

CLASSIFICATION OF RURAL HOLDINGS BY SIZE AND TYPE OF ACTIVITY

1965-66

BULLETIN No. 3—QUEENSLAND

Prepared under instructions from the Right Honourable the Treasurer by

K. M. ARCHER

Commonwealth Statistician

COMMONWEALTH BUREAU OF CENSUS AND STATISTICS

CANBERRA, AUSTRALIA

CLASSIFICATION OF RURAL HOLDINGS BY SIZE AND TYPE OF ACTIVITY, 1965-66

PREFACE

This bulletin is one of a series for each State (Nos. 1-6) and for Australia (No. 7) (including the Northern Territory and the Australian Capital Territory) presenting details of tabulations showing classifications of all rural holdings by size of principal characteristics (viz. area of holdings, area of sown grasses and clovers and selected crops and numbers of main livestock) and by type of activity for the year 1965-66.

Classifications of holdings by size of principal characteristics have, in the past, been undertaken at irregular intervals. They have been prepared on a substantially uniform basis in all States for each of the years 1947-48, 1949-50, 1955-56, 1959-60 and 1965-66, and in New South Wales only for 1964-65. The tabulations relating to size classification of holdings in this series of bulletins are similar to those prepared in 1959-60.

The first detailed and systematic classification of rural holdings according to both size and type of activity was undertaken uniformly throughout Australia in 1959-60. Prior to this the only detailed classification along these lines was that undertaken in New South Wales for 1955-56. This was largely experimental and was the forerunner of the more recent classifications.

The tabulations included in these bulletins have been prepared from information taken from the Agricultural Pastoral and Dairying Census for the 1965-66 season (conducted at 31 March 1966). Crop areas and land use data relate to the 1965-66 season, while numbers of livestock are as at 31 March 1966.

Although there are minor variations between States, a "rural holding" is defined briefly for the purpose of these statistics as a piece of land 1 acre or more in extent, used for the production of agricultural products or for the raising of livestock and the production of livestock products. In a limited number of cases rural holdings of less than 1 acre which are engaged in intensive production are included. In cases where land owners or occupiers possess or work more than one holding, separate returns are required for each, except where the holdings are in close proximity and are worked as one, in which case one return only may be submitted covering the two or more holdings concerned.

Type of Activity

The classifications used and the methods employed are described below.

(i) *The Classification* Holdings with total gross receipts for all products amounting to \$1,600 or more (commercial holdings) have been classified according to the following types of activity:

Sheep and cereal grain	Poultry
Sheep	Pigs
Cereal grain	Sugar
Meat cattle	Tobacco
Milk cattle	Other (one main purpose)
Vineyards	Multi-purpose
Fruit (other than vine)	
Vegetables - Potatoes	
Other	

In addition to the above types of "commercial" holdings, the annual census includes holdings which have not been classified by type of activity but are shown separately in these tabulations as "Sub-commercial holdings" or "Unused holdings".

(ii) *Method Used* Holdings have been classified to type according to the principal activity on each holding. Because of the many holdings on which more than one type of activity occurs, it was necessary to adopt some objective measure of the relative importance of each activity and then to apply consistent criteria in determining the principal activity.

The most appropriate measure of the importance of each type of activity on a holding for the purposes of this classification was considered to be gross cash receipts at the farm. Gross receipts were estimated by taking the areas of crops and numbers of livestock reported on the annual census returns for 1965-66 and multiplying them by estimated values per acre or per livestock unit for each crop and type of livestock reported. To remove the effects of seasonal irregularities in 1965-66 in both yields and prices, the derived values were based, in the main, on the averages for the five years ended 1964-65. The principal exceptions to this rule were in estimating returns from meat cattle and milk cattle, for which the derived values were based on data for the two years ended 1964-65. This was necessary because of changes in the classification of cattle in 1963-64 which are described below. Generally, the values used were based on averages of both yield and price for each State (as a whole), but in some States important regional variations within the State were taken into account for some products.

Holdings with estimated gross receipts of \$1,600 or more (i.e., "commercial" holdings) were classified to type of activity in accordance with the following criteria:

- (a) Holdings running sheep and growing cereals for grain were classified as "Sheep and cereal grain" if the combined receipts from these activities accounted for at least 75% of the total receipts of the holding and if neither activity contributed more than four times the other.
- (b) Holdings running cattle for milk production and pigs were classified as "Milk cattle" if the combined receipts of these activities were 50% or more of the total receipts of the holding.
- (c) Other commercial holdings were classified to the activity which accounted for 50% or more of the total receipts of the holding. It should be noted that -
 - (i) holdings were classified to "Vegetables-other" where 50% or more of the total receipts were derived from the production of vegetables of any kind (including potatoes), but where potatoes alone did not account for more than half the total receipts.
 - (ii) holdings were classified to "Other (one main purpose)" where a single product, other than those covered by a specific classification, contributed 50% or more of the total gross receipts e.g. cotton, oilseeds.
- (d) If none of the criteria under (a), (b) or (c) was satisfied, the holding was classified as "Multi-purpose".

