

MOTOR VEHICLE REGISTRATIONS, QUEENSLAND, OCTOBER 1988

PHONE INQUIRIES

For more information about these statistics please contact Terry Goater on Brisbane (07) 222 6247.

For other inquiries, including copies of publications, please contact Information Services on Brisbane (07) 222 6351.

MAIL INQUIRIES

Please write to Information Services, Australian Bureau of Statistics (ABS), G.P.O. Box 9817, Brisbane, Q. 4001.

Main Features

In October 1988 there were 7,824 registrations of new motor vehicles (excluding motor cycles, mobile equipment and trailers) processed. This was 6.1 per cent lower than the number processed in September 1988 (8,334) but 41.5 per cent higher than the number processed in October 1987 (5,529).

New registrations for the 3 months ended October 1988 (24,094) were 11.4 per cent higher than for the 3 months ended July 1988 (21,633) and 37.1 per cent higher than for the 3 months ended October 1987 (17,573).

As these series contain irregular influences that can be highly volatile, short-term movements cannot be assumed to indicate changes in the underlying trend. Because of this volatility, a trend estimate is also published to provide users with a clearer picture of underlying trends (see Table 2).

Explanatory Notes

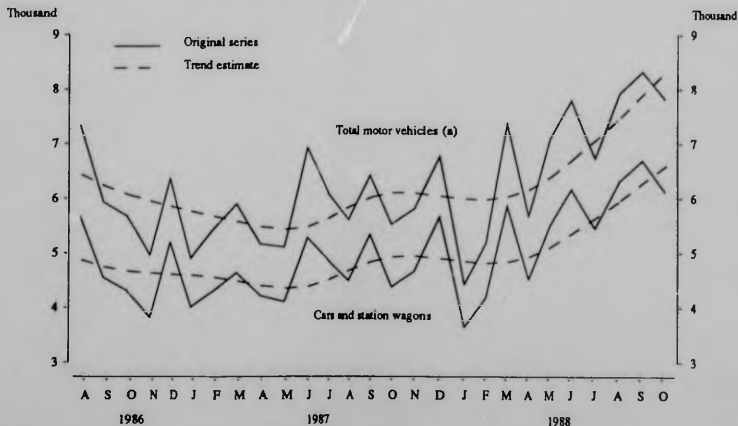

Introduction

In these statistics, registrations are generally for new motor vehicles processed by the motor vehicle registration authority in Queensland during the period. In some instances registrations of new motor vehicles are not recorded in the statistics until some time after registration. It follows that registrations in this publication do not necessarily represent sales of new motor vehicles in the period.

Source and Scope

2. Motor vehicle registration statistics are obtained from data made available by both the Queensland Main Roads Department (MRD) and the Commonwealth Department of Administrative Services (DAS). These data reflect the information recorded in registration documents. The MRD classifies rigid trucks with a gross vehicle mass (GVM) of 4 tonnes or less as either utilities or panel vans, whereas the DAS classifies such vehicles as rigid trucks. To maintain the consistency of Queensland data, figures obtained from the DAS for rigid trucks with a GVM of 4 tonnes

REGISTRATIONS OF NEW MOTOR VEHICLES, QUEENSLAND

(a) Excluding motor cycles, mobile equipment and trailers.

Explanatory Notes (continued)

Source and Scope (continued)

or less are reclassified by the Queensland Office of the ABS to either utilities or panel vans. This results in minor discrepancies between figures contained in this publication and figures in the national publication (Catalogue No. 9303.0).

Seasonal Adjustment

3. Original, seasonally adjusted and trend estimate series for registrations of new motor vehicles are shown in Table 2. The two component series 'motor cars and station wagons' and 'other vehicles' are each adjusted separately, and the adjusted figures for total registrations are obtained by adding together the two component series. In the seasonally adjusted series, account has been taken of normal seasonal factors and 'trading day' effects (arising from the varying numbers of Sundays, Mondays, Tuesdays etc. in the month) and the effect of movement in the date of Easter which may, in successive years, affect figures for different months.

4. Seasonally adjusted statistics should not be regarded as in any way definitive. In interpreting particular seasonally adjusted statistics it is important to bear in mind the methods by which they have been derived and the limitations to which the methods used are subject.

5. Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series may be more clearly recognised. Seasonal adjustment procedures do not aim to remove the irregular or non-seasonal influences which may be present in any particular month, such as the effect of introducing new models or of industrial disputes. Irregular influences that are highly volatile can make it difficult to interpret the movement of the series even after adjustment for seasonal variation.

