EXPLANATORY NOTES

Introduction

This bulletin contains index numbers of the *Price Index of Electrical Installation Materials*. The index provides comparisons of the overall price changes occurring for a combination of materials, fixed as to quantity and quality. Information on the construction of the index is contained in *Labour Report No. 56, 1971*.

Items and weights

2. This index is a *fixed weights index*. In general, the weights for the index were derived from information relating to the values of materials used in selected representative projects in Sydney and Melbourne during the three years 1960-61 to 1962-63. The projects selected for this purpose had a minimum electrical materials and labour content of \$10,000.

3. The items in this index have been selected as representative of materials used in electrical installation in structures such as hospitals, schools, factories and multi-storeyed commercial buildings and flats.

Prices

4. The items are priced as at the middle of the month for which index numbers are published. The basis of pricing is the price to electrical contractors, delivered on site or into store, Sydney and Melbourne. The price series used relate to specific standards for each item and in some cases are combinations of prices for different makes, types, etc.

Index numbers

5. Index numbers for financial years are simple averages of the relevant monthly index numbers. Index numbers for the current month are subject to revision.

Interpretation of the index

6. In interpreting movements in the index, particularly those from month to month, it should be noted that changes frequently occur in an uneven fashion over time. In particular, the prices of some major components in this index are affected by fluctuations in the price of copper. Changes in index numbers for individual months, therefore, do not necessarily indicate changes in trend; they should not be interpreted in isolation and without reference to changes over longer periods.
