

COMMONWEALTH BUREAU OF CENSUS AND STATISTICS, CANBERRA,
AUSTRALIA.

SECONDARY INDUSTRIES.

1950-51.

BULLETIN No. 45.

PREPARED UNDER INSTRUCTIONS FROM THE RIGHT HONORABLE THE TREASURER,
BY

S. R. CARVER,
ACTING COMMONWEALTH STATISTICIAN.

[illegible]

MANUFACTURING STATISTICS.

(i) SCOPE OF THE STATISTICS.

Scope.—The statistics are compiled annually and show—

Number and size of factories; Number of persons employed, in various categories; Salaries and wages paid; Book value of land, buildings, plant and machinery (not capital invested); Value of materials, containers, repairs and replacements, power, fuel and light (including water and lubricating oil) used in factories; Value of output; Value of production; Quantities and values of fuel used; Quantities and values of principal materials used and articles produced; Value of additions and replacements to, and depreciation allowed on, land and buildings, and plant and machinery; Rated horse-power of engines ordinarily in use and those in reserve or idle.

The returns from which these statistics are compiled are obtained from manufacturers; they are not intended to show a complete record of the income or expenditure of factories nor to show the profits or losses of factories collectively or individually.

Definition of "Factory".—For the purposes of the accompanying statistics a "factory" is defined as an establishment in which four or more persons are employed or where power (other than manual) is used in any manufacturing process.

Classification of Factories.—The classification of factories adopted under Resolution No. 4 of the Conference of Statisticians, 1930, was introduced in 1930-31.

(ii) PERIOD COVERED.

The period covered by the statistics in this Bulletin, is, in the main, the twelve months ended 26th June. In cases where some other accounting period is used it is permissible to complete the census schedule for that accounting period. These cases, however, are comparatively few and their inclusion in no way impairs the comparability of the statistics in the year under review or from year to year.

(iii) DEFINITIONS OF TERMS USED.

Average Number of Persons Employed.—All persons employed in the manufacturing activities of a factory are counted as factory employees. The figures relating to employment, therefore, exclude all those engaged in selling and distribution, such as salesmen, travellers, collectors, carriers engaged solely on outward delivery of manufactured goods, and retailing storemen. The figures do include, however, proprietors who work in their own businesses, as well as "out-workers".

The average number of persons employed is quoted on two different bases: the average during the period of operation and the average over the whole year. Of these, the former is simply the aggregate of the average number of persons employed in each factory during its period of operation (whether the whole or only part of the year). This average is used only in respect of details relating to classification according to number of persons employed (Tables 7-10). The latter, which is used in all other instances, is calculated by reducing the average number working in the factories (irrespective of period of operation) to the equivalent number working for a full year.

Working proprietors are included in all employment figures other than those relating to monthly employment and age distributions, but salaries and wages paid in all cases exclude drawings by working proprietors.

Value of Materials Used.—This item includes the value, in the usual sense, of the materials used, stores used, containers, tools repaired, and materials used in repairs to plant. In general, it does not include the value of customers' articles or materials repaired, assembled or treated by the factory.

Value of Fuel, &c., Used.—This item includes also the cost of power and light used, of lubricants and of water. Additional details of the costs included under this heading are given in Table 31.

Value of Output.—The value of factory output is the value of the goods manufactured or their value after passing through the particular process of manufacture and includes the amount received for repair work, work done on commission and receipts for other factory work. The basis of valuation of the output is the selling value of the goods at the factory, exclusive of all delivery costs and charges and excise duties, but inclusive of bounty and subsidy payments to the manufacturer of the finished article.

Value of Production.—The value of production is the value added to raw materials by the process of manufacture. It is calculated by deducting from the value of factory output the value (at the factory) of the materials used, containers and packing, power, fuel, and light used, tools replaced, and materials used in repairs to plant (but not depreciation charges).

