PREFACE

This Bulletin is published in two parts;
Part 1 : Exports and Part 2 : Imports.

Figures for 1967-68 are preliminary and are
subject to revision.

EXPLANATORY NOTESBASIC DOCUMENTS

The Overseas Trade Statistics published in this bulletin have been derived from documents obtained under the Customs Act by the Department of Customs and Excise and compiled by the Commonwealth Bureau of Census and Statistics. They do not include certain items for which customs entries are not required. (See paragraph (11) of this note). These documents are duplicate copies of export and import entries submitted by exporters and importers or their agents to the Department of Customs and Excise.

2. Export entries show date and port of shipment, country of consignment and the description, quantity (where required) and value of the goods. The statistical item number is inserted by the exporter or his agent and verified by officers of the Department of Customs and Excise.

3. Import entries show date and port of entry, country of origin, description of goods, quantity (where required), value of the goods and amount of duty paid thereon. The tariff item number under which the goods are admitted and the statistical key code are inserted by the importer or his agent, and these are verified by statistical officers of the Department of Customs and Excise in the local offices of the Collectors of Customs.

PERIOD COVERED BY STATISTICSExports

4. These are recorded statistically in the month in which the export entries are passed by the Department of Customs and Excise. Normally this is within a few days of shipment. Shipment of some major items is at times delayed by abnormal factors affecting sales, deliveries for export and the loading of ships. When such delays occur, exports during the affected period are diminished and when the delays are overtaken shipments include substantial quantities of accumulated stocks as well as current disposals.

5. Wool shipments in any trade year may be materially affected by the time spread of wool auctions which normally end in July. The carry-over for shipments varies from year to year. New season's wheat normally becomes available for shipment from December onwards, and the quantity shipped in any trade year (ending June) depends on the size of the crop, the time spread of sales for export, and physical factors affecting the scheduling of deliveries.

Imports

6. Imports are recorded statistically in the month in which import entries are passed by the Department of Customs and Excise. Normally this is within a few days of discharge of cargoes. See para. 21.

VALUATION

7. Exports sold to overseas buyers before export are valued at the Australian f.o.b. port of shipment equivalent of the actual price paid to the exporter. Exports shipped on consignment are valued at the Australian f.o.b. port of shipment equivalent of the price paid for similar goods of Australian origin in the principal markets of the country to which they are dispatched for sale.

8. The recorded value of imports is the "value for duty" as laid down for customs purposes, i.e. the f.o.b. port of shipment equivalent of the actual price paid by the importer plus any special deduction, or of the current domestic value in the exporting country, whichever is the higher. (See paragraph (11) of this note.) All values are recorded in Australian currency.

STATISTICAL CONCEPTS OF TRADE

Trade system

9. The statistics of exports and imports presented in this bulletin are recorded on a "General trade" basis, i.e. export figures include both Australian produce and re-exports, while imports comprise goods entered directly for domestic consumption together with goods imported into Customs warehouses. However, Table 3, Part 2 shows statistics of imports on a "Special trade" basis i.e. cleared for home consumption. Export figures exclude exports of ships' stores and aircraft stores, separate details for which are shown in Table 9 of Part 1 of this bulletin. Import figures include defence equipment imported by the Australian Services. These imports are normally classified according to the commodity imported, e.g. warships are classified under "ships and boats", and are included in the month in which the import entry is lodged with the Department of Customs and Excise.

Merchandise and non-merchandise trade

10. Total trade is divided into merchandise and non-merchandise in accordance with international standards recommended by the United Nations. Merchandise trade is the equivalent of total exports or imports less certain items specified as non-merchandise. These non-merchandise items include commodities such as gold, legal tender, decorations, trophies, samples, passengers' personal effects, military equipment and stores for Australian Forces abroad, goods for the use of diplomatic and consular representatives, goods imported with the intention of being re-exported, goods exported with the intention of being re-imported, etc. A complete description of these commodities is contained in the Australian Export and Import Commodity Classifications published by the Bureau.

Balance of payments basis

11. Statistics of exports and imports for balance of payments purposes are derived by making certain adjustments, relating both to scope and valuation, to statistics of merchandise exports and imports. Statistics on the adjusted basis are published in statistical bulletins relating to the balance of payments. The adjustments include the following: Imports are adjusted for the overall excess of recorded value for duty over the actual selling price to the importer. Exports and imports of goods for repair and return and the value of repairs are deducted from merchandise trade; exports and imports of ships and aircraft for use on overseas routes, certain imports of defence equipment, and other trade items for which customs entries are not required are added. Adjustments are also made for timing differences between the change of ownership and the lodgment of import entries, in the case of certain large items of equipment (e.g. warships).

