PREFACE

Statistics of imports are classified according to the new Australian Import Commodity Classification. This is based on the Standard International Trade Classification, Revised - (S.I.T.C.) - which is closely related to the Brussels Tariff Nomenclature used in the new Australian Customs Tariff. Statistics of exports are classified on the same basis as in former bulletins, but a new Australian Export Commodity Classification based on S.I.T.C. will be introduced from July, 1966. It will then be possible to replace the interim series of bulletins with a new series in which imports and exports are classified within a comparable framework.

2. Coincident with the introduction of the new Tariff and the new import commodity classification the definition of merchandise imports and exports has been revised in accordance with international standards recommended by the United Nations. The non-merchandise items of recorded trade are listed in the Australian Import Commodity Classification 1965-66 and the Australian Export Commodity Classification 1965-66.

3. Copies of the Australian Import Commodity Classification and the current Australian Export Commodity Classification will be supplied on request.

EXPLANATORY NOTES(i) Basic Documents.

(a) The Oversea Trade Statistics published herein have been derived from documents obtained under the Customs Act by the Department of Customs and Excise and compiled by the Commonwealth Bureau of Census and Statistics. They do not include certain items for which customs entries are not recorded. (See paragraph (vii) of this note.) These documents are duplicate copies of export and import entries submitted by exporters and importers or their agents to the Department of Customs and Excise.

(b) Export entries show date and port of shipment, country of consignment and the description, quantity (where required) and value of the goods. The statistical item number is inserted and verified by officers of the Department of Customs and Excise, Canberra.

(c) Import entries show date and port of entry, country of origin, description of goods, quantity (where required), value of the goods and amount of duty paid thereon. The tariff number under which the goods are admitted and the statistical key code are inserted by the importer or his agent, and these are verified by Statistical Officers of the Department of Customs and Excise in the local offices of the Collectors of Customs. The value of imports as recorded is that laid down in the Customs Act, i.e., the actual price paid by the importer, plus any special deduction, or the current domestic value in the exporting country, whichever is the higher, f.o.b. port of shipment. (See paragraph (vii) of this note.)

(ii) Exports.

(a) These are recorded statistically in the month in which the export entries are passed by the Department of Customs and Excise. Normally this is within a few days of shipment, but in the case of bullion and specie some entries may be delayed several months. Shipment of some major items is at times delayed by abnormal factors affecting sales, deliveries for export and the loading of ships. When such delays occur, exports are diminished (pro tanto) and when such delays are overtaken shipments include substantial quantities of accumulated stocks as well as current disposals.

(b) Wool shipments in any trade year may be materially affected by the time spread of wool auctions which normally end in July. The carry-over for shipments varies from year to year. New Season's wheat normally becomes available for shipment from December onwards, and the quantity shipped in any trade year (ending June) depends on the size of the crop and the time spread of sales for export.

(c) Exports are recorded with destination "For Orders" when the country of consignment has not been determined at the time of export. Where exports "For Orders" are not shown separately in the tables of Section III Table 13 any such exports have been included with "Other Countries".

(iii) Imports are recorded statistically in the month in which import entries are passed by the Department of Customs and Excise. Normally this is within a few days of discharge of cargoes.

(iv) Merchandise and Non-Merchandise Trade - Change of Basis introduced July 1965. "Merchandise" and "non-merchandise" trade have been redefined in accordance with international standards recommended by the United Nations. Figures shown for 1964-65 have been revised to conform to the new definitions.

Non-merchandise items include commodities such as gold, legal tender, decorations, trophies, samples, passengers' personal effects, military equipment and stores for Australian Forces abroad, goods for the use of diplomatic and consular representatives, goods imported with the intention of being re-exported, goods exported with the intention of being re-imported, etc. A complete description of these commodities is contained in the Australian Commodity Classifications (Imports and Exports) published by the Bureau.

(v) Classifications. From July, 1965 imports have been classified according to the new Australian Import Commodity Classification which is based on the Standard International Trade Classification (Revised). However the basis of classification of

exports has not changed. The export section of the former Statistical Classification of Imports and Exports has been published separately by the Bureau with some minor revisions, as the Australian Export Commodity Classification 1965-66. A new export commodity classification based on S.I.T.C. will be introduced from July, 1966.

(vi) Coverage. Statistics shown herein include merchandise and non-merchandise trade unless otherwise specified. Defence equipment imported by the Australian Services is included. These imports are normally classified according to the commodity imported e.g. warships are classified under "ships and boats", and are included in the month in which an import entry is lodged with the Department of Customs and Excise. The value of outside packages for both exports and imports is included in all tables, being included under each item concerned for exports and as a separate item in Section 9(a) of imports. Export figures relate to both Australian produce and re-exports, except in Section III Table 13 where exports of Australian produce only are shown. Exports of ships' stores and aircraft stores are excluded from overseas trade statistics, but are shown separately on page 44.

(vii) Excess of Exports or Imports. Oversea trade statistics are compiled from information recorded in customs documents. The excess of exports or imports in recorded merchandise trade has to be adjusted for both valuation and coverage to provide estimates of the balance of trade which will be found in Statistical Bulletins on the "Balance of Payments". Imports are adjusted for the overall excess of recorded value for duty over the actual selling price to the importer. Imports and exports of goods for repair and return and the value of repairs are deducted from recorded merchandise trade; imports and exports of ships and aircraft for use on overseas routes, certain imports of defence equipment, and other trade items for which customs entries are not required are added.

(viii) Balance of Payments. Estimates of the balance of trade do not measure Australia's total balance of payments which includes other transactions such as freight and insurance charges on imports, shipping expenditure in Australian ports, overseas travel, payments of profits and interest, and private and government borrowing overseas. Estimates of these transactions will be found in Statistical Bulletins on the "Balance of Payments".

(ix) Previous Year's Figures. The introduction of a new import classification and a new Customs Tariff has precluded publication, for 1965-66, of previous year's figures in tables 7 and 14.

(x) Rounding. Where figures have been rounded in this publication, any discrepancies between totals and sums of components are due to rounding.
