MONTHLY BULLETIN OF AUSTRALIAN PRODUCTION STATISTICS

No. 141 JUNE, 1960

For the purpose of the accompanying statistics, a "factory" is taken to be a manufacturing establishment in which four or more persons are employed, or in which power other than manual is used, and the production of small establishments not classified for statistical purposes as factories is not included in the figures shown herein. Annual totals for 1938-39, 1948-49 and the last three complete financial years are shown in conjunction with (a) totals for the most recent six month and three month periods, together with comparative figures for the same periods, twelve months earlier, and (b) monthly totals for each of the latest thirteen months (in most cases).

Figures from July, 1959 onwards are preliminary and subject to revision, but the annual totals shown for 1958-59 are final.

An index of the contents is given on page 2.

Many of the items included are shown in greater detail in the Secondary Industries Bulletin and the series of Manufacturing Industries Bulletins.

The production of each of the commodities listed is given up to the latest available month. For each commodity other than those collected by, or in conjunction with Government Statisticians, the authority responsible for providing the figures is indicated by a footnote to the item title. Figures up to 1958-59 inclusive represent totals derived, wherever possible, from annual factory returns collected by Deputy Commonwealth Statisticians in each State. It should be noted that in some cases annual returns are accepted from factories for a year other than the normal financial year ended June, 30th.

Production of Food, Clothing and Miscellaneous Industries is illustrated graphically in this and alternate issues of this Bulletin.

PERSONS USING THIS BULLETIN ARE ASKED TO NOTE PARTICULARLY THE FOLLOWING:-

1. The Monthly Bulletin of Production Statistics contains data of monthly output of over 150 individual factory products. As monthly particulars of additional items are collected and become available for publication, they will be included in the Bulletin. The items for which quantity of output is published herein are not, however, selected as representative of all factory output. In practice, it is not possible to make such a selection at present.
2. The tables should be read only as showing monthly trends in output of the individual items or groups of items listed. They have not been summarised into a monthly index of Volume of Factory Output, nor a monthly index of Industrial Production, because they cannot be assumed to be representative of total trends in volume of factory output nor volume of industrial production. It is, in fact, improbable that they are continually representative in this sense.
3. Although the list of items in these monthly tables includes only a small proportion of all the items produced in factories, it, nevertheless, relates directly to items accounting for possibly up to 35 per cent. of total value of factory output.
4. Comparable annual data of quantity of output are collected, at present for a longer list of items covering about one-half of factory production, measured in gross value of output, or slightly less (about 45 per cent.) measured in terms of net value of output or "value added" by process of manufacture. Among the factors limiting useful extension in the annual collection of factory output (in quantitative terms) into the field as yet unrecorded in that way are: (i) the fact that a large part of factory production cannot be expressed in quantity terms but only as a gross or net value of output; (ii) the great and growing diversity of factory products; and (iii) the absence of homogeneity in many types of factory products.

K.M. ARCHER
ACTING COMMONWEALTH STATISTICIAN
