EXPLANATORY NOTES

The statistics of exports and imports shown in this statement are preliminary and subject to revision. More detailed monthly statistics will be published progressively as they become available.

2. **Source of Data.** These statistics are compiled by the Australian Bureau of Statistics from information contained in export and import entries submitted by exporters or importers, or their agents, to the Department of Police and Customs, as required by the Customs Act. Exports and imports are recorded statistically in the month in which the entries are passed by the Department of Police and Customs. Normally, this is within a few days of shipment or discharge of

cargoes, but delays sometimes occur in the lodging of export entries and import entries may be lodged early using the check-to-arrive system.

3. **Excess of Exports or Imports.** The statistics shown in Table 1 refer to the total value of exports and imports recorded during the period specified and the excess of the value of exports or imports shown does not represent the balance of trade. The balance of trade is the excess of exports or imports on a "balance of payments" basis and is derived from overseas trade statistics after certain adjustments relating to valuation, timing and coverage are made to total recorded exports and imports. Details of adjustments are set out in the bulletin : *Balance of Payments* (Reference No. 8.1).

4. **Seasonal Adjustment.** Table 2 contains seasonally adjusted statistics of exports and imports. In carrying out seasonal adjustment, account has to be taken not only of seasonal factors but also, of "trading-day" effects (arising from the varying numbers of Sundays, Mondays, etc. in the month) and the influence of Easter, which may affect figures for different months in different years. Details of the methods used in seasonally adjusting these and other series are given in *Seasonally Adjusted Indicators 1975* (Reference No. 1.10). The statistics may also be subject to large irregular influences which are not removed by seasonal adjustment and may be affected by changes in the composition of exports and imports. For these reasons, particular care should be exercised in interpreting month-to-month movements.
