EXPLANATORY NOTES

Population estimates

1. The estimated population for Australia as a whole takes account of natural increase and net overseas migration since the latest Census. Natural increase represents the excess of live births registered over deaths registered. Net migration represents the excess of recorded overseas arrivals over recorded overseas departures. A minus sign (-) denotes an excess of departures over arrivals.

2. The estimate of population for each State or Territory represents the population ascertained at the census plus recorded natural increase and net gain from recorded overseas migration. Gains and corresponding losses that result from movements between States and Territories are also taken into account in so far as they are recorded as transfers of State of residence under child endowment procedures or Australian electoral procedures or are indicated in other ways such as the results of any special count. As records of migration by State or Territory are not complete the estimated State and Territory populations so derived are approximate and are subject to revision when the population of each State is ascertained at the next census.

3. Holiday, business and other similar short-term movements between States and Territories are not taken into account in the quarterly calculations. However such movements do affect the estimates in so far as people who were on holiday or other short-term interstate travel at the time of the census are counted in the population of the State or Territory where they spent census night. On the other hand, changes in the

populations of States and Territories due to visitors from overseas and Australians travelling overseas are reflected in all estimates.

Seasonal and other effects on quarterly figures

4. Quarterly figures and rates for marriages, births and deaths reflect seasonal influences and may also be influenced by varying delays in registrations due to administrative and other factors which may affect the month of registration. A variation in rates based on small numbers of events may reflect transitory changes which can average out in variations in rates based on large numbers. Quarterly divorce figures, particularly the numbers of dissolutions granted, are affected by such administrative factors as the occurrence of law vacations and the availability of judges.

Preliminary figures available for September quarter 1974

5. Problems associated with the introduction of new systems of recording and compiling data of overseas arrivals and departures have caused some delay in the publication of this series of bulletins. Preliminary estimates of population, live births and deaths for the quarter ended September 1974 were issued on 22 January 1975 in *Preliminary Estimates of Population, Births and Deaths* (Reference No. 4.16). Preliminary marriage and divorce statistics for this quarter are also available. Note that the March and June quarters 1974 preliminary figures appearing in Bulletin No. 4.16 have now been revised.

NOTE. Any discrepancies between totals and sums of components in tables are due to rounding.

(a) Increase consists of natural increase, net overseas migration gain, and an adjustment to make the series of increases agree with the total intercensal increase revealed by successive censuses. The adjustment reflects the combined net error in the census and in the recording of births, deaths and migration during the intercensal period. Minus sign (-) denotes a net decrease. (b) Census result.

1973	19.56	8.51	11.05	2.14
1974	18.36	8.30	10.06	5.52

(a) Live births, deaths or net migration (excess of overseas arrivals over overseas departures) during each period per thousand of mean population for the period. (b) The rate of natural increase is the difference between the crude birth and crude death rates.

NOTE. Rates of natural increase and net migration may be calculated alternatively as the increase during the period expressed as a proportion (per cent) of the population at the beginning of the period. Figures prepared on this basis are shown in the next table.

NOTE. Mean populations are calculated for twelve-month periods to provide a satisfactory average basis for calculations requiring allowance for the continuous change in population figures during such periods. The mean population for any year has been calculated by the formula:

$$\text{Mean population} = \frac{a + 4b + 2c + 4d + e}{12}$$

where a, b, c, d and e, respectively, are the populations at the end of the quarter immediately preceding the year and at the end of each of the four succeeding quarters; e.g., in the case of a calendar year, 31 December of the preceding year, and 31 March, 30 June, 30 September and 31 December of the year under consideration.

(a) Petitions for decree other than dissolution during the June quarter 1974 were: nullity, 15; judicial separation, 5; dissolution or nullity, 2. (b) Decrees absolute. There were 10 decrees of nullity and 4 of judicial separation granted during the June quarter 1974. (c) Number of decrees of dissolution, nullity and judicial separation granted per ten thousand of mean population.

NOTE. See paragraph 4 of the explanatory notes. The decline in dissolutions granted in Victoria in 1973 is believed to be due to one less judge hearing divorce cases.
