ABS PUBLICATIONS

All publications produced by the ABS are listed in the *Catalogue of Publications* (1101.0) which is available free of charge from any ABS office.

Publications dealing with individual States are produced by the Deputy Commonwealth Statistician in each State.

SYMBOLS AND USAGES

The following symbols, where shown in columns of figures or elsewhere in tables mean

- n.a. not available
- n.y.a. not yet available
- .. not applicable
- n.p. not available for separate publication (but included in totals where applicable)
- p preliminary – figure or series subject to revision.
- r figures or series revised since previous issue.
- nil or less than half the final digit shown
- break in continuity of series (where drawn across a column between two consecutive figures).

Yearly periods shown as, e.g., 1976, refer to the year ended 31 December 1976, those shown as, e.g., 1976-77, refer to the year ended 30 June 1977.

Values are shown in Australian dollars (\$) or cents (c).

Where figures have been rounded, discrepancies may occur between sums of the component items and totals.

SEASONALLY ADJUSTED INDICATORS

In the Contents page numbers of series containing seasonally adjusted indicators are marked with asterisks.

Measures of variability and details of the methods used in seasonally adjusting Bureau statistics are given in Appendixes D and E, respectively, of *Seasonally Adjusted Indicators* (1308.0). This annual publication also contains historical original and seasonally adjusted data in tabular and graphical form of a selection of the statistics appearing in the Bureau's monthly and quarterly publications.

As well as being adjusted for normal seasonal factors, some of the statistical series included in the *Monthly Review of Business Statistics* have been adjusted for the effects of calendar variations, namely: 'trading-day' effects (arising from the varying numbers of Sundays, Mondays, Tuesdays, etc. in a month) and the influence of movable holidays, e.g. Easter and Australia Day.

Most of the original and all of the seasonally adjusted series are subject to revision.

(a) Excess of births registered over deaths registered. (b) Excess of recorded overseas arrivals over recorded overseas departures, excluding short term (less than one year) movement. Minus sign (-) denotes an excess of departures over arrivals. (c) Increase consists of natural increase, net migration and adjustment in the light of Census results. (d) Census result adjusted for underenumeration.

NOTE: Population estimates shown above for dates prior to 30 June 1976 incorporate revisions following the completion of an examination of evidence for underenumeration in the 1971 and 1976 Censuses. An explanation of the basis for these revised estimates is given in *Population and Vital Statistics* (3212.0) for the June quarter 1977.

OVERSEAS ARRIVALS AND DEPARTURES

Permanent movement - those arrivals with the stated intention of settling permanently in Australia and Australian residents departing with the stated intention of leaving permanently abroad.

Long-term movement - number of visitors in long-term departure (1 resident with the stated intention of staying in Australia or abroad respectively for two weeks or more, or more, and the departure of visitors and relatives of Australian residents who have stayed in Australia or abroad respectively for two weeks or more).

Short-term movement - all other overseas arrivals and departures.

The statistics exclude crew members, train passengers passing through Australia who are not cleared for entry and passengers on short passenger services, mail-carrying and freight ships in Australia on ships not then engaged in regular voyages.

(a) The estimates are based on benchmarks derived from the results of the 1971 population census and other relevant sources. For the period subsequent to the census the employment data are obtained from three main sources, namely (i) current payroll tax returns, (ii) current returns from Government bodies, and (iii) some other current returns of employment (e.g. for hospitals); the balance, i.e. unrecorded private employment, is estimated. Month-to-month changes shown by current returns are linked with the benchmark data to derive the monthly estimates. At June 1971 recorded employment obtained from the foregoing sources accounted for about 90 per cent of the total number of employees in the industries covered as determined by the census. The estimates shown are based on the Australian Standard Industrial Classification. For further details on this series see *Employment and Unemployment* (6213.0) published monthly. (b) For details of the methods used see *Seasonally Adjusted Indicators*, 1978 (1308.0). (c) Affected by industrial disputes.

The estimates shown above are being revised as it has become apparent that the benchmarks used for the series, which have been obtained mainly from population censuses, are substantially understated. In the meantime the series provides a reasonable indication of current month-to-month movements. For more detail see *Civilian Employees* (6211.0).

(a) Vacancies notified in the C.E.S. which were still unfilled at the Friday nearest the end of the month and which employers claimed could be filled if labour were supplied immediately or within the following month. Vacancies for full time, part time, permanent, temporary and seasonal positions are included. (b) For details of the methods used see *Seasonally Adjusted Indicators 1978* (1908.0). (c) Juniors comprise all persons under 21 years of age, including school-leavers.