In the process of manufacture, many goods are treated in several industries, the output of one becoming the raw materials of another, so that such commodities are counted more than once in the aggregate value of output and of raw materials. Examples are raw sugar passing from the mills to the refinery, metals from the smelters which become raw materials in establishments concerned in the production of metal goods, and timber from the sawmills used in furniture factories and in joinery. On the other hand, the aggregate value of production is assessed without duplication, the value added by each industry being taken into account once only. For this reason the value of production, and not the value of the output, is used as a measure of activity in the manufacturing industries as a whole.

There are many miscellaneous expenses, such as maintenance of buildings, &c., depreciation, workers' compensation insurance, other insurances, pay-roll tax, income tax, advertising, interest on borrowed money, bad debts and many other sundry charges, which are not taken into account. Consequently it must not be inferred that, when wages and salaries are deducted from value of production, the whole of the surplus is available for interest and profits.

Rated Horse-power of Engines Used.—Statistics of power used in factories other than Central Electric Stations relate to the "rated horse-power" of engines ordinarily in use and of engines in reserve or idle, omitting obsolete engines. In the case of Central Electric Stations, the figures refer to the "rated capacity" of engines and generators installed. In 1935-36 and previous years, the statistics of power used in factories (including Central Electric Stations) represented the "average horse-power used". See Tables Nos. 53 and 54.

SECTION I.—MANUFACTURING.

No. 1.—Factories: Summary of Operations.

Land and Buildings (f)	£000	116,597	84,134	20,806	24,367	11,055	8,659
Plant and Machinery (g)	£000	112,864	92,748	28,964	24,561	11,457	13,728

1960-61.							
Factories	No.	17,129	13,504	4,776	3,141	3,111	1,486
Persons employed (a)	No.	490,965	516,792	94,579	83,160	43,761	23,827
Salaries and Wages paid (b)	£000	211,329	163,267	42,837	42,079	19,658	11,737
Value of Power, Fuel, Light, &c., used	£000	33,851	17,371	6,295	7,287	3,759	1,699
Materials used (c)	£000	422,422	382,002	134,437	117,347	46,452	32,409
Production (d)	£000	396,169	274,600	75,460	67,342	34,250	24,614
Output (e)	£000	825,912	675,033	216,212	192,356	84,431	58,624
Land and Buildings (f)	£000	130,468	101,326	23,958	23,289	10,751	9,064
Plant and Machinery (g)	£000	136,492	106,341	34,235	26,729	14,713	19,470

(a) Average over whole year. (b) Includes Working Proprietors. (c) Excludes amounts drawn by Working Proprietors. (d) Includes also value of containers, packing, &c., tools replaced and repairs to plant. (e) Value added in process of manufacture. (f) Value of output less value of materials and fuel used. (g) Value of goods produced including amounts received for work done. (h) Value at end of year including estimated value of value of premises and machinery.

(a) Excludes Central Electric Stations (see Table No. 55). (b) Excludes motors driven by electricity of own generation. The total may still involve a small amount of duplication, since certain establishments generating electricity principally for their own requirements and some of their power is purchased, many of whom, it may be presumed, are establishments included elsewhere in this table. (c) Includes all Prime Movers and Motors.

AUSTRALIAN SECONDARY INDUSTRIES.

No. 60. Government Factories : Summary of Operations.

(NOTE.—This table embraces establishments under the control of the Commonwealth and State Governments. These include railway and tramway workshops, electric light and power works, printing works, forest sawmills, dockyards and factories for the production of munitions, clothing, &c. Except in Victoria, gas works and electricity undertakings of the local governing bodies are classified as private and not Government establishments.)

No. 62—Factories : Principal Materials Used, 1950-51.

Particulars shown in this table are arranged alphabetically as in the previous Bulletin. They represent recorded usage in the industries or processes indicated only, and therefore do not necessarily show total factory usage of the articles listed. Where there are less than three users of a particular article in a State, details are confidential and indication of such is given by a footnote—(a) Not available for publication. Figures shown include, wherever applicable, quantities of articles produced and consumed in the same year in the factories producing them.