Holdings with estimated gross receipts of less than \$1,600 were treated as "sub-commercial" holdings which operate on a part-time or small-scale basis.

Those holdings for which no estimated gross receipts could be estimated in respect of their activities reported in the annual census (e.g. used only for intermittent grazing, or growing fruit trees which were not bearing) were treated as "Unused".

Fodder crops have generally been regarded as an ancillary to livestock production, and excluded from estimation of gross receipts. For this reason some holdings which reported fodder crops only, and no other activity, are included in "Unused".

In 1959-60, certain types of holdings (such as those attached to institutions, "dry run" dairies, and, in some States, horse studs), which were excluded from the holdings classified by type as being "special" holdings, were included in the category "Unused, Special, Etc.". In the 1965-66 classification these holdings have been classified by type of activity in terms of the standard criteria.

Definitions

Livestock Attention is drawn to various aspects of livestock and their treatment in the classification.

In the tabulations relating to livestock, all sheep, meat cattle, milk cattle, or pigs reported on each holding were regarded as a single flock or herd.

Since the 1959-60 classification, certain changes have been made in the wording and layout of cattle items on the annual census schedule which should be borne in mind when comparing the 1965-66 classification in respect of cattle. Prior to the 1963-64 annual census, farmers were requested to report their herds as either "beef cattle" or "dairy cattle". These two terms caused confusion between breed and purpose, e.g., where vealer production was carried on in association with dairying. However, since 31 March 1964 land holders have been required to report only their bulls (and in some States, bul calves) as "dairy-breed" or "beef-breed" and their other cattle according to whether they were used mainly

for meat production or milk production. In addition the number of cows and heifers kept for domestic milk supply were reported separately. This latter group has been excluded from this size and type classification.

In this bulletin the terms "Meat cattle" and "Milk cattle" are abbreviated versions of the phrases "cattle used for meat production" and "cattle used for milk production".

In States other than New South Wales and Queensland, if there were no sheep on a holding at 31 March, but details were shown on the return for sheep shorn during the year, gross receipts from sheep were estimated on the basis of this information. This has had the effect of classifying to "Sheep" or "Sheep and cereal grain" in those States certain holdings with no sheep at 31 March (see Table 25).

Land Utilisation The following definitions of the various categories of land utilisation have been used in this bulletin.

- (i) *Area of fruit* This relates to the total (bearing and not bearing) area of orchard, plantation, vine and small fruits and edible nuts and olives.
- (ii) *Area of crops (excluding fruit)* This relates in general to all crops other than fruit crops as listed in Table No. 5 of the publication "Rural Industries", Bulletin No. 2, 1963-64 issued by this office. The area of grasses and clovers cut for seed and hay is excluded in respect of all States except South Australia. In South Australia the area of grasses and clovers cut for seed and hay is included but the area of lucerne for grazing is excluded (see (iv)).
- (iii) *Area lying fallow* This relates only to land lying fallow during the whole or the greater part of the season. It excludes land under short or summer fallow.
- (iv) *Area under sown grasses and clovers* This relates to the area of sown grasses (including medics, paspalum, rye-grasses, lupins, phalaris, rhodes, sudan, etc.) and clovers (subterranean and other types) whether grazed, cut for hay or silage or harvested for seed. Paspalum is excluded for New South Wales. In South Australia, area of grasses and clovers cut for seed and hay is excluded but lucerne for grazing is included (see (ii)).
- (v) *Balance of holding* This is a balance item, and represents the area of land used for grazing (other than sown grasses and clovers and crops fed off), the area occupied by buildings etc., and the area of forested, mountainous, etc. land not used for farming purposes. In Table 23, balance of holding may be slightly understated due to the fact that area of fruit and area of crops includes a comparatively insignificant area which is double-cropped.

The areas shown in the above categories in these bulletins are based on data which have been subject in some cases to some minor amendments since these tabulations were undertaken. Consequently, the figures in these bulletins may vary slightly from those published elsewhere.

Rounding In Tables 1 and 23 any discrepancies between acreage totals and the sum of acreage components are due to rounding.
