

STATISTICAL BULLETIN - CHICKEN HATCHINGS AND POULTRY SLAUGHTERINGS

AUGUST 1971

Reference No. 10 11

The statistics in this bulletin have been compiled from returns supplied by commercial chicken hatcheries (i.e. those making sales of day-old chicks) and by commercial poultry slaughtering establishments. Poultry farmers hatching chicks solely for replenishing their own flocks, producers in the Northern Territory and the many very small producers are excluded from the collection. However, the statistics represent a high level of coverage in respect of commercial hatcheries and slaughtering establishments.

Statistics for poultry slaughtered in Queensland are based on numbers slaughtered as collected by the Queensland Department of Primary Industries. From 1968-69, New South Wales slaughtering statistics include poultry slaughterings by producers in the Australian Capital Territory.

Particulars of the supply and utilisation of poultry meat in Australia for the years 1965-66 to 1969-70 are contained in Table 8.

Symbols used in this bulletin

- p - Preliminary. Subject to revision.
.. - Nil or less than half the final digit shown, or not applicable.
n.a. - Not available.

NOTE. Any discrepancies between totals and sums of components in tables are due to rounding.

(a) Incomplete; prior to 1968-69 excludes particulars for Tasmania. (b) Included with ducks and drakes. (c) Not available for publication. (d) Dressed weight of whole birds, pieces and giblets, as reported by producers in all States except Queensland. (e) Estimated.

II. CHICKEN HATCHINGS

In Tables 6 and 7 following, details relate to all eggs set and chicks hatched in commercial hatcheries whether for sale as day-old chicks or for replenishment of own flocks. The statistics represent actual settings and hatchings (excluding chicks destroyed) for each month shown. As the hatching period is normally three weeks, there is not necessarily a relationship between the number of eggs set and the number of chicks hatched in any one month.