No. 68.—Factories : Principal Articles Produced, 1950-51.

Particulars shown in this table represent total recorded factory production in Australia of the articles listed and are presented alphabetically as in the previous year. Articles for which details are collected but not publishable are now included with the appropriate footnote i.e. (a). Values shown represent the selling value of the factory excluding Excise Duty where applicable to any item. There are three standard notes throughout the table, viz. :—

- (a) "Not available for publication" (figures confidential);
 (b) "Quantity only available" (Values not available owing to the inclusion in the quantity produced of :—
 (i) Articles assembled—no values recorded;
 (ii) Articles produced on commission—no values recorded; or
 (iii) Quantities produced by, and used in, further processes in the works producing them).

In the case of (iii), this is indicated either by a separate figure or, where a separate figure cannot be given, by the third standard note i.e.—

(c) "Includes quantities produced and used in works producing them".

SECTION II.—MONTHLY PRODUCTION OF CERTAIN COMMODITIES.

Commodities for which information is furnished monthly are classified, mainly on the basis of value of production, as "major" or "minor". The table following shows the monthly production in Australia (excluding Northern Territory and Australian Capital Territory in all cases other than meat and gold production) of all "major" commodities for which information is at present available. Information on the monthly production of "minor" commodities and on recent additions to the monthly collection and also for non-minor commodities, figures generally, the reader should refer to the *Monthly Bulletin of Production Statistics* published by the Bureau.

The table shows monthly statistics for each month from July, 1948 to June, 1952, and also monthly averages of annual figures extending back to 1928-29.

Monthly figures for years up to and including 1950-51 (with some exceptions noted below) have been adjusted, where necessary, to agree with annual figures contained elsewhere in this bulletin. In some cases, however, complete agreement cannot be effected. The cases where the annual averaging period of some firms ends on a date other than 30th June. Figures for July, 1951, and later months are preliminary in that some are based on collections which do not cover minor producers, some are undergoing detailed examination and some are particularly in relation to deliveries and not production. Revised figures will be published five-weekly or fortnightly basis have been adjusted to a calendar month basis by assuming a constant rate of production during each period of shortening in appropriate proportion of each period's figures to the relevant calendar month.

The following notes for each commodity state the source of the figures and method of collection, the period covered, and other relevant information.

FUEL.

Black Coal.—Collected on a fortnightly basis from all producers and compiled by the Joint Coal Board. Generated by the Commonwealth Statistician to calendar month figures.

Brown Coal.—Collected from all producers by the Victorian Government Statist and the Victorian Mines Department. The figures collected by the Statist are the best of producers on a calendar month basis, and those collected by the Mines Department are from small producers on a weekly basis which is converted by the Commonwealth Statistician to a calendar month basis.

BUILDING MATERIALS.

Bricks.—Collected on a calendar month basis from major producers and compiled by the State Statisticians in Western Australia and Tasmania and by State Building Materials Control Authorities in other States. The totals for each State are then estimated by the Commonwealth Statistician, except in New South Wales, where the State Statistician makes the estimate.

Concrete Building Blocks.—Collected on a calendar month basis from all producers and compiled by State Building Materials Control Authorities in all States except Tasmania, where collection is by the Commonwealth Statistician. The figures are in terms of standard square yards to 1944-45 inclusive, thereafter in terms of finished square yards. A standard square yard denotes a given value of standard square yards per square foot measured by the finished square yards, the area covered by the finished square yards of corrugation.

Concrete, Portland.—Collected on a calendar month basis from all producers and compiled by the Commonwealth Statistician in all States except New South Wales, where collection is by the State Building Materials Control Authority.

Fluxes, Plaster Sheets.—Collected on a calendar month basis from major producers by State Building Materials Control Authorities for all States except South Australia and Queensland, where they are taken into account by the Commonwealth Statistician when estimating total production.

