..	Appendix I. Classification of geographic trade areas for shipping statistics.	

OVERSEAS SHIPPING CARGOJULY, AUGUST AND SEPTEMBER 1967

Monthly statistics of shipping cargo are shown in this bulletin, classified by countries of loading and discharge, and by type of shipping service.

Tables 1 and 2 present a summary of monthly statistics, tables 3 and 4 figures by major trade areas, tables 5 to 10 show in summary form figures for each State by major trade areas, and tables 11 and 12 give appropriate country detail for Australia as a whole. Overseas ports are classified to countries and geographic trade areas in accordance with the Classification of Geographic Trade Areas for Shipping Statistics set out in Appendix I. The major trade areas used in Tables 3 to 10 consist of a summary grouping of geographic trade areas.

The statistics are compiled from returns submitted by shipping companies or their representatives to Customs Houses at each port throughout Australia. A return is submitted for each movement of a vessel into and out of a port except (i) naval vessels, (ii) yachts and other craft used for pleasure, (iii) foreign fishing vessels that neither load nor discharge cargo and (iv) vessels of 200 net tons and under. Arrivals and departures are treated separately in the statistics.

Cargo is recorded on returns either in terms of units of weight or in terms of units of measurement (a ton measurement is a unit of 40 cubic feet). The statistics show separate figures for cargo recorded in tons weight and cargo recorded in tons measurement.

Type of vessel is shown on returns, and on the basis of this information separate statistics are compiled for two groups - liner services; and tramps, bulkships and tankers.

Returns for vessels arriving from overseas show cargo discharged at Australian ports classified by the ports at which it was loaded. Similarly, cargo loaded at Australian ports for discharge overseas is shown according to ports at which it will be discharged. The overseas ports shown are not necessarily ports of origin or ultimate discharge of cargo because previous or subsequent overseas transshipments are not taken into account.

Domestic transshipments can take place in Australian ports before overseas cargo is loaded or after it is discharged by reporting vessels. These previous and subsequent transshipments are also not taken into account.

In some cases the overseas port at which cargo is to be discharged has not been determined at the time of departure of the vessel. It is then classified as being for discharge at "optional ports". "Optional ports" cargo is allocated to a specific country or, if this is not possible, to a geographic trade area.

Figures for 1967-68 in this bulletin are preliminary, subject to revision.
