MAIN FEATURES

This publication is the first issue of a new series of Award Rates of Pay Indexes, Australia. The new series takes June 1985 as the base, using data from a survey of employers conducted in respect of May 1985.

The previous series was based on June 1976 employee data, and subsequent changes in distribution of employees in terms of industry, occupation, award coverage etc. have generally led to the need for a new index with a more contemporary structure. The new series draws on a sample of approximately 700 awards and 5,500 award classifications (cf. 900 awards and 2,400 classifications in the previous series).

In the 12 months to December 1987 the Weekly Award Rates of Pay Index for both full-time adult male and female employees rose by 4%.

The inclusion of National Wage Case second-tier increases (of up to 4.0%) caused a number of series in the Award Rates of Pay Indexes to rise, between November and December 1987. In that month, the biggest movement in the weekly industry series, persons, was for Manufacturing (+0.9%). For the weekly occupation series, persons, the biggest movement was for metal tradespersons (+1.4%) and trades assistant and factory hands (+0.8%).

For the period June 1985 to November 1987 there is an overlap between the old and the new series. Over this period the old wage and salary earners index of Weekly Award Rates of Pay for full-time adult persons, Australia, increased by 10.5%. The corresponding index from the new series also increased by 10.5%.

EXPLANATORY NOTES

Introduction

1. This publication is the first issue of the new series of the Award Rates of Pay Indexes, Australia. The new series of indexes covers the period commencing June 1985 to December 1987 and replaces the previous series of indexes which covered the period June 1976 to November 1987.

2. The new series provides weekly and hourly award rates of pay for full-time adult wage and salary earners. Separate indexes for wage earners and wage and salary earners are not provided in the new series, because of difficulties in distinguishing wage and salary earners in award documentation or in the survey from which employment numbers were obtained.

3. The methodology used to construct the Award Rates of Pay Indexes is in general similar to that used for other indexes such as the Consumer Price Index and the Wholesale Prices Index. It is based on a representative 'basket' of award rates of pay. The indexes are constructed by weighting award rates of pay for selected classifications according to the pattern of employment that existed at May 1985. The 'basket' of classifications, and their weights remain constant during the life of the indexes, so changes in the indexes reflect general trends in award rates of pay over time. They do not measure relative levels of average

award rates of pay between States and industries, awards and occupations.

4. The Award Rates of Pay Indexes are fixed weight indexes and therefore periodic reviews of the representativeness of the awards selected and revisions to the weights applied to those awards become necessary. This rebasing has been undertaken to take into account changes which have occurred during the life of the 1976 series in the distribution of the number of employees in terms of: industry, occupation, award coverage, jurisdiction, State/Territory and sex.

5. The base for the new series of June 1985 has been determined using data obtained from the Survey of Employee Earnings and Hours conducted in May 1985. The previous series was based on June 1976 employee data. For more information regarding the methodological and conceptual changes in the new series and the relationship between the previous series and the new series, refer to *Information Paper: Award Rates of Pay Indexes* (6343.0) released on 11 February 1988.

Scope and coverage

6. The award rates of pay for full-time adult employees which are normally varied in accordance with awards, determinations or registered collective agreements have been selected in the indexes. The indexes cover 3.0 million persons (2.1 million males and 0.9 million females). Approximately 3 per cent of full-time adult employees are covered by unregistered agreements (i.e. those agreements made by an employer with a group of employees and which are not registered with a Federal or State industrial arbitration authority). For statistical purposes these have been considered to be similar to awards. The rates prescribed in the more important of these, such as the collective agreement between the State Transport Authority of Victoria and some of its employees, have been included in the indexes.

7. Rates of pay applicable to approximately 16 per cent of full-time adult employees who are not covered by awards, determinations or registered or unregistered collective agreements, are not covered by the indexes. This includes those employees whose rates of pay and conditions of work are not normally varied in accordance with variations in a specific Federal or State award, determination or registered collective agreement or a specific unregistered agreement.

Design of the indexes

Selection of the classifications

8. The source used to base the indexes is the May 1985 Survey of Employee Earnings and Hours. The Survey collected information on the industry and occupation of individual employees, on the award under which they are covered and their award classification.

9. This information was used to stratify classifications by industry, occupation and State as part of a sample design which ensured that the indexes have been produced at a satisfactory level of reliability for all cross-classifications included in the series.

10. A sample of approximately 700 awards and 5,500 award classifications has been selected for inclusion in the indexes. This is approximately twice the number of classifications than were selected in the previous series.

Compilation

11. Data on the award rates of pay from June 1985 and subsequent months have been compiled for each of the selected award classifications. Estimates of weighted average award rates were calculated by expanding data from the sample of award classifications. The estimates for June 1985 for each component of the series were then converted to an index value of 100.0.

