease in assets or an increase in liabilities.

Available longer-term series

12. Users requiring monthly series for months earlier than those shown in this publication should contact Mr John Lazanis on Canberra (062) 52 5507. Series consistent with Table 1 and for exports f.o.b. and imports f.o.b., seasonally adjusted, are available from July 1971 onwards.

Related publications

13. Current publications produced by the ABS are listed in the *Catalogue of Publications, Australia* (1101.0). The ABS also issues, on Tuesdays and Fridays, a *Publications Advice* (1105.0) which lists publications to be released in the next few days. The Catalogue and Publications Advice are available from any ABS office.

Symbols and other usages

- .. not applicable
- nil or rounded to zero

14. Where figures have been rounded, discrepancies may occur between sums of the component items and totals.

(a) The rates quoted are mid-points of the buying and selling rates for the last trading day of the month obtained from the Commonwealth Trading Bank. (b) The trade-weighted index is published by the Reserve Bank and is an index of the average value of the Australian dollar vis-à-vis currencies of Australia's major trading partners.
