FURTHER INFORMATION

Titles of the publications issued by the N.S.W. Office are shown on the back cover of this publication: those issued during the last month are listed in the inside front cover. A list of the complete range of publications available from the ABS can be obtained from any ABS Office.

In some cases, the ABS can also make available information which is not published. This information may be made available in one or more of the following forms: microfiche, photocopy, data tape, computer printout, clerically-extracted tabulation. Generally, a charge is made for providing unpublished information. Inquiries should be made as shown in the inquiries section of this publication.

Access to a wide range of ABS statistics is also available through the VIATEL videotex system and on AUSSTATS, ABS' on-line service through CSIRONET. Further information about these services can be obtained from the Sydney ABS Information Service on (02) 268 4611, or from any ABS Office.

SYMBOLS AND OTHER USAGES

Standard notations are used throughout this publication, with meanings as follows:

- n.a. Not available.
- n.e.s. Not elsewhere specified.
- n.p. Not available for publication but included in totals where applicable.
- n.y.a. Not yet available.
- p Preliminary - figure or series subject to revision.
- r Figure or series revised since previous issue.
- .. Not applicable.
- Nil or rounded to zero.
- _____ Break in continuity of series (where a line is drawn across a column between two consecutive figures).

Where figures have been rounded, discrepancies may occur between sums of the component items and the totals shown.

SEASONALLY ADJUSTED INDICATORS

In most instances, the aim in compiling monthly or quarterly economic time series is to provide evidence of movement, in order to indicate the effects changing conditions are having on the activities being measured - and, in so doing, to signal what might be likely to occur in the near future. Seasonal adjustment is a technique designed to assist in these processes of analysis and interpretation by removing the estimated effects of normal seasonal variation from statistical series, so that the effects of other influences on the series may be more clearly recognised.

Details of the methods used in deriving the seasonally adjusted figures shown in this publication are given in the annual publication Seasonally Adjusted Indicators (1308.0), issued by the Central Office of the Bureau.

Seasonally adjusted statistics are revised following revision to the original data and as additional data are brought into the analysis each year.

For series where one of the components and the total of the components have been seasonally adjusted (e.g. private dwellings and total dwellings), any figures derived by deduction (in the example quoted - government dwellings) do not amount to a formally seasonally adjusted series for the balance of the components.

(a) Excess of live births over deaths. (b) Because of administrative problems involving registrations of births and deaths, figures of natural increase from June quarter 1984 to December quarter 1985 have been imputed - see footnotes (b) and (h) in the table below.

Note. The estimated resident population (preliminary) of the Sydney Statistical Division at 30 June 1986 was 3,430,550 and that of the Newcastle and Wollongong Statistical Subdivisions was 429,250 and 237,600 respectively.

(a) The statistics shown are compiled on the basis of the month of registration rather than the month of occurrence. (b) The 1984 figures are significantly affected by abnormal delays at the Registry of Births, Deaths and Marriages which were not completely overcome for births and deaths until December quarter 1985 and for marriages until March quarter 1986. (c) The figures shown in this table relate to events registered in N.S.W. rather than to the concept of 'resident' population. (d) Deaths under one year of age. (e) For quarterly periods, an equivalent annual rate. (f) Number per 1,000 of mean estimated resident population. (g) Number per 1,000 live births. (h) Imputed - based on an estimate of the number of events which would have been registered had administrative problems not occurred at the Registry of Births, Deaths and Marriages. See footnote (b).

LABOUR FORCE STATUS OF THE CIVILIAN POPULATION AGED 15 AND OVER, N.S.W.

Note. The tables on pages 2 to 5 contain estimates derived from the Monthly Population Survey which is conducted on a sample basis throughout Australia. Explanatory notes and a technical note about the estimates and further detailed estimates (including industry and occupation details), are contained in The Labour Force (Including Regional Estimates), New South Wales (6201.1) which is issued quarterly and is available, on request, from the N.S.W. Office of the Bureau.

Due to the introduction of a revised questionnaire in April 1986, the estimates from April 1986 on pages 2, 3, 4 and 5 are based on the revised definition of employed persons. For more details, see The Labour Force, Australia, April 1986 (6203.0).

- (a) Period from the time the person began looking for work or was stood down to the end of the survey week. Periods of unemployment are recorded in complete weeks and this results in a slight understatement of duration of unemployment. (b) Mean duration is obtained by dividing the aggregate number of weeks a group has been unemployed by the number of persons in that group. (c) See headnote on page 2.

EMPLOYED CIVILIAN WAGE AND SALARY EARNERS : SECTOR AND FULL-TIME/PART-TIME STATUS, N.S.W.
('000)

Note. The tables on pages 6 and 7 contain estimates derived from the Survey of Employment and Earnings, an Australia-wide employer-based survey. Explanatory notes are contained in Employed Wage and Salary Earners, Australia (6248.0), which is issued quarterly and is available on request from the N.S.W. Office of the Bureau. Estimates derived from the Survey of Employment and Earnings will differ from labour force estimates derived from the Monthly Population Survey for the reasons set out in the information paper Comparison of Employment Estimates from the Labour Force Survey and the Survey of Employment and Earnings (6263.0), which is available free, on request, from the Bureau.

