EVENING PAPERS : TUESDAY, 7TH AUGUST, 1951.

MORNING PAPERS : WEDNESDAY, 8TH AUGUST, 1951.

MONTHLY INDEX OF AUSTRALIAN EXPORT PRICES - JUNE, 1951.

1. Two series of index-numbers are provided herein - one on fixed weights, the other on changing weights. Each takes account of 20 items, which normally constituted about 80 per cent. of the total value of exports of merchandise and silver together with gold production.

2. All export parities are calculated from price quotations from the most reliable and representative sources available. In most cases the prices used are those at which current sales are being effected. For some metals, however, the prices are the average value of current realizations in various markets and hence show some irregularity. From July, 1945 the export prices used for wheat in the index are average actual realizations for current shipments.

I. THE SIMPLE AGGREGATIVE INDEX : FIXED WEIGHTS

3. The "quantity multipliers" used for this series for the period 1928-36 were the average annual exports (or production, in the case of gold) during the five years 1928-29 to 1932-33. Since July, 1936, these multipliers have been re-calculated on the basis of average annual exports (production, in the case of gold) during the three years 1933-34 to 1935-36.

4. Indexes are also given for individual commodities and certain groups thereof. The percentage distribution of these groups in the aggregates of the "All Groups" indexes for the base period (1936-37 to 1938-39) is shown at the head of the table and represents the proportional contribution of each to the "All Groups" indexes for all periods from 1936-37. Thus, the equivalence in "points" of any percentage variation in the "group", etc., indexes, when multiplied by the percentage at the head of its column will give the number of "points" by which the "All Groups" index would be varied. Those of line (e) are applicable to the "All Groups (inclusive of Gold)" and of line (f) to the "All Groups (exclusive of Gold)" indexes.

RECENT TRENDS - EXPORT PRICE INDEX - WOOL AND "OTHER GROUPS"

5. Reference to the group indexes in the table on page 2 hereof will show the great increases and the wide dispersion of prices of export commodities in recent years. In particular, very great movements upwards and downwards occurred in the price of wool during the twelve months ended June, 1951. Similar, but less marked, movements have occurred in prices of metals and hides. Since wool is a predominant export (with 46 per cent. of the Base Aggregate of the index) fluctuations in wool prices obscure the movements affecting the other components in the All Groups index. For purposes of comparison they are shown separately below:-

(Base of each Section - Average of 3 years ended June, 1939 = 100)

Year ended June -	Wool	Other Groups	All Groups	Month-	Wool	Other Groups	All Groups
1946	117	171	146	1950 - July	(a) 592	333	451
1947	173	228	203	August	864	340	579
1948	287	280	283	September	890	355	599
1949	365	305	332	October	890	360	602
1950	473	308	383	November	965	366	639
1951(a)	999	366	654	December	973	366	643
				1951 - January	1,252	368	771
(a) Nominal				February	1,339	369	811
				March	1,437	377	860
(b) Subject to revision				April (b)	1,094	384	708
				May (b)	973	385	653
				June (b)	717	384	536

Taken together, in base year proportions, prices of exports other than wool have shown relatively little rise (about 26 per cent.) since 1948-49. The comparative steadiness of the weighted average index of prices of these "Other Groups" contrasts with the pronounced fluctuations in prices of wool.

EXPORT PRICE INDEX

INDIVIDUAL COMMODITIES, GROUPS AND ALL GROUPS COMBINED

(Base of each Section - Average of 3 years ended June, 1939 = 100)

Period	Wool	Wheat	Butter	Metals (a)	Meats (b)	Sugar	Dried Fruits (c)	Tallow	Hides (d)	Gold	All Groups

II. THE MONTH-TO-MONTH INDEX : CHANGING WEIGHTS

6. Australian export products are not marketed regularly throughout the year. Wool and wheat are obvious examples of commodities which are marketed in relatively large quantities at certain periods of the year. In consequence, while the "fixed weights" index indicates satisfactorily the trend of the market, it does not, by itself, give an adequate indication of the significance of price movements as they actually affected current sales. This is shown much more clearly by the "changing weights" index given in the table below.

7. This index is designed to compare prices in any one month (or period of a trade year) with those in the corresponding month (or period) of the previous year. The weights used in its construction are the quantities exported in these two corresponding months (or periods). A full description of the method of computation can be found on page 434 of the Official Year Book of the Commonwealth No. 35, 1942 and 1943. A summary of movements in this index follows. Column A shows the movements in the index for groups other than wool and column B the movements in the index for all groups including wool.

(Base : Weighted Average Price Level in corresponding months (or periods) of preceding year = 100)

Month	Month Stated compared with same month of preceding year		Period of trade year ending in month stated, compared with same period of preceding year