NOTE: Sample surveys were conducted by the Australian Bureau of Statistics in March each year from 1974 to 1978 to obtain information on the level and composition of job vacancies. To reduce to a minimum the delay in collection of data and publication of the results a quarterly telephone survey in respect of vacancies was commenced in May 1977. These surveys were conducted in May, August and November 1977 and in February and May 1978. As part of the measures necessary to bring the activities of the ABS within the resources available to it, the surveys of job vacancies were then terminated. For a number of reasons the estimates obtained from these surveys differ substantially from the numbers of vacancies registered with the C.E.S. at those dates. For example, the survey estimate of total vacancies at May 1978 was 32,200 while the C.E.S. figure was 17,904. Results of the surveys and reasons why the survey estimates differ from C.E.S. statistics were published in *Job Vacancies, May 1978* (6231.0).

INTERNAL TRADE

VALUE OF RETAIL SALES (a) (\$ million)

Retail sales figures in the table below relate principally to sales to the final consumer of new and used goods for personal and household purposes. The series covers retail sales by all establishments included in the Australian Standard Industrial Classification subdivision 48 except motor establishments, bread and milk vendors, footwear repairers and household electrical appliance repairers. The following establishments are also included: cafes and restaurants, licensed hotels, motels and wine saloons, licensed clubs and hairdressers. The estimates are obtained from a survey based on the 1973-74 Census of Retail Establishments. For further explanation see *Retail Sales of Goods* (8503.0) June quarter 1978.

(a) Estimates of Exports and Imports of merchandise at average 1974-75 prices were presented for the first time in Catalogue No. 5421.0 of 11 August 1978. These estimates replace the previously published series based on average 1966-67 prices. (b) Prior to September quarter 1976, the recorded value of imports was the higher of actual selling price or current domestic value (in the country of export). Since then a system of valuation based on the Brussels Definition of Value has been used. It has been estimated that if the previous basis of valuation had continued, the current price values of total imports would have been about 2% higher than the recorded values on the new basis. The estimates at average 1966-67 prices would be affected to a much lesser degree.

PRICES AND WAGES

CONSUMER PRICE INDEX

The Consumer Price Index has been compiled for periods from September quarter 1948. The composition of groups and the group structure of the index has been altered with the introduction of the ninth Consumer Price Index series as from September quarter 1976. A description of the index is contained in the booklet "A guide to Consumer Price Index".

EXPORT PRICE INDEX NUMBERS (Base : Year 1959=100)

Figures since June 1967 have been compiled on a basis which incorporates a re-weighting (on a 1969-70 basis) of the items contained in the previous series and the inclusion of some additional items.

(a) Comprises coal, iron and steel, copper, zinc, lead and silver. Does not include iron ore, bauxite, alumina and mineral sands, which however has been included in the "All groups" index from July 1969 on. (b) As from 1969-70 "All groups" includes the following items, in addition to the specified groups: iron ore, bauxite, alumina and mineral sands. (c) Nominal.

CONSUMER (RETAIL) PRICE INDEXES, VARIOUS COUNTRIES

(Base of each index: Year 1970 = 100.0)

(Source: Monthly Bulletin of Statistics of the Statistical Office of the United Nations)

The index numbers show fluctuations in prices in each country and do not measure relative price levels as between countries.

The items priced and the levels at which they are priced in these indexes vary widely according to the intended purposes of the indexes of the various countries. A short dash on each side of an index number (e.g. -107.6-) indicates that the two series have been linked at that period.

(a) For a full weeks work (excluding overtime), as prescribed in awards, determinations and collective agreements. The wage rates for adult males exclude rural industry. The wage rates for adult females exclude rural industry; mining and quarrying and building and construction. Rates shown should not be regarded as actual current averages, but as indexes expressed in money terms indicative of trends. They do not measure the relative level of minimum wages as between States. Figures for the last twelve months are subject to revision. (b) The hours for adult males exclude rural industry; and shipping and stevedoring. The hours for adult females exclude rural industry; mining and quarrying; and building and construction.

NOTE: For further information regarding these statistics reference should be made to the monthly bulletin *Wage Rates* (6312.0).

AVERAGE WEEKLY EARNINGS PER EMPLOYED MALE UNIT (a)

Original Series. Estimates of average weekly earnings are made each quarter in respect of both full-time and part-time civilian wage and salary earners in all industries combined. The earnings figures used in the calculation of the averages comprise award and over-award wages and salaries, the earnings of employees not covered by awards, overtime earnings, etc., and includes payments made retrospectively or in advance during the quarter. Particulars of employment and wages and salaries are derived from payroll tax returns and from direct returns from government and other bodies. For a more detailed explanation of the methods used, see *Average Weekly Earnings* (6302.0).

Seasonally adjusted series. Quarterly estimates are affected by seasonal influences. For example special payments, including prepayments for holiday periods tend to raise the December quarter and to depress the March quarter averages. In addition, figures for all quarters are affected by the varying incidence of pay-days in successive quarters. Allowance for the varying incidence of pay-days and for seasonal factors has been made in calculating the seasonally adjusted estimates. It should also be noted that seasonal adjustment factors were estimated from a series adjusted to allow for the effects of major awards and determinations of Federal and State industrial authorities. The effects of these awards and determinations are retained in the seasonally adjusted data. A detailed description of the methods of seasonal adjustment is given in *Seasonally Adjusted Indicators* (1308.0).