Roofing Tiles, Terra Cotta and Concrete.—Collected on a calendar month basis from all producers and compiled by State Statisticians in Western Australia and Tasmania and by State Building Materials Control Authorities in other States.

Sawn Timber.—Estimated from details of royalties paid on logs taken from Crown and/or private lands. The authorities are the State Forestry Departments and the Forestry and Timber Bureau of the Commonwealth Department of the Interior.

CHEMICALS AND ALLIED PRODUCTS.

Sulphuric Acid.—Collected on a calendar month basis from all producers and compiled by the Commonwealth Statistician.

Superphosphate.—Estimated by the Superphosphate Industry Committee of the Commonwealth Department of Commerce and Agriculture, which applies a standard factor to the quantity of phosphate rock used each month as supplied by each producer.

Sulphate of Ammonia.—Collected on a calendar month basis from all producers and compiled by Nitrogen Fertilisers Pty. Ltd. and the Commonwealth Statistician.

Paints.—Collected on a calendar month basis from all producers and compiled by the Commonwealth Statistician.

IRON AND STEEL.

Pig-iron.—Collected on a four-weekly basis from all producers by the Commonwealth Statistician and converted to a calendar month basis. Discrepancies between monthly and annual figures are due to major producers furnishing annual returns for a year ending other than 30th June.

Blanks and Billets.—See note above for Pig-iron. This item covers blooms, billets, slabs, and axle blanks, for forging purposes. Details collected annually are on a slightly different basis from those collected monthly.

Ingot Steel.—See note above for Pig-iron.

REFINED METALS.

Gold.—Collected on a calendar month basis and compiled in each State by the State Mines Department.

Silver.—Collected from Australian Mineral and Metals Association (Inc.) and Bureau of Mineral Resources. Major production is on a calendar month basis. Balance converted by Commonwealth Statistician to calendar month basis. Compiled by Commonwealth Statistician.

Copper.—Collected on a calendar month basis from all producers and compiled by the Australian Mines and Metals Association (Inc.).

Lead.—See note above for Copper. These figures include quantities in respect of lead refined to the bullion stage and exported.

Zinc.—Collected on a four-weekly basis from the sole producers by the Commonwealth Statistician and converted to a calendar month basis.

DOMESTIC REFRIGERATORS.

Details of each of the different types shown under this heading are collected on a calendar month basis from all producers and compiled by the Commonwealth Statistician.

BUILDING FITTINGS.

Stoves of Cookstoves.—Details are collected on a calendar month basis from all known producers and compiled by the Commonwealth Statistician in all States except New South Wales, where collection is by the State Building Materials Control Authority. The figures for solid fuel and gas cooking stoves include household and commercial types to 1947-48 inclusive, thereafter household only. Figures for electric cooking stoves include commercial stoves and ranges, and household stoves, stoves, and cookers to 1944-45 inclusive, thereafter household cooking stoves only.

MOTOR BODIES.

Collected on a calendar month basis from all producers and compiled by the Commonwealth Statistician.

PEDAL CYCLES.

Collected on a calendar month basis from all producers and compiled by the Commonwealth Statistician.

INTERNAL COMBUSTION ENGINES.

Collected on a calendar month basis from all producers and compiled by the Commonwealth Statistician.

ELECTRIC MOTORS.

Collected on a calendar month basis from all producers and compiled by the Commonwealth Statistician. Figures for 1918-19 to 1931-32 include all motors made and incorporated in other products of the manufacturer. Earlier figures do not.

CATTLE HIDES, YEARLINGS AND CALFSKINS.

Figures collected and compiled by Australian Hides and Leather Industries Board, and are on the basis of Hides and Skins received into stores.

TEXTILE PRODUCTS (NOT DRESSES).

Cotton Textiles. } See note above for Internal Combustion Engines.
Wool Textiles. }
Rayon Woven Fabrics. }

CLOTHING.