EXCESS OF EXPORTS OR IMPORTS

12. In this bulletin the excess of the value of exports or imports is shown for merchandise plus non-merchandise trade in Table 1 and for merchandise trade only in Table 2. The excess of exports or imports does not, on either of these bases, represent the balance of trade. The balance of trade is derived by comparing statistics of exports on a balance of payments basis with statistics of imports on that basis. (See paragraph (11)).

TERMS USED IN THIS BULLETIN

13. "Exports" and "Imports" refer to exports and imports on a general trade basis.

"Merchandise" and Non-merchandise see paragraph 10.

"Australian Produce" is defined as goods, materials, or articles which have been produced, manufactured or partly manufactured in Australia, except goods which were originally imported and have undergone only repair or minor operations which leave them essentially unchanged.

"Re-exports" are defined as goods, materials or articles originally imported which are exported in the same condition in which they were imported, and goods, materials or articles originally imported which are exported after undergoing repair or minor operations which leave them essentially unchanged.

NOTE. Minor operations include blending, packaging, bottling, cleaning, sorting, husking and shelling.

"Imports cleared for home consumption" differ from imports in scope in that they include withdrawals from bonded warehouses but exclude imports into bonded warehouses.

COUNTRY OF CONSIGNMENT OR ORIGIN

14. "Country of consignment" referred to in export tables means the country to which goods were consigned at the time of export. Where the country of consignment is not determined at the time of export the goods are recorded as exported "For orders".

15. "Country of origin" referred to in import tables means the country of production of goods imported.

COMMODITY CLASSIFICATIONS

16. From July 1965 imports have been classified according to the new Australian Import Commodity Classification (A.I.C.C.) which is based on the Standard International Trade Classification, Revised (S.I.T.C.) and from July 1966 exports have been classified according to the new Australian Export Commodity Classification (A.E.C.C.), also based on the S.I.T.C. Copies of these classifications or extracts from them, can be obtained from offices of the Bureau. There is a difference in treatment between the two classifications with respect to outside packages. In the A.E.C.C. the value of outside packages is classified with the goods contained in them, but in the A.I.C.C. the value of outside packages is included under a separate item in Section 9(A).

TREATMENT OF AMENDMENTS

17. Where revisions have been made to the previously published figures for earlier months of the current financial year, appropriate adjustments are made to the year-to-date figures shown in this Bulletin. For this reason, monthly figures published in all issues for the current financial year to date will not necessarily add to the year-to-date figures shown in this issue.

BALANCE OF PAYMENTS

18. Estimates of the balance of trade do not measure Australia's total balance of payments which include other transactions such as freight and insurance charges on imports, shipping expenditure in Australian ports, overseas travel, payments

of profits and interest, and private and government borrowing overseas. Estimates of these transactions will be found in Statistical Bulletins on the "Balance of Payments".

ROUNDING

19. Any discrepancies between totals and sums of components in tables are due to rounding.

SEASONAL ADJUSTMENT

20. Original and seasonally adjusted statistics of exports and imports are shown in Table 1, page 7. Details of the methods used in seasonally adjusting these and other series are given in "Seasonally Adjusted Indicators 1967" issued on 18 July 1967. In the seasonal adjustment, account has been taken not only of normal seasonal factors but additionally of "trading-day" effects (arising from the varying numbers of Sundays, Mondays, Tuesdays etc. in the month) and the influence of Easter which may, in successive years, affect figures for different months.

PROCEDURAL CHANGES

21. A change in procedures whereby import entries can be cleared by the Department of Customs and Excise in advance of the arrival of the goods was introduced on a trial basis in some customs ports on 13 November 1967 and was extended to the ports of Sydney and Melbourne on 6 February 1968. This change in procedures will to some extent affect the time at which imports are recorded statistically. The effect will probably be spread over several months as importers and customs agents take advantage of the new procedures. It is not practicable to obtain an accurate measure of the effect of the new procedures on statistics of imports but it seems likely that for the year 1967-68 the total value of imports would be increased by less than one per cent. The effect on subsequent years is expected to be negligible.

NOTE. A dissection of imports showing the value of imports of goods owned by the Commonwealth Government is not available. However, the conceptual difference between imports and imports cleared for home consumption is mainly of practical importance in the case of imports not owned by the Commonwealth Government.

(a) See paragraph 13 of explanatory notes. (b) Imports cleared for home consumption under items 1 and 2 of the Second Schedule to the Customs Tariff. Item 1 refers to "goods that at the time they are entered for home consumption (a) are owned by the Commonwealth; and (b) are not intended for purpose of trade". Item 2 refers to "goods (a) that, at the time they are entered for home consumption, are owned by the Commonwealth; and (b) exemption from duty of which is, in the opinion of the Minister, in the national interest".