(a) Particulars of wages and salaries paid are not available for males and females separately; estimates have therefore been calculated in terms of male units, i.e. total male employees plus a proportion of female employees, the proportion being derived from the estimated ratio of female to male average earnings in each State. The ratio used in the current quarter for Australia is approximately 67 per cent. For further details on the separate State ratios see *Average Weekly Earnings* (6302.0). (b) Original series estimates have been calculated on a basis which excludes the effects of varying numbers of Australian Government pay-days in each quarter.

NEW CAPITAL EXPENDITURE BY PRIVATE ENTERPRISES, SELECTED INDUSTRIES AND TYPE OF ASSET (\$ million)

These statistics are designed primarily to measure trends in expenditure by private enterprises, on new fixed tangible assets. The statistics in this table differ somewhat from the item *Gross fixed capital expenditure* in the table on page 36 of this publication as a result of the different methods of compilation of the two sets of statistics.

(a) Fabricated metal products, other industrial machinery and equipment and household appliances. (b) Wood, wood products and furniture (except sheet metal), glass, clay and other non-metallic mineral products, leather, rubber and plastic products and other manufacturing, n.e.c. (c) Finance, insurance, real estate, business services, communication, entertainment, recreation, restaurants, hotels and personal services. (d) Excludes enterprises coded to retail activity, community services and construction. (e) Includes houses, flats and home units, water and sewerage installations, lifts, heating, ventilating and similar equipment forming an integral part of buildings and structures, land and construction site development, roads, bridges, wharves, harbours, railway lines, pipelines, power and telephone lines. Also included is the value of expenditure on mine development (e.g. construction of shafts in underground mines, preparation of mining and quarrying sites for open-cut extraction, other developmental operations undertaken primarily for commencing or extending production). (f) Includes plant, machinery, vehicles, electrical apparatus, office equipment, furniture, fixtures and fittings not forming an integral part of buildings, durable containers, special tooling, etc.; also includes goods imported from overseas whether previously used outside Australia or not.

INCREASE IN BOOK VALUE OF STOCKS HELD BY PRIVATE ENTERPRISES (\$ million)

These statistics are designed primarily to measure trends in investment in stocks by private enterprises. The statistics in this table differ somewhat from the item *Increase in stocks* in the table on page 36 as a result of the different methods of compilation of these two sets of statistics.

(a) Includes electricity and gas, restaurants, hotels and clubs. (b) Informants are asked to report the book value of their stocks at the end of each quarter according to their normal principles of valuing stocks for balance sheet purposes. Increases in the book value of stocks between the beginning and end of a quarter will partly reflect changes in the physical quantities of all component items and partly changes in prices at which stocks are valued. A stock valuation adjustment is deducted from the increase in book value of stocks to arrive at the increase in stocks valued at the average price of the quarter.

(a) Quantities shown are metallic contents of mine products based on chemical assay. (b) Western Australian and Northern Territory gold production figures (in respect of major producers) normally relate to a four-week period ending in the calendar month indicated. However, two such periods ended in the calendar month of March 1978 for Western Australia and August 1978 for the Northern Territory.

(a) Up to 30 June 1974, SDR and IMF gold tranche are valued on the basis of Australia's official parity established with the IMF; subsequent figures are based on the IMF basket valuation for the SDR, which is published in terms of U.S. dollars, crossed with the representative rate for the Australian dollar in terms of the U.S. dollar. Gold is valued at the Reserve Bank buying price up to the end of January 1976; from February 1976 to end May 1976 gold is valued at the IMF official price in SDR converted to Australian dollars at the derived SDR/\$A rate; subsequently, the basis of valuation is the average London gold price for the month, converted to Australian dollars at the market rate of exchange applying on the last day of the month. Since June 1973, the foreign currency value of all other overseas assets has been based, where applicable, on market quotations; accrued interest is normally taken into account; figures for earlier periods are on a historical cost basis. Conversion to Australian dollar equivalent is based on market rates of exchange. (b) Changes in the value of holdings of official reserve assets reflect both balance of payments transactions and valuation effects arising from changes in exchange rates.

(a) Aggregates for the six States and the Commonwealth Government together, as obtained from particulars in this table, contain duplications due to State payments to the Commonwealth Government in respect of payroll tax before October 1971 and Commonwealth Government payments to the States of grants for specific and general purposes. (b) Figures for New South Wales represent combined transactions of consolidated revenue fund and trading enterprises (Public Transport Commission and Maritime Services Board) included in annual Budget papers. Adjustments have been made to exclude duplications. (c) Figures for Victoria cover the Victorian Consolidated Revenue Fund excluding the Works and Services section.