Hosiery. Collected on a calendar month basis from all Knitting Mills and compiled by the Commonwealth Statistician.

Knitted Underwear. See note above for Hosiery.

Shirts and Pyjamas. See note above for Internal Combustion Engines.

Footwear. See note above for Internal Combustion Engines.

FOOD, DRINK AND TOBACCO.

Flour from Wheat. Collected on a fortnightly basis from all producers through the Australian Wheat Board and compiled and converted to a calendar month basis by the Commonwealth Statistician.

Rice. Collected on a calendar month basis from all producers and compiled by the Commonwealth Statistician.

Refined Sugar. Estimated by the Commonwealth Department of Trade and Customs from data supplied by all producers on a four or five-weekly basis and converted to a calendar month basis by the Commonwealth Statistician.

Confectionery. See note above for Rice.

Meat. Collected on a calendar month basis from all factory producers by the Commonwealth Statistician through the State Statisticians. In addition to jam, the quantities include conserves, fruit spreads, and jellies.

Meat. Estimated by the Commonwealth Statistician from details of slaughtering and production supplied by principal slaughtering works through the State Statisticians. The figures listed give details of production of five classes of meat (bone-in weight) and their total weight in terms of fresh meat. The monthly returns were designed to cover the following percentages of total slaughtering during 1912: Cattle, 75 per cent., sheep, 84 per cent., lambs, 87 per cent., and pigs, 90 per cent.

Wet Milk Used for All Purposes. Estimated on a calendar month basis by the Commonwealth Statistician from information available on utilization of milk for butter, cheese, processed milk products, and milk used or consumed for all other purposes.

Factory Butter. Collected on a calendar month basis from all factory producers and compiled by the Commonwealth Dairy Produce Population Committee Ltd.

Factory Cheese. See note above for Butter.

Processed Milk Products. Collected on a calendar month basis from all known factory producers and compiled by the Commonwealth Statistician. The quantities include the total weight of condensed, concentrated, and powdered milk (full cream, skim, and buttermilk) produced. Infant and invalid foods are excluded up to the year 1912-13 and included from 1913-14.

Ice Cream. See note above for Butter.

Beer. Supplied on a monthly basis by Excise Branch of the Commonwealth Department of Trade and Customs in respect of all breweries.

Wine and Spirits. Monthly totals relate to the quantities on which excise duty is paid every calendar month, obtained from excise entries passed for home consumption by the Commonwealth Department of Trade and Customs, and compiled by the Commonwealth Statistician. Normally these figures approximate production. Monthly averages for the years 1918-19 to 1930-31 are obtained from the annual census of production.

PAPER.

Newsprint. Collected by the Commonwealth Statistician on a calendar month basis and made available for publication by the sole producer. These figures cover both first and second quality newsprint.

RUBBER GOODS.

Pneumatic Tyres, Motor. Collected on a calendar month basis from all producers and compiled by the Commonwealth Department of Supply and Development.

Pneumatic Tyres, Cycle. See note above for Internal Combustion Engines.

FLOOR COVERINGS.

Wool Felt, Carpet and Linoleum. These figures aggregate in square yards the quantity of felt for floor covering, carpet, and linoleum produced. Details of each commodity are collected on a calendar month basis from all producers and compiled by the Commonwealth Statistician.

HEAT, LIGHT AND POWER.

Total Gas Made in Gas Works. Collected on the basis of monthly net sales of major producers by the State Statisticians in each of the States. Total production is then estimated by the Commonwealth Statistician.

Total Electricity Generated. Collected on a calendar month basis from major producers by the State Statisticians in each of the States. Total production is then estimated by the State Statisticians in respect of New South Wales and by the Commonwealth Statistician in respect of the Other States. In the case of Victoria, South Australia and Western Australia certain smaller producers supply figures on a four-weekly basis which is converted by the Commonwealth Statistician to a calendar month basis.