(a) Overtime is time worked in excess of award, standard or agreed hours of work for which payment is received. Overtime hours represent the number of hours of overtime paid for. (b) The figures shown are based on the last pay period ending on or before the third Friday of the month shown. (c) Calculated by dividing total overtime hours paid for in each group by the total number of employees in the same group. (d) Calculated by dividing total overtime hours paid for by the number of employees who were paid for overtime. (e) The number of employees who were paid for overtime as a percentage of the total number of employees.

CONSUMER PRICE INDEX

Note. The Consumer Price Index is designed to measure quarterly variations in the level of retail prices for goods and services which represent a high proportion of the expenditure of wage and salary earner households. The index covers a large and representative selection of commodities and services arranged in eight major groups.

PRICE INDEXES OF MATERIALS USED IN MANUFACTURING INDUSTRIES, AUSTRALIA

Note. These indexes are on a net sector basis. The All Manufacturing Industry Index relates to materials used by establishments classified to the Manufacturing Division of the Australian Standard Industrial Classification (ASIC), which have been purchased or transferred in from establishments outside that Division. The Subdivision/Group indexes relate to materials used by establishments classified to that Subdivision/Group of the Manufacturing Division which originated from outside that Subdivision/Group. Therefore, materials produced by other Subdivisions of Australian manufacturing industry, other Divisions of Australian industry (e.g. 'Agriculture, forestry, fishing and hunting' or 'Mining') and materials produced overseas are included. Further details of the indexes are contained in the publication, Price Indexes of Materials Used in Manufacturing Industries, Australia (6411.0).

PRICE INDEXES OF ARTICLES PRODUCED BY MANUFACTURING INDUSTRY, AUSTRALIA

Note. These indexes are on a net sector basis. Thus, the All Manufacturing Industry Index relates to articles produced for sale or transfer outside the Manufacturing Division of the Australian Standard Industrial Classification (ASIC), for export, or for use as capital equipment, whilst the Subdivision indexes also include articles produced for sale or transfer to other Subdivisions within the Manufacturing Division. Further details of the indexes are contained in the publication, Price Indexes of Articles Produced by Manufacturing Industry, Australia (6412.0).

IMPORT PRICE INDEX, AUSTRALIA

Note. The Import Price Index is a fixed weights index and is weighted using the pattern of Australian imports during the three years 1978-79, 1979-80 and 1980-81. Commodities whose prices are directly represented in the index constituted 84 per cent of the total value of imports of merchandise into Australia in 1980-81. Further details of the index are contained in the publication Import Price Index (6414.0).

Index groups relate to commodities defined in terms of selected divisions of the Australian Import Commodity Classification (AICC) 1981-82 (1204.0).

EXPORT PRICE INDEX, AUSTRALIA

Note. The Export Price Index is a fixed weights index. The weights of the commodities directly represented in the index have been derived from values of exports in the years 1974-75, 1975-76, and 1976-77. These commodities accounted for 89 per cent of the total value of exports of merchandise from Australia in the period 1974-75 to 1976-77. Further details of the index are contained in the publication Export Price Index (6405.0).

Index groups relate to commodities defined in terms of selected divisions of the Australian Export Commodity Classification (AEC) 1978-79 (1203.0).

(Base of each group index: 1974-75 = 100)

(a) These are gross contents of metallic minerals produced, as determined by assay, and make no allowance for losses in smelting and refining. The quantities shown are therefore, in general, greater than those actually recoverable. (b) Includes the metallic contents (when finally separated) of zircon-rutile concentrates recovered in N.S.W. and finally separated in Queensland. Excludes the metallic contents of zircon-rutile concentrates recovered in Queensland and finally separated in N.S.W. (c) Content of fine metal.

PUBLICATIONS ISSUED BY AUSTRALIAN BUREAU OF STATISTICS (SYDNEY)

The Deputy Commonwealth Statistician issues a large range of publications presenting statistics relating to New South Wales. All of these are obtainable from the Australian Bureau of Statistics, St. Andrew's House, Sydney Square (George Street, next to Sydney Town Hall), Sydney.

The *New South Wales Year Book* presents a comprehensive statistical survey of the social, demographic, and economic structure and growth of the State, and describes the legislative provisions and administrative arrangements which are of significance for a proper interpretation and analysis of the statistics of the State. The *Pocket Year Book* and *New South Wales in Brief* contain a wide range of statistical and other material in compact form and are useful for the handy reference. More recent statistics are available in the *Monthly Summary of Statistics*. The *Regional Statistics* presents a selection of the more important statistics available for geographical areas of the State. More detailed statistics relating to matters treated generally in the above publications are available in the various *subject bulletins*, which range from preliminary monthly statements to detailed bulletins presenting the results of periodic censuses, etc. The date of release and current price of the more important bulletins issued by this Office appears below.