Weighting

12. The weighting pattern of the indexes is determined at the award classification level. The weights applied to the award classifications included in the indexes are derived from the May 1985 Survey of Employee Earnings and Hours. The distribution of the weights used in the construction of the index is shown in Appendix A.

13. Awards have been divided into two groups, 'major' awards and 'minor' awards, depending on the estimated employment coverage of each award. All major awards have been included in the indexes, while only a sample of minor awards have been included. There are 200 major awards and 500 minor awards in the index. For classifications selected within major awards, the employment benchmarks have been inflated in the indexes to account for the total employment within the award. For classifications selected within minor awards, employment benchmarks have been inflated in the index to account for the total employment coverage of all minor awards.

Limitations of weighting

14. The index is a fixed weight index. The weights of the index need to be reviewed periodically because of the problems inherent with having a fixed weight index. In particular, the index is not responsive to changes in the structure and coverage of awards, and is likely to become less representative and therefore less reliable over time. An example of this type of problem occurred with the Victorian Nurses Award. This award underwent a major restructuring during 1986 with some classifications being amalgamated and others being split into two or more classifications. This type of restructuring of an award in the index means that an equivalent classification needs to be selected from the revised award structure. However, until a complete review of the indexes is carried out, the old structure must be used.

15. Another example of the problems that can occur with fixed weight indexes concerns second-tier variations. In general, second-tier variations have been applied to all employees covered by an award. In some cases however, the second-tier increase has only been granted to a proportion of the employees covered by the award. Because of the fixed weights of the index a partial increase to an award cannot be included in the index. In such cases the index is varied if the increase applies to the majority of the employees covered by the award.

Definitions

16. The award rates of pay used in the compilation of the indexes:

Include

- (i) the base rate and any allowances or loadings that are applicable to ALL employees under a specific award classification, e.g. industry allowance.
- (ii) supplementary payments when they are specified within the award.

Exclude

- (iii) remuneration allowances. It is considered that these allowances are paid to reimburse employees for expenses they are expected to incur during the course of their employment (e.g. tool allowances). The inclusion of these allowances would not reflect the true level of remuneration of these employees.
- (iv) superannuation payments and other payments such as severance and termination payments which are paid to employees as part of an award agreement.

17. The *weekly award rates of pay series* for full-time adult employees provide details of the movements in the weekly rates of pay for award classifications included in the index.

18. The *hourly award rates of pay series* for full-time adult employees provide details of the movements in the hourly rates of pay for award classifications included in the index. These series include only those awards and classifications where hours of work are specified in the award.

19. *Standard weekly hours of work* refer to the weighted average standard weekly hours of work where the weights are those used in the construction of the award rates of pay indexes. Estimates of standard weekly hours of work will be included in the June issue of this publication. Estimates of standard weekly hours of work at the base period are included as Appendix B.

20. Estimates of the *weighted average minimum weekly award rates of pay* are based on the weights used in the construction of the award rates of pay indexes. The weighted average minimum award rates of pay at the base period are included as Appendix C.

Relating the series

21. Some users have expressed a requirement to be able to relate the 1976-based and the 1985-based series. Appendix D provides a method to link the two series.

22. Users should note that proportional increases in the 1976-based and the 1985-based series can differ because:

- awards and classifications have different weights, reflecting the changing distribution of the employees represented in the indexes,
- award variations do not occur uniformly across all awards; and

- remunerative allowances are treated differently (see *Information Paper: Award Rates of Pay Indexes*, Catalogue 6343.0, released on 11 February 1988).

23. The differences in behaviour of the indexes can be significant when award variations are not uniform. From June 1985 to October 1987 the proportional increases in the indexes were virtually identical. However, the increase in the 1976-based index of weekly award rates of pay for full-time adult persons from October 1987 to November 1987 was 0.3% while the 1985-based index showed no increase. This can be attributed to a number of second tier increases associated with award classifications which:

- have substantially smaller weights in the new index than the old, or
- are not selected in the new index.

24. An approximate linking of the indexes can be made by multiplying one index by a fixed number (a linking factor) to obtain the other. This is equivalent to assuming that the proportional increases in the indexes would have been the same. This assumption is reasonable if award variations have been close to a uniform rate across awards.

25. It is convenient to use the commencement of the new series, June 1985, as a reference point to calculate the linking factors. However, because of the above comments, this is not considered to be an appropriate use of the indexes.

Reliability of indexes

26. Since the indexes are based on information obtained from a sample of employers they are subject to sampling variability. That is, they may differ by chance from figures that would have been produced if all employers had been included in the survey.

