ACKNOWLEDGEMENT OF ASSISTANCE

All manuscripts based in whole or in part on these data should:

- (i) identify the data and original investigators by including the bibliographic reference for the data file given on the reverse of the title page;
- (ii) acknowledge the Social Science Data Archives and, where the data are made available through the Social Science Data Archives by another archive, acknowledge that archive;
- (iii) declare that those who carried out the original analysis and collection of the data bear no responsibility for the further analysis or interpretation of them.

In order to assemble essential information about the use of archival resources and to facilitate the exchange of information about users' research activities, individuals are requested to deposit two copies of each completed manuscript, thesis abstract, or reprint to the Social Science Data Archives.

ANALYSIS CONDITIONS

Research Topic (Abstract)

Topics in this survey include: opinion of USSR and US; respondents reading on 1983 nuclear arms control negotiation in Geneva; willingness of US and USSR to reach agreement on nuclear weapons reduction; amount of attention respondent pays to defence and security issues; ANZUS; support for variety of forms of defence co-operation; Australia's co-operation in ANZUS extend to Western Pacific and Indian Oceans; US or Australia benefits gained by Australia from ANZUS; ANZUS and risk of attack of Australia; trust in US to come to Australia's defence; visits by US warships carrying nuclear weapons; reasons for support/oppose visits by US warships; South Pacific Nuclear Free Zone; support for South Pacific Nuclear Free Zone; activities that could be prohibited in South Pacific Nuclear Free Zone; possibility of enforcing South Pacific Nuclear Free Zone. Standard variables include Federal voting intention, household size, age, marital status, schooling, occupation of respondent or of main income earner, household income, country of birth, industry sector, religion, tenure of dwelling, sex, area.

This study is part of a series (SSDA No's 525 to 532) commissioned by the United States Information Service between 1982 and 1985 on Australians' attitudes to defence issues. Similar studies were carried out in New Zealand at the same time (SSDA No's 521 to 524) which contain some parallel questions.

Kind of Data

survey

Time Dimensions

cross-sectional (one-time) study

Definition of Total Universe

persons aged 14 and over throughout Australia

Sampling Procedures

area-cluster sample with sex quota

The survey was conducted by the Roy Morgan Research Centre Pty Ltd.

The sample was designed to produce a representative cross-section sample of Australian adults. Using the entire Australian electoral roll as the sampling frame, 110 dwellings were selected at random. Interviewers were then instructed to commence interviewing at the dwelling adjacent to, and at the right of, the random start (i.e. one of the 110 dwellings randomly selected) and to interview one individual there and, moving in a clockwise fashion around the block, in each adjacent dwelling until a cluster of 10 individuals was interviewed.

Dates of Data Collection

date of data collection: October 1983

Method of Data Collection

personal interview

Data Gathering staff

Morgan Gallup Poll interviewers

All interviewers are carefully briefed and required to conduct a practice interview.

Weighting

Weighting criteria

The results are weighted by dividing Australia into a number of geographic areas and estimating the number of men and women, in various age groups, living in those areas. This produces about 310 "cells" containing some thousands of men and women of different age groups. The corresponding interviews in each "cell" are then multiplied to represent the correct number of people in each cell.

Weighting procedures

The weight is an integer value and is included in the data file.

DIMENSIONS OF DATA SET

number of cases: 1117
number of variables per case: 168
number of cards per case: 3

ACCESSIBILITY

Codebook

The Australian National University
Canberra 2600

- [10] The absolute frequency of occurrence of each code value in the data file.
- [11] The relative frequency (percentage) of occurrence of each code value in the data file.
- [12] The code values occurring in the data for this variable.
- [13] The textual definitions of the codes, or value labels.

Note 1

The variable name, variable label, value labels and missing values are reproduced in the SPSS-X set-up file which is distributed with the data file.

Note 2

Items [10], [11], [12] and [13] above may not be provided for all variables, for example, where there are variables with unlabelled values, or where the number of values for a given variable is too large to incorporate comfortably into the codebook. Frequencies and codes for these variables appear in a frequencies addendum.
