SAWN NATIVE TIMBER

MONTHLY BULLETIN OF AUSTRALIAN PRODUCTION STATISTICS

NO. 62 JANUARY, 1954.

For the purpose of the accompanying statistics a "factory" is taken to be a manufacturing establishment in which four or more persons are employed or in which power other than hand is used. Annual totals for 1938-39 and the last five complete financial years are shown in conjunction with (a) totals for the most recent six monthly and three monthly periods together with comparative figures for the same periods twelve months earlier and (b) monthly totals for each of the latest fifteen months (in most cases).

Figures from July, 1952, onwards are preliminary and subject to revision but the annual totals shown for 1951-52 are final.

An index of contents is given on page 2.

Many of the items included here are shown in greater detail in the Secondary Industries Bulletin and Manufacturing Industries Bulletins.

The Bulletin is published as near as possible to the beginning of each month and the production of each of the commodities listed is given up to the latest available month. For each commodity other than those collected by, or in conjunction with, Government Statisticians, the authority responsible for providing the figures is indicated by a footnote to the item title. Figures up to 1951-52 inclusive represent totals derived, wherever possible, from annual factory returns collected by Government Statisticians. It should be noted that in some cases annual returns are accepted from factories for a year other than the normal financial year ending June 30th.

The following two groups of commodities are reproduced in graphical form, each alternately, in issues of this Bulletin: -

- (i) Heat, Light and Power ; Building Materials ; Chemicals ; Metal and Metal Industries.
- (ii) Food, Clothing and Miscellaneous Industries.

Group (i) is included in this issue.

PERSONS USING THIS BULLETIN ARE ASKED TO NOTE PARTICULARLY THE FOLLOWING.

- 1. This Monthly Bulletin of Production Statistics contains data as to monthly output of about 132 individual factory products. As monthly particulars of additional items are collected and become available for publication, they will be included in the Bulletin. The items for which quantity of output is published herein are not, however, selected as representative of all factory output. In practice it is not possible to make such a selection at present.
- 2. The tables given should be read only as showing monthly trends in output of the individual items or groups of items listed. They have not been summarized into a monthly index of Volume of Factory Output, nor a monthly Index of Industrial Production, because they cannot be assumed to be representative of total trends in volume of factory output nor volume of industrial production. It is, in fact, improbable that they are continuously representative in this sense.
- 3. Although the list of items covered in these monthly tables includes only a small proportion of all the items produced in factories, nevertheless it relates directly to items accounting for about 30 per cent of total value of factory output.
- 4. At present comparable annual data of quantity of output are collected for a longer list of items covering about one-half of factory production, measured in gross value of output, or slightly less (about 45 per cent) measured in terms of net value of output or "value added" by process of manufacture. Among the factors limiting useful extensions in the annual collection of items of factory output (in quantitative terms) into the field as yet unrecorded in that way are; (i) the fact that a large part of factory production cannot be expressed in quantity item terms but only as gross or net value of output; (ii) the great and growing diversity of factory products; and (iii) the absence of homogeneity in many types of factory products.

S.R. CARVER