27. Inaccuracies may also occur because of imperfections by respondents or in processing by the ABS. Inaccuracies of this kind are referred to as *non-sampling errors*. Although considerable care is taken in questionnaire design; in the instructions given to employers on how to select a sample of their employees; in editing the survey returns and in relating the figures to comparable statistics; these inaccuracies may occur in any enumeration, whether it be a full count or a sample. As an example, a contribution to non-sampling error has occurred in this survey because a number of employers had difficulty in providing information on awards and classifications as they lacked knowledge of which awards and/or classifications covered their employees.

Comparability of results

28. When comparisons are made between period-to-period movements in the Award Rates of Pay Indexes (ARPI) and movements in Average Weekly Ordinary Time Earnings (AWOTE) for full-time adults published in *Average Weekly Earnings, States and Australia* (6302.0) it is important to recognise the different coverage, scope, definitions, and methodology used in the construction of each series. In particular, the AWOTE series includes a number of payments additional to award rates of pay used in compiling ARPI. Allowances covered

under awards which are not industry or occupation-wide in their application such as site, travelling, height or dirt allowances, are excluded from ARPI but included in AWOTE. The AWOTE series also includes other payments such as shift penalty payments and over-award pay. A significant number of employees are not covered by awards but are included in AWOTE. The AWOTE series is also affected by compositional changes in the labour force. However ARPI is not similarly affected, being a fixed-weight index constructed from a representative 'basket' of occupations selected from the May 1985 Survey of Employees Earnings and Hours. It is subject to reselection and rebasing at infrequent intervals. Other factors affecting comparisons between the two series include seasonal influences on earnings and differences between the two series in the treatment of retrospective pay increases. A detailed description of the methodology, scope, and definitions used in compiling AWOTE is featured in Catalogue No. 6302.0.

Classification of industry and occupation

29. Industry is classified according to the *Australian Standard Industrial Classification (ASIC) 1983* (1201.0). Occupation is classified according to the *Australian Standard Classification of Occupation (ASCO)* (1222.0).

General increases in award wages

30. Details of general increases in award wages as a result of wage hearings since 1980 are included as an appendix to those issues of this publication which correspond to the month in which general wage increases have been awarded. Information for earlier periods was published in *Labour Statistics, Australia, 1980* (6101.0) and earlier issues of that publication.

Related publications

31. For details of previously published indexes reference should be made to the following publications:

All occupation groups	319.03	324.27	327.33	314.41	337.40	328.95	327.02

(a) Occupation is based on the Australian Standard Classification of Occupations (ASCO). (b) Includes the Northern Territory and the Australian Capital Territory.

APPENDIX D. AWARD RATES OF PAY INDEXES: LINKING FACTORS

This appendix provides a method of linking the 1976 and the 1985 based series. Linking of the series is discussed in paragraphs 21 to 25 of the Explanatory Notes.

For any required series, the linking factors are derived as follows:

$$\text{1976 to 1985 linking factor} = \frac{\text{1985-based series value at reference point}}{\text{1976-based series value at reference point}}$$

$$\text{1985 to 1976 linking factor} = \frac{\text{1976-based series value at reference point}}{\text{1985-based series value at reference point}}$$

To convert a 1976-based series value to a 1985-base, multiply the value by the appropriate 1976 to 1985 linking factor. To convert a 1985-based series value to a 1976 base, multiply the value by the appropriate 1985 to 1976 linking factor.

The following example illustrates the use of the linking factors for the Weekly Award Rates of Pay series for Full-time Adult Persons, Australia. The index numbers used in the calculations are contained in Table D1 below.

$$\begin{aligned} \text{1976 to 1985 linking factor} &= \frac{(\text{1985-based}) \text{ Persons (col 2)}}{(\text{1976-based}) \text{ Wage and Salary Earners — Persons (col 1)}} \\ &= \frac{100.0}{208.5} \text{ (Reference period = June 1985)} \\ &= 0.480 \end{aligned}$$

$$\begin{aligned} \text{1985 to 1976 linking factor} &= \frac{(\text{1976-based}) \text{ Wage and Salary Earners — Persons (col 1)}}{(\text{1985-based}) \text{ Persons (col 2)}} \\ &= \frac{208.5}{100.0} \text{ (Reference period = June 1985)} \\ &= 2.085 \end{aligned}$$

The June 1976-based index for December 1987 can be approximated by:

$$\begin{aligned} (\text{1985-based}) \text{ Index Value} \times 2.085 &= 110.8 \times 2.085 \\ &= 231.0 \end{aligned}$$

Table D1 : Weekly Award Rates of Pay Series : Full-time Adult Persons, Australia(a)

	<i>Wage and salary earners — Persons</i>		<i>Persons</i>
	<i>June 1976 = 100.0</i>	<i>% increase since June 1985</i>	<i>June 1985 = 100.0</i>
	<i>col 1</i>		<i>col 2</i>