6. The seasonally adjusted series can, however, be smoothed to reduce the impact of the irregular component in the adjusted series. This smoothed seasonally adjusted series is called a trend estimate series and is shown in Table 2. The trend estimate has been derived by applying a 13 term Henderson-weighted moving average to the series.

7. While this technique enables smoothed data for the latest period to be produced, it does result in revisions to the smoothed series for the most recent months as additional observations become available. Similarly, the seasonally adjusted series is subject to revision.

8. For more information on seasonal adjustment of this series, users should refer to the ABS publication *Seasonally Adjusted Indicators* (Catalogue No. 1308.0) and for information on smoothing of time series generally, users should refer to the ABS Information Paper *A Guide to Smoothing Time Series - Estimates of Trend* (Catalogue No. 1316.0).

Classification of Vehicles

9. Other truck types include non-freight-carrying trucks, ambulances, hearses and motorised caravans.

10. Although registration of recreation vehicles intended for use in public places other than roads is compulsory, particulars of such vehicles are excluded from statistics contained in this publication.

11. Particulars of vehicles with diplomatic and consular plates and government-owned new vehicles other than those belonging to the defence services are included in this publication.

12. As the registration documents used by the various State motor vehicle registry systems are not uniform, either in the data that are available or in the definition of common data items, care must be taken when making comparisons between data from different systems. It is possible for identical vehicles to be described differently in different States or Territories, e.g. rear end door sedans may be registered either as cars or station wagons. Consequently, cars and station wagons have been amalgamated to avoid any confusion. In addition, in a relatively small number of cases, the characteristics used to classify vehicles for the purposes of this publication may be inconsistently recorded within a particular registration system.

Related Publications

13. Users may also wish to refer to the following publication which is available on request:

Motor Vehicle Census (9309.0) - Irregular - Latest issue: 1985 (\$4.10)

14. Current publications produced by the ABS are listed in the *Catalogue of Publications* (Catalogue No. 1101.0) and those produced by the Queensland Office are listed in *List of Publications* (Catalogue No. 1101.3). A *Publications Advice* (Catalogue No. 1105.0) is issued on Tuesdays and Fridays which lists publications to be released in the next few days. These publications are available from any ABS Office.

Unpublished Statistics

15. The ABS can also make available certain motor vehicle registration statistics which are not published. Where it is not practicable to provide the required statistics by telephone, they may be available in other forms, such as microfiche, photocopy, computer printout or clerically extracted tabulation. A charge may be made for providing unpublished statistics in these forms.

16. For further information on these unpublished statistics contact Terry Goater by telephoning Brisbane (07) 222 6247, or write to Information Services at the address above.

(a) Gross Vehicle Mass (GVM): The maximum laden mass at which the vehicle should be operated as recommended by the manufacturer.

The GVM ranges in tonnes are listed below:

A - Up to and including 4

(See paragraph 2 of the Explanatory Notes.)

B - Above 4 to 8

C - Above 8 to 12

D - " 12 " 16

E - " 16 " 20

F - Above 20 to 30

G - " 30

N.S. - Not stated.

(b) Gross Combination Mass (GCM): The amount specified for the vehicle by the manufacturer as being the maximum of the sum of the laden mass of the vehicle plus the maximum laden mass of any vehicle which might be towed as a semi-trailer or trailer. In Queensland, however, the prime mover and trailer or semi-trailer are not registered as one unit and an estimate of the GCM has been made. The GCM ranges in tonnes are listed below:

H - Up to and including 8

I - Above 8 to 12

J - " 12 " 16

K - " 16 " 20

L - Above 20 to 24

M - " 24 " 30

N - " 30 " 34

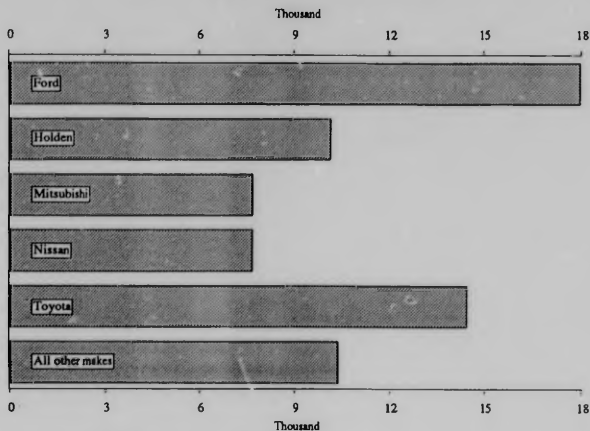

O - Above 34 to 40

P - " 40

N.S. - Not stated.
