PRODUCTION SUMMARY NO. 28 : FOOTWEAR
AUSTRALIA : FEBRUARY 1976

All annual figures are derived from the recorded monthly production and are subject to revision. From July 1973, the basis of collection of footwear statistics was changed from type of construction to type of material used in the uppers, and the statistics below are presented on this basis.

As from February 1976 production statistics are no longer being collected from single establishment manufacturing enterprises employing less than four persons or from establishments predominantly engaged in non-manufacturing activities but which may carry on in a minor way some manufacturing.

However, except for a few commodities, the effect on production levels and movements is marginal. An indication of the approximate magnitude of the break in comparability may be obtained by comparing annual 1974-75 data which are shown in this publication on both the old and the new basis. Monthly data from July 1975 to January 1976 have also been adjusted on the new basis.
