MAIN FEATURES

The number of overseas movements in November 1989 was 693,900, 1% more than in November 1988 and 13% more than in November 1987. There were 363,300 arrivals (up 2% on November 1988) and 330,500 departures (no change from November 1988).

Permanent movement

In November 1989:

- 10,770 settlers arrived in Australia, 17% below the total for November 1988 (13,010).
- 2,100 permanent departures were recorded, 30% more than November 1988 (1,610).

Arrivals of visitors for short-term visits

In November 1989:

- Total short-term visitor arrivals numbered 192,700, 7% below the figure for November 1988 but 5% higher than November 1987. In seasonally adjusted terms, November 1989 short-term arrivals showed an increase of 3% over October 1989.
- There has been a continued reduction in visitors arriving in Australia to attend conventions compared with 1988. Only 1% of total short-term visitors arrived for conventions in November 1989 compared with 4% in November 1988. However, the proportion of visitors arriving to visit relatives increased to 21% in November 1989 compared with 19% in November 1988.
- There has been a continuing decline in visitor numbers from the U.S.A compared with the corresponding month in the two previous years. In November 1989 the number of visitors from the U.S.A was 22,500, (12% of all visitor arrivals) 27%

below that for November 1988 and 34% below the number for November 1987.

- Visitors from Japan were also fewer in number than one year ago (29,200 in November 1989 compared with 36,200 in November 1988). This decline was partly offset by increases in the number of visitors from Hong Kong (+1,200), Malaysia (+1,400), Singapore (+1,400) and Taiwan (+1,000).
- Visitors from the U.K. rose from 12% of the total visitors in November 1988 to 14% in November 1989 showing an increase of 4% in actual visitor numbers (27,100 in 1989, 26,500 in 1988). The number of visitors from New Zealand also increased, 41,600 in November 1989 (21% of total visitor arrivals) compared with 37,800 in November 1988 (18% of total visitor arrivals).

Departures of Australian residents for short-term trips abroad
In November 1989:

- There were 144,200 departures of Australian residents for short-term visits overseas. This is 16% above the figure for November 1988 and continues the trend, which started in December 1988, for increased numbers of Australians to visit overseas. Areas visited were generally the same as in November 1988 in percentage terms although the proportion of Australian residents who intended to visit the U.S.A was down slightly (10% in November 1989 compared with 12% in November 1988) and offset by an increase in the proportion who intended to visit New Zealand (17% in November 1989 compared with 14% in November 1988). Malaysia, Singapore and Thailand continued to increase in popularity as destinations, a trend which has been evident since early 1989.

SHORT-TERM VISITOR ARRIVALS (a)

SHORT-TERM RESIDENT DEPARTURES

(a) Refer to paragraph 20 of the Explanatory Notes at the back of this publication.

EXPLANATORY NOTES

Introduction

This series of publications contains statistics of overseas arrivals and departures in summary form for the latest available month during which the movement occurred. More detailed statistics can be made available, on request, in unpublished form.

Scope

2. The statistics in this publication relate to the number of movements rather than the number of travellers (i.e. the multiple movements of individual persons during a given reference period are each counted separately). The statistics exclude the movements of operational air and ships' crew, of transit passengers who pass through Australia but are not cleared for entry, and of passengers on pleasure cruises commencing and finishing in Australia aboard ships not then engaged on regular voyages.

Definitions*Category of movement*

3. Category of movement is primarily determined by the traveller's selection of their own category on the passenger card. This selection is accepted provided it is consistent with other information on the passenger card.

Permanent movement

4. Permanent arrivals (settlers) comprise travellers who hold migrant visas, (regardless of stated intended period of stay), New Zealand citizens who indicate an intention to settle and those who are otherwise eligible to settle (e.g. overseas born children of Australian citizens). Permanent departures are Australian residents (including former settlers) who on departure state they do not intend to return to Australia.

Long-term movement

5. Long-term arrivals comprise overseas visitors (except those that hold migrant visas—see paragraph 4 above) who intend to stay in Australia for 12 months or more and Australian residents returning after an absence of 12 months or more overseas. Long-term departures comprise Australian residents who intend to stay abroad for 12 months or more and overseas visitors departing who stayed 12 months or more in Australia.

Short-term movement

6. Movements of travellers whose intended or actual length of stay is less than twelve months are classified as short-term, except those who on arrival hold migrant visas (see paragraph 4 above).

7. A significant number of travellers state exactly 12 months or one year as their intended period of stay. Many of these stay for less than that period and on their departure from, or return to, Australia are therefore classified as short-term. To maintain consistency between arrivals and departures, movements of travellers who report their actual or intended period of stay as being one year exactly are randomly allocated to long-term or short-term, in proportion to the number of movements of travellers who report their actual length of stay as up to one month more, or one month less, than one year.

Country of birth or residence

8. The grouping of countries into regions in Asia in Table 4 is based on United Nations' classification of world regions. Applying this classification, the region which includes most 'middle east' countries is included in Asia and is called 'Western Asia (Middle East)'.

9. Statistics on country of birth or residence have certain limitations because of inadequate reporting on passenger cards. For instance, it is not possible to make a distinction between Northern Ireland and the Republic of Ireland, or to separately identify England, Scotland and Wales. Similarly 'Germany' could refer to the Federal Republic or to the Democratic Republic.

Estimation method

10. Overseas arrival and departure statistics are derived from a combination of full enumeration and sampling. All permanent movements and all movements with a duration of stay of one year or more are fully enumerated and processed. All movements with a duration of stay of less than one year are sampled and statistics relating to these movements are therefore estimates which may differ from statistics which would have been obtained if details of all these movements had been processed.

11. The statistics in this publication have been rounded, to the nearest 100 for short-term movements and to the nearest 10 for permanent and long-term movements. In tables showing both short-term and permanent and long-term movements the total movements have been rounded to the nearest 100. The sums of the components may, due to rounding, not add exactly to totals.

Corrections and imputations

12. The imprecision due to sampling errors should not be confused with errors arising from imperfections in reporting, which may occur in any data collection, whether sampled or not. Every effort is made to minimise such errors, both through careful design of the passenger cards and through checks on the information once it is received. During the edit process some items are corrected where they conflict with other known information. Missing replies to certain items such as age and country of birth are also imputed by reference to other related items.

13. Errors of this kind differ from discrepancies arising from the fact that certain information reflects the travellers' intentions, at the time the passenger cards were completed. These intentions are of course subject to change. Particularly affected is the distinction between permanent and temporary movement and in the latter case, length of intended stay, country in which most time will be spent and purpose of journey.

Seasonal adjustment

14. Original and seasonally adjusted short-term overseas visitor arrivals and short-term Australian resident departures are shown in Tables 1 and 2 respectively. In the seasonally adjusted series, account has been taken of normal seasonal factors and 'trading day' effects (arising from the varying numbers of Sundays, Mondays, Tuesdays, etc. in the month) and the effect of movement in the

date of Easter which may in successive years, affect figures for different months.

15. Seasonal adjustment may be carried out by various methods and the results may vary slightly according to the procedure adopted. Accordingly, seasonally adjusted statistics should not be regarded as in any way definitive. In interpreting particular seasonally adjusted statistics it is important to bear in mind the methods by which they have been derived and the limitations to which the methods used are subject. The adjustment procedure used for the Short-Term Visitor Arrivals and Resident Departures data is an aggregative adjustment. Prior to the July 1989 issue these data were adjusted at the category total level only (for visitor arrivals and resident departures separately). The aggregative method adjusts the major components separately (in this instance, the main countries of each category). The adjusted category total is obtained by summing the adjusted components. For more detail, contact the Supervisor, Time Series Analysis, A.B.S. on (062) 52 6103.

16. Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series may be more clearly recognised. Seasonal adjustment procedures do not aim to remove the irregular or non-seasonal influences which may be present in any particular month, such as the effect of major sporting and cultural events, changes in airfares structure and the fluctuation of \$A relative to other currencies. Irregular influences that are highly volatile can make it difficult to interpret the movement of the series even after adjustment for seasonal variation.

17. The seasonally adjusted series can, however, be smoothed to reduce the impact of the irregular component in the adjusted series. There are a number of ways of accomplishing this, depending on the intended uses of the smoothed series. If importance is attached to measuring the underlying change in the most recent periods, moving averages employing appropriate weighting patterns should be adopted; the choice of averaging technique will determine in part the degree of smoothness of the derived series. The longer the term of the moving average the longer is the time series affected by revisions resulting from more recent data. In order to ensure that the underlying trend-cycle of a series is reflected in the trend estimate series, the degree of smoothness alone cannot always be used as the sole criterion in determining which moving average is appropriate.

18. The trend estimate short-term overseas visitor arrivals and short-term Australian resident departures statistics are shown in Tables 1 and 2 respectively. The trend estimate has been derived by applying a 13-term Henderson-weighted moving average to the series.

19. While this technique enables smoothed data for the latest period to be produced, it does result in revisions to the smoothed series, principally, of recent months as additional observations become available. There may also be revisions as a result of the re-estimation of the seasonal factors. For further information concerning the smoothing process refer to an Information Paper *A Guide to Smoothing Time Series — Estimates of "Trend"* (1316.0).

20. With the conclusion of World Expo 88 in October 1988 an abrupt dislocation may have occurred in the trend path of the Short-term Overseas Visitor Arrivals series. In these circumstances there are insufficient data available to estimate reliably the current trend movements, therefore the trend estimate from November 1988 onwards is not published. As subsequent data become available this situation with regard to estimates of trend movements will be monitored, and will be released when considered reliable.
